CONSULTANT'S REPORT

878,114 Pte Gray H. J.

Having this date examined the marginally named man, I am of the opinion that he shows the following points in the examination of Nervous Sys.

(1) A rather fixed apathetic expression.
(2) Gait rather deliberate uncertain. Not hemiplegic, not ataxic. No real Romberg sign.
(3) Some general coarse tremor chiefly in arms + hands noticeable when at rest, variable, not of "intention" type. At times the head is involved.
(4) Some weakness of L. arm + leg - without atrophy of muscles - measurements symmetrical. - face unaffected.
(5) Tendon jerks + throughout. Ankle clonus. variable not usually well sustained + most marked + constant Left side. - A Babinski plantar reflex ++ Extensor but not typical. Cremasteric R = +, + = absent. Abdominal ++ not obtained.
(6) A slight tendency to stiffness in limbs especially L. leg but not definitely "spastic"
(7) No real sensory changes - Complaints of "numbness" in the past.
(8) Coordination of both upper + lower limbs fairly good. Stereognosis normal.
(9) Some hesitancy in micturition - has been slight tendency to retention on occasion -
(10) Pupils rather small - equal + regular - light reaction normal. - Has had transient diplopia over period of 4 mos. in 1917. + now says L. eye vision poor. (Vide Op. report)
(11) Vessels seem in early stage sclerosis + B.P. not increased.
(12) Mentally is quiet, apathetic, mildly depressed at times. Memory good - Nothing else of special note.

This man has been carefully examined. My opinion is that he is suffering from Disseminated Sclerosis that it will be progressive, though progress may be very slow.

That this man should report again in a years time for re-examination.

That there is no evidence that it was caused or aggravated by service.

This man was seen by Col. Russell who confirmed this view of the case.
