(To include full description of present disabling condition or conditions, and of the immediate and direct cause of incapacity, i.e., debility, breathlessness on exertion, necessity of treatment by rest, etc.)

He is very markedly tremulous and nervous: there is a tremor of speech, amounting to an impediment. There is a marked grade of debility: he jumps at a noise - there is poor nervous control. Pupils are contracted - he looks Scared - there is a funiculosus of his face and neck, which he says has come on since the gassing. The lungs are normal - as is the heart: he has occasional vomiting after meals: the physical effects of the gas seem, however, to have passed away, leaving only the mental and nervous effects. Heart is normal except for tachycardia. Treatment here is not indicated: an opportunity to obtain light work would be the most beneficial course.

12. (a) Is the disability the result of service or climate?

(b) Has it been aggravated by intemperance, vice or misconduct?
