Physical Examination:-

Nervous system.

Station & gait normal.

Tendon & other reflexes everywhere normal, including cranial.

Grasp of right hand average 24 K as against 50 K in left. Has had nerve injury, apparently from his statement, incomplete, & from the residual impairment of sensation of the right median nerve.

Respiratory system normal.

Circulatory do do.

Genito-intestinal system, apparently normal.

His discomfort that he gives a history of is probably due to foreign methods of cooking & restricted diet while he was a prisoner.

He has two small protruding piles, not inflamed, & not requiring operation.

Vision slight hyperopia.

Hearing slight disease. Has watch right ear 4", left "2".

With regard to the diagnosis of neurasthenia, I should consider he has recovered practically entirely from this.

The right hand would render him unfit for military service for some months. The nerve is however regenerating. He has voluntary movement of all muscles supplied by the median nerve & almost no wasting. He has moderate impairment of all forms of sensation over the area supplied by the right median nerve, but this is not severe enough to interfere with the use of the hand.
