Disease

G. S. W. Left forearm.

Sensory Symptoms - nearly complete anaesthesia on palmar surface of 3 1/2 Radial digits & corresponding part of palm; a lesser degree of anaesthesia on dorsal surface of same 3 digits in part supplied by median - slight blunting over area supplied by Radial also. No hypaesthesia to deep pressure. There is astereognosis but not loss of joint sense - on palmar surface thermal sensation is absent.

No subjective complaints of pain. Motor Condition - A lesion of the median at the site of wound would affect only the abductor pollicis & the two carpal muscles. These muscles react to faradism rather weakly. There is also vol. power (imperfect) in these muscles.
