22/7/18 Returned to Queens Hospital, Sidcup for operation.
24/7/18 Slight haemorrhage from right ear last night - there is mucoid discharge with the blood. E.F.R.
30/7/18 Under general anaesthesia given by Capt. Clayton, RAMC. Surgeon - Capt. E.F. Risdon, CAMC. Scar tissue in the region of the right external auditory meatus was removed and a small ascending flap sewed into position over the lower border of the external auditory meatus on to the cheek. Closed with horsehair. The internal ear was inspected and a hard firm piece of bone was seen uncovered, region of the external semicircular canal, and from somewhere round this blood seemed to be oozing. The anterior membranous wall of the external auditory meatus was adjusted by making pressure - it seemed to increase the bleeding. It is difficult to say the source of this bleeding. The hearing is very poor - only voice at 6"x" can be heard.
3/8/18 Less bleeding from auditory meatus right, but still some blood stained cerumen. EFR.
5/8/18 Complains of right frontal headaches almost constant - comes worse at night. When first lying down patient becomes dizzy, but goes to sleep very quickly - headache does not prevent him going to sleep. Patient says he is dizzy every morning when he gets up. On inspection of the ear a large perforation is seen beginning at the posterior wall and in the anterior wall a raw area is to be seen. Recommend Massage of face. E.F.R.
14/8/18 Considerable discharge from right lachrymal sac. Right ear - no discharge noticed - Patient says bled yesterday. No headaches. EFR.
20/8/18 No pus in right ear. Large perforation seen opening into Eustachian tube and mucoid discharge round the opening. To have Lachrymal sac right under local anaesthetic. Upper right lateral extracted yesterday, considerable pus has been coming away since.
21/8/18 Under local anaesthesia the right lachrymal sac was dissected out and drainage instituted into the nose. The infra orbital ridge right was much mutilated, owing to previous injury consequently no anatomy can be made out. Drainage left in for 24 hours into the nose. Capt. E.F.R. Film. 5141. Right upper lateral region shows small area of rarefaction region of root. EFR.
26/8/18 A right upper lateral tooth was extracted and considerable pus evacuated.

30/7/18.	G.S.W. Face. Anophthalmos right. Trismus.			
3/8/18.	Under general anaesthesia given by Capt. Clayton. RAMC. Surgeon. Capt. E.F. Risdon. CAMC. Scar tissue in the region of the right external auditory meatus was removed and a small ascending flap sewed into position over the lower border of the external auditory meatus on to the cheek. Closed with horsehair. The internal ear was inspected and a hard firm piece of bone was seen uncovered region of the external semicircular canal, and from somewhere round this blood seemed to be oozing. The anterior membranous wall of the external auditory meatus was adjusted by making pressure - it seemed to increase the bleeding. It is difficult to say the source of this bleeding. The hearing is very poor - only voice at 6" can be heard.			
5/8/18.	Less bleeding from auditory meatus right, but still some blood stained cerumen. EFR.			
14/8/18.	Complains of right frontal headaches almost constant - comes worse at night. When first lying down patient becomes dizzy, but goes to sleep very quickly - headache does not prevent him going to sleep. Patient says he is dizzy every morning when he gets up. On inspection of the ear a large perforation is seen beginning at the posterior wall and in the anterior wall a raw area is to be seen. Recommend Massage of face. EFR.			
20/8/18.	Considerable discharge from right lachrymal sac. Right ear - no discharge noticed - Patient says bled yesterday. No headaches. EFR.			
21/8/18.	No pus seen in right ear. Large perforation seen opening into Eustachian tube and mucoid discharge round the opening. To have Lachrymal sac right done under local anaesthetic. Upper right lateral extracted yesterday, considerable pus has been coming away since.			
26/8/18.	Under local anaesthesia the right lachrymal sac was dissected out and drainage instituted into the nose. The infra orbital ridge right was much mutilated, owing to previous previous injury consequently no anatomy can be made out. Drainage left in for 2 hours into the nose. Capt. E.F. Risdon. CAMC			
30/8/18.	Film. 5141 Right upper lateral region shows small area of rarefaction region of root. EFR.
