G. E. RICHARDS M.B., DIRECTOR
REPORT OF THE ROENTGEN EXAMINATION OF

Date May 23/19 Name Pte J. Aiken #331011

Address S.C.R.,

Referred by Dr. Caulfield. Case No. 50014

Stereoscopic plates were made of the chest.

The bony structure shows distinctly and the contour is normal, and there is no evidence of pathology involving it.

The hylus shadows show more thickening than is usually seen, that on the right side being slightly more marked than on the left. A few calcified fibrous lymph nodes are present.

The ascending bronchi show distinctly, and show fibrous thickening. This, however, is practically equal on both sides.

The descending bronchi show more thickening than is usually seen.

I am unable to detect any evidence which would justify a positive diagnosis of tuberculosis involving the parenchyma of either lung.
