16-12-18	OPERATION. Under Rect. Oil Ether, given by Capt. Henderson. Surgeon, Capt. E.F.Risdon, CAMC. Bone Graft was done, observing the main technique. An incision was made in the neck, two fingers in width in mandible and parallel with it left side of the neck. Towels were clamped into position before making any opening into the muscle. Posterior fragments were free on left and it was consequently rather difficult to expose. Both ends of the fracture were denuded of periostium and thinned for a distance of about 2 cms, thereby producing a gap of about 3 cms. Section of bone was taken from crest of ilium of this length and width sufficient to fill this gap. Held in position with Belgium Iron Wire and making butt-joints at each end with the bone of the mandible. Closed with horse hair. Small drainage tube left in for 24 hours. The wound over right ilium from which the graft was taken was closed with Silk worm gut and horsehair, leaving drainage tube in for 24 hours.
