New label. undated. 5 by 4.25 inches. Green, orange, yellow, and white. Printed on clear plastic film. Written in both English and French. The product name is now written "VFP Tofu." With the product comes a recipe sheet (5.5 by 8.5 inches; date coded 81-1), folded into eighths, and packed inside a sealed plastic envelope. It contains recipes for Tofu Eggless Salad, Tofu Mayo, and Cauliflower with Tofu Lemon Cream. Kathleen O'Bannon is listed as the company's nutrition consultant. The company also has a sheet of tear-off recipes. On one side are serving suggestions for tofu and recipes for Tofu meat loaf, scrambled tofu & eggs, and Sweet tofu topping. The other offers a 30% discount on Christina Clarke's book "Cook with Tofu."

Talk with Stephen Yu. 1990. March 5. He started making soyfoods in Feb. 1978. His first three products were tofu, tofu pudding (daufu-fa), and soymilk.

Note: This is the earliest record seen (Feb. 2010) concerning Victor Food Products Ltd. (Scarborough, Ontario, Canada).

1143. **Product Name:** Tofu Pudding (daufu-fa), and Soymilk.
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1978. February.
**New Product–Documentation:** Talk with Stephen Yu. 1990. March 5. He started making soyfoods in Feb. 1978. His first three products were tofu, tofu pudding (daufu-fa), and soymilk.

1144. Bal, Arya K.; Shantharam, S.; Ratnam, S. 1978. Ultrastructure of *Rhizobium japonicum* in relation to its attachment to root hairs. *J. of Bacteriology* 133(3):1393-1400. March. [37 ref]
Address: Dep. of Biology, Memorial Univ. of Newfoundland, St. John's, Newfoundland, Canada A1B 3X9.

1145. Walker, Robert. 1978. How to make tempeh–the nutritious meat substitute. *Alive (Canada)* No. 18. p. 13.
• ***Summary:*** The author started producing Canada's first commercial tempeh in June 1978. Here he describes what tempeh is, how to make it at home, and how to cook it. Photos show: (1) Robert Walker with the container he invented for making doughnut-shaped tempeh. The inside core and the holes on the outside tube allow the air to circulate evenly throughout the fermenting soybeans. (2) A close-up of two shapes of tempeh. A note at the bottom of the page states: "Robert Walker who lives in Port Perry, Ontario, is starting a tempeh making business." Address: Ontario, Canada.

1146. Carroll, K.K. 1978. The role of dietary protein in hypercholesterolemia and atherosclerosis. *Lipids* 13(5):360-65. May. [50 ref]
Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT Canada N6A 5C1.

1147. Shurtleff, Bill. 1978. News from New-Age Foods Study Center. *Soycraft (Lawrence, Kansas)* 1(3):3-5. June.
• ***Summary:*** This open letter begins: "Dear Soycrafters of North America: There has recently been growing interest in North America in starting a Soycrafters Union or Cooperative, perhaps along the lines of Japanese National Tofu, Miso, Shoyu, Natto, etc. Unions [Associations]. Such a development would seem to represent a great leap forward, of benefit to many in the expansion of consciousness and production of quality soyfoods in the Western world."

The author then summarizes five major functions of Japanese national trade associations related to soy products, and suggests how each of these be adapted to present American conditions and consciousness which are very different from those in Japan: Purchasing soybeans, maintaining a list of member shops, doing "soyfood publicity," publishing a newsletter, and establishing and running a nationwide center, information clearing house, and school for teaching production of low-technology "soyfoods" to people from both developed and developing countries.

"How might this basic model be adapted to the United States? First, since soyfoods are still quite new in the USA, we might want to form one united front cooperative or union for all soycrafters or producers of soyfoods, rather than trying to form individual unions for tofu & soymilk, miso, tempeh, shoyu, etc. Given such a joint union, it would seem that all of the functions performed by the Japanese unions would be of great potential value to producers in North America. The key point, however, is that for the Union to work it must be financially viable and sound. Thus it must be created and supported by individual members who understand clearly that its functions are in their best interest, both in the short and long run."

"Second, we must remember that the number of shops presently producing soyfoods here is still very small. We have the names of 95 tofu shops and/or soy dairies in the United States plus 6 more in Canada, 9 tempeh shops, 8 miso shops, and one shoyu factory (Kikkoman). Of these, about 41 of the tofu shops and soy dairies, 5 of the tempeh shops, and 2 of the miso shops are 'new-age' types, newly started by Caucasian Americans. This latter group would probably form the initial nucleus of the Soycrafters Union, however after the benefits of membership could be clearly demonstrated, the more conservative Japanese producers might be eventually interested in joining."

"At the proposed First North American Soycrafters Convention to be held in Ann Arbor [Michigan] July 28-30 the above suggestions might be discussed one by one..."

At the end of the article is a form which new or existing tofu or soymilk manufacturers in the U.S. are invited to fill out and return to Shurtleff so that he can list them in the next edition of *The Book of Tofu.* Its asks for the name, address, and phone number of the company, the person(s) in charge, the date tofu or soymilk production started, the approximate cost of getting started, the average quantity of soybeans used per week, the soyfoods produced (in order of importance), the main pieces of equipment purchased, and equipment the company plans to purchase in the near future.

Note the early use of the terms "soyfoods" and "soyfood" in this article. The term "soyfoods" was coined by Surata Soyfoods of Eugene, Oregon, in Dec. 1976.

Note 2. This is the earliest document seen (Oct. 2008) that contains the term "low technology" (or "low tech"). Shurtleff coined this term to refer to soyfoods that could be made, and had long been made, using simple, traditional technologies, appropriate to Third World countries or

relatively poor areas. Address: Director, New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo 177, Japan. Phone: (03) 925-4974.

1148. Shurtleff, William. comp. 1978. Mailing labels of companies buying large quantities of *The Book of Tofu,* and *The Book of Miso* from Autumn Press. Lafayette, California. 1 p. Undated. Unpublished typescript.
• ***Summary:*** Mailing labels (including the company name, purchaser or key contact person, and address) are given for the following companies: Erewhon, Inc. (Cambridge, Massachusetts), Nutri-Books Corp. (Denver, Colorado), Lifestream Natural Foods (Richmond, BC, Canada), Manna Foods (Scarborough, Ontario, Canada), Midwest Natural Foods (Ann Arbor, Michigan), Nature's Best (Torrance, California), Laurelbrook Foods (Bel Air, Maryland), Feather River (Bellevue, Washington), Arrowhead Mills (Denver, Colorado), Llama Trading Co. (Greenfield, Massachusetts), Reality Natural Foods (Honolulu, Hawaii), Tree of Life (St. Augustine, Florida), Eden Foods (Ann Arbor, Michigan), New Leaf Distributing Co. (Atlanta, Georgia), East West Journal (Brookline, Massachusetts), Mother Earth News (Hendersonville, North Carolina), Bookpeople (Berkeley, California), Landstrom (South San Francisco, California), Health Foods Inc. (Des Plaines, Illinois).

A single-letter code, A through D, appears in the upper right corner of each label. A = Biggest buyer. B = Second biggest buyer, etc. Erewhon and Nutri-Books are the two biggest buyers. Address: Lafayette, California.

1149. **Product Name:** Tempeh.
**Manufacturer's Name:** Tempeh Enterprises, Ltd.
**Manufacturer's Address:** R.R. 3, Group 3, Box 7, Port Perry, ONT, L0B 1N0 Canada. Phone: 416-985-3158.
**Date of Introduction:** 1978. June.
**New Product–Documentation:** Soya Bean Tempeh. This 1-page leaflet (undated, but probably printed in 1978-79) contains 10 tempeh recipes developed by Tempeh Enterprise Ltd.: Tempeh rarebit. Fried tempeh cakes. Tempeh-rice casserole. Tempeh soup. Tempeh casserole. Broiled tempeh cakes. Tempeh steamed delight. Tempeh carob (or chocolate) cookies. Tempeh candy bars. Tempeh and wheat-germ brownies.

Letter (5 pages) from Robert Walker, founder and owner. 1979. March 9. He presently makes 1 batch of tempeh a week; 28 lb of soybeans yield about 50 lb of tempeh. "I am 59 years old, have a full-time job, and started Tempeh Enterprises Limited about 1 year ago with thoughts of devoting all my time in the future, if I retire at an early age, to making and marketing tempeh... I made a large poster for each store ('Tempeh Available Here'). I am enclosing a recipe flyer, that is on the counter in each store..." Describes his process and equipment.

Letter from Robert Walker. 1979. Undated, but about April. Gives a detailed handwritten 9-page description, with illustrations, of how his company makes tempeh. Letter from Robert Walker. 1979. May 9. Includes photos of his process for making tempeh. Shurtleff & Aoyagi. The Book of Tempeh. 1979 (July). p. 149. Owner: Robert Walker.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Robert Walker.

Letter from Robert Walker. 1984. May 3. "I started to sell tempeh in June 1978. I have enclosed a letter and some bills of sale as proof of the date. I do not know of any other tempeh production before mine. Robert Rodale wrote an article in *Prevention* magazine about tempeh in July 1977. After reading and studying that article I decided to start a tempeh shop. The maximum amount of tempeh I made and sold was 50 lb/week. I will be 65 years old in September and I am planning on retiring for my job at Port Perry High School at the end of that month. As to why I stopped making tempeh, I guess I was trying to burn the candle from both ends, working 8 hours a day, 5 days a week at the high school, making 50 pounds of tempeh and the starter and driving about 60 miles (one way) through heavy traffic to Toronto each Saturday to deliver the tempeh to 5 or 6 health food stores, as well as doing household duties, community work, gardening, snow shovelling (we live in the country), etc." On 29 Oct. 1979 Robert was taken to the hospital and diagnosed as suffering from anxiety syndrome. He was not able to return to work at school for one year. Now he is back to normal, but he had to discontinue making tempeh commercially.

Shurtleff & Aoyagi. 1985. History of Tempeh. p. 60. This was the earliest known commercial tempeh produced in Canada.

1150. Thompson, Lilian U. 1978. Coprecipitation of cheese whey with soybean and cottonseed proteins using acid and heat treatment. *J. of Food Science* 43(3):790-92. May/June. [11 ref]
• ***Summary:*** Compared with a commercial soy protein isolate, all coprecipitates had a lower solubility, emulsifying and whipping capacities, but equivalent water and fat absorption capacities. The whipping properties decreased in the coprecipitate isolate but increased in the coprecipitate soybean and cottonseed concentrate. Address: Dep. of Nutrition & Food Science, Univ. of Toronto, Toronto, Ontario, Canada.

1151. Sosulski, F.W.; Chakraborty, P.; Humbert, E.S. 1978. Legume-based imitation and blended milk products. *Canadian Institute of Food Science and Technology Journal* 11(3):117-23. July. [15 ref. Eng; fre]
• ***Summary:*** Protein isolates from ten legume species were evaluated as the protein component in imitation milks. While similar in protein content, the isolates exhibited a

wide range in solubility, fat homogenization, viscosity, and conductivity. The legumes were ranked in the following descending order of preference for imitation milk production: lima bean *(Phaseolus lunatus,* 5.9), mung bean *(Vigna radiata,* 5.9), pea bean *(Phaseolus vulgaris,* 5.7), Great Northern bean *(Phaseolus vulgaris,* 5.6), lupine *(Lupinus angustifolius,* 5.4), field pea *(Pisum sativum arvense,* 5.2), lentil *(Lens culinaris,* 5.1), chickpea *(Cicer arietinum,* 5.1), soybean *(Glycine max,* 4.8), faba bean *(Vicia faba minor,* 4.1). Note the low ranking of soybeans. The lima bean had the best color ranking. Mung bean (4.1) had the best taste, followed by chickpea (4.0), lupine (3.6) and northern bean (3.6), all far ahead of soybean (2.8). Lupine (5.3) had the best odor, followed by mung bean (5.0), lentil (4.7), and lima bean (4.5), with soybean quite low at 3.3.

Note 1. It is not clear whether or not the soybeans used in this study were grown in Saskatchewan.

Note 2. This is the earliest English-language document seen (Jan. 2005) that uses the term "faba bean" (or "faba beans") to refer to *Vicia faba.* Address: Depts. of Crop Science and Dairy and Food Science, Univ. of Saskatchewan, Saskatoon, Sask, S7N 0W0, Canada.

1152. Carroll, K.K.; Giovannetti, P.M.; Huff, M.W.; Moase, O.; Roberts, D.C.K.; Wolfe, B.M. 1978. Hypocholesterolemic effect of substituting soybean protein for animal protein in the diet of healthy young women. *American J. of Clinical Nutrition* 31(8):1312-21. Aug. [29 ref]

• ***Summary:*** Type II hyperlipidemic patients appear to be significantly more sensitive to the cholesterol lowering effects of soy proteins than normolipidemics. Thus, plasma cholesterol levels were found to be significantly lower on the plant protein diet as compared to the animal protein diet. Address: 1. Univ. of Western Ontario.

1153. Tamarkin, Bob. 1978. What–and who–makes Cargill so powerful? *Forbes.* Sept. 18. p. 150-51, 154, 156.

• ***Summary:*** "With a net worth of over $1 billion, grain trader Cargill, Inc. is the U.S.'s largest privately held corporation. Here's a rare peek behind the scenes... This $11-billion-a year 114-year-old dowager of the grain industry handles more than 25% of U.S. grain exports, making it the single largest contributor to the U.S. balance of payments. What makes Cargill unusual is the fact that 85% of the stock is owned by some 33 members of the Cargill and MacMillan families and the tax-exempt Cargill Foundation, a charitable trust."

Contains graphs of earnings and sales from 1968 to 1978. Earnings rose from 15 million in 1968 to $40 million in 1972 to $220 million in 1974 and $230 million in 1975; by 1977 they had fallen back to $110 million, but rose to an estimated $120 million in fiscal 1978.

Sales rose from $2,000 million in 1968 to $4,000 million in 1972, to 10,800 million in 1975. Thereafter they stabilized, reaching an estimated $11,300 million for the fiscal year ended 31 May 1978.

"Basically, Cargill makes a profit in two ways: (1) by buying grain at a point of surplus and carrying it to a point of deficit, and (2) by buying it at a time of surplus and carrying it over to a time of deficit. The profit comes from its ability to do both of these things at a lower cost than its competitors–and its willingness from which Cargill never strays. 'During the soybean boom [in 1973] Cargill could have made $200 million had we gone long our inventories,' recalled a Cargill trader. 'But we stayed hedged. That was the test. There was a minirevolt among traders who wanted to go long, but [President] McVay said No'...

"Up until 1950, Cargill's only business was grain. Today grain accounts for only about one-third of the volume. Cargill is currently one of the top soybean processors in the world as well as feed producer for the livestock and poultry industries in the U.S., Europe, Canada, Latin America and Asia. It grows and markets hybrid corn, sells products made from soybeans, flour, wheat, tapioca, sunflowers and other oilseeds, poultry, eggs and scrap iron. Recent ventures include cattle feeding, poultry processing, salt mining, steel production, barge construction, chemical processing, sugar, molasses, cotton and coal merchandising, commodity futures trading, equipment leasing and life insurance."

Photos show Chairman Whitney MacMillan, Cargill's chateau-like headquarters near Minneapolis, Minnesota, and President McVay and Vice Chairman Diercks.

1154. *Soyanews (Sri Lanka).*1978—. Serial/periodical. c/o CARE, P.O. Box 1024, Colombo, Sri Lanka. Vol. 1 Sept. 1978.

• ***Summary:*** During its early years, this publication, edited by Mr. Pathiravitana in Colombo, was extremely well done, a pioneering effort in assisting the introduction of soya to a Third World country. The Jan/June 1987 issue announced that Soyanews, presently a quarterly, would henceforth be published only twice a year. But that was soon changed back to a quarterly due to help from Plenty Canada.

1155. National Soybean Processors Association. 1978. Year book and trading rules 1978-1979. Washington, DC. ii + 106 p.

• ***Summary:*** On the cover (but not the title page) is written: Effective October 1, 1978. This is the 50th anniversary issue. Contents: The National Soybean Processors Association [Introduction and overview]. Constitution and by-laws. Officers and directors. Executive office. Members. Standing committees. Food Protein Council. Trading rules on soybean meal. Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture,

protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal (automatic sampler, probe sampler), official weighmaster application, semi-annual scale report, official referee chemists (meal). Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Foreign trade definitions (for information purposes only).

The page titled National Soybean Processors Association (p. ii) states: "During the past crop year about 900,000,000 bushels of soybeans moved through processing plants of NSPA's 29 member firms. Approximately 55 percent of America's 1.7 billion-bushel soybean crop is bought and processed by NSPA members. Exporters account for another 41 percent of the crop, and the remainder [4%] is returned to farms for seed, feed, and residuals." Also discusses industry programs, soybean research, and international market development."

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers–Chairman: John G. Reed, Jr., Continental Grain Co. Vice Chairman: C. Lockwood Marine, Central Soya Co., Inc. President: Sheldon J. Hauck. Secretary: A.E. Idleman, A.E. Staley Manufacturing Co., Inc. Treasurer: Edward J. Cordes, Ralston Purina Co. Immediate past chairman: Lowell K. Rasmussen, Honeymead Products Co.

Executive Committee: Gorge A. Heinz ('79), Buckeye Cellulose Corp. Donald H. Leavenworth ('79), Spicola, Cargill, Inc. C. Lockwood Marine, Central Soya Co. Inc. John G. Reed, Jr., Continental Grain Co. Gaylord O. Coan ('80), Gold Kist, Inc. Lowell K. Rasmussen, Honeymead Products Co. William T. Melvin ('80). Planters Oil Mill, Inc. Theodore W. Bean ('79), Quincy Soybean Co. Edward J. Cordes, Ralston Purina Co. Richard E. Bell ('80), Riceland Foods, Inc. Austin E. Idleman, A.E. Staley Mfg. Co.

Board of Directors (alphabetically by company; each member company has one representative on the board): Thomas H. Wolfe, Anderson, Clayton & Co. Charles Bayless, Archer Daniels Midland Co. Keith Voight, Boone Valley Coop. Processing Assn. George H. Heinz, Buckeye Cellulose Corp. David C. Thompson, Bunge Corporation. Donald H. Leavenworth, Cargill, Inc. C. Lockwood Marine, Central Soya Co., Inc. John G. Reed, Jr., Continental Grain Co. Joe C. Givens, Dawson Mills. Alfred Jenkins, Delta Cotton Oil & Fertilizer Co. Kenneth E. Sullivan, Farmers Grain Dealers Assn. of Iowa. Donald M. Chartier, Farmland Industries, Inc. Gaylord O. Coan, Gold Kist Inc. Lowell K. Rasmussen, Honeymead Products Co. Kenneth J. McQueen, Land O'Lakes, Inc. Floyd W. Brown, Lauhoff Grain Co. Kermit F. Head, Missouri Farmers Assn.–Grain Div. Robert E. Hicks, Owensboro Grain Co., Inc. Sewell L. Spedden, Perdue Incorporated. John H. Payne, Planters Manufacturing Co. William T. Melvin, Planters Oil Mill, Inc. Theodore W. Bean, Quincy Soybean Co. Edward J. Cordes, Ralston Purina Co. Richard E. Bell, Riceland Foods, Inc. J.D. Morton, Sherman Oil Mill. Stiles M. Harper, Southern Soya Corp. Austin E. Idleman, A.E. Staley Mfg. Co. Preston C. Townsend, Townsend's Inc. Tyler Terrett, West Tennessee Soya Mill, Inc.

Executive office, Washington, DC: Executive Director, Sheldon J. Hauck. Director, Public Affairs: Jack DuVall. Director, Regulatory Affairs: William F. Sullivan. Administrative Asst.: Helen Miller. National Soybean Crop Improvement Council: Robert W. Judd, Managing Director.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 26. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Anderson, Clayton & Co. (6); Phoenix, Arizona; Jackson, Mississippi; Houston, Texas. Archer Daniels Midland Co. (26); Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Fredonia, Kansas; Mankato, Minnesota; Red Wing, Minnesota; Fremont, Nebraska; Lincoln, Nebraska; Kershaw, South Carolina. Boone Valley Coop. Processing Assn., Eagle Grove, Iowa. Buckeye Cellulose Corp. (8); North Little Rock, Arkansas; Augusta, Georgia; Cincinnati, Ohio; Memphis, Tennessee. Bunge Corporation (6); Cairo, Illinois; Logansport, Indiana; Emporia, Kansas; New York City, New York; Cargill, Inc. (18); Osceola, Arkansas; Gainesville, Georgia; Cedar Rapids, Iowa; Des Moines, Iowa; Sioux City, Iowa; Washington, Iowa; Chicago, Illinois; Wichita, Kansas; Minneapolis, Minnesota; Fayetteville, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (11); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Marion, Ohio; Bellevue, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (6); Guntersville, Alabama; Chicago, Illinois; Taylorville, Illinois; New York City, New York; Cameron, South Carolina. Dawson Mills (3); Dawson, Minnesota. Delta Cotton Oil & Fertilizer Co. (1); Jackson, Mississippi.

Farmers Grain Dealers Assn. of Iowa (Cooperative), Soybean Processing Div. (1); Mason City, Iowa. Farmland Industries, Inc. (5); Van Buren, Arkansas; Sergeant Bluff, Iowa; Hutchinson, Kansas; St. Joseph, Missouri. Gold Kist Inc. (3); Atlanta, Georgia. Honeymead Products Co. (3); Mankato, Minnesota. Land O'Lakes, Inc. (2); Fort Dodge, Iowa; Sheldon, Iowa. Lauhoff Grain Co. (1); Danville, Illinois. Missouri Farmers Assn.–Grain Div. (5); Mexico, Missouri. Owensboro Grain Co., Inc. (2); Owensboro, Kentucky. Perdue Incorporated (2); Salisbury, Maryland. Planters Manufacturing Co. (2); Clarksdale, Mississippi. Planters Oil Mill, Inc. (2); Rocky Mount, North Carolina. Quincy Soybean Co. (4); Quincy, Illinois. Ralston Purina Co. (8); Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Louisville, Kentucky; Kansas City, Missouri; St. Louis, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Riceland Foods, Inc. (8); Helena, Arkansas; Stuttgart, Arkansas. Sherman Oil Mill (1); Fort Worth, Texas. Southern Soya Corp. (1); Estill, South Carolina. A.E. Staley Manufacturing Co. (7); Decatur, Illinois. Townsend's Inc. (2); Millsboro, Delaware. West Tennessee Soya Mill, Inc. (1); Tiptonville, Tennessee.

Associate Members: ACLI Soya Co, White Plains, New York. Anderson Clayton Foods, Dallas, Texas. Balfour MacClaine International, Ltd., New York City, New York. Best Foods, a Unit of CPC International Inc., Englewood Cliffs, New Jersey. California Vegetable Oils, Inc., San Francisco. Canadian Vegetable Oil Processing Co., Hamilton, Ontario, Canada. Cobec Brazilian Trading and Warehousing Corp. of the U.S., New York City. Louis Dreyfus, Stamford, Connecticut. Durkee Foods, Div. of SCM Corporation, Chicago, Illinois (Gerald J. Daleiden). Gordon-Kutner Co., Dallas, Texas. Grain Processing Corp., Muscatine, Iowa (H.P. Woodstra). Hartsville Oil Mill, Hartsville, South Carolina (Richard A. Koppein). Humko Products, Memphis, Tennessee. Hunt-Wesson Foods, Inc., Fullerton, California. Lever Bros Co., New York City, New York. Maple Leaf Mills Ltd., Toronto, Ontario, Canada (W.G. Milliken). Marwood Company, San Francisco, California. Overseas Commodities Corp., Minneapolis, Minnesota. Pillsbury Co., Bloomington, Minnesota. Procter & Gamble Co., Cincinnati, Ohio. PVO International Inc., San Francisco, California. Quaker Oats Co. Toepfer, Inc., New York City, New York (Dieter Rahlmann).

Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given–Crop Improvement Council. Meal trading rules. Oil trading rules. Safety and insurance. Soybean Research Council. Technical. Address: 1800 M St., N.W., Washington, DC 20036. Phone: (202) 452-8040. Telex 89-7452.

1156. Shurtleff, William. 1978. Tofu shops and soy dairies in the West. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 2 p. Undated. Unpublished typescript.
• ***Summary:*** Lists the name, address, phone number and owner of all known tofu shops and soy dairies in the USA (alphabetically by state, and within each state alphabetically by city), Canada, Latin America, Europe, and Australia. There are 122 tofu shops and soy dairies in the USA and Canada, and 138 on the entire list.

This list appeared in the first Ballantine Books edition of *The Book of Tofu*, which was available on 22 Dec. 1978, although the date on the copyright page is Jan. 1979. We checked the last dummies on 23 Oct. 1978–which is the latest date we could have submitted this list. Address: Lafayette, California. Phone: 415-283-2991.

1157. Starenkyj, Danièle. 1978. Le bonheur du végétarisme: Principes de vie & recettes. 2ième éd. [The happiness of vegetarianism: Principles of life and recipes. 2nd. ed.]. Armagh, Quebec, Canada: Orion. 351 p. Oct. Illust. by Stefan Starenkyj. Index. 23 cm. First ed. 1977. [26 ref. Fre]
• ***Summary:*** Soy-related recipes include: Soy coffee (p. 101). Soya souffle (with whole soybeans, p. 204). Chapter 14, titled "A cow in your kitchen" (p. 207-27), contains extensive information on soymilk, soymilk products, and problems with cow's milk. It's contents: Introduction. What is soya? The proteins of the soybean *(la fève soja).* The carbohydrates of the soybean. The vitamins and minerals of the soybean. The oils of the soybean. Soymilk: The cow of China. Reasons for replacing animal milk in your diet with soymilk: Many people are allergic to animal milk. Animal milk is a cause of anemia. Animal milk can be a cause of infection of the urinary tract, particularly in infants. Animal milk is polluted. Comparison of the composition of soymilk and cow's milk (100 gm each). How to make soymilk at home. Soymilk whipped cream. Soy mayonnaise without eggs. Soy yogurt (fermented). Tofu: The meat without bones. Nutritive value of tofu. How to make tofu at home. Tofu filets. Tofu steaks. Breaded tofu slices. Tofu pâté à tartiner. Grilled tofu. Okara *(La pulpe de soja).* Okara pâté *(Pâté à la pulpede soja).* Soya butter *(Buerre de soja;* made from 1 cup lightly grilled soy flour, 2 cups water, a little salt, and about ½ cup oil). Address: Ottawa, Canada.

1158. Lindsay, Anne. 1978. Try Oriental options: Easy-to-prepare Japanese recipes. *Toronto Star (Ontario, Canada).* Nov. 15. p. C1-C2.
• ***Summary:*** Japanese recipes include: Gomoku gohan (Rice with vegetables; with "2 cakes aburaage {fried bean curd}, cut into matchstick size, julienne strips," and "¼ cup soy sauce"). Sukiyaki (with "2 pieces tofu {fresh bean curd} cut

into one-inch pieces"). Sukiyaki sauce (with "½ cup soy sauce").

Note: A very good description of authentic sukiyaki and how to make it.

1159. Christmas, Robin. 1978. Price of security is total submission. *Toronto Star (Ontario, Canada).* Nov. 25. p. C4.
• ***Summary:*** Robin Christmas is writing a book on manipulation of the mind "in the new religions, the so-called cults." In this article he examines The Farm, a commune of 1,100 that describes itself as a "spiritual community of longhairs." The Farm, with headquarters in rural Lewis County, Tennessee, is the center of a network of 17 sister farms spread out across the United States, with one branch in Guatemala and one in Lanark County, Ontario, Canada–a federally registered non-profit organization named Plenty Canada. The Farm' spiritual mentor is Stephen Gaskin–" drop-out from his job as an instructor of creative writing at San Francisco State College."

"The Farm views itself as a pilot program for the salvation of the human race." The members live simply and use appropriate technology requiring far fewer resources than those of a typical North American today.

In Guatemala, a team of Farm volunteers is working on earthquake reconstruction, agricultural reform and public works "with the aid of $20,000 in money and $90,000 in materials from the Canadian International Development Agency (CIDA), channeled through Plenty Canada.

"The head of Plenty Canada, Dennis Martin, said this week in an interview from Tennessee that the group has a promise of $780,000 more through CIDA for earthquake reconstruction."

"The new religions fill needs for their members: Security, boundless love, and acceptance, food, shelter, and a purpose to one's existence.

"The price? Well, it's only total submission to the ideology of the group. For many that is a fair trade."

Note 1. This is the earliest document seen (Jan. 2010) that mentions Plenty Canada.

Note 2. We (Soyinfo Center) feel this is a very unfair, unbalanced, and inaccurate description of The Farm and its "branches."

1160. Kent, Jack. 1978. Oilseed mill starts search for qualified staff: Maple Leaf Monarch plant. *Windsor Star (Essex County, Ontario, Canada).* Dec. 1.
• ***Summary:*** Canada's first multi-oilseed processing plants will require a specially trained work force. "The Maple Leaf Monarch plant will replace the present facilities of Maple Leaf Mills on the Toronto waterfront and more than triple the capacity of the plant." Address: Star business reporter.

1161. Etienne, P.; Gauthier, S.; Dastoor, D.; Collier, B.; Ratner, J. 1978. Lecithin in Alzheimer's disease. *Lancet* ii(8101):1206. Dec. 2. [9 ref]
Address: Douglas Hospital Center; Montreal Neurological Inst.; Dep. of Pharmacology, McGill Univ.; Maimonides Hospital. All: Montreal, Canada.

1162. Boulton, Marsha. 1978. The soya dog: The same old dog minus the meat. *Maclean's (Canada)* 91(31):11. Dec. 11.
• ***Summary:*** Alan Kempton, age 46 and a biologist at Ontario's University of Waterloo [Canada], is building a better hotdog with the help of soya and a $25,000 research grant from the federal ministry of agriculture. He hopes to have the product ready by July 1979. Beef prices are up 70% from last year.

1163. *East West Journal.*1978. Soy boom. Dec. p. 18.
• ***Summary:*** "Over seventy people involved in the production of soy foods met in Ann Arbor, Michigan, this summer and established the Soycrafters Association of North America (SANA). The nonprofit organization will facilitate communication among the 140 businesses producing tofu, miso, soymilk, or tempeh. SANA reports soy foods have been received enthusiastically across the United States and Canada. Seventy new tofu shops and soy dairies have been established in thirty-one states in the last two years. For further information write SANA, Box 76, Bodega, California 94922."

1164. **Product Name:** Tofu.
**Manufacturer's Name:** Oriental Trading Co.
**Manufacturer's Address:** 340 Ave. C South, Saskatoon, SASK, S7M 1N4, Canada. Phone: 306-652-3697.
**Date of Introduction:** 1978. December.
**New Product–Documentation:** Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Oriental Trading Co., 19th St., Saskatoon, Saskatchewan, Canada. Owner: Mrs. Kwok.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Art Mark.

1165. **Product Name:** Tofu.
**Manufacturer's Name:** Shrada Tofu.
**Manufacturer's Address:** R.R. 1, New Denver, BC, Canada.
**Date of Introduction:** 1978. December.
**New Product–Documentation:** Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Owner: Derrick Marston.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. No phone number. Owner: Derrick Mattston.

1166. **Product Name:** Tofu.
**Manufacturer's Name:** Hwa Chang.
**Manufacturer's Address:** Toronto, ONT, Canada.
**Date of Introduction:** 1978.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Jhasun Koo, owner and founder of Pyung Hwa Food Co. 1989. May 4. He started making tofu in 1978 on Dundas St. In 1978 the only other tofu companies in Toronto were Yet Sing (probably the first) and Hwa Chang. Both were run by Chinese-Canadians and both are still in business.

1167. **Product Name:** [Tofu: Soybean Cake].
**Foreign Name:** Tofu: Gâteau aux Feves de Soya.
**Manufacturer's Name:** Pyung Hwa Food Co. Inc.
**Manufacturer's Address:** 2139 Dundas St., Toronto, ONT, M6R 1X1, Canada. Phone: 416-534-0237.
**Date of Introduction:** 1978.
**Ingredients:** Soya beans (Feves de soya), water, magnesium chloride (chlorure de magnesium), calcium sulfate (sulfate de calcium).
**Wt/Vol., Packaging, Price:** 600 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** R. Leviton. 1980. Soyfoods magazine. Summer. p. 16-17. "Mr. Jhasun Koo's Korean tofu shop (2139 Dundas St.) is located underneath a garage and service station. The traditional-style shop, which began operation in 1976, produces about 5,000 pounds of tofu weekly, in the form of 2000, 40-ounce containers of nigari-made tofu." He has 7 workers. Two-thirds of Pyung Hwa's market is Oriental stores, the rest going to natural foods stores. With Vital Eat handling his tofu distribution now, and Mr. Koo's recent conversion to nigari and organic soybeans, he expects to increase sales to the natural foods trade.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Jhasun Koo.

Label. 1983, undated. 5 by 4.25 inches. Plastic film. Blue and light blue on clear film. "Soybean cake. Gateau aux feves de soya. Keep refrigerated."

Talk with Martha Gifford Thompson of Rochester Zen Center. 1989. April 11. She once visited a small tofu shop on Dundas in Toronto. She is not sure what nationality of people ran it. Talk with Jon Cloud of Soy City Foods. 1989. May 3. Pyung Wa was an early tofu company on Dundas St.

Talk with Jhasun Koo, owner and founder. 1989. May 4. He started making tofu in 1978 (not 1976) on Dundas St. Before that he had made soy sprouts in his home basement. In 1978 the only other tofu companies in Toronto were Yet Sing (probably the first) and Hwa Chang. Both were run by Chinese-Canadians and both are still in business. In 1986 he moved from Dundas St. to his current address: 115 McCormack St., Toronto, ONT, M6N 1X8. Phone: 416-767-7604.

1168. Commission of the European Communities. Agriculture. 1978. Report of the study group on vegetable proteins in foodstuffs for human consumption, in particular in meat products. Luxembourg. v + 150 p. (EUR 6026). [20+ ref]
• ***Summary:*** Contents: Summary of conclusion and recommendations. Introduction: Origin, terms of reference and composition of the Study Group, mode of operation of the study group and the form of its report, scope of the report. Sources of vegetable protein foods: Vegetable protein foods and the farming community. Vegetable protein foods and the consumer: Nutrition, safety, acceptability. Current technology and commercial development: Legislation, type (a), (b), (c), and (d) products. Enforcement. Other foods.

Appendixes. I. Membership of the Study Group and the Commission Secretariat. II. Part 1. The nutritional situation in the EEC, by A. Ferro-Luzzi and A. Mariani. Part 2. Note on the methods for the evaluation of protein quality, by A. Ferro-Luzzi and A. Mariani. Part 3. Amino acid composition of some traditional foodstuffs and of potential sources of proteins for human consumption, by T. Staron. III. Part 1. Existing and new sources of plant proteins suitable for use in human nutrition, by T. Staron. Part 2. Toxic substances contained in potential sources of proteins for human consumption, by T. Staron. IV. Commercial development of soya bean protein products in the EEC, by A.G. Ward. V. Potential vegetable protein sources for human consumption from within the EEC, by T. Staron. VI. Summaries of existing legislation concerned with the use of vegetable protein foods in meat products and the meat product regulations of the EEC countries, Canada and USA, by A. Brincker.

Page 102 states that in Luxembourg "The addition of vegetable protein products to meat products is not permitted." Address: Luxembourg.

1169. Halpin, Anne Moyer. 1978. Unusual vegetables: Something new for this year's garden. Emmaus, Pennsylvania: Rodale Press. xv + 443 p. See p. 46-52. Illust. by Cynthia Hellyer. Index. 24 x 20 cm. [45* ref]
• ***Summary:*** The chapter titled "Soybean" (p. 46-52) starts with a beautiful, full-page illustration and contains excellent, accurate, detailed information by an organization that has done pioneering work with green vegetable soybean varieties (and organic gardening and farming) in America. Contents: History of vegetable soybeans in the

USA. Description of plant. Habit: Erect vs. prostrate. Preferred climatic conditions. Choosing the best variety: Kanrich (shatter resistant), Seminole, Rokusan [Rokusun], Jogun, Hokkaido, Fuji, Bansei, Extra Early Green, Early Green Bush, Fiskeby V Vegetable Bean, Pickett, Okuhara, Akita, Altona, Envy, black soybeans. Planting. Fertilizer (on poor soil can increase yield markedly). Inoculation. Plant protection against diseases and insects. Growing in a cold frame or greenhouse. When and how to harvest. Freezing. Basic cooking. Nutritional value. Serving as edamame, in the pods. Recipe ideas. Growing with high-lysine corn for succotash. Making coffee from dry soybeans. Seed sources: Burgess Seed and Plant Co. (Galesburg, Michigan); W. Atlee Burpee Co. (Warminster, Pennsylvania; Kanrich); Comstock, Ferre and Co. (Wethersfield, Connecticut); William Dam Seeds (West Flamboro, Ontario, Canada); DeGiorgi Co. (Council Bluffs, Iowa); Gurney Seed and Nursery Co. (Yankton, South Dakota; Disoy); Johnny's Selected Seeds (Albion, Maine; Envy, Altona, Traverse, Meredith, Giant Green); Kitazawa Seed Co. (San Jose, California; Extra Early Green); Le Jardin du Gourmet (West Danville, Vermont); Earl May Seed and Nursery Co. (Shenandoah, Iowa); Nichols Garden Nursery (Albany, Oregon); Stokes Seeds, Inc. (Buffalo, New York; Early Green Bush, Verde); Thompson and Morgan, Inc. (Farmingdale, New Jersey; Fiskeby V, Okuhara); and the Vermont Bean Seed Co. (Manchester Center, Vermont; Black Soybean)."

Soybeans are also mentioned in each appendix: 1. Directory of seed sources for the vegetables in this book (p. 385-89). 2. A seasonal planting guide (p. 390-91). 3. Soil preferences (p. 396). 4. Optimum climate conditions (p. 401). 5. Making the best use of your garden (p. 406-07). 6. Food values of exceptional vegetables (p. 414-15). 7. A quick kitchen guide: How to use these vegetables in your favorite dishes (and a few new ones!) (p. 420-21; Flavor: Buttery, unique. Use green beans in appetizers, hors d'oeuvres and snacks. Salads. Soups. Vegetable side dishes. Main dish casseroles and combinations. Can be frozen or canned).

Also discusses: Amaranth (p. 1-8, incl. grain amaranths). Cowpea (p. 140-45). Peanut (p. 276-301). Address: Rodale Press, Emmaus, Pennsylvania.

1170. Ontario Soya-Bean Growers' Marketing Board. 1978. A summary of board structure and marketing system. Chatham, Ontario, Canada. 24 p. 28 cm.

• ***Summary:*** The first 7 pages of this report are titled "Soybean: An historic review of Ontario production," being extracts from a paper presented by Dr. J.W. Tanner, Head, Crop Science Dep., Univ. of Guelph.

The soybean pioneer in Canada was Charles A. Zavitz at the Ontario Agricultural College, starting in 1893. By 1927 Zavitz had evaluated more than 100 varieties, most of them for at least five years. In 1923, the soybean program at Harrow was started by Dr. F. Dimmock. In 1927 Dr. Dimmock was transferred to the Ottawa research station, where he continued his work on soybeans and produced an excellent string of soybean varieties over the next 35-40 years including Acme, Comet, Crest, Mandarin, Capital, Merit, Kabott, and Pagoda. The Harrow research was continued by Caspar Owen who, in 1931, started to breed soybeans. "This program was to prove to be one of the most outstanding in North America producing such varieties as AK (Harrow, Harman, Harly, Harosoy and Harome)."

"Two short-lived crushing plants were established in the southwest part of Ontario in the mid-1930s, one of which was located at Colborne Street in Chatham. The late 1930s were critical years for the soybean in Ontario, and without the Maple Leaf Mills plant (which was primarily processing flax) and Toronto Elevators, there would have been no place to market the new crop.

"The establishment of soybeans as a major crop in North America was assured by the occurrence of World War II."

"With the construction of a new plant in Toronto in 1944, Victory Mills launched one of the greatest promotions of a crop ever witnessed in the Province of Ontario. Extension bulletins, newspaper advertisements, movies, newsletters and meetings inundated the farmers with information and enthusiasm. Acreage grew and by the early 50's the soybean had become a major cash crop in Southern Ontario and had its own marketing board. "

Also discusses: Information and product sources. Soybean processors (three in Ontario). Comparable duty rats on edible oil products. Ontario Soya-Bean Growers' Marketing Board–Appointments 1978, officers and address. Address: Box 1199 (175 Keil Drive North), Chatham, Ontario N7M 5L8, Canada.

1171. Rohmer, Richard. 1978. E.P. Taylor: The biography of Edward Plunket Taylor. Toronto, Ontario, Canada: McClelland and Stewart. 355 p. See p. 140-41. 24 cm. Index.

• ***Summary:*** In 1938 E.P. Taylor "had decided that Canadian Breweries Limited should invest in a subsidiary known as Sunsoy Products Limited, which processed soya beans on a small scale in Toronto."

During World War II, Taylor accepted a challenge offered to him by the Controller of Fats and Oils, Mrs. Phyllis Turner, who he considered to be a very competent and attractive woman. Mrs. Turner had tried unsuccessfully to get Canada's major packing and milling companies, such as Canada Packers and Maple Leaf Mills, to cooperate with her. At the time, Maple Leaf Mills did own and operate a small soya bean processing plant, but it was the only one in Canada. To make matters worse, so few soya beans were

grown in Canada that they had to be imported from the United States.

She asked to see Taylor (who was used to handling grain in his breweries), told him about the critical shortage of vegetable oils in Canada, and asked him if he would consider constructing a plant to process vegetable oils. He said that he would, for his brewery company was interested in doing more work to support the war effort.

Taylor told the board of Canadian Breweries that he thought the company should investigate this proposal. He did a lot of research himself. He traveled to Decatur, Illinois, and saw several soybean plants in operation. From his experience with Sunsoy he realized that a large unit, which included elevators and a crushing plant, could produce large amounts of oil. Moreover, he believed that soya bean oil would have a good future in Canada when the war was over.

Taylor has asked T.G. Ferguson to come into the soybean project, to conduct a detailed study, and to come up with a proposal that would estimate the costs of constructing the plant and operating it. Meanwhile, Taylor obtained an option on several acres of land on the waterfront at the eastern end of Toronto Harbor.

By early December 1943 he had made the decision to go ahead and build the plant. He "made a public announcement that a new $25 million project for the extraction and processing of vegetable oils would be built by Canadian Breweries" (p. 140-41).

In April 1944 initiated a new underwriting for Canadian Breweries Ltd. It was completed in mid-summer and raised over $1 million of expansion capital for the company, which included the new soya bean processing and vegetable oil plant, to be named Victory Mills Limited." It would be a Canadian Breweries subsidiary."

The new plant was an experiment with equipment not used before in Canada–mechanical screw presses coupled with a solvent extractor. Taylor had decided that the plant should be able to process about 3 million bushels of soya beans per year–even though only 874,200 bushels had been grown in Ontario in 1943. The vegetable oil and the protein feed to be produced by the plant were urgently needed commodities and Taylor was sure that Canadian farmers would respond by growing more soybeans. By 25 Nov. 1944 three of the five mechanical screw presses were in operation producing soya bean oil to meet the acute shortage and using soya beans imported from the USA to augment those produced in Canada. "The remainder of the presses came into service in 1945, on schedule" (p. 154-55).

In 1944 some $2,000,000 was spent to build Victory Mills.

Note: E.P. Taylor lived 1901-1989. Richard Rohmer was born in 1924.

1172. Shearson Hayden Stone Inc. 1978. Special survey: U.S. and Canadian soybean processing facilities. New York, NY. 8 p. Nov.

• ***Summary:*** The USA has a total soybean crushing capacity of 1,226 million bushels/year based on 330 available days. A ranking of the capacity of major U.S. soybean crushers is as follows (as of 1 Nov. 1977):

Cargill 224 million bushels/year. 18.3% of industry total.

Archer Daniels Midland 178 million bushels/year. 14.5% of industry total.

Central Soya 94 million bushels/year. 7.7% of industry total.

A.E. Staley 93 million bushels/year. 7.6% of industry total.

Ralston Purina 92 million bushels/year. 7.5% of industry total.

All Co-ops 232 million bushels/year. 19.0% of industry total.

Other 312 million bushels/year. 25.4% of industry total.

The leading soybean crushing states (in million bushels per year capacity) are: Illinois 258, Iowa 176, Minnesota 83, Tennessee 73, Indiana 70, Arkansas 69, Missouri 68, Mississippi 59, Ohio 50.

The individual soybean crushing plants with the largest capacity are (* = food grade plant): ADM* (Decatur, Illinois) 150,000 bushels/day. Quincy Soya (Quincy, Illinois) 120,000 bushels/day. Cargill, Inc. (Memphis, Tennessee) 100,000 bushels/day. A.E. Staley (Des Moines, Iowa) 100,000 bushels/day.

Canadian soybean crushers capacity (total 148,000 bushels/day) are: Maple Leaf Mills (Windsor, Ontario) 60,000 bushels/day. Victory Mills (Toronto, Ontario) 42,000 bushels/day. Canadian Vegetable Oil Processing (CVOP, Hamilton, Ontario) 33,000 bushels/day. Maple Leaf Mills (Toronto, Ontario) 13,000 bushels/day. Total: 148,000 bushels/day. Note: Maple Leaf Mills is the largest Canadian soybean crusher, with a total capacity of 73,000 bu/day.

1173. Stanley, D.W.; deMan, J.M. 1978. Structural and mechanical properties of textured proteins. *J. of Texture Studies* 9(1/2):59-76. [21 ref]

Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada.

1174. Tanner, J.W.; Hume, D.J. 1978. Management and production [of soybeans]. In: A.G. Norman, ed. 1978. Soybean Physiology, Agronomy, and Utilization. New York: Academic Press. xii + 249 p. See p. 157-217. Chap. 6. [64 ref]

• ***Summary:*** Contents. 1. Introduction. 2. Planting: Soil and climatic requirements, choice of cultivar, fertility, tillage and seedbed preparation, weed control, time of planting, row width and seeding rate, planting equipment,

inoculation, seed dressings. 3. Management during the growing season: Selection and use of herbicides, lodging, diseases, nematodes, insects, hail damage, minor elements, irrigation. 4. Harvesting. 5. Drying and storage. Address: Dep. of Crop Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

1175. Ward, Gordon M. 1978. A history of the research station, Harrow, Ontario, 1909-1974. *Research Branch, Canada Dept. of Agriculture, Historical Series* No. 10. 72 p. [14 ref]

• ***Summary:*** This history contains an excellent section titled "Soybeans," which contains a detailed history of the Harrow station's research contributions to this crop, including its very important breeding program.

"A very modest variety-testing program was started at the Station by Dr. Dimmock in 1924 and continued until 1929 when it was taken over by Mr. C.W. [Casper / Cass] Owen. The first hybridizations of soybeans were made in 1931."

" In 1943 Mr. Owen released his first new variety called Harman, which was well received by the industry and was soon widely grown. It was an earlier-maturing soybean."

Harrow's first important variety was A.K. (Harrow). Other key Harrow soybean varieties and their dates of introduction are: Harman 1943. Harley 1948. Harosoy (1951). Hardome (1953). Harosoy 63 (1963). Harwood (1970). Harlon (1974).

Other key researchers at Harrow include Dr. A.A. Hildebrand (plant pathologist), Dr. B. Buttery (physiologist), Dr. R.I. [Richard] Buzzell (pronounced BUZ-ul, geneticist; he assumed responsibility for the soybean breeding program in 1962 when C.W. Owen retired), Dr. J.W. [John] Aylesworth (plant breeder). Note: Dr. Ward retired from Harrow in Oct. 1976. Address: Former staff member, Research Station, Harrow, Canada.

1176. Whigham, D. Keith; Minor, Harry C. 1978. Agronomic characteristics and environmental stress. In: A.G. Norman, ed. 1978. Soybean Physiology, Agronomy, and Utilization. New York: Academic Press. xii + 249 p. See p. 77-118. Chap. 4. [92 ref]

• ***Summary:*** Contents. 1. Introduction. 2. Light: Response to day length, response to light intensity, response to light quality, interaction between light and temperature. 3. Temperature: Effect of temperature on growth and development, on nitrogen fixation, on physiological processes, on seed quality, on protein and oil, and on pests. 4. Water: Effect of mulching, water deficit, excess water, atmospheric humidity. 5. Wind: Effect of wind, effect of windbreaks. 6. Pests: Birds and rodents, diseases, insects, weeds. 7. Conclusions.

The length of the dark period is the controlling factor in eliciting photoperiodic responses. Flowering occurs when the day length becomes shorter than the critical value for the cultivar. An excellent map (p. 79) shows the zones of best adaptation for cultivars of maturity groups 00 through X. Table II (p. 80) lists some cultivars classified by maturity group in North America: 00 (farthest north, mostly in Canada)–Altona, Portage. 0–Merit, Swift. I–Hark, Hodgson. II–Beeson, Corsoy. III–Calland, Williams. IV–Clark 63, Kent. V–Forrest, Hill. VI–Davis, Lee 74. VII–Bragg, Semmes. VIII–Hardee, Improved Pelican. IX (farthest south; southern Florida, Mexico, Cuba)–Jupiter. Address: 1. Dep. of Agronomy, Iowa State Univ., Ames, IA 50011; 2. Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

1177. Peterson, John B. 1978? History of Agronomy Department, Purdue University. Lafayette, Indiana: Purdue Univ. Dep. of Agronomy. 174 p. Undated. Unpublished typescript.

• ***Summary:*** Contents: Early interest in agricultural education and research in Indiana: Indiana legislative act of 1829, Indiana legislative act of 1835. The ought years [1900-1909]: Undergraduate and non-graduate teaching, graduate program, research activities, extension, professional activities. The teen years [1910-1919]: Undergraduate and non-degree teaching, graduate program, research activities, extension, professional activities. The twenties: Undergraduate and non-degree teaching, graduate program, research activities, extension, professional activities. The thirties: Undergraduate and non-degree teaching, graduate program, research activities, extension, professional activities.

Alfred T. Wiancko is mentioned throughout: In 1903 he joined Purdue as Associate Professor of Agronomy in the School and Assistant Agriculturalist in the Station. He would later become the first head of the Agronomy Department (p. 10). "Thus, by 1903 four strong people, who would build and shape the future of Agronomy at Purdue (Wiancko, G.I. Christie, Martin L. Fisher, and Samuel D. Conner) were now on board... In the 1902-03 Catalogue... Wiancko had been promoted to Associate Professor Agriculture... At the Station, Wiancko was assistant to W.C. Latta in the agricultural program. Wiancko took Latta's place as agriculturist in the Station in 1905" (p. 11). "The title 'Agronomist' began to appear in 1905 with the listing of Wiancko as Associate Professor of Agronomy." (p. 11). In 1907-08 courses in soils and crops were grouped under the main heading of 'Agronomy.' This was the first indication of an independent Agronomy curriculum. Fisher and Wiancko taught the six courses. In 1908 "Wiancko was listed "in charge" of Agronomy, a possible indication that in the School as well as in the Station, Agronomy was considered to be a department" (p. 12).

Graduate program: "As early as 1882 the annual register described an M.S. program based on at least three years of study of an 'advanced science,' passing an exam, and submitting a thesis... In 1894 Charles S. Plumb became responsible for the graduate program in Agriculture..."

Research activities: Research in soil improvement concerned the effects of adding organic matter, "acid" phosphate, raw rock phosphate and muriate of potash.

Extension: In 1900 the Indiana Corn Growers Association was formed. In 1939 Lowell S. Hardin wrote his thesis at Purdue on this history. G.I. Christie was one of the charter members. Starting in 1882 the State Board of Agriculture sponsored the Farmers' Institutes. Latta became a principal leader in the growth of the institutes. "The first work in Indiana to be known by the name 'Extension' was authorized by the Purdue Experiment Station in 1906 following the Smith Act by the Indiana General Assembly in 1905. G.I. Christie was promoted from Assistant in Field Crops to Associate in Agricultural Extension, a new department of the Experiment Station in 1906. This dynamic, articulate man was well fitted for the needs of his time. An excellent organizer, inspirational speaker, and demanding leader, he caused extension to flourish under his leadership. During the winter of 1906 every county in the state was scheduled for Institute meetings... Christie became Director of the Extension Department in the Experiment Station in 1907.

As the 1920s began, Wiancko was still head of the Soils & Crops Department of the Station. In 1924 Keller E. Beeson (who graduated from Purdue in June 1922) was added to the agronomy extension staff. "Beeson and Pence were excellent teachers, helpful, persuasive, and articulate with each possessing a great sense of humor. Their enthusiasm and love for their work was always obvious." Christie and Beeson were both leaders in the International Crop Improvement Association, founded in 1919. "Christie and a handful of leaders from other corn belt states launched the seed certification idea. In Indiana the seed certification program was introduced in 1920 by the Indiana Corn Growers Association in cooperation with Purdue University..." Note: By the spring of 1929 G.I. Christie had left Purdue and was at Guelph Agricultural College, Guelph, Ontario, Canada.

"A major program assigned to Beeson in 1924, in addition to seed certification, was soybeans... In 1924 the soybean acreage in Indiana was less than 200,000. Most were cut for hay. Combines were not common until after 1930. Beeson and Pence talked up the potential of soybeans as a cash crop for all... By Beeson's retirement in 1962 the state acreage had grown to 2,750,000, a spectacular example of the results of public research and education, due largely to Beeson and Pence."

Starting in the 1930s, G.H. Cutler was active in soybean crop improvement.

"Soybeans were grown for grain by 485 farmers in 1919. By 1939 there were 1,377,000 acres in the state.

Note added by Sandy Spitznagel, secretary to the head of the Dep. of Agronomy: These men followed but overlapped with Prof. Wiancko: Cutler joined the staff in 1926. Albert Probst arrived in 1936 as USDA soybean man, did his PhD while at Purdue, and spent his professional life at Purdue as our "Mr. Soybean." Talk with Sandy. 2000. Jan. 10. This edition of the manuscript, finalized in about 1978, has gone through two subsequent revisions, one by Dr. Fred Patterson in the 1980s and another by Dr. Marvin Phillips currently. All three manuscripts are located at Purdue University Department of Agronomy, in the office of the department head, in a central file under "department history." Address: Dep. of Agronomy, Purdue Univ., West Lafayette, Indiana.

1179. **Product Name:** Vitasoy (Soymilk).
**Manufacturer's Name:** Vitasoy (USA) Inc. (Importer). Made in Hong Kong by Hong Kong Soya Bean Products Co. Ltd.
**Manufacturer's Address:** San Francisco, California.
**Date of Introduction:** 1979. January.
**Wt/Vol., Packaging, Price:** 250 ml Tetra Brik Aseptic carton.
**How Stored:** Shelf stable; refrigerate after opening.
**New Product–Documentation:** Spot in Soyfoods. 1982. Winter. p. 56. "Vitasoy in America." Shurtleff & Aoyagi. 1984. Soymilk Industry & Market. p. 32-33, 43-44, 130-53. "In January 1979 Yvonne and Irene Lo incorporated The Soya Bean Products Co., N.A. (SBPC) as a marketing company for HKSBP's products in North America. They opened headquarters that month on Bush Street in San Francisco and began immediately to market and distribute

plain and malted Vitasoy in Canada in 250 ml Tetra Brik Cartons. In February 1981 they introduced the same products to the USA, immediately after the U.S. Food and Drug Administration lifted its ban on aseptic Tetra Pak type cartons (because of a disproven concern over hydrogen peroxide residues from sterilization). Thereafter, many major Asian soymilk manufacturers also began to import soymilk to America."

• ***Summary:*** Contents: Introduction. 1. Soybean food uses in Asia. China: Soaking dry soybeans, tou chiang (soybean milk), tou fu (soybean curd), processed tou fu products, tou fu pi (protein-lipid films), huang tou ya (soybean sprouts), whole soybeans, fermented soybean foods, production and consumption. Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products, yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), whole soybeans, fermented soybean food, production and consumption. Korea: Tubu (soybean curd), processed tubu product, soybean sprouts, whole soybeans, soybean flour, fermented soybean food, production and consumption. Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap {soy sauce}, tauco {soybean paste}), food mixtures, production and consumption. Thailand: Tofu *(tauhu),* soy sauce, green soybeans in the pods *(tourae).* Philippines: Soybean sprouts, soybean coffee, soybean cake, soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. Middle East. References–Soybean food uses in Asia.

2. Soybean food uses in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa.

3. Soybean food uses in Europe and U.S.S.R.

4. Soybean food uses in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela. Mexico: New village process, commercial developments. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America.

5. Soybean food uses in North America. United States. Canada. References–Soybean food uses in North America.

6. Soybean food uses in Australia. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprouts, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soy sauce, fermented soybean paste, fermented whole soybeans, natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. 9. Industrial production and selling prices of edible soybean protein products.

10. Barriers to accepting and using soybeans in food: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Address: NRRC, Peoria, Illinois.

1181. [Shurtleff, William; Aoyagi, Akiko]. 1979. Soyfoods buyer's guide [Tofu, tempeh and miso shops in the USA and Canada]. *Whole Foods (Berkeley, California)* 2(1):42-44. Jan.

• ***Summary:*** A listing of all companies in the USA and Canada, by food type, by state.

Note: This is also the earliest English-language publication (one of two in this issue) seen that uses the term "Soyfoods" in the title. Shurtleff and Aoyagi compiled this list and gave *Whole Foods* permission to use it free of charge. Address: P.O. Box 234, Lafayette, California 94549.

1182. Brinton, William F., Jr. 1979. Soybeans–The ecology of productivity. *Acres U.S.A.* Feb. p. 8-9.

• ***Summary:*** This paper was presented recently at the International Federation of Organic Agriculture Movement (IFOAM) meeting in Montreal, Quebec, Canada. The author found that "soybeans responded more favorably to nitrogen additions stemming from organic sources than to equivalent amounts from chemical sources. He also found that undigested manure can exert initial inhibitory effects on root development, this when compared to composted manure."

1183. Sanderson, J.B.; Sterling, R.; MacLeod, J.A. 1979. Soybean trials. *Research Station Charlottetown, P.E.I., Research Summary* For the year 1978. See p. 81-82. (Agriculture Canada Research Branch).

• ***Summary:*** Soybeans are discussed in the section titled "Protein and New Crops." Six soybean varieties were tested. "Recently developed soybean lines and varieties are extending the area of adaptation. Soybeans planted in early

June were harvested with a plot combine [a small combine for harvesting small test plots] at three locations near Charlottetown in mid-October. The early maturing varieties were in the range of 16 to 18% moisture. The line *Maple Presto,* which may be licensed in 1979, gave good yields and matured well in 1978. This variety is approximately one week earlier in maturity than *Maple Arrow,* the only variety currently recommended for the Atlantic Region." Address: Prince Edward Island, Canada.

1184. Lischenko, V.F. 1979. World production of food proteins: Situation, structure, trends. *J. of the American Oil Chemists' Soc.* 56(3):178-80. March.
• ***Summary:*** A photo shows Lischenko. Address: Lead, Section of Agricultural Problems Inst. of USA and Canadian Studies, Khlebny pereulok 2/3, Moscow, USSR.

1185. *Plenty News (Summertown, Tennessee).*1979. Soybean project in Guatemala highlands. 1(2):1-3. March.
• ***Summary:*** Plenty was incorporated on 4 Oct. 1974 in the State of Tennessee as a non-profit relief and development corporation. In Solola, Guatemala, Plenty will "be setting up a village-scale soy dairy to produce 100 pounds of tofu and 40 gallons of soy ice bean (ice cream made from soymilk) three times a week. The dairy will supply free ice bean for local school lunch programs. It is intended that the dairy will produce low-cost, high-protein foods and become a local cottage industry, run by indigenous people of Solola. This project is co-sponsored by the NGO Division of the Canadian International Development Agency [CIDA] as phase one of an Integrated Development Project..." Some 1,500 pounds of soybeans have been donated by UNICEF. Suzy Jenkins is one of the soyfood teachers.

"In cooperation with UNICEF and the International Soybean Program (INTSOY), Plenty has screened 20 varieties of soybeans, determining which ones would grow at 6,000 feet in the Guatemalan highlands... The beans were successful, yielding up to 40 bushels per acre. Approximately 100 farmers from San Andreas Itzapa and neighboring towns will be planting trial patches of soybeans in their own fields this coming spring. Plenty will supply them with the seed of the best-performing varieties."

Contains many purple photos of soybeans and soyfoods in Guatemala, including: Suzy Jenkins carrying water in a pot on her head for a soymilk demonstration. A Guatemalan man standing waist-deep in a field of soybeans with a bearded Farm member looking on, smiling. Guatemalan women crushing soybeans in a metate, filtering out soymilk using a cloth sack, then drinking the soymilk. A little girl drinking soymilk from a big cup. Planting soybeans. Amaranth plants.

Note 1. This is the earliest document seen (April 2004) that mentions Solola, Guatemala, in connection with soy.

Note: This is the earliest document seen (Jan. 2003) concerning Plenty Canada. Address: 156 Drakes Lane, Summertown, Tennessee.

1186. Lambert, J.W. 1979. [Sven] Holmberg, soybean pioneer in the far north. *Soybean News* 30(3):4. April.
• ***Summary:*** "I met Sven Holmberg for the first time in July, 1951. He was visiting soybean breeding projects in northern United States to exchange ideas and germplasm. That summer of 1951 was one of the coolest in Minnesota records, but Sven was uncomfortable with our 'heat.' He was, of course, accustomed to the summer weather of his native city, Norrkoping, Sweden, where for a decade or more he had been breeding soybeans that would flower under very long photoperiods and tolerate relatively low midsummer temperatures.

"Holmberg had been commissioned by his government to attempt to develop soybean varieties which could be produced in Sweden, and he had correctly identified coolness during the reproductive stages as the most important temperature limitation to successful culture of the crop in his country. Accordingly, he decided to search for genetic tolerance to low temperatures at flowering time. His search led him to northern Asia in the region around the Sea of Okhotsk, where soybeans have been grown for a long time and where the maritime summer days are frequently cloudy and cool.

"The germplasm he brought back from this region, when crossed with 'early' genotypes from other sources, became the basis for the varieties 'Fiskeby V,' released in 1968, 'Bravalla,' released in 1975, and 'Träff,' released in 1978. These varieties have become world-wide standards for adaptation to long, cool summer days. On the U.S. maturity scale, Fiskeby V is earlier than our earliest Group 00 varieties so perhaps could be considered 'Group 000.' At Norrkoping, which lies at 58º 36' N. Lat. and has a mean July temperature of about 61º F, Bravalla and Träff average six and eleven days earlier than Fiskeby V, respectively. To emphasize this earliness still further, the variety Träff in 1978 produced ripe seed at Umea, Sweden. Umea is located at 63º 48' N. Lat. and in 1978 had a mean July temperature of 57º F. On contrast, Chicago, Illinois, lies at 41º 47' N. Lat. and has a long time average July temperature of 76º F.

"The Holmberg varieties are low growing (15-25 inches) and yield only modestly (15-35 bushels per acre), but the marvel is that they mature seed at all under the very long photoperiods and the low average summer temperatures of central Sweden. I am sure that Sven Holmberg had few illusions of Sweden becoming a major producer of soybeans, but he was interested in showing that the crop could be produced as a nutritious home vegetable and a usable source of protein in military rations. This he accomplished, and at the same time he developed

germplasm which has proved useful in several other countries.

"Holmberg has been generous in sharing his germplasm with other soybean breeders. Several Canadian workers have used his lines in their crosses. For example, one of the parents of 'Altona' is a Holmberg line. Northern European workers have also made good use of his germplasm.

"Through the years Sven and I have exchanged materials for use in our respective breeding programs, and we have kept in frequent touch with each other. He is a man of warm personal charm and engaging intellect. Early on we enjoyed a number of common interests, but I suppose the one thing that cemented our friendship was our mutual interest in soybeans. Once, in 1956, I had the pleasant opportunity of visiting Norrkoping and seeing his research plots at Fiskeby. I was impressed then as I still am, twenty-three years later, with the achievements of this modest Swede in adapting the soybean to the conditions of the far north. Sven is presently in his eighties, but is still supervising an extensive soybean breeding program."

Photos show: (1) Sven A. Holmberg. (2) J.W. Lambert. Address: Prof., Dep. of Agronomy & Plant Genetics, Univ. of Minnesota.

1187. **Product Name:** Kome Miso.
**Manufacturer's Name:** Shin-Mei-Do Miso Co.
**Manufacturer's Address:** 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
**Date of Introduction:** 1979. April.
**Ingredients:** White rice koji, soybeans, salt, water.
**New Product–Documentation:** Letter/Order from Lulu Yoshihara. 1976. Nov. She orders a copy of *The Book of Miso, Vol. II.*

Letter from Lulu Yoshihara. 1981. Sept. 9; Martin. 1982. Comox District Free Press. Sept. 17; Leviton. 1983. Soyfoods. Winter. p. 36-37; Shurtleff & Aoyagi. 1983. Book of Miso. 2nd ed. p. 238. The company was started in April 1979 by Lulu Yoshihara. Leviton. 1982. In a Small Bright Building. Yasuo (nickname "Yoshi") grew up on a farm in Japan and already knew how to make miso. The shop can make about 10,000 lb of miso in a typical year. Yasuo & Lulu Yoshihara run the business.

Talk with Yasuo Yoshihara. 1996. March 22. Their first miso was a white rice miso named "Kome Miso." It was sold only to natural- and health food stores. His business is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping.

1188. Smith, Robert A. 1979. Delsoy Products (1943-1963) (Document part, I) (Interview). In: The Ford Experimental Laboratory and the "Square House." Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 44-72.

• ***Summary:*** By the 1940s, many U.S. states had a fill [filled] milk law, which prevents the blending of vegetable fats (which cost about half as much as butterfat) with dairy products to make any product which simulates a milk product–such as ice cream or whipped cream. During World War II, a restriction stated that cream could not contain more than 18% butter fat, in order to conserve butter fat which was in short supply. To circumvent this law, two partners in Chicago, Illinois, Eric Russell Swanson (the production man, who owned the Swanson Dairy in Chicago) and Herbert Marshall Taylor (the promoter and salesman) formed the Russell Taylor Company and developed a whipping cream product made by adding 17% vegetable fat to cream containing 17% butterfat. It was a very successful product in the Chicago area and was eventually bought out by the Bowman Dairy Co. So they decided to come to Michigan, which didn't have a filled milk law, and develop a similar product–which they named Devonshire Topping. It, too, was very successful, so the Michigan dairies had the state legislature pass a law to prohibit it.

Taylor had read about Henry Ford's soybean milk through the publicity it was getting. He visited Bob Smith at the Carver Laboratory and asked if Smith could make whipping cream from soybeans. Smith had never tried this before but in a few days work at the Laboratory (using a soymilk process first developed at Moir House Lab) he had samples that Taylor was very pleased with. Taylor said he wanted to start producing the product commercially in Michigan using the Ford soybean base. Henry Ford said that he did not want to get into the business of producing soybean milk for sale, but he gave Smith permission to give Taylor small amounts to experiment with and to work with Taylor to design a plant to produce the soy base product in Dearborn. Ford wisely warned Smith to be very careful with Taylor (who looked like a promoter) and not to get involved in any stock deals.

Starting in the spring of 1943, Smith worked in his spare time, designed all the equipment (based on the design of the equipment in the Carver Laboratory but on a larger scale), and built a plant in the old Livonia Dairy at 2001 S. Telegraph Road (at Harvard) in Dearborn. Several other people also worked on the job. The plant's initial capacity was about 1,000 gallons per day (one shift). The equipment in Ford's Carver Lab was designed to produce 150 gallons of soymilk per day in a small non-stop stream. The funds needed to equip and establish the plant in Dearborn came from profits made by selling Devonshire Topping in Detroit. "In the latter part of 1943 we began production [of soy-based whip topping] in the [Livonia] dairy. We had lots of problems getting the equipment because of the war and the scarcity of materials. Eventually we got the thing going. We started experimentally, selling across state lines to test the law. We advised the Agricultural Department what we were

doing. We shipped to Toledo and we sold in Detroit. The product sold very well. Of course, there was no whipping cream. We just couldn't make enough of the product to supply the demand."

To make Delsoy they started by making soymilk from low-fat soybean meal, then added vegetable oil and liquid sugar (a blend of a small amount of corn sugar and a larger amount of sucrose from either sugar cane or sugar beets) to make about 3,000 gallons a day of the base for the topping. The protein produces the foam that makes the whipping possible. The fat produces the stabilizing that keeps it whipped. The sugar is added to give a sweet flavor.

The name Delsoy was Herbert Marshall Taylor's idea. The filled milk product that his company had been selling previously in Detroit was named Devonshire Topping. But that name was contested by the people at Devonshire-Melba Co. and they prevailed. Taylor was going to have to change the name of his product, and at the same time he was changing it from a dairy-based product to a soy product–so he thought of "delicious soy" or "Delsoy." In addition, the first letter was the same as the D in Devonshire, which would help in advertising the new product to former customers. The Russell Taylor Co. manufactured Delsoy for the first year or so, until the company name was changed to Delsoy Products. The company name was composed of Eric Russell Swanson's middle name and Herbert Marshall Taylor's last name.

Herbert Marshall Taylor "was the only son of a superintendent of the Canadian Pacific Railway. He had been raised in kind of a royal fashion. He rode around in private railroad cars and lived pretty well. He was very expert at spending money at a high rate of speed, which was one of our big problems after the company was formed. He spent money like it was going out of style and we always had trouble."

"Harvey Whitehouse was a dairyman in Detroit and he was hired to operate the Russell Taylor plant. It was in the Grand Trunk Terminal warehouse in Detroit [Russell-Taylor Inc., 1951 East Ferry Ave. at 3rd Ave, Detroit 11]. He didn't join us until after our plant was completed in Dearborn. When our Dearborn plant was completed, they shut down the warehouse plant in Detroit and he came out and operated the Dearborn plant. At that time I was working at Fords [the Ford Motor Co.] and I was just spending part of my time at the Delsoy product... it was somewhere in the fall of 1943 I believe... Harvey Whitehouse was hired because he was qualified to operate both refrigeration and steam equipment... He was hired from the Rosebud Dairy in Detroit to operate the equipment at the Russell Taylor warehouse on Third Avenue in Detroit. Russell Taylor had... rented an existing plant there, used it on a part-time basis, and paid for the use of the equipment on a per-gallon basis.

"Now when we started Delsoy Products, we had our refrigeration and we had hired our own people to deliver it... We never sold Delsoy out of that warehouse [on Ferry Ave. in Detroit]. All the Delsoy we sold out in the Dearborn plant. That was the Devonshire Topping that we sold out of the Ferry Avenue warehouse."

H.M. Taylor closed down Devonshire Topping because "he got in trouble with the War Food Board for using too much milk solids in his product. He used about four times his allocated amount of milk solids and was sued by the government and was found guilty. He and Swanson and the rest of the company were fined. They had to stop the operation on account of that." That was when they shut the warehouse in Detroit. At about the same time the filled milk law went into effect and they couldn't produce it any more. Delsoy had been in production for about a year before the lawsuit was settled with the government. Taylor got the larger of the two fines because he was the instigator and leader of the idea. "We were definitely anxious to get Taylor out of the company because he was definitely running us into the ground with his wild spending." Bob Smith put up the money for Taylor to keep him out of jail and in exchange took over Taylor's stock in the company–which gave Smith control of two-thirds of the company. But he decided it would be best to split the ownership among himself, Swanson, and Whitehouse. Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Baut: Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: Smith: 313-777-5394. Baut: 313-565-3000.

1189. Smith, Robert A. 1979. Delsoy Products (1943-1963) (Document part, II) (Interview). In: The Ford Experimental Laboratory and the "Square House." Conducted by Donald V. Baut of Dearborn Historical Museum, May 31. 72 p. transcript. See p. 44-72.

• ***Summary:*** Bob Smith left the Ford Motor Co. in Aug. 1945 to work full time with Delsoy Products. Taylor and Smith each owned 1/3 of the stock, Swanson owned 1/6, and various other people owned the remaining 1/6. Swanson and Taylor put in the money and Smith contributed the know-how. Delsoy Topping sold very well because no dairy whipping cream was available. They shipped to Toledo, Ohio, and sold in Detroit, Michigan.

Taylor and Swanson were fined by the federal War Food Board for using too much milk solids in their original dairy-based whipping cream. Smith offered to pay off Taylor's $6,000 fine to get Taylor out of the company. Taylor was a lavish spender and the source of much conflict. At one point he tried to grab a majority of the stock for himself. Taylor's interest in the company was to develop a product and then sell the stock to make money on the stock rather than on the sale of the product. Smith, Swanson, and Whitehouse ending up owning Delsoy Products.

Originally Delsoy Topping was sold in paper containers purchased from the Sutherland Paper Co. in Kalamazoo, Michigan. Delsoy bought the containers by the carload, 300,000 at a time. When Sutherland went out of business, Delsoy switched to buying containers from the Crown Cork and Seal Co. in Philadelphia. During World War II Crown Cork and Seal had developed a pressurized metal can to use for insecticide sprays by the military. Delsoy was the first to realize that the can's unique valve (produced by the Super Whip Co. in Chicago and used with nitrous oxide gas) made it suitable for whipping cream. So the company modified its formula for Delsoy Topping, put it in this pressurized can, and in 1946 or 1947 named it Presto Whip. They were the first company to ever put a topping in a pressure can and sell it. It immediately became a huge success, was widely advertised, and was soon sold by every chain store in the area. Soon Delsoy Products was working 3 shifts, making 25,000 cans a day–sold mostly in the Detroit area. Soon they were selling the products over a range of 350 miles in lower Michigan, Ohio, and parts of Indiana, Pennsylvania, and New York. By 1963 they had 23 distributors. One of their first big customers was Awrey Bakery, a prestige account, that bought 300 gallons/day, 5 days a week. They mixed equal parts of Delsoy and dairy whipped cream to get a superior product for use in cream puffs. Initially they refrigerated all products. Later they would freeze everything immediately and keep it frozen until it was distributed to the stores.

The process for making Delsoy Topping was a very technical and difficult one–even for people with much experience in making it. There was a patent application made under the name of Henry Ford and R.A. Smith but it was probably never completed or issued. Initially the soybeans were grown by Ford but after Delsoy Products began, "low temperature soybean meal" with high protein solubility and most of the fat removed was purchased from Central Soya. Being a vegetable product, it was subject to less bacterial deterioration than cream products. To further extend the shelf life, Smith adapted a machine that was developed for the sterilization of orange juice then used it to heat the product to 300 degrees for 1.5 seconds, followed by rapid cooling to produce a sterile product. Delsoy competed very favorably with similar dairy products. It was less expensive and each can contained 40% more product (10 oz vs. 6-7 oz), and it had superior whipping qualities with much higher whipped volume. Initially the can and valve cost about $0.11 and the product (Presto Whip) cost $0.06. It retailed for $0.29. At one point a chocolate flavor was introduced, but it was soon discontinued. They sold Delsoy Topping to institutions, in quarts to smaller bakeries, 5 gallon cans to larger bakeries, and 10-gallon cans to Awreys.

Zazu Pitts, a famous actress, "health addict," and close friend of Gloria Swanson got interested in the product, visited the Carver Lab to try the soybean milk, and for a while considered buying a franchise.

After Presto Whip was launched, Delsoy Products began a new company named Delsoy Distributors. The first big product they distributed was Hawaiian Punch. Later they started the Smith, Swanson, Whitehouse Brokerage Co. and distributed Good Luck Margarine, Red Star Yeast, Hawaiian Punch, etc.

In 1963 Bob Smith left the company; Harvey Whitehouse and his son David bought Bob's stock. Today Delsoy Products is named Whitehouse Products. Note: Bob Smith was born on 1 April 1913, so he was age 66 at the time of this interview.

Update: Talk with Richard B. Folsom of Canton, Michigan. 1992. Jan. 31. According to Don Baut, a curator at the Dearborn Historical Museum, Whitehouse Products was purchased in 1983 by C.J. Christoff & Sons of Lowell, Michigan.

Talk with Bob Ely at Chadalee Farms Inc. 1992. Feb. 4. The company is now called Chadalee Farms, Inc. and Christoff Gourmet Foods is one division. The only non-dairy product they still make that they acquired from Whitehouse Products is Chadalee Farms is imitation sour cream. They also private label it under other brands, such as Nuggett, Pocahontas, etc. Within the past few months they have discontinued the whipped toppings and the aerosol toppings. When they bought the products from Whitehouse they changed the brand name from Whitehouse to Chadalee Farms. Whitehouse and Chadalee also packed the products under many national brands. For more details, he suggests contacting Dave Whitehouse in Dearborn, Michigan, at 313-562-0242. Dave now works for Chadalee as a salesman. Address: Smith: 26351 Hollywood Ave., Roseville, Michigan 48066; Baut: Dearborn Historical Museum, 915 Brady St., Dearborn, Michigan 48124. Phone: Smith: 313-777-5394. Baut: 313-565-3000.

1190. Lifestream Natural Foods, Ltd. 1979. Lifestream (Document part). In: Midwest Natural Foods Distributors, Inc. 1979. Catalog 13. Spring, 1979. Ann Arbor, Michigan. iv + 290 p. See p. 113, 249-51.

• ***Summary:*** Packaged goods (p. 113): Lifestream: Carob mint fudge, Cashew halvah, Hiker's bar, Mega bite bar, Sesame dream bar, Sunshine honey bar. These retail for US$0.38 to $0.46 each.

In the refrigerated section: Full-page ad (p. 249). "Lifestream natural fruit 'n nut delites!" No sugar. No corn syrup. No fillers. No chemical additives or preservatives! Lifestream–Nourishing the roots of society. A photo shows packages of 4 of the products (each with both English and Canadian text): Almond delite. Strawberry delite. Raspberry delite. Peach delight. Several of these products themselves are also shown, together with the natural ingredients from which they are made.

Full-page ad (p. 250). “Essene Bread. Wholesome. Nutritious. Uncompromising quality. Organically grown food that tastes good.” A large label of this 1-lb loaf of bread is shown. The only ingredient is sprouted organically grown wheat–no salt. “There are now six Essene breads to choose from: Regular, raisin, fruit, seed, rye, and fruit muffins.”

Refrigerated products: Lifestream. Delights & Pastries: Almond, peach, raspberry, strawberry, butter tarts, peanut butter cookies. These retail for US$0.39 to $0.42 each.

“Sprouted grain breads (organic). Refrigerated or freeze: Essene fruit muffins, bread, pumpernickel-rye, raisin, seed bread, Lifestream Essene fruit cake, 8 grain sprouted bread, sesame sprouted bread, sunflower sprouted bread.” These breads retail for $1.37 to $1.76 each. Address: [Richmond, BC, Canada].

1191. **Product Name:** Tempeh.
**Manufacturer’s Name:** Farm Foods.
**Manufacturer’s Address:** R.R. #3, Lanark, ONT, K0G 1K0, Canada. Phone: 613-278-2215.
**Date of Introduction:** 1979. June.
**Ingredients:** Soybeans, water, culture.
**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed).
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Allan and Susan Brown. 1998. May 11, followed by a detailed letter from Allan. In the late summer of 1974, having met and become engaged on the Wisconsin Farm, Allan and Susan hitch-hiked to The Farm in Summertown, Tennessee, where they were married later that year. Susan writes: “When we arrived at the Gate, it was Cynthia and Albert Bates who graciously took us in and shared their humble tent-house on Hickory Hill. (They even moved next door for a weekend to make room for my parents when they came from Boston to attend the wedding.) While we were staying there, Cynthia sometimes took me to the soy dairy, where she and Alexander Lyon were experimenting with ways to make tempeh. They had heard about it from Dr. Hesseltine in Illinois. I learned to make tempeh starter on rice from Cynthia. Little did I know then that I would eventually make my livelihood making tempeh!

“Our next experience with tempeh was in January 1976 while we were visiting my parents in Belmont, near Boston, Massachusetts. On my mother’s shelf was a tempeh kit–a small package containing dry split soybeans, starter, and instructions. She had ordered it via a Farm catalogue. The culture was spores mixed with starch, to make such small amounts easier to measure. I made tempeh on the water-heater, in various containers. The most effective was a covered casserole (very Earth-friendly compared to the disposable plastic bags we now use!) The results were delicious, although there were a few patches of dark gray and some dried out places where the culture hadn’t grown.”

In 1978 Allan learned how to make tempeh from Mary Hubbard (who was from The Farm in Tennessee) in the kitchen on The Farm in Canada. Mary and her husband Nick had their home base in Tennessee. From the Farm-affiliated Denver Center (in Colorado), where they had been making tempeh, they had come to Lanark, Ontario, to help out at The Farm, while most of the community members were away at Thunder Bay planting trees as a fund-raiser for Plenty and while Allan and Susan were bonding with a newborn baby given to them by a young lady who did not want to keep her baby. For about 3 weeks Mary and Nick made “every kind of soy product under the sun, including tempeh.” A good friend of Allan’s named Paul Smith ran Baldwin Natural Foods–the hottest macrobiotic store in Toronto. Paul had seen the tempeh made by Robert Walker at Baldwin Natural Foods; he was making about 50 lb/week of tempeh shaped like a doughnut. Allan thought there was a market for a second tempeh product, so in the summer of 1979 he started making tempeh under the Farm Foods label. Allan photocopied a label with a bamboo border, and sold the tempeh at Baldwin Natural Foods. Allan made the tempeh in the community kitchen and incubated it on the rafters above the wood stove in the kitchen. There wasn’t a lot of agreement on The Farm to make tempeh commercially. There was a constant struggle for the available energy from Plenty and from Farm Foods. After about 6 months, during which they made only 2-3 very small batches of tempeh and sold them to just one store (Baldwin Natural Foods) in Toronto, Allan and Susan were ready to leave The Farm. Their tempeh operation wasn’t really a business yet; it was more just testing the waters. Robert Walker had suffered a stroke and his tempeh-making equipment was up for sale. So as the Browns moved to Toronto, taking their fledgling tempeh operation with them, they bought Robert’s equipment. In June 1980, in the heart of Toronto’s Chinatown, they started Noble Bean (which see) as a tempeh manufacturing company.

Photo copy of Label (5¼ by 3½ inches) sent by Allan Brown. 1998. Jan. 21. This label was used for a short period of time in 1979. It has a bamboo border, with the word “Tempeh” written in large letters across the top half of the label. “Contents: Soybeans, water, *Rhizopus oligosporus* culture, vinegar.” Below that are the words “Farm Foods” with a thin outline around each word. Between the two words is a circular logo, which shows rows of crops (soybeans) in a field converging in the distance at the foot of three mountains. Below that is the typewritten address: “R.R. #3, Lanark, ONT K0G 1K0.” Note: The typeface used for the word “Tempeh,” the bamboo border, and the Farm Foods logo all appeared earlier (about 1978) on tempeh products made at The Farm in Summertown, Tennessee.

1192. Jaeger, Martin. 1979. The likely effects on Ontario soybean producers of the shift in the location of a soybean crushing plant from Toronto to Windsor. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 17 p. June. Series: Economics Information. 30 cm. [6 ref]
• ***Summary:*** Contents: Foreword. Trends in the Ontario oilseed industry: Production trends, facility changes, institutional trends. The current situation. The change: UCO (United Co-Operatives of Ontario) facilities, Maple Leaf-Monarch facilities. The likely effects of the change on Ontario farmers: The effect on pricing and delivery patterns, pricing during the close of navigation, direct delivery, effects of the new processing location on elevators. Summary. References.

Index to tables: 1. Oilseeds production, imports and exports, Canada, crop year 1969-70 to 1977-78. 2. Soybean production and utilization, Canada, 1969-1977. 3. Area, yield, and production of soybeans, Ontario, 1967-1978. 4. Farms reporting soybeans and area in soybeans, Elgin, Essex, Kent, Lambton, and Middlesex, Statistics Canada Survey, mid-year 1969, 1977, and 1978. 5. Availability of major edible oils, by type, Canada, 1967-1977 (calendar year). 6. Supply and disposition of oilseed meals, by crop year, Canada, 1967-68 to 1977-78, crop year beginning August 1. 7. Soybean marketings in Ontario as a percentage of crop year total by month, 1953-54 to 1977-78.

In 1972, the Canadian federal government expropriated some property on the Toronto shoreline (at the northwest end of Lake Ontario) which included the Maple Leaf crushing plant. Maple Leaf began to seek a new location. In 1977 it announced that it was forming a partnership with Monarch Foods (Lever Bros. Limited) to construct an integrated crushing and refining plant in Windsor alongside the proposed United Co-operatives of Ontario (UCO) deep water terminal on the Detroit River. The UCO and Maple Leaf-Monarch facilities are scheduled to open in the summer of 1979. Maple Leaf-Monarch is owned equally by Maple Leaf Mills and Lever Bros. Ltd. Lever Brothers Ltd. was not previously in the oilseed crushing business in Canada, although it is in this business elsewhere in the world on a far larger scale than was Maple Leaf Mills in Canada.

The author thinks the opening of the Windsor crushing plant may increase slightly the average price received by Ontario farmers for soybeans. Address: Economics Branch, Ontario Ministry of Agriculture and Food, Legislative Buildings, Toronto, Ontario M7A 1B6.

1193. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** La Soyarie.
**Manufacturer's Address:** 25 rue St. Etienee, Hull, QUE, J8X 1H5, Canada. Phone: 613-235-5356.
**Date of Introduction:** 1979. June.
**Ingredients:** Organically grown soya beans *(Feves de soja biologiques)*, water, magnesium chloride *(chlorure de magnesium)*.
**Wt/Vol., Packaging, Price:** 500 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Won. 1979. The Ottawa Journal (ONT, Canada). Nov. 28. p. 35. Crosby. 1979. The Citizen (Ottawa, ONT, Canada). Dec. 4. p. 58. "Miracle tofu a busy way of life for couple."

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owners: Koichi & Francine Watanabe.

Label. 1983. 5.5 by 4.5 inches. Plastic film. Red and black on clear film. "No preservatives. To keep fresh, replace water daily." A bit of information, "that may amuse you [from Steve Rowat, March 29, 1989]. Koichi Watanabe who runs La Soyarie in Hull, Quebec, and who left Japan at age 17, and whose brother runs a tofu operation in Japan, learned to make tofu by reading *The Book of Tofu*, in English, like I did."

Address: Dep. of Biology, McGill Univ., Montreal, Canada H3A 1B1.

1195. Horan, F.E. 1979. Corporations and the world food problem. Paper presented at World Game '79, New York University, Loeb Student Center, New York City, NY. July 18. 20 p.
• ***Summary:*** Focuses on ADM, vegetable proteins, TVP, cereal-soy blends, and the Food for Peace Title II program. Figure 1 shows percentage of after-tax income spent on food: Canada 14.8, France 16.5, UK 16.6, Netherlands 16.9, USA 17.0, West Germany 21.2, Korea 46.8, Philippines 50.8.

In the period 1963-65, the percentage of total protein obtained from vegetable and from animal sources was: Developing regions: 81/19. Developed regions 46/54. World 68/32. Address: Vice President, R&D Div., Archer Daniels Midland Co., Decatur, Illinois.

1196. Leviton, Richard. 1979. Soycrafters Association of North America. Director's Report. Colrain, Massachusetts: SANA. 17 p. July 28.
• ***Summary:*** Contents: I. Summary of progress. II. Financial report. III. Proposals to the membership: 1. Establish regional coordinators & develop infrastructure; Activities of the RCs. 2. Soyfoods Data Book (SANA would publish its own Green Book, like the ASA Blue Book). 3. Soyfoods publicity program. Soycrafters questionnaire (Please complete and return to registration desk before leaving

conference). 4. Lobbying FDA/USDA for acceptance of soyfoods in school lunches. 5. Liaison and cooperation with American Soybean Association and Food Protein Council. 6. 1980 SANA Conference in conjunction with INTSOY & NRRC [at the University of Illinois, Champaign]. 7. Children's educational program with theater and video. IV. Organizational plans.

The "Summary of progress" section (p. 1) begins: "Perceiving a lull in the forward movement of the newly formed Soycrafters Association, last October I offered to assume leadership of SANA and to publish its journal, Soycraft. The appointed director, Larry Needleman, found himself swamped with work with his new tofu equipment importing company, Bean Machines, Inc., and willingly handed over the directorship, which consisted of one box of folders and stationery. In January, SANA opened a small office at the New England Soy Dairy, in Greenfield, Massachusetts and David Kilroy joined as advertising and production supervisor for Soycraft." An international mailing was done to all the 900 names on Bill Shurtleff's mailing list, with about a 10% response. The summer conference at Hampshire College was a success, attracting "225 people from all over the USA including Hawaii, Puerto Rico, three from England, one from Switzerland, and a broad mixture of academics, soycrafters, farmers, food technologists. As of July 28, we had generated 65 new members (85 as of 8/27) and 50 subscribers (87 as of 8/27).

"On June 1, SANA took new office space in downtown Greenfield, set up files, began to accumulate review copies [of books] for its library, and purchased an electric typewriter. Essentially, SANA has used its funds to organize and sponsor the Soycrafters Conference (which cost about $14,000) and publish Soycraft #1, sixty pages long."

Two tables (p. 2) compare the types/categories of SANA membership and the number of members in each category in January and in July, 1979, before and after the conference.

Two maps show: (1) The USA and Canada divided into 9 regions. (2) Location of soycraft companies (manufacturers) on an outline map of the USA.

Addenda: Report of the SANA Committee on Committees (3 p.). Overview of committees and proposed activities. Organization chart showing relationship of SANA membership, Regional representatives, executive board, director, and six committees. Address: Director, SANA, 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1201. Muendel, H.-H. 1979. Soybeans: A potential crop for southern Alberta. *Agriculture Canada Research Station, Lethbridge, Weekly Letter* No. 2381. Sept. 19. 1 p.
• ***Summary:*** "Soybean research at the Lethbridge Research Station will help meet an increasing demand for information on new crops for the irrigated areas of southern Alberta. The release last spring of the variety Maple Presto, developed at the Ottawa Research Station, represents a breakthrough in terms of early maturing adapted cultivars. The challenge for breeders is to develop higher-yielding, early maturing varieties. In 1979, about 150 acres were seeded to soybeans by 12 southern Alberta farmers, on an experimental basis." Address: New Crops, Lethbridge, ALB, Canada.

1202. *Bulletin CETIOM.*1979. 4 nouvelles variétés de soja [Four new soybean varieties]. No. 76. p. 11-14. 3rd trimester. [Fre]
• ***Summary:*** The four new varieties are: Weber (Group I, Iowa), Sloan (Group II, Iowa), Verone (Group II, UNCAC), Maple Arrow (Group 00, Ottawa, Canada). Gives information on yields and composition based on trials. Also compares: Hodgson, Amsoy 71, Kingsoy, Wells, Altona, Swift, Evans. Address: France.

1203. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Carmel Hill Tofu Shop.
**Manufacturer's Address:** P.O. Box 3, New Carlisle, QUE, G0C 1Z0, Canada.
**Date of Introduction:** 1979. September.

**New Product–Documentation:** Letter/Order for 100 copies of the pamphlet "What is Tofu" from "Carmel Hill Tofu Shop." 1979. Sept. 25. The company is located at the address shown above.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Dennis Connolly.

1204. Meilke, Karl D.; Young, Larry. 1979. A quarterly North American soybean forecasting model. *Canada, Department of Agriculture, Policy, Planning and Economics Branch, Working Paper* No. 4. 107 p. Sept. (FARM Project). [86 ref]
Address: School of Agricultural Economics and Extension Education, Univ. of Guelph, Ontario.

1205. Saxelin, M.L.; Nurmiaho, E.L.; Korhola, M.P.; Sundman, V. 1979. Partial characterization of a new C3-type capsule-dissolving phage of *Streptococcus cremoris* [in viili]. *Canadian J. of Microbiology* 25(10):1182-87. Oct. [26 ref]
• ***Summary:*** Native viili is a viscous, ropy, sour milk product produced in Finland by fermenting dairy milk at room temperature after inoculation with a previous fermented batch of product. Capsule-forming strains of *Streptococcus cremoris* are the typical starters for this product. Occasionally fermentation fails and resulting in a non-ropy clot–the subject of this article. Address: Dep. of General Microbiology, Univ. of Helsinki, Finland.

1206. *Vegetarian Times.*1979. An interview with Dr. Paavo Airola. No. 33. Sept/Oct. p. 45-51. [1 ref]
• ***Summary:*** Dr. Airola who was born in Eastern Europe and educated in Scandinavia, is a citizen of Canada and resides in the USA. He advocates a vegetarian diet and distinguishes between a therapeutic diet and an optimum diet. "Many foods are better eaten raw. But some foods, such as grains and some vegetables, are actually better eaten cooked... I could not find a single group of people known for good health who eat an exclusively raw-food diet. On the contrary, the diet of the Hunzakuts is up to 70-80% cooked, and the diet of the extremely healthy Vilcabambas and Yucatan Indians is up to 90% cooked. I generally recommend a ratio of 70-80% raw to 20-30% cooked.

Concerning protein for vegetarians: "Raw proteins in my diet come mostly from seeds, nuts, vegetables, and raw milk. According to the Max Planck Institute, raw proteins are utilized twice as effectively by the body as cooked proteins. Soybeans, sunflower seeds, sesame seeds, almonds, potatoes, buckwheat, and most fruits and green vegetables contain complete proteins. As you can see, this is what Americans have been told for several decades, that only animal proteins are complete and that vegetable proteins are not complete... Soybeans are very difficult to use in human nutrition because they contain trypsin inhibitors which interfere with protein digestion. They must be cooked thoroughly to destroy these inhibitors and make them edible.

Two photos show Dr. Airola.

1207. Williamson, Doug. 1979. Maple Leaf Monarch Co. oilseed plant will have little impact, study claims. *Windsor Star (Essex County, Ontario, Canada).* Nov. 20. p. 20.
• ***Summary:*** A new government report, commissioned by the Ontario Soya-Bean Growers' Marketing Board and prepared by the economics branch of the Ontario Ministry of Agriculture and Food (OMAF), says that Ontario's newest oilseed processing plant in Windsor (near central Michigan) will not have any dramatic impact on the provincial soybean industry. Though the oilseed crushing capacity of Ontario province is now 50% greater, there will be only minor price changes for area farmers because of the plant's location and therefore little incentive for them to increase production. The most significant effect of the plant will be that western Canadian rapeseed and Ontario soybean meal will replace U.S. soybean meal in the southwestern Ontario market. Yet the 1979 crop is expected to total 25 million bushels, up 32% from the 19 million bushels last year. Ontario processor requirements are between 35 and 40 million bushels; the difference is made up by soybean imports from Michigan and Ohio. During the warm months, crushers buy soybeans by the boatload. But in winter, when Seaway navigation is closed, they must rely on stored soybeans since trucking from elevators is expensive.
Address: Star agricultural reporter.

1208. Won, Shirley. 1979. "Meat without bones" business growing: Hull couple banking on soybeans. *Ottawa Journal (Canada).* Nov. 28. p. 35.
• ***Summary:*** Francine and Koichi Watanabe first tried to start a tofu shop in Ottawa but failed. Now they own and run La Soyarie in Hull, Quebec, Canada. Contains 5 recipes. A large color photo shows Koichi as he uses a hand-turned winch to lift a pressing sack filled with okara and soymilk.
Address: Ontario, ONT.

1209. **Product Name:** Mugi Miso. Renamed Barley Miso in about 1981.
**Manufacturer's Name:** Shin-Mei-Do Miso Co.
**Manufacturer's Address:** 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
**Date of Introduction:** 1979. November.
**Ingredients:** Barley koji, soybeans, salt, water.
**New Product–Documentation:** Talk with Yasuo Yoshihara. 1996. March 22. Their second miso, introduced in November 1979, was a barley miso named "Mugi Miso."

Sold only to natural- and health food stores, it was renamed "Barley Miso" in about 1981.

1210. Crosby, Louise. 1979. Miracle tofu a busy way of life for couple [Francine & Koichi Watanabe of La Soyarie in Hull]. *Ottawa Citizen (Ontario, Canada).* Dec. 4. p. 58. • ***Summary:*** The company started in June 1979. They plan to open a soy deli and make tofu cheesecake and tofu burgers on a larger scale. Address: Staff writer.

1211. Crosby, Louise. 1979. Tofu flavor is delicate, subtle–or bland! *Ottawa Citizen (Ontario, Canada).* Dec. 12. p. 5. • ***Summary:*** "Tofu fans say its flavor is delicate, subtle. Others call it bland, tasteless. Alone, its not much to get excited about, but combined with other foods and spices, or in a sauce, it can be delicious." Summarizes many ways of using tofu.

"Good tofu cookbooks are also available and many of the unfamiliar ingredients are available in Oriental food stores.

Included in the list are *The Tofu Cookbook,* by Bauer and Anderson (Rodale Press), *Tofu Goes West,* by Gary Landgrebe (Fresh Press), *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi (Autumn Press), and *The Heartsong Tofu Cookbook,* by Toni and Bob Heartsong (Banyan Books). • ***Summary:*** This is largely a compilation of information from many other books and articles. On the cover is a color painting of The Gardener (or Vertumnus), from his series, The Four Seasons, c. 1590, by Giuseppe Arcimboldo (or Arcimboldi) of Milano.

In Chapter 12, on China, the section titled "Meats and alternates" (p. 110-13) notes that the soybean is called the "Chinese Cow" [sic, "Cow of China"] because of its versatility. Soybeans are used as whole dry beans and as sprouts, or they can be made into a firm white curd called "Chinese cheese" [sic], which can be used in many different ways. Soybean milk may be used in much the same way that westerners use cow's milk. They are fermented to make the favourite condiment, soy sauce, or "fermented bean curd that is packed in jars and sold as red bean sauce or white bean sauce,..." Cantonese names from soy products are: Mien chiang: A syrup-like sweet bean paste. Dow-foo (tofu). Foo yu (fermented tofu). Tiem jook (dried yuba, broken into pieces). Wow doo [Wu dou]. Black soybeans. Dow see [doushi, soy nuggets]: Salted, fermented black soybeans.

In Chapter 30, on Japan, the section titled "Meats and alternates" (p. 336-37) notes that products made from soybeans include: (1) "Shoyu, a sweetish soy sauce made from wheat and barley [sic], soybeans, salt, and water." (2) Miso, or "fermented soybean paste," used mostly for flavouring soups [miso soup]. (3) Tofu, or soybean curd, is a staple in Japanese cookery. "Its smooth, custard-like texture and bland flavour make it an ideal ingredient. It is extremely versatile and readily absorbs other flavours. Many "restaurants in Japan take great pride in their tofu dishes."

In Chapter 31, on Korea, the section titled "Fruits and vegetables" (p. 350-51) discusses soybeans and their products at length. Soy sauce is used to season *kim* (nori) and other edible seaweeds. Soy sauce is an ingredient in "hot pepper mash" *[kochu jang]*. Soybeans are used to make "soybean mash" *[doen jang]*. Dry soybeans are roasted in an iron pot, then ground, and the roasted soy flour is used as a garnish over rice cakes or plain cooked rice; children enjoy eating the coarser roasted bits that are sifted out of roasted flour or meal. Soybeans sprouts are eaten lightly cooked as a vegetable. Soybeans are also made into tofu *(tu bu);* a brief description of the process is given, in which the drained curds are left in their hemp bag to form a firm cake, which may be cut, dipped into soy sauce, or fried in sesame oil. "Oil can also be made from the soybeans, but it is not commonly used or prepared."

Although commercial soy sauce, made in factories, is now widely available, many Korean households still prepare their own soy sauce each fall. Boiled soybeans are pounded, molded into a cone shape, and set to dry until hard. They are then wrapped with rice straw, hung from eves, rafters or ceilings, and allowed to ferment for several weeks [until they become *meju]*. During the winter, these fermented cones may be stored in huge rice-straw bags kept in a cool place.

In the spring, break the cone into small pieces and place in a large earthenware jar, nearly filled with water. Add salt, spices, red peppers, and a few charcoal lumps. Leave this in the sun for a few days [sic, 30-60 days] until the molded soybean chunks float to the top and the resulting liquid turns black. Ladle out and filter the black liquid, then boil it to make soy sauce. The solids remaining in the jar are used as soybean mash [after the charcoal is removed].

A portrait photo of the author, with a brief biography, appear on the rear cover and in the Introduction. Address: Ph.D. student, Ontario Inst. for Studies in Education, Toronto, Ontario, Canada.

In the "Company Histories" section, that of Maple Leaf Mills Ltd. is given on pages 141-42; it includes Maple Leaf Milling and Toronto Elevators.

"Maple Leaf Mills Ltd.: The inspiration and hard work of a handful of men in the late 1930's blossomed into Maple Leaf Mills of the 1970's, a diversified enterprise whose history is part of Canada's coming of age in feed and livestock production and agricultural research. Today's computer-speed marketing aids were not available when Toronto Elevators Ltd., a grain company, and Maple Leaf Milling Co., a flour miller, began selling feed in the late 1920's. By 1929, both were members of the original Canadian Feed Manufacturers Association and competing against one another in the feed business. More than 30 years later, the two pioneering companies merged to form Maple Leaf Mills Ltd. and retained the 'Master Feeds' brand name of Toronto Elevators.

"There had always been strong bonds between the two firms. Fred Presant, who joined Toronto Elevators in 1929 to establish a feed manufacturing operation at the request of company founder Gordon Leitch, was an old friend of Ted McRostie who engineered the creation of Maple Leaf's feed production set-up.

"From its flour milling operation at Pt. Colborne, Ontario, Maple Leaf had the by-products at hand to produce prepared feeds for livestock as well as a scratch grain for poultry made of a whole grain mixture. Ted McRostie, manager of the feed department, worked closely with Prof. Graham of O.A.C. and in the early 1930's Maple Leaf was selling Monarch Poultry and Livestock Fees as well as a line of Cafeteria Open Formula Feed. Bags of O.A.C. Cafeteria laying mash–illustrated by hens walking up to a cafeteria–were produced on the philosophy that birds had selected from a range of ingredients. Maple Leaf Milling was the only company that sold feeds on the open formula basis: 300 lbs. crushed oats, 150 lbs. bran, 85 lbs. soybean meal, 100 lbs. middlings. The whole formula was right on the jute bags. Maple Leaf's second feed mill was constructed in Montréal just after the Second World War.

"Of the feed manufacturing developments which modernized the industry in the 1950's, there were two. Prior to bulk handling, 'feed was put in 50 lb. paper bags instead of 100 lb. jute bags, the reason being that there were three flights of stairs to climb in made-over buildings.' The second revolution was the 'pelleting of feeds, making crumbles. That had most to do with the mechanization of broilers and caged layers since mash in conveyor belts is difficult to control.'"

"As a grain company, Toronto Elevators did not have animal or cereal by-products for feed manufacturing as did meatpacking or flour milling companies. Toronto Elevators used what was called a whole-grain base and this is what they came to in later years. This was the start of high-energy complete feeds, the result of experimentation, observation and results obtained by Fred Presant and others in the company. 'I had very definite ideas as to the quality of the product that we were going to put out under the name of Master Feeds which I had originated.'

"Presant's purposefulness grew out of his earlier work in the poultry business, managing a 2,000 laying hen farm at Bracebridge, Ontario in 1917, one of the largest farms in Ontario at the time. When Master Feeds was launched as a department of Toronto Elevators, 'nobody knew who we were or our product and the salesmen would have to go round and visit individual poultrymen, usually with a flock of 200 laying hens,' notes Presant. But as the farm business began to grow. Presant's salesmen approached farm suppliers to be dealers. In 1932 Fred Presant served as President of C.F.M.A."

"'Then your reputation grows.' A concrete symbol of the sales work was the construction of a new feed plant in Toronto in 1938."

"In 1962, Toronto Elevators merged with Maple Leaf Milling and the feed operations were combined as Master Feeds." Address: Box 2080, Station "D," Ottawa, Ontario K1P 5W3, Canada.

• ***Summary:*** Like other animals, humans "require many nutrients including essential fatty acids, vitamins, minerals, and fatty acids. Human requirements for the nine essential amino acids have been estimated recently (World Health Organization, 1973) and are similar to those proposed for other animals.

Long before the isolation and characterization of individual amino acids, it was recognized that, in general, proteins from some sources (such as plants) were inferior to those from other sources (animals). "This knowledge led to the concept of protein quality... Many people during the past 75 years have been engaged in the sometimes frustrating problem of evaluating protein quality.

"If research had followed a different course we might have set requirements for each essential amino acid (the way we do for vitamins) and the idea of 'protein quality' might never have arisen. In theory, we don't need a method for 'protein quality'–all we need are satisfactory methods for measuring (available) amino acids and an accurate knowledge of human requirements for each essential amino acid. Block and Mitchell (1946) pioneered this approach to evaluating food proteins, calling the method chemical score."

"Thomas (1909) provided us with the first true method for assessing differences in protein quality–the biological value (BV) method. Mitchell (1924) standardized the procedure and applies it to many foods." Equation: BV = (retained nitrogen divided by absorbed nitrogen) x 100. A more detailed and meaningful equation is then given. "Biological value is a nitrogen balance technique..." The method is laborious and subject to several possible sources of error.

Osborne, Mendel, and Ferry (1919) "increased the dependency of the rat growth method by expressing the weight gained and protein consumed as a ratio–hence the name "protein efficiency ratio" or PER." Equation: PER = Weight gained divided protein consumed. "PER values for a protein increase as the protein content of the diet is raised up to a maximum value (usually about 9-10% protein)... Although PER is the official method of the United States and Canada, it has serious shortcomings which are generally well-known and will be discussed later.

"Miller and Bender (1953) proposed net protein utilization (NPU) which assessed the nitrogen (N) utilization of the test protein. The carcass nitrogen of the test group and a group fed a non-protein diet are measured." Equation: NPU = (Body N of test group minus body N of group fed a non-protein diet) divided by the N consumed by the test group. "Determination of body nitrogen is a messy business... NPU is widely used, particularly in Europe.

"Bender and Doell (1957) published a simpler version of NPU called net protein ratio or NPR. Body weight rather than body nitrogen was measured." Equation: NPR = (Body weight of test group minus body weight of group fed a non-protein diet) divided by the protein consumed by the test group.

"Hegsted and Chang (1965) "proposed the slope ratio (SR) assay which is a multi-dose procedure which includes a non-protein diet and three or more dietary levels of protein. Only levels falling in the linear portion of the slope are used in computing the slope. Lactalbumin [a protein obtained from milk whey that is similar to the albumin in human blood serum] was chosen as a reference protein and

the slope of the test protein was expressed as a percent of the slope for lactalbumin."

Relative protein value (RPV) "is the same as the slope ratio (SR) except that the data for the non-protein is omitted when calculating the slope." SR is generally considered more suitable that RPV.

"All of the methods discussed measure, either directly or indirectly the efficiency of the utilization of the food protein for deposition of body nitrogen." The search is on for a method to replace PER. It is important to remember that "protein quality depends principally on the content of the limiting amino acid and the relative requirements of that amino acid for maintenance and growth."

An interesting discussion and debate follows. Dr. Peter L. Pellett of MIT [Massachusetts] concludes: "Data for lysine, total sulfur amino acids and perhaps threonine are all that are necessary for the vast majority of food proteins and, when expressed as percentages of food requirements, have the tremendous of being *additive* for mixed complementary dietaries, an attribute that is impossible for bioassays, no matter how accurate, to emulate." In short, in the future, we should focus on amino acid requirements rather than protein quality. Address: Dep. of National Health and Welfare, Tunney's Pasture, Ottawa 3, ONT, Canada.

1222. Pollard, Douglas C. 1979. Sprouts for dieters. Cobalt, ONT, Canada: Highway Book Shop. vi + 89 p. Illust. No index. 18 x 11 cm.
• ***Summary:*** Contents: Preface. Note. Sprouts: A valuable food for dieters. Seeds to sprout (discusses 37 varieties, including soybeans [p. 30]). Sprouting containers. How to sprout. Suggested ways to use sprouts. Soy-related recipes: Soy vegetable soup (p. 58). Creole soy sprouts (p. 71). Soybeans (74). Soy sprout butter (81). Soy sprout milk (84). 1224. Smith, Elizabeth Bernice. 1979. Vegetarian meal-planing guide: A lacto-ovo-vegetarian diet. Winnipeg, Manitoba, Canada: Hyperion Press Ltd. 104 p. Illust. (some color). 21 x 22 cm. [57+ ref]
• ***Summary:*** At head of title: "Dr. Elizabeth Smith's New World of Eating." Table 5e (p. 25) lists calories for meat alternates group. Soybean sprouts, miso, soybean curd (tofu), soybean milk, and TVP are moderate calorie, while soybeans and soy grits are high calorie.

Page 47 notes: "Generally speaking, legumes are moderately deficient in methionine. Soybeans are an exception, as are their by-products, tempeh (fermented), tofu (the curd formed for soya), and soybean milk. All these are roughly equivalent in quality to cow's milk.

Page 49 notes that when breast feeding is not possible, soyamilk may be formulated as a very satisfactory substitute; vitamin B-12 must supplement it in pill form. "An infant who cannot tolerate cow's milk because of allergy and cannot be breast fed may accept a soybean formula until 3 to 4 months of age. At weaning, according to Fomon, the child should continue to receive by cup either soybean formula or soybean milk fortified with vitamin B-12.

Pages 54-56 describe in detail how to sprout soybeans at home, and how to prepare homemade soymilk and tofu (soybean curd). It is advised that fermented soybean products such as miso and tempeh not be produced at home "as the control of the fermentation process by specific micro-organisms is too difficult to achieve without specialized training and equipment."

Soy-related recipes include: American soybean loaf (with soaked, ground soybeans, p. 76). Soybeans printanier (with cooked soybeans). Soya sesame loaf. Soya cheese balls (with cooked, seasoned soybeans). Soybean casserole (p. 77). Sprouted soybean Creole. Sprouted soybeans au gratin. Bean sprout chop suey (with tofu, p. 77). Skillet soya sprouts and beans (p. 78). Soybean stroganov (p. 78). Address: Winnipeg, Manitoba, Canada.

1225. Voldeng, Harvey D. 1979. Soybeans in Canada–Past, present and future. Based on an article [sic, manuscript] by Dr. H. Voldeng. In: Fats and Oils in Canada: Annual Review. Ottawa, Ontario, Canada: Grain Marketing Office, Dept. of Industry, Trade and Commerce, Agriculture Canada. [vi] + 95 p. See p. 1-10. Chapt. 1. [7 ref]
• ***Summary:*** Contents: Introduction. Introduction of soybeans to Canada. Importance of the soybean [worldwide]. Utilization. Food uses of soybeans: Oriental foods–Soy milk, tofu, sufu, miso, soy sauce, tempeh, Hamanatto, natto. Western ingredients–Full fat flour, defatted flour, soy protein concentrates (70% protein), soy protein isolate (more than 90% protein), textured soybean protein. Soybeans in Ontario. Development of short season varieties. Soybeans in Quebec and the Maritimes. Soybeans in the Prairies (southern Manitoba and Alberta).

A table shows soybean acreage in Ontario's leading counties in 1978. Kent 205,000. Essex 192,000. Lambton 170,000. Elgin 63,000. Middlesex 40,000. Other 7,000. Total (Ontario) 705,000 acres.

Soybeans grown in Ontario can be crushed at three plants: (1) Victory Soya Mills (owned by Procter and Gamble) in Toronto. (2) Canadian Vegetable Oil Processing Limited (owned by Canada Packers) in Hamilton. (3) The recently completed Maple Leaf Monarch plant (affiliated

with Unilever Corporation) in Windsor. Total crushing capacity in Ontario is about 35 million bushels per year.

The CSP Foods Plant in Altona, Manitoba, has in some years crushed limited amounts of soybeans imported from the U.S.

"Development of short season varieties: The justification for the effort to develop a large acreage outside of southwestern Ontario as been the magnitude of imports of soybeans, meal and oil. This has been and continues to be sizeable. The situation (in metric tons = tonnes) is outlined below for the 1977/78 crop year: (1) Whole soybeans: Production 527,361. Imports 262,835. exports 64,173. Domestic crushing 728,400.

(2) Soybean oil: Imports 28,100. Exports 1,400. Domestic production 125,600.

(3) Soybean meal: Imports 376,300. Exports 45,600. Domestic production 575,400. Source: *Fats and Oils in Canada, Annual Review,* 1978.

Letter (e-mail) from Dr. H. Voldeng of Agriculture and Agri-Foods Canada. 2010. Feb. 16. The original "article" was not an article but a manuscript that was sent to the publishers of this volume; they reduced the length slightly. It was never published separately, no longer exists, and cannot be cited separately. Address: Agriculture Canada, Ottawa, Ontario.

Address: Univ. of Guelph, Ontario, Canada.

1227. Landsberg, Michele. 1980. Family: 25 pounds later, I'm hanging in. *Toronto Star (Ontario, Canada).* Jan. 14. p. D1.
• ***Summary:*** She spent 26 days at the Nathan Pritikin Longevity Center in Santa Monica, California, where she "practised the austere virtues of exercise, a no-fat [sic, low-fat] diet of natural whole grains and vegetables, and a nicotine-free life." It wasn't easy for an "unsaintly" lady, but she lost 25 pounds.

She even learned about a new wonder food, as crazily versatile as the famous "shmoo" of L'il Abner fame. It's tofu! As exulted by Jim White, Star food writer, who transforms it into everything from tofu cheesecake to stir-fried tofu to tofu-garlic dip. She will give recipes next Wednesday.

"Tofu is a bland, creamy soya bean curd which is almost solid protein; 3½ ounces of the cute little wobbly stuff has only 72 calories compared to 347 calories for the same amount of rump roast.

"It's goofy serendipities like tofu that filled up the blank space left by cigarettes and steak."

1228. *Toronto Star (Ontario, Canada).*1980. Tofu takes the cake as dieter's delight. Jan. 16. p. D2.
• ***Summary:*** A half page of tofu recipes tested by the Star Test Kitchen. The source of each is given. For example: Tofu orange almond dessert, from The Book of Tofu by Shurtleff and Aoyagi. Tofu smoothie, from The Tofu Cookbook by Kathy Bauer and Juel Andersen. Tofu cheesecake, from the Soja Restaurant, which will soon open on Kensington Ave.

An illustration shows a slice of Tofu cheesecake.

1229. White, Jim. 1980. Close encounter of the tofu kind: A white custardy thing zooms out of the Orient onto your lunch counter. *Toronto Star (Ontario, Canada).* Jan. 18. Family section.
• ***Summary:*** This full-page feature states: "Brace yourself, Toronto, for the experience, because there's every indication tofu's going to do more than hover on the horizon like a fleet of sci-fi spacecraft." Victor Food Products in Scarborough [a suburb of Ontario] says that sales of tofu have nearly tripled in one year, from 720 lb/day to more than 1,900 lb/day. Shoppers can now buy tofu in selected Dominion, Lowlaws, Miracle Mart, and A&P outlets. "When the big boys take a bite of the action, you know something is cooking."

The article includes a listing of tofu makers and retailers in the Toronto area. Makers: (1) Pyung Hwa Co., 2139 Dundas St. W. Jhasun Koo. Phone: 534-0237. Korean-style tofu. Firm, 10-oz. cakes cost $0.55. (2) Wah Chong Co., 88 Ossington. Phone: 532-0841. Chinese style. $1.20/dozen. (3) Yet Sing Co., 11 Baldwin St. Phone: 863-0818. Custardy tofu. $0.70/dozen. (4) Victor Food Products. A photo shows Stephen Yu, standing with has packaged tofu and soymilk products.

Paul Smith, owner of Baldwin St. Natural Foods, runs a small night class once a month on making tofu. Branson Hospital (Seventh-day Adventist) has been serving vegetarian meals to patients for 22 years. Much of the protein comes from soyamilk, soya curd, and other soya products. Interest in tofu has been spread by the publication of *The Book of Tofu,* by William Shurtleff and Akiko Aoyagi. Address: Star Food Writer.

1230. Beard, James. 1980. A vegetarian's lunch need not be dull. *Toronto Star (Ontario, Canada).* Jan. 23. p. D6.
• ***Summary:*** "Ten years ago, few people would have dreamed of going to a vegetarian restaurant for lunch–and I count myself among them." Beard finds the food in most vegetarian restaurants too limited, bland and boring.

But then he discovered Greens in San Francisco (near the Presidio and the Golden Gate Bridge). He tried the brochette [two skewers] of vegetables and marinated tofu and, to his surprise, he liked it. The veggies were mushrooms, zucchini, carrots, and onions.

Illustrations show: (1) Two brochettes with one cube of tofu on each. (2) James Beard.

1231. **Product Name:** Beef & Soya Burgers.
**Manufacturer's Name:** Cardinal Meat Specialists Ltd.
**Manufacturer's Address:** 2396 Stanfield Rd., Mississauga, Ontario, Canada.
**Date of Introduction:** 1980. January.
**Ingredients:** Incl. ground beef and textured soy protein.
**Wt/Vol., Packaging, Price:** 14 burgers in a 1 kg reclosable box.
**How Stored:** Frozen.
**New Product–Documentation:** Food in Canada. 1980. Jan. p. 31. "Cardinal introduces 'extended' burgers." Cardinal has introduced chopped, formed, and frozen burgers. Sold 14 in a 1 kg box, they contain 8% soya protein extender and are priced lower and shrink less during cooking than regular beef patties. A photo shows the box.

1232. *Food in Canada.*1980. Cardinal introduces "extended" burgers. 40(1):31. Jan.
• ***Summary:*** Cardinal Meat Specialists Ltd. of 2396 Stanfield Rd., Mississauga, Ontario, Canada, has introduced Beef and Soya Burgers. The chopped, formed, and frozen burgers, sold 14 in a 1 kg box, contain 8% soya protein extender. They are priced lower and shrink less during cooking than regular beef patties. A photo shows the box.

1233. Meilke, Karl D.; Young, Larry; Miller, Dorothy. 1980. A quarterly forecasting model of the Canadian soybean sector. *Agriculture Canada, Policy, Planning and Economics Branch, Working Paper* No. 9. 73 p. Jan. [24 ref]
• ***Summary:*** "Soybean Domestic Demand and Trade (p. 3-5): Until very recently Canada's three soybean crushers were located in the Toronto-Hamilton area and had a combined rated crushing capacity of approximately 635,000 mt. [metric tons = tonnes] per year. Actual soybean crushings varied from 547,000 mt. in 1968/69 to a high of 743,000 mt. in 1978/79 and averaged 657,000 mt. over the eleven year period (Table 1).

"Early in 1980 Maple Leaf Mills closed its small Toronto crushing plant and opened a new integrated crushing plant, jointly owned with Lever Brothers, in Windsor, Ontario. The opening of this new plant has implications for the pricing of Ontario soybeans and for Canadian trade in soybeans, soyoil and soymeal... Canada's soybean crushing capacity will increase by almost 50 percent, to 890,000 mt. per year, when the new plant is in full operation."

"Two recent events may have an impact on the pricing of Ontario soybeans. The first is the opening of the Windsor crushing plant, which Jaeger (1979) feels may increase slightly the average price received by Ontario farmers for soybeans. The second is the removal of the United States tariff of 60¢/bushel, on soybeans, during the recent GATT negotiations. The possibility of shipping Southwestern Ontario soybeans into deficit producing areas in the U.S. adds a new element to marketing and possibly pricing Ontario soybeans."

With the "increased output of soyoil from the Windsor plant, Canada's soyoil price may not be above the U.S. price by the full amount of the tariff. Since there is no publicly reported soyoil price it will be hard to know if this has happened" (p. 48).

Note: This is the 2nd earliest English-language document seen (Sept. 2006) that uses the term "soyoil" to refer to soybean oil. Address: School of Agricultural Economics and Extension Education, Univ. of Guelph, ONT, Canada.

Note: This is the earliest publication seen (Feb. 2003) that mentions Brightsong Tofu. Address: Colrain, Massachusetts.

1237. Leviton, Richard; Shurtleff, William. 1980. Estimates of production and sales of tofu and other soyfoods in the USA and Canada (News release). Soycrafters Assoc. of North America, 305 Wells St., Greenfield, Massachusetts 01301. 1 p. Feb.

• ***Summary:*** Early statistics compiled on the U.S. soyfoods industry: 188 tofu companies, employing 680 people, used 13,500,000 lb of soybeans to produce 33,750,000 pounds of tofu that retailed for $33,750,000.

Other soyfood manufacturers (including 27 tempeh companies and 5 miso companies), employing 225 people, used 4,500,000 lb of soybeans to produce 11,250,000 pounds of other soyfoods that retailed for $11,250,000. The figures were compiled largely by Shurtleff, who gave Soycrafters Assoc. permission to use them. On 8 Feb. 1980 Leviton also sent a letter to Linda Madl, Soybean Bluebook, American Soybean Assoc. with a request to publish these statistics; she never did. Address: 1. Sunrise Farm, Heath Rd., Colrain, Massachusetts 01340; 2. New-Age Foods Study Center, P.O. Box 234, Lafayette, California 94549.

1238. McGregor, Otis. 1980. Report from Ontario [Soya-Bean Growers' Marketing Board]. *Soycraft (Colrain, Massachusetts)* 1(2):10-11. Winter.

• ***Summary:*** "The Ontario Soya-Bean Grower's Marketing Board is a growers' board. In 1949, soybean growers in Ontario petitioned the Agriculture Department to establish a marketing plan and soybeans were declared as a regulatory commodity under the Ontario Farm Products Act. Soybean production in Ontario started in tests plots at the Ontario Agricultural College, Guelph, in 1893. By 1927, O.A.C. evaluated over 100 varieties. The Harrow Research Station began soybean plots in 1923 and later produced such varieties as Harman, Hardome, Harasoy, Harlan, Harcor, Harwood.

"Soybean acreage in Ontario competes with field corn."

Soybean production in Canada is 98% of Ontario origin. Ontario is deficient in production to meet the needs of the three crushing plants which now possess a daily production capacity of 3,550 tons. To be self-sufficient, production would require 1.2 million acres. Last crop year, the Ontario crushers purchased 13 million bushels from the U.S. which enter Canada tariff-free.

"In 1954, the Board, endeavoring to achieve greater competition in the marketplace, exported soybeans to Europe. In 1974, with the variety Harwood, the Board entered the human consumption market in Japan. Harwood, having a greater water-soluble protein, soon became distinguished in that market for tofu and miso.

"The Board negotiates on behalf of its 16,000 growers, the terms and condition of sales from the farm-gate to dealers and processors."

"Editor's note: Soybeans that the Board markets, suitable for tofu-making, include Hodgson, Wells, Harosoy 63, Harcor, Amsoy 71, Maple Arrow, and Evans." Address: Secretary-Manager OSBGMB, Box 1199, Chatham, ONT Canada N7M 5L8, Canada.

1239. Shantharam, S.; Gow, J.A.; Bal, A.K. 1980. Fractionation and characterization of two morphologically distant types of cells in *Rhizobium japonicum* broth culture. *Canadian J. of Microbiology* 26(2):107-114. Feb. [37 ref. Eng; fre]

• ***Summary:*** "Differential centrifugation of stationary phase broth culture of *Rhizobium japonicum* yielded two distinct types of morphological types of bacterial cells, rods, and small coccoid forms with capsulated and non-capsulated cells in each group... Both fractions were capable of nodule formation in the soybean." Address: Dep. of Biology, Memorial Univ. of Newfoundland, St. John's, Newfoundland, Canada A1B 3X9.

1240. Marquard, R.; Schuster, W.; Honarnejad, R.J. 1980. Produktivitaet, Oel- und Eiweissqualitaet von sechs Sojabohnensorten in Anbauversuchen auf zwei deutschen Standorten [Productivity, and quality of oil and protein of six soybean varieties in cultivation studies at two German locations]. *Fette, Seifen, Anstrichmittel* 82(3):89-93. March. [9 ref. Ger; eng]

• ***Summary:*** The six soybean varieties were: Caloria and Gieso (Germany). Altona (Canada). Merit and Beeson (USA). F 66/602 (Romania). The two locations were:

Gross-Gerau (Rhein-Main Region) and Rauisch-Holzhausen (20 km east of Marburg, a relatively cool place at the foot of the Vogelsberg mountains in Hesse). The two locations had distinctly different soil and climatic conditions. Although the protein content varied significantly, the oil content was almost constant. Address: 1-2. Institut fuer Pflanzenbau und Pflanzenzuechtung, Ludwigstrasse 23, 6300 Giessen, West Germany; 3. Tehran, Iran.

1241. Soja Soyfoods Cafe & Delicatessen. 1980. March. New soyfoods restaurant or deli. 10 Kensington Ave., Toronto, ONT, Canada M4Y 1C9.
• ***Summary:*** Leaflet. 1980. Describes the restaurant and the foods it serves. White. 1980. Starweek. April 5. p. 57. Menu. 1980. Soja goes to Mexico.

Menu. 1982. Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in March 1980 by Mary Anderson. Address: Toronto, ONT, Canada.

1242. White, Jim. 1980. Dining out: Jim White goes on a soya spree at Soja and finds the salads and desserts respectable, but the tofu tiresome. Unlike MacArthur, he will not return. *Starweek (Supplement of the Toronto Saturday Star)*. April 5 to 12. p. 57.
• ***Summary:*** Soja, a soyfoods vegetarian restaurant at Kensington Market in Toronto, got mixed reviews. The author loved the tofu desserts but found too much tofu in everything. "You know tofu as bean curd, that squiggly, bland stuff that winks at you from the depths of a platter of Chinese mixed vegetables... tofu is a patty of compressed soya milk... its healthy but tasteless."

"Soja, by the way, means soya in Spanish and is pronounced as in 'So'dja like the meal? Wouldja come again?' The answer is No, pronounced emphatically. Not until the menu–like starch–is modified."

A photo shows Lynn Stirling and Mary Anderson in front of their restaurant. Address: ONT, Canada.

1243. Lang, H.C.; Buzzell, R.I.; Beversdorf, W.D. 1980. Soybean production. *Ontario Ministry of Agriculture and Food, Publication* No. 173. 17 p. AGDEX 141.
• ***Summary:*** "Soybeans were first introduced in Ontario in 1893 and were grown primarily as a hay crop... It is estimated that during 1979 soybeans were grown on 700,000 acres (283,290 ha) in Ontario, mainly in the traditional soybean growing area of Essex, Kent, Lambton, Middlesex and Elgin Counties. Despite this record acreage, $263 million of soybeans and soybean products were imported into Ontario during the soybean crushing year ending August 31, 1979. Soybean acreage in Ontario could expand to 1.2 million acres (480,000 ha) to supply those soybeans and soybean products imported from the United States." Address: 1. Extension agronomist, Ontario Ministry of Agriculture and Food; 2. Agriculture Canada, Harrow Research Station; 3. Crop Scientist, Univ. of Guelph. All: Canada.

1244. Ontario Agricultural College. 1980. Recognition banquet: Zavitz Hall (Leaflet). Guelph, Ontario, Canada: OAC. 2 panels. 22 cm. Single sided.
• ***Summary:*** On the right panel is a photo of Zavitz Hall. The banquet will take place on Monday, 14 April 1980, with a reception at 6:30 p.m. and the banquet at 7:15.

On the left panel is a detailed history of Zavitz Hall. "This historic structure was formally opened as the Field Husbandry Building on Tuesday, January 12, 1914 by Canada's Minister of Agriculture, the Honorable Martin Burrell. Built by the Government of Ontario and financed by the federal government it was specifically designed for teaching and research related to plant production.

"In his opening remarks the minister stated, 'This building erected to meet the ever growing needs of agronomical work stands also, in a sense, as a tribute to the sterling worth and loyal services of the man who has made that work of such high importance to agriculture of Canada–Professor C.A. Zavitz.' The building has since been named Zavitz Hall."

"Built at a cost of $60,000 this was a significant investment for the 200 million dollar field crops industry of Ontario in 1914."

"The basement was divided into storage rooms for grains, greases, seeds and equipment. There, many hundreds of thousands of packages of seed were prepared and organized for research plots throughout the length and breadth of Ontario. These were distributed to thousands of graduates and farmers through the Ontario Agricultural and Experimental Union for assessment of the plant strains they produced. The produce was returned and reprocessed for calculation of yield and other comparisons. Such seeds also were used on the experimental grounds for meticulous testing and comparison by Dr. Zavitz and those who followed.

"Crop research plots surrounded the building for many years after construction, for during the first 50 years after the opening of the building served the Field Husbandry Department. In the latter years of use by that department, (now Crop Science, OAC) even the basement was converted to offices, classrooms and laboratories for students, staff and faculty as the seed processing was squeezed out to a new 'seed' building on campus. The latter building after complete renovation and addition now houses the School of Landscape Architecture.

"Since 1965, Zavitz Hall has served as administrative offices for Wellington College and as a section of the library until the opening of McLaughlin library. Today it serves as a studio facility of the Fine Arts Departments and as office space for other University units such as the Centre for Resources Development.

"Today the quaint building is located at the centre of campus, dwarfed by the concrete of the University Centre, McLaughlin Library and the Physical Sciences Building. Zavitz Hall stands in tribute to Dr. Charles Ambrose Zavitz, graduate of the first degree class of OAC, experimentalist, Director of Field Experiments, Head of the Field Husbandry Department, developer of superior field crop varieties and meticulous researcher from 1888 to 1942."

Talk with James R. Zavitz. 2001. Dec. 6. This banquet is to celebrate the reopening of the refurbished Zavitz Hall. The banquet was held in Peter Clark Hall, a different building (a student center on campus), because there are no banqueting facilities in Zavitz Hall. Address: Guelph, Ontario, Canada.

1245. **Product Name:** Brown Rice Miso.
**Manufacturer's Name:** Shin-Mei-Do Miso Co.
**Manufacturer's Address:** 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.
**Date of Introduction:** 1980. April.
**Ingredients:** Brown rice koji (only a little bran removed), soybeans, sea salt, water.
**Wt/Vol., Packaging, Price:** 450 gm plastic tub.
**New Product–Documentation:** Talk with Yasuo Yoshihara. 1996. March 22. Their third miso, introduced in April 1980, was Brown Rice Miso. They put the brown rice through a rice polisher to remove a just little bit of the bran; this is necessary so the koji culture can grow. This miso is sold only to natural- and health food stores.

1246. Hope, Jane; Bright-See, E. 1980. Milk digestion aid now in liquid form: Nutrition matters. *Toronto Star (Ontario, Canada).* May 14. p. D3.
• ***Summary:*** Those who don't drink milk because they can't digest its lactose [a sugar], might want to try LactAid; just add 4-5 drops to a glass of milk.

Other people are forced to avoid milk and milk products because they are allergic to milk protein. Babies with milk allergies are often given formulas based on soy protein. "Since soy protein is a high quality protein, the babies grow just as well as if they were getting regular milk."

Adults who are allergic to daily milk might "consider using the soy products which are available in many Chinese grocery stores. These include soybean milk and bean curd (also known as tofu or dow fu). The protein in these products is very good." And they contain no lactose.

Small photos show Jane Bright and Dr. E. Bright-See.

1247. Ananth, J. 1980. Tardive dyskinesia: Myths and realities. *Psychosomatics* 21(5):389-91, 394-96. May. [75 ref]
Address: Assoc. Prof., Dep. of Psychiatry, McGill Univ.; Senior Psychiatrist, Allan Memorial Inst.; Director, Continuing Medical Education, Douglas Hospital Center, Montreal, Canada.

1248. **Product Name:** Tofu.
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2847 Dundas Street West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
**Date of Introduction:** 1980. May.
**Ingredients:** Water, organically grown soybeans, magnesium chloride.
**Wt/Vol., Packaging, Price:** 550 gm.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm.: Calories 72, protein 7.6 gm, carbohydrate 2.3 gm, fat 5 gm.
**New Product–Documentation:** Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owners: Pat Guardino & Paul Whitehead.

Label. 1985. 6.75 by 9.5 inches. Plastic film. Orange, green, yellow, and brown on clear. "A Good Source of Protein. Made from Soybeans Organically Grown in Canada." Back label says, "Health is the most precious thing you have. Sustain it by eating good food. Come to our Soyateria for information, education and cooking ideas on Tofu, Soy-Pro, Soyettes, and all of Soy City's delicious and nutritious products. Soyateria–The Soybean Information Center."

Label sent by Jon Cloud. 1989. May 5. Says that this product was introduced in the spring of 1980.

1249. Le Claire, J.-M.; Le Meter, L. 1980. 2.–Du soja, mais aussi des anchois du coton, du tournesol... [2.–About soybeans, but also anchovies, cotton, sunflower...]. *Ouest-France.* June 10. [Fre]
• ***Summary:*** Part two in a series on "Strategies concerning proteins," this article compares various protein sources. Soy is the leading source of protein for both animal feeds and (among oilseeds) human foods. How soybeans have flown into the lead: The history of soybeans is exemplary. This American yellow gold, of which only 1.4 million tonnes (metric tons) were produced in 1935, experienced a surge in production during World War II: cut off from their suppliers of vegetable oils, the U.S. rushed into growing soybeans as a source of oil. Then came the aftermath of the war and the increase in meat consumption in industrialized countries. The needs of Japan and especially Western Europe strongly contributed to the spread a feeding model that has been described since as "Corn-soy," the corn bringing energy and soybeans the indispensable proteins to balance the ration. At the same time, the Americans created animal stock adapted to the consumption of these products.

A monopoly was thus effectively established because China, an equally important producer, was absent from the world market. But in '72, then especially in '73, came a

shortage of fish flour. At the time, all the press was concerned to know if, yes or no, a bed of anchovies had been located along the length of the Peruvian coast. A smaller-than-expected American soybean harvest did not help to calm the appetites without a doubt fueled by a troubled demand. And this in addition to unanticipated Russian purchases came to again weigh upon the market. American farmers profited from it to ask for an embargo. Remember the few weeks of panic that this measure, nonetheless quickly lifted, provoked in places specialized in European animal feed? The Brazilians are infiltrating this crack in the system: they are today at a production of the order of 15 million tonnes, while the U.S. produced 51 million tonnes in 1978. In three years, the Brazilian example has been followed by their Argentinian neighbors (about 5 million tonnes at present).

The small place of other proteins: In the take-off of this primary material [soybeans], Europe is not neutral. It holds to the contrary a strategic role: that of principal importer (14 million tonnes in '78, for $4 billion). Here, the terms of exchange have been wisely studied. Everything happens as if the U.S. and the European Community *(Communauté)* had signed anew a pact of non-aggression. International negotiations provide proof of it: the Americans reluctantly accept the community protection of the cereal market, in exchange, the Europeans open wide their borders to American proteins; only France, among the nine, raises objections (it imports no less than 2.9 million tonnes of soybean oilcakes).

What place remains for other protein sources? A few exceptions aside, it [the place of other protein sources] has a strong propensity to diminish. Thus for the cottonseed oilmeal, a by-product of textile fiber: despite its second position of nearly 8 million tonnes, it does not represent more than 10% of world protein production destined for animal feed.

Also fish, that experienced a considerable expansion between '60 and '71 however and whose production borders that of cottonseed, diminished with the over-exploited anchovy beds.

As for the rest (less than 20% of world production), its small numerical importance does not however obliterate its future. It is in fact perhaps thanks to rape-seed, broad beans, forage peas, that Europe can diminish its dependence in regard to the American continent. Mr. Dronne writes about rape-seed: "The progress of technology and genetics leaves hope for a vast enlargement of its outlets for European and Canadian production..."

Finally, we must not forget the sunflower, principal source of oilcakes in Eastern European countries, nor the peanuts of Senegal or India, if their quality can be a bit better mastered.

Soybeans remain however and for a long time still, without a doubt, a principal material at a relatively good price. This fact, plus its "technical" qualities, explains its success. But it would be dangerous, for the countries that need it, to sleep on the laurels of the soybean. "Even more so," insists Mr. Dronne, "in face of the growing rise of devices to pay for the importations of oil, the principal agricultural exporting countries can be tempted to utilize food arms." Address: France.

1250. Kitts, D.D.; Krishnamurti, C.R.; Kitts, W.D. 1980. Uterine weight changes and tritium labeled-uridine uptake in rats treated with phytoestrogens. *Canadian J. of Animal Science* 60(2):531-34. June. [9 ref]
• ***Summary:*** Note: This is a fairly early report showing that soybeans have estrogenic activity. Biological tests in rodents and ruminants suggest that plant estrogens (phytoestrogens) resemble natural occurring internal (endogenous) estrogens in their mode of action. Estradiol-17β, diethylstilbestrol (DES) and certain phytoestrogens extracted from soybean meal and alfalfa hay were administered intraperitoneally [injected into the abdomens] of immature female rats. The major estrogenic compounds in soybean meal were genistein and daidzein, while those in alfalfa hay were genistein, formononetin and coumestrol. Coumestrol and genistein exhibited uterine responses (changes in uterus weight and moisture content) similar to but much weaker than those of estradiol-17β and DES; the dose required to produce the effects was approximately 100 to 1000 times higher than in the latter two compounds. Address: Dep. of Animal Science, Univ. of British Columbia, Vancouver, BC V6T 2A2, Canada.

1251. **Product Name:** Tempeh.
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** (1) 38 Grange Ave., Chinatown, Toronto, ONT, Canada; (2) From Jan. 1984–293 Augusta Ave. (in Kensington Market, near Oxford St.), Toronto, ON M5T 2M2.
**Date of Introduction:** 1980. June.
**Ingredients:** Soybeans, water, culture.
**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed). In spring 1982 an 8.5 oz size was introduced.
**How Stored:** Frozen.
**New Product–Documentation:** Label. 1985, undated. 5.25 inches square. Green on yellow. "An excellent source of protein. Culturing fine tempeh since 1979." 227 gm. Recipes for Tempeh Shish Kebab, Indonesian Fried Tempeh, Nutritional Yeast and Tempeh Casserole; Letter from Allan Brown. 1985. Aug. 7. "I have been making tempeh since 1979. [He started making it commercially on The Farm in Lanark, Ontario.] We bought Robert Walker's equipment in 1980. We just moved back to the country, near Plenty Canada. We're at R.R. #1, McDonalds Corners, ONT, K0G 1M0, Canada."

Talk with John Gabriel, former tempeh maker and member of The Farm, now living in Nevada City, California. 1992. April 28. Allan Brown is now making 200 lb/day of tempeh, which makes him the biggest tempeh maker in Canada.

Talk with Allan and Susan Brown. 1998. May 11, followed by letters from Allan and Susan. Their company is still named Noble Bean, not Noble Beans. They first began making tempeh commercially in mid-1979 at The Farm in Lanark, Ontario. After about 6 months, by the time Alan and Susan were ready to leave The Farm, Robert Walker had suffered a stroke and his tempeh-making equipment was up for sale. So as the Browns moved to Toronto, they bought Robert's equipment. They located a small shop at 38 Grange Ave., in the heart of Toronto's Chinatown, and founded Noble Bean. There they began making tempeh in about June of 1980. They produced 200/300 lb/week. Their first distributor was Ital Foods, a Rastafarian community that made vegetarian sandwiches and distributed them, along with Noble Bean's tempeh, to natural food stores. Susan writes: "When we began to make tempeh in Toronto, I made the starter. I sterilized bottles of rice in a pressure cooker, and inoculated them with spores from the Tempeh Lab in Summertown, Tennessee (made by Cynthia Bates). We incubated them in our tempeh incubator. In 1983 I started using a larger autoclave to prepare the rice medium. When our second son, Marty Brown, was born (on April 13, 1988), we began buying bulk inoculant from the Tempeh Lab, as we still do."

Allan writes: "In the fall of 1983 we moved back to The Farm near Lanark, Ontario, to have a home birth. We brought a happening scene with us–six freezers and a strong market in Toronto 225 miles away. We were feeling out what things were like an discovered much dissention and competitive vibes among the men (Plenty vs. Farm Foods, etc.). After one week we knew we weren't going to stay. It was coming apart at the seams. But while we were there amongst good friends, Noble Bean was a community business for a short while. Our first son, Casey Brown, was born at the community on Nov. 6, 1983. We left in Jan. 1984, when Casey was 2 months old, and moved back to Toronto, where we rented a house at 293 Augusta Ave. (two doors from Oxford St., postal code M5T 2M2) in Kensington Market. This was the ethnic food center of Toronto. At our house on Augusta, we had our tempeh shop on the first floor, and we lived upstairs. We were then distributing to 40 stores weekly. We also distributed tofu burgers from La Soyarie of Ottawa, Ontario. In late 1984, EcoFarms began distributing our tempeh to farther-flung stores in Ontario."

In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land.

Note 1. This is the earliest soyfoods company seen (June 1998) that has the term "Noble Bean" in the company name.

Note 2. This is the earliest known commercial soy- or tempeh product made by Noble Bean in Canada.

1252. Food City. 1980. Food City: We reserve the right to limit quantities (Ad). *Toronto Star (Ontario, Canada).* July 23. p. A10.
• ***Summary:*** Near the center of this full-page grocery store ad: "Tofu (soya bean curd) product of Ontario, 16-oz. package 99¢" Address: Toronto.

cholesterol, and on steroid excretion in rabbits. *J. of Lipid Research* 21(5):546-58. July. [56* ref]
Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT Canada N6A 5C1.

1257. Leviton, Richard. 1980. Soyfoods in Toronto. *Soyfoods* 1(3):14-19. Summer.
• ***Summary:*** Discusses Vital Eat, Pyung Hwa, Soy City Foods, and Victor Food Products. Victor Food products (102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9) was founded and is owned and managed by Mr. Stephen Yu. In the 3,600 square foot tofu factory, 13 workers (mostly Vietnamese refugees) produce 1,900 lb/day of tofu, 750 gallons/week of Nutrisoya soymilk, and about 200 quarts/day of kinugoshi soybean pudding. Mr. Yu, who was born in China and educated in California, came to Toronto in 1977 to make an initial market survey. He opened his plant in Feb. 1978, with an initial production of 900 lb/day. Mr. Yu now has accounts in all major Toronto supermarket chains. He reaches about 40% of the Oriental market and about 40% of the overall soyfoods market. He speaks fluent English and is "far more forward looking and market conscious than his Oriental competitors in the Toronto area." His production process and equipment are described in detail. Last summer he appeared on a 10-minute television feature that depicted the story of soybeans from field to shop to table. This was followed, in Jan. 1980, by a major article which profiled his company in the *Toronto Star.* This publicity ushered his tofu into the three big supermarket chains not yet carrying it and sales in the four chains that were rose 100%. Note: This is the earliest document seen (April 2001) that mentions Victor Food Products in Canada.

Soy City Foods, at 2847 Dundas St., is a new soy production site due to open in the spring Pat Guardino is general manager and Leonard Bugyra is sales manager. The company is a subsidiary of Golden Age, Inc., a spiritual group which operates a successful vegetarian restaurant downtown and is currently installing a second one next door. The company will start by producing about 600 lb/day of tofu, as well as soymilk and soysage. They will supply their contiguous restaurant and sell bulk soyfoods from their own retail counter in the storefront. They will also produce tofu cheesecakes and okara cookies in the restaurant.

Photos show Soy City Foods and its owners (incl. Pat Guardino), Pyung Hwa Tofu Shop, and Victor Yu of Victor Food Products with Nutrisoya soymilk. Address: Colrain, Massachusetts.

1258. Leviton, Richard. 1980. Traditional tofu in New Hampshire. *Soyfoods* 1(3):34-37. Summer.
• ***Summary:*** There are two tofu shops in New Hampshire. Discusses the work of Jay and Pat Gibbons of North Country Soyfoods (once called Crystal Hills Tofu Shop, in Bethlehem, New Hampshire) and Robert Cook and Viney Loveland of Willowbrook Soyfoods (Gilsum, New Hampshire). Each shop "illustrates the virtues and drawbacks of operating a small, labor-intensive, low-technology, low-capital shop that serves a local clientele. Each shop embodies a portion of that original inspiring vision from *The Book of Tofu* of a multiplicity of tiny, traditional, community based tofu shops whose tofu crafters deliver fresh bulk tofu every day.

Crystal Hills opened in September 1977, after a year of preparation by Jay and Pat. Now named North Country Soyfoods, it has modified the traditional soysage recipe by eliminating wheat germ, substituting barley malt for honey, and adding 5% vinegar to increase the shelf life. The company supplies large amounts to Jon Cloud of Cloud Mountain, who helps to export about 1,000 lbs every 3 weeks to co-ops in Montreal and Toronto.

Photos show: Robert Cook and Viney Loveland standing in front of the Willowbrook Soyfoods shop. Jay and Pat Gibbons. Adding nigari to soymilk at Crystal Hills. Stirring the soy slurry in a large caldron. Then pressing the okara for soymilk. Address: Colrain, Massachusetts.

1259. **Product Name:** VFP Nutrisoya (Soymilk).
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1980. July.
**Wt/Vol., Packaging, Price:** Plastic bottle, about 1 liter.
**How Stored:** Refrigerated.
**New Product–Documentation:** Leviton. 1980. Soyfoods. Summer. p. 17. The company makes 750 gallons a week, flavored with sugar. In plastic quarts. Leviton. 1981. Soyfoods. Winter. p. 55. A black-and-white photo shows 6 of the plastic bottles. The size looks like about 1 liter. Soya Bluebook. 1986. p. 102.

1260. **Product Name:** Kinugoshi Soybean Pudding.
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1980. July.
**New Product–Documentation:** Leviton. 1980. Soyfoods. Summer. p. 17. The company makes "about 200 quarts daily of *kinugoshi* soybean pudding."

1261. Wang, H.L. 1980. Enhancement of nutritive factors in fermented foods. Paper presented at the International Fermentation Symposium, London, Canada. July 21-23. 9 p. Address: NRRC, Peoria, Illinois.

1262. Yoshihara, Lulu. 1980. Shinmei-do Miso Company. *Soyfoods* 1(3):10. Summer.

• ***Summary:*** In this letter, the author tells of the founding, activities, products, and production process of this small miso company. Her husband and co-worker, Yoshi, is Japanese. They have the capacity to make 80 gallons/week of miso but are operating below capacity for lack of space and firewood. Their main miso variety is rice (kome) miso. Barley miso will be ready in early 1981 and brown rice miso will be ready in the fall of 1981. "Our markets are the Japanese food coops and natural food stores. We started in spring 1979 and have just sold our first miso. Our first experimental batch was made in February 1977." Address: Shinmei-do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

1263. Hope, Jane; Bright-See, E. 1980. Vegetarian diets need good planning: Nutrition. *Toronto Star (Ontario, Canada).* Sept. 24. p. C-3.
• ***Summary:*** Describes the different types of vegetarians and their different needs. The section titled "Soy protein" begins: "But the amount and quality of protein in plant foods is usually lower than that found in animal foods. The exception, of course, is soy protein. Soy products, such as cakes [tofu?] and soy milk, are excellent sources of protein."

Discusses protein complementarity and good books on vegetarian nutrition and recipes.

1264. Bal, Arya K.; Shantharam, S.; Verma, D.P.S. 1980. Changes in the outer cell wall of *Rhizobium* during development of root nodule symbiosis in soybean. *Canadian J. of Microbiology* 26(9):1096-1103. Sept. [31 ref. Eng; fre]
• ***Summary:*** The "*Rhizobium* cell-wall membrane undergoes significant changes during establishment of the root nodule symbiosis." Address: 1-2. Dep. of Biology, Memorial Univ. of Newfoundland, St. John's, Newfoundland, Canada A1B 3X9; 3. Dep. of Biology, McGill Univ., Montreal, P.Q., Canada.

1265. **Product Name:** Tofu.
**Manufacturer's Name:** Cantai Tofu Corp.
**Manufacturer's Address:** 700 S. Leland Ave., Thunder Bay, ONT, P7E 2P6, Canada.
**Date of Introduction:** 1980. September.
**New Product–Documentation:** Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. No phone number.

1266. *League for International Food Education (LIFE) Newsletter.*1980. Soybeans in Guatemala. Sept. p. 3.
• ***Summary:*** "With 1500 lbs of soybeans donated by UNICEF, Plenty has been teaching the people of Guatemala, concentrating on the wives of farmers who have shown an interest in growing soybeans, how to make soymilk and tofu (bean curd) using a metate and utensils traditionally found in their homes.

"Classes are held once a week for four students at a time. All students have learned the process in one lesson. They return to their homes provided with cheesecloth and small bags of beans. After they use those, they can return for more. Most students have successfully made tofu in their homes and say their families like it.

"Plenty plans to set up a village-scale soy processing plant which will produce 100 lbs of tofu and forty gallons of icebean (ice cream made from soymilk) three times a week. Funded by Plenty and CIDA/Canada, the plant will supply free icebean for school lunch programs. After an initial period of training, the soy plant will evolve into a local cottage industry and a means of financial support for members of the community.

"For further information, please write to: Suzy Jenkins; Soy Technician; Plenty; 156 Drakes Lane; Summertown, Tennessee 38483 USA."

1267. Ontario Soya-bean Growers' Marketing Board. 1980. Soybean cuisine. P.O. Box 1199, Chatham, Ontario N7M 5L8, Canada. 58 p. Sept. 22 cm.
• ***Summary:*** Contents: History of soybeans. Soybean salute. Soybean cooking methods. Soups. Main courses. Salads & dressings. Roasted soybeans & snacks. Soy flour, muffins & breads. Squares, cookies & cakes.

The soy ingredient used in most recipes is either cooked whole dry soybeans, roasted soybeans, or soy flour. Quite a few of the recipes are submitted by the wives of Ontario farmers. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

• ***Summary:*** Contents: History of soybeans. Soybean salute. Soybean cooking methods. Soups. Main courses. Salads & dressings. Roasted soybeans & snacks *(Soja Grillé et Collations).* Soy flour, muffins & breads. Squares, cookies & cakes.

The soy ingredient used in most recipes is either cooked whole dry soybeans, roasted soybeans, or soy flour. Quite a few of the recipes are submitted by the wives of Ontario farmers. An identical book, titled *Soybean Cuisine,* was published at the same time in English. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1269. **Product Name:** Tofu.
**Manufacturer's Name:** Rubenstein Tofu Shop.

**Manufacturer's Address:** R.R. 1, Cleveland, NS, B0E 1J0, Canada.
**Date of Introduction:** 1980. September.
**New Product–Documentation:** Letter/Order for the book *Tofu & Soymilk Production* from Mark Rubenstein. 1979. Sept. 19. He is located at the address shown above.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. No phone number. Owner: Mark Rubenstein.

1270. **Product Name:** Tofu.
**Manufacturer's Name:** Shaw Grocery.
**Manufacturer's Address:** 1447 Gerard St. East, Toronto, ONT, M4L 1Z9, Canada. Phone: 416-466-8058.
**Date of Introduction:** 1980. September.
**New Product–Documentation:** Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Yen Yung Shaw.

1271. Shurtleff, William. 1980. Tofu shops and soy dairies in the West. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 2 p. Sept. Unpublished typescript.
• ***Summary:*** Lists the name, address, phone number and owner of all known tofu shops and soy dairies in the USA (alphabetically by state), Canada, Latin America, Europe, Australia & New Zealand, Africa, and the Middle East. Address: Lafayette, California. Phone: 415-283-2991.

1272. Asimi, S.; Gianinazzi-Pearson, V.; Gianinazzi, S. 1980. Influence of increasing soil phosphorus levels on interactions between vesicular-arbuscular mycorrhizae and *Rhizobium* in soybeans. *Canadian J. of Botany* 58(20):2200-05. Oct. 15. [29 ref. Eng; fre]
• ***Summary:*** In nodulated soybeans growing in sterile unamended soil, growth and yield increases were obtained by inoculation with the vesicular-arbuscular (VA) mycorrhizal fungus *Glomus mosseae*. These were accompanied by improved phosphorus uptake (phosphorus is probably the most important nutrient for growth and effective nodulation of legumes), lower root to shoot ratios, better nodulation with higher nitrogenase activity, and changes in the pattern of the latter during plant growth. Phosphate fertilization increased yield and phosphorus content, but "higher levels of phosphate fertilization considerably diminished infection and, in particular, fungal spread within the roots." Address: Station d'Amélioration des Plantes, Institut National de la Recherche Agronomique [INRA], BV 1540, 21034 Dijon, France.

1273. Leviton, Richard. 1980. The soy deli: Tofuna salad to soysage-on-rye. *In Business.* Sept/Oct. p. 44-47.
• ***Summary:*** "The soy delicatessen is emerging as the most exciting and innovative means of retailing these ready-to-eat natural foods." Discusses in detail: Hip Pocket Tofu Deli in Columbus, Ohio, started on 1 March 1980 by Mick Vissman and Bill Lutz; Soja Soyfoods Cafe & Delicatessen in Toronto, ONT, Canada, started in Feb. 1980 by Tucker Held, Lynn Sterling, and Mary Anderson; Far Pavillians [sic, Pavilions] in Telluride, Colorado, opened in October 1977 and now run by Catherine Peterson; The Tofu Shop deli in Rochester, New York, started in November 1978 by Greg Weaver, Norman Holland, and Andy Schecter; The Soy Plant Deli in Ann Arbor, Michigan, a cooperative; The Yellow Bean Trading Company, started in September 1978 by Timothy and Carol Huang. They opened a retail soy deli in March 1979; The Good Belly Deli in Boulder, Colorado, which recently changed its name from "Cow of China," is run by Steve Demos, who also owns White Wave; and Mintz's Buffet, in the upper East side of New York City. "David and Ethyl Mintz have incorporated tofu into their traditional kosher Jewish deli, featuring dairyless tofu cheesecakes, tofu sauces, tofu in vegetable egg souffles, along with their matzoh balls, gefilte fish, and chopped liver, or soup to nuts, old time foods like Grandma used to make, a big menu."

Photos show: The exterior of Soja Soyfood Cafe, with Tucker Held, Lynn Stirling, and Mary Anderson standing below the sign. The wooden wall menu at The Tofu Shop in Rochester, New York. Greg Weaver and one other person working inside the kitchen of The Tofu Shop. Address: 100 Heath Rd., Colrain, Massachusetts 01340.

1274. **Product Name:** Tofu.
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Pt. Rd., R.R. 2, Sooke, BC, Canada V0S 1N0. Phone: 604-642-3263.
**Date of Introduction:** 1980. October.
**Ingredients:** Organic soybeans, water, nigari (magnesium chloride–extract of sea water) (1988).
**Wt/Vol., Packaging, Price:** 16 oz packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm.: Calories 70, protein 9 gm, carbohydrate 1 gm, fat 5 gm, sodium 7 mg, potassium 40 mg.
**New Product–Documentation:** Leviton. 1982. In a Small Bright Building. Wayne Jolley. The Healing Exchange News. 1988. Jan. p. 7. "The only organic tofu and soymilk available in Victoria."

Talk with and letter from Wayne Fatt. 1988. Sept. 28-29. The business was started in 1980 in a small building in Sooke, a community on the outskirts of Victoria. It has since relocated twice. In May 1988 Wayne Fatt purchased the company from Wayne Jolley, and in July 1988 moved from

2625 Otter Point Rd., R.R. 2, Sooke, BC, V0S 1N0 to a much larger facility at 4247 Dieppe, in Victoria. The company name is unchanged. They now make the following soyfood products, all of which are organic: Tofu (packaged and bulk), herb tofu, tofu cutlets, tofu burgers, tempeh, tempeh burgers, many pasta types: linguini, buckwheat linguini, mixed rotini, whole wheat fettuccine (plain, spinach, and herb), SuperSoy organic soya drink (natural, malted, or mocha). Non-soy products include wheatlets (seitan, formerly called Vegetarian Wheat Cutlets, launched in Sept. 1987) [garlic, ginger, or plain flavors], mochi (introduced Nov. 1985) [miso, brown rice, multi nut/maltinut, raisin & cinnamon, plain flavors], amazake [plain, blueberry, nut, strawberry].

Label. 1988, received. 5 inches square. Blue, green, yellow and white on clear plastic film. Logo of sun rising behind fjords. Address: 2625 Otter Point Rd. "A Good Source of Protein" written in large letters across top of label. Recipe for Tofu Cutlets.

1275. Esko, Edward; Esko, Wendy. 1980. Macrobiotic cooking for everyone. Tokyo: Japan Publications, Inc. 272 p. Nov. Foreword by William Tara, Director, Community Health Foundation, London, England. 26 cm. [50 ref]
• ***Summary:*** The authors studied in Japan (mostly Kyoto), from Sept. 1978 to May 1979, at which time they returned to Boston. In the summer of 1979 "more than 100 delegates from various regional centers throughout the United States and Canada met in Boston for the first North American Congress of Macrobiotics." Part I of this book discusses the theory of macrobiotics and Part II gives recipes. Unfortunately, the book has no index, and the bibliography gives no years of publication. There are chapters on: Seitan, fu, and noodles (incl. soba), and Sea vegetables.

Soy-related recipes include: Brown rice and soybeans (p. 90). Miso soft rice (p. 96). Somen with deep-fried tofu (p. 118). Kenchin soup (with deep-fried tofu cubes and tamari, p. 130). Okara soup (p. 132). Miso soups (p. 137-143; 12 recipes are given plus a long letter from Jan Belleme, about how she and her husband, John, who arrived in Japan in late October 1979, are now living with the Onozaki family and studying miso-making there–p. 138-39). Sauteed cucumbers and miso (p. 154). Boiled cabbage, sweet corn, and tofu (p. 155). Udon-vegetable bane (with deep-fried tofu, p. 159). Steamed kale and tofu (p. 161). How to make sprouts (incl. soybean sprouts, p. 177).

Chapter 5 is titled "Bean dishes, including tofu and natto." It states (p. 178-79, without citing the source) that "In China and Japan there is a proverb, 'A man who eats too many beans becomes a fool.'... Lima beans and soybeans are both very yin, and require thorough chewing. They should be eaten only on occasion and in small quantities... Kombu can be placed on the bottom of the pot when cooking chickpeas, soybeans, lima beans or kidney, pinto and navy beans. I have found that kombu definitely improves their flavor, and because of its high mineral content, creates a very balanced dish." To pressure cook soybeans so that they do not clog the steam escape valve, first boil them for 30 minutes. Skim the foam off the top as it rises, and when no more foam rises to the surface you may place them in a pressure cooker and continue cooking until done. Recipes include: Japanese black beans (black soybeans). Soybeans with kombu and burdock. Soybeans with lotus root and salmon. Following a long discussion of tofu, Homemade tofu. Tofu with scallions. Tofu with bonito flake broth. Baked tofu with miso/lemon sauce. Broiled tofu. Tofu loaf. Steamed tofu rolls. Deep-fried tofu cakes. Aburage (Age or deep-fried tofu). Stuffed age pouches. Okara. Okara croquettes. Sautéed natto. Natto rice or noodles. Natto tempura. Dried natto.

Hijiki with soybeans (p. 193). Hijiki and deep-fried tofu (p. 194). Tempuraed tofu-nori rolls (p. 198). Koi-koku (Carp miso soup, p. 220). Daikon and tamari. Scallion miso. Green peppers and miso (p. 224). Miso condiments (p. 226). Tamari. Moromi (p. 227). Rutabaga-tamari pickles (p. 233). Quick miso pickles (p. 234). Tofu tamari dressing (p. 236). Tofu-sesame dressing. Shiro-miso-tofu dressing. Miso dressing (p. 237). Tamari-lemon dressing. Tamari-rice vinegar dressing. Miso-tahini dressing (p. 238). Miso-rice vinegar dressing. Miso walnut dressing. Miso-tahini spread. Sesame miso spread. Miso-nut spread (p. 239). Lentil-miso spread. Lima bean miso spread (p. 240). Tofu dip (p. 243). Amazake (p. 247-48). Clear broth soup with tofu & scallions (p. 253). The glossary lists many soy products plus azuki beans, sea vegetables (many types), gluten, koji, kuzu, mochi, natto, nigari, okara, seitan, tekka, tempeh, umeboshi, unohana (okara), and yuba.

Macrobiotic periodicals include: *East West Journal* (Brookline, Massachusetts). *Kushi Institute Study Guide and Kushi Inst. Newsletter* (Brookline, MA). *The Order of the Universe* (East West Foundation, Brookline, MA). *The Macrobiotic Review* (East West Foundation, Baltimore, Maryland). *Spiral* (Community Health Foundation, London). *Le Compas* (Paris). Note: The date each periodical began publication is not given.

The lengthy section on seitan (p. 110-13) gives a detailed recipe for making seitan at home using the short method and 3½ lb hard spring wheat flour or hard red winter wheat flour. The broth is made with kombu and tamari. Seitan recipes include: Seitan stew. Seitan fried rice. Stuffed mushrooms (with sauce). Stuffed squash or Hokkaido pumpkin. Address: Boston, Massachusetts.

1276. Griffith, G.R.; Meilke, K.D. 1980. A description of the market structure and agricultural policies in five regional oilseed and oilseed product markets. *University of Guelph, School of Agricultural Economics and Extension Education, Publication* AEEE/80/13. 107 p. Nov. [157 ref]

• ***Summary:*** Contents: 1. A summary of the market structure and agricultural policies in five regional oilseed and oilseed product markets. 2. The Canadian oilseed and oilseed product market–description and policies. 3. The Japanese oilseed and oilseed product market–description and policies. 4. The European Community oilseed and oilseed product market–description and policies. 5. The U.S. oilseed and oilseed product market–description and policies. 6. The Brazilian oilseed and oilseed product market–description and policies. Bibliography. Address: Guelph, Ontario.

1277. **Product Name:** Soy-Pro (Meatless Sausage).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1980. November.
**Ingredients:** Soybean mash [okara], durum & whole wheat flours, vegetable oil, bran, water, honey, cider vinegar, blackstrap molasses, herbs, seasonings, lecithin, sea salt.
**Wt/Vol., Packaging, Price:** 350 gm plastic bag.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm: Protein 7.2 gm, fat 1.6 gm, carbohydrates 19.9 gm, calories 203.
**New Product–Documentation:** Interview with Jon Cloud. 1985. Aug. Label sent by Jon Cloud. 1989. May. The product was introduced in the fall of 1980.

1278. Lowe, Marion. 1980. Miso–Another soy food. *Chimo (Canada).* Dec. p. 46-47.
• ***Summary:*** An introduction to miso, with two recipes (Mushroom Miso Sautee, and Miso Stew), based on *The Book of Miso* by Shurtleff & Aoyagi. A photo shows a 500 gm jar of Macro-Bio Soya Bean Puree / Puree de Feve de Soja (Miso), sold by Nu-Life Nutrition Ltd. in Vancouver, British Columbia, Canada.

1279. **Product Name:** [Macro-Bio Soya Bean Puree (Miso)].
**Foreign Name:** Macro-Bio Puree de Feve de Soja (Miso).
**Manufacturer's Name:** Nu-Life Nutrition, Ltd. (Importer). Made in Japan.
**Manufacturer's Address:** Vancouver, BC, Canada.
**Date of Introduction:** 1980. December.
**Wt/Vol., Packaging, Price:** 500 gm jar.
**New Product–Documentation:** Photo of jar and label in Chimo. 1980. Dec. p. 47. "Miso–Another soy food." At top of label: "Authentic Japanese Foods."

1280. *Soya Bluebook.*1980-1994. Serial/periodical. St. Louis, Missouri: American Soybean Assoc. Called Soybean Blue Book from 1947-1966; Soybean Digest Blue Book from 1967-1978; Soybean Digest Bluebook in 1979; Soya Bluebook from 1980 to 1994.

• ***Summary:*** A directory and information book (general and statistical) for the soybean production and processing. In 1987 the *Soya Bluebook* contained seven major sections: Organizations (incl. Associations), Soy Directory (Crushers, Soyfoods, Industrial Products), Soybean Manufacturing Support Industries, Marketing and Auxiliary Services, Soy Statistics, Glossary, Standards and Specifications. Well indexed, with color maps. In the early 1980s the Bluebook started to include many more foreign soyfood manufacturers.

The book contains many tables, including: "World Soybean Production," which gives area and production in specified countries (1974-1980). In 1980 this included: North America: Canada, Mexico, United States. South America: Argentina, Brazil, Bolivia, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay. Europe: Bulgaria, France, Hungary, Romania, Spain, Yugoslavia. Soviet Union. Africa: Egypt, Ethiopia, Nigeria, South Africa, Tanzania, Uganda, Zaire. Asia: Burma, China (Mainland), Taiwan, India, Indonesia, Iran, Japan, Kampuchea, Korea (north), Korea (South), Philippines, Thailand, Turkey, Vietnam. Oceania: Australia. World total.

In early 1988 the American Soybean Association sold the *Soya Bluebook* to Soyatech, owned by Peter Golbitz. His first print run was 8,800 copies. Yellow pages were added. In Dec. 1989 Soyatech announced that in 1988 estimated readership was 10,265 in 55 countries. 33.6% of the buyers were soybean processors / manufacturers, 28.7% were importers, exporters, transporters or marketers, 15.0% were suppliers of soybean processing or handling equipment and manufacturing support services, 9.9% were consultants, booksellers, or periodicals, 8.7% were organization or government agencies, and 4.1% were colleges, universities, libraries, and information centers. By region, 64.3% were sold in North America, 15.2% in Europe, 9.1% in Asia / Pacific / Oceania, and 9.1% in Latin America.

The 1991 Soya Bluebook appeared in Aug. with a new larger (8½ by 11-inch) format and 264 pages. The indexing system is more complete and the pages are tabbed for easy access to each section. The "reference" section was expanded by adding nutritional information on soyfoods, a new chart of soyfoods products, and soybean oil trading standards.

*Health Foods Business.* 1992. Nov. p. 218. *Soya Bluebook* now reports its circulation to be 3,000.

Talk with Joy Froding of Soyatech. 1995. Jan. 12. The 1994 print run of Soya Bluebook was 2,300 copies. An estimated 4 people read each copy.

Price of the Soya Bluebook (1 book sent to USA, Canada, or Mexico): 1992 = $28 (if paid before June 1; $38 afterward). 1993 = Same price. 1994 = $38 (no prepayment discount; Available July 1994; this book has fold-out indexing tabs and 272 pages. The order form announcing

the '94 Soya Bluebook states: "For 47 years Soya Bluebook has served as *the* noted information source for the world's soybean industry"). Starting in Jan. 1994 four issues of *Bluebook Update* are available free of charge to all who subscribe to or are listed in *Soya Bluebook.* 1995-96 = $38 ($48 after 1 June 1995; then in Nov. 1995 the price is raised to $58; incl. indexing tabs, 292 pages). This 1995-96 issue is titled "Soya Bluebook Plus: the annual directory of the world oilseed industry." Crops featured on the front cover are "soya, corn, cottonseed, palm, canola, rapeseed, and sunflower." Address: St. Louis, Missouri; Bar Harbor, Maine (After Jan. 1988).

1281. **Product Name:** Soya Flour, and Soya Flakes.
**Manufacturer's Name:** Kundesale Cereal Products Factory.
**Manufacturer's Address:** Kundesale, near Kandy, Sri Lanka.
**Date of Introduction:** 1980.
**Ingredients:** Soybeans.
**Wt/Vol., Packaging, Price:** Flour or flakes in 250 gm or 500 gm plastic bag. Flour retails for Rs 5/- or Rs 10/-. Flakes for Rs 6/50 or Rs 13/-. Bulk flour wholesales for Rs. 18/kg and the flakes for Rs. 22/kg.
**How Stored:** Shelf stable.
**Nutrition:** 38-39% protein.
**New Product–Documentation:** Form filled out by Jane Gleason. 1988. March. She noted that the Plenty Canada Soya Food Centre purchased soy flour and flakes from this company but did not give any information about the company itself. For details see Chocolate Milk (Aug. 1987). Second form. 21 April 1988 meeting with Mr. Udaya Alahakoon of 6 Ampitiyaya Rd., Kandy, whose family owns and manages the business. Their factory previously produced the Thriposha flour for CARE. The company now uses 5,000 kg/month of soybeans bought for Rs 9/kg one the wholesale market and from private sellers in Colombo.

The flour is sold primarily to one biscuit manufacturer (Maliban, 4,000 kg/month) and smaller quantities to 2 other soyfood producers. Plenty Canada is the only consumer outlet for the unblended soya flour. The other producer using Kundesale's flour is the Rice Processing Research and Development Centre (Paddy Marketing Board, 750 kg/month), which sells Soya Blended Rice Flour (see separate entry). Labels. 1987. 3.75 by 2 inches. Paper. Brown on light yellow/beige. In English and Sinhalese. "Soya Flour: For added nutrition, mix one part soya flour to 3 or 4 parts American flour or rice flour in your regular daily use."

"Soya Flakes: Precooked and easy to use. For a nutritious breakfast, add to tea, hot milk, porridge, kola kanda, etc. For extra protein, add to curry dishes, pol sambol, etc. To make paripoo, add flakes to sufficient boiling water and cook for 2-3 minutes. Add paripoo spices as needed." Flakes are marketed by Plenty Canada and by Spices and Essences, Colombo, with their label.

1282. **Product Name:** Soymilk.
**Manufacturer's Name:** Pyung Hwa Food Co. Inc.
**Manufacturer's Address:** 2139 Dundas St., Toronto, ONT, M6R 1X1, Canada. Phone: 416-534-0237.
**Date of Introduction:** 1980.
**Wt/Vol., Packaging, Price:** 600 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Jhasun Koo, owner and founder. 1989. May 4. He started making soymilk in 1980, but no longer makes it.

1283. Schmid, J.; Keller, E.R. 1980. The behavior of three cold-tolerant and a standard soybean variety in relation to the level and the duration of a cold stress. *Canadian J. of Plant Science* 18:351-74. *
Address: Swiss Federal Inst. of Technology, Dep. of Crop Science, ETH Zentrum, CH-8092 Zurich, Switzerland.

1284. **Product Name:** [Dried Flavored Tofu].
**Foreign Name:** Tofu Saveur Sec (Wu Hsiang Doufu Kan).
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1980.
**Ingredients:** Water, extract of soy, water, salt, calcium sulphate, soy sauce, egg color, monosodium glutamate, spices.
**Wt/Vol., Packaging, Price:** 250 gm (8.8 oz).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1987. 5 x 2 inches. Red on white. Form filled out by Peter Joe. 1988. May 20. Gives date. The term "dried" in the product name means that the tofu is pressed until it is very firm. It does not undergo a drying process.

1285. **Product Name:** Soy Tempeh.
**Manufacturer's Name:** Thistledown Soyfoods.
**Manufacturer's Address:** R.R. 5 (Church Rd. 5855), Duncan, BC, V0L 4T6, Canada. Phone: 604-748-9514.
**Date of Introduction:** 1980.
**New Product–Documentation:** Label. 1982, undated. 3.5 by 4 inches. Green and purple on white; Shurtleff & Aoyagi. 1982. Soyfoods Industry & Market. p. 48

1286. Tsukamoto, J.Y. 1980. 1979 Annual Technical Report. Manitoba Agriculture, Brandon, MAN R7A 1L9, Canada. 7

p. Unpublished manuscript.
• ***Summary:*** This is a report on "Project 202, Soybeans Production Demonstration. The objective of this project was to develop technology for and demonstrate the commercial production of soybeans. In 1979 the plan was to demonstrate the commercial production of soybeans utilizing all Maple Presto seed available for the project. Then the soybeans produced under the project were to be crushed to determine the commercial acceptance of the variety Maple Presto produced in Manitoba.

"The implementation of this project involved activities that were spread over a twelve-month period. They fell within four main areas: Production demonstration, field days, short courses and seminars, and crushing soybeans."

Six cooperators from various parts of Manitoba participated in the project; they followed recommended production practices from seeding to harvesting, then delivered their soybeans to the seed cleaning plant at Notre Dame. 800 kg of the soybeans produced were crushed at the P.O.S. Pilot Plant Corporation, Saskatoon, Saskatchewan. The author concludes that if there are not bad droughts or killer frosts, if weeds are controlled satisfactorily, and if normal rainfall occurs, a yield of 1,345 to 1,681 kg/ha (20 to 25 bu/acre) of Maple Presto appears realistic in commercial scale production. Address: Agro-Man Soybean Project Leader, Manitoba Dep. of Agriculture.

1288. Maple Leaf Mills Ltd. 1980. Maple Leaf Mills: The company that grew with Canada. Toronto, Ontario. 22 p.
• ***Summary:*** The section titled "Maple Leaf Monarch Limited" (p. 12-13) states: "The corporate decision carrying the largest dollar tag ever in Maple Leaf Mills history was the vegetable oil processing complex at Windsor, Ontario.

"This huge, $50 million plant is the country's largest vegetable oil processing operation. It started up in 1979. The plant will supply more than a third of eastern Canada's vegetable oil and meal market. Jointly owned by Maple Leaf Mills and Lever Brothers Limited, it operates as a separate company, Maple Leaf Monarch Limited.

"Maple Leaf Mills had been in the vegetable oil business since the early years of World War II. The original refinery processing oilseeds, mainly soybeans, was located on Toronto's central waterfront.

"This facility, however, became obsolete for a number of reasons. Despite expansions, the overall capability of the plant to produce oil and meal volumes for the markets of the 1970s and 1980s was limited. As well, the long-term plans by several levels of government to revamp Toronto's waterfront meant the plant would ultimately have to be torn down.

"With the Windsor plant now in operation, Maple Leaf Mills and Lever Brothers share a partnership in one of the western world's largest and most modern vegetable oil refineries.

"Two main operations are carried out at this facility– seed crushing and oil processing. The seed-crushing operation processes about 450,000 metric tonnes of oilseeds annually, approximately 80 per cent of which are soybeans. The oil processing section produces about 50,000 tonnes of vegetable oils which are consumed in the production of margarine, shortening, salad and cooking oils. Technical oil products are used in the manufacture of paints, varnishes, printing inks and caulking compounds. The high protein meals produced are aimed primarily at the poultry and livestock feed markets of eastern Canada.

"Maple Leaf Monarch's Windsor plant represents a major market for Canadian soybean growers, located as it is in an area served by excellent transportation facilities to enable economic assembly of raw materials for processing." An aerial photo shows the "Maple Leaf Monarch vegetable oils plant at Windsor, Ontario, one of the world's largest."

A section titled "History Highlights" (p. 16-21) gives a chronology of the company from 1833 to 1980. 1904– Maple Leaf Flour Mills Company Limited incorporated under Dominion of Canada letters patent. The company soon begins acquiring other flour mills and elevators. 1908– Maple Leaf acquired Wheat City Flour Mill (in Brandon, Manitoba; founded 1901) 1910 April 5–Maple Leaf Milling Co. Ltd. formed to take over assets of Maple Leaf Flour Mills Co. Limited, with mills at Thorold, St. Catherines, Kenora, and Brandon, and grain elevators in Western Canada. Also Hedley Shaw Milling Co. (est. 1901, by acquiring Grantham Mill {St. Catharines, est. 1836} and Welland Mills {Thorold, est. 1848}). 1928–Toronto Elevators built elevator of 2 million bushels capacity at Queens Quay, Toronto. The company also purchased all 1,156 outstanding shares of Sarnia Elevator Co. Ltd.

1946–"Toronto Elevators started oil refinery at Queens Quay and began importation of food oils."

1956–"Toronto Elevators modernized Queens Quay feed plant and acquired a new elevator at Wallaceburg."

1961–"Amalgamation of Toronto Elevators Limited, Maple Leaf Milling Company Limited, and Purity Flour Mills Limited. Maple Leaf Mills Limited was the emerging company."

1972–"Federal Government expropriated the Queens Quay complex for future redevelopment of Toronto harbor lands." 1975–"Maple Leaf Mills and Lever Bros. commenced a joint venture, construction of a major vegetable oil plant at Windsor, Ontario." Note: This is the first mention of Lever Bros. in this chronology. 1976–

”Norin Corp., of Florida, acquired 74% of the common stock of Maple Leaf Mills.” 1979–”Norin Corp. acquired all outstanding common shares of Maple Leaf Mills.”

1980 “Canadian Pacific Enterprises Limited, of Montreal, acquired all common shares of Maple Leaf Mills as a result of purchase of Norin Corp.”

On page 22 is a historical listing of the presidents of Maple Leaf companies, with their dates of office. Address: Toronto, Ontario, Canada.

1289. Mogi, Koya. 1980. Recent progress of soy sauce manufacturing in Japan. In: Proceedings of the Oriental Fermented Foods. Food Industry Research and Development Institute, P.O. Box 246, Hsinchu, (300) Taiwan. iv + 229 p. See p. 88-101. Held 10-14 Dec. 1979 in Taipei, Taiwan. 13 tables. 6 figs. [2 ref]

• ***Summary:*** Contents: Introduction. Manufacture: Treatment of raw materials, koji making, aging, pressing, refining. High temperature and short time cooking method. The following tables are included: 1. Classification of shoyu (5 kinds, 3 grades, 3 production methods). 2. Some characteristics of different kinds of shoyu (kinds, color, soybean:wheat ratio). 3. Typical composition of 5 different kinds of shoyu. 4. Differences in koikuchi shoyu grades (total nitrogen, soluble solids except NaCl, alcohol). 5. Differences in shoyu production methods (hon-jozo, shinshiki, amino acids liquid mix). 6. Shoyu production of different kinds in 1977 (koikuchi 917,738 kl = 85% of total, usukuchi 124,829 kl = 11.6% of total, tamari 23,437 kl = 2.2% of total, shiro 4,456 kl = 0.4% of total, saishikomi 3,072 = 0.3% of total). 7. Shoyu production in different grades in 1977 (special 59.3% of total, upper 27.5%, standard 13.2%). 8. Shoyu production by different methods in 1977 (hon-jozo 66.9% of total, shinshiki-jozo 28.4%, amino acids liquid mix 4.7%).

The innovation of treating soybeans using the high temperature and short time cooking method increased the yield of shoyu very much and was patented in Japan, the USA, and Canada. The protein in raw soybeans is undenatured and cannot be hydrolyzed (digested) by the enzymes of koji molds. Therefore it is necessary to denature the soybean protein by cooking so that it can be hydrolyzed. “The phenomenon of the so-called ‘N-property’ (turbidity nature) appears, if portions of soybean protein remain undenatured. ‘N-property’ is the phenomenon that *shoyu* becomes turbid when it is diluted and heated. This is the appearance of insoluble form of undenatured protein and remarkably diminishes the commercial value of *shoyu*.

“Undenatured protein is soluble in water, especially saline water, and goes into the product. If the product contains undenatured protein, ‘N-property’ described above appears as a coagulant when *shoyu* is diluted to the concentration fitted to the specified cuisine and/or further heated. However, excess denaturation also makes soybean protein undecomposable by proteolytic enzymes. Thus, over-denaturation results in a decrease of the yield of *shoyu* and an increase of the production cost.

“Steam cooking has been used as a means to increase digestibility of soybean protein. Technical know-how of so-called ‘NK-method’ developed by Mr. Tateno *et al.* of the author’s company in 1952 has been generally used by many soy sauce manufacturers. It was an epoch-making method of soybean treatment in *shoyu* making. Before that time, the utilization rate of nitrogen was about 66 to 70%. A utilization rate of nitrogen is defined as a percentage of soluble nitrogen in *moromi* mash to total nitrogen in the raw materials used. In this method, soybeans are cooled rapidly after cooking to prevent excess denaturation. Soybeans are steamed at 0.9 to 1 kilogram per square centimeter gauge pressure for 30 to 60 minutes (average 45 minutes) and then cooled as soon as possible with the aid of jet condenser to reduce the pressure inside the cooker. Thus, the utilization rate of nitrogen attained by the ‘NK-method’ is 81 to 82%. After many years, the ‘NK-method’ was first replaced with ‘high temperature and short time cooking method’ in about 1970.

“It has long been believed that the treatment of the ‘NK-method’ is best with steam at 0.9 kilograms per square centimeter for 30 to 60 minutes and that either higher temperature or longer time causes excess denaturation and decrease of the utilization rate of nitrogen. However, the author’s results of bench-scale experiments indicate better digestibility of soybeans when the conditions of higher temperature and shorter time are used for denaturation of protein.”

Note: This is the earliest document seen that mentions *saishikomi* shoyu. Address: Kikkoman Shoyu Co., Ltd., Plant No. 7, 339 Noda, Noda-shi, Chiba-ken, Japan.

1294. Tsukamoto, J.Y. 1980? Some information about soybeans in the Prairie Provinces. Paper presented. 7 p. Undated. Unpublished manuscript.
• ***Summary:*** Gives a detailed discussion of soybean variety development work in the Prairie Provinces in Canada: Manitoba, Saskatchewan, and Alberta. "Soybean production in the prairies is not a new venture. Particularly in the province of Manitoba, there have been earlier attempts to produce soybeans. Furthermore, soybean varieties, such as Altona and Portage, were developed by the University of Manitoba. Because of management problems and low returns, however, commercial production of soybeans did not flourish in Manitoba. By the early 1970's, it had dwindled to production by only a few seed growers. Finally, seed production also ceased as growers realized that the production of other seed required less management and fewer risks and that the returns from other crops were more attractive.

"In Manitoba, with an early maturing variety developing, interest in soybean production was revived, first on the part of researchers who were associated with this development. Three years ago, with the assistance of Dr. R. Hamilton (Agriculture Canada, Brandon), the Prairie Bean Growers Association undertook a small scale soybean production program. This was done with the aid of New Crop Development funds made available from Agriculture Canada. The program continued up to 1979 with varying measures of success. The variety Portage was used with narrow row spacing. Difficulty was experienced due to the short growing season in the project area, combined with excessive nitrogen in the soil. In some cases, there was difficulty in controlling weeds...

"Although it was done only in 1977, Pride Seed Company had 17 test sites, located from Teulon, Manitoba, to Yorkton, Saskatchewan, where the adaptation of soybeans was studied along with that of corn and sorghum varieties. This study also experienced varying degrees of success...

"In 1979, under Manitoba's value added crop development plan known as the Agro-Man Program, a commercial-scale soybean production demonstration was initiated. Six farmer cooperators, located from Niverville to Melita, were involved...

"The plan originally was to crush all of the soybeans produced under the program at C.S.P. Food Ltd., Altona, in order to determine commercial acceptance of an early line of soybeans (Maple Presto). Crushing requires a minimum of 5000 bushels which was not produced in 1979. In order to obtain some crushing information, a composite sample of 800 kg was crushed at P.O.S. Pilot Plant Corporation in Saskatoon. The results of crushing were satisfactory."

The three main varieties tested were Maple Presto, Portage, and McCall.

In Saskatchewan, Dr. Albert Slinkard at the Univ. of Saskatchewan has been the only person involved in soybean work. He conducted Dr. H. Voldeng's series 1000 soybean yield test at Saskatoon from 1977 to 1979. In Alberta, 12 growers were involved in the production of about 40 ha of King Grain line X005 and 20 ha for Maple Presto for seed multiplication in 1979. Yields of 2,156 kg/ha were considered good and one farmer on 6 ha achieved 2,706 kg/ha. In Alberta, numerous scientists at Lethbridge (incl. breeder Dr. H. Muendel) and Mr. R. Park at Lacombe and Dr. J.E. Andrews are conducting soybean research.

"In conclusion, it must be stated that sound weed control practices are of the utmost importance in the production of soybeans in all regions of the prairie provinces. It goes without saying that continued varietal improvement and studies of other phases of soybean production are necessary.

"Canada continues to import soybean oil, meal, and soybeans for crushing. Obviously, there is a domestic market for soybeans. Also there is an opportunity for exports. An effective marketing system is necessary if the prairie provinces are to realize the great potential in soybean production." Address: Agro-Man Soybean Project Leader, Manitoba Dep. of Agriculture, Canada.

• ***Summary:*** This concerns losses using a combine harvester. Contents: Introduction. Preharvest loss. Shatter loss. Stubble loss. Lodged and loose stalk loss. Cylinder loss. Separation loss. How to measure harvest losses. Address: Engineering section, Ridgetown College of Agricultural Technology, Ridgetown, ONT, Canada.

1299. Leviton, Richard. 1981. Making soymilk in America. *Soyfoods* 1(4):16-24. Winter.
• ***Summary:*** A review of soymilks available nationwide and a detailed analysis of Numu, New England Soy Dairy's problematic soymilk and the reasons for its failure in September 1980, at a cost of $40,000. Also discusses: Vitasoy (imported to California). President Soybean Drink (imported to California). Soy Fresh (made by Quong Hop in California since 1972). Soy Moo (made by Health Valley in California). Fresh Soybean Juice (made by Wy Ky of Los Angeles). Soymilk (made by Mighty Soy). Soybean Beverage (made by Hoven Foods, Seattle). Soy Juice (made by Redwood Valley Soyfoods Unlimited [Richard Rose]). Plain Soymilk (made by Island Spring, Vashon, Washington). Nutrisoya (made by Victor Food Products, Toronto, Canada). Soy-Ya! (made by Joy of Soy, Minneapolis, Minnesota). Soy Milk (made by White Wave of Boulder, Colorado). Soyalac and Soyagen (made by Loma Linda of Mt. Vernon, Ohio). In 1978 Nasoya introduced Vidasoy–prematurely; it was a disaster. A photo shows Stephen Yu holding a bottle of Victor Foods' Nutrisoya. Address: Colrain, Massachusetts.

1300. Leviton, Richard. 1981. Putting tofu in the lunch boxes of America: A report on serious soyfoods marketing. *Soyfoods* 1(4):54-61. Winter.
• ***Summary:*** About New England Soy Dairy, Timothy Metzger and Dannon Yogurt, Larry Needleman and Bean Machines, Thelma Dalman (Food Service Director for Santa Cruz city school system), Al Jacobson (The Wizard of Foods, "a tidy, bustling, elfin, walking idea man") and his Garden of Eatin', Paul Duchesne and Wildwood Natural Foods, Steve Demos and White Wave. A photo shows Victor Food Products on sale in Canada: VFP Tofu, and VFP Nutrisoya soymilk.

A sidebar by Timothy Metzger, gives an interesting history of marketing dairy yogurt in America. Dannon introduced its yogurt to the U.S. some 38 years ago (i.e. about 1943). Concerning Wildwood (p. 61): "In Fairfax, just over the hills from the Golden Gate Bridge and San Francisco, Paul Duchesne's Wildwood Natural Foods appears to fulfill the dreams of many soyfoods proprietors by combining both light tofu manufacture with light sandwich production in a clean, efficient, and industrious little shop. Mr. Duchesne designed his shop as a tofu showcase with broad wall-to-wall front windows so that passers-by may glimpse tofu production during the days. Wildwood produces a line of eight packaged vegetarian sandwiches including *Brown Rice and Tofu Sandwich* (with vegetables in a whole wheat bun), *Tofu Vegetable Salad, Two Beans in a Bun, Carrot-Raisin Salad, Marinated Bean Salad,* and *Beet Salad.* While they enjoy the luxury of a delivery van for San Francisco accounts, Mr. Duchesne impressed upon me the fun of using a bicycle that pulls a small flat trailer for on-the-street sales in Fairfax on those endless California summer days when folks are out relaxing on their skateboards and zipping down the street on roller skates and sailboats crisscross Sausalito Bay." Address: Colrain, Massachusetts.

1301. MacLeod, J.A.; Sterling, J.D.E. 1981. Soybean technology transfer. *Research Station Charlottetown, P.E.I., Research Summary* For the year 1980. See p. 106. (Agriculture Canada Research Branch).
• ***Summary:*** "In 1979 a technology transfer program was initiated to evaluate the feasibility of producing soybeans on Prince Edward Island. Past attempts at soybean production were unsuccessful because early maturing varieties were not available. Maple Presto, from the Ottawa soybean breeding

program, was a significant step in the development of earlier maturity and evaluation of its potential under Prince Edward Island conditions is under investigation." In 1980 six growers from Prince Edward Island grew Maple Presto soybeans. The highest yield, 1,456.2 kg/ha, was obtained by D. Ling in North Winsloe. He planted the soybeans on May 26 and harvested them (containing 16.0% moisture) on Oct. 29. Address: Prince Edward Island, Canada.

1302. Tsukamoto, J.Y. 1981. 1980 soybean activities in the Prairie Provinces. Paper presented at the 36th Annual Meeting of the Expert Committee on Grain Breeding (ECGB). 15 p. Held 16-17 Feb. 1981 at Edmonton, Alberta, Canada.
• ***Summary:*** The Prairie Provinces are Manitoba, Saskatchewan, and Alberta. This paper consists of 3 parts. Part 1 (p. 1-6, incl. Appendix I) is the basic presentation by Joe Tsukamoto, which focuses on developments in Manitoba. Approximately 7,000 bu of Maple Presto were harvested from a demonstration project and crushed at C.S.P. Foods in Altona to determine the commercial acceptance of this variety.

Part 2 (Appendix II, p. 7-14) is titled "The development of new short-season soybean varieties," by H.D. Voldeng of Agriculture Canada, Ottawa. "There are four characteristics that are of special concern to the plant breeder when he evaluates the potential of a promising new strain: yield, maturity, oil content and protein content. Growers are particularly interested in yield and maturity, whereas industry is concerned with oil and protein levels... In general higher yields are produced by later maturing cultivars." According to table 1, the variety that matures in the shortest time, Maple Presto, requires only 101 days in Manitoba, and gives a yield of 1,980 kg/ha.

Part 3 (Appendix III, p. 15) is titled "Report on soybeans in Southern Alberta, 1980," by Hans-Henning Muendel of Agriculture Canada Research Station, Lethbridge, Alberta T1J 4B1, Canada. It discusses commercial trials (including tests of small-seeded "natto" types), agronomic and physiological studies, and varietal testing and breeding. Address: Manitoba Agriculture.

1309. Barry, Ann. 1981. Flour: Which type to use for what. *Chicago Tribune.* March 26. p. W_A2 (or S_A2 or N_B2).
• ***Summary:*** The small section titled "Other flour" states: "Gluten flour has practically all starch removed... Other diet flours include potato starch, soybean, oat flour, rice flour, and corn flour. Some brands of diet flours are Cellu Goods, Golden Harvest, and Fearn Soya Foods, available in Chicago health food stores."

The last section, "Where to get natural flours," begins: "Stone-ground flour is milled the old-fashioned way, by stone rollers, which are often propelled by water power." Best to keep refrigerated: The name and address of the following sources is given: Arrowhead Mills (Hereford, Texas), El Molino Mills (City of Industry, California). Erewhon Trading Co. (Cambridge, Massachusetts), Grain Process Enterprises Ltd. (Scarborough, Ontario, Canada), Great Valley Mills (Bucks County, Pennsylvania), Shiloh Farms (Sulphur Springs, Arkansas), Vermont County Store

(Weston, Vermont), and Walnut Acres (Penns Creek, Pennsylvania). Address: Chicago.

1310. Carroll, K.K. 1981. Soya protein and atherosclerosis. *J. of the American Oil Chemists' Soc.* 58(3):416-19. March. [38 ref]
Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, Canada.

1311. Jenkins, David J.A.; Wolever, T.M.S.; Taylor, R.H.; et al. 1981. The glycemic index of foods: a physiological basis for carbohydrate exchange. *American J. of Clinical Nutrition* 34(3):362-66. March. [12 ref]
• ***Summary:*** To determine the effect of different foods on blood glucose, 62 commonly eaten foods (including cooked soya beans and canned soya beans) and sugars were fed individually to groups of 5-10 healthy fasting volunteers. Blood glucose levels were monitored. The glycemic index is the area under the blood glucose response curve for each food expressed as a percentage of the area after taking the same amount of carbohydrate as glucose. The glycemic index for cooked soya beans was 15 ± 5 and for canned/ tinned soya beans was 14 ± 2. These figures were quite small compared with vegetables (70 ± 5%), breakfast cereals (65 ± 5%), or cereals and biscuits (60 ± 3%), or fruit (50 ± 5%).

Note 1. The glycemic index is a measure of how quickly foods convert to glucose in the human bloodstream. Thus it rates foods according to how much and how fast they raise blood sugar after eating. It can be used to distinguish good carbohydrates (convert slowly) from bad.

Note 2. This is the earliest English-language document seen (June 2007) that contains the term "glycemic index."
Address: 1. Dep. of Nutrition and Food Science, Univ. of Toronto, 150 College St., Toronto, ONT M5S 1A8 Canada.

1312. McDonnell, Kathleen. 1981. From fodder to fast food: Soybeans crop up more than ever on farms and in stores. *Maclean's (Canada).* March.
• ***Summary:*** Recently soybean breeders have created early-maturing varieties which are enabling soybeans to spread northward "beyond their traditional growing area in extreme southern Ontario, which now produces more than 90 per cent of Canada's total harvest." This year substantial acreage will be seeded in Alberta, Manitoba, P.U.I. [Prince Edward Island], Quebec and eastern Ontario.

"With last year's harvest of 26.2 million bushels worth more than $200 million, Canada has now moved into fifth place among world soybean producers–after the U.S., Brazil, China, and Argentina.

Human consumption of soybeans is definitely catching on in Canada. At one health food store in Vancouver, BC, the most popular item is tofu, or soybean curd, which is now "being touted as the 'yogurt of the '80s.' Packaged tofu is now being sold in major supermarket chains across the country..."

The largest consumers of soy products by far are vegetarians. Elsie Sokol, chief dietitian at Toronto's Branson Hospital (run by Seventh-Day Adventists) "receives 'thousands' of requests from across the country for information about soybeans and gives lectures on their nutritional value and preparation." She believes the day will come when people in general will praise soybean growers. Mary Anderson, who shares her enthusiasm, is one of three partners who run a soy-food restaurant named Soja in Kensington Market. A photo shows Mary, with a tray of soy cheesecake and burgers, in front of her restaurant's sign.

1313. Soycrafters Assoc. of North America; Soyfoods Center. 1981. Estimated soyfoods industry statistics (News release). Sunrise Farm, Heath Rd., Colrain, MA 01340. 1 p. March. Updated in Aug. 1981.
• ***Summary:*** 1. Number of companies manufacturing tofu, tempeh, miso, soynuts, soy sprouts, soy sauce, secondary soyfoods, soy delis & restaurants, in the USA, Canada, and Latin America. 2. Production statistics for USA and Canada: Raw soybean usage, food production, employees, and retail sales value are given for 4 types of tofu makers (caldron, steam kettle, pressure cooker, factory), tempeh, soynuts, and soy delis and restaurants. With totals. Actual gathering of statistics was done largely by Soyfoods Center. Address: 1. Richard Leviton, Colrain, Massachusetts; 2. W. Shurtleff, Lafayette, California.

1314. Tape, Norm W. 1981. Status on development of Codex Alimentarius standards for vegetable proteins. *J. of the American Oil Chemists' Soc.* 58(3):439-40. March.
Address: Agriculture Canada, Ottawa, ONT, Canada.

1315. Soyateria (The). 1981. April. New soyfoods restaurant or deli. 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada.
• ***Summary:*** Leaflet. 1981. "Soy City Foods announces the grand opening of the soyateria, soyfoods specialty shop... We specialize in fast, tasty, all natural soyfoods to take out. You may cal your order ahead of time. 762-1257. Open Monday to Saturday–11:30 a.m. to 7:00 p.m." Also a menu.

Questionnaire filled out by owner of restaurant or deli. 1982. Lists the company's most popular soy-based menu items in descending order of popularity. The highest weekly total sales over the past 6-2 months, the month that this occurred, and why. The average weekly sales during this period. Average hourly wages paid to workers. The business startup cost (amount of money it cost to get the business started). Current profitability status. Plans for the future. Advice the owner would give to someone starting a similar business.

Shurtleff & Aoyagi. 1982. Report on Soyfoods Delis, Cafes & Restaurants. p. 3. Started in April 1981 by Jon Cloud as part of Soy City Foods. Address: Toronto, ONT, Canada. Phone: 416-762-1257.

1316. Soyfoods Center; Soycrafters Assoc. of North America. 1981. Soyfoods Production in America and the West (News release). Lafayette, California: New-Age Foods Study Center. 1 p. April. Updated in Sept. 1981 in a neater format.
• ***Summary:*** A table shows production statistics for 25 types of soyfoods. Number of manufacturers in the USA, Canada, Other West, Total; Tons of raw soybeans/year used by each food. Yield of food from 1 unit weight of soybeans. Wholesale value. Retail value. Number of people employed. Address: P.O. Box 234, Lafayette, California 94549.

1317. Shurtleff, William. 1981. Analysis of the U.S. and Western world tofu industry. Lafayette, California: Soyfoods Center. 1 p. May 17. Unpublished typescript.
• ***Summary:*** In this 1-page summary, prepared for Kikkoman Corporation, a table gives the following statistics for the years 1979, 1980, and 1981: Number of tofu manufacturers in the USA (120, 145, 159), Canada (7, 14, 19), other non-Asia, total. Raw soybeans used (tons/year) in USA. Percentage of total raw soybeans used for all soyfoods in the USA. Yield (pounds of tofu made from 1 pound of soybeans) (2.5). Tons of tofu produced in USA (16,250, 20,500, 26,000). Wholesale value (million dollars) (12.0, 17.5, 25.0). Retail value (million dollars) (23.2, 33.9, 48.5). Number of production employees (602, 759, 965).

Notes: The largest food uses of soybeans in the USA in 1981 are: Soy flour and grits (defatted) 52.6% (of all soybeans used), textured soy flour (incl. TVP) 19.7%, soy protein isolates 16.9%, soy protein concentrates 7.7%, soy sauce 1.2%, tofu 0.8%, soymilk and dairylike products 0.6%.

Estimates of regional markets for tofu: Largest market–California. Second largest–East Coast from Massachusetts to Maryland. Third largest–Pacific Northwest. Fourth largest–Northern Midwest (Wisconsin, Michigan, Illinois, Minnesota, Indiana).

Addresses of tofu manufacturers is included. Address: The Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1318. Benisch, Reginald. 1981. Soja in Oesterreich: Der zaehe Kampf gegen den Wolf [Soybeans in Austria: The tough struggle against (Mr.) Wolf]. *Trend (Austria)*. May. p. 176-81. No. 5. [Ger]
• ***Summary:*** When Dipl. Engineer Anton Wolf first planted Soviet and Canadian soybean seeds in Austria in 1975, he was prepared for an intense but vehement battle against rural ignorance. But the 52 year old researcher (of climate and plants at the Central Bureau for Meteorology and Geodynamics in Vienna-Döbling) wanted to prove that soybeans in Austria were not a botanical insanity. According to agronomists, soybeans only do well in places like the USA and Brazil. In 1978 Wolf's project to acclimatize soybeans to Austria first started to show success, with yields comparable to those obtained in the USA. Quickly the American soybean lobby entered the picture in order to protect the monopoly of a handful of U.S. firms. A group of emissaries flew to Vienna to try to stop the agronomic trials. They registered a quick partial success. The Austrian Minister of Trade took seriously their threat to hinder imports of Austrian cheese to America, and let the project of an Austrian oil mill lie dormant. But Wolf expanded his trials and was soon getting yields of 3,500 kg/ha. The Soya Circle *(Sojaring)*, a 2-year old association of farmers testing soybeans, was made solid by the threat. People were considering starting an oil mill in Austria but didn't for lack of hope in good oilseed yields.

Josef Rickl, a miller from Grosschweinbarth in Weinviertel, has been also been a soybean farmer for 3 years. He would like to make a micronized whole soy flour at the Wolkersdorfer Suesswarenfabrik Candita for use in confections. Austria presently imports 97% of her protein and fat. "In Austria, soya is really no novelty. Since the late 1800s the beans were planted with great success in the territory of the present republic, with yields of 2,000 kg/ha. Austria exported seeds to the Near East and North Africa. In the 1940s a soya cookbook was published. In 1945 soybeans suddenly disappeared from Austrian fields, supposedly at the instigation of the American occupation forces. Soy became forgotten and the adapted varieties were lost forever.

"Soy cultivation tests show that the wonderplant grows very well here. In spite of that, it seems that the plan to enrich agriculture through the regular planting of a protein rich bean and to balance trade, for clear reasons, is withering in the official drawer."

A photo shows a folded Herald Tribune, three golden bullets on one side, and an uprooted soybean plant on the other. Wolf's address is Wallriss Strasse 45/3/6, A-1180 Wien, Austria.

1319. **Product Name:** Frozen Buddha (Soymilk Ice Cream) [Chocolate Mint, Pineapple Coconut, Lemon Coffee, Chocolate Almond, Lime Ginger, Carob, Blueberry, Maple Walnut, Vanilla, Apricot, or Holiday Spice Eggnog].
**Manufacturer's Name:** Metta Tofu Products.
**Manufacturer's Address:** Wren Rd., Denman Island, BC, V0R 1T0, Canada.
**Date of Introduction:** 1981. May.
**How Stored:** Frozen.
**New Product–Documentation:** Letter from Lulu Yoshihara of Denman Island, BC, Canada. 1981. Sept. 9.

Last spring, her neighbor Ray Lipovsky, “the tofu man,” started making Frozen Buddha, “a soy ice cream, which is very, very popular (because it is very, very delicious). I’ll enclose the lid with this letter...”

Label. 1982. Undated. Spot in Soyfoods. 1983. Winter. p. 49-50. “How to Freeze the Buddha.” Monthly production of 1,500 liters in the winter.

1323. Soy City Foods. 1981. Wholesalers of Tofu and other Soy Products (Ad). *Toronto Star (Ontario, Canada).* June 30. p. B13. Advertising supplement.
• ***Summary:*** “Soyateria–Soyfoods Specialty Shop. Try our fast, tasty, all natural soyfoods–to take out.” Address: 2847 Dundas Street West, just east of Keele St. [Toronto]. Phone: 762-1257.

1324. *Toronto Star (Ontario, Canada).*1981. Meals are meatless for many families (Advertorial). June 30. p. B13. Advertising supplement.
• ***Summary:*** “There’s a quiet revolution shaping up on your dinner table.

“Many families are eating meat analogue (meat substitute to you and me). Long acclaimed by many vegetarians and members of the Seventh-Day Adventist church, the meat analogue looks and tastes about as much like meat as margarine resembles butter, and that’s close enough for many.

“Some are frozen and ready to serve, some come in sealed tins and complete a recipe, others in packages, dehydrated so that you can slip them into your knapsack when you aren’t making stews and casseroles at home. Names like Vegetarian Burger, Sizzleburgers, Prosage Links and Big Franks abound, not to mention Vegetarian Stakelets, Stripples (like bacon). You name your favorite meat, fowl, or fish and manufacturers such as Loma Linda Foods or Worthington Foods will probably be able to offer a reasonable facsimile.

“The soybean has been a staple of the oriental diet for hundreds, if not thousands of years. It is a complete protein, and enthusiasts are quick to note the absence of cholesterol and animal fat content. Add wheat gluten to capture the ‘mouth feel’ of flesh food, peanuts for the taste and fibrous texture, a bit of seasoning here and there, extrude the whole, cook to taste, and voila, the meat analogue!

“Soybean drink [soymilk] is another entrant in the huge North American beverage sweepstakes. With its white colour and nut-like flavour, it offers an alternative to milk for drinking and cooking.”

1325. *Toronto Star (Ontario, Canada).*1981. New miracle food is protein rich Tofu (Advertorial). June 30. p. B13. Advertising supplement.
• ***Summary:*** A large advertorial in praise of tofu. An illustration shows a cake of tofu on a white plate.

“Just what is this tofu everyone is talking about?

“Tofu (pronounced TOE-fu) is a rich source of protein that can serve as the backbone of any diet–replacing or alternating with meat and dairy products. It originated in East Asia several millennia ago... In the West, it is known as soybean curd.”

“Tofu has a white cheese-like consistency made from soybean curds just as cheese is made from dairy curds. Unlike cheese, Tofu is not fermented, aged and ripened.”

1326. *Toronto Star (Ontario, Canada).*1981. Many foods promote health (Advertorial). June 30. p. B11. Advertising supplement.

• ***Summary:*** "The subject of health foods opens a wide and complex canvas." What are they? Are they the same as "natural foods" and "pure foods"? Are they all organic?

"'Health foods are,' as Barbara Towns, manager of Soyateria Delicatessen in Toronto explains, 'anything that enhances the body. Anything that prmotes health instead of disease.'"

"Tofu is a health food staple. It is a soybean curd which looks like a block of cheese. It is high in protein..."

1327. Vegetarian Restaurant (The) (Ad). 1981. Healthy food that tastes terrific! (and at a great price too.) (Ad). *Toronto Star (Ontario, Canada).* June 30. p. B11. Advertising supplement.
• ***Summary:*** "Try our nutritious and wholesome food at either of our two locations [in Toronto]: (1) 542 Yonge at Wellesley. Phone: 961-9522. (2) 2849 Dundas West. Phone: 762-1204."

1330. Brisson, G.J.; Keeney, M.; Enig, M.; Sampugna, J. 1981. Report of the Ad Hoc Committee on the Composition of Special Margarines: A critique. 42 p. June. [76 ref]
• ***Summary:*** The title page states that the report was "Submitted by a committee of medical and scientific experts... at the request of the Dairy Bureau of Canada. No publisher or place of publication is given. This pro-dairy report attempts to refute the report of the ad hoc committee.

Contents: Summary. Summation of comments. Introduction. Critique: 1. There is no evidence of essential fatty acid (EFA) deficiency or marginal intake of EFA in Canada. 2. Arbitrary recommendations on linoleic acid. 3. There is no reliable assay for linoleic acid. 4. High levels of polyunsaturated fatty acid (PUFA) have not yet been proven beneficial. 5. The lipid hypothesis has not been proven. 6. The metabolic effects of *trans* fatty acids and other isomers have not been fully elucidated. 7. The consumer should not be misled. 8. General comments. 9. Additional research is needed in several areas. 10. Recommendations of the ad hoc

committee should not be implemented. Critique committee members and consultants. References. Address: 1. Prof. of Nutrition, Laval Univ., Quebec, QUE, Canada; 2-4. Biochemistry Div., Dep. of Chemistry, Univ. of Maryland.

1331. Cloud, Jon. 1981. The ecological side dish [Soysage]. *Soyfoods* No. 5. p. 40. Summer.
• ***Summary:*** "Soysage was born out of a no-waste consciousness... The okara (soybean pulp or fiber), usually viewed as a nuisance, is now viewed as a potential resource." Describes the basic process for making soysage with okara.

"During the World War II years, a product called Soysage was developed and trademarked by W.H. and Alice Braun, owners of Imperial Brands of Chicago, Illinois. Their Soysage was made from soyflour, peanut flour, cottonseed flour, wheat middlings, wheat germ, yeast, vegetable protein, seasoning. Very little is known about that venture, however, since the trademark was renewed for only a short time." The Farm in Summertown, Tennessee, rediscovered the term "soysage" in the early 1970s and developed their own version, which was used mostly as a side dish.

Photos show: Soysage labels. A large stainless steel tray filled with 3 rows of soysage patties.

1332. **Product Name:** Soysage (Meatless Okara-based Sausage).
**Manufacturer's Name:** Cloud Mountain, Inc.
**Manufacturer's Address:** Buffalo, New York.
**Date of Introduction:** 1981. July.
**New Product–Documentation:** Leviton. 1981. Soyfoods. Summer. p. 43. "Jon Cloud, owner of Cloud Mountain, manufactures and distributes 2,000 lb. of soysage monthly, fresh and refrigerated, primarily in Canada. The soysage is produced in Ontario, Canada, using the facilities of a tofu plant. Cloud Mountain is North America's largest producer and distributor of soysage." It is the company's biggest money maker, retailing for $1.60/lb.

1333. Leviton, Richard. 1981. The legal side of soysage. *Soyfoods* No. 5. p. 43. Summer.
• ***Summary:*** Jon Cloud, owner of Cloud Mountain, Inc. of Buffalo, New York, makes and distributes about 2,000 lb/month of soysage, fresh and refrigerated, primarily in Canada. This soysage, which retails for $1.60/lb, is manufactured in Toronto in a tofu plant. Soysage is Cloud's biggest money maker, and Cloud Mountain is north America's largest producer and distributor of soysage. However when trying to apply for a Canadian trademark, they met with serious problems.

First, Canada's Department of Consumer and Corporate Affairs said it is illegal in Canada to label a product "soysage" since it is not a qualified or standard meat substitute. It fails to meet Canada's nutritional composition standards, and would need to be extensively fortified. Yet even if the product were fortified, the Department refused to let Cloud market the product as "soysage."

Second, when Cloud Mountain applied for a U.S. trademark, a Bureau of Trademarks official told them to desist from using the term "soysage: as it was misleading.

After a fruitless 8-month legal struggle, Jon Cloud happened upon the Food Directorate, a division of the Health Protection Branch or Canada's Health, Education, and Welfare Department. They classified Cloud's product as "a non-standardized food" and allowed Cloud to sell it as a vegetarian product, rather than a meat substitute. The Food Directorate plans to draft a series of new standards for other soy products, including tofu. Address: Colrain, Massachusetts.

1334. Londin, Louise. 1981. Soy delis & Mintz's Buffet. *Soyfoods* No. 5. p. 6-7. Summer.
• ***Summary:*** Discusses the Good Nature Deli in Oak Park, Illinois, started on 14 December 1980 by Kevin O'Brien and Mary Ellen Sackett; The Soyateria in Toronto, Canada, situated in front of Soy City Foods and started in 1980 by Jon Cloud; and Mintz's Buffet (Glatt Kosher Cookery and Catering) in New York City. "David Mintz's popular recent contribution to tofu cookery is his creamy, delicious Tofu Ice Kream, which has been attracting large numbers of people into the shop. It is an original blend of tofu, soymilk, fresh fruits, natural essences of apples, figs and raisins, pure wildflower honey, egg whites, and soy oil. It comes in such tempting flavors as country vanilla, old fashioned chocolate, strawberries n' kream, peaches n' kream, apples n' kream, dutch nut chocolate, and apricot rum. At the Buffet, they call him Mintz, the Prince of Tofu." Photos show: David Mintz at his Tofu Time ice cream machine. The deli case at Mintz's Buffet.

1338. Yoshihara, Lulu. 1981. Re: History of and update on Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyfoods Center, Sept. 9. 3 p. Handwritten, with signature.
• ***Summary:*** "Shin-Mei-Do Miso started commercial production in April 1979. I studied miso making with the traditional masters at Maruman Miso Company in Iida City, Nagano Prefecture, Japan. Maruman still operates a *tezukuri* [hand crafted] shop as well as a huge factory and I was able to compare both processes and the resulting kinds of misos. Last spring my husband, Yoshi, visited them and received many compliments about our miso, as well as constructive criticism.

"We make two types of miso: *Kome* (organic soybeans, Kokuho Rose rice, sea salt, well water) age 1-1½ years, and *Mugi* (organic soybeans, Canadian barley, sea salt, well water) aged 22 months (2 summers).

"We also have 2 experimental batches of *genmai* [brown rice] miso made with whole organic brown rice (Lone Pine). This fall we will start making moromi miso, a type of naturally sweet finger-lickin' miso from a recipe we received from our teacher in Japan.

"This summer Yoshi and two local carpenters built a new addition to our miso workshop..." Address: Shin-Mei-Do Miso Co., Wren Rd., Denman Island, BC, Canada, V0R 1T0.

1339. White, Jim. 1981. Chinese take-out gets the taste test: Our experts explore Metro's other 'Chinatown'–the busy suburban take-out scene–and find some of the food good, much of it predictable but none of it exceptional. *Toronto Star (Ontario, Canada).* Sept. 20. p. D1.
• ***Summary:*** A Chinese woman observes that women's tastes are changing: "'Younger women tend to order a lot of bean curd [tofu] dishes, now. Its very popular. I think many of them are on diets.'" Address: Food editor.

1340. Adilman, Sid. 1981. Relief from chow mein: Breaking bread. *Toronto Star (Ontario, Canada).* Oct. 11. p. F15.
• ***Summary:*** Outside of Toronto's Chinatown the writer discovered an excellent restaurant named Dinner King, that serves Chinese vegetarian food. From "the four pages of strictly vegetarian offerings" he chose and enjoyed: (1) Bean curd and straw mushroom soup. Sparkling–with fresh tofu, straw mushrooms juicy and round, and no MSG. (2) Sangkan with pepper in garlic and black bean sauce. The writer was unable to find out what "Sangkan" was; it "had the texture and look of fried bean curd, made with dough." He called it "Breathtaking!" (3) Fried bean curd skin [yuba] rolls.

1341. Meyer, Walter H. 1981. Re: Comments on critique of report of ad hoc committee on the composition of special margarines, by Brisson, et al. Letter to Dr. George D. Micklea, Institute of Edible Oil Foods, c/o Standard Brands Canada Ltd., Mississauga, Ontario, Canada, Oct. 28. 6 p.
• ***Summary:*** "The Technical Committee of the Institute of Shortening and Edible Oils has reviewed the Critique of the Report of the Ad Hoc Committee on the Composition of Special Margarines, by Brisson *et al.* (June, 1981) and has found numerous statements that are misleading or scientifically inaccurate. The purpose of this memorandum is to call to your attention specific erroneous and misleading information presented in this Critique." Many of the controversies concern *trans* fatty acids. Address: Chairman, Technical Committee, Inst. of Shortening and Edible Oils, Inc., 1750 New York Ave., N.W., Washington, DC 20006. Phone: 296-7960.

1342. National Soybean Processors Association. 1981. Yearbook and trading rules 1981-1982. Washington, DC: National Soybean Processors Association. ii + 106 + A1-12. 23 cm. Spiral bound.
• ***Summary:*** On the cover (but not the title page) is written: Effective October 1, 1981. Issued annually to all members of the association. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Associate members. Standing committees. Trading rules on soybean meal (first adopted 18 Oct. 1933). Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanic sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, manufacturers' certification–Installation of automatic sampler (at barge loading transfer facility), semi-automatic sampler certification (at barge loading transfer facility), official referee chemists (meal). Soybean meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), manufacturers certification–Installation of automatic sampler (at vessel loading facility), semi-automatic sampler certification (at vessel loading facility). Trading rules on soybean oil (first adopted 21 May 1930). Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for

color (NSPA tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions.

The page titled National Soybean Processors Association (p. ii) states: "During the past crop year about 1,000,000,000 bushels of soybeans moved through processing plants of NSPA's 24 member firms. Approximately 50 percent of America's 1.8 billion-bushel soybean crop was bought and processed by NSPA members. Exporters account for another 36 percent of the crop, and the remainder [14%] is returned to farms for seed, feed, and residuals." Also discusses industry programs, soybean research, and international market development."

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers–Chairman: Gaylord O Coan, Gold Kist, Inc. Vice Chairman: Edward J. Cordes, Ralston Purina Co., President: Sheldon J. Hauck. Secretary: Donald H. Levinworth, Cargill, Inc. Treasurer: Lowell K. Rasmussen, Honeymead Products Co. Immediate past chairman: C. Lockwood Marine, Central Soya Co., Inc.

Executive committee: Richard G. Rypkema ('83), Agri Industries. Charles Bayless ('83), Archer Daniels Midland Co. David C. Thompson ('82), Bunge Corporation. Harold H. Leavenworth, Cargill, Inc. C. Lockwood Marine, Central Soya Co., Inc. Gaylord O. Coan, Gold Kist, Inc. Lowell K. Rasmussen, Honeymead Products Co. Kermit F. Head ('82), Missouri Farmers Assn.–Grain Div. Sewell L. Spedden ('82), Perdue, Incorporated. Edward J. Cordes, Ralston Purina Co.

Board of directors (alphabetically by company; each member company has one representative on the board): Richard G. Rypkema, Agri Industries. Thomas H. Wolfe, Anderson, Clayton & Co. Charles Bayless, Archer Daniels Midland Co. Keith Voigt, Boone Valley Coop. Proc. Assn. David C. Thompson, Bunge Corporation. Harold H. Leavenworth, Cargill, Inc. C. Lockwood Marine, Central Soya Co., Inc. Ronald L. Anderson, Continental Grain Co. Donald M. Chartier, Farmland Industries, Inc. Gaylord O. Coan, Gold Kist, Inc. Lowell K. Rasmussen, Honeymead Products Co. Kenneth J. McQueen, Land O'Lakes, Inc. Kermit F. Head, Missouri Farmers Assn.–Grain Div. Robert E. Hicks, Owensboro Grain Co., Inc. Sewell L. Spedden, Perdue, Incorporated. Wilton L. Adcock, Planters Oil Mill, Inc. Thomas L. Shade, Quincy Soybean Co. Edward J. Cordes, Ralston Purina Co. William P. Hudson, Riceland Foods, Inc. J.D. Morton, Sherman Oil Mill. Styles M. Harper, Southern Soya Corp. Kenneth A. Robinson, A.E. Staley Mfg. Corp. Preston C. Townsend, Townsends, Inc. Tyler Terrett, West Tennessee Soya Mill, Inc.

Executive office, Washington, DC: Executive Director, Sheldon J. Hauck. Director, Public Affairs: Murray C. Keene. Director, Regulatory Affairs: Rhond R. Roth. Administrative Asst.: Alicia B. Rickman. National Soybean Crop Improvement Council: Robert W. Judd, Managing Director. General counsel: Elroy H. Wolff, Sidley & Austin. Special counsel: Julian B. Heron, Jr., Heron, Haggart, Ford, Burchette & Ruckert.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 23. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Agri Industries–Soybean processing division (2); Des Moines, Iowa. Anderson, Clayton & Co. (4): Phoenix, Arizona, Jackson, Mississippi, Houston, Texas. Archer Daniels Midland Co. (23); Archer Daniels Midland Co. (26); Little Rock, Arkansas; Augusta, Georgia; Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Fredonia, Kansas; Mankato, Minnesota; Red Wing, Minnesota; Kansas City, Missouri; Clarksdale, Mississippi; Fremont, Nebraska; Lincoln, Nebraska; Kershaw, South Carolina; Memphis, Tennessee. Boone Valley Coop. Processing Assn. (3); Eagle Grove, Iowa. Bunge Corporation (9); Cairo, Illinois; Danville, Illinois; Logansport, Indiana; Emporia, Kansas; Marks, Mississippi; New York City, New York. Cargill, Inc. (20); Osceola, Arkansas; Gainesville, Georgia; Cedar Rapids, Iowa; Des Moines, Iowa; Sioux City, Iowa; Washington, Iowa; Chicago, Illinois; Wichita, Kansas; Burnsville, Minnesota; Minneapolis, Minnesota; Fayetteville, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (11); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Bellevue, Ohio; Marion, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (11); Guntersville, Alabama; Chicago, Illinois; Taylorville, Illinois; New York City, New York; Cameron, South Carolina. Farmland Industries / Far Mar Co (4); Van Buren, Arkansas; Sergeant Bluff, Iowa; Hutchinson, Kansas; St. Joseph, Missouri. Gold Kist Inc. (6); Decatur, Alabama; Atlanta, Georgia; Valdosta, Georgia. Honeymead Products Co. (3); Mankato, Minnesota. Land O'Lakes, Inc. (5); Fort Dodge, Iowa; Sheldon, Iowa; Dawson, Minnesota; Minneapolis, Minnesota. Missouri Farmers Assn.–Grain Div. (6); Mexico, Missouri. Owensboro Grain Co., Inc. (2); Owensboro, Kentucky. Perdue Incorporated (2); Salisbury, Maryland.

Planters Oil Mill, Inc. (2); Rocky Mount, North Carolina. Quincy Soybean Co. (4); Quincy, Illinois. Ralston Purina Co. (8); Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Louisville, Kentucky; Kansas City, Missouri; St. Louis, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Riceland Foods, Inc. (9); Helena, Arkansas; Stuttgart, Arkansas. Sherman Oil Mill (1); Fort Worth, Texas. Southern Soya Corp. (1); Estill, South Carolina. A.E. Staley Manufacturing Co. (7); Decatur, Illinois. Townsend's Inc. (2); Millsboro, Delaware. West Tennessee Soya Mill, Inc. (1); Tiptonville, Tennessee.

Associate Members: ACLI Soya Co, White Plains, New York. Anderson Clayton Foods, Dallas, Texas. Balfour MacClaine International, Ltd., New York City, New York. Best Foods, a Unit of CPC International Inc., Englewood Cliffs, New Jersey. Canadian Vegetable Oil Processing–Div. of Canada Packers Inc., Hamilton, Ontario, Canada. Cobec Brazilian Trading & Warehousing Corp. of the U.S., New York City. Delta Cotton Oil & Fertilizer Co., Jackson, Mississippi. Durkee Foods, Div. of SCM Corporation, Chicago, Illinois (Millark M. Evak). Hunt-Wesson Foods, Inc., Fullerton, California. Kraft, Inc.; Glenview, Illinois; Memphis, Tennessee. Lever Bros Co., New York City, New York. Louis Dreyfus, Stamford, Connecticut. Maple Leaf Monarch Co., Toronto, Ontario, Canada (W.G. Milliken). Marwood Company, San Francisco, California. Overseas Commodities Corp., Minneapolis, Minnesota. Pillsbury Co., Minneapolis, Minnesota. Procter & Gamble Co., Cincinnati, Ohio. Schouten International, Inc., Minneapolis, Minnesota. Spencer Kellogg, Div. of Textron, Inc., Buffalo, New York. Alfred C. Toepfer, Inc., New York City, New York (Dierk Overheu).

Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given–Export development committee, Crop Improvement Council. Meal trading rules. Oil trading rules. Safety, health, and loss prevention. Technical. Address: 1800 M. St., N.W., Washington, DC 20036. Phone: 202/452-8040.

1343. **Product Name:** Tofu.
**Manufacturer's Name:** Thistledown Soyfoods.
**Manufacturer's Address:** R.R. 5, Duncan, BC, V0L 4T6, Canada.
**Date of Introduction:** 1981. October.
**New Product–Documentation:** Leviton. 1982. In a Small Bright Building. They began making tofu in Oct. 1981.

1344. Pink, Dave. 1981. Oilseed processor ready to reap area advantages. *Windsor Star (Essex County, Ontario, Canada).* Nov. 9. p. 25.
• ***Summary:*** Maple Leaf Monarch (MLM) Company's Windsor plant opened for business in July 1979 with a capacity to crush 360,000 tonnes of soybeans each year and up to 95,000 tonnes "of the softer oilseeds including rapeseed (or canola), flax, and sunflower seeds." In Toronto the company could crush only 90,000 tonnes of soybeans and 50,000 tonnes of flax. The company was hoping that their new oilseed crushing plant in Windsor, in Canada's soybean heartland, would give it an edge over the competition. But after two years in production, company president William Milliken says a Windsor address hasn't made much difference–so far." Local soybean production hasn't grown much; MLM depends on the USA for 40% of its soybean supply. But Milliken is optimistic that the move will eventually pay off. MLM has the best of both worlds. First, a 42-acre site on the Detroit River in Windsor's west end, gives access to a deep water port. Second, the surrounding counties of Essex, Kent, and Lambdon, are Canada's major soybean producing areas.

MLM, which employs about 115 (mostly skilled tradesmen) is owned equally by two parent companies: (1) Maple Leaf Mills, a division of Miami, Florida-based Norin Corp. which is now controlled by Canadian Pacific Ltd., and (2) Lever Bros., a division of the giant European multi-national Unilever Corp. MLM's only other Ontario competitor, Victory Soya Mills, has announced no plans to crush rapeseed. MLM supplies about 36% of Eastern Canadian soy products from its $60 million Windsor plant–slightly behind Victory Soya Mills and slightly ahead of Canada Packers. MLM had sales of about $200 million in 1980. These three Eastern Canada crushers combined were able to supply just 80% of Eastern Canada's one million tonne soybean meal market last year, with the balance coming from U.S. firms. The three crushers supplied 172,000 tonnes of soybean oil last year, including small amounts exported to North Africa and the Caribbean. Only 4,000 tonnes of U.S. soybean oil had to be imported into Eastern Canada. But the three Eastern crushers can't compete with U.S. companies for the Western Canadian market; Minnesota crushers can offer lower prices. MLM will continue to run 24 hours a day, 7 days a week, even though there is a soybean oil surplus.

A photo shows William Milliken in a hard hat, standing outside the MLM mill. Age 60, he is a 35-year veteran of the oil seeds business.

Note: This is the earliest document seen (Jan. 2005) that mentions "canola" together with soybeans. The word "Canola" is derived from CANada + Oil + LOw acid. Address: Star agriculture reporter.

1345. *Plenty Canada News (Lanark, Ontario, Canada).*1981. Integrated rural development program [Lesotho, Africa]. Fall. p. 2.
• ***Summary:*** "At the Motsemocha Village Technology Centre four sleeping huts have now been completed and

others are being built... and the masons have begun building the sandstone walls of the soy dairy."

"Soy demonstrations instructing local Basotho people about the home preparation of soy foods continue. Local response and requests for further training has encouraged expansion of this program. One half litre of soy milk per day for children and one litre of soy milk for adults or its equivalent from other soy foods provides approximately 3/4 of the minimum daily requirement of protein."

A photo shows two round huts, one with a conical thatched roof and the other with no roof yet. Address: R.R. 3, Lanark, Ontario K0G 1K0, Canada.

1346. *Plenty Canada News (Lanark, Ontario, Canada).*1981. Soy Dairy: Integrated soy project–Guatemala. Fall. p. 3.
• ***Summary:*** "The Integrated Soy Project which Plenty Canada introduced into the Guatemala Highlands is continuing without the presence of Plenty volunteers. The Indigenos of San Bartolo, trained by Plenty Volunteers in soy technology, now operate their Soy Dairy on a daily basis. Two hundred local farmers have grown enough soybeans to supply the dairy for the rest of this year.

"The dairy is currently sustaining itself by selling soy ice bean and tofu at an affordable price in the local market. Every week it sells about 75 gallons of ice beans and 50 lbs. of tofu, and is making just enough money to cover weekly operating expenses."

"Just about everybody seems to love ice cream. The soy ice bean is rich and creamy and is made with all natural native fruits and flavors such as: banana, pineapple, orange, raspberry, zapote, papaya, melon and chocolate."

An illustration shows a cone of "Soy Ice Bean." A photo shows many Guatemalan children happily holding up cones of soy ice bean. Below this article is a form requesting donations to Plenty Canada. Address: R.R. 3, Lanark, Ontario K0G 1K0, Canada.

1347. White, Jim. 1981. Food gifts good enough to give and receive: Christmas gifts. *Toronto Star (Ontario, Canada).* Dec. 6. p. E4.
• ***Summary:*** No. 3 is tofu, also known as the "white steak" of the Orient [sic], bean curd, or dofu. It "is that shimmery, squiggly custard found in Chinese and Japanese restaurants."

Made from soy beans, tofu is just catching on. It is a healthy food, a good source of protein, that contains no cholesterol and is low in calories and sodium. Vegetarians like tofu, as do those who are allergic to dairy products. In fact, many alternatives to dairy products are now made from tofu.

Since tofu is inexpensive, it should grow in popularity among those who are budget minded or thrifty.

For the many people who run out of ideas for how to prepare tofu, its smart to buy a good tofu cookbook. *Cook with Tofu,* by Christina Clarke is one of these. Address: Food editor.

1348. Howell, R.W. 1981. Re: Early soybean physiologists in the United States. Letter to William Shurtleff at Soyfoods Center, Dec. 23. 3 p.
• ***Summary:*** "Dr. W.L. Burlison was an ardent proponent of the importance of plant physiology to agronomy. In his presidential address to the American Society of Agronomy on November 17, 1927, he said, 'Agronomy... must ally itself with those sciences that are basic in the interpretation of plant function, namely, chemistry, physics, and plant physiology.' It is no coincidence that the USDA soybean program included a physiologist from the earliest days and that physiology has had a prominence in Agronomy at Illinois that is unequalled.

"E.B. Earley was the first physiologist in the U.S. Regional Soybean Laboratory at Illinois and Missouri from 1937 to 1944, when he joined the University of Illinois faculty. He published a paper on soybean reaction to zinc, and one on temperature of the root environment of soybeans. Most of his career was devoted to corn research.

"D.F. McAlister came to the Laboratory after World War II. His research concerned mineral nutrition, and the effects of defoliation. He left in 1951 to become a department head at the University of Arizona, later serving that University in Brazil and as assistant director of the Agricultural Experiment Station.

"I succeeded McAlister in 1952, continuing until I became investigations leader for USDA soybean work in 1964. My research concerned phosphorus nutrition and metabolism, oil synthesis, and effects of temperature on seed development and composition.

Several physiologists joined the USDA during the 1960s: R.E. Johnson, mineral nutrition; R.W. Rinne, oil metabolism; W.L. Ogren, photosynthesis; J.E. Harper, mineral nutrition; C. Sloger, nitrogen fixation; C.F. Tester, biochemistry.

"Soybeans have been the object of study by many physiologists whose primary focus was not the plant itself, but some key physiological processes. This trend goes back to the work of Garner and Allard, who identified photoperiodism in the 1910s, and to Borthwick, Parker, and Hendricks in the 1930s and later H.J. Evans, now at Oregon State, and R.H. Burris, of Wisconsin, made basic contributions to understanding of nitrogen fixation in soybeans. The system of Maturity Groups (00 to X) to identify the areas of adaptation of soybean varieties is based directly on the photoperiod research of Borthwick and Parker. Borthwick is one of the few agricultural scientists to be elected to membership in the National Academy of Sciences, a recognition of the fundamental significance of

his work in photoperiodism, much of it with 'Biloxi' Soybeans. J.C. Brown, and C. Foy wrote several outstanding papers on comparative iron metabolism, based on a variant type reported about 1940 by M.G. Weiss.

"Soybeans were 'discovered' by crop physiologists around 1960. R.M. Shibles began work on soybeans at Iowa State about that time, as did I.C. Anderson. A student of Anderson's was J.W. Tanner, who went to Canada and pioneered soybean physiology at Guelph" (Ontario province).

"Very recently, research groups concentrating on photosynthesis have been created, building on the foundation established in soybeans. Work in soybeans provided the basis for understanding photorespiration, virtual absence of which in maize and a few other grasses, explains much of the difference in potential productivity of soybeans and corn. Photorespiration is 'like a leak' by which much of the product of photosynthesis is lost before storage.

"Likewise, much of the theory of symbiotic nitrogen fixation has evolved from work on soybeans. In another instance, differences in expression of physiologic traits (iron and phosphorus nutrition) have been shown to be controlled in some cases by very simple and traditional genetic mechanisms.

"With the growth in number of soybean physiologists and the increased understanding of complex processes, it has become more difficult to render simple physiological explanations of questions of growth. The goal of 'helping the breeders' has been elusive. There has not been identified a key process, measurement or improvement of which would replace conventional testing. However, with the advent of genetic engineering the interface between physiologists and breeder/geneticists is becoming less clear. The skills for cell and tissue culture, protoplast fusion, and the other marvels of genetic engineering are those of the physiologist, perhaps now coming to fruition in partnership with the geneticist/breeder." Address: Head, Dep. of Agronomy, Univ. of Illinois.

1349. Fisher, G.A. 1981. The economics of soybean production in Ontario, 1980. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 40 p. Dec. Series: Economics Information. [14 ref]
• ***Summary:*** Contents: Summary. Background of the study: Purpose, approach. An overview of the soybean industry: Uses of soybeans, production in Ontario, trends in production costs, marketing. Soybean production practices: Recommended practices in Ontario, practices used by growers in this study. Costs, yields, and returns: Production costs, yields, returns. Comparative production advantage of soybean and other cash grain crops. Marketing options for Ontario growers. Appendix. 18 tables. 6 appendix tables. 2 figures. Address: Economics Branch, Ontario Ministry of Agriculture and Food, Legislative Buildings, Toronto, Ontario M7A 1B6.

1350. Hume, D.J. Jackson, Ann K.H. 1981. Pod formation in soybeans at low temperatures. *Crop Science* 21(6):933-37. Nov/Dec. [16 ref]
• ***Summary:*** Most soybean varieties stop forming pods at temperatures around 15ºC. This is a report of cold-tolerant varieties that form pods at day / night temperatures as low as 15 / 9ºC. Address: 1. Prof., Crop Science Dep., Univ. of Guelph, Guelph, ONT, Canada; 2. Science technician, Plant Physiology Div., Dep. of SIR, Palmerston North, New Zealand.

1351. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** La Maison du Tofu Carmel.
**Manufacturer's Address:** CP 567, Bonaventure, QUE, Canada G0C 1E0. Phone: 418-752-5869.
**Date of Introduction:** 1981. December.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1981. Dec. 8. Owner: Dennis Connolly.

1352. Soycrafters Assoc. of North America. Soyfoods Center. 1981. Per capita use of soyfoods grows to nearly 9 lbs. in U.S. *Vegetarian Times* No. 52. Dec. p. 6.
• ***Summary:*** Based on a Sept. 1981 news release copyrighted by the Soyfoods Center and the Soycrafters Assoc. of North America, this summary of a market study gives for each major soyfood product the number of manufacturers in the USA, Canada, and worldwide. The tons/year of raw soybeans used. And (in the USA only) the tons of food produced, wholesale value, retail value, and number of employees.

In the USA, the number of manufacturers, tons of product produced, and retail value in million dollars are as follows for low technology, traditional: Tofu and tofu products (154, 22,700, $50.4), tempeh (32, 494, $1.78), soymilk and soymilk products (14, 148,000, $118.0), soy sauce, shoyu & tamari (15, 54,837, $203.0), soynuts and soynut butter (12, 2,750, $4.6), miso (10, 2,000, $4.8), soy sprouts (5, 360, $0.25), etc. Subtotals for low tech (284 manufacturers, 231,305 tons produced, $392.25 retail value).

For high-technology, modern: Soy flour & grits, defatted (12, 400,000, $190.4), textured, extruded soy flour (TSP/TVP) (2, 200,000, $179.2), soy protein concentrates (3, 45,000, $56.7), soy protein isolates (3, 45,000, $126.0), meat analogs (secondary products) (6, 20,000, $55,000). Subtotals for high tech (26 manufacturers, 710,000 tons produced, $615.6 retail value). Total low and high tech: 310 manufacturers, 941,305 tons produced, and $1,007.85 million dollars.

Also published in New Age (Jan. 1982, p. 17) under the title "Tofu Takes Over."

1353. Wolfe, Bernard M.; Giovannetti, P.M.; Cheng, D.C.H.; Roberts, D.C.K.; Carroll, K.K. 1981. Hypolipidemic effect of substituting soybean protein isolate for all meat and dairy protein in the diets of hypercholesterolemic men. *Nutrition Reports International* 24(6):1187-98. Dec. [42 ref]
• ***Summary:*** Isolated soy protein completely replaced animal protein in a diet fed to 7 human subjects for 49 days. Total cholesterol was lowered 13%, LDL cholesterol was lowered 17%, VLDL and HDL cholesterol were not changed. Address: Depts. of Medicine, Biochemistry and Home Economics (Brescia College) of Univ. of Western Ontario, London, ONT, Canada.

1354. **Product Name:** Lecithin.
**Manufacturer's Name:** Canada Packers Inc. Chemical Div.
**Manufacturer's Address:** 5100 Timberlea Blvd., Mississauga, ONT, L4W 2S5, Canada.
**Date of Introduction:** 1981.
**New Product–Documentation:** Soya Bluebook. 1981. p. 56.

1355. **Product Name:** Tofu Dream (Soymilk Ice Cream).
**Manufacturer's Name:** Farm Foods.
**Manufacturer's Address:** R.R. #3, Lanark, ONT, K0G 1K0, Canada. Phone: 613-278-2215.
**Date of Introduction:** 1981.
**Wt/Vol., Packaging, Price:** Pints.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Allan Brown. 1998. May 11. Tempeh (made by Allan in 1979) was the first commercial soy product made by Farm Foods in Lanark, Ontario. In about 1981 Farm Foods decided to focus their energy on a soy ice cream named Tofu Dream, their second soy product, which was similar to the Ice Bean made by The Farm in California. Arthur Herold was the man in charge of the product, which lasted for about 4 years.

1356. Brisson, Germain J. 1981. Lipids in human nutrition: An appraisal of some dietary concepts. Englewood, New Jersey: Jack K. Burgess. xvi + 175 p. Illust. 24 cm.
• ***Summary:*** Contains a good account of the issues in the *trans* fatty acids debate. See especially Chap. 3 "The enigma of *trans* fatty acids." The author appears to believe sincerely that *trans* fatty acids may be the heretofore unknown cause of coronary heart disease–and perhaps cancer. He uses the word "Cholesterophobia" to refer to his belief that excessive concern with blood cholesterol is unwarranted. Address: PhD, Prof. of Nutrition, Laval Univ., Quebec, Canada.

1357. Fats and oils in Canada: Annual review 1980. 1981. Ottawa, Ontario, Canada: Grain Marketing Office, Dept. of Industry, Trade and Commerce. 87 p. 28 cm.
• ***Summary:*** This annual government publication is packed with statistics on the subject. Address: Ottawa, Ontario, Canada.

1358. Kloss, Jethro. 1981. Back to Eden: A human interest story of health and restoration to be found in herb, root, and bark. Loma Linda, California: Back to Eden Books. xxxii + 684 p. Illust. Index. 18 cm. Kloss Family Heirloom Edition.
• ***Summary:*** One of the most creative and original sources of early soyfoods recipes, which include "Soybean Cream" and "Soybean Ice Cream." This revised edition contains the complete original text of this classic work on healing herbs, home remedies, diet, and health–plus 16 pages of new family recollections by Jethro Kloss' daughter, son, and granddaughter at the beginning of the book, and 16 pages of previously unpublished photographs in the middle of the book. This edition was first copyrighted in 1972. The book has been published continuously by the Kloss family since 1946. A blurb on the cover of the 1981 printing (which retails for $2.95) states: "Two million copy bestseller. The complete original text [with the same page numbers]. New family additions!" A color illustration by Harry Anderson shows a man and woman seated by an idyllic river, surrounded by birds and animals, in the Garden of Eden. The rear cover states that this is "The heirloom authorized Kloss family edition."

The contents of the book, except for the new sections mentioned above, are identical to the original 1939 edition. But the recollections of Jethro Kloss by his children and granddaughter contain a wealth of new and interesting information. The recollections by his daughter Promise Kloss Moffett note: "My father was born on a large farm near Manitowac, Wisconsin, on April 27, 1863. The ninth of eleven children born to his pioneering parents lived a healthy and happy life in that primitive Indian country...

"When he was about twenty, he went to Florida and worked in the orange groves, finally owning a large grove at Deland. Later he attended school in Nebraska and then in Battle Creek, Michigan. While in Battle Creek he worked closely with the then revolutionary medical leadership of the world-renowned Battle Creek Sanitarium. He saw clearly the disastrous results of the use of dangerous drugs then prevalent in caring for the sick. He developed further his own philosophy and understanding of the laws of nature...

"He was married March 5, 1900 to Miss Carrie Stilson, who had trained as a Bible worker and teacher and had labored in a mission in Madison, Wisconsin and taught

several terms of grade school. At that time he was a licensed minister in Wisconsin and they established their home at Rose Lawn. Two children were born to this union, Promise Joy and Paul, who died when only four weeks old of whooping cough. During these years, besides my father's ministerial work, my parent's operated a branch of the Battle Creek Sanitarium and also sold Battle Creek Sanitarium health foods. My mother died in July of 1905.

"In March, 1907, my father married Mrs. Amy Ponwith, a widow with a small daughter, Mabel. My father and step-mother owned and operated an attractive sanitarium in pleasant surroundings in St. Peter, Minnesota, which they named *The Home Sanitarium*... Their daughter Lucile was born here in St. Peter in 1908 and their son, Eden, in 1910.

"Next the Kloss's became interested in the self-supporting work being conducted in the south and visited some of the schools in North Carolina and Tennessee. About 1911 they sold the sanitarium in Minnesota and moved to Fountain Head, Tennessee, where their youngest daughter, Naomi, was born in 1913. Here they bought a 250 acre farm, built a large house and barn, and raised many kinds of fruits and vegetables...

"A later development in good health was his creation of a significant health food manufacturing operation in Amqui, Tennessee after receiving a call from them to take charge of their food factory...

"Before this factory was sold to the Nashville Agricultural Normal Institute he was shipping health foods all over the United States and Canada. It was during this time at this place that he originated many new health food recipes. This establishment later became a part of what has since become the well-known Madison College near Nashville, Tennessee.

"Our next move was to Brooke, Virginia where [in 1921] papa established a health food factory and retail market. Each of us children was pressed into service in one way or another with this family enterprise. At times we would be helping with some food experiment, or perhaps in typing and retyping the material that later became *Back to Eden*, which was many years in preparation. Jethro Kloss's son Eden was for many years his right hand helper. Whatever my father did in spreading the gospel of health and natural living, he did with all his might and trained his children in that same pattern of living...

"One of my favorite memories as a family is the daily worship hour when Father would gather his family of seven about him and we would sing hymns, read Bible verses around the circle, and pray together. He was a gentle but firm family leader.

"Although a strict disciplinarian, my father was warm-hearted and affectionate–devoted to his family. When he was away from home, we invariably received a letter from 'papa' every day...

"Eventually this health food factory at Brooke, Virginia was taken over by my step-sister, Mabel and her husband.

"The Kloss's then moved to Washington, D.C. and carried on his work of treating the sick, lecturing on health and a more intensive study of herbs and preparation of his book, *Back to Eden.* I still have in my possession an attractive menu... for a Demonstration Dinner he gave March 27, 1933, at the Dodge Hotel in Washington, D.C. The menu was completely vegetarian and included 'Sweetbreads a la Kloss.' The pumpkin pie and strawberry sundae were made with soy milk...

"*Back to Eden* was at last published in 1939, the fruition of much toil and sacrifice for many years by the entire Kloss family... [Jethro's] wife Amy [Pettis] Kloss died in 1944 at Fredericksburg, Virginia...

"In 1945 papa became acquainted with Mr. and Mrs. Deloe Robert Hiatt on a trip to Madison, Tennessee. Together they found a property at Coalmont, Tennessee, where the Hiatts took over the promotion and publication of *Back to Eden*... [Jethro] peacefully went to sleep in June of 1946, his eighty-fourth year [but he was age 83], and today rests in a little cemetery in Tennessee."

The recollections by his son, Eden, note: "I was born in St. Peter, Minnesota, on February 10, 1910, to Jethro and Amy Kloss... After the move to Tennessee, my parents developed a plant for the manufacture of a line of vegetarian meat substitutes, cereals, crackers, and other items, at Amqui, near Nashville. (Our business was called the Nashville Sanitarium Food Factory.) Many of my early memories center on that large two-story factory, where raw materials were transformed into good-tasting, healthful food products...

"My father was an untiring worker. He would be up hours before the rest of the family–building fires, starting cracker dough, and making everything ready so that the work could go full speed ahead when the workers arrived in the morning... One day when Eden was burned while canning tomatoes, Jethro rushed him to the Madison Sanitarium for treatment. Kloss also made gluten there.

"When I was nine or ten years old, the factory was sold to the private school at Madison and transferred to that campus, and our family traveled in our pickup truck, camping en route, from Tennessee to Virginia. Here, at a town named Brooke, we found an ideal location–a plot of ground with a building in which we could make and sell health foods and teach people about healthful living...

"It was here at Brooke, Virginia, that Papa started to put in uncounted hours working on the beginnings of his book, *Back to Eden.*

"After some years, my oldest sister and her husband took over the food factory, and my parents moved to Takoma Park (on the outskirts of Washington, D.C.)...

"Papa's travels to give lectures and food demonstrations took him to places like Miami, Florida, and

Houston, Texas."

There are also recollections by his granddaughter, Doris Joyce Kloss Gardiner. In about 1939-40 she used to be with her grandparents when they visited relatives in Falmouth, Virginia, just north of Fredericksburg. There she helped make soymilk: "Nor was I happy to stand at the stove stirring and stirring large kettles of soybean milk (so the milk wouldn't stick and be scorched)–a laborious and time-consuming process. But Grandpa's soybean milk was delicious, and so were the twenty or so other soy products that he originated and produced–including meat substitutes and soybean bread, butter, cheese, and ice cream...

"Often Grandpa would prepare soybean ice cream to serve at the close of his lectures or cooking demonstrations. One of my favorite treats was to lick the paddle from the ice-cream freezer before we left home to go to the lecture...

"Grandpa and Grandma Kloss died when I was in my mid-teens." The frontispiece (facing the title page) is a portrait photo of Jethro Kloss. An original of this photo was sent to Soyfoods Center in 1985 by Doris Kloss Gardiner of Loma Linda, California. On the 4th page of photos in the center section is an ad by "Kethro Kloss Health Food Company, Brooke, Virginia." Photos show two hand grinders, a large-scale gas-fired pressure cooker, a large stove-top pressure cooker, and a hand scaler. The text begins: "We manufacture a large line of health foods." In 1921 Kloss opened this health food factory in Brooke, VA, and it as on this site that he began writing *Back to Eden.* Address: P.O. Box 1439, Loma Linda, California 92354.

1359. Le tofu... [What is tofu?]. 1981. Quebec, Canada. 14 p. 28 cm. [Fre]
• ***Summary:*** This is a pirated edition of the English-language publication "What is tofu?" by Shurtleff and Aoyagi. It was pirated and produced by L'Entrepôt Coopératif L'Engoulevent, 320 rue St-Roch, Quebec, G1K 6S2. Phone: (418) 522-3347. 2,000 copies were printed in 1991. Address: Quebec, Canada.

1360. Leviton, Richard. 1981. Tofu. Colrain, Massachusetts: Published by the author. 19 p. Unpublished manuscript. 28 cm.
• ***Summary:*** Each page contains a large photo (mostly color) with a caption below explaining it. There are photos of: Nasoya Organic Tofu. Richard and Kathy Leviton and Tom Timmins behind a round cooling tank of tofu at Tomsun Foods. Packaging tofu at Victor Food Products in Canada. The production process used for tofu at Tomsun including soaking, grinding, cooking in a triple compartment steam cooker, separation of soymilk and okara, coagulation, pressing of the curds, manual cutting of the tofu, cooling the tofu in water in a long stainless steel cooling tank. Four photos of tofu recipes. Address: Colrain, Massachusetts.

1361. Matthews, D.J.; Hayes, P. 1981. The yield of soybeans under Northern Ireland conditions. *Record of Agricultural Research (Belfast, Northern Ireland Dep. of Agriculture)* 29:23-27. [7 ref]
• ***Summary:*** In 1979 three Swedish and two Canadian soybean varieties were grown at Newforge Lane, Belfast, Northern Ireland; their growth and yield were compared. The performance of 25 other soybean varieties of various origins were also evaluated using 20 plants of each variety. Of the 35 varieties used, only 11 flowered and 10 set pods. Only the three Swedish varieties produced a significant yield and only one, Traff, fully matured by late October. Yields were low, the highest yielding variety, Bravalla, producing 844 kg/ha of seed. Seed quality was low with a high proportion of abnormal seeds. The existing soybean varieties are not considered suited to the conditions of Northern Ireland. Address: 1-2. Dep. of Agricultural Botany, Queen's Univ., Belfast BT7 1NN, United Kingdom. Hayes' additional address: Field Botany Research Div., Dep. of Agriculture for Northern Ireland, Newforge Lane, Belfast BT9 5 PX.

1362. Meilke, Karl D.; Griffith, G.R. 1981. An application of the Market Share Approach to the demand for soyabean and rapeseed oil. *European Review of Agricultural Economics* 8(1):85-97. [23 ref]
• ***Summary:*** The authors use this approach to estimate demand for total vegetable oils and soybean oil in the USA, Canada, Japan, and the European Community (EC), and rapeseed oil in Canada. The results imply that the demand for rapeseed oil is more elastic than the demand for soybean oil in all regions, and that the demand for both rapeseed and soybean oil is by far the most elastic in the EC. Address: 1. Univ. of Guelph, ONT, Canada; 2. New South Wales Dep. of Agriculture, Australia.

1363. Milner, Max. 1981. Protein resources in international food aid programs. In: D.W. Stanley, E.D. Murray, and D.H. Lees, eds. 1981. Utilization of Protein Resources. Westport, CT: Food & Nutrition Press, Inc. 403 p. See p. 18-31. Chap. 2. [23 ref]
• ***Summary:*** Contents: Introduction. Unconventional proteins in the recent past. Developments in the early 1950s. Philosophical questions and problems. Initiatives in protein foods in the 1960s. Status of some protein resources. Soy protein products supplied by Food for Peace. Fish protein concentrate (FPC). Cottonseed flour. Canadian efforts. Guideline for preparing food grade groundnut (peanut) flour.

Table 2.1 is a partial list of protein-rich foods based on novel proteins, by country: Brazil: Fortifex (corn, soy), Enriched Maizena (corn, soy), Cerealina (corn, soy). Colombia: Incaparina (corn, soy), Colombiarhina (corn,

soy), Duryea (corn, soy). Ethiopia: Faffa (teff, cereal, milk, soy). Guatemala: Incaparina (corn, cottonseed, soy). Mexico: Protea (corn, soy). South Africa: Pronutro (corn, soy, yeast).

Table 2.2 gives the ingredients (with the percentage of each used) in four blended foods (special food supplements) distributed by USAID: Wheat Soy Blend, Corn Soy Milk, Instant Corn Soy Milk, and Whey Soy Drink Mix.

Table 2.3 gives the ingredients (with the percentage of each used) in five soy-fortified (SF) processed staple foods distributed by USAID: SF Bulgur, SF Flour 12%, SF Cornmeal, SF Sorghum Grits, SF Rolled Oats.

Table 2.4 shows the number of pounds sent in 1978, the total cost, and the cost per pound of the nine foods described above. The most popular product was Soy-fortified bulghur, of which 600.2 million pounds were sent at a cost of $50.7 million. It cost 8.4 cents a pound, the least expensive of the nine. The most expensive, Whey Soy Drink Mix, cost 23.2 cents a pound. Address: Assoc. Director, International Nutrition Planning Program, MIT, Cambridge, Massachusetts 02139.

1364. Pugi, K. 1981. Novel proteins, the North American experience. In: D.W. Stanley, E.D. Murray, and D.H. Lees, eds. 1981. Utilization of Protein Resources. Westport, CT: Food & Nutrition Press, Inc. 403 p. See p. 289-302. Chap. 15. [8 ref]
• ***Summary:*** Table 15.4 shows the relative cost in dollars per pound of utilizable protein from various sources in 1974. The least expensive source was cottonseed flour ($0.42/lb), followed by soy concentrate ($0.49), low-fat soy flour ($0.55), soy isolate ($0.75), and extruded soy ($1.87).

Table 15.5 shows the quantity and value of protein additive usage for human diets from 1970 to 1975. In 1975 dairy whey had the largest quantity shipped (495 million lb), followed by soy flour and grits (160), then casein (caseinates; 120). Most of the whey (87%) and the casein/caseinate (81%) is used in imitation dairy products. The quantity of soy-based products shipped in millions of pounds grew as follows during this period: Soy flour rose from 140 million lb in 1970 to 160 million lb in 1975. Soy concentrate rose from 30 to 35, soy isolate from 35 to 45, textured soy products from 20 to 30.

Table 15.6 shows the protein additive usage by food product category in 1975. For soy flour, 41% was used in baked goods, 24% in meat, and 13% in dry cereal for adults. For soy protein concentrate, 46% was used in meat products, 17% in dry cereals for infants, and 9% in baked goods. For soy protein isolate, 49% was used in meats, 24.4% in imitation dairy products, and 6.7% in baked goods. For textured soy protein products, 73% was used in meat products and 27% in other uses. The source of much of this information was a 1975 report by William C. Hale of Arthur D. Little, Inc. titled “Impact of Technology on the Food Supply” (50 p.). Address: Du Pont Canada Incorporated, P.O. Box 5000, Kingston, Ontario K7L 5A5, Canada.

1365. Satin, Morton; Findlay, Chris. 1981. Designing commercial protein foods. In: D.W. Stanley, E.D. Murray, and D.H. Lees, eds. 1981. Utilization of Protein Resources. Westport, CT: Food & Nutrition Press, Inc. 403 p. See p. 328-48. Chap. 17. [3 ref]
• ***Summary:*** Discusses the use of soy flour and soy protein concentrates in making bread since they are the most popular high-protein supplements currently in use. One goal is crumb lightness. Address: Steinberg Foods Ltd., 5600 Pierre de Coubertin, Montreal, QUE, H1N 1P9, Canada.

1366. Shurtleff, William; Aoyagi, Akiko. 1981. Qu’est-ce le tofu? Traduction et mise en page: L’équipe de l’Informatek, Quebec [What is tofu? Translated into French by the folks at Informatek, Quebec, Canada]. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 16 p. [Fre]
• ***Summary:*** Contents: Introduction: What is tofu? A family of distinctively varied foods. A storehouse of high-quality protein. A pillar of vegetarian nutrition. An ideal food: Low in saturated fats, free of cholesterol; an ideal diet food. Buying and storing tofu. Making tofu at home and in communities. Soybeans, tofu, and the world food crisis. Tofu shops in Japan. Cooking with tofu (13 recipes). Address: Authors: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Informatek: 688 St-Jean, Québec, G1R 1P8, Canada. Phone: Quebec: (418) 522-5386.

1367. Stanley, David W.; Murray, E.D.; Lees, David H. 1981. Utilization of protein resources. Westport, Connecticut: Food & Nutrition Press. 403 p. Illust. Index. 24 cm. [300+ ref]
• ***Summary:*** This book is based on the International Symposium on Protein Utilization held 13-16 Aug. 1978 at Guelph, Ontario, Canada. It contains 22 chapters by various authors in 5 sections. Those related to soy are cited separately. Address: 1. Dep. of Food Science, Univ. of Guelph, ONT, Canada; 2. Dep. of Food Science, Univ. of Manitoba, Winnipeg, Manitoba, Canada; 3. Griffith Laboratories, Ltd., Scarborough, ONT, Canada.

1368. Thompson, Donald E. comp. 1981. Indiana authors and their books 1967-1980: Also containing additional names from the beginnings of Indiana statehood. 3 vols. Crawfordsville, Indiana: Wabash College. Index. 28 cm.
• ***Summary:*** On page 421 is an entry for “Wiancko, Alfred Theodor: 1872-1949.” Wiancko was born on 16 Oct. 1872 in Sparrow Lake, Ontario, Canada. 1895–He received the B.S. degree from Ontario Agricultural College, where he was later assistant librarian and taught German. 1901-03–In

Nebraska he worked for the Standard Cattle Co. and the University of Nebraska. 1903–He arrived at Purdue University, where he taught in the school of agriculture. Later he was head of the department of agronomy and did research. 1943–Prof. Wiancko retired. 1949 Dec. 10–He died in Eustis, Florida.

1950–Obituary for Prof. Wiancko in the *Proceedings of the Indiana Academy of Science* (Vol. 60). Address: Librarian Emeritus, Wasbash College, Indiana.

1369. Yan, Martin. 1981. The Yan can cook book. Garden City, New York: Doubleday & Company Inc. 355 p. Illust.
• ***Summary:*** This Chinese cookbook, published in both hardcover and paperback, contains at least 15 recipes using bean curd (tofu), especially in the chapter titled "Bean Curd, Eggs, and Other Protein-Rich Foods" (p. 179-99). Tofu is usually referred to as "soybean curd" or "bean curd." Pages 185-87 contain a recipe for making tofu at home, and give a nutritional comparison of firm bean curd, chicken eggs, ground beef, and cottage cheese. In the chapter "Saucy Dips" is a recipe for "Black Bean Sauce" using "salted black beans" [soy nuggets].

The glossary (p. 313-) gives good descriptions of the following soyfoods: Black beans salted, brown soy sauce, Hoisin sauce, Hot bean paste, MSG (monosodium glutamate), soy sauce, bean curd, and soybean sheets dried (yuba).

The author is the star of a popular daily Chinese cooking show named "Yan Can," which he has hosted since 1978. Born and raised in Kwongchow, China, he left China in 1963 and began cooking at the age of 13 as an apprentice in a popular Hong Kong Restaurant (owned by his uncle) and at age 18 he had earned a diploma from the Overseas Institute of Cookery. Arriving in the USA in 1969, he earned a masters degree from the University of California at Davis.

1370. [Japan miso export statistics]. 1981. In: Okura-sho Yushutsu Tsukan Tokei-hyo. Tokyo, Japan.
• ***Summary:*** Gives miso export statistics for 15 countries. For each country gives: 1980 weight and 1981 weight (in kg). Percentage increase. 1980 and 1981 price in yen. Percentage price increase. The top countries, in descending order of amount exported are (with the 1981 weight in kg for each): USA 834,303. Singapore 94,988. Netherlands 67,767. Canada 46,178. England 40,371. West Germany 39,966. Australia 39,432. Iraq 34,509. Indonesia 30,620. Hong Kong 28,940. France 27,959. Belgium 26,625. Taiwan 25,238. Italy 18,755. Saudi Arabia 18,627. Total for all miso exports to all countries 1,524,008. Address: Tokyo, Japan.

1371. *Soybean Update (Winnipeg, Manitoba, Canada).*1981—. Serial/periodical. Richardson Securities of Canada. Annual.
• ***Summary:*** Continues Soybean Update (Winnipeg). Address: Canada.

1372. Bailey, L.D.; Hamilton, R.I.; Chow, P.N.P. 1981? Soybean production–Research developments. Paper presented at ? 15 p. Undated. Unpublished manuscript.
• ***Summary:*** "The present Soybean research program at Brandon has as its broad objective 'The development of management systems for efficient soybean production on the eastern prairies'. Guided by the results of the previous research this new research was initiated in 1972-1973, and takes a multidiscipline approach, involving three broad areas–(1) Breeding, (2) Evaluation and Physiology, (3) Management. The success of the program is due in large measure to the cooperation among the research team, with provincial agronomists and University researchers.

"The Breeding research is carried out by Dr. Voldeng of the Ottawa Research Station. Dr. Voldeng in cooperation with Dr. R.I. Hamilton (BRS) maintains a breeding and evaluation nursery at the Brandon Research Station... To date the program has produced two licensed varieties: (1) Maple Presto–the earliest licenced cultivar grown in North America. (2) Maple Amber–a high yielding, high protein early maturing cultivar."

The Corn Heat Unit system is used to help predict how soybean varieties will perform under various agro-climatic conditions. For example, research data shows that the McCall variety requires considerably more heat units and time to reach full maturity than the Maple Presto variety. A cool tolerance gene has recently been identified at Ottawa by Drs. Voldeng and Seitzer. "The research on row spacing shows that as the row width is reduced from 80 cm to 20 cm the yield of beans increased (Table 4), and further the height of the first pod above the ground increased, thus contributing to the yield. The results of the plant density studies are as conclusive (Table 5). The table shows that in general maximum yields are obtained with a population density of 60-100 plants/square meters.

"The data for the date of planting experiments have not been completely analyzed. However, preliminary indications are that May 15-25 appears to be the optimum seeding dates." Address: Agriculture Canada, Brandon Research Station, Box 610, Brandon, Manitoba, Canada.

1373. Soy City Foods. 1981? Recipes for tofu & soy-pro & other soy foods. W. Toronto, ONT, Canada. 9 p. No index. 22 cm. Undated.
• ***Summary:*** Contents: Retail section–tofu recipes. Soups. Salads. Sandwiches. Dinners. Desserts. Soypro. Soypro recipes. Address: 2847 Dundas St., West Toronto, ONT, Canada. Phone: (416) 762-1257.

1374. Soybean production in Manitoba. 1981? Government of Canada, Regional Economic Expansion, Manitoba Dep. of Agriculture, AGRO-MAN. 16 p. 16 x 23 cm. * Address: Manitoba, Canada.

1375. Tsukamoto, Joe. 1981? Soybean production in western Canada. Paper presented. 10 p. Undated. Unpublished manuscript.
• ***Summary:*** Discusses soybean variety development work in Alberta, Saskatchewan, and Manitoba provinces in Canada. Address: Manitoba Agriculture, Brandon, Manitoba, Canada.

1376. Linton, Marilyn. 1982. How's your tofu, old bean curd? *Sunday Sun (The).* Jan. 10. p. G-17.
• ***Summary:*** In ten years, "tofu will be as commonplace as pizza, as much a part of your eating style as yogurt." A photo shows Stephen Yu of Victor Food Products standing in front of his tofu products and cooling tank inside his factory. Yu's business has increased 300% is the last 3 years. Today he sells his tofu through Loblaws. Yu recommends that Caucasians start cooking with tofu by making Scrambled Tofu.

"Buying tofu: Most supermarkets carry tofu and all Chinese and Japanese grocery stores do. You can also buy freshly made tofu from Yet Sing, at 11 Baldwin, Victor Food's tofu costs $1.29 at Loblaws for a plastic package containing three pieces or 500 gm.

"Every Chinese restaurant in town includes dishes with tofu on its menu. Also try Soja's Tofu Cafe at 10 Kensington in the Kensington Market area. Nettie Cronish's tofu kiwi cake costs $12, serves eight, and is available (along with other tofu delicacies) by special order from her at 598-3228." Address: Toronto, ONT, Canada.

1377. Jordan, D.C. 1982. Notes: Transfer of *Rhizobium japonicum* Buchanan 1980 to *Bradyrhizobium* gen. nov., a genus of slow-growing, root nodule bacteria from leguminous plants. *International J. of Systematic Bacteriology* 32(1):136-39. Jan. [34 ref]
• ***Summary:*** "Recent data indicate that the slow-growing, non-acid producing root nodule bacteria of leguminous plants should be separated from the fast-growing, acid-producing strains and placed in a new genus... The name proposed for the new genus is Bradyrhizobium." Address: Microbiology Dep., College of Biological Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

1378. Soyfoods Center. 1982. Tempeh shops in the West. Lafayette, California. 2 p. Jan. Unpublished manuscript.
• ***Summary:*** Lists the name, address, and phone number of 41 tempeh shops in the USA, 3 in Australia, 3 in Canada, 1 in England, 5 in the Netherlands, and 1 in West Germany. Address: Lafayette, California. Phone: 415-283-2991.

1379. Wood, Brian J.B. 1982. Soy sauce and miso. *Economic Microbiology* 7:39-86. Jan. A.H. Rose, ed. Fermented Foods. [50 ref]
• ***Summary:*** Contents: 1. Introduction. 2. The preparation of soy sauce: Introduction, preparation of raw materials (the beans, wheat), mixing, koji, moromi. 3. Of beans, microbes, and miso: Beans, microbes, miso. 4. Trade in soy sauce: Introduction, statistics. Table 1 (p. 64-66) shows exports of soy sauce in 1978, in tonnes (metric tons) from Hong Kong, Korean Republic, Singapore, Japan, and total, to almost every country in the world (with each country's population in millions), grouped by region as follows: 1. North America: Canada, USA (#1)–Regional total imports: 6,052.3 tonnes. 2. South and Central America [and Caribbean]: Argentina (#3 in region), Bolivia, Brazil, Chile, Costa Rica, Ecuador, El Salvador, Guatemala, Guyana, Honduras, Mexico (#2), Nicaragua, Panama, Paraguay, Surinam, Venezuela (#1), Granada, Jamaica, Trinidad and Tobago, total. Former Dutch West Indies–Regional total imports: 1,046.4 tonnes. 3. Europe: Austria, Belgium, Czechoslovakia, Denmark, Finland, France (#4 in region), Germany (West #3), Greece, Italy, Netherlands (#2), Norway, Portugal, Spain, Sweden, Switzerland, UK (#1), USSR–Regional total imports: 3,017.7 tonnes. 4. Near and Middle East: Bahrain (#3), Egypt, India, Iran (#2), Iraq, Jordan, Kuwait, Oman, Qatar, Saudi Arabia (#1), United Arab Emirates, Yemen Arab Republic–Regional total imports: 1,193.5 tonnes. 5. Far East and Western Pacific: Brunei, Hong Kong (#3 in region), Indonesia, Japan, Korea (South), Macao, Malaysia (#2), Philippines, Sabah (#1; A state of Malaysia from 1963; Formerly British North Borneo), Sarawak (A state of Malaysia from 1963), Singapore, Taiwan, Thailand–Regional total imports: 3,139.4. 6. Pacific and Australasia: Australia (#1 in region), Cook Islands, Christmas Islands, Fiji, Guam (#2), Nauru, New Caledonia, New Hebrides, New Zealand, Oceania n.c.s. (#3), Papua New Guinea, Portuguese Timor, Samoa and Tonga, Solomon Islands, Tuvalu (Ellis Island), U.S. Oceania–Regional total imports: 1,647.5 tonnes.

Note: This is the earliest document seen (July 2008) concerning soybean products (soy sauce) in Kiribati (Christmas Islands), in Nauru, in Qatar, or in Tuvalu. This document contains the earliest date seen for soybean products in Kiribati (Christmas Islands), in Nauru, in Qatar, or in Tuvalu (1978); soybeans as such have not yet been reported.

7. Africa: Algeria, Canary Islands, Ethiopia, Gambia, Ghana, Kenya, Libya, Malagasy, Malawi, Mauritius (#2 in region), Nigeria, South Africa (Republic of, #1), Sudan, Réunion Islands (#3), Tanzania, Zaire. Other African countries–Regional total imports: 365.7 tonnes. World total imports: 15,731.5 tonnes, of which 6,192.8 tonnes from Hong Kong, 1,233.5 tonnes from South Korea, 1,713.6

tonnes from Singapore, 6,591.6 tonnes from Japan. The value in pounds sterling and in pounds sterling per tons of soy sauce is given for each exporter.

Other tables show: (2) Soy sauce exports (in tonnes and value) each year from 1976 to 1976 from Hong Kong, South Korea, Singapore, and Japan. A large percentage of Hong Kong's exports are re-exports (probably from China). (3) Total soy sauce exports from Japan, 1976-1978, by container type, with amount and value. (4) Soy sauce and miso production in Japan every 5 years from 1965 to 1978 (in tonnes). (5) Soy sauce and miso production in Japan for export in 1976, 1977, and 1978. Miso production (in tonnes) averaged about 40% of soy sauce production, and miso exports (in tonnes) averaged about 13% of soy sauce exports. (6) Imports of soy sauce into Hong Kong, Singapore, and the USA from exporting countries in 1978 (with figures for exports from China in 1976 and 1977). (7) Re-exports of soy sauce (made in China) from Hong Kong and Singapore in 1978 to major importing countries worldwide, by region, by country. Small countries that are the destination of this soy sauce include: Honduras, Nicaragua, Panama, Venezuela, Trinidad and Tobago, Former Dutch West Indies [also called Netherlands Antilles; they are part of the Lesser Antilles and consist of two groups of islands in the Caribbean Sea: Curaçao and Bonaire, just off the Venezuelan coast, and Sint Eustatius, Saba and Sint Maarten, located southeast of the Virgin Islands. The islands form an autonomous part of the Kingdom of the Netherlands], Pakistan, Saudi Arabia, United Arab Emirates, Brunei, Sabah, Sarawak, Fiji, Nauru, Oceanea (non-U.S.), Oceanea (U.S.), Papua, Samoa and Tonga, Solomon Islands, Ghana, Malagasy Republic, Togo. Total from Hong Kong: 2,945.3 tonnes, and from Singapore 109.5 tonnes.

(8) Exports of miso (in tonnes) from South Korea and Japan in 1978 to major importing countries worldwide, by region, by country. The leading importers are: USA (622), Saudi Arabia (353), Singapore (66), Bahrain (64), Netherlands (38), Iran (29), Iraq (29) France (28), German Federal Republic (23), Smaller importers include: Chile, Guyana, Surinam, Bangladesh, Iran, Iraq, Jordan, Kuwait, Quatar, Saudi Arabia, United Arab Emirates, Yemen Arab Republic, Sabah, Fiji, Guam, New Hebrides, Papua New Guinea, Samoa, Solomon Islands, Algeria, Canary Islands, Ghana, Kenya, Libya, Mozambique, South Africa Republic, Zaire.

Note: This is the earliest document seen (June 2007) concerning soybean products (miso) in Quatar. This document contains the earliest date seen for soybean products in Quatar (1978); soybeans as such have not yet been reported.

(9) Exports of miso from South Korea and Japan in 1976, 1977, and 1978 (quantity and value each year; no importing country names are given).

5. Tour of South East Asia: Technical and scientific aspects, trade aspects. 6. Acknowledgments. References

The chapter on Trade states: Soy sauce and soy paste (miso) are traded between all countries of South East Asia. The Korean Republic's exports nearly quadrupled in tonnage. The Kikkoman Company's production facility in Wisconsin produced 21,6000 tonnes of soy sauce in 1978. This was equal to 3 times the total exports from Japan in the same year. Japan's total share of the world soy sauce market remains very healthy. Miso exports are still small in comparison with soy sauce. On a rising market Japan's exports still only represent 0.2% of its annual miso production; "clearly there is considerable room for expansion here."

Miso is of greater relative importance to Korea than it is to Japan. Among the European countries, Belgium and Holland import the greatest amount of miso on a per capita basis. Spain imports a fair amount of miso. The U.S.A. and Canada had total miso imports totaling about 10% of their soy sauce imports.

"In Thailand, there are about 50 soy sauce factories, the majority of which are small, producing less than 100 kilolitres per year, although it should be noted that most of them also produce soybean paste and soybean cheese [probably tofu]. The total annual consumption of soy sauce in Thailand is estimated at about 6,000 kilolitres (about 7,200 tonnes).

"In Malaysia, there are about 140 soy sauce factories producing in total an estimated 5.5 million gallons of soy sauce per year according to the proprietor of a leading brewery in Kuala Lumpur. This is about 21,000 tonnes per annum" (p. 84). Address: Dep. of Applied Microbiology, Univ., of Strathclyde, Glasgow [Scotland], U.K.

1380. Hillyard, Roger. 1982. History of Erewhon, natural foods, and macrobiotics in America. Part I (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 7. 2 p. transcript.

• ***Summary:*** Roger got involved with macrobiotics in San Francisco in about 1965. He lived in San Francisco, was doing light shows at the Avalon Ballroom, read the book *You are All Sanpaku* [by Sakurazawa Nyoiti (George Ohsawa); English version by William Dufty], and got involved. Also in about 1965, Herman Aihara and Bob Kennedy used to come to town to lecture in a church on Oak Street. Bill Tara and Paul Hawken, who were filmmakers, lived in a warehouse on lower Mission St. described in the *Electric Kool-Aid Acid Test,* by Tom Wolfe (largely about Ken Kesey and the Merry Pranksters). "A little macro scene started. We heard that Boston was macro Mecca."

Roger arrived in Boston in Oct. 1969. Erewhon started when Michio and Aveline Kushi were living in Cambridge, Massachusetts; in their basement they had a little food,

which they would sell to people who came to hear Michio lecture. “The food was but a vehicle to the larger teaching. The food is like an asana or yoga posture, but the goal is enlightenment. You can get stuck on the food. That is why Michio had very, very little involvement in Erewhon’s food business, His focus was on the philosophy of macrobiotics and spreading it.”

The Erewhon store was (at the time) in the basement of today’s Redwing Books. Evan Root started the store, but he wanted to get out of it into a restaurant. Paul Hawken took over the sleepy little store. Bill Tara (who was from Santa Cruz) also worked there for a while. The tiny store had few customers, a very limited selection of products, and a little mail order business. Shortly after Roger arrived, the Erewhon store at 342 Newbury Street opened–in Nov. or Dec. 1969. Bruce Macdonald and Jim Docker helped to renovate the new store. The whole thing was called Erewhon Trading Co. In Feb. 1970 Roger started to work in this retail store.

Shortly thereafter, Paul Hawken went to Japan. At that time the only companies importing food from Japan were Chico-San and Infinity Foods in New York; both were macrobiotic. Erewhon bought from them, and then started doing a little wholesaling. After Paul went to Japan, Erewhon started importing directly from Japan. Paul got in touch with Mr. Kazama and helped to get Mitoku into the natural food export business. Kazama was an old friend of Obiyashi, who was an old friend of Michio Kushi’s from Columbia University. Muso was shipping to Chico-San and Infinity. Erewhon imported from Muso and Kazama. Roger thinks Mitoku started in about 1970-71. Before that they sold soccer shoes and cranes. The fact that Paul was in Japan was instrumental in getting Erewhon’s imports started.

The Erewhon retail store would sometimes get huge shipments, such as a 40-foot-long truck of rice that filled up the whole Erewhon storeroom. It was something like Kokuho Rose [a brand of short grain brown rice grown by Koda Bros. in Dos Palos, California]; it as not organically grown. There was really no room for it, and no refrigeration. At about this time the Lundberg Brothers in California started growing brown rice organically. At one time a boxcar of 100,000 lb of Lundberg rice arrived, so Erewhon needed more warehouse space. Also involved were Jean Allison (from California) and Wally Gorell (from the Straight Theater, Haight-Ashbury district, San Francisco). In about mid-1970 Erewhon leased a 10,000 square foot warehouse space on the 5th floor of 33 Farnsworth St. [a big brick warehouse] in Boston. The space had a nice milling room. Then the wholesale business took off. Roger left Boston in April 1971. He had been running both the distributing company and the wholesale company, but there was a store manager. The retail store expanded into its back room. Then the wholesale business grew like mad. Orders came from non-macro natural foods stores, from new macro groups, etc.

How did the natural food movement get started? As Roger recalls, it was not started by macros. In about 1966 or 1967 Sunset Natural Foods became New Age Foods, an early natural foods store run by Fred Rohe. The natural food movement sprung out of the new consciousness–the counterculture–as did macrobiotics. The macrobiotic movement fed the natural foods movement. One Erewhon customer was Mr. Natural in Carbondale, Illinois. Although he was not a macro, he bought miso, tamari, rice, etc. There were lots of other non-macro stores like that too. But there were also lots of macro stores. Bill Tara opened a store and macro center on the 14th floor of a downtown building in Chicago; out of that grew Food for Life. Tom Waxman started Essene in Philadelphia, Pennsylvania. These were two mini-Erewhons. Each started as a small retail store, then became a wholesaler. Erewhon provided the model.

Erewhon set up a branch distributor in Canada, which later became Manna Foods, with Gene Newman, a macro. Westbrae was a Berkeley political organization started by Bob Gerner, making granola. Erewhon West was connected with Bruce Macdonald. Bill Tara, with Aveline Kushi’s prodding, started the Erewhon store in Los Angeles; it did a little distributing. Bruce Macdonald went to Los Angeles, then Bill Tara left for England–Roger doesn’t know why. Erewhon West started growing. Jimmy Silver ran the Big Sanae, which became the Seventh Inn. Roger then went to Texas and in Jan. 1972 he worked with Deaf Smith for about a year. Later Erewhon West was sold to John Fountain, but really to John Demming–as a separate business from Erewhon.

The Well [a wholesale and distribution company in San Jose, California] was an offshoot of Fred Rohe’s New Age Foods, ca. 1969-1970. It was never macrobiotic. Fred sold stock in his business, had 2 stores in San Francisco, then opened a big natural foods store [actually a supermarket] named New Age Natural Foods on California Street in Palo Alto. The whole thing was a fiasco; the Palo Alto store never made money.

Deaf Smith Farms was established as a joint venture between Erewhon and Arrowhead Mills; it never worked out. In April 1971 Bruce Macdonald started a marketing company named Pure & Simple. In March 1972 Roger started working at the Well in San Jose. Bruce went to Green Mountain Grinery in Boulder, Colorado. Gradually The Well became Pure & Simple, and started importing from Mr. Kazama an Muso.

Paul Hawken was the first person to work with farmers to get them to grow grain organically for Erewhon. One of these was Carl Garrich of Lone Pine, Arkansas–after Erewhon moved to 33 Farnsworth Street. Roger did a lot of work with farmers at Arrowhead Mills, but not connected with macrobiotics.

Major macrobiotic wholesale distributors: Erewhon East and West, Laurelbrook (later), Food for Health, Essene, Manna in Canada (later). Llama (later) was not macro.

Macrobiotics played the major, primary role in introducing soyfoods to America. A little was also coming through Japan Foods [San Francisco] and Nishimoto [Trading Co., Los Angeles]. The macros made these foods available, but don't overcredit it; the time was ripe and it just happened. The main contribution of macrobiotics was simply making these foods available and teaching about them. Michio always said that macrobiotics is not just about food and the diet.

"It was frightening when we stopped to think about it. The business was doubling and tripling at a crazy rate." Roger still has his early notes but no accounting books. Continued. Address: California.

1381. White, Jim. 1982. Carobs brighten dull winter dishes. *Toronto Star (Ontario, Canada).* Feb. 10. p. C8.
• ***Summary:*** Frieda Caplan, the queen of exotic and interesting new fruits and vegetables, and a California food wholesaler, is in Toronto to brighten the dull, cold winter with California sunshine. This year her company hopes to ring up $10 million in gross sales.

According to Kaplan, trends in the U.S. are towards fresh herbs and tofu, and away from salt.

Nearly half of the 10,000 letters Caplan receives each year come from consumers who want "to know more about tofu, the Orient's soybean cake, and how to use it.

"Tofu is available in many Toronto supermarkets." A 500-gram package of Victor Food Products' tofu, containing four slices packed in water, retails for $1.19 at A&P.

Karen Kaplan, Frieda's daughter (age 26), who is in charge of developing recipes for the company's line of exotic foods, prefers to treat tofu simply–by broiling it.

Cut slices about 3/4 inch thick, brush with soy or teriyaki sauce, and place beneath the broiler on an oiled pan. Broil until nicely browned and crusty, then turn to brown the other side.

Before broiling the 2nd side, you may want to "top it with a slice of mozzarella cheese (though this works better without the brushed-on sauces). Broil until the cheese is melted."

A photo shows Kaplan tasting a Mexican carob pod. Address: Food editor.

1382. MacLeod, J.A.; Sterling, J.D.E. 1982. Soybean technology transfer. *Research Station Charlottetown, P.E.I., Research Summary* For the year 1981. See p. 140. (Agriculture Canada Research Branch).
• ***Summary:*** "Maple Amber soybeans have adequate maturity and good yield potential for many areas of the Atlantic Region. Maple Amber, a new soybean variety form the Ottawa breeding program was compared to Maple Presto on two farms in 1981 under the technological transfer program. Maple Amber matured about seven days later than Maple Presto in 1981 and it gave an excellent yield at one location and a satisfactory yield at the second location."

George MacMurdo planted his soybeans at Kelvin on May 28 and harvested them on Oct. 16. He obtained a yield of 3,028 kg/ha from Maple Amber and 2,337 kg/ha from Maple Presto. Address: Prince Edward Island, Canada.

1383. Ontario Soya-Bean Growers' Marketing Board. 1982. Canadian soybean mission to Japan, Korea, Singapore, Hong Kong, Malaysia. Chatham, Ontario, Canada. 12 p. Feb. 24 x 11 cm. [Eng; jap; kor]
• ***Summary:*** Small portrait photos (p. 2) show mission members: P. Epp, B. Calhoun, A. Ford, O. McGregor, Michael Loh, Dr. R. Buzzell, M. Pennell. The first four men are from the Ontario Soya-Bean Growers' Marketing Board. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1384. Ontario Soya-Bean Growers' Marketing Board. 1982. Canadian soyabean mission, South East Asia, Feb. 12th–27th, 1982: Mission member reports. Chatham, Ontario: Ontario Soya-Bean Growers' Marketing Board. 12 p. Feb. 24 x 11 cm. [Eng]
• ***Summary:*** Contents: Comments, by Peter H. Epp, Chairman. Japan: Home Shokuhin Tofu Manufacturing Co., Komatsuya Shokuhin (natto mfg. plant), Nihon Miso (manufacturing plant), Japan Miso Assoc., Japan Tofu Assoc., Federation of Japan Natto Manufacturers' Cooperative Society, Wako Shokuryo Co. (makes natto; Jacob Hartz in Arkansas supplies them with "936X" variety small-sized natto soybeans; Wako also supplies Nihon Miso Mfg. Plant), X-Can Far East Ltd. Korea: Seoul meeting at embassy, Chung's Food Ltd., Agriculture and Fisheries Development Corp., Korean Soybean Curd Cooperative Manufacturing Assoc. Singapore: Okura & Company Ltd., Eng Huat Pte. Ltd., Intraco. Malaysia: Yeo Hiap Seng Co. Ltd. (the largest manufacturer of soymilk in Malaysia and Singapore). Follow-up. Conclusion.

Each of the following members of the mission wrote a chapter in this book, discussing each visit mentioned in the contents: Peter H. Epp, Bernard Calhoun, Otis McGregor, Richard I. Buzzell, M.D. Pennell (General Manager, R&D, H.J. Heinz Company of Canada Ltd.), Michael Loh (Export Development Specialist, Ontario Ministry of Agriculture and Food).

Details are given on the soybean characteristics desired for each type of soyfood product, especially in the chapter by Dr. Buzzell. Popular soybean varieties include: For Miso: Enlei [Enrei], Fujimejiro, Harcor. For natto: Jizuka, Suzuhime, Nattawa. For tofu: Amsoy, Coles, Harcor.

Letter from Fred Brandenburg of OSGMB. 1994. Nov. 9. "Regarding export promotion before 1982, any activities would have been part of larger government sponsored trade missions. For example, in 1979 Otis McGregor participated in a mission to Asia which was co-ordinated by Michael Loh. It included a number of marketing boards and associations from Canada."

Note: This is the earliest document seen (Dec. 1998) that (apparently) mentions the soybean variety Enrei. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1385. **Product Name:** Marinated Tofu Cutlets.
**Manufacturer's Name:** Sooke Soy Foods.
**Manufacturer's Address:** Sooke, BC, Canada V0S 1N0.
**Date of Introduction:** 1982. February.
**Ingredients:** Tofu (organic soybeans, water, nigari [magnesium chloride–an extract of sea water]), soy sauce, garlic, ginger, cayenne, black pepper.
**Wt/Vol., Packaging, Price:** 10 oz / 284 gm.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm: Calories 104, protein 12 gm, carbohydrates 3.4 gm, fat 8.2 gm.
**New Product–Documentation:** Label. 1988, received. 6 by 4.5 inches. Yellow, green, blue and white on clear plastic film. "Ready to serve–Hot or cold. For snacks, sandwiches, or as a main course. A good source of protein. No preservatives."

1386. Tsukamoto, J.Y. 1982. Soybean production in western Canada. Paper presented at the 37th Annual Meeting of the Expert Committee on Grain Breeding (ECGB). 10 p. Held 16 Feb. 1982.
• ***Summary:*** "The commercial scale production of soybeans in Western Canada was limited primarily to Manitoba because of a lack of markets for soybeans in both Saskatchewan and Alberta... According to the cooperators' estimated yields, a total of about 32,500 bushels (884.7 tonnes) was produced in the Agro-Man soybean production demonstration, for which McCall yielded an average of 22 bushels per acre (1480 kg/ha) and Maple Presto yielded about 14.5 bushels per acre (975 kg/ha) (See Table 1)...

"Cargill Grain Company Limited reported that they had three major contracts for the commercial production of soybeans using the variety McCall. The fields ranged in size from 150 acres (61 ha) to 500 acres (202 ha). Yields ranged from 22 bushels per acre (1,480 kg/ha) at Morden to 32 bushels per acre (2,152 kg/ha) in the Emerson and Portage la Prairie areas...

"There also was some production of soybeans not for crushing but for human consumption. It is estimated a total of approximately 4,500 acres (1,821 ha) of soybeans were grown in Manitoba in 1981." Address: Manitoba Agriculture.

1387. Wilcox, J.R. comp. 1982. The Uniform Soybean Tests, northern states, 1981. West Lafayette, Indiana: Science and Education Administration, USDA. 208 p. 28 cm.
• ***Summary:*** Near bottom of title page: "United States Department of Agriculture. Science and Education Administration, cooperating with State Agricultural Experiment Stations."

Contents: Introduction. Uniform Test participants–1981. Strain designation. Methods–1981. Disease. Policy on testing and release of strains. Uniform test strains released in 1981. Uniform test locations–1981. Identification of parent strains. Uniform test 00. Uniform test 0. Uniform test I. Preliminary test I. Uniform test II. Preliminary test IIA. Preliminary test IIB. Uniform test III. Preliminary test IIIA. Preliminary test IIIB. Uniform test IV. Preliminary test IV.

Note: Harvey D. Voldeng, Ottawa Research Station, Ottawa, Ontario, Canada, is now the northernmost participant in Ottawa, Canada. Address: USDA-ARS, Agronomy Dep., Room 2-307 Lilly Hall, Purdue Univ., West Lafayette, Indiana 47907. Phone: 317-744-8074.

1388. **Product Name:** [Soyabec Baked Tofu Roti].
**Manufacturer's Name:** Les Alimentents Soyabec Inc. (Importer). Made in Miami, Florida, by Swan Gardens.
**Manufacturer's Address:** 1215 Boulevard St. Joseph, Montreal, QUE, H2J 3K1, Canada.
**Date of Introduction:** 1982. March.
**Ingredients:** Eau, feves de soya, sauce soya (feves de soya, ble entier, sel de mer), epices, sulfate de calcium.
**Wt/Vol., Packaging, Price:** 227 g vacuum packed.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. *Roti* means "A roast."

1389. **Product Name:** [Soyabec Tofu].
**Foreign Name:** Soyabec Tofu.
**Manufacturer's Name:** Les Alimentents Soyabec Inc. (Importer). Made in Miami, Florida, by Swan Gardens.
**Manufacturer's Address:** 1215 Boulevard St. Joseph, Montreal, QUE, H2J 3K1, Canada.
**Date of Introduction:** 1982. March.
**Ingredients:** Eau, feves de soya, sulfate de calcium.
**Wt/Vol., Packaging, Price:** 454 gm vacuum packed.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. They imported the tofu by air freight 3,000 lb at a time, then delivered it to stores. It was the first vacuum packed tofu in Quebec. Soyabec stopped operations in early 1983. They had no money left to import. Transportation costs had increased and the U.S. dollar had become more expensive.

1390. **Product Name:** [Tofu Salad].
**Foreign Name:** Salad au Tofu.
**Manufacturer's Name:** Les Aliments Soyabec Inc.
**Manufacturer's Address:** Montreal, QUE, H2J 3K1, Canada. Phone: 514-276-9570.
**Date of Introduction:** 1982. March.
**Ingredients:** Tofu, shallots (échalotes), celery, carrot, parsley, mustard, sunflowerseed oil (huile d'tournesol), turmeric (curcuma), thyme, basil, chervil (cerfeuil), salt, pepper, garlic, salty-tasting herbs (herbes salees).
**Wt/Vol., Packaging, Price:** 250 gm plastic tub.
**How Stored:** Refrigerated.
**New Product–Documentation:** From Yvon Tremblay and La Magie du Tofu. In six years he served at least 100,000 samples. Sold about 500 lb/week.

1391. Tremblay, Yvon; Boyte, Frances. 1982. La magie du tofu: 80 recettes simples et économiques [The magic of tofu: 80 simple and economical recipes]. Montreal and Paris: Stanke Ltee. 101 p. Illust. No index. 22 cm. [Fre]
• ***Summary:*** Contents: Preface. The health advantages of tofu. Preparation of tofu. 1. Hors-d'oeuvres. 2. Soups. 3. Salads. 4. Sauces. 5. Main dishes. 6. Desserts. Address: 1. Chef, Montreal, QUE, Canada; 2. Dietitian.

• ***Summary:*** About the new book *La Magie du Tofu*, by Yvon Tremblay and Frances Boyte. Address: Canada.

1393. Rowan, Renee. 1982. Le "tofu", l'or blanc des années 80 [Tofu, the white gold of the '80s]. *Devoir (Le) (Quebec, Canada)*. April 7. p. 13. [Fre]
• ***Summary:*** Discusses Yvon Tremblay and his new book La Magie du Tofu. He has been a specialist in vegetarian cuisine for 10 years. Address: Canada.

1394. Griffith, G.R.; Meilke, K.D. 1982. A structural econometric model of the world markets for rapeseed, soybeans and their products. *University of Guelph, School of Agricultural Economics and Extension Education, Publication* AEEE/82/5. 136 p. April. [157 ref] Address: Guelph, Ontario.

1395. **Product Name:** [Horium Tofu].
**Foreign Name:** Tofu Horium.
**Manufacturer's Name:** Les Aliments Horium Foods Inc.
**Manufacturer's Address:** 1050 rue Lacasse Street, C1-18, Montreal, QUE, H4C 2Z3, Canada. Phone: 514-933-4605.
**Date of Introduction:** 1982. April.
**Ingredients:** Organic soybeans, natural salt or sea salt, purified water.
**Wt/Vol., Packaging, Price:** 450 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. Form filled out by Mr. Chong-Hong Ho, owner. 1988. Nov. 11. The product was launched in April 1982. Label. 5 by 7 inches. Red, green, and black on white. In French and English. "All natural. After removing package, submerge tofu completely in cold water and change it regularly."

1396. **Product Name:** [Soya Yogurt (Organic)].
**Foreign Name:** Yogourt de Soya (Organique).
**Manufacturer's Name:** Les Aliments Horium Foods Inc.
**Manufacturer's Address:** 1050 rue Lacasse Street, C1-18, Montreal, QUE, H4C 2Z3, Canada. Phone: 514-933-4605.
**Date of Introduction:** 1982. April.
**Ingredients:** Soyabean, water, sugar, flavour.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1988, received. 5.5 by 2.5 inches. Red and blue on white. In French and English.

1397. **Product Name:** [Organic Soya Drink].
**Foreign Name:** Boisson de Soya Organique.
**Manufacturer's Name:** Les Aliments Horium Foods Inc.
**Manufacturer's Address:** 1050 rue Lacasse Street, C1-18, Montreal, QUE, H4C 2Z3, Canada. Phone: 514-933-4605.
**Date of Introduction:** 1982. April.
**Ingredients:** Extract of Soyabean, water.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm.: Calories 25, protein 4.4 gm, carbohydrate 3.4 gm, fat 2.5 gm, water 88.6 gm.
**New Product–Documentation:** Label. 1988, received. 5.5 by 2.5 inches. Red and blue on white. In French and English.

1398. Leviton, Richard. 1982. On the road for the fast food burger: A soy deli odyssey. *Vegetarian Times* No. 56. April. p. 62-65.
• ***Summary:*** Includes visits to and detailed descriptions of the ambience and menu at: The Well Bean Deli in Santa Cruz, California (Kevin Van Slooten), Real Food Tofu Cafe in Redwood Valley, California (Dik & Sharon Rose), The Tofu Shop in Arcata, California (Matthew & Susanne Schmit), South Fork Tofu Cafe in Helena, Montana (Bruce Anfinson, Vicki Keller, and Richard Saravalli), The Good Nature Deli in Oak Park, Illinois (Kevin O'Brien and Mary Ellen Sackett), The Soy Plant Deli in Ann Arbor, Michigan (a co-op), Hip Pocket Tofu Deli in Columbus, Ohio (Bill Lutz), Nature's Grace in Honesdale, Pennsylvania (Jamie and Nancy Stunkard), Lotos Cafe in Rochester, New York (Greg Weaver), Soyateria in Toronto, Ontario (owned by Soy City Foods), Mintz's Buffet in New York City (David Mintz), and Everybody's Vegetarian Restaurant in Nashville, Tennessee (run by The Farm).

At Mintz's Buffet (1040 Third Ave., 10021) "David Mintz would like to stuff the Big Apple with savory tofu, judging by the enthusiasm with which he embraced tofu a year ago in his traditional Jewish kosher deli and catering company. Mintz added tofu to his line of 'soup to nuts, old time foods like Grandma used to make, a big menu,' and placed tofu vegetable pies and tofu ice cream proudly next to the gefilte fish, chopped livers and matzoh balls. Located on New York's upper east side near Bloomingdale's, Mintz's (which seats 15) receives celebrities and ordinary folk alike, people who are drawn to its special 'Mintz's Tofu Buffet of Vegetable Quiches,' Tofu Vegetable Pies, Tofu Vegetable Salads (for instance, steamed broccoli with tofu mustard sauce), Tofu Egg Rolls, Tofu Blintzes, Tofu Bran Muffins (strawberry-rhubarb, apple-walnut, blueberry-bran, carrot-apple, pecan, lemon-granola, pineapple-coconut and cherry-granola), Soy Burgers and Soy Pizza. Before we glide out of Mintz's soy emporium on a cloud of soybeans, we must sample his renowned Tofu Ice Kream (also called *Tofutti)* made from tofu, soymilk, fresh fruit, essences of apples, figs and raisins, honey, egg whites, soy oil–'creamy and delicious, it's beyond cream.'" Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1399. Shurtleff, William; Aoyagi, Akiko. 1982. Survey of tofu production in the United States and Canada. Lafayette, California. 1 p. April. Unpublished manuscript.

• ***Summary:*** This is a typewritten table with 8 columns: The three main ones are (1) Company name. (2) Date started operations. (3) Tofu production in April 1982 (in 1,000 lb/week). Companies are arranged in descending order of tofu production.

Hinode Tofu Co. (Los Angeles, California; 1937?). 140.
Azumaya, Inc. (South San Francisco, California; 1920?). 110.
Aloha Tofu Co. (Honolulu, Hawaii; 1950?). 60.
Quong Hop & Co. (South San Francisco, California; 1906). 43.
England Soy Dairy (Greenfield, Massachusetts; Jan. 1977). 36.
C.R. Food (Los Angeles, California; April 1979). 28.5.
Wy Ky (Los Angeles, California; July 1970). 28.
Wo Chong & Co. (San Francisco, California; 1928). 24.
Kanai Tofu Factory (Hawaii; 1923). 16.
Traditional Tofu (Oakland, California; 1978?). 17.
Mighty Soy, Inc. (Los Angeles, California; Aug. 1980). 16.6.
Eastern Foods Corp. (Minneapolis, Minnesota). 15.
Panda Food Products (Woodhaven, New York; 1981). 15.
Nasoya Foods (Leominster, Massachusetts; April 1978). 12.
Island Spring (Vashon, Washington; Dec. 1976). 12.
Swan Gardens (Miami, Florida). 12.
Sam Sung Food Inc. (Washington, DC; 1980). 11.
Ota Tofu Co. (Portland, Oregon; 1919). 10.4.
Victor Food Products (Scarborough, Ontario, Canada; Feb. 1978). 10.
Hashizume Food Products (New York City, New York; 1969). 10.
Soyfoods of America (Duarte, California; 1981?). 10.
White Wave (Boulder, Colorado; Sept. 1977). 9.
The Soy Plant (Ann Arbor, Michigan; Sept. 1977). 7.
Chicago Tofu Co. (Chicago, Illinois; 1960). 6.
Nomura Tofu Co. (Chicago, Illinois; 1975). 6.
Northern Soy (Rochester, New York; May 1977). 6.

1400. *Soybean News.*1982. Pioneer developer of soybeans for the North deceased. Dr. Sven A. Holmberg. 33(3):4. April.

• ***Summary:*** Dr. Holmberg, Head of the Holmberg Soybean Breeding Institute at Fiskeby, Norrköping, Sweden, passed away on 10 Nov. 1981 at the age of almost 88 years.

In the 1930s he had become interested in the soybean and speculated about its possibilities in Sweden. In 1938 he studied soybean breeding in the USA, and in 1939-40 he made his first expedition to Japan and Sakhalin. In the severely cold climate of the Hokkaido islands he found soybean types which he considered valuable for breeding in Sweden. In 15 years he developed strains which matured

Dr. Sven A. Holmberg†

and yielded comparatively well in middle Sweden, where Fiskeby is located. In 1957 he returned to the Far East [East Asia] to collect more material. In 1970, when almost 70 years old, he made a third expedition to Siberia and Japan. "In the meantime he studied soybean breeding in the USA and Canada. He learned that his breeding material was successfully used in North American programs. Dr. Holmberg cooperated and counseled with Dr. J.W. Lambert, soybean breeder, University of Minnesota.

"The most interesting [and commercially important] varieties bred by Dr. Holmberg are Fiskeby V, Brävalla, and Träff. Although other promising varieties are in early stages of development, it is anticipated it will take 15 to 20 more years for soybeans to reach major crop status in Swedish agriculture according to a friend. The intention of Dr. Holmberg was to make the crop food for man.

"A friend has written 'Sven Holmberg has done the fundamental work with soya bean for Northern Europe. The inheritors of his material and his ideas will have to fulfill his work. This is the best way to honor the man who devoted himself so enthusiastically and so intelligently to the breeding of soya bean in the North.'"

A photo shows Sven A. Holmberg in his later years, standing in a field of soybeans. He is facing the camera, wearing a long black coat, holding a sheaf of papers in his left hand and a cane in his right

1401. Voldeng, Harvey D.; Seitzer, J.F.; Donovan, L.S. 1982. Maple Presto soybeans. *Canadian J. of Plant Science* 62(2):501-03. April.

• ***Summary:*** Contents: Introduction. Pedigree and breeding methods. Performance. Other characteristics. Pedigree seed stocks. "Maple Presto is the earliest maturing soybean cultivar licensed in Canada. It combines with earliness the attributes of high oil content in the seeds, resistance to lodging and shattering, and adequate plant height." It was "developed by the Agriculture Canada Research Station, Ottawa, Ontario, with the cooperation of the Research Station at Brandon, Manitoba." "Maple Presto can mature with as few as 2200 corn heat units from planting to maturity.

"Pedigree and breeding methods: Maple Presto originated at the Ottawa Research Station in 1974 as an F-4 plant selection from the cross of line 840-7-3 and an F-1 plant of the cross Portage x Amsoy. Line 840-7-3 is a selection of very early maturity obtained from Dr. Sven Holmberg, Norrkoping, Sweden."

"License No. 1906 was issued for Maple Presto on 7 March 1979 by the Plant Products Division, Production and Marketing Branch, Agriculture Canada.

"Performance: Maple Presto matured 17 and 18 days earlier than McCall and Maple Arrow in Ontario and produced about 70% of the seed yield of the later maturing cultivars (Table 1). Plans of Maple Presto were shorter by 6 and 10 cm than those of McCall and Maple Arrow, respectively."

Note: This is the earliest maturing soybean variety whose name begins with the word "Maple."

Talk with Ted Hymowitz. 1998. Oct. 8. Ted went to Canada last week and visited with Harvey Voldeng, who developed this variety. Dr. Voldeng told Ted that the word "Maple" comes from the name of the road that runs past their experimental farm. Hilarious! Address: Research Station, Agriculture Canada, Ottawa, Ontario K1A 0C6, Canada.

1402. Bernard, Richard L. 1982. Re: Major varieties of vegetable type soybeans: Place and year released, and ancestry. Letter to William Shurtleff at Soyfoods Center, May 15. 1 p.

This information is published in registration articles in *Crop Science*, usually during the year or two after release, except for the Hawaiian varieties which were announced in *HortScience* 5(3):146-49. June 1970. Also described in Hawaiian Agricultural Experiment Station Report 178 (undated).

Update: 1997 Jan. 1. Dr. Bernard enjoys eating green vegetable soybeans. When they are fresh, in season, he

freezes large amounts of them in small plastic bags. Then each day of the year, he pulls one bag out of his freezer, boils them, and enjoys them for lunch with his sandwich made of whole-grain bread. He is one of the few soybean breeders or agronomists who enjoys soyfoods! He does not drink alcohol, makes a sincere effort to eat a healthy diet, and loves to dance–sometimes every night. Address: Prof. of Plant Genetics, Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

1403. *Medical World News.*1982. Subbing soy drinks for milk cuts high lipids. 23(12):61. June 7. [1 ref]
• ***Summary:*** High cholesterol levels can be lowered by substituting a soy protein extract for some dietary source of animal protein–according to study director Kenneth K. Carroll (Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada). Replacing cow's milk with a soy-protein preparation for 6 weeks reduced plasma cholesterol levels in 5 of 33 subjects with abnormally high initial cholesterol levels. The drinks each contained the same amount of butterfat and calories. Similar replacement of meat or eggs would be possible.

1404. Muendel, H.-H. 1982. Developing soybeans for Alberta. *Agriculture Canada Research Station, Lethbridge, Weekly Letter* No. 2521. June 9. 1 p.
• ***Summary:*** "The development of improved soybean varieties and agronomic practices should make soybean production a practical reality on irrigated farms in southern Alberta. At the Lethbridge Research Station we are working with other federal and provincial researchers to adapt soybeans to our short, cool growing season. As energy costs increase, soybeans will become more important as an energy efficient crop. Soybeans can use atmospheric nitrogen, instead of commercial fertilizer, and much of this 'free' nitrogen is added to the soil, reducing fertilizer needs of the next crop.

"The variety Maple Amber, released in 1981 by the Ottawa Research Station in cooperation with western research stations, resulted in a 25 percent yield increase over the early maturing Maple Presto. Maple Amber matures easily in southern Alberta, has oil levels equal to Maple Presto and a higher level of seed protein...

"We found that delaying seeding until the soil temperature at seed level is above 10ºC will improve yields in southern Alberta. However, seeding should be completed by May 20.

"A few growers in southern Alberta have achieved soybean yields exceeding 2,000 kilograms per hectare (about 32 bushels per acre). It should be possible with improved production practices now available to increase the yield to about 2,124 kg/ha (40 bushels/acre)." Address: New Crops, Lethbridge, ALB, Canada.

1405. American Soybean Association. 1982. Soya Bluebook '82. St. Louis, Missouri: American Soybean Assoc. 212 p. June. Index. Index to advertisers. 22 cm.
• ***Summary:*** Contents: Organizations: American Soybean Association, National Soybean Processors Association, Food Protein Council, Ontario Soya-Bean Growers Marketing Board, State Research Experiment Stations, United States Department of Agriculture, Foreign Agricultural Service, Government Buying Agencies.

Soy product directory: U.S. oil extraction plants / refineries, non-U.S. oil extraction plants / refineries, soyfoods manufacturers, industrial product manufacturers, exporters.

Buyer's guide to products & services: Category listings, commercial equipment & supplies, soy product processing equipment & supplies, farm equipment & supplies, commercial services, manufacturers & suppliers guide.

Soy statistics: Charts [graphs], maps, tables, metric conversion, glossary of soybean terms, United States standards for soybeans.

Indexes: Directory (alphabetical company listings), buyer's guide (alphabetical company listings), advertisers.

After p. 162 are two beautiful color fold-out maps, based on USDA figures as of spring 1980. (1) 1979 U.S. soybean production (bushels) by county. The color coding shows clearly that counties along the Mississippi River and in Illinois produce the most soybeans–more than 10 million bushels per county, in red (2) 1979 soybean acreage by county. The greatest acreage is found in the red counties having more than 150,000 acres planted to soybeans. Address: P.O. Box 27300, St. Louis, Missouri 63141. Phone: 314-432-1600.

1406. Check, William A. 1982. Switch to soy protein for boring but healthful diet. *J. of the American Medical Assoc.* 247(22):3045-46. June. 11. [3 ref]

1407. White, Jim. 1982. Restaurant busts spiral as depression hits home. *Toronto Star (Ontario, Canada).* July 7. p. C14.
• ***Summary:*** A year ago many new restaurants were opening in Toronto. Among those already gone from the local food scene is "the tofu palace Soja (Kensington Market)."

"The depression (you can call it a recession all you want to, but when 1.25 million Canadians are on the pogey [welfare, dole], I call it a depression) has really hit the restaurant trade hard." Address: Food editor.

1408. Durnford, Nancy. 1982. There's no cream in Ice Bean. *Gazette (The) (Montreal, Quebec, Canada).* July 28.
• ***Summary:*** "With the arrival of Ice Bean, virtually every Montrealer can lick or spoon a frozen confection. Ice Bean, an ice cream-like dessert, contains no cream or milk solids and is suitable for anyone on a cholesterol-restricted diet or

for those allergic to cow's milk. It is also low in calories. A three-ounce serving of the soybean based dessert contains 66 calories compared to more than 200 calories for a similar portion of ice cream.

"Salt-free and sweetened with honey, the creamy-smooth Ice Bean is packaged in two sizes and five flavors. The one-pound containers are available in three flavors: Carob, vanilla and mocha. Individual portions or three-ounce sizes come in those flavors plus Orange Sunshine, containing orange juice concentrate, and Dutch Chocolate, made with cocoa."

1409. **Product Name:** Vegi-Patties (Meatless Burgers). **Manufacturer's Name:** Lifestream Natural Foods Ltd. **Manufacturer's Address:** Richmond, BC, Canada V6V 1J7.
**Date of Introduction:** 1982. July.
**Ingredients:** Textured soya flour, wheat gluten, safflower oil, whole wheat bread crumbs, tomato paste, dried vegetables, oat flour, pea flour, tamari, sunflower seeds, sesame seeds, nutritional yeast.
**Wt/Vol., Packaging, Price:** Four 3-ounce burgers per box.
**How Stored:** Frozen.
**Nutrition:** Per 3-oz. pattie: 230 calories, 15 gm protein, 17 gm carbohydrate, 13 gm fat, 485 mg sodium.
**New Product–Documentation:** Spot in Soyfoods. 1982. Summer. p. 55. "All vegetable meat substitute." Spot in Adweek East. 1987. April 6. All vegetable meat substitute. Label. 1987 (undated). Box 8.5 by 4.5 by 1 inch. Color illustration of burger on lettuce and tomatoes. "All vegetable meat substitute made with textured soy flour. An exciting new way to cook. Look for recipe ideas on back." Cheese and Spinach Casserole. Spaghetti Sauce with Vegi-Balls.

1410. Ablett, G.R. 1982. An introduction to soybeans. *Notes on Agriculture (Guelph, Ontario)* 18(1):9-10. Aug.
• ***Summary:*** Soybeans are presently one of the most important cultivated crops. The can be grown from the equator to latitudes of 50º or more (around Winnipeg in Manitoba, Canada). In 1978 some 80.450 million metric tons (tonnes) of soybeans were produced on over 50 million hectares of land.

Tables show: (1) The world's leading soybean producing countries in 1968 and 1978. In 1978 they were (in million tonnes): USA 50.9 (60% of the world total). China 10.5. Brazil 10.5. Argentina 3.8. USSR 0.640. Indonesia 0.523. Canada 0.520. South Korea 0.319. World total 80.450. Source: *Commodity Year Book 1980*, by Commodity Research Bureau, Inc.

(2) Soybean hectarage, yield and production, 1941-1980 in five year averages in Ontario. Source: *Agricultural Statistics for Ontario*, OMAF, Publication 20. Address: Ridgetown College of Agricultural Technology, Ridgetown, ONT, Canada.

1411. Adolphe, D. 1982. Canola–Canada's no. 1 oilseed. *Notes on Agriculture (Guelph, Ontario)* 18(1):5-7. Aug.
• ***Summary:*** "'Canola' is the term now applied to those special modern rapeseed varieties with five percent or less erucic acid and three milligrams per gram or less glucosinalates, measured normally. The name refers to the seed, oil, meal, protein extractions and seed hulls, from, or of, varieties known in the industry as 'double low' rapeseed.

"History suggests that rapeseed was cultivated as early as the 20th century B.C. in India and was introduced to China and Japan at about the time of Christ."

"Ancient civilizations in Asia and along the Mediterranean used rapeseed oil for lighting [illumination] because it produced a smokeless white flame.

"Rapeseed was grown in Europe as early as the 13th Century and during later centuries developed acceptance for both cooking and lighting."

In Canada, commercial rapeseed production began in 1943 following the blockade of Asian and European sources of rapeseed oil in the early 1940s [during World War II]. The oil was urgently needed as a lubricant for the rapidly increasing number of marine engines in naval and merchant ships. Since the early 1960s rapeseed acreage has increased dramatically in Western Canada and spread across the three prairie provinces. Canola was developed in Canada in the 1970s.

"Canola is used entirely for its oil and protein content. It contains 40 percent oil by weight. Rapeseed oil was limited to industrial uses until 1958 when it was classed as an edible oil for human consumption in Canada.

"Canola is the greatest supplier of vegetable oil to the Canadian market. In 1980, Canola oil accounted for 46.8 percent of the edible oil market and soybean oil 31.9 percent."

"Canola oil is used mainly in the production of margarines, shortenings, and salad oils."

"The most popular use of canola oil is in cooking and salad oils..."

Note: This is the earliest document seen (Jan. 2005) that mentions "canola oil." Address: Canola Council of Canada, 301-433 Main St., Winnipeg, Manitoba, R3B 1B3, Canada.

1412. deMan, J.M. 1982. Vegetable oils in the food supply. *Notes on Agriculture (Guelph, Ontario)* 18(1):28-29. Aug.
• ***Summary:*** "A biological hydrogenation process occurs in the rumen of the cow and ruminant milk fat contains fairly large quantities of *trans* isomers." Address: Dep. of Food Science, Ontario Agricultural College, Univ. of Guelph, ONT, Canada.

1413. Hume, D.J. 1982. Soybean production. *Notes on Agriculture (Guelph, Ontario)* 18(1):11-12. Aug.
• ***Summary:*** Contents: Adaptation. Soils and land preparation. Crop rotation. Varieties. Inoculation. Weed control. Seeding practice. Fertilizer. Disease and pest control. Harvest practices. Farm storage. Address: Crop Science Dep., Ontario Agricultural College, Univ. of Guelph, ONT, Canada.

1414. McGregor, Otis. 1982. Soybeans–The human consumption approach. *Notes on Agriculture (Guelph, Ontario)* 18(1):13-14. Aug.
• ***Summary:*** "In 1974 the Ontario Soya-bean Growers' Marketing Board launched a program directed to the human consumption market... In 1974 the Ontario soybean export market represented a single shipment of white hilum soybeans to Japan for processing into tofu, miso and natto. Today tofu and miso are becoming popular in Ontario.

"Since 1975 the Ontario Soy-Bean Board has experienced remarkable success in moving soybeans into the human consumption market and the diets of Canadians. Two cookbooks have been printed by the Board and distribution has exceeded 70,000. Tofu shops have emerged in Ontario, to the extent that franchising is in the offing. Toronto has restaurants serving soybean meals... Today, the Ontario Soya-Bean Growers' Marketing Board actively promotes whole soybeans in one pound bags in various supermarkets." Address: Ontario Soya-bean Growers' Marketing Board, Chatham, ONT, Canada.

1415. Moorman, Michael. 1982. Ice cream: Another soy surprise. *Bestways.* Aug. p. 78, 81. [2 ref]
• ***Summary:*** Describes The Farm's work with soy ice cream in the USA, Guatemala, and Haiti, and their soy dairy in Lesotho. "Plenty, the relief organization of the Farm community based in Summertown, Tennessee, built a village soy dairy and tofu shop in Solola, Guatemala, with the help of local Indians and funding from the Canadian International Development Agency, UNICEF, and Plenty donations. In February, 1980, the Solola soy dairy began production and started selling soy ice cream and tofu from the dairy and in the local market place. The soy dairy is currently operated by local people trained by Plenty technicians. Free soy ice cream is distributed to poor and undernourished children through the nearby schools...

"Plenty technicians also went to Haiti and worked with Mother Teresa's Sisters of Charity. They made soy milk ice cream there for malnourished children. After training some of the people in how to use soybeans, they left equipment for them–including an ice cream machine–so they could continue on their own...

"Another arm of Plenty is reaching out to Lesotho, South Africa, where technicians are building a Village Technology Center. One of the stone huts of the Center will be used as a soy demonstration kitchen, where local villagers will be taught how to process soybeans at home. Plenty's projects are just one example of how soyfoods can be introduced into a foreign culture."

Four recipes are given for homemade soy ice cream, each based on soymilk. Note: This is an early document concerning soybean products (soy ice cream) in Lesotho. Address: Production Manager, Farm Foods, Summertown, Tennessee.

1416. Vinall, Geo. H. 1982. The processing and marketing of oil seeds in Ontario. *Notes on Agriculture (Guelph, Ontario)* 18(1):24-27. Aug.
• ***Summary:*** Begins with the early history of Canadian Vegetable Oil Processing (CVOP, the writer's company) in Hamilton, Ontario. Oilseed processing in Ontario started during World War II.

Note: Documents show that six companies started crushing soybeans to make oil and meal before 1940: (1) 1930 March–Milton Oil Refineries, Ltd., Milton. (2) 1932–Dominion Linseed Oil Co., Baden. (3) 1932–The Soya Bean Oil and Meal Co-operative Company of Canada Ltd., Chatham. (4) 1936–Edgar Soya Products, Ltd., Belle River. (5) 1936–Soya Mills Ltd., Stratford. (6) 1938–Toronto Elevators Ltd., Toronto.

From 1940 to 1942 Canada was finding it difficult to obtain enough vegetable oil to satisfy growing domestic demand. A good supply of ground nuts [peanuts] was located in India, Canada's war-time government then negotiated with an Australian (Sir Walter Carpenter) to move a small expeller (oil seed) processing plant from British Columbia to Ontario. In 1942 this plant, which had been processing copra (coconut) on a Vancouver dock side, was moved to the Hamilton harbour waterfront. Canada's federal government then arranged to have thousands of tons of peanuts (in jute bags) delivered to Hamilton for processing. From 1943 to 1948 peanut deliveries were intermittent and this other oilseeds such as sunflowers, flax, palm kernel and copra were crushed in Hamilton. After the war, the Hamilton plant began looking for a more local source of oilseeds and in 1948 began crushing American-grown soybeans.

"G.S. Boulter was the prime person in the transfer of the oilseed processing plant from Vancouver to Hamilton. In 1944 he left W.R. Carpenter and, starting that same year, was instrumental in building another oilseed crushing plant (Victory Mills Ltd.) in Toronto. Later in the 1940s a third plant was built by Toronto Elevators Ltd. (later Maple Leaf Mills Ltd.) in the Toronto harbour.

The plants that processed oilseeds during the 1940s used expellers to separate the oil from the seed.

In 1979 Maple Leaf Mills closed their Toronto Plant and relocated in Windsor, increasing their capacity by 1,200 tons per day.

"In 1967 the United Kingdom [UK] joined the E.E.C. which effectively cut off a market for Canadian soybean oil and meal. Up to that time Ontario crushers always had an alternative to the domestic market... Thus the application of duties by the UK effectively restricted soybean products (except in dire situations) to Canadian markets."

Tables show: (1) Current daily capacities (tonnes per day) for Ontario oilseed processors: Victory Mills Ltd., 1,360 soybeans. CVOP 1,200 soybeans + 600 soft seed. Maple Leaf Monarch 1,100 soybeans + 280 soft seed.

(3) Production of soybean oil and rapeseed oil, 1976-1981. Rapeseed oil figures were was always larger. (4) Consumption of soybean and rapeseed oils, 1976-1981–for margarine, shortening, salad oils and total. Address: Canadian Vegetable Oil Processing, Hamilton, ONT, Canada.

1417. Martin, Debra. 1982. 1000 years old and very new [Shin-Mei-Do Miso]. *Comox District Free Press (Canada).* Sept. 17. Friday.
• ***Summary:*** Six years ago, Lulu and her husband, Yoshi Yoshihara moved to Denman Island from Vancouver, where Yoshi worked as a projectionist for Pacific Cinemathique. He continued to commute from the Island to work, seeing his family only once a week–an arrangement that was not satisfactory. So they both decided to figure out a way to make a living on the island.

An idea came from a cookbook [The Book of Miso] she purchased in Seattle at a Japanese supermarket. They already knew about miso, so they tried making some small experimental batches at home. But they soon decided the only way to really learn the process would be from a Japanese master.

"Lulu took their four-year-old son and went off to Japan for eight months, staying with Yoshi's mother, and then with a family that operated a large miso factory in Iida City, located in a mountainous part of Japan with a climate similar to Denman Island's.

"She was fortunate to be taken under the wings of a miso master who had worked at the factory for 40 years and was in charge of the hand-made miso division there."

"This hands-on experience gave her an idea of what the koji should look like, taste like, and smell like, knowledge hard to gain from books.

Lulu and Yoshi started making miso in earnest from 1979. Photos show: (1) Yoshi standing by a stack of koji trays in sauna-like koji incubation room. (2) Lulu at her stove making miso soup. (3) Yoshi standing on a ladder by a wooden vat of miso, handing a pail down to Lulu. (4) Different Shin-Mei-Do miso products, packaged and bulk.

1418. **Product Name:** Dayspring Tofu, Deep-Fried Tofu, Soy Pudding, and Tofu Kit.
**Manufacturer's Name:** Dayspring Soyacraft Corporation.
**Manufacturer's Address:** 626 Esquimalt Rd., No. 5., P.O. Box 7285, Station D, Victoria, BC, V9A 3L4, Canada. Phone: 604-382-2144.
**Date of Introduction:** 1982. September.

1420. Leviton, Richard. 1982. In a small bright building: Cottage soy industries on Vancouver Island. Colrain, Massachusetts. 15 p. Sept. Unpublished typescript.
• ***Summary:*** Discusses Sooke Soyfoods (Wayne Jolley), Thistledown Soyfoods, Shin Mei Do Miso, and Metta Tofu. Note: This article was commissioned by *East West Journal* but never paid for or published. For a good summary, see: *Soyfoods.* 1983. Winter. p. 36-37. "Cottage soy industries thrive on Vancouver Island."

Concerning Shin Mei Do on Denman Island: Lulu Yoshihara recalls: In 1976 we picked up *The Book of Miso* at Uwjimaya department store in Seattle. It didn't look like it would be all that hard [to make miso] or take that much time or technology. Plus miso wasn't perishable and didn't need to be marketed right away. Ray [Lipovsky] was already here doing tofu and that gave us the idea we could do a little home soy business on the island and make a living. So I went to Japan in 1977 to find a miso teacher. We've been together since 1971. Address: Colrain, Massachusetts 01340.

1421. **Product Name:** Tofu.

Fran Halter. 1984. The Gazette (Quebec). March 5. "A Committed True Believer Spreads the Word About the Curd." About Norbert Argiles of Unisoya. Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. Unisoya was started in 1976 by Norbert Argiles. It was one of the first tofu shops in Quebec. Their tofu was sold in Montreal. Argiles worked for 10 years then burned out. He sold the company, which still exists.

1425. Tallent, W.H. 1982. UJNR Toxic Microorganisms Panel. *Northern Regional Research Center, Notes from the Director* No. 1524. p. 3. Oct. 29.
• ***Summary:*** The meeting was held at the Food Research Inst., Univ. of Wisconsin, from Oct. 17-22. United States was represented by Dr. C.W. Hesseltine, NRRC. "In scientific sessions, 2½ days were devoted to mycotoxin and bacterial toxins. After a tour of the Biotron on the University of Wisconsin Campus, the panelists visited the Kikkoman plant at Walworth, Wisconsin. This plant in 10 years has doubled in size; it now uses 30,000 acres of soybeans and at least as many acres of wheat in soy sauce (shoyu) production. The operation is controlled by 6 team leaders, who develop consensus decisions with others in their groups. The terms 'foreman' and 'supervisor' are never used. Turnover of employees is only a tenth that of American companies, and absentee figures are only a fifth of that found in industries in the surrounding area. Last year production of shoyu amounted to 5 million gallons in this plant. Shoyu is sold in various quantities, up to 50-gallon drums; these larger quantities are sold to other [food] companies for flavoring purposes.

Note: Lite shoyu is being discussed. This plant supplies the U.S., Canada, and parts of Europe. The fermentation tanks are 17,000 gallons capacity. Address: Center Director.

1426. Hazarika, Sanjoy. 1982. Oilseeds cooperatives in India. *Agribusiness Worldwide.* Oct. p. 10-14. [Eng; spa]
• ***Summary:*** "Sales of U.S. commodities have served to finance the establishment of cooperatives of small oilseed producers in India. Patterned after the country's successful milk co-ops, the oilseed co-ops have grown from 300 to over 70,500 members in only three years." The man behind this new movement is Dr. Verghese Kurien, the 61-year-old small dynamo of a man who launched the milk cooperative movement in the western India state of Gujarat in 1948, starting in the township of Anand.

"Financing for the scheme has been generated primarily by the sale of soybean oil and rapeseed oil donated by the Cooperative League of the USA (CLUSA) and the Canadian Cooperative Union. Money from the annual sale of about 86,000 tons of the edible oil is estimated at US$160 million. The U.S. group gets the oil from U.S. government surplus stocks and is to supply 160,000 tons of refined soybean oil over a seven-year period which ends in 1986."

Note: A similar article titled "Cooperatives in India" was published in the Cooperative League Fund Hunger Report in 1982. Address: Correspondent for the New York Times.

1427. Ouellette-Babin, Diane. 1982. Energy input and output of grain corn and soybean production. *Ontario Ministry of Agriculture and Food, Factsheet* No. 82-084. 3 p. Nov. AGDEX 100/708. [7 ref]
Address: Agricultural Energy Specialist, Ontario.

1428. Leviton, Richard. 1982. Re: Summary of soyfoods research trips in the Midwest and Canada (Oct. 14-28) and West Coast (Nov. 21-30). Letter to William Shurtleff at Soyfoods Center, Dec. 6. 2 p. Typed, with signature on letterhead.
• ***Summary:*** The letter begins: "As you requested, the notes on my 'historic' tour, hysterically unprofitable, but at least fun." Traveling 4,700 miles, Leviton gave programs about tofu, tempeh, and other soyfoods sponsored by various companies, and was on TV and newspaper interviews. Companies visited in the Midwest and Canada: Rising Sun (Columbus, Ohio), Prairie Soyl, Community Foods Tofu/

Tempeh Shop, Light Foods, Michiana Soyfoods, Zakhi Soyfoods, Bountiful Bean, Higher Ground Tempeh, Steve Fiering (disappointing business meeting), Soyateria, Victor Foods (Toronto, Ontario, Canada), La Soyarie (Ottawa), Unisoya (Quebec).

West Coast and British Columbia: Wildwood Natural Foods, Brightsong Light Foods, Dayspring Soyacraft, Sooke Soyfoods, Metta Tofu, Sin-Mei-Do, Thistledown, Lifestream, Surata.

Leviton is thinking about relocating in California or working with Soyfoods Center on writing books. Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1429. **Product Name:** Lecithin–C.V.O.P.
**Manufacturer's Name:** Canadian Vegetable Oil Processing. Div. Canada Packers Inc.
**Manufacturer's Address:** Victoria Ave & Burlington St., Hamilton, ONT, Canada.

1431. EUVEPRO. 1982. Vegetable protein: A case for consumer choice. Brussels, Belgium. 12 p. [Eng]
• ***Summary:*** Contents: Introduction. What are vegetable protein products? Vegetable protein products–their range of applications. Nutritional aspects. Vegetable protein products and the European Community. Vegetable protein products and the farmer. Legal aspects. EUVEPRO; The European Vegetable Protein Federation: What is EUVEPRO? (founded in 1977), the aims of EUVEPRO, how EUVEPRO works.

European food legislation and regulations create many obstacles which restrict or prevent the use of vegetable proteins in practice. "These restrictions are out of date and should be lifted to enable consumers to enjoy the benefits of this valuable food ingredient."

"The Codex Alimentarius Commission acknowledged the value and the specific problems of vegetable protein products by creating a Codex Committee on Vegetable Proteins hosted by Canada (two sessions held in Ottawa, 1980 and 1982) and the E.E.C. Commission created a Working Group on Vegetable Proteins which published its conclusions in 1978... Food law in all countries rests on the application of two guiding principles: protection of the consumer's health and protection against deception... The EEC Labeling Directive of December 1978 responded to a need for clear labeling provisions."

This report uses the term "soya" as a singular noun throughout, e.g. "Soya represents, after wheat, the world's major vegetable protein source." Address: Brussels, Belgium.

1432. **Product Name:** [Tofu (Firm, Regular, or Kinugoshi)].
**Foreign Name:** Tofu (Ferme, Regulier, Veloute).
**Manufacturer's Name:** Les Aliments Multisoya Inc.
**Manufacturer's Address:** 1925 Route 139, Roxton-Sud, QUE, J0H 1Z0, Canada.
**Date of Introduction:** 1982.
**Ingredients:** Feves soya, eau, nigari naturel (clorure de magnesium).
**Wt/Vol., Packaging, Price:** 250 gm or 500 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1982, undated. 4.5 by 4 inches. Plastic film. Reddish purple, yellow and black on clear film. Drawing of bean vine. "Keep refrigerated. No cholesterol. Product of Quebec." Claude Harris is the owner. Letter (handwritten) from Frances of Les Aliments Multisoya Inc. 1984. March 1. He has already sent a resumé of his conference of Nov. 1983. Gives the owner's name, address and phone number of the company.

1433. Maison Tofu. 1982. New soyfoods restaurant or deli. 835 est, rue Duluth, Montréal, QUE, H2L 1B2, Canada.
• ***Summary:*** Menu sent by Richard Leviton. 1982. Above "Maison Tofu" is written in French: "buffet/café pour végétarien gourmet." The menu includes the following soy-related dishes: A la carte: Tofu burger. Sandwich au tofu. Chili con tofu. Choix quotidien, avec margarine de soya ou beurre. Les plats choisis: Lasagna de tofu. Tofu bourguignon. Ragoût de tofu. Chili con tofu. Grande salade verte–du tofu mariné. Desserts: Pouding de tofu aux fruits. Address: Montreal, Quebec, Canada. Phone: 522-2304.

1434. **Product Name:** Lecithin.
**Manufacturer's Name:** Maple Leaf Monarch Co.
**Manufacturer's Address:** 365 Evans Ave., Toronto, ONT, M8Z 5W7, Canada.
**Date of Introduction:** 1982.
**New Product–Documentation:** Soya Bluebook. 1982. p. 58.

1435. Shin-Mei-Do Miso Company. 1982. What is miso (Leaflet). Denman Island, British Columbia, Canada. 2 p. Front and back. 28 cm.

• ***Summary:*** Side 1 is an introduction to miso. Side 2 is recipes, plus a plug for *The Book of Miso,* by Shurtleff & Aoyagi. Address: Denman Island, BC, Canada, V0R 1T0. Phone: 335-0253.

1436. **Product Name:** Soyettes (Meatless Soy-based Patties / Burgers).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1982.
**Ingredients:** Soy mash [okara], oats, rice, cashews, soy oil, sunflower seeds, sesame seeds, tamari, potato starch, herbs, seasoning, spices.
**Wt/Vol., Packaging, Price:** 350 gm paperboard box containing 4 patties.
**How Stored:** Frozen.
**New Product–Documentation:** Interview with Jon Cloud. 1985. Aug. Label sent by Jon Cloud. 1989. May 5. Product was introduced in 1982.

1437. Soyateria (The). 1982. Soyfoods specialty shop: Menu. 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. 1 p.
• ***Summary:*** The menu includes the following soy-related dishes: Hot sandwiches: Tofu not dog. Tofu okara superwich. Soyball submarines. Tofuna submarine. Soysalad submarine. Soy reuben. Tofu delight. Specials: Agé. Side orders: Tofu macaroni salad. Tofu dip–for chips or vegetables. Salad-sandwich spreads: Tofuna. Soya. Tofu macaroni. Beverages: Cashew nut milk. Soymilk shakes (Banilla, Carobana). Desserts: Cheese cake. Puddings. Address: Toronto, ONT, Canada. Phone: 416-762-1257.

1438. **Product Name:** Bean Cake, Tofu Curds, Pressed Tofu, Grilled Tofu.
**Manufacturer's Name:** Superior (Tofu) Soy Products Co. Renamed Superior Tofu Ltd. in 1994.
**Manufacturer's Address:** 1752 Commercial Dr., Vancouver, BC, V5N 4A3, Canada. Phone: 604-253-1050.
**Date of Introduction:** 1982.
**New Product–Documentation:** Business card from Percy Chan. Received 1987. Sept. Chinese characters read: Doufu, Doufu-hwa, Dou-jiang, Doufu-gan, Zha-doufu.

Talk with Rita Chan, owner. 1997. June 23. She and her husband started this company in 1982 at 1752 Commercial Dr., Vancouver. Originally they made 4 types of tofu plus soymilk. They stayed at this location until 1992. However in 1986 they expanded into a new location at 438 Main Street in Vancouver. In 1994 they moved out of the building on commercial drive and into their present, much larger building at 1469 Venables St., Vancouver, BC Canada V5L 2G1. Phone and fax: (604) 251-1806. Also in 1994 they changed the company name to Superior Tofu Ltd., the present name. Then in 1996 they moved out of Main St., consolidating all operations at 1469 Venables St. Over the years they have added many new soy products. In Feb. 1997 they started a restaurant named Superior Tofu in the heart of Chinatown in Vancouver. They serve mostly fast foods–using much of their own tofu and soymilk–and they also have a retail outlet.

1439. **Product Name:** Soya Milk.
**Manufacturer's Name:** Superior (Tofu) Soy Products Co.
**Manufacturer's Address:** 1752 Commercial Dr., Vancouver, BC, V5N 4A3, Canada. Phone: 604-253-1050.
**Date of Introduction:** 1982.
**New Product–Documentation:** Business card from Percy Chan. Received 1987. Sept. Chinese characters read: Dou-chiang.

Talk with Rita Chan, owner. 1997. June 23. She and her husband started this company in 1982 at 1752 Commercial Dr., Vancouver. They made soymilk from day one.

1440. **Product Name:** Soy Pate (from Okara).
**Manufacturer's Name:** Thistledown Soyfoods.
**Manufacturer's Address:** R.R. 5, Duncan, BC, V0L 4T6, Canada.
**Date of Introduction:** 1982.
**New Product–Documentation:** Leviton. 1982. In a Small Bright Building. They began making tofu in Oct. 1981.

1441. Carroll, K.K.; Woodward, C.J.H. 1982. Hypocholesterolaemic effects of soy protein in relation to amino-acid composition: Experimental researches. In: G.C. Descovich and S. Lenzi, eds. 1982. Soy Protein in the Prevention of Atherosclerosis. Lancaster [Lancashire], Boston, The Hague: MTP Press. 110 p. See p. 21-26. Chap. 3. [21 ref]
Address: 1-2. Univ. of W. Ontario, London, Canada.

1442. Jenkins, Suzy; Praskin, L.; Praskin, A. 1982. Plenty integrated soy program, Guatemala. Summertown, Tennessee: The Book Publishing Co. 48 p. Illust. 28 cm.
• ***Summary:*** This remarkable, inspirational, creative booklet contains the best summary of Plenty's Solola Soy Program, with 71 excellent black-and-white photos, many of them taken by Jenny Banks Bryant and others. "Plenty Canada" (founded in 1976 by a group of Canadians) provided the funding for this project and Plenty International provided the volunteers. It was a very successful and innovative project, that unfortunately was suspended in 1980 when the political situation became too dangerous for Americans to stay in the area. Happily, it was restarted by Plenty Canada in mid-1985 and as of early 1988 is active and growing.

Contents: Plenty. Preface. Soy agricultural program. Soy demonstration program. Soy extension program. Step-by-step demonstration process (how to make soymilk and

tofu in a Guatemalan village). Plenty Solola soy dairy. Soy dairy floor plan and flow sheet. Step-by-step production procedures. Marketing soy products. Poor people and nutrition. Training apprentices. Appendix.

The Preface, by Plenty director David Purviance, notes that Plenty went to Guatemala in 1976 to help with reconstruction following a severe earthquake. Plenty set up a primary health care program and an orphanage. "In these programs, we fed soymilk to the children who were brought to us for care. The beneficial effects on these malnourished kids were unmistakable. Many of the Indian mothers observed that our own children remained healthy on a soy-based diet. Living in the village and learning the language and lifestyle of the people, Plenty volunteers remained accessible to our Indian neighbors.

"In 1978, agronomist Daryl Jordan began testing the feasibility of growing soybeans in the highland area. The results were good, and Suzy Jenkins started demonstrating how to make soymilk and tofu in some of the local homes. As interest and support for the soybeans grew, they were joined by Laurie and Alan Praskin to help expand the project. During the next two years, their efforts produced a three-phase program of soy introduction that improved the lives of several thousand Guatemalan Indians. What follows is their account of a program that included the cultivation of soybeans by village farmers, home demonstration of soy preparation techniques and the creation of a village-scale soy dairy which produces soy ice cream and tofu for sale in the local market and for free distribution to hungry kids."

Page 15 states: "The Extension Program was implemented by one soy technician and the 18 trained cooperative extensionists. In six months over 1,000 men and women were taught how to make soymilk and tofu through this program. One hundred ten classes were held in 74 different areas." Photos show tofu and soymilk being made. Thirteen photos (p. 12-17) show the step-by-step process for making tofu in a Guatemalan village, including:

(1) San Martin soy extensionists preparing tofu at a nutrition class.

Twenty-four photos (p. 18-32) show the Solola Soy Dairy, including its construction, inside, outside, floor plan, and the step-by-step process for making tofu and soy ice cream. Page 21 states: "The soy dairy started operation in February of 1980. It produces approximately 90 to 100 gallons of soy ice cream and 60 to 75 pounds of tofu a week. Its maximum production capacity with the present equipment is 200 gallons of ice cream and 450 pounds of tofu a week. It was stocked with a year and a half supply of soybeans and has since been supporting itself by selling soy ice cream and tofu from the dairy in the local marketplace."

(2) "The soy dairy is open for selling tofu and soy ice cream seven days a week. Suzy Jenkins hands soft-serve soy ice cream in cones from a soy dairy window (p. 32).

(3) Little Mayan girl eating seasoned tofu from a bowl. "A one-half pound serving of tofu sells for 25 cents [U.S.]

Note: This is the earliest document seen (Jan. 2003) that mentions “Plenty Canada” (see p. 4). Address: The Farm, Summertown, Tennessee.

and contains: 163 calories (10% of the Recommended Dietary Allowance for a child age 4-6 years), and 17.7 grams of protein (59% of RDA) (p. 37).

(4) Little Mayan girl licking a big soy ice cream cone as she runs. “Our soy ice cream contains soymilk, tofu, sugar and oil, which make it abundant in calories and protein. A half-cup serving of our soy ice cream sells for 10 cents and contains 183.4 calories” (11% of the Recommended Dietary Allowance for a child age 4-6 years) and 3.1 grams of protein (10% of RDA) (p. 38).

In the chapter titled “Marketing soy products,” a photo (p. 33) shows the Soy dairy booth in the Solola market. The sign over the window reads: “Helados y Queso–Hecho de frijoles de soya” [“Ice cream and cheese–Made from soybeans”]. Photos on the next two pages show: Mayan women preparing tofu to be sold on tortillas at the Solola State Annual Fair. The booth at the fair with a sign advertising soy ice cream and tofu. Guatemalan soldiers enjoying soy ice cream cones. Many happy kids holding up soy ice cream cones. A Plenty volunteer “giving away soy ice cream to 180 children at a school in a rural village.”

1443. Kamel, B.S.; deMan, J.M. 1982. Composition and properties of bean curd made from Ontario soybeans. *Canadian Institute of Food Science and Technology Journal* 15(4):273-76. [7 ref. Eng; fre]

• ***Summary:*** The composition and properties of tofu made from 11 varieties of soybeans grown commercially in Ontario were determined. The crude protein content of the soybeans (in gm/100 gm, on an “as is” basis) ranged from 31.6 to 38.9. The minimum concentrations for coagulation were 0.1% for calcium chloride, 0.25% for calcium sulfate, and 0.20% for calcium acetate. Calcium citrate did not coagulate soymilk. Both anion and pH appear to influence coagulation. The initial pH of the soymilk was 6.58 and coagulation occurred at pH 5.91 for calcium chloride, 5.74 for calcium sulfate, and 6.09 for calcium acetate. Curd yield ranged from 20.7 to 27.3% and protein yield from 59.0 to 69.8%.

Queso Blanco (recently being studied in the author’s department) is a cheeselike product made in Latin America from dairy milk that is heated and coagulated using acidic fruit juices or acidic solutions (citric acid or calcium

chloride). It is salted, separated, and pressed. The white creamy fresh cheese, which is ready to be used after a short period of ripening, has a high yield and interesting functional properties. "The similarity between this process and the manufacture of Tofu is obvious. It should be interesting to study production of a mixed soymilk Queso Blanco." Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT N1G 2W1, Canada.

1444. Ko Swan Djien. 1982. Indigenous fermented foods. *Economic Microbiology* 7:15-38. A.H. Rose, ed. Fermented Foods. [67 ref]

• ***Summary:*** Contents: 1. Introduction. 2. Foods fermented by moulds: Roles of the moulds. 3. Foods fermented by bacteria: Fermented vegetable products, fermented fish products, fermented seeds (natto, thua-nao, dagé), fermented starch-rich raw materials (fermented maize products, fermented rice products, fermented cassava), fermented plant juice.

4. Foods fermented by a mixture of moulds and yeasts: Ragi, micro-organisms, fermented starch-rich raw materials.

5. Foods firstly fermented by moulds [as in making koji], followed by a fermentation with a mixture of bacteria and yeasts (the salt-tolerant yeasts are species of *Saccharomyces* and *Torulopsis;* the bacteria are species of *Pediococcus* and *Streptococcus):* Tane koji, soy sauce, other fermented soybean products (tauco {porridge or dry consistency}, miso, hamanatto {which is soft and his a high moisture content}, tou-shih {which has a much lower water content than hamanatto and is therefore not so soft}. These "fermented soybean products are also used as flavouring agents in cooking as well as table condiments or as a side dish").

6. Specific aspects of fermented foods: Mould species, lactic-acid bacteria, yeasts, salt. 7. Acknowledgement. References.

Concerning soy sauce (p. 30-31): "Japanese *shoyu* is made from equal amounts of soybeans and wheat." The "raw materials are inoculated with tane koji which contains spores of selected strains of *Aspergillus oryzae* and *A. soyae.* In less sophisticated soysauce factories throughout South East Asia, mould species grow spontaneously on the soybeans by natural contamination from the air and from the bamboo trays on which soybeans of former batches were incubated (Bhumiratana et al., 1980). The moulds involved are species of *Aspergillus, Rhizopus,* or *Mucor.* Some Indonesian *kecap* manufacturers inoculated the cooked soybeans with tempe [tempeh] inoculum which contains spores of *Rhizopus oligosporus."*

1445. Plenty International. 1982. Soy Demonstration Program: Introducing soyfoods to the Third World. A step by step guide for demonstrating soymilk and tofu preparation. Summertown, Tennessee. 16 p. Undated. Illust. 21 cm.

• ***Summary:*** Actually written by Suzy Jenkins and Laurie Praskin, this booklet is a summary of two larger works published in 1980 (written by Darryl Jordan and Suzie Jenkins) and earlier in 1982 (by Suzy, Laurie and Alan Praskin).

As interesting as it is innovative, this summary focuses on Plenty International's Soy Demonstration Project in Guatemala, showing how soybeans are being grown in local villages and women are making soymilk and tofu using traditional equipment. All Guatemalans are shown in traditional Mayan clothing *(traje).*

Contents: Introduction. Soy extension program. A soy demonstration in photographs: Soaking the beans, grinding, cooking, straining, soymilk, curding tofu, straining the curds, storing the products. Helpful hints. Recipes. A nutritional comparison. Soybean agricultural impact statement.

Black and white photos show soyfoods and people in Guatemala. These include: (1) A little Guatemalan girl, kneeling, licking her fingers as she eats seasoned tofu from a bowl. (2) Women smiling and laughing as they grind soybeans on traditional stone *metate.* (3) Women's nutrition group (with children) from San Jose Poaquil standing behind their soybean patch. (4) Simple tools needed for making tofu. (5) Close-up of a woman grinding soybeans on

a *metate*. (6-8) Cooking ground soy slurry and filtering the soymilk from the pulp. (9) A little girl drinking a big cup of soymilk. (10-14) Curding the tofu, straining the curds, and pressing the tofu. (15) Girl eating tofu on a bun. (16) A happy group of Guatemalans and Americans standing around a stove, enjoying soymilk and tofu. (17) Soybean variety trials in Solola, Guatemala. Elevation: 7,200 feet (2,195 meters). (18) A little bustling along as she licks a cone of soymilk ice cream.

On the rear cover: "The Soy Demonstration Project was funded by Plenty International, UNICEF (United National International Children's Educational Fund) and CIDA (Canadian International Development Agency), and donations from supporters." For further information write: "Suzy Jenkins or Laurie Praskin, Plenty Soy Technicians, 156 Drakes Lane, Summertown, Tennessee 38483 USA." Address: Summertown, Tennessee.

1446. Poirier, Marie. 1982. Le plaisir de la cuisine au tofu [The pleasure of tofu cuisine]. Prevost, Quebec, Canada: Unisoya Inc. 52 p. No index. 22 cm. [2 ref. Fre]
• ***Summary:*** Includes recipes for main courses, soups, salad dressings, salads, and desserts. Many of the recipes call specifically for Unisoya tofu. There is also an ad for Unisoya on the rear cover. Address: Quebec, Canada.

1447. Victory Soya Mills Limited. 1982. Soybeans in Canada. Toronto, ONT, Canada. 25 p. 28 cm.
• ***Summary:*** Contents: 1. Introduction: History, world production, characteristics and products. 2. Plant growth and development: The seed, vegetative growth and development, reproductive growth. 3. Growing the crop: Varietal selection, soils, seedbed preparation, planting date, planting rate, planting depth, row width, seed inoculation, seed treatments, soil fertility, weed control, mechanical weed control measures, chemical weed control measures, crop diseases, insects, harvesting, drying, storage. 4. Marketing and utilization. 5. Appendices: Soybean varieties and distributor addresses, herbicides, insecticides, publications.

On the cover of this attractive color booklet is a photo of a white sack filled with white-hilum soybeans on a wooden floor; a Canadian flag projects from the top of the bag. There are two photos of Victory Soya Mills on the Toronto waterfront. "Most of Canada's [soybean] production is still centered in the five southwest counties of Ontario (Essex, Kent, Lambton, Middlesex and Elgin). New early varieties, however, are rapidly spreading the crop throughout Ontario and even into the prairie provinces." Address: 333 Lakeshore Blvd. E., Toronto, ON M5A 1C2. Phone: (416) 363-8771.

1448. **Product Name:** Soya Nova Tofu.
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** Glen Echo Rd., R.R. #1, Mayne, BC, V0N 2U0. Canada.
**Date of Introduction:** 1983. January.
**New Product–Documentation:** Talk with Debbie Lauzon. 1990. Dec. 28. Then letter from her on 11 Feb. 1991. She learned how to make tofu 15-20 years ago in California, where she also bought tofu. Then she moved to Canada and was living on a farm in the Ottawa Valley, Ontario, Canada. A friend bought and sent her a little tofu kit that enabled her to make about 1 pound of tofu. She and Chris Kodaly first started making tofu commercially in Jan. 1983 at Mayne, BC, Canada. Mayne Island is a small island in the Gulf Islands, with a population of about 500. The official name of the company was and still is Soya Nova Tofu Shop. The market was small so she only made 10 lb of tofu a week. But nearby Galiano Island is a larger market, so on Fridays she took went there and sold her tofu at the farmers' market. The only way back to Mayne Island was via Saltspring Island (the largest of the Gulf Islands), so she sold her tofu there at the Saturday farmers' market. Saltspring (population 5,000) soon became her biggest market so she and Chris moved there from Mayne in 1985. Their tofu shop is part of their home and is considered a cottage industry.

As of Feb. 1991 Soya Nova makes about 800 lb/week of tofu on Saltspring (up from 400 lb/week in Dec. 1990); they have about 3 employees, not all full time. Chris Kodaly has not been directly involved with the company for the last couple of years. He is a piano teacher, but he is still her business partner. "The most important thing for Soya Nova is to produce the freshest and best tofu for our community, friends, and family."

Leaflet sent by Deborah. 1991. Feb. 6. The company is now located at 1200 Beddis Road, Ganges, B.C. V0S 1E0. Phone: 537-9651. But the return address on the envelope is RR#2 Rourke Rd. C-28, Ganges. Products that are coming soon are Okara Granola Bars and Tofu Cheesecake.

1449. A&P. 1983. You'll do better with these great super... (Ad). *Toronto Daily Star (Canada).* Feb. 9. p. C8.
• ***Summary:*** In the right center of this full-page ad: "Fresh To Fu. Product of Ontario. Soya Bean Curd, 500 gm pkg.–99¢." Address: Toronto.

1450. Shurtleff, William; Aoyagi, Akiko. 1983. History of miso and soybean jiang. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 82 p. Feb. 21. Unpublished typescript.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. Etymology. Part I: History of soybean jiang in China. Early Chinese non-soybean jiang. Early Chinese soybean jiang (100 B.C. to 599 A.D.). 600 to 1899. The Twentieth Century. Part II: History of soybean jiang/jang in Korea and Southeast Asia. Dissemination of jiang from China. Korea. Indonesia. Vietnam. Malaysia. Part III: History of miso in Japan. Introduction; origins not

clear. Early non-soybean hishios (before 700 A.D.). The Nara period (710-784 A.D.); Ganjin 754. The Heian period (794-1160 A.D.). The Kamakura period (1185-1333). The Muromachi period (1336-1568). The Edo or Tokugawa period (1603-1867). The Meiji and pre-war periods (1867-1940). The postwar period, modern times (1941-1982). Part IV: History of miso in Europe. Early European references (1597-1899). 1900-1949. 1950-1982. Part V: History of miso in the United States and Canada. Early developments (1896-1929). 1930-1959. Growth of interest in miso (1960-1982). Part VI: History of miso in other countries. India. Israel. Latin America. Address: Lafayette, California. Phone: 415-283-2991.

1451. **Product Name:** Soyettes (Okara Patties). Renamed Veggie Burger in Feb. 1992.
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
**Date of Introduction:** 1983. February.
**Ingredients:** Soybean pulp [okara], durum flour, cornmeal, water, vegetable oil, onion flakes, vegetable flakes, lecithin, sunflower seeds, herbs, spices, sea salt.
**Wt/Vol., Packaging, Price:** Four 64.2 gm patties in a bright red box with a color photograph.
**How Stored:** Frozen.
**New Product–Documentation:** Spot in Soyfoods. 1983. Winter. p. 48. "Give Okara a Pat." Talk with Lorraine Guardino of Soy City Foods. 1992. Feb. 18. The Soyettes are now called the Veggie Burger. The ingredients are different; it has no cholesterol and is low in fat. The packages will be ready in about 3 weeks, and should be available at retail stores within 1 month. The product is now sold only to the food service industry; it first became available in early Feb. 1992.

1452. *Soyfoods.*1983. Cottage soy industries thrive on Vancouver Island. Winter. p. 36-37.
• ***Summary:*** Wayne Jolley's Sooke Soyfoods, which opened in early 1981, produces 1,800 lb/week of nigari tofu. Thistledown Soyfoods, run by Jan Norris, opened in October 1981. Each week the company produces 350 lb of tofu, 150 lb of tempeh (vacuum packed), and 75 lb of soy pate from okara. At Shin Mei Do Miso, Lulu and Yoshi Yoshihara have been making miso since 1979. They now produce 10,000 lb of 3 styles of miso each year. Metta Tofu is owned by "Ray Lipovsky, who might be North America's original cottage tofumaker as he's been coagulating soymilk with sea water since 1975... Besides producing 600 pounds of nigari tofu every week, Lipovsky is hot on the trail of Frozen Buddha, his multi-flavored line of frozen soymilk ice cream, already producing 360 gallons weekly."

Also on the island in Victoria, though too large for the cottage scale, is Dayspring Soycraft Corporation, operated by Michael Hsieh. Hsieh, a trained dentist, and his brother, Steven, and their families, emigrated to British Columbia from Taiwan and decided to launch a pressure cooker tofu plant in 1982.

1453. Tsukamoto, J.Y. 1983. Agro-Man Soybean Program in 1982. Paper presented at the 38th Annual Meeting of the Expert Committee on Grain Breeding (ECGB). 11 p. Held 15-16 Feb. 1983.
• ***Summary:*** This has been the fourth year of soybean production demonstrations since this program was implemented; 24 cooperators were involved. The main varieties tested were McCall, Maple Presto, and Maple Amber. A killing frost on Aug. 27 damaged many soybean plants. The protein content of the soybeans harvested was lower than desired (40.3% vs. 44% desired). In 1983 it is planned that the Maple Amber variety will be tested on about 607 ha (1,500 acres) by about 30 cooperators. Address: Manitoba Agriculture.

1454. Voutsinas, Leandros P.; Cheung, E.; Nakai, S. 1983. Relationships of hydrophobicity to emulsifying properties of heat denatured proteins. *J. of Food Science* 48(1):26-32. Jan/Feb. [32 ref]
• ***Summary:*** Soy protein isolate was obtained from General Mills, Inc. (Minneapolis, Minnesota). Promine-D was obtained from Central Soya Co. (Chicago, Illinois). The emulsifying properties of a protein could be well predicted based solely on the surface hydrophobicity level, but not on the basis of solubility level. Soy protein is now much less used for its functional properties as a food material except as an additive for meat and seafood products. Address: Affiliated with the Dep. of Food Science, the Univ. of British Columbia, Vancouver, Canada V6T 2A2.

1455. Shurtleff, William; Aoyagi, Akiko. 1983. History of soy oil hydrogenation and of research on the safety of hydrogenated vegetable oils. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 49 p. April 14. Unpublished typescript.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. Part I: What is hydrogenation? About hydrogenation. About *cis* and *trans* fatty acid isomers. Part II: A brief history of hydrogenation. The early years (1897-1939). Hydrogenation developments from 1940-1982. Part III: History of research on the safety and nutritional value of hydrogenated oils and fats. Address: Lafayette, California. Phone: 415-283-2991.

1456. Fox, Chloe; Fox, Abraham. 1983. The au naturel tofu manual: Modern Jewish tofu cooking. Au Naturel, 6110 Monkland Ave., Montreal QUE, Canada H4A 1H4. 47 p. April. No index. 21 cm. [7 ref]

1457. Richard, Lou. 1983. History of Fearn Soya Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, May 6. 1 p. transcript.
• ***Summary:*** Elwood has Dr. Fearn's files. Lou called Elwood and Elwood said he will send (loan) Soyfoods Center everything he has. Lou will send (loan) Soyfoods Center some coins and invoices from about 1935. In about 1947-49 Dr. Fearn's secretary, Renee, went home with lots of the company records.

Fearn Natural Foods was at 1206 N. 31st Ave., Melrose Park. In 1955 they moved to 355 West Ontario. Then in 1968 they moved to their present address at 4520 James Place in Melrose Park, Illinois. In 1982 the company name was changed from Fearn Soya Foods to Fearn Natural Foods.

Lou is quite sure Dr. Fearn died in 1947–not 1949. since that was the first year he (Lou) started to work in the company; he graduated from 8th grade in 1947. In 1949 he was a sophomore in high school.

A box arrived from Fearn via UPS in early May 1983, several days after this interview. It contained a wealth of early documents in 21 different files. The names of the files were: 1. Stubs of cancelled checks, 1946-47. 2. Walker = Purchase order to Fearn from H.W. Walker Co. in Chicago. 3. Harriett Assoc. (anti-Communism). 4. Large ledger of orders received in 1937. 5. Small ledger of orders received in 1936-37. 6. Dr. Fearn's circulars and labels, old. 7. Miscellaneous bills, 1947. 8. Vitona. 9. P.A. [Paul] Richard. 10. Personal, Dr. Fearn (incl. lots of photos, but no good ones of him). 11. Products, processes, machinery (Dr. Fearn). 12. Professional correspondence, as with Le Clerc. 13. Miscellaneous deals and ventures (Dr. Fearn). 14. Manufacturers (incl. Loma Linda). 15. Golden Mix. 16. Financial, incl. cancelled signed checks. 17. Fearn Foods = Fearn International. 18. Correspondence–Malcolm McBride and Viana deal. 19. Miscellaneous old trucking bills & unusual items. 20. English connections. 21. Correspondence, Belleville in Southern California.

Included in the shipment were many coins that Dr. Fearn apparently collected during his travels, including coins from the following countries–listed alphabetically. The number of coins from each country, and the range of dates that appear on the coins are shown in parentheses. Note that Dr. Fearn was probably in a particular country on or after the latest date: Austria (3, 1924-1925), Belgium (4, 1870-1917), Canada (3, 1842-1918), China (40, all undated, but "10 cash" token coins with square hole in center, minted from 1853-1861), Germany (Deutsches Reich, 45 coins, 1874-1927), Great Britain (6, 1856-1922), Japan (7, 1889-1923), Luxembourg (2, 1906-1916), United States (1, 1916). Address: Melrose Park, Illinois 60160.

1458. Fox, Chloe; Fox, Abraham. 1983. The au naturel tofu manual: Tofu recipes for families. Au Naturel, 6110 Monkland Ave., Montreal, QUE, H4A 1H4, Canada. 42 p. May. No index. 22 cm. [5 ref]
• ***Summary:*** Contents. Introduction. 1. Basic ingredients. Recipes–2. Entrées. 3. Main dishes. 4. Desserts. 5. Miscellaneous. Address: Montreal, QUE, Canada.

1459. Leviton, Richard. 1983. In search of the elegant plate: Using tofu in restaurants. *Soyfoods.* Summer. p. 22-32.
• ***Summary:*** *Soyfoods* magazine recently interviewed 50 restaurants around the country to learn how they were serving tofu, the amount of tofu they used each week, and their prognosis for tofu's future in restaurants. The interviews focused on natural foods and macrobiotic style restaurants–where much of the current use and innovation is taking place. The 50 restaurants represent an estimated 8% of America's estimated 600 natural foods restaurants. The 50 restaurants interviewed purchase about 111 tons of tofu yearly; by extrapolation, all natural foods restaurants would purchase a total of 611.5 tons of tofu yearly, or 2.25% of current tofu production. Asian restaurants are estimated to use an additional 3,822 tons, or 14% of total production. Many restaurants prefer to buy their tofu in bulk directly from the manufacturer. Leading centers for tofu innovation in restaurants are Boston (from the macrobiotic community), New York, then San Francisco and Los Angeles (which have large numbers of Asian-Americans and tofu manufacturers). Open Sesame, one of Boston's foremost macrobiotic restaurants, uses 350 pounds/week of tofu according to owner Gary Welkin. Also discusses tofu use and dishes served at various natural food vegetarian restaurants: Lotos/Lotus Cafe (Rochester, New York; owner Greg Weaver), Woodlands (Vancouver, BC, Canada), Blair Island (Eugene, Oregon), Meyera (Santa Monica, California), Penthouse Garden (New York City; chef George Roeger), Greens (San Francisco, California; run by Zen Center, head chef Jim Phalon), Sojourner Coffee House (Santa Barbara, California), Amazing Grace (San Francisco), Blue Heron (Minneapolis, Minnesota), Sunshine Inn (St. Louis, Missouri), Pachamama (Boulder, Colorado), Brownies (New York City), Moosewood Restaurant (Ithaca, New York), Latacarta (Boston), Blind Faith (Evanston, Illinois), Whole Wheat 'N' Wild Berries (New York City), Earth Angel (New York City), Green River Cafe (Greenfield, Massachusetts), The Garland (Tucson, Arizona), Cafe Shalom (Boston). At macrobiotic restaurants: L'Odeon (Boston), George's (Philadelphia, Pennsylvania), Grain Country (Hollywood, California), Paul & Elizabeth's (Northampton, Massachusetts), Five Seasons (Jamaica Plain, near Boston; owner John Pell), The Caldron

(New York City; they have been open since 1970, and making their own tofu since 1975), Angelica's Kitchen (New York), Seventh Inn (Boston), Harvest Cafe (Washington, DC). At mixed cuisine natural foods restaurants: The Unicorn (North Miami Beach, Florida; Terry Dalton, owner, opened in late 1979, uses 335 lb/week of tofu), Nature's Oven (Miami), The Natural Cafe (Santa Fe, New Mexico), The Eatery Amulette (Monmouth Junction, near Princeton, New Jersey), The Haven (Santa Fe, New Mexico), The Copper Star (Tucson, Arizona). At tofu fast food takeout restaurants and delis: The Unicorn (Florida), Erewhon Healthycatessen (Los Angeles), The Patisserie (Boulder), Golden Temple (St. Louis). Natural foods Oriental restaurants: The Wok (Greenfield, Massachusetts), Real Good Karma (San Francisco; has served tofu since 1976), Souen (New York City), Golden Horde (Cambridge, Massachusetts), Plum Tree (New York City), Shangrila (San Francisco), Inaka (Los Angeles), Fuji-Ya (Minneapolis). Specialty atmosphere white tablecloth restaurants: Trader Vic's (San Francisco), Cambridge Crossing (Salt Lake City, Utah), The Good Earth (chain of 30 restaurants owned by General Mills). Address: 100 Heath Rd., Colrain, Massachusetts 01340. Phone: 413-624-5591.

1460. **Product Name:** Tofu.
**Manufacturer's Name:** Maple Leaf Soyfoods Co.
**Manufacturer's Address:** 49 Bushmills Square, Agincourt, ONT, M1V 1K5, Canada.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: M. Wei. Phone: Not listed.

1461. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Nanda-Line Soy Products.
**Manufacturer's Address:** 4058 Rue St. Urbain, Montreal, QUE, H2W 1V3, Canada.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Nantha Kumar. Phone: Not listed.

1462. **Product Name:** Tofu.
**Manufacturer's Name:** Nutri Soy Foods.
**Manufacturer's Address:** 20 Big Red Lane, Agincourt, ONT, M1V 1N9, Canada. Phone: 416-291-6823.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Harry Kwok.

1463. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Tofuco Foods Inc.
**Manufacturer's Address:** 3637 Cremaize E. #1215, Montreal, QUE, H1Z 2J9, Canada. Phone: 514-376-5010.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Not listed.

1464. **Product Name:** Tofu.
**Manufacturer's Name:** Wah Chong Co.
**Manufacturer's Address:** 80 Ossington Ave., Toronto, ONT, M5T 2R4, Canada. Phone: 416-532-0841.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Anthony Kim.

1465. **Product Name:** Tofu.
**Manufacturer's Name:** Winnie Imrie Tofu.
**Manufacturer's Address:** Route 1, Comp. 9, Site 1, Edgewood, BC, V0G 1J0, Canada. Phone: 604-269-7275.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Winnie Imrie.

1466. **Product Name:** Tofu.
**Manufacturer's Name:** Yee's Grocery.
**Manufacturer's Address:** 209 Pacific Ave., Winnipeg, MAN, Canada. Phone: 204-942-7668.
**Date of Introduction:** 1983. June.
**New Product–Documentation:** Soyfoods Center Computerized Mailing List. 1983. June 20. Owner: Philip Yee.

1467. Dubetz, Steve; Major, D.J.; Rennie, R.J. 1983. Production practices for early maturing soybeans in southern Alberta. *Canadian J. of Plant Science* 63(3):641-47. July. [12 ref. Eng; fre]
• ***Summary:*** Delaying seeding of soybeans to late May or early June reduced yields in southern Alberta. Address: Research Station, Agriculture Canada, Lethbridge, Alberta T1J 4B1, Canada.

1468. **Product Name:** [Tofu {Vacuum Packed, Nigari}].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Regal Naturel (Marketer). Made in Quebec by Unisoya.
**Manufacturer's Address:** Montreal, QUE, Canada.
**Date of Introduction:** 1983. July.
**Wt/Vol., Packaging, Price:** 1 lb vacuum packed.
**New Product–Documentation:** Talk with Richard Milon. 1987. Dec. 11. He bought the tofu in bulk from Unisoya and

vacuum packed it. He had 4 products. Making each one was labor intensive. He sold them to 100 retail stores. The company survived until late 1984.

1469. **Product Name:** [Baked Tofu Roti (Sausage Flavor, or Bacon Flavor)].
**Foreign Name:** Baked Tofu Roti (Saveur de Saucisse, or Saveur de Bacon).
**Manufacturer's Name:** Regal Naturel (Marketer). Made in Quebec by Unisoya.
**Manufacturer's Address:** Montreal, QUE, Canada.
**Date of Introduction:** 1983. July.
**Wt/Vol., Packaging, Price:** 8 oz vacuum packed.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Richard Milon. 1987. Dec. 11. He bought the tofu in bulk from Unisoya. Both products were sold vacuum packed.

1470. **Product Name:** [Tofu Salad].
**Foreign Name:** Salade de Tofu.
**Manufacturer's Name:** Regal Naturel (Marketer). Tofu made by Unisoya.
**Manufacturer's Address:** Montreal, QUE, Canada.
**Date of Introduction:** 1983. July.
**New Product–Documentation:** Talk with Richard Milon. 1987. Dec. 11. He bought the tofu in bulk from Unisoya.

1471. *Presse (La) (Montreal, QUE, Canada).*1983. Le tofu, de la viande sans os [Tofu, the meat without bones]. Aug. 10. p. D4. [Fre]
• ***Summary:*** Contains recipes for tofu gratin and tofu cheesecake.

1472. Pink, Dave. 1983. Soybean story has thousands of conclusions. *Windsor Star (Essex County, Ontario, Canada).* Sept. 27. p. C6.
• ***Summary:*** The 2,700 soybean farmers in Essex County had bad weather and hard times during the past year. Peter Epp, a Leamington-area farmer, is chairman of the Ontario Soya-Bean Growers' Marketing Board. A photo shows Dave Pink. Address: Star agriculture reporter.

1473. Brennan, Thomas J. 1983. Re: Soybean production in Austria. Letter to William Shurtleff at Soyfoods Center, Sept. 30. 2 p. Typed, with signature on letterhead.
• ***Summary:*** The closed door policies of the region make information gathering a difficult, if not impossible, task. Two soybean specialists in the region are: (1) Dr. Jerzy Szyrmer, Plant Breeding and Accilimatization Inst., Radzikow, Poland. He has been attempting to develop soybean varieties for home production and consumption; he has no commercial interestes at all. (2) Prof. Dr. Victor F. Lishchenko, or his assistant, Dr. Leonid Kolesnikov, Food and Agriculture Dep., Inst. of U.S. and Canada Studies, 2-3 Khelbny per., Moscow, USSR. Lishchenko has just published a book in Russian on soybeans in the USSR.

"Now to address some of your questions. What causes swings in production and imports of soybeans and products? That is difficult to answer. Initially I would say imports are directly related to hard currency availability. The scientists and livestock production people recognize the value of soybeans, but don't control the purse strings. That's the central bank or foreign trade organizations. Soybean purchase requests go in the basket with all other import needs.

"Production swings are often caused by weather or disease. More commonly, however, I would attribute changes to government attitudes. For example, in Yugoslavia producers are paid nearly $400 / MT to raise soybeans while they could buy C.I.F. at about $250 / MT. Soybean production has increased, but so has corn and wheat production. These products are now bartered for beans and meal. If hybrids could be developed, Hungarian production would soar, as corn production did in the 70's. They want to grow soybeans, however, at this time, it is still more profitable to grow corn and small grains. The value of the crop per hectare far exceeds soybeans' potential value. Certain state farms which have produced beans in the past want to increase production; however, the central government discourages this by setting low prices. Three or four years ago the attitude was different and soy production was encouraged. Talk to Bob Bergland about the Farmland / Eaton proposal for a soy crushing plant in Hungary.

"Statistics on soy protein utilization are hard to come by. Imports are usually handled by the Ministries of Food, where I have few contacts. Sales are also controlled by a small number of companies, e.g., Ralston, ADM, Staley, etc., which are not prone to reveal figures. USDA at one time listed TSP sales, but I haven't seen any statistics for 1982 or 1983." Address: Gatterburggasse 18/2/3, A-1190, Vienna, Austria. Phone: 37-41-18.

1474. *Marketing and Development in Ontario Agriculture.*1983. Soybeans [in Canada]. Sept. p. 4-6.
• ***Summary:*** "Soybeans were introduced to Canada from the USA in 1893 by researcher C.A. Zavitz at the Ontario Agricultural College. Working alone for 30 years Zavitz, through painstaking research, developed the first variety registered by the Canadian Seed Growers' Association... More than 95% of all soybeans produced in Canada are grown by approximately 17,000 growers who are mainly located in southwestern Ontario." Soybeans have become Ontario's third largest cash crop in dollar value, worth nearly $188 million to growers in the 1981-82 marketing year. Discusses the history and work of the Ontario Soya-Bean Growers' Marketing Board, established in 1949 under the Ontario Soya-Bean Growers' Marketing Plan. Each grower pays 90 cents/tonne to the Board. Address: Ontario.

1475. **Product Name:** Tofu, Soymilk, Soymilk Yogurt. **Manufacturer's Name:** Merrickville Bakery & Tofu. **Manufacturer's Address:** St. Lawrence Street, Merrickville, ONT, K0G 1N0, Canada. Phone: 613-269-3200.
**Date of Introduction:** 1983. September.
**New Product–Documentation:** Form filled out by Steven Rowat. He uses 2 lb/day of dry soybeans. The tofu shop does not have its own name. Started 15 Sept. 1983.

1476. Plenty USA. 1983. If we share there is more than enough to go around... Plenty (Brochure). Summertown, Tennessee: Plenty. 12 panels. Sept. 28 cm.
• ***Summary:*** This brochure, containing many photos, describes the activities of Plenty USA and Plenty Canada (R.R. 3, Lanark, Ontario, Canada K0G 1K0) worldwide, including Guatemala and the Caribbean. It is accompanied by a cover letter from David Purviance, Director, dated 10 September 1983.

Photos show: (1) Plenty volunteers in Solola, Guatemala, working on a water project. (2) A Mayan woman, in traditional Mayan dress, grinding soybeans on an ancient tool, the *metaté.* (3) Two young girls in Solola enjoying soy ice cream from Plenty's soy dairy. "A one-cup serving provides 20% of a child's recommended protein allowance." The Village Technology Training Center in Lesotho, with solar panels.

Note 1: This is the earliest document seen (July 2004) concerning Plenty International (called Plenty USA in the early days).

Note 2: This is the earliest document seen (July 2004) that uses the term "Plenty USA." Address: 156 Drakes Lane, Summerton, Tennessee 38483.

1477. Hobbs, E.H.; Muendel, H.-H. 1983. Water requirements of irrigated soybeans in southern Alberta. *Canadian J. of Plant Science* 63(4):855-60. Oct. [22 ref. Eng; fre]
• ***Summary:*** Water use peaked in late July or early August with a daily requirement of 7 mm. Address: Research Station, Agriculture Canada, Lethbridge, Alberta T1J 4B1, Canada.

1478. Kauffman, Harold E. 1983. Re: Soyfoods in Canada. Letter to Mr. Allan Praskin, 17968 Oak Drive., Los Gatos, CA 95030, Nov. 18. 1 p.
• ***Summary:*** "I am pleased to hear that you have established a soyfoods training center in Canada. I certainly will keep this in mind so if we identify people from developing countries who need that type of training we will know where to send them.

"I have talked to Bill Shurtleff and he said he will send you a copy of the proposal for an Asian soyfood network training program." Address: INTSOY Director, 113 Mumford Hall, 1301 W. Gregory Dr., Urbana, Illinois 61801. Phone: 217-333-6422.

1479. *Seed Trade News.*1983. Professors honored. Nov. 23.
• ***Summary:*** "Agronomists Jean Lambert and Steve Simmons received awards for their achievements in agronomy at the annual meeting of the American Society of Agronomy. Lambert, professor emeritus of agronomy and plant genetics at the University of Minnesota, received the Agronomic Achievement Award in crop science... Lambert's major contribution has been in the development of high-yielding soybean varieties adapted to northerly latitudes. The project that he directed has released 18 of these soybean varieties, which have been used extensively in the northern United States, Canada, and Europe... Both Lambert, who is now retired, and Simmons have been researchers for the University of Minnesota's Agricultural Experiment Station."

1480. *SoyaScan Notes.*1983. Recent changes on The Farm in Tennessee: The Changeover (Overview). Nov. 29. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This overview was compiled after talks with several long-time members of The Farm in Tennessee. Many people have left The Farm. The population has dropped to about 700 from a peak of about 1,300 several years ago. Some feel that "the boat is sinking." The farm is now in a period of transition called "the Changeover." The reasons for this change in basic economic structure are quite complicated, but a major reason is the large population of people who did not have a paying job. Formerly everything on The Farm was collectively owned (there was no private property), and all income went into a common pool to pay the community's expenses. At the end of the changeover, each community member will be required to pay their own way, including monthly dues voted by the members for debt reduction plus ongoing community services: roads, water, fuel, taxes, bookkeeping, etc. However, the land and all other non-business community assets will continue to be held in common.

There are two types of work on The Farm: (1) "Service jobs" such as working on the Farm as a teacher, in the Soy Dairy, as a mechanic, etc. at a job which provides valuable services to Farm members but does not generate any income. (2) Money-making jobs, mostly off The Farm, and especially in construction–a construction crew of 40-50 skilled men brought in the majority of The Farm's income. The basic problem is that although everyone works every day, not enough people are making money. Summertown, in Lewis County, is in one of the poorer, rural parts of Tennessee, and there are not many paying jobs available in Summertown or the surrounding area.

The Farm worked very hard to create its own companies (such as Farm Foods and The Book Publishing Co.) that would employ members and earn money to support the community, but it took time for these companies to become profitable and, since they were collectively owned, they could not attract investors. When the changeover started, people working in community-owned businesses were given those businesses. For example, those working in the soy dairy when the changeover started, now owned it. They could sell the soyfoods they made both to community members and off The Farm; they shared the profits from their enterprise, and each used that income to buy whatever they needed.

Many Farm members agree that a basic part of the problem was The Farm's great generosity. They generously allowed almost everybody who came to the gate to join the Farm. Stephen went on tours in buses to talk about vital issues of the day; The Band went with him and neither ever charged people to hear them. The community generously helped those in need around the world, in part through Plenty a relief organization created on The Farm in 1974, and with much volunteer labor.

Over the years The Farm had to borrow money to pay its bills–just like most American families and businesses. The amount borrowed was not unreasonable given the size of the community, however these loans and the interest on them eventually so large that they were the main catalyst for the changeover. A large percentage of the early dues went toward debt reduction, enabling The Farm to pay off its total debt of $1.2 million in a little more than three years.

Many of those who left were the ones making money; some of them got tired of supporting the others.

The big change from a collective to a cooperative took place in mid-October 1983. Many people who had given all their money and personal possessions to The Farm and imagined living their entire lives there felt considerable bitterness and anguish; they often left with nothing but good memories and had begin to hunt for a job. People are now employed at and paid by The Book Publishing Co., Farm Foods, Solar Electronics, and Satellite Dishes. Things that used to be given away for free on The Farm (such as soyfoods made at the Soy Dairy) are now bought and sold. People can start their own business on The Farm. Its the "real world" now. The Farm still has big debts and could even dissolve. Big medical bills hurt The Farm. Plenty is totally independent of The Farm financially, and has grown much bigger. The Farm Soy Dairy has trained several hundred people from Third World countries over the years.

Plenty Canada is in Lanark, Ontario. They have a little basement tofu and tempeh shop, and want to make it a soyfoods training center.

1481. *Presse (La) (Montreal, QUE, Canada).*1983. Le "tofu" connait une faveur grandissante [Tofu wins growing favor]. Nov. 30. p. E-12. [Fre]
• ***Summary:*** Discusses Yvon Tremblay and Frances Boyte. A photo shows a package of Vitasoy. Address: Canada.

1482. **Product Name:** Soy Nibbles (Soymilk Ice Cream Sandwiches) [Raspberry, or Carob].
**Manufacturer's Name:** Soy City Soyfoods.
**Manufacturer's Address:** Toronto, Ontario, Canada.
**Date of Introduction:** 1983. November.
**How Stored:** Frozen.
**New Product–Documentation:** Soyfoods Newsletter. 1984. Jan. p. 1. Individually wrapped and round. The sandwich layers are wheat free, made with okara. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 77.

1483. Weston Graham & Associates Ltd. 1983. Eastern Ontario soybean production and marketing feasibility study. Ottawa, ONT, Canada. 26 + 138 + 114 p. Nov. 28 cm. Looseleaf.
• ***Summary:*** This report was prepared largely by William W. Graham of Weston Graham & Associates for the Ontario Soya-Bean Growers' Marketing Board in cooperation with the Government of Ontario and the Government of Canada. Contents of Executive summary: Introduction. Soybean crop development needs: Producer problems and concerns, elevator operator problems and concerns, crusher problems and concerns. Conclusions and recommendations: The potential for increased soybean production, technology transfer and producer information needs, the potential for a new crushing facility in Eastern Ontario (250 tons/day at Prescott), additional handling and storage facilities for soybeans, servicing specialty food markets (natto, tofu). Summary of situation, requirements, effects and future scenarios of soybean production and Marketing in Eastern Ontario: Production, transportation/handling/storage, crushing, import and export markets.

Contents of main report: 1. Introduction. 2. Profile of production. 3. Soybean production and management. 4. Production potential. 5. Marketing and use patterns. 6. Market infrastructure options. 7. Opportunities and impacts. 8. Soybean development needs. 9. Recommendations and conclusions. List of 33 tables. List of 1 map and 2 figures.

Canadian soybean production has traditionally been restricted to the southernmost areas of Ontario. "The release of the soybean variety Maple Arrow in 1975 [developed by Dr. Donovan and Dr. H. Voldeng using Fiskeby V and Harosoy crosses] made commercial scale soybean production a reality in Eastern Ontario." Maple Presto, an extremely early maturing variety, was licensed and released in 1978, but it did not gain wide acceptance due to its relatively low yields. In 1981 Maple Amber was released and has since become popular in shorter-season zones; its yields are generally only a little less than Maple Arrow. Maple Arrow is currently the variety most widely grown in

Eastern Ontario. “Soybeans have been grown in Eastern Ontario since the mid-1930s, but until recently were only produced on a very limited scale. During the 1940s and 1950s Dr. Dimmock carried out a research program at the Central Experimental Farm in Ottawa. Varieties such as Comet, Crest, and Acme were adapted to the short season...” In 1976 only 462 acres of soybeans were grown in Eastern Ontario and most of these (197 acres) were grown in Glengarry County. But in 1981 some 11,089 acres of soybeans were grown in Eastern Ontario; the 3 top counties were Prince Edward (4,263 acres), Dundas (1,474 acres), and Ottawa/Carleton (1,129 acres). Since the 1981 census of agriculture, soybean acreage has more than doubled, to an estimated 23,000 acres in June 1982.

In Quebec province, only 66 acres of soybeans were grown in 1961, rising to 1,234 acres in 1971 and 3,555 acres in 1981. The main soybean growing counties in southern Quebec in 1981 were Richelieu (1,840 acres) and SW Montreal (1,333 acres). Address: 1684 Woodward Dr., Suite 217, Ottawa, ONT, K2C 3R8 Canada. Phone: (613) 225-0226.

1484. Shurtleff, William; Aoyagi, Akiko. 1983. History of soy flour, grits, flakes, and cereal-soy blends. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 128 p. Dec. 24. Unpublished typescript.

• ***Summary:*** A comprehensive history of the subject. Contents: Part I: What are soy flour, grits, flakes, and cereal-soy blends? Introduction: Developed in the West, difference from roasted soy flour. Soy flour. Soy grits and flakes. Cereal-soy blends = soy-fortified blended foods. Etymology and nomenclature: German, French, U.S. English, U.S. whole soy flour, British English. Overview of world soy flour history. Part II: History of soy flour, grits, and cereal-soy blends in Europe and Australia. The early years (1767 to 1899). 1900 to 1919. Between two wars (1920-1939). 1940-1959. 1960 to 1983. Part III: History of soy flour, grits, flakes, and cereal-soy blends in the USA. The early years (1767-1919). 1920 to 1939. The 1940’s and World War II. 1960 to 1980’s. Food for Peace Program. Low cost extrusion cookers. Soy flour, grits, and flakes in America. Part IV: History of soy flour, grits, and cereal-soy blends in Canada. Part V: History of soy flour, grits and cereal-soy blends in Asia. Introduction. Bangladesh. China. India. Indonesia. Japan. Korea. Philippines. Sri Lanka. Taiwan. Thailand. Vietnam. Part VI: History of soy flour, grits, and cereal-soy blends in Latin America. Introduction. Bolivia. Brazil. Chile. Colombia. Costa Rica. Ecuador. Guatemala. Guyana. Mexico. Paraguay. Peru. Venezuela. Part VII: History of soy flour, grits, and cereal-soy blends in Africa. Introduction. Ethiopia. Ghana. Kenya. Nigeria. Rwanda and Burundi. South Africa. Tanzania. Uganda. Zimbabwe. Part VIII: History of soy flour, grits and cereal-soy blends in the Middle East.

Note: This is the earliest English-language document seen (July 2003) with the term “cereal-soy blends” in the title. Address: Lafayette, California. Phone: 415-283-2991.

1485. Plenty. 1983. Plenty Caribbean Project report (Brochure). Summertown, Tennessee: Plenty. 12 p. Dec. 28 cm.

• ***Summary:*** “Plenty USA began to research the Caribbean island nations to our south in early 1982. Plenty Canada agreed to a joint project, and the wheels began to turn. We contacted some friends in Europe who owned a 105' sailing ship, the ‘Fri.”

“In October 1983, directors from Plenty followed up their research with a three-week visit to six of the poorest Caribbean islands... Choosing from among projects that Plenty has undertaken in other parts of the globe, the Integrated Soy Project was by far the one most often requested by the islanders.” On 15 May 1983 a sailing ship named Fri was dispatched from St. Augustine, Florida, to visit the islands with 96 crates of tools, equipment, and food. It stopped in ports at Barbados, St. Vincent, St. Lucia, Dominica, Antigua, and Haiti, before finally returning to Florida on August 19. There is now a soy project in St. Vincent.

Photos show: (1) Six black members of the Tirocher Society standing outside their building. “Using seed provided by Plenty, members of a co-op in St. Lucia are trying to break the monocrop mold by growing soybeans and vegetables.” (2) The Plenty office crew in Tennessee, including Albert Bates, David Purviance, Patrick Thomas, and Stephen Gaskin. A form invites donations for several projects including “Soyfoods development in the Caribbean islands.” Plenty is a non-profit international development corporation. (3) Plenty’s Village Technology Center in Lesotho. Its electricity is provided by a panel of solar cells. Address: 156 Drakes Lane, Summerton, Tennessee 38483.

1486. **Product Name:** [Vitasoy Tofunaise. (No Eggs Tofu Salad Dressing)].
**Manufacturer’s Name:** Mandarin Enterprises Ltd.
**Manufacturer’s Address:** No. 13-12200 Vulcan Way, Richmond, BC, V6V 1S8, Canada.
**Date of Introduction:** 1983.
**Ingredients:** Tofu, sunflower oil, apple cider vinegar, honey, sea salt.
**Wt/Vol., Packaging, Price:** 375 ml.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1983, undated. 2.75 by 2 inches. Self adhesive. Red and blue on gold.

Label shown on color brochure sent by Gerry Blanchard of Natural Promotions, Vancouver, BC, Canada. 1992. Jan. 22. His company developed a new label for this product. The term “Vitasoy” is not presently visible.

1487. Carroll, K.K. 1983. Dietary proteins and amino acids–Their effects on cholesterol metabolism. In: M.J. Gibney and D. Kritchevsky, eds. 1983. Animal and Vegetable Proteins in Lipid Metabolism and Atherosclerosis. New York, NY: Alan R. Liss, Inc. ix + 177 p. See p. 9-17. (Current Topics in Nutrition and Disease, Vol. 8). Illust. Index. 24 cm. [27 ref]
• ***Summary:*** Contents: Introduction. Further studies on effects of dietary proteins and other dietary components on plasma cholesterol levels in rabbits. Amino acid composition of dietary proteins in relation to their effects on plasma cholesterol levels. Studies on mechanism of action of dietary protein. Effects of dietary protein on plasma cholesterol levels in humans. Acknowledgments.

"Our interest in the effects of dietary proteins and amino acids on cholesterol metabolism arose from our attempts to understand why rabbits become hypercholesterolemic and develop atherosclerosis when fed semipurified diets without added cholesterol, as reported by Lambert et al. [1958] and Malmros and Wigand [1959]. By varying the composition of the semipurified diet, we were able to show that the effects were associated with the casein commonly used as the protein component of semipurified diets, and could be prevented by replacing the casein with soy protein [Hamilton and Carroll, 1976]." Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada.

440913. Wild soybean from China. "Donated by Kirin Academy of Agricultural Sciences, Kungchuling, Kirin Province. Received through W.O. Scott, Dep. of Agronomy, Univ. of Illinois, Urbana. Received March 1980. Collected 1979.

440927-440943. *Glycine canescens* F.J. Herman. From Australia. "Donated (but not collected) by T. Hymowitz, Dep. of Agronomy, Univ. of Illinois, Urbana. Received Aug. 1979.

440944-440974. *Glycine clandestina* Wendl. From Australia. Donated by T. Hymowitz.

440975. *Glycine falcata* Benth. From Australia. Donated by T. Hymowitz.

440976-440977. *Glycine latrobeana* (Meissn.) Benth. From Australia. Donated by T. Hymowitz.

440978-440980. *Glycine latifolia* (Benth.) Newell & Hymowitz. From Australia. Donated by T. Hymowitz.

440981. *Glycine tabacina* (Labill.) Benth. From Fiji. Donated by T. Hymowitz. Collected 1930. Sigatoka, Viti Levu, Fiji. Collected by Greenwood. Wild.

440982-440997. *Glycine tabacina* (Labill.) Benth. From Australia. Donated by T. Hymowitz.

440998-441011. *Glycine tomentella* Hayata. From Australia. Donated by T. Hymowitz.

441012-441013. *Glycine tomentella* Hayata. From China. Donated by T. Hymowitz.

441339-441383. *Glycine max* (L.) Merr. Soybean. From Indonesia (East Java, Central Java, West Nuca Tanggara [West Nusa Tenggara, incl. Lombok and Sumbawa islands, in eastern Indonesia]). Donated by S. Djojoderdjo and Soebekti, Univ. of Gadjah Mada, Jogjakarta [Yogyakarta].

442003-442004. From China, Peoples Republic of. Donated by Institute of Crop Breeding and Cultivation, Chinese Academy of Agricultural Science, Beijing. Received through G. Liang, Dep. of Agronomy, Kansas State Univ., March 1980.

442005-442021. From South Korea. "Donated by Applied Genetics Laboratory, Korea Atomic Energy Research Inst., Seoul Received through R. Loiselle, Plant Gene Resources of Canada, Ottawa.

442022-442045. *Glycine max* (L.) Merr. Soybean. From Poland. "Donated by Plant Breeding and Acclimatization Inst., Radzikow / Warszawy. Some also from the Soviet Union and Yugoslavia.

442834. *Glycine max* (L.) Merr. Soybean. From China, Peoples Republic of. "Donated by T.C. Tso, Tobacco Laboratory, USDA, Beltsville, Maryland." Collected from a market near Quilin, Kwansi Province.

Note: In Part II: 445842-445849. From. Thomas A. Lumpkin, Zhejiang Academy of Agricultural Sciences, Hangzhoe, Zhejiang, China. Address: Washington, DC.

1493. Yeo Hiap Seng Ltd. 1983. Yeo's quality foods and beverages. Singapore. 25 p. [Eng]

• ***Summary:*** "Yeo Hiap Seng's heritage dates back to 1900 in China. The Company started operations in Singapore in 1935, as a manufacturer of fine soya sauces." A photo shows the store front at one of its early locations. Many color photos show the company's products, which include the following soyfood products: Soy sprouts, salted black beans, salted yellow beans, hoi sin sauce, crushed yellow bean sauce, black bean sauce, salted soya beans, soy sauces (light or dark), and Yeo's soya bean drink (canned). Most product names are given in English, French, and Chinese. The company has offices (whose address and phone are given) in Singapore, Malaysia, Hong Kong, United Kingdom, USA (San Jose, California), and Canada (Richmond, BC). Address: Singapore.

1494. **Product Name:** [Tofu Dip].
**Manufacturer's Name:** Les Aliments Multisoya.
**Manufacturer's Address:** 1925 Route 139, Roxton-Sud, QUE, J0H 1Z0, Canada.
**Date of Introduction:** 1983?

1495. **Product Name:** Soysage (Meatless Okara-based Sausage).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada. Phone: (416) 762-1257.
**Date of Introduction:** 1983?
**New Product–Documentation:** Leaflet. About 1983, undated. Brown on yellow. 6 panels. Defines Soysage and contains recipes for: Soysage pizza sandwich. Sliced soysage sandwich. Soy burgers. Soyballs and Gravy with rice. Soysage casserole. Stuffed zucchini.

1496. Vansickle, Janice. 1984. Soybean growers would participate in insurance plan. *Windsor Star (Essex County, Ontario, Canada).* Jan. 11. p. D1.

• ***Summary:*** Essex County soybean growers are discussing contributing to an insurance fund to protect their interests when grain elevators run into financial trouble. About 60 growers attended a county meeting of the Ontario Soya-Bean Growers Marketing Board, whose chairman is Peter Epp, a Leamington grower. Address: Star agriculture reporter.

1497. Shin Mei Do Miso. 1984. Denman Island Miso (Unpasteurized) (Leaflet). Denman Island, British Columbia, Canada. 1 p. Front and back. 22 cm.
• ***Summary:*** Side 1 is an introduction to miso plus one recipe and a plug for *The Book of Miso*, by Shurtleff & Aoyagi. Side 2 is 4 miso recipes. Printed with brown ink on beige paper. Address: Denman Island, BC, Canada, V0R 1T0.

1498. *Soybean News.*1984. 63 commercial [soybean] breeders. 35(1):1. Jan.
• ***Summary:*** "The Commercial Soybean Breeders organized in February, 1977. The membership included 35 individuals located in 15 states who were employed by 28 companies.

"By 1979 the number of breeders in the organization totaled 39 and by 1981 it increased to 51.

"There are 30 companies employing 63 breeders in CSB today. The breeders are stationed in 16 states and in 3 locations in Canada."

1499. Lo, Yvonne. 1984. Founding and history of Vitasoy (USA) Inc. (Interview). Conducted by William Shurtleff of Soyfoods Center, Feb. 10. 2 p. transcript.
• ***Summary:*** Yvonne had the idea and took the risk. The Soya Bean Products Co., N.A. Inc. was incorporated in Jan. 1979. It was a marketing Co. Yvonne and Irene Lo (her sister) were equal stockholders. She was now an entrepreneur. Their first office was (in Jan. 1979) was on Bush St., then they moved to 185 Berry St., then to 435A Brannan St.

In April 1982 Yvonne and Irene sold their company to the parent company, Hong Kong Soya Bean Products Co., Ltd. (HKSBP, founded by her father, K.S. Lo), when the parent company got serious about the U.S. market. They made good money from the sale, and plan to use it to raise capital and facilitate long-term operations. Yvonne's company is now an affiliate of HKSBP, and she owns none of it.

Yvonne graduated from a Canadian university and worked as a city planner for 6 years in Toronto, Ontario. She decided to drop her professional career to become a soy entrepreneur. She felt she was more suited for business; her heart was in marketing. So in early 1979 she switched careers and professions. She had done nothing with her father's company (HKSBP) before starting her own company.

In the early 1970s, HKSBP started using the dry process for making soymilk; before that it had used the typical wet-grind process. Address: 435A Brannan St., San Francisco, California 94107.

1500. Shurtleff, William; Aoyagi, Akiko. 1984. K.S. Lo and the history of Vitasoy in Hong Kong and North America. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 24 p. Feb. 10. Unpublished typescript.
• ***Summary:*** A comprehensive history of the subject. Contents: Introduction. The early years (1910-1944): Birth and education (K.S. Lo was born on 2 Feb. 1910), Julian Arnold's speech on soybeans in 1937, 1939 refugee camp in Kowloon, sets up soymilk shop, sees potential, sets up The Hong Kong Soya Bean Products Company (HKSBP) with 4 friends in 1939, hard times, spoilage, work with Dr. Y.T. Chiu, schools accept soymilk, Howard Hoover, HKSBP goes broke 1941, refugee in Free China during Japanese occupation of Hong Kong. Starting over (1944-1959): Sold in milk bottles through soft drink outlets as a noncarbonated beverage, new market of common people, instant success, started adding vitamins 1948, franchise for Greenspot orangeade, new plant in Aberdeen, Hong Kong, first sterilized soymilk allowing long shelf life 1953, breakthrough greatly increased demand, competitors forced change of name from Vitamilk to Vitasoy in 1953, other companies copy soft-drink marketing approach, UNICEF interest, train Indonesian technicians, granted Pepsi-Cola bottling franchise in 1957, sold Vitasoy heated during cold months. The 1960's continuing growth: Five-fold growth from 1955-1960, start of mass promotion, slogan "Vitasoy makes you taller, stronger, and more attractive," Hong Kong's best selling soft drink in 1962, introduction of malt Vitasoy, new Kowloon plant built 1962-1963, 1964 presentation of paper at UNICEF symposium in Tokyo, choice of Monsanto to market Vitasoy world-wide, their lack of food experience a problem, media coverage, multinationals follow Coca Cola's lead and start producing soymilk. The 1970's, diversification and internationalization: Sons' new products fail due to poor marketing, conversion to dry process for making Vitasoy, drop in sales due to inflation and depression, four major decisions, new slogan "Vitasoy is more than just a simple soft drink," introduction of Tetra Brik cartons, diversification into fruit drinks and teas, ending of Pepsi franchise 1977, strong sales rebound after 1975, new Aberdeen plant 1978, addition of carbonated soft drinks to product line summer of 1978, Lo's retirement 1978, leadership of HKSBP to 2 sons, refugee feeding from 1975 on, diversification into dairying 1979, start of export to world market in 1979, overview of market position, competition, new slogan "Taste the feeling" in 1983, prices and ingredients, China's big potential. Vitasoy in North America: First Asian soymilk imported to North America,

The Soya Bean Products Co., N.A. Inc. (SBPC) incorporated in San Francisco, California, by Lo's 2 daughters as marketing company, SBPC sold to HKSBP and renamed Vitasoy USA, Inc. in 1982, 60% sales increase, extensive market research on American attitudes and taste preferences, announcement of American products and soymilk plant in CA. The present and future: Same problems as Kikkoman in expanding into world market, changing future markets. Address: Lafayette, California. Phone: 415-283-2991.

1501. Yoshihara, LuLu. 1984. Re: Varieties of Shin-Mei-Do miso, ingredients, ages, and prices for 10 lb post paid. Letter to Lorenz A Schaller, California, Feb. 13–in reply to inquiry. 1 p. Handwritten, with signature on letterhead.
• ***Summary:*** Red miso, 1½ years, $25.15. Barley miso, 2 years, $25.15. Brown rice miso, nearly 3 years, $26.35.

A business card (printed with brown ink on beige paper) accompanies the letter.

1502. United Press International (UPI). 1984. 'McDonald Duck' attack hits China. *Toronto Star (Ontario, Canada).* Feb. 20. p. A3.
• ***Summary:*** "China is about to open its first Western-style fast food restaurant, using Donald Duck to lead the hamburger and french fries revolution. Other foods on the menu will be hot dogs, ice cream cones, and box lunches.

The Peking restaurant is named Yi Li Fast Food–Yi Li being the name of Peking's best-known bakery, which will supply the buns. The red neon sign is in English, not Chinese, and all the furniture (tables, chairs in the 60-seat dining area) and atmosphere is Western. Large pictures of American cartoon character Donald Duck are on the walls inside, on the food packaging, and even on the roof.

"For the less adventurous, traditional Chinese snacks of soybean milk, salted duck eggs and long slabs of fried dough sticks will be sold."

1503. **Product Name:** Tempeh.
**Manufacturer's Name:** Cheribon Foods.
**Manufacturer's Address:** 7223B–101 Ave., Edmonton, ALB, T6A 0H9, Canada.
**Date of Introduction:** 1984. February.
**New Product–Documentation:** Letter from Max Pierolie (or spelling may be Pieroelie, or Periolie), tempeh maker. 1985. July 4. They use 50 lb/day of soybeans.

1504. **Product Name:** Tempeh Burger.
**Manufacturer's Name:** Cheribon Foods.
**Manufacturer's Address:** 7223B–101 Ave., Edmonton, ALB, T6A 0H9, Canada. Phone: 403-462-1097.
**Date of Introduction:** 1984. February.
**New Product–Documentation:** Letter from Max Pieroelie, tempeh maker. 1985. July 4. They use 50 lb/day of soybeans.

1505. Shurtleff, William; Aoyagi, Akiko. 1984. Soymilk industry and market: Worldwide and country-by-country analysis. 2 vols. Lafayette, California: Soyfoods Center. Vol. 1, 199 p. Vol. 2, 100 p. Feb. 28 cm. [165 ref]
• ***Summary:*** A comprehensive overview, worldwide, with extensive historical information. The first study of its type, with many statistics, graphs, and tables. Volume 1 is the market study, and Volume 2 is black-and-white copies of soymilk labels and other graphics. Contents: 1. Introduction. 2. Directory of soymilk manufacturers and related companies worldwide. 3. Definitions and varieties of soymilk. 4. Overview of world soymilk industry and market, and future outlook. 5. United States soymilk industry and market. 6. Japan. 7. Korea. 8. China. 9. Taiwan. 10. Hong Kong. 11. Singapore and Malaysia. 12. Southeast and South Asia: (13. Vietnam. 14. Thailand. 15. Philippines. 16. Indonesia. 17. India. 18. Sri Lanka). 19. Europe (Incl. Plamil Foods in England, Tetra Pak Group in Sweden, Alfa-Laval and John Wilson in Sweden, Danish Turnkey Dairies–DTD and Soya Technology Systems (STS), Alpro/Vandemoortele in Belgium, Nestle, F. de Selliers in Belgium, Dansk Soyakagefabrik in Denmark, Lima Andiran in France, Galactina in Belp, Switzerland, and Semper A.B. in Sweden).

20. Latin America. 21. Africa. 22. History of Vitasoy in Hong Kong. 23. Two modern soymilk manufacturing processes: Marusan and Alfa-Laval. 24. Etymology of the word "soymilk" worldwide. 25. Analysis of ingredients in 49 popular Japanese soymilk products. 26. Bibliography. 27. About the Soyfoods Center. A table on p. 12 gives an overview of world soymilk production in 1983 ranked in descending order of annual per capita consumption. These statistics do not include China (PRC) or soy-based infant formulas, usually made from soy protein isolate. 1. Taiwan, 210 million liters, 11.1 liters/capita, growing at 30% per year. 2. Hong Kong, 39.1 million liters, 7.5 liters/capita, growing at 10% per year. 3. Singapore, 11.2 million liters, 4.7 liters/capita, growing at 15% per year. 4. South Korea, 67.0 million liters, 1.60 liters/capita, growing at 60% per year. 5. Malaysia, 21.4 million liters, 1.53 liters/capita. 6. Japan, 131.8 million liters, 1,10 liters/capita, growing at 101% per year. 7. Thailand, 50.0 million liters, 1.00 liters/capita. 8. USA, 9.6 million liters, 0.04 liters/capita. Total world production: 548.3 million liters.

Page 36 gives an overview of the U.S. market for soy-based infant formulas and adult soymilk. Production of soy-based infant formulas (on a ready to serve basis) in 1983 was as follows: Ross Laboratories made 14,720,000 gallons of Isomil (i). Mead Johnson made 14,080,000 gallons of Prosobee. Loma Linda made 2,240,000 gallons of Soyalac. And Wyeth Labs made 960,000 gallons of Nursoy. Thus

32,000,000 gallons of soy-based infant formula were made in the USA in 1983.

Also in 1983, consumption of soymilk by adults in the USA was as follows: 1,743,000 gallons were made by specialized soymilk manufacturers in the USA (Loma Linda Soyagen 1,000,000 gallons; Worthington Soyamel 670,000 gallons, Miller's Soy (private label) 73,000 gallons). 690,000 gallons were imported (328,000 gallons of Vitasoy by Vitasoy USA, 254,000 gallons of Yeo's by YHS, 50,000 gallons of Edensoy by Eden Foods, 25,000 gallons of President by President, 25,000 gallons of Kibun by Kibun, 8,000 gallons of To-Neu by San-J International). 250,000 gallons were made fresh by tofu companies (45,000 gallons by Mighty Soy, 41,000 gallons by Victor Foods [Scarborough, Ontario, Canada], 39,000 gallons by Quong Hop & Co., 35,000 gallons by Wy Ky, and 90,000 gallons by others).

Yield. 1 ton of raw soybeans yields approximately 4,320 gallons of soymilk. Conversion: 3.785 liters = 1 gallon. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1506. Slough, David. 1984. Milk of human ingenuity and entrepreneurial skill. *Asian Business* 20(2):21-23. Feb. Cover story. See also related article on page 27.
• ***Summary:*** Discusses Hong Kong Soya Bean Products Co. Ltd.'s new connections with China. "The privately owned mini-transnational beverage maker's first product, Vitasoy, was made from China-sourced soyabeans and its latest product, milk, comes from the dairy farm it established in Guangdong province. The author repeatedly gives the company's name as "Vita."

In 1982 the company had an authorized and paid-up capital of HK$210 million, 70% of which was owned by the Lo family, with the rest privately disposed among more distant relatives and friends. Turnover that year was HK$244 million, and the profits are estimated at 15-20% of turnover. A fair market value for the company is estimated at about HK$750 million.

"Those figures demonstrate quite remarkable growth for a traditional Chinese family-run company formed in 1940 with an initial capital of only HK$18,000. In its first year of operation turnover based on a single product operation was less than HK$90,000. It had 20 employees then and operated in rented premises. Despite a close-down during the Japanese occupation and a financially disastrous entry in the early 1970s into the fast food business, the company enjoyed steady growth to the mid-1970s and impressive growth thereafter."

"In Hong Kong, Vita owns assets valued at HK$220 million, it operates two plants with a combined floor area of 38,000 square meters, and has a labour force of 950. Production of beverages is running in excess of 12 million 24-unit cases per year. It supplies something like 30% of the local soft drinks market."

But now the company is diversifying into dairy milk. In China, Vita has a 5-year compensation trade agreement with the Guangdong Province Guangming Overseas Chinese farm where 1,200 people and 3,500 milch cows produce 8,000 tonnes of fresh milk a year. That agreement cost the company HK$22.7 in borrowed investment capital. Vita has used that milk to capture 60% of the Hong Kong milk market. Vita looks all set to monopolize the Hong Kong fresh milk market by late 1987. "Under that agreement, Vita provided the livestock, technological know-how, equipment, managerial expertise and market for the product of 4 dairy farms and a centralised milk processing facility."

The dairy farm isn't Vita's only investment in China. In late 1983 Winston Lo signed a US$5 million joint venture agreement to establish a vegetable processing facility in Guangdong province. It will pack and chill up to 20 tonnes of green leaf vegetables a day, for sale in Hong Kong.

"Vitasoy was the company's sole product–ignoring a venture into fast foods–until 1976. Turnover rose from HK$87,000 in 1941 to HK$3.3 million by 1955, HK$12.6 million by 1965 and HK$40.2 million by 1975. In 1975, while founder K.S. Lo was still at the helm, Vita installed the first Tetra-brik packaging line in Hong Kong and launched the UHT version of Vitasoy. The time, the product and the packaging were right. Sales took off. Under Winston Lo, Vita then decided to branch out into the packaging of juices. It started with orange, mango, guava and kalamansi and captured 30% of the fruit juice market in just 2 years. Chrysanthemum tea, lemon tea, herbal tea, lime juice and cane juice soon followed. Other lines and carbonated drinks (orange, cola, cream soda and root beer) were added to give Vita a product for every sector of the soft drink market. Vita products are now exported."

"Vita now purchases at least 50% of its soyabeans from Canada and the USA–despite the fact that soya beans from those countries have been developed for oil extraction rather than protein extraction (the latter is the case with Chinese soyabeans) and therefore give a lower protein yield. There are no plans for a public flotation of shares in Vita. Founder K.S. Lo is still wielding considerable power as chairman of the board of directors. Day to day management is in the hands of managing director Winston Lo and deputy managing director Frank Lo."

1507. **Product Name:** Tofu.
**Manufacturer's Name:** Yat Sun Food Products Ltd.
**Manufacturer's Address:** 12531–126 Street, Edmonton, ALB, T5L 0X3, Canada. Phone: 455-8787.
**Date of Introduction:** 1984. February.
**New Product–Documentation:** Letter from Kenson Quan. 1984. March 20. They started production in Feb. 1984. Kenson is a younger member of the family. His uncle is

Kenneth Quan. The family has made bean sprouts for years. Still active in May 1991.

1508. Halter, Fran. 1984. A committed tofu true-believer spreads the word about the curd. *Gazette (The) (Quebec).* March 5. [Eng]

• ***Summary:*** Norbert Argiles, age 43, of Unisoya in Quebec "is philosophically dedicated to placing tofu in every household refrigerator." A native of Catalonia, a region in Spain, he has been preaching the nutritive value of tofu since the 1960s. "In 1978, Argiles decided to quit talking and start acting on the value of the high-protein food. He left a job in quality control at a major Montreal aircraft-engine manufacturer and invested a total of $7,000 to open the first Quebec-based business to produce tofu on a large scale.

"'When I first started, I used to go to stores and people looked at me like I was selling moon rocks,' said the 43-year-old businessman... 'But patience and a strenuous sales effort have convinced them of the value of tofu.'

"Unisoya Inc.'s plant, nestled in the picturesque Laurentian community of Prevost, 75 kilometers north of Montreal, is a converted warehouse and the simple executive office is housed in a trailer." To finance his fledgling operation, Argiles sold granola bars and unsweetened canned fruit on the side. "Unisoya is now producing an average of 5,000 pounds of tofu a week, up from 200 pounds a week at the start of the operation five years ago. The tofu wholesales at $1 a pound in 15-pound pails, or slightly more in prepackaged pound blocks.

"Sales for fiscal 1983 ended May 31 were $200,000. Argiles projects that the figure will increase 30 to 60 per cent in fiscal 1984 as Unisoya develops new markets in the province and begins to sell to a major grocery chain with stores across Quebec... Argiles estimates Unisoya's market share might be as high as 40 per cent, but competition from several new Quebec tofu producers, which have recently entered the market, has left him with little profit... Argiles spent $15,000 last year to promote tofu and said he hopes that once he makes 'a breakthrough' in public awareness, tofu will become a dietary staple."

Each week Argiles uses 3,500 lb of locally grown soybeans that have not been treated with chemicals. His water comes from a well drilled below his tofu factory. Address: Canada.

1509. Henningsen, Peter. 1984. Re: Growing soybeans in Nova Scotia. Improving tempeh incubator. Letter to William Shurtleff at Soyfoods Center, March 15. 2 p. Typed, with signature on letterhead.

• ***Summary:*** Peter is working for Wolfgang Furth-Kuby, translating *The Book of Tempeh*, by Shurtleff and Aoyagi, into German. He and his wife now live at exactly 45 degrees north latitude. All of Germany and most of France is far north of their home. "Soybeans are grown commercially in the Annapolis Valley of Nova Scotia, one of the best areas in Canada for growing apples..." Statistics show that production of pedigreed soybean seed production in Nova Scotia was 17,367 kg in 1979 and 7, 167 in 1980.

Peter and his wife live in a very good microclimate in zone 5b. "Our problem here is that the soil keeps very cold long into the spring, and soybeans need fairly warm ground to germinate–otherwise they will hesitate and be overtaken by rot. So I plan to plant my soybeans by the middle of June, which leaves me with 105 or maybe even 120 days before the first frost." The climate of Nova Scotia during the summer gets very hot during the day–very similar to the climate of Brazil in summer.

"By the way, I think you could improve upon [the design of] your small incubators [for making tempeh at home] by putting the heat source at the bottom and using a low-temperature heat source like a mini-greenhouse heating cable (light bulbs give off so much radiant heat that heats only the surface it strikes)." Address: RR#1 Walton, Nova Scotia, Canada B0N 2R0.

1510. Robert-Stolow, Johanne B. 1984. Ingredient listing for tofu ["Soymilk" acceptable term for use in Canada]. Manufactured Foods Div., Consumer Products Branch, Hull, Quebec, Canada. 1 p. March 21. Unpublished manuscript.

• ***Summary:*** "To: Regional Managers Attention: Regional Food Specialists in Halifax, Toronto, Winnipeg, Vancouver.

"Subject: Ingredient listing for TOFU. At a recent meeting with Agriculture Canada, it was agreed that the term, 'soymilk' would be the acceptable designation for the aqueous extract of soybeans used in the manufacturing of TOFU. This decision was based on a review of the research literature where the term 'soymilk' has been in use for 60 years or more. It can therefore be argued, as in the case of cocoanut milk, that the common name 'soymilk' is well established within this particular trade, thus barring any objection from the dairy industry.

"'Soymilk' is obtained via the following process... (A flowchart is given). The soymilk is then processed further to produce the TOFU.

"Please be advised that we will be recommending the use of this name and of its French equivalent "jus de soya" (MAPAQ) for labelling. For the sake of uniformity, we would appreciate your doing likewise. We thank you in advance for your cooperation in this matter."

Note: Victor Food Products of Toronto petitioned the government to legalize use of the word "soymilk" in labeling tofu. Address: Manufactured Food Div., Consumer Products Branch, Government of Canada, Hull, Quebec.

1511. Vansickle, Janice. 1984. Bean worth weight in gold. *Windsor Star (Essex County, Ontario, Canada).* March 26.

p. B1-B2.
• ***Summary:*** Soybeans are now Essex County's major field crop and the third largest cash crop in Ontario province (with a value of more than $203 million in 1982), but few people know what happens to the golden nuggets after they leave the farm. Most of the soybeans are crushed in Canada to make soybean oil and meal. Last week the Ontario Soya-Bean Growers' Marketing Board held a symposium in Toronto titled "Ontario soybeans–A journey into the next century." Sheldon Hauck, vice-president of the Soy Protein Council in the USA and one of the speakers estimated that soy protein is an ingredient in over 2,500 readily available grocery store items. Contains a nice history of the soybean in Canada. Ontario now exports soybeans to 20 countries, "including major shipments to Japan, which buys only top quality soybeans and turns them into soyamilk, soyaflour, tofu, miso–a soyapaste for soup–and natto–a fermented soybean used as an appetizer." Speaker after speaker confirmed a bright future for soybean exports. Moreover, all supermarkets in Windsor now carry tofu, a soya curd. Soy oil is found in margarine and cooking oils. Soy protein appears in soya sauce, simulated bacon bits, and infant formulas. The H.J. Heinz Company in Leamington has been working with the marketing board to develop a line of processed soybean products for the retail market.

Ontario's three soybean crushing plants are experiencing hard times, in part due to competition from canola oil (which enjoys subsidized freight rates); they are operating at 62% of capacity and could be forced to shut down. Photos show: A pair of cupped hands holding soybeans. Peter Epp, chairman of the Ontario Soybean Growers Marketing Board.

Note: This is the earliest English-language document seen (March 2009) that uses the term "soyapaste" to refer to miso. Address: Star agriculture reporter.

1512. Beversdorf, Wally D. 1984. Soybean breeding developments and new varieties [in Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 36-48.
• ***Summary:*** A similar soybean symposium held in Sept. 1973 at Ridgetown Agricultural College of Agricultural Technology (Ridgetown, Ontario) played an important role in the development of soybean breeding in Canada. During the past 10 years, soybean production in Canada has more than doubled, thanks in large part to improvement in varieties, but also to improved management practices, and increasing demand for soybean products. Since 1973 early-maturing varieties have greatly expanded the area adaptable to growing soybeans. One of the major successes in soybean breeding during the past decade has involved the improved tolerance of soybeans to phytophthora root rots.

Traditionally 5 counties have produced most of the soybeans in Ontario and in Canada. Since 1973 soybean production outside this 5-county area has grown by 180%. Canadian varieties are often defined by the number of heat units (HU's) they require to mature properly. Certain "soybean Heat Unit Areas" are also defined; the best known are the 2600, 2800, 3100, and 3400 Heat Unit Areas. The southern tip of Ontario gets about 3100 to 3500 heat units. The 2600 soybean Heat Unit Area is generally the coldest and farthest north, and soybean yields from this area are generally lower than from warmer areas, in part because the number of days to maturity is less. In 1974 only 3 soybean varieties were recommend by OMAF (Ontario Ministry of Agriculture and Food, Publication 296) for the 2600 Heat Unit Area: Altona, Vansoy, and Hardome. But in 1984 six varieties were recommend for this Heat Unit Area: Maple Presto, Maple Amber, McCall, Maple Arrow, Bicentennial, and Evans.

All soybean varieties recommended by OMAF were developed by public institutions. The first privately developed variety, XK505 (from Maple Leaf Mills, Ltd.) appeared as a recommended variety in 1975. In 1984, 24 of the 35 varieties recommended by OMAF were developed in the private sector, by six companies breeding or evaluating soybean varieties in Ontario.

Future prospects for cultivar development: Progress in developing sources of low linolenic acid soybean oil suggests that within 10 years soybean varieties will be able to produce oil that no longer requires hydrogenation and winterization for salad oils. "This should result in reduced refining costs and the elimination of *trans* isomers of fatty acids, which have been implicated in elevated blood serum cholesterol." Address: Crop Science Dep., Univ. of Guelph, Guelph, ONT, Canada.

1513. Churcher, Colin J. 1984. Canadian transportation policy and its effect on the Ontario oilseed industry. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 142-53.
• ***Summary:*** Discusses the Crow Rate, the Minimum Compensatory Rates (MCRs established in 1976) on canola products, and the Western Grain Transportation Act, which came into effect on 1 Jan. 1984. "Soybean products are competing in Eastern Canada with canola products that move under a subsidized rail freight rate in Western Canada." Address: Director of Grain Transportation and Handling, Transport Canada, Ottawa, Ontario.

1514. Davis, C. Murray. 1984. The state of the soybean crushing industry [in Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 103-12. Held March 18-20.

• ***Summary:*** In Canada, "the largest single soybean crusher is Victory Soya Mills, located in Toronto, rated capacity 1,350 tpd (tons per day) or 480,000 tpy (tons per year). Next is Maple Leaf/Monarch at Windsor, rated at 1,300 tpd or 462,000 tpy. Finally, Canadian Vegetable Oil Products in Hamilton, rated at 1,200 tpd or 1,367,000 tons/year."

"The soybean crushing industry created with private capital, until recently, progressive and profitable all without one dollar of government involvement, has been ignored, abused and generally kicked from pillar to post for the last 5 years." This industry has come under tremendous pressure from and been seriously damaged by market domination of canola oil financed through massive federal and provincial government subsidies. "Fifteen years ago, rapeseed oil was unknown–today, Canola controls almost 55% of the refined / deodorised vegetable oil in Canada."

The most blatant subsidy is the freight rate structure that allows western Canadian oil access to eastern Canadian consumption. The Crow Bill (which allows canola oil reduced and subsidised freight rates to Thunder Bay, in western Ontario) and the Minister of Transport threaten to shut down Ontario's soybean crushing industry. The author urges abolition of all subsidies. "Let the marketplace decide. We currently have a heavily subsidized Canola industry losing enormous amounts of money at the expense of a self-supporting, and up until recently, profitable soybean industry. This is insanity. Compounding this are overpriced Canadian soybeans relative to soybean costs for competitive U.S. crushers."

The words "soyoil" (p. 3) and "soymeal" (p. 6) are mentioned.

Note: The author began his career at Victory Soya Mills in 1962. Address: Manager of Commodity Operations, Victory Soya Mills, Toronto, ONT, Canada.

1515. Epp, Peter H. 1984. The Ontario Soya-Bean Growers' Marketing Board's view of the next century. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 302-311.
• ***Summary:*** Discusses: Soybean pricing and the open tariff-free border with the USA. The Oleomargarine Act. Minimum Compensatory Rates (MCR's) and why they have put the Ontario soybean crushing industry in jeopardy (The program, established by the Canadian Transport Commission, originally encouraged the movement of raw rapeseed from Western to Eastern Canada. The government has poured $3 million annually into the program, which ends up subsidizing rapeseed oil in Ontario), the present status and potential of soybean crushing in Ontario (in 1982-83 three Ontario crushers crushed 1 million tonnes of soybeans). Market development.

Tables and graphs show the following, related to Canadian edible oil production, from 1973-1983: Margarine oil, shortening oil, cooking and salad oil, soymeal and rapemeal, soyoil and rapeoil. Note that for cooking and salad oil, rapeoil has always and increasingly exceeded soy oil production during this period. Total rapeoil production passed soyoil production in about 1975 and is now more than double that of soyoil. Soymeal production has always exceeded rapemeal production.

Note: This is the earliest English-language document seen (Oct. 2007) that contains the word "rapeoil." Address: Chairman, OSGMB, Leamington, ONT, Canada.

1516. Hauck, Sheldon J. 1984. Soy proteins: The United States experience. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 264-79.
• ***Summary:*** The Food Protein Council was organized in 1971; in Jan. 1982 the name was changed to Soy Protein Council. Most of the organization's early activity was devoted to working with U.S. government agencies to evolve fair laws and regulations governing nutrition labeling and composition of soy protein products, and the use of soy protein in government feeding programs... Much of that task is behind us and we feel the need to extend our activities into the realm of public or consumer information...

"We estimate that soy protein is an ingredient in over 2500 readily available grocery store items... Soybeans are a raw material that account for over 90% of the vegetable protein on the market today. Over 1 billion pounds of soy protein is manufactured each year in the United States.

Soy protein products are used primarily as a functional ingredient in foods. The addition of soy protein keeps cookies form breaking, keeps bread fresh longer and makes it more nutritious, makes sausage and luncheon meats more firm and juicy, makes soup more thick and creamy, reduces the amount of fat absorbed by doughnuts when they are frying, reduces shrinkage in meat patties, makes waffles and pancakes brown and crispy, and when added to pizza topping, saves money, reduces fat and cholesterol, and tastes delicious. The Council is not promoting soy protein in competition with beef. Because adding soy protein to a meat product, "we're using information that shows how using soy protein as an extender can actually lead to more, not less meat consumption... The U.S. Army is trimming nearly $7 (over $10 more up to date) million from its annual food budget by using soy protein in its kitchens around the world." Address: Executive Vice-President, Soy Protein Council, Washington, DC; Founder & President, Hauck & Associates, Washington, DC.

1517. Hawkins, Kerry L. 1984. World oilseed outlook and implications for the Canadian market. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 205-223.

• ***Summary:*** The world grain trade grew rapidly in the 1970's. The decade was a seller's market for grain exporters. Between 1972 and 1980 total world trade in wheat, coarse grains, and oilseeds increased roughly 65%, and oilseeds and their related products more than doubled. 80% of the increase in imports in the 1970's went to non-traditional markets, especially centrally-planned economies and newly-industrialized countries. At the beginning of the 1970's the centrally-planned economies [e.g. USSR] embarked on an ambitious program to improve diets [i.e. increase consumption of animal products]. But they tried to do too much too fast, and the food subsidies proved too costly to continue. Since 1980, only soybean exports have continued to grow.

The main oilseeds produced worldwide are soybeans, cotton seed, ground nuts / peanuts, sunflower seed, rapeseed, sesame seed, copra, palm kernels, linseed / flax, and castor seed.

Soybeans have the lowest percentage oil content of all oilseeds; copra and palm kernels have the highest. Canola contains 40% oil vs. 20% for soybeans. Palm oil has become the low-cost oil and increased its share in price-sensitive markets. Brazil has passed the USA as the leading exporter of soybean oil. Population growth rate is decreasing, and should be 1.75% by the end of the 1980's. Address: President, Cargill Ltd., Winnipeg, Canada.

1518. Hume, David J. 1984. Canola breeding developments and new varieties. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 49-54.
• ***Summary:*** Canola refers to varieties of rapeseed (either *Brassica napus* or *B. campestris)* which contain less than 5% erucic acid in their oil and less than 30 micromoles of glucosinolates per gram of oil-free meal. So, briefly, canola is high quality rapeseed. The development of canolas was largely done in Canada, at the Agriculture Canada Station at Saskatoon and at the University of Manitoba, during the 1960s and early 1970s. These developments have allowed overseas markets to expand and canola is now Canada's second largest crop, after wheat. The main types of canola are spring canola and winter canola. Winter rapeseed is the dominant oilseed crop grown in Europe. Address: Crop Science Dep., Univ. of Guelph, Guelph, ONT, Canada.

1519. Huneault, Triena. 1984. A consumer's perspective on soybeans and agriculture [in Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 287-95.
• ***Summary:*** The average person that she talked to had a "vague notion that soybeans were nutritious but, except for health enthusiasts, generally had no idea how to incorporate soybeans into their diet. This is true not only of typical consumers but also of farmer's wives, even though soybeans were a major source of income for their families. Since realizing this in 1977, the Ontario Soya-Bean Growers' Marketing Board hired a full-time home economist to promote soybeans and distributed at least 50,000 copies of a soybean recipe book. A joint project was entered into with the H.J. Heinz Company to develop new soybean products in 1981 and, in 1982, Faye Clack Inc. conducted an independent survey of consumer reaction to soybean products.

During a recent visit to supermarkets and a health food store in Windsor, Ontario, the author found "that all of the supermarkets now carry tofu due to the increased number of Asian immigrants who had been asking for it, and also the relatively new Canadian interest in Oriental cooking." Address: Consumers' Assoc. of Canada, Windsor, Ontario.

1520. Le Roux, Edward J. 1984. Future research in oilseeds [in Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 55-64.
• ***Summary:*** Canadians call canola the "Cinderella Crop." It was developed by research finds. The author hopes that research will make Canada self-sufficient in soybeans and soybean products by 1990. During the last decade, the area planted to soybeans has doubled–in part because of improved varieties such as Harcor from the Harrow Research Station in 1975, and Maple Arrow, Maple Amber, and Nattawa from the Ottawa Research Station. The breeding trend is toward more specialized varieties. There is increasing research emphasis on integrated management in order to reduce farmer's dependency on chemicals wherever possible and to ensure a better environment. "We want chemicals to be seen as one of several ways to control pests, not the only way. That is our future thrust. The aim is to ensure the farmer has the safest possible working environment. The aim is to reduce his input costs. The aim is to give him pest control options. The aim is to maintain consumer confidence in the safety and quality of all our food products, soybeans included. The aim is to protect the environment at large, the land, the water, the air, the beneficial insect populations...

"In a very significant move, we have begun construction of a $36 million facility at Saint-Hyacinthe near Montreal, Quebec, devoted exclusively to food processing research. It will be unique in Agriculture Canada. The new centre will be open in 1986, the 100th birthday of Agriculture Canada's agri-food research establishment." Address: Asst. Deputy Minister of Research, Agriculture Canada, Ottawa, ONT.

Address: Chariman, Technical Committee, Inst. of Edible Oil Foods; Vice President, Corporate Technical Services, Nabisco Ltd.

1524. Mogi, Ken. 1984. The history of shoyu (soy sauce) brewing in the United States. The story of the Oriental Show-You Company. San Francisco, California: Kikkoman. 3 p. March. Unpublished manuscript. Combined with a subsequent interview of Ken Mogi by W. Shurtleff on 20 April 1984.
• ***Summary:*** "Early in this century, Mr. Shinzaburo Mogi, one of the Mogi family's ancestors, tried to make shoyu in America. Mr. Mogi was born in 1872 and later came to America in about 1892. He studied at college in Maryland but had an eye problem so he gave up studying and returned to Japan. In 1904, the year his daughter Katsuko was born, he was in Toronto selling Japanese bicycles, involved in a trading business unconnected to Kikkoman. According to the memory of Mr. Tsuneo Tanba, who worked with Mr. Mogi very closely (and later told his story to Morio Ichiyama, Kikkoman historian), Mr. Mogi managed a shoyu plant in Denver, Colorado, in 1907; it was not successful. Later, he had some contact with a shoyu project in Toronto, Ontario, Canada. Though I traveled to Denver, I could not get any information on this." / Note: On 7 Feb. 2005 Ken Mogi wrote William Shurtleff at Soyfoods Center (in response to some questions about the existence of the Denver soy sauce plant): "I talked with Komiya. Mr. Shinzaburo Mogi had the New Testament reading meeting with 5-6 people during lunch break when Mr. S. Mogi was living in Noda [Japan] during World War II. Mr. Komiya told me that he remembered that Mr. S. Mogi mentioned the Denver story." However Ken Mogi is does not know (1) if S. Mogi ever wrote anything about a soy sauce plant in Denver, (2) when and where S. Mogi told this story to Mr. Tanba, and (3) when and where Mr. Tanba told Mr. Ichiyama about S. Mogi's supposed soy sauce plant in Denver. Ken Mogi encloses a photo of Mr. Shinzaburo Mogi at about age 30.

Mr. Mogi's daughter, Mrs. Katsuko Yoshida, who is living in Tokyo, does not remember anything about Denver or her father starting a soy sauce plant in Denver. However she did tell me the story about "Oriental Shoyu" in Indiana.

Katsuko lived in Chicago with her parents in the 1920's (maybe 1920-1926). Mr. Mogi worked for Yamato Shokai, selling Japanese silks. They found the product "Oriental Shoyu" in the market and were very much impressed. They visited the plant in Indiana and later Mr. Mogi became a stockholder in that company.

Mr. Esta Keirn started employment with the Oriental Show-You Co. on 28 Oct. 1932 as a [mung] bean sprout washer. He continued until 1 Nov. 1961, when the company was sold to Beatrice Foods Inc. and turned over to La Choy Food Products. Mr. Keirn worked for La Choy for 8 years. He never met Mr. Mogi but he heard several things about him from Mr. Ohki.

Shinzo Ohki, the founder of the company and one of 8 children, was born in 1884 in Kamakura, Japan. He immigrated to the USA in 1901, landing in Seattle, Washington. Eventually he ended up in Columbia City, Indiana, where he graduated from high school. He then graduated from college in New York City. Upon graduation he started in business as a tea merchant in Detroit. To expand his line, he imported soy sauce in small wooden kegs from Japan. This he bottled and sold along with his tea. He could not expand his tea business but the soy sauce business kept growing.

Wishing to expand by adding other products to his line, he returned to Columbia City, took in a partner to gain capital, and set up in a vacant canning plant (Vance Canning Co.). This is when he incorporated and took the name of Oriental Show-You Company, Inc. Then, in 1917, Mr. Ohki went to Japan to obtain the formula (and also a wife) and some instruction in making soy sauce so he could manufacture his own. Upon coming back to Columbia City, Indiana, he enlisted the help of someone from the USDA to work out the koji culture. Fermentation was set up in large wooden beer vats. Equal parts soybeans, wheat, and salt were aged for 24 months, then pressed and bottled. According to Mr. Keirn, the company produced as much as 30,000 gallons of shoyu in one year. The plant in Columbia City was vacant for some time and now most of it has been torn down, but the adjacent adobe and brick buildings are still standing.

Note 1. Much of this story was published in the Japanese-language newspaper *Rocky Mountain Jiho* (Denver, Colorado), 25 Jan. 1984. p. 4. Kenzaburo's great grandfather was the first president of Noda Shoyu K.K. (today's Kikkoman). Shinzaburo Mogi was the latter's brother.

Note 2. On 7 Feb. 2005 Kenzaburo Mogi IV of Kikkoman, Japan, sent William Shurtleff a hand-drawn map showing the location of the four buildings that were part of the Oriental Show-You Company in Columbia City, Indiana. They were located between the railroad track and Factory Avenue, near Line street. These photos show: (1) The office building. (2) The printing and boiler shop building. (3) The remains of the soy sauce plant, with hand-drawn arrows pointing the areas on the cement floor used for the moromi tank, koji making, and pressing. (4) Close-up of the cement base of the moromi tank. (5) Close-up of the space on the cement floor, between the moromi tank and outside wall, where the heater was. (6) Close-up of the area used for pressing *(assaku)* the soy sauce from the moromi. (7) Mr. Esta Keirn standing in a grassy field in front of the chow mein building, which once shared a wall with the soy sauce plant. (8) Granite tombstone of the founder, Shinzo Ohki (1883-1967) and his wife, Taka (1889-1963). (9) Mr. Esta Keirn. Address: Kikkoman Marketing and Planning Inc., P.O. Box 784, San Francisco, California 94101.

1525. Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Ontario soybeans...a journey into the next century (Proceedings). Chatham, Ontario, Canada: OSGMB. 319 p. Held 18-20 March 1984 at Toronto, Ontario, Canada. No index. 29 cm. [3 ref. Eng]
• ***Summary:*** Contains 30 papers by various authors; most are cited separately. Address: Chatham, ONT, Canada. Phone: (519) 352-7730.

1526. Ontario Soya-Bean Growers' Marketing Board. 1984. Ontario Soya-Bean Growers' Marketing Board. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 3. 28 cm.
• ***Summary:*** "The 17,000 Ontario soybean producers, who farm nearly 1,000,000 acres of soybeans in the four regions of Southern, Western, Central and Eastern Ontario, are separated into eight soybean districts and two soybean areas...

"The board's activities are funded by a two and one-half cent per bushel check-off [checkoff] on soybean sales by producers. One-half cent of this check-off is used for research, domestic, and overseas promotion. The balance of the check-off is used to provide the soybean producer with the latest and most up-to-date information on soybean prices and markets, as well as other services." Address: Chatham, ONT, Canada.

1527. Pennell, M.D. 1984. Canned soybeans: A new consumer product. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 280-86.
• ***Summary:*** After extensive testing and development the product concept was abandoned. Address: General Manager, R&D, H.J. Heinz Co. (Canada), Leamington, Ontario.

1528. Rennie, J. Clare. 1984. A look at the progress of soybeans [in Canada] in the last decade. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 22-35.
• ***Summary:*** "In 1893, Professor C.A. Zavitz, crop specialist at the Ontario Agricultural College, grew probably the first field of soybeans, as a replacement for cow peas which had failed, and set in motion a 30-year variety testing program for Ontario farmers. Canada's first new variety, OAC 211, was introduced in 1923; this was followed in the 1930's by three early maturing ones, A.K., Mandarin, and Capital, introduced by Dr. Dimmock of the Harrow Dominion Experimental Station. A colleague, Dr. Cass Owen, was the originator of Harosoy, introduced in 1951. It quickly became a leading Ontario variety as well as the main one grown in the American soybean belt for many years...

"However, soybeans were not a major crop in Ontario, or for that matter in the USA, until the Second World War. What was grown was largely for green manure and forage. The statistics on soybeans in Ontario were not even given separately until 1942. The predominance of linseed meal and cottonseed meal and oil was too strong to be easily overcome by another crop. The wartime demand for an easily available source of vegetable oil and protein gave soybean production its first big boost...

"In Ontario, the production figures for the last decade show... sharp increases. Aside from demand which made it economically attractive for farmers to grow soybeans, this increase has been made possible by a breeding and management research program to extend Ontario's soybean area and to maintain yields at competitive levels. Until the late 1970's, virtually all of the province's soybeans were grown in Essex, Kent, Lambton, Middlesex, and Elgin Counties. With new early maturing, high-yielding varieties adapted to the growing conditions in Central, Western and Eastern Ontario, production in these areas is increasing rapidly. The number of hectares planted has risen from 4,010 ha in 1972 to 61,500 ha in 1982...

"The Ontario breeding program has emphasized not only early maturity and high yields, but also resistance to disease and to pod shattering, and good nodulation capabilities. Under the direction, since 1976, of Dr. Wally Beversdorf... the program is rapidly coming of age. Maple

Arrow, a high-yielding variety adapted to 2,600 heat unit areas, was developed at the Central Experimental Farm, Ottawa. Its introduction in 1976 was the shot in the arm needed to expand the soybean-growing area, and the OMAF/Guelph program is aimed at continuing this expansion...

"In the last decade, we have largely overcome nodulation problems, with the introduction of granular inoculants in the mid-1970's. These inoculants, which have proven particularly effective in first-time soybean fields...

"The introduction of a flexible floating cutterbar has further cut harvest losses, which had been as high as 30 percent with rigid cutterbars and conventional combines...

"With the establishment of the [Maple Leaf Monarch] crushing facility at Windsor [in July 1979], the province's daily crushing capacity has increased by 300 tonnes per day, and the three crushing plants at Toronto, Hamilton, and Windsor are crushing about 35 million bushels of soybeans each year."

Table 4 shows that in 1972 only 9,909 acres (2.5% of the total Ontario province planting) took place outside the traditional five-county region. By 1982 this had increased to 151,964 acres (17% of the total planting)–largely due to the development of new short-season varieties in the "Maple" series, which matured in 100-108 days at 2200 to 2550 heat units. Address: Asst. Deputy Minister of Technology and Field Services, Ontario Ministry of Agriculture and Food (OMAF).

1529. Sim, William J. 1984. Farmers' experiences and experiments with growing soybeans [in Ontario, Canada]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 73-78.

• ***Summary:*** The author grows 500 acres of soybeans in Ontario. Soybean production in Canada is subsidized by the federal government. "Until 1973, the only export of any consequence was to the United Kingdom, mainly because of the preferential trade benefit. This was phased out in the early 1970s and export sales greatly diminished. In 1973, after years of frustration, the Soybean Board subsidized a shipment of about 30,000 bushels to Japan for the human consumption market, mainly miso and tofu. Since then, the quality of Ontario soybeans has become so renown in the Pacific Rim countries that 1982 exports to this area accounted for 2.2 million bushels. The potential of this market is almost unlimited...

"In summary, I would like to say that I am excited about our soy production. It is like a new lease on life to grow something other than corn. We'll probably never get rich at it, but we'll enjoy trying." Address: Farmer, Moore township, Lambton County, ONT, Canada.

1530. Subden, Ron. 1984. Star Wars soybeans. . . Genetic engineering of soybeans. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 296-301. [1 ref]

• ***Summary:*** Contents: Introduction. Classic breeding–The quest for new allele combinations. Mutagenesis–Inducing new alleles. Cell fusions–Hybrids of non-related species. Genetic engineering–Plasmid mediated recombination. Star wars.

By the year 2000 strains of soybeans "will not only be bred but actually constructed by 'gene machines' (computers with microprocessors that actually make whole sets of genes) that will literally assemble a genotype to the grower's specifications. Soybeans all have approximately the same number of genes and the same arrangement of genes within the chromosomes. Different forms of the same gene are called alleles. Sometimes a desired gene for soybean improvement exists in an entirely different plant organism such as a bacterium or yeast. Genetic engineering techniques are now available to cut out the desired gene, and stitch it into a plasmid. Plasmids are small, circular sets of genes that can replicate like a parasite in a host cell. Under certain circumstances, some plasmids can insert themselves into the chromosomes of plant cells. If they carry a desired gene for crop improvement, plasmids then become vectors. Plasmid borne genes can be inserted into the plant chromosomes and eventually into the seeds and persist through succeeding generations. In such a way, new alleles or new genes can be introduced into the plant germline...

"A soybean gene is a chain molecule composed of a very precise sequence of nucleotides which contains a genetic code. The sequence of a gene can readily be determined by relatively simple procedures. The nucleotide sequence of a virus containing 49000 nucleotides has recently been published. The first gene was constructed in the '70s by G. Khorana at the University of Wisconsin. He used literally dozens of technicians and the project took years. Today, one can purchase for $40,000 (Canadian) a 'gene machine' that quickly will make sequences of 10-15 nucleotides... The gene machine construction of a complete gene, say 1500 nucleotides long, is at present quite technically difficult if not impossible. The problem is, however, only technical and will be solved... A complete set of soybean genes is probably around 5-10 thousand genes." Address: Prof. of Genetics, Univ. of Guelph, Guelph, ONT, Canada.

1531. Suzuki, Steven. 1984. Pacific Rim potential for edible soybeans. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 224-41.

• ***Summary:*** Soybeans were first exported from Canada about 12 years ago when a Japanese house approached the Ontario Soybean Grower's Marketing Board for a trial shipment to Japan. The trial worked out very well and in a short time Ontario's soybean exports became a multi-million dollar business. Ontario soybeans are very clean, the quality is comparable to Japanese and Chinese soybeans, and the supply is consistent. However the price is high in relation to Chinese and U.S. soybeans. As a result, Ontario soybeans are sold in high-priced markets, as for making premium quality miso or soyamilk. The supply of Chinese soybeans is irregular. Address: Manager, Grain Trading Section, Okura & Co. America Ltd., New York, NY.

1532. Wernham, Les. 1984. Exports–Problems and opportunities [for Canadian soybeans]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 246-53.
• ***Summary:*** Soybean exports from Ontario have expanded dramatically during the past 10 years; in 1982 they reached a high of 132,000 tonnes worth $44 million. The East Asian market including Japan, Korea, Hong Kong, and Malaysia accounted for 81% of Ontario's export soybean sales in 1983, with an additional 8% going to Europe. The main buyers in 1982 were: Japan 47,414 tonnes, Netherlands 19,545 tonnes, Singapore 18,039 tonnes, Indonesia 16,652 tonnes, Hong Kong 15,234 tonnes.

Most of these soybeans are sold for human consumption. "For example, one of Sweden's foremost pharmaceutical manufacturers has in the past years been that country's largest single importer of Canadian soybeans. Taking about 3,000 tons annually, this company produced a patented intravenous nourishment called Intralipid." Tiny soybeans (5 mm diameter or less) are used to make bean sprouts and natto. For soybean exports, freight constitutes an average 21% of the net delivered cost to the buyer in his country. They are shipped in bagged or bulk (20 or 40 foot) containers. The main focus of breeding should be to develop varieties that do not carry a common bitterness or beany flavor. Address: Grain Manager, King Grain, Chatham, ONT, Canada.

1533. Whelan, Eugene. 1984. [The soybean industry in Canada and its future]. In: Ontario Soya-Bean Growers' Marketing Board. ed. 1984. Ontario Soybean Symposium. Chatham, Ontario, Canada: OSGMB. 319 p. See p. 65-72.
• ***Summary:*** "Soybeans are a crop with a bright future. I am proud that my department has supported the development of this crop which, last year, brought Canadian farmers $250 million in farm cash receipts." Discusses the Advance Payments for Crops Program, and the Agricultural Stabilization Act. "Support programs aside the main reason for the expansion of Ontario soybean acreage is the development of earlier-maturing varieties. Or, in two words, successful research. As a matter of fact, our earliest Ontario variety today matures in about 100 days, as opposed to over 115 days for the earliest variety 25 years ago.

"I'm sure you would agree with me that the $3 million Agriculture Canada allocated to oilseeds research in 1983-84 was money well spent... It has been estimated that Eastern Canada could be self-sufficient in soybean production by 1990...

"Although 51 per cent of the vegetable oil used in Canada is canola, most of the remainder is soybean oil... We're still importing 370,000 tonnes of American soybeans annually, plus a lot of meal... When it comes to competing in export markets, you now have additional help on your side. I'm talking, of course, about the help of Canagrex... Speaking of canola, I know there's one other matter that concerns your industry. That's the matter of minimum compensatory rates on canola products moving east of Thunder Bay. As you know, the government last year accepted the principle that the existing MCRs should be replaced by freely negotiated, commercial rates." Address: Minister of Agriculture, Agriculture Canada, Ottawa, ONT, Canada.

1534. Tan, Tjeng Giok. 1984. Early work with tempeh in Canada (Interview). *SoyaScan Notes.* April 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Tan never made tempeh commercially and he does not have a company–though he was involved with tempeh. An acquaintance of his was studying at a university in the United States and he wanted a sample to test for vitamins. Mr. Tan used to make tempeh, but only for himself and friends, starting in about 1968. He does not know of any early Canadian tempeh companies. Address: 324 Apache Trail, Toronto, Ontario, Canada. Phone: 416-491-2328.

1535. Lewis, Joseph, 1984. Soymilk and soyfoods in Canada (Interview). *SoyaScan Notes.* April 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Use of the word "soymilk" has been legalized in Canada, but users are not allowed to state that it is free of cholesterol or lactose. Joe will send details in a letter.

The key to getting permission from the Canadian government was to show that the word "soymilk" existed before 1922. Joe will send soymilk patents issued before 1922.

Dr. John Demann is one of the world's foremost authorities on soyfoods. He works closely with Victory Foods and was the keynote speaker at a recent soy symposium in London, Ontario.

In March 1984 there was a super soybean symposium in Canada; Joe will photocopy and send the proceedings.

The single best source of historical material on soy in Canada is the National Archives in Ottawa. It is all on computer going back to the 1920s. He thinks one could find 50 pounds of historical material.

Tofu Products International in Markham, Canada, makes very dirty [unsanitary] tofu; many cakes are also underweight. Its a bad company, is ruining the tofu industry in Canada, and seems to exist only for quick profits. Address: 102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9. Phone: 416-752-0161.

1536. Rubenstein (Howard J.) Associates, Inc. 1984. Tofutti in bulk-pack available nationwide (News release). New York. 2 p. April 27.
• ***Summary:*** "Tofutti, the nondairy soy-based frozen dessert, is now available hard-frozen in 2½ gallon bulk pack containers to restaurants and food service establishments nationwide... The first five bulk pack flavors are Vanilla Almond Bark, Chocolate Supreme, Maple Walnut and Wildberry Supreme.

"Tofutti, which is made with tofu, is similar to ice cream but contains no cholesterol, no lactose and no butterfat. Its ingredients are water, high fructose, corn sweeteners [sic], honey, corn oil, tofu, isolated soy protein, assorted natural flavors and vegetable gums.

"Tofutti has been available in soft-serve form since 1981 through distributors in New York, Hawaii, California, Florida, Washington, D.C., Oregon, Washington, Idaho, Arizona, New Mexico, Texas, Nevada, Utah and Canada.

"Sold in a liquid mix, retailers then dispense it through a soft-serve frozen dessert machine in any one of six soft-serve flavors: Vanilla, Chocolate, Strawberry, Maple Walnut, Banana Pecan and Peanut Butter."

Then discusses the effects of cholesterol on heart disease, and lactose intolerance–which afflicts approximately 40 million Americans. Address: New York.

1537. Cramer, M.M.; Beversdorf, W.D. 1984. Effect of genotype X environment interactions on selection for low linolenic acid soybeans. *Crop Science* 24(2):327-30. March/April. [15 ref]
Address: Dep. of Crop Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

1538. Muendel, Hans-Henning. 1984. Soybean cultivars for the southern prairies: Progress and prospects. *Agriculture Canada Research Station, Lethbridge, Research Highlights* For the year 1983. p. 72-73. April.
• ***Summary:*** "The major emphasis in the soybean breeding program initiated in 1978 is the development of cultivars suitable for the southern prairies and the marketplace. With early-generation screening for protein and yield and the use of winter nurseries, this goal is deemed attainable in the near future...

"The soybean breeding program at Lethbridge was initiated in 1978 and since 1979 has been in part supported by the Province of Alberta (Farming for the Future program)."

A photo shows Hans Muendel. Address: Research Station, Lethbridge, Alberta, T1J 4B1, Canada. Phone: 403-327-4561.

1539. Soldati, A. 1984. Report 1982-83 of the "Working Group for the Promotion of Soybeans in Northern Europe and Canada." *Eurosoya* No. 2. p. 55. April.
• ***Summary:*** This group was formed in 1981 at the suggestion of the Soybean Network FAO (M. Arnoux) and of the EUCARPIA Section Oil and Protein Crops (G. Robbelen). Address: Swiss Federal Inst. of Technology (ETH), Crop Science Dep., CH-8307 Eschikon-Lindau, Switzerland.

1540. *Presse (La) (Montreal, QUE, Canada).*1984. Le soya, la protéine de l'avenir pour les gens d'ici [The soybean, protein source of the future for people here?]. May 2. [Fre]
• ***Summary:*** Canada is now a major exporter of soybeans to East Asia. Some return in the form of soymilk and tofu.

1541. *Wall Street Journal.*1984. P&G agrees to sell assets of Toronto unit. May 14. p. 12, col. 3.
• ***Summary:*** This agreed sale of the company's Victory Soya Mills Ltd. unit in Toronto to Central Soya Co. is part of Procter & Gamble's plan to exit from commodity industries. "Procter & Gamble's cotton seed and soybean crushing operations once were a major part of the company's business. Those operations led to the consumer products company's involvement in food processing and the development of its Crisco brand cooking oils. During the past three or four years, however, the company has been selling its crushing subsidiaries. 'It's a very small part of our business now,' a spokeswoman said. 'It makes sense to sell the units to companies that specialize in those operations.'"

1542. Lewis, Joseph. 1984. Re: The word "soymilk" has just been legalized in Canada after a long process. Letter to William Shurtleff at Soyfoods Center, May 27. 2 p. [1 ref]
• ***Summary:*** Victor Foods has finally received written permission to use the word "soymilk" from Consumer & Corporate Affairs, Canada, the body that reviews all labels submitted to them for correctness and makes most of Canada's policies regarding labeling.

"It was a long fight and we received no support from any of the other soyfoods processors here in Canada. This seems to be the rule... let Victor do it at his expense and we will be able to use the new regulations at no expense to us.

"We are most interested in the new [soyfoods] association that is being presently formed [by Frances

Boyte] and would like very much to be a part of it. How do we go about this?"

Note: This is the earliest document seen (Jan. 2010) that mentions a soyfoods association in Canada–although it was not established until 1985. Address: 102 Hymus Rd., Scarborough, Ontario, Canada M1L 2C9. Phone: 416-752-0161.

1543. Shurtleff, William; Aoyagi, Akiko. 1984. Amerika Gasshû-koku oyobi Kanada ni okeru miso no rekishi [History of miso in the USA, and Canada]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* 32(5):237-40. May. [221 ref. Jap]
• ***Summary:*** This is part 2 of a translation in 4 parts by Taeko Ebine of the chapter on the "History of Miso" from *The Book of Miso* by Shurtleff and Aoyagi. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1544. **Product Name:** Falafels (Spicy Mideastern Patties).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
**Date of Introduction:** 1984. May.
**Ingredients:** Soy mash [okara], chick peas, millet, sesame seeds, tamari, soy oil, potato starch, spices, seasonings.
**Wt/Vol., Packaging, Price:** 350 gm box.
**How Stored:** Frozen.
**Nutrition:** Per 100 gm: Protein 7.6 gm, carbohydrates 18.4 gm, fat 15.1 gm, calories 240.
**New Product–Documentation:** Label. Received 1988, Aug. 8.5 by 4.5 by 2 inches. Printed on stiff paper box. Orange and black on yellow with color illustration of an oasis plus camels, tent, and palms. Text and recipes in English and French. "Ready for the oven. Heat and serve." On side panel: "Health is the most precious thing you have. Sustain it by eating good food." Recipe on back for Traditional Falafel Sandwich. Letter from Jon Cloud: Introduced in the spring of 1984. Later he said it started in 1983.

1545. Hansen, Barbara. 1984. Tofu. *Los Angeles Times.* June 7. Food section (Part VIII). p. 1, 9, 12, 14. Thursday.
• ***Summary:*** Don Bushman, American Soybean Assoc. director in Singapore, notes that the Asian soybean market is growing rapidly. "Indonesians consume about 1 million tons of soybeans annually, 60% to 65% of them in the form of tofu, and 35% to 40% as *tempe.* The fifth-largest nation in the world in terms of population, Indonesia imports 400,000 tons of soybeans a year, about 90% of them from the United States. Some 25,000 to 30,000 tons of soybeans are used annually for food in Malaysia, and 15,000 to 20,000 tons are imported to Singapore for food use, Bushman said. In Singapore and Malaysia, most of the tofu is made with Canadian beans, he added, explaining that Canada is able to deliver the beans at a lower cost. Thailand produces all of its food beans domestically and does not import additional supplies, Bushman said. However, the United States sends soy meal for animal feed to this and other Asian countries."

1546. Huff, Murray W.; Giovannetti, P.M.; Wolfe, B.M. 1984. Turnover of very low-density lipoprotein-apoprotein B is increased by substitution of soybean protein for meat and dairy in the diets of hypercholesterolemic men. *American J. of Clinical Nutrition* 39(6):888-97. June. [45 ref]
Address: Senior Research Fellow of The Ontario Heart Foundation, Dep. of Medicine, Univ. Hospital, 339 Windermere Road, London, Ontario, Canada N6A 5A5.

1547. Jones, G.E.; Anderson, G.W. 1984. Research success in field crops: The expansion of corn and soybean production in Ontario. *Highlights of Agricultural Research in Ontario* 7(2):1-4. June. [Eng; fre]
• ***Summary:*** "There is no doubt that the technology which dictated the rapid development of corn and soybean production was chemical weed control. Corn was the forerunner crop and the dominant discovery for it was atrazine, developed by Geigy of Switzerland in 1954. This chemical showed the way to broad spectrum weed control including the destruction of perennial weeds, notably quack grass. By 1958, this 'miracle of chemistry' had been joined by a sister chemical, simazine, recommended in Ontario."
Address: Dep. of Crop Science, Ontario Agricultural College, Univ. of Guelph, Guelph, Ontario, Cananda.

1548. **Product Name:** [L'Herberie Smoked Tofu Fume].
**Foreign Name:** L'Herberie Smoked Tofu Fume.
**Manufacturer's Name:** L'Herberie.
**Manufacturer's Address:** Rue de St. Viateur, Montreal, QUE, Canada.
**Date of Introduction:** 1984. June.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11.

1549. **Product Name:** [Tempeh Burgers (Marinated and Baked. No Oil)].
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** Toronto, ONT, Canada.
**Date of Introduction:** 1984. June.
**New Product–Documentation:** Letter from Allan Brown. 1985. Aug. 7. Ready to eat. 4 oz for $1.65. Letter (fax) from Allan Brown. 1998. Jan. 21. Tempeh burgers were first sold in June 1984.

1550. Shurtleff, William; Aoyagi, Akiko. 1984. Amerika Gasshû-koku oyobi Kanada ni okeru miso no rekishi (2) [History of miso in the USA and Canada (2)]. *Miso no Kagaku to Gijutsu (Miso Science and Technology)* 32(6):287-91. June. [221 ref. Jap]
• ***Summary:*** This is part 3 of a translation in 4 parts by Taeko Ebine of the chapter on the "History of Miso" from *The Book of Miso* by Shurtleff and Aoyagi. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1551. **Product Name:** Firm Nigari Tofu, Soymilk, and Soysage.
**Manufacturer's Name:** Maritime Soycraft.
**Manufacturer's Address:** R.R. 4, Antigonish Harbor, NS, B2G 2L2, Canada. Phone: 902-863-2903.
**Date of Introduction:** 1984. July.
**New Product–Documentation:** Form filled out by Sian McLean (a woman), ca. 1984. They started on 1 July 1984 and now make firm nigari tofu, soymilk, and soysage. The business has no name yet. "Small word-of-mouth operation so far." They use 60 lb/week of soybeans.

Letter from Sam Weinreb. 1988. Jan. 14. He just talked with Hugh and Sian McLean. Talk with Sian McLean. 1988. Feb. 15. They started making tofu July 1984. His company is now named Maritime Soycraft, R.R. 2, Heatherton, NS, B0H 1R0, Canada. Phone: 902-386-2474. Says he started making soysage in 1986, but it is shown on his 1984 form. Call from Sian. 1991. Nov. 18. They make mostly tofu, plus some soymilk. They no longer make soysage. They make about 500 lb/week of tofu. There is a nice little steady market and people really like Maritime tofu. Her first name is Welsh.

Letter from Sian McLean. 1994. July 16. Maritime Soycraft is now located at Keppoch Mountain, R.R. #1, Antigonish, Nova Scotia B2G 2K8, Canada. Phone: 902-863-3978. This is a new tofu shop she built. She presently makes only fresh bulk tofu. She left her former marriage with Hugh and has a new partner who wants to do tofu production.

Talk with lady who works with Sian. 1995. May 15. Sian now has a vacuum packaging machine for her tofu, and she can get a shelf life of two weeks before the product turns yellow. This vacuum-packed tofu is not yet on the market.

Talk with Rick Turner of Maritime Soycraft. 1999. Dec. 2. They moved 1½ to 2 years ago to R.R. #4, Antigonish, NS B2G 2L2. Their phone number has not changed. They are now a partnership with 3 partners, Sian, Rick, and one other full-time person. They make about 1,000 lb/week of tofu, but have to expand to take on a new chain. So their business is growing and they are looking for new equipment.

• ***Summary:*** Contents: 1. Introduction. 2. Etymology. 3. World Overview. 4-8. History of Tempeh in Indonesia. 9-11. History of Tempeh in Europe and Australia. 12-15. History of Tempeh in the United States and Canada. 16-18. History of Tempeh in Japan. 19-23. History of Tempeh in Asia (China, Taiwan, Southeast Asia, India, Sri Lanka). 24. History of Tempeh in Latin America. 25. History of Tempeh in Africa. 27. International Interest. 28. U.S. and Third World Problems.

The world's largest tempeh manufacturers are as follows:

Company name, Country, Year Started, Avg. Weekly Production

1. Marusan-Ai, Japan, 1983, makes 15,148 lb/week = 6,885 kg/week
2. Tempe Production Inc., Netherlands, 1969, makes 13,200 lb/week = 6,000 kg/week
3. Quong Hop/Pacific Tempeh, USA/CA, 1980, makes 7,000 lb/week = 3,182 kg/week
4. White Wave, USA/CO, 1979, makes 5,850 lb/week = 2,659 kg/week
5. Soyfoods Unlimited, USA/CA, 1981, makes 5,800 lb/week = 2,636 kg/week
6. Torigoe Flour Milling, Japan, 1983, makes 5,770 lb/week = 2,623 kg/week
7. The Tempeh Works, USA/MA, 1979, makes 5,500 lb/week = 2,500 kg/week
8. Marukin Foods, Japan, 1983, makes 4,620 lb/week = 2,100 kg/week. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1554. Mintz, David. 1984. Barron's Mailbag: Tofu Time responds [to column by Alan Abelson on Aug. 6]. *Barron's*. Aug. 13. p. 9, 32.
• ***Summary:*** Tofu Time began distributing hard-frozen pints of Tofutti in mid-July through their master distributor, Haagen-Dazs Co. The product is sold in over 15 markets,

through chains and independent grocery stores. Tofutti's soft-serve mix can be processed through any standard soft-serve dispensing machine, the same machines used to process soft-serve ice cream and frozen yogurt desserts. For this reason, during the past year the company has been able to expand sales of soft-serve Tofutti to over 20 states and Canada.

Preliminary figures indicate that sales of Tofutti products for the just completed fiscal fourth quarter exceeded $1.5 million and that the company had a profitable quarter and perhaps a profitable year.

Tofutti is lactose free. It has been estimated that 25% of the U.S. population has lactose intolerance. The figure is even higher in many foreign countries. Address: President, Tofu Time Inc., New York City [New York].

Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 18-20. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** "Historically, soybean breeding efforts in Canada have been directed toward improving yields, increasing the area of adaptation (to shorter season and cooler geographic areas) and improving pest tolerance. As soybean production has increased toward domestic self-sufficiency, the industry has placed more emphasis on development, production, and marketing of special quality beans for specific non-oil export markets...

"In Canada, yield of soybeans per unit land area has remained a primary consideration in soybean breeding (except for natto-type beans) because of licensing requirements for pedigreed seed production and marketing. Among high yielding breeding lines, large seed size, white or yellow hilum colour and high seed quality (resistance to discolouration and cracking) are common selection criteria associated with tofu and miso export potential."

Canadian soybean breeders are generally aware of the characteristics defined during the 1982 "Soybean Export Mission to South East Asia" for various soyfood uses. These desired soybean characteristics are shown in Table 1 for natto, miso, tofu, soymilk, and soy sprouts. Address: Assoc. Prof., Univ. of Guelph, Guelph, ONT, Canada.

1558. Chan, Fred. 1984. General uses of soybeans in Hong Kong and competition from Chinese soybeans. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 15-17. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** Tofu: The two major types of tofu in Hong Kong are soft tofu (which is displayed in water to maintain its form) and mild tofu (which is firmer, is displayed on wooden planks, and is the most common type). Chinese soybeans are preferred to Canadian soybeans because after a maximum of 5 hours on display in the open market, water will start to weep from the tofu made from Canadian soybeans. In 1983, about 6,000 tonnes of imported soybeans were used to make tofu in Hong Kong; this was about 33% of the total soybeans imported.

Bean curd sheets and bean curd sticks [yuba] are very common snacks and dishes in Hong Kong. "Canadian soybeans have an advantage in this market because they produce whiter soymilk which in turn will produce whiter colour products. However, the bigger size of the Chinese soybean results in a higher yield... Manufacturers will normally mix 60% of Canadian soybeans with 40% of Chinese soybeans in order to achieve a higher output of whiter sheets... Total utilization was around 4,000 tonnes in 1983, with Canadian soybeans representing 78%.

Soy sauce and bean paste: The market is dominated by Chinese soybeans because bigger beans produce more sauce and paste. In 1983 approximately 6,000 tons of soybeans were used to make soy sauce and bean paste, with Chinese soybeans representing 75%, Vietnamese 14%, and Canadian 11%.

Soymilk: In 1983 about 1,800 tonnes of soybeans were used to make soymilk in Hong Kong, mostly by Vitasoy. Chinese and Canadian soybeans each share about 50% of the market.

Discusses various reasons that Chinese soybeans are very competitive in Hong Kong. The Chinese Oil, Cereal and Foodstuff Company in Hong Kong has an office in Hong Kong. Under this national organization are two agents specializing in Chinese soybeans. Transport time from China to Hong Kong is 7 days versus 32 days from Canada. Address: Director, Chung Hing Co., Hong Kong.

1559. Epp, Peter H. 1984. Growers' interest in supplying export markets. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 42-45. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** In 1954 Ontario soybean growers began to seek export markets when the Ontario Soybean Growers' Marketing Board organized the first export of Canadian soybeans to the United Kingdom.

In the late 1960s, samples of Canadian soybeans were forwarded to Pacific Rim countries to try to determine whether Canadian varieties were acceptable to the tofu and miso markets of those countries.

The replies indicated that Japanese food manufacturers preferred U.S. varieties such as Kanrich, Amsoy, Corsoy, Ohio, and I.O.M. (Indiana, Ohio, Michigan) soybeans.

In 1970 an export promotion booklet titled "Cansoy" was introduced to 52 foreign countries promoting the story of Canadian soybeans.

"Ontario soybean samples continued to be forwarded annually but received no support or interest until the spring of 1972. At that time the C. Itoh people in Toronto indicated the Harwood variety, produced by the Harrow Research Station, possessed qualities favorable to the manufacture of tofu and miso. C. Itoh was willing to purchase a shipment of 750 tons for further testing by some of their customers. The soybean board made several important decisions: (1) To include a letter with the soybeans from the Canadian Grain Commission stating that the shipment consisted of 85-90% Harwood variety soybeans. In other words, the identity of the Harwood variety had been preserved or maintained, and not mixed with other varieties. This marks the start of Canada's identity preserved (IP) program and a strong commitment to providing the soybean characteristics that Asian food products wanted. (2) To pay $6,920 of the total freight and stevedoring costs to Japan.

In Feb. 1982 the OSGMB sponsored its first export mission to Asia–to Japan, South Korea, Hong Kong, Singapore, and Malaysia.

Since the Harwood variety, Dr. Buzzel of the Harrow Research Station has devoted a great deal of time breeding soybean varieties suitable for the edible market. Address: Chairman, Ontario Soya-Bean Growers' Marketing Board, Chatham, ONT, Canada.

1560. Fujimori, Ikuo. 1984. Users' requirements [of soybean varieties] for miso. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 10-11. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** "In 1983, 1,600 miso makers in Japan produced 570,000 tonnes of miso. They used a total of 181,000 tonnes of soybeans comprised of approximately 121,000 tonnes from China, 20,000 tonnes of domestic soybeans [grown in Japan], and 20,000 tonnes of Canadian white hilum soybeans and others." The desirable characteristics of soybeans for making miso are as follows: A yellow or white hilum. The larger the seed size the better (more than 18 gm per 100 seeds); larger soybeans tend to be more consistent in texture, taste and color. The thinner the hull (seed coat) the better, but not easy to split. The cotyledon cells should be light yellow. The less foreign materials, and damaged and split beans the better; corn is an especially undesirable foreign material. The four key cooked conditions: 1. The texture of the cooked soybeans must be soft; 2. The soybeans should absorb water quickly and thereby cook quickly; 3. The soybeans should have a high carbohydrate content; 4. The color of the cooked soybeans must remain bright yellow. Address: Executive Vice-President, Takeya Miso Co. Ltd., Suwa, Japan.

1561. Hayashi, Nobu. 1984. Users' requirements [of soybean varieties] for natto and tofu. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 12-14. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** From January to June 1984 soybeans imported to Japan from the USA had the lowest CIF price (US$331.31 per tonne), followed by soybeans from China ($350.16), with Canadian soybeans being the most expensive ($408.62).

The preferred characteristics of soybeans for natto are: Small in size, round in shape, and clear hilum. Beans should have a firm skin (seed coat) free of cracks. High sugar and amino acid contents. High carbohydrate and low calcium contents. "However the real suitability of the soybeans is determined by the taste of the natto."

The preferred characteristics of soybeans for tofu are: High protein and low oil contents, especially a high nitrogen solubility index (NSI) which affects the yield of tofu. The larger the seed size the better. Hilum color is not a big problem but a light-colored hilum is preferred since it may give a whiter tofu. A thin and firm skin (seed coat) which

reduces the soaking time required. “Like natto, the real suitability is known only when the tofu is tasted.” For all soybeans, it is very important that the price be competitive. Address: Gomei Shoji Co., Tokyo, Japan.

1562. Loh, Michael. 1984. An overview of export markets for edible soybeans. In: Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on Export Markets for Ontario Soybeans: Edited Proceedings. 45 p. See p. 1-9. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** “Ontario first exported edible soybeans in 1972 and over 12 years have built it into a $40 million business. 1981 was our best year when exports totalled $46 million... The bulk of Ontario’s soybean exports are sold to the Far East [East Asia]–Japan ($8 million in 1983), Singapore ($6 million), Hong Kong ($3.5 million), Malaysia ($1 million), Indonesia, and Korea.” In these countries soybeans are consumed in the daily diet of the people. In Japan, for example, they are made into miso, tofu, natto, soymilk and shoyu. Korea also makes soy sprouts, Indonesia makes tempeh, and Singapore, Malaysia, and Hong Kong make dried yuba. In addition, sales to the Netherlands, United Kingdom, and France are quite significant.

Concerning Ontario’s market share of soybean imports for food use: Japan imports 877,300 tonnes, of which 27,000 tonnes or 3.1% is from Ontario. Singapore and Malaysia import 36,000 tonnes, of which 20,000 tonnes or 55.0% is from Ontario. Hong Kong imports 20,000 tonnes, of which 10,000 tonnes or 50.0% is from Ontario.

Japan’s sources of its 877,300 tonnes of imported soybeans are as follows: USA 570,000 tonnes (65%), China 280,000 (32%), Canada 27,000, South America 300.

Japan uses its 877,300 tonnes of imported soybeans as follows: tofu 485,000 tonnes (55.3%), miso 180,000, natto 185,000, soymilk 25,000, cooked soybeans 10,000, shoyu 6,500, other 85,800. Within these figures, Ontario’s soybeans are used as follows: Miso 20,000 tonnes (11.1% of the total), natto 5,000 tonnes (5.9%), and tofu 2,000 tonnes (0.4%). Address: Export Development Specialist, Ontario Ministry of Agriculture and Food, Toronto, Canada.

1563. Ontario Ministry of Agriculture and Food, Market Development Branch. 1984. Workshop on export markets for Ontario soybeans: Edited proceedings. Ontario, Canada. 45 p. Held 5 Sept. 1984 at Wheels Motor Inn, Chatham, ONT, Canada. 28 cm.
• ***Summary:*** Contains 9 chapters by various authors, most cited separately. Address: Ontario, Canada.

• ***Summary:*** Pages 53, 55, and 57 give statistics for soybean area, yield, and production in Quebec and Ontario from 1976 to 1983 (projections). Address: Canada.

1565. **Product Name:** Grain Tempeh (With Okara, Brown Rice & Sunflower Seeds).
**Manufacturer’s Name:** Soy City Foods.
**Manufacturer’s Address:** 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
**Date of Introduction:** 1984. October.
**Ingredients:** Soy mash [okara], brown rice, sunflower seeds, vinegar, Rhizopus oligosporus.
**Wt/Vol., Packaging, Price:** 250 gm plastic bag.
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm: Protein 7.9gm, fat 9.76 gm, carbohydrate 12.0 gm, calories 167.4 gm.
**New Product–Documentation:** Label. Received 1988, Aug. 7 inches square. Printed on plastic bag. Orange, white, green, yellow and blue. Illustration of a sunflower and a field at the base of high mountains. Text and recipes in English and French. “150 g of tempeh provides a good source of protein. Keep refrigerated. Always cook thoroughly.” On back panel: “Health is the most precious thing you have. Sustain it by eating good food.” Recipe for Soy City Bake. “Tempeh naturally changes color from white through grey to black. These colouration changes improve the tempeh’s quality and flavour.” Letter from Jon Cloud: Introduced in the fall of 1984. Later he said spring 1984.

1566. *Trinidad and Tobago Review.*1984. The “noble bean” in the Caribbean. Oct. p. 27.
• ***Summary:*** “On the main road about 1 mile south of the heart of Roseau between Dominica’s western slopes and the shoreline is the Plenty Canada Soya Shop (a photo of which is shown). After only a week opening in Newtown, this unusual take-away outlet sells out of accras and [soy] ice-cream nearly every day.” Each morning the staff prepares batches of soyamilk. which is “used to make ice-cream and Tofu (soyabean cheese) and some is reserved to be sold as milk while the presscake [okara] is combined with tofu, wholewheat flour and seasonings to prepare the delicious and popular fried accras. The shop opens at one o’clock and serves a steady stream of customers until eight, unless stocks run out.”

Plenty Canada’s representatives arrived on Dominica in response to requests from local people. “With the co-operation of the government they have demonstrated simple home-scale soyafoods preparation in local areas and conducted soyabean seed trials. The initial interest in soyafoods was enough to encourage them to set up shop in central Roseau, grinding the beans at first by hand in a cocoa mill. As the business grew they needed more

production space and more contact with local people on a 'grass roots' level as the shop was intended primarily as a training situation. Since the move to Newtown a Dominican couple are planning to re-open the original premises as a second soya shop, Creole-style.

"Plenty's soya project is staffed by three volunteers from Canada and the USA, who receive only subsistence, and five wage-earning Dominicans who are learning to manage the shop. They have requests for soya shops in other parts of the island...

"Plenty brought in an initial supply of soyabeans from North America and are now supplying seed to two groups of local farmers who are keen to grow for the shop... The shop is beginning production of Tempeh, a cultured soya food from Indonesia."

Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term "soyabean cheese" to refer to tofu.

Note 2. This is the earliest English-language document seen (Aug. 2002) that uses the term "Noble Bean" in the title to refer to the soybean.

1567. *New Chronicle. The Conscience of the Nation (Dominica, West Indies).*1984. Soy foods available. Nov. 30.
• ***Summary:*** Today Nathalie Andrew is opening "Soy Kweyol," a take away health oriented catering service in the heart of Roseau, Dominica. All of her foods are made from soybeans, and are homemade. A photo shows Nathalie serving a beverage from her shop window. "Soy beans, it has been discovered, can now be grow locally. Farmers in areas like La Plaine have successfully produced their first crop of beans and have already begun preparations for planting a second crop. The seeds which take three months to grow can be obtained from the 'Plenty' Office in Victoria Street, New Town." Address: Dominica.

1568. *Soyanews (Sri Lanka).*1984. Plenty study team in Sri Lanka. 7(3):1, 7. Nov.
• ***Summary:*** "A three-member team from Plenty Canada arrived in Sri Lanka at the end of last month to study the impact of the country's Soyabean Development Program. The members are Suzy Jenkins Viavant, Soya Development Consultant, Maya Shearer, Nutrition Consultant and Larry McDermott, Director of Plenty Canada.

"Plenty Canada, like its American counterpart, Plenty International is a non-profit, non-governmental, relief and development organisation engaged in increasing self-sufficiency in developing countries through appropriate village technologies...

"Sri Lanka's Soyabean Development Program has attracted the attention of CIDA, the Canadian International Development Agency, which has commissioned this team from Plenty to make a study of the current state of the soya foods introduction program with an eye to improvements at grass roots level."

A photo shows Shearer and McDermott tasting soymilk ice cream. Plenty plans to use this type of ice cream to help introduce soyfoods to Sri Lanka. The Plenty team will end their visit to Sri Lanka near the end of this month.

A letter from Chuck Haren on page 7 states that he is currently operating a Soy Training Center at Roseau, Commonwealth of Dominica, in the West Indies. Plenty is now also operating soy development programs in Lesotho, Jamaica, and St. Lucia.

1571. Hymowitz, Theodore. 1984. Dorsett-Morse soybean collection trip to East Asia: 50 year retrospective. *Economic Botany* 38(4):378-88. Dec. [38 ref]
• ***Summary:*** Contents: Introduction. The plant explorers–Dorsett and Morse (a biographical sketch of each). Oriental Agricultural Exploration Trip (gives all key dates, places, and events on the trip). Dorsett-Morse collection. Soybean collection (a detailed discussion, including history and varieties): "This paper is devoted to the analysis of the 4,451 soybean *(Glycine max)* accessions collected by P.H. Dorsett and W.J. Morse during their plant exploration trip to east Asia 1929-1931. Until about 1950 the collection was used primarily for the development of vegetable type soybean cultivars. During this period many of the accessions were lost. Today only 945 of the original 4,451 accessions are available in the United States soybean germplasm collection. From the 1950s to the 1980s, as soybean production increased in the United States, so did plant pathogen problems. The Dorsett-Morse soybean accessions have been extremely valuable to plant pathologists and breeders as sources of resistance to certain pathogens. Individual genotypes in the collection have been used for genetic studies on morphological, physiological and biochemical traits. Due to the development and distribution of higher-yielding soybean cultivars, farmers in east Asia are no longer growing lower-yielding landraces. Although these landraces are now extinct in east Asia, many were collected by Dorsett and Morse and are preserved in

the United States soybean collection. Over the years, the Dorsett-Morse collection has increased in value and will be as useful to soybean scientists in the future as it has been in its first 50 years of existence."

"According to Piper and Morse (1923) no more than 8 soybean cultivars were grown in the United States prior to 1898. In 1898, the Office of Foreign Seed and Plant Introduction was established within the United States Department of Agriculture (USDA) to centralize introduction activities. Introduced plants were assigned permanent numbers under the Plant Introduction (P.I.) designation system. The first soybean listed in the P.I. system was P.I. 480 from South Ussurie, Siberia. The seeds were received from Professor N.E. Hansen in March, 1898 (Cook, 1898).

"Between 1898 and 1928, approximately 3,000 accessions of soybeans were introduced into the United States from China, Japan, Korea and India (Bernard, 1983). The collections were made principally by P.H. Dorsett, F.N. Meyer, and C.V. Piper. In the mid-1920s it was apparent to the USDA that the soybean was becoming a major American crop. Funds were allocated to send 2 plant scientists on a major expedition to Japan, Korea and northeast China, primarily to collect soybean germplasm and also to collect seed and propagating material of other crops of interest."

"Dorsett-Morse Collection: Dorsett and Morse sent back to Washington, DC, approximately 9,000 accessions of seed and propagating material (Ryerson, 1930). About half the accessions collected were soybeans (Table 1); the other half consisted of representatives from 230 genera. Individually or jointly, Dorsett and Morse collected germplasm from fruit and vegetable markets, food and flower shows, experiment stations, botanical gardens, seed companies, farms, factories making soybean and other food products, processing plants, and from the wild. In certain instances they contacted individuals to make collections of specific indigenous plants. In addition, the pressed 814 herbarium specimens, mostly 5 sheets each. They also brought back boxes containing butterfly, moth, wasp, spider and ant specimens.

"The explorers returned with 3,350 black-and-white still pictures, 6,700 ft of standard black-and-white motion picture negative and 2,400 ft of colored motion picture negative. Lastly, the brought back 210 publications, 341 different soybean food products and 236 bamboo-made articles (Dorsett and Morse, 1928-1931)."

"The Dorsett-Morse collection trip cost approximately $25,000. Even with today's inflated dollars the benefits gained by United States soybean farmers, processors, and consumers greatly exceed the original collection cost." Talk with Ted Hymowitz. 1998. June 15. In fact, the value to American farmers of one soybean introduced by this expedition, P.I. 88788, which is a source of resistance to soybean-cyst nematode (SCN) races 3 and 4, is greater than the cost of the entire expedition–several times over. Interestingly, it was not until the late 1980s and 1990s, some 60 years after the expedition, that the resistance contained in this one soybean began to be utilized by U.S. soybean breeders. This is a good example of the importance of collecting and preserving germplasm, whose value may not be known until many years later.

Tables show: (1) Soybean accessions introduced into U.S. by Dorsett and Morse and currently available in the U.S. soybean collection: 1929–366 in original collection / 126 currently available. 1930–2,261 / 554. 1931–424 / 206. 1932–1,400 / 59. Total–4,451 / 945 (=21.2% currently available).

Table 2. 41 of their soybean introductions that by simple selection became cultivars in the USA and Canada, with P.I. number, place of origin, and Maturity Group: Cultivar names: Agate, Aoda, Arisoy, Bansei, Bansei (Ames), Cherokee, Chusei, Delsoy, Emperor, Etum, Fuji, Goku, Green and Black, Hakote, Hidatsa, Higan, Hokkaido, Imperial, Jackson, Jefferson, Jogun, Jogun (Ames), Kanro, Kanum, Kura, Magnolia, Mendota, Nanda, Osaya, Rokusun, Sac, Sato, Seminole, Shiro, Sioux, Sousei, Tastee, Toku, Waseda, Willomi, Wolverine.

Table 3. Eight "vegetable-type soybean cultivars developed in the U.S. by hybridization and selection from germplasm introduced by Dorsett and Morse:" Disoy, Kanrich, Magna, Perry, Prize, Shore, Verde, and Yelnanda.

Table 4. Selected soybean introductions by Dorsett and Morse with resistance to certain pathogens: Column 1, organism (Fungal, bacterial, viral, and nematode pathogens). Col. 2, Disease. Col. 3, Source of resistance (PI numbers).

Table 5. Introductions by Dorsett and Morse listed in the soybean genetic type collection: Column 1, lines (11). Col. 2, P.I. number. Col. Description (Narrow leaflet, dense pubescence, black pod, etc.).

Note: This is the earliest English-language document seen (April 2004) that uses the term "landraces" (or "landrace," spelled as one word) to refer to indigenous soybean varieties. Address: Crop Evolution Lab., Dep. of Agronomy, Univ. of Illinois at Urbana-Champaign, Urbana, IL 61801.

1572. Meilke, Karl D. 1984. An economic profile of the Ontario soybean industry. *University of Guelph, School of Agricultural Economics and Extension Education, Publication* AEEE/84/9. x + 97 p. Dec. Also published in March 1983 under the same title as a 105-page report for Dr. Nelson Ball, Director, Agricultural and Food Development, Agriculture Canada, Toronto, ONT, Canada. 28 cm. [42 ref]

• ***Summary:*** Contents: 1. Introduction: The role of soybeans and soybean products in the world oilseeds market, the

importance of soybeans in Canada and Ontario, objectives, outline of the study. 2. Ontario soybean production: Soybean production, spatial distribution of production, number of farm production units and trends in their size, costs-of-production, Ontario soybean yields, expected changes in soybean production technology. 3. Ontario soybean marketing: Institutional structure, soybean domestic demand and trade, soybean meal domestic demand and trade, soybean oil domestic demand and trade, tariff structure, soybean marketing, seasonality of Ontario soybean prices. 4. Ontario soybean processing: Soybean processing capacity, technology employed, investment pattern, institutional structure, performance of the processing industry, financial performance, major changes in the processing industry. 5. The international soybean market: Major competitors, cost of production of competitors, recent and expected trends in production for major soybean exporters and importers (United States, Brazil, Argentina, Japan, European Community), policy and economic environment affecting soybean supply and demand. 6. Opportunities for expansion of production, processing and marketing of soybeans. 7. Constraints to expansion of Ontario soybean production, processing and marketing. References.

Tables: 1.4. Canada's trade in oilseeds and oilseed products, 1970-1982. 1.5. Canada's trade in soybeans and soybean products, 1970-1983. 1.6. Ontario farm cash receipts by commodity, selected years. 2.1 Ontario soybean area, yield, production, average farm price and farm value, 1970/71 to 1983/84. 2.2 Ontario soybean/corn price ratios and soybean production, 1970/71 to 1983/84. 2.3 Ontario soybean production by county, 1972 to 1981, '000 bushels. 2.4 Soybean production as a percent of total cropland, in Ontario, by county, 1976 and 1981. 2.6 Distribution of farms growing soybeans in 1981, by size, for selected counties. 2.7 Trends in soybean production costs and input use, Ontario, 1957-1959, 1973-1974, and 1980. 2.8 Estimated soybean production costs Ontario and the United States, 1980. 2.9 United States and Ontario soybean yields. 2.10 Estimated trend in soybean yields, Canada and the United States, bushels/acre. 3.1 Canada, supply and disposition of soybeans, 1968/69 to 1983/84, 1,000 mt. 3.2 Canada, imports of soybeans by country of origin, 1970 to 1981. 3.3 Canada, soybean exports by country of destination, 1970 to 1981. 3.5 Canada, soybean meal exports by country of destination, 1970 to 1981. 3.6 Canada, imports of soybean meal by country of origin, 1970 to 1981. 3.9 Canada, soybean oil exports by country of destination, 1970 to 1981. 4.1 Imports of soybean meal by province.

Figures: 2.1 Soybean acreage and production in Ontario, 1941-1982. 3.1 Comparison of Canadian (PSO2) and United States (PSO4*ER34) soybean prices, 1968(1)–1982(3). 3.3 Comparison of Canadian (PSM2) and United States (PSM4*ER34) soybean meal prices, 1968(1)–1982(4).

Argentina: Soybean production in Argentina is increasing rapidly, just as it did in Brazil a decade earlier, and for much the same reasons. Argentina's economy is heavily in debt, inflation is high and widespread, the policy environment is uncertain, and there are cash flow problems. However the soybean is seen as part of the solution to these problems. Soybean production has increased from about 0.027 mmt (million metric tons) in 1970/71 (beginning April), to about 0.496 mmt in 1975/76, to an estimated 4.150 mmt in 1982/83 (see table 5.9, from USDA, FAS).

About 85% of the soybeans cultivated win Argentina are double cropped with wheat. They compete for land with cattle and corn. The stage of very rapid growth in soybean production appears to be nearing an end as Argentina's farmers are reaching the limit of the land on which it is easy to grow soybeans.

Soybean crushing has been slow to catch up with production. Table 5.9 shows that the soybean crush increased from 0.021 mmt in 1970/71 to an estimated 1.907 mmt in 1982/83. Because of this, Argentina has become the world's second larger exporter of whole soybeans, exporting 135% more than Brazil in 1982/83. However policies are now in place which will lead to expansion of Argentina's crushing industry. In early 1983, whole soybeans were subject to a 25% export tax while oil and meal were subsidized by 10%.

Exports of whole soybeans from Argentina began in 1973/74 with 0.050 mmt, but returned to zero in 1975/76. Thereafter they skyrocketed from 0.111 mmt in 1976/77 to a peak of 2.776 mmt in 1979/80, falling slightly to an estimated 2.151 mmt in 1982/83.

Exports of soybean meal have been modest, ranging from 0.25 and 0.28 mmt between 1976/77 and 1980/81 (table 5.10, from USDA ARS). But consumption of soybean meal in Argentina has been increasing, approximately doubling between 1973/74 and 1982/83. A similar pattern emerges for soybean oil, but both exports and domestic demand are modest (table 5.11, from USDA ARS).

In the future, Soybean production in Argentina is expected to expand, although not as rapidly as during the last 10 years. The percentage of soybeans crushed in Argentina is expected to increase, and the country's exportable surplus of soybean meal and oil will probably grow.

Japan is the world's single largest importer of soybeans. Between 1970 and 1980 soybean imports to Japan increased by 31%.

Japan produces relatively small and declining amounts of oilseeds; primarily rapeseed, soybeans, and peanuts. Today Japan is a highly developed industrial nation and agriculture contributes only a small amount to the gross domestic product. In 1961 Japan's agricultural land area

peaked at 15.1 million acres, declining to about 13.3 million acres in 1978. "The area of orchards, permanent plantations and arable grasslands has increased considerably since 1960, while the area of ordinary upland fields (where oilseeds are grown) has dropped to about one-half its 1960 size."

Brazil: Beginning in the mid-1960s, Brazil started an aggressive export development program. Its goals were: (1) To slow the rate of inflation. (2) To diversify exports. (3) To increase exports of value-added products. (4) To maximize foreign exchange earnings. One commodity that benefited from this program was the soybean. Soybean production in Brazil rose from 1.50 mmt in 1970/71 to 15.20 mmt in 1981-82 (table 5.6, USDA FAS).

Various factors account for the dramatic growth in Brazilian soybean production: (1) The climate in southern Brazil makes it possible to double crop wheat and soybeans. Double cropping is the practice of consecutively producing two crops of either like or unlike commodities on the same land during the same year. The government's high support price for wheat substantially increased wheat area and encouraged double cropping. In 1975 some 50-70% of the soybean area in the major producing areas was double cropped with wheat.

(2) Because of import controls on nitrogen fertilizer, soybeans may have become more attractive to Brazilian farmers as a legume that fixes nitrogen in the soil. Since Brazil has produces relatively little of its own nitrogen fertilizer, and that fertilizer is relatively expensive, soybeans are attractive because they require little nitrogen fertilizer and (as a legume) they add their own nitrogen to the soil.

(3) Both Brazilian coffee policy and frosts have contributed to the increase in Brazilian soybean production. During the 1960s, when there was considerable excess in international coffee supplies, the government paid farmers to remove old coffee trees and plant other crops. Especially in the State of Parana, much of the new crop acreage was planted to soybeans. In July 1975, when severe frost killed over 15 percent of the coffee trees in Parana and severely damaged all the rest, much of this newly available land also went into soybeans.

(4) Brazilian soybeans tend to have a relatively higher oil content than their U.S. counterparts (19% vs. 17.7%). So in 1973 and 1974 when vegetable oil prices in world markets rose dramatically, cultivation of soybeans in Brazil became more profitable. As Thompson (1979) writes: "There is simply no other crop or beef which can compete with soybeans on a profit per hectare basis."

(5) Brazil's poultry industry is growing rapidly, so the domestic demand for soybean meal as a protein feed supplement has increased significantly.

Table 5.6 titled "Brazil, soybean supply and disposition," shows that soybean production increased from 1.509 mmt in 1970/71 to 12.835 mmt in 1982/03. The soybean crush increased from 0.932 mmt in 1970/71 to 12.728 mmt in 1982/03. Exports of whole soybeans increased from 0.290 mmt in 1970/71 to a peak of 3.516 mmt in 1975/76, then decreased to 0.810 mmt in 1982/03.

Brazil's policies designed to expand soybean crushing capacity and exports have been very successful; Brazil is presently the world's largest exporter of soy meal and soy oil (tables 5.7 and 5.8). Because of this emphasis on crushing soybeans in Brazil, the country's exports of whole soybeans have decreased since their peak in 1975/76 when exports where 33.5% of domestic production to only 6.3% of total production in 1982/83. Meanwhile, exports of soybean meal have increased from 0.588 mmt in 1970/71 to a peak of 8.582 mmt in 1981/82. And exports of soybean oil meal have grown from 0.003 mmt in 1970/71 to a peak of 1.212 mmt in 1981/82. Address: Ontario, Canada.

1573. **Product Name:** Tempeh.
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.
**Date of Introduction:** 1984. December.
**Ingredients:** Organic soybeans, water, and culture (Rhizopus oligosporus).
**Wt/Vol., Packaging, Price:** 8 oz (227 gm).
**How Stored:** Refrigerated or frozen.
**Nutrition:** Per 100 gm: Calories 163, protein 19 gm, carbohydrates 13 gm, fat 5 gm.
**New Product–Documentation:** Label. 1988, received. 6 inches square plastic bag. Blue, white, green, and yellow on clear film. "An excellent source of protein. Soy. Organic. No preservatives. On Back: Quick and Easy Recipes for Saucy Tempeh, and Sweet and Sour Tempeh. If you like our tofu–you'll love our tempeh! * Tempeh, like tofu, is so versatile it adapts itself to any cooking method and all types of cuisine. * Tempeh is terrific in stir frys, soups, stews, and sandwich spreads. * Tempeh is delicious deep-fried like fish sticks, broiled as cutlets, or barbecued. * Invent your own dishes; great in Mexican and Italian foods! Grey or black areas on tempeh are due to normal sporulation, and do not indicate spoilage." Letter from Wayne Fatt. 1988. Sept. 29. The product was introduced in Dec. 1984.

1574. **Product Name:** Hi-Pro Tofu.
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1984. December.
**Ingredients:** Curded with calcium sulfate.
**Nutrition:** Contains 14.7% protein.
**New Product–Documentation:** Eleanor Brownridge. 1984. Foodservice and Hospitality. Dec. p. 22. "Tofu: Hospital Food of the '80s?"

1575. **Product Name:** Soy Milk.
**Manufacturer's Name:** Country Cottage Foods.
**Manufacturer's Address:** R.R. 1, Ohaton, ALB, T0B 3P0, Canada.
**Date of Introduction:** 1984.
**New Product–Documentation:** Soya Bluebook. 1984. p. 62.

1576. **Product Name:** Tofu.
**Manufacturer's Name:** Country Cottage Foods.
**Manufacturer's Address:** R.R. 1, Ohaton, ALB, T0B 3P0, Canada.
**Date of Introduction:** 1984.
**New Product–Documentation:** Soya Bluebook. 1984. p. 78.

1577. Flengmark, Poul; Augustinussen, Erik; Nordestgaard, Anton. 1984. Arter af baelgsaed 1979-81 [Species of grain legumes, 1979-81]. *Tidsskrift for Planteavl (Denmark)* 88(2):111-18. [11 ref. Dan; eng]
• ***Summary:*** Field trials were conducted with 9 grain legumes, including 2 soybean varieties. In some years, the protein yield of soybeans and lupins was higher than that of peas. The highest crude protein [CP] contents were found in lupin (approx. 48%) and soybean (35-43%). The soybean varieties tested were Fiskeby V (from Sweden) and Maple Presto (from Canada). Address: Statens Forsoegsstation, 4000 Roskilde, Denmark.

1578. **Product Name:** Tofu.
**Manufacturer's Name:** Nakasone Foods.
**Manufacturer's Address:** 1510-C 31st Street, North, Lethbridge, ALB, T1H 5J8, Canada. Phone: 403-328-4817.
**Date of Introduction:** 1984.
**New Product–Documentation:** Talk with Gene Arizono. 1987. He bought the company from Mark Nakasone in about 1986. Talk with Gene's wife. 1988. Sept. 27. The company has been renamed Sansei Foods. It will reopen in the spring of 1989 at Box 500, Coalhurst, ALB, T0L 0V0, Canada. Mark Nakasone started tofu production in 1984.

1579. **Product Name:** Aburagé (Deep-Fried Tofu Pouches), and Atsu-Agé (Deep-Fried Tofu Cutlets).
**Manufacturer's Name:** Nakasone Foods.
**Manufacturer's Address:** 1510-C 31st Street, North, Lethbridge, ALB, T1H 5J8, Canada. Phone: 403-328-4817.
**Date of Introduction:** 1984.
**New Product–Documentation:** Talk with Gene Arizono's wife. 1988. Oct. 17. Mark Nakasone made two types of agé when the Arizono's bought the company in 1986. He started making tofu in 1984.

1580. **Product Name:** [Tempeh Spread with Garlic].
**Foreign Name:** Tartiner au Tempeh.
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** Toronto, ONT, Canada.
**Date of Introduction:** 1984.
**Ingredients:** Organic soy tempeh, tamari, spring water, garlic, chives, soy oil.
**Wt/Vol., Packaging, Price:** 227 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1985, undated. 3.5 inches in diameter. Orange and green on white. "Fresh-Delicious-Nutritious. Great for sandwiches or on crackers. All natural. Ready to eat." Letter from Allan Brown. 1985. Aug. 7. 8 oz for $1.95. Letter (fax) from Allan Brown. 1998. Jan. 21. This Garlic Tempeh Spread was first sold in 1984, and continued being sold until 1986.

1581. **Product Name:** Soymilk, Tofu, Soy Ice Cream, Fried Accras, or Tempeh.
**Manufacturer's Name:** Plenty Canada Soya Shop. Renamed Soy Development Center by 1987.
**Manufacturer's Address:** Roseau, Dominica.
**Date of Introduction:** 1984.
**How Stored:** Frozen.
**New Product–Documentation:** Trinidad and Tobago Review. 1984. Oct. p. 27. "The 'noble bean' in the Caribbean. Accras (fritters), a traditional local food, are now made by mixing tofu and okara with wholewheat flour and seasonings, then frying.

Plenty Bulletin. 1987. Fall. p. 4. Note: This is the earliest known commercial soy product made in Dominica.

1582. **Product Name:** Tofu [Moderately Firm].
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1984.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1984. 6 x 5 inches. Plastic film for tub. Red and orange. In English and French. Moderately firm. Coagulated with calcium sulphate. 16 oz. "Pasteurized. No preservative." Two packets of tofu recipes. "News break from Sunrise." 1987. "Look what we're doing to sell tofu! Sunrise sponsors popular consumer contest in October '87 issue of Women to Women Magazine. Grand Prize: All expenses paid 7-days trip for 2 to a gorgeous Palm Springs Health Resort." Contest supported in 3 ways: In-store displays; Magazine support, Oct. 4-color double page spread, front cover flash; Radio support–97 Kiss FM, 30 second spots. Form filled out by Peter Joe. 1988. May 20. Gives date.

1583. **Product Name:** [Soft Tofu].
**Foreign Name:** Tofu Doux.
**Manufacturer's Name:** Sunrise Market Ltd.

**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1984.
**Ingredients:** Water, soybeans, magnesium chloride (extracted from nigari), glucono-delta-lactone.
**Wt/Vol., Packaging, Price:** 10 oz (300 gm).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 5.5 by 3.5 inches. Blue and white with color photo in middle of tofu cubes in a salad with lettuce, tomatoes, and cucumbers. "Pasteurized. No preservative." Product name also written in Chinese. Form filled out by Peter Joe. 1988. May 20. Gives date.

1584. Tetra Pak International. 1984. Tetra Pak V.I.P. Brochure (or Visitors Guide). Lund, Sweden. 46 p. 20 x 5 cm.
• ***Summary:*** This narrow booklet, out of print by 1990, contains a chronology of main events connected with aseptic packaging. V.I.P. Guides published after 1984 did not include this time line.

1944. The first development work starts on creating a package for milk that requires a minimum of material and gives maximum hygiene. This results in the principal on which the tetrahedral carton is based. Development work continued from 1944-1951.

"1951. AB Tetra Pak is formed in Sweden. The new packaging system, presented to the press in May 1951.

"1952 the first Tetra Pak machine was placed for a commercial operation in Sweden.

"1959. Development works starts on Tetra Brik, the new rectangular carton.

"1961 Oct. The first machine for filling bacteria-free milk aseptically is exhibited at a press conference in Bern, Switzerland." Note: All the company's machines prior to this date had been non-aseptic! The features of the packaging were low cost and hygienic. Much of the milk in Europe at this time was still sold unpackaged, in bulk.

"1963. March. Tetra Brik, the rectangular carton [non-aseptic], comes into commercial use in Medallia?, then in Stockholm, Sweden, later in the year.

"1964. The first AT machine [making aseptic tetrahedron packages] to be installed outside Europe is placed in Lebanon.

"1965. Deliveries of machines for aseptic filling gather speed–the trend towards longlife milk as a supplement to pasteurized starts in Europe and in several of the developing countries.

1968. The ½-litre Tetra Brik is introduced in Bochum, West Germany. The first version of Tetra Brik Aseptic is set up for field trials at Thun in Switzerland.

"1969. The first series of Tetra Brik Aseptic machines is ready for delivery. A new type of machine, the AT-1000, is introduced and the first deliveries go to Spain. Completion of the two-year delivery plan comprising 7 complete conversion lines and 25 aseptic filling machines for the Soviet Union.

"1974. Tetra Brik Aseptic is introduced in North America by Laiterie Cité in Canada. Concentrated juice is packed in 200 ml Brik Aseptic cartons and becomes a major dairy product.

"1979. Tetra Pak delivers the first aseptic Tetra Brik machine to the People's Republic of China, for chrysanthemum tea and sugarcane juice.

"1980. On exhibition at the DLG Fair in Frankfurt, West Germany, is the first Tetra King machine for 500 ml packages. Also presented is the new generation of aseptic Tetra Brik machines, AB 8. This machine has a capacity of 5,000 cartons per hour, made possible by a new sterilization bath.

"The market for portion packs continues to grow and a special space-saving aseptic Tetra Brik machine, AB 9, is now available for small volumes."

The original tetrahedron package, developed by the founder, Dr. Rausing, was originally called the Tetra Pak. Then the brick-shaped package, developed later, was called the Tetra Brik, and the company was named Tetra Pak, and the tetrahedral pack was renamed the Tetra Standard.

Concerning the "aseptic process": It was developed years before by Dole for a canning system. Then it lay dormant for a while. Address: Sweden.

1585. Bourdon, Mary B. 1984. Charlottetown Research Station 1909–1984 [Prince Edward Island, Canada]. *Agriculture Canada Research Branch, Historical Series* No. 19. (Research Station, P.O. Box 1210, Charlottetown, P.E.I., C1A 7MB, Canada).
• ***Summary:*** Chapter 6, "The Depression Years," notes that forages received increased emphasis. "From 1932 to 1936 forage research work at Charlottetown underwent expansion in the numbers of crops and varieties tested. New crops introduced included soybeans, millet, lupine, lespedeza,..."

Chapter 20, "Protein Crop Studies" (p. 61) is about soybeans. A large photo with a sign that reads "Regional Soybean Variety Trial," shows a field of soybean varieties that are being evaluated at the Charlottetown Research Station.

"In 1974, a soybean variety testing program was initiated at Charlottetown Research Station. Mr. J. Brian Sanderson, in cooperation with soybean breeder Dr. H.D. Voldeng, Ottawa Research Station, began testing soybean varieties under cool, moist Maritime conditions. Maple Presto, a variety developed at the Ottawa Research Station, was high yielding and sufficiently early to mature. When Brian Sanderson went on educational leave (1978-1980), Dr. John MacLeod assumed responsibility for soybean variety evaluation and management. Technology transfer projects funded by the Department of Regional Economic Expansion were begun under the direction of Dr. MacLeod.

One such project was to evaluate the commercial potential of Maple Presto in the region. This project and others like it were conducted as a cooperative effort of researchers, producers, and extension workers. Subsequent variety evaluation by Dr. MacLeod identified Maple Amber as a soybean variety with potential for the region."

Note: Chapter 6 seems to indicate that soybeans were not tested at this station on PEI prior to the early 1930s. Address: Canada.

1586. Central Soya Co. 1984. Annual report: Fifty years of growth and a future to share. Fort Wayne, IN. 28 p.
• ***Summary:*** This is part I of the company's two-part annual part on its 50th anniversary, celebrated on 2 Oct. 1984. Part I gives a review of the past year. Net sales were $1.73 billion. Earnings from continuing operations were $18.7 million, or $1.29 per share.

"In memoriam–H.W. McMillen. On March 26, Mr. Harold W. "Mick" McMillen, age 77, former Chairman of the Board of Central Soya Company, died in Fort Wayne. Throughout his 17-year tenure as Chairman of the Company, Mr. McMillen helped guide Central Soya form a $100 million feed and soybean processing operation to a billion dollar international agribusiness and food processing company."

Central Soya is divided into two groups: Agribusiness and Food. The Agribusiness Group is composed of four divisions: Soybean Processing, Grain Merchandising, International Feed, and Domestic Feed. The Soybean Processing Div. of the Agribusiness Group was strengthened by the acquisition of Victory Soya Mills of Ontario, Canada. This is Central Soya's 9th soybean processing plant and its first in Canada.

The Food Group is composed of parts: Fred's Frozen Foods, Refined Oil Division, Chemurgy Division, J.H. Filbert, Inc., Zatarain's, Inc., and Centre Brands, Inc. The Chemurgy Division "experienced significant increases in sales volume of all major product lines, led by Response textured soy protein concentrate and Centrolex granular lecithin." Response is used mostly in meat and poultry products. Centrolex is sold mostly to the health food market. Address: Fort Wayne, Indiana.

1587. Ontario Agricultural College Alumni Association. 1984. The Ontario Agricultural Hall of Fame: Charles A. Zavitz (1863-1942) (Leaflet). Guelph, Ontario, Canada. 4 panels. Front and back. 21 cm.
• ***Summary:*** This 4-panel leaflet is printed with dark brown ink on heavy beige paper. On the front panel is the title, plus a circular logo and the words "In recognition of Service to Ontario Agriculture." On the inside left page is an excellent portrait illustration of Charles Zavitz, done in 1984 and based on an existing photograph. He is wearing a double-breasted suit and necktie. His head is nearly bald and he has a white mustache and a white pointed beard. He looks serious (not smiling) and is facing slightly to the right. On the inside right page is a brief description of his career: "Charles Zavitz was a native of Coldstream in Middlesex County. A member of the first graduating class at the Ontario Agricultural College in 1888, for 41 years he was actively engaged in teaching and research on the Guelph campus. In 1883 he was placed in charge of all field crop experimental work; in 1904 he was appointed Professor of Field Husbandry and Director of Field Experiments, later being named Head of the Field Husbandry Department. Dr. Zavitz is best known for his work in cereal grains and his system of test plots. His greatest achievement was the development of 'OAC 21' Barley, but over 15 years he introduced many other varieties of cereal grains to Ontario farms.

"Ontario's success with alfalfa is attributed to Dr. Zavitz, and he was also a strong advocate of soybeans.

"His potato research was nationally accepted and he wrote a wide range of bulletins and publications.

"In 1916 he received an Honorary Doctor of Science degree form the University of Toronto, and in 1935 an Honorary Doctor of Law degree from the University of Western Ontario."

The back panel is blank. Note: 1984 marked the 100th anniversary of Charles' registration at OAC. Address: Guelph, Ontario, Canada.

1588. Perkins, David S. 1984. The history of Drackett. Cincinnati, Ohio. 18 p. (Unnumbered). 21 cm.
• ***Summary:*** This interesting history, containing many photos, was written for in-house use to update the company's history and to commemorate the company's 75th anniversary in 1985. "Another new venture begun in the 1930's was soybean extraction. The Company's goal was to provide raw materials from which other products could be developed. At the pilot plant, built in 1937, research led to the development of industrial proteins [probably 'alysol'] which could be used for manufacturing paints, adhesives, emulsifiers, and shoe polish. Scientists in the Nutrition Laboratory experimented with soybean products as animal feed.

"In 1940, Drackett completed building a soybean extraction plant and storage silos in Sharonville, several miles north of the Spring Grove Avenue headquarters. A year later the plant was operating round the clock producing soybean oil, and soybean meal for cattle feed. By 1945 Drackett was one of the largest soybean processors in the Midwest.

"In 1946 Drackett began using soybean products to make molding powder and plastic preforms for the molding industry. During this time Drackett research also developed a textile fabric, Drackett Soybean Azlon, which could be blended with rayon and either wool or cotton.

"Another soybean product Drackett marketed was Charge Dog Candy [Charge Candy for Dogs, launched in about 1949 and first mentioned in the 1949 annual report]. Its ingredients included soybeans and bone meal, and the product was to be used as a reward for training, as a special treat, and as a supplement to a dog's regular diet [Apparently dog's dated it.]

"As in other industries, World War II strongly affected Drackett. The business suffered from limited raw materials, manpower, and equipment... The Company did supply soybean fats, oils, and protein food materials to the Department of Agriculture... Once the war was over, the company quickly grew. It nearly doubled in size–from 225 employees in 1942 to 522 in 1945. More growth resulted from public financing in 1944, which provided funds for additional equipment and research."

"Although soybean extraction had helped the Company through World War II, post war conditions began to make the operation less profitable. In 1957 management decided to sell the Sharonville plant in order to concentrate Company efforts on researching, manufacturing, and marketing household cleaning products."

A page of photos shows: (1) The Sharonville soybean processing plant with its new silos. "By 1945 Drackett was the largest soybean processor in Ohio." (2) A sack of Ortho Protein, which had many industrial uses, including as a component for manufacturing shoe polish, paint, and adhesives. (3) A case of Charge Dessert for Dogs. (3) During World War II there was a shortage of cloth. Roger Drackett (left), his father Harry, Robert Boyer, and one other employee are shown "examining socks and a blanket made with Drackett Soybean Azlon. After World War II, the development of other synthetics made it less profitable to use soybean fibers for manufacturing cloth."

In 1948 Roger Drackett became president and an era of expansion began. In 1948 The Drackett Company of Canada, Ltd. was established as a subsidiary to produce and sell Drano and Windex in Canada. In 1957 and 1958 Drackett made its first bid for the night time television audience with sponsorship of two of America's favorite programs, "Wagon Train" and "Maverick." By 1963 Drackett also had branches in West Germany, England, and Australia. In 1964 Drackett stock, which had been public since 1944, was first listed on the New York Stock Exchange. In that year sales were $58,476,246 and net profits were $5,053,679. In 1965 Bristol-Myers acquired Drackett. In 1968 marketing for Metrecal and Nutrament was transferred to Drackett from another Bristol-Myers division. In 1972 Roger Drackett retired. As of 1984, Drackett products that are first in their category include: Windex glass cleaner, Drano drain cleaner, Vanish bowl cleaners, Renuzit air fresheners, O-Cedar mops and brooms, Endust dust and cleaning aid, Nutrament fitness and energy food, and Twinkle, a paste cleaner for silver or copper-clad kitchen utensils. Address: Director, Public Relations, The Drackett Co., 201 East Fourth St., Cincinnati, Ohio 45202-4178. Phone: 513-632-1500.

1589. Shurtleff, William. comp. 1984. Semi-log graph of soybean production in Canada, 1941-1981 (Overview). Lafayette, California. 1 p. [14 ref]
• ***Summary:*** If we plot Canadian production of soybeans (for beans) on a semi-log graph–the kind most useful in showing rates of growth and changes in those rates–we see that the rise in this production was most rapid from 1941 to 1955, when the crop reached 150,000 metric tons.

After 1955 the rate of growth slowed until about 1977 when it began to increase again; it reached 700,000 metric tons in 1980.

Note: From 1977 until about 1997 the rate increased again. Address: Founder and Director, Soyfoods Center, Lafayette, California.

1590. Spillers Premier Products Ltd. 1984. Product information. Puckeridge, Ware, Hertfordshire SG11 1RW, England. 8 p. Manufacturer's catalog.
• ***Summary:*** Soy products include Bredsoy, Soygold, Soyolk, Trusoy, Soyex, Trugran, Toasted Soya Bran, Defatted Soya Products, and imported Canadian Soya Beans. Address: Puckeridge, Ware, Hertfordshire, England. Phone: 0920 821291.

1591. Srihara, Priyadarshini. 1984. Processing to reduce the antigenicity of soybean products for preruminant calf diets. PhD thesis, University of Guelph, Canada. Page 3128 in volume 45/10-B of Dissertation Abstracts International. * Address: Univ. of Guelph.

1592. SilverPlatter Information, Inc. 1984—. AGRISEARCH (Computerized databases). [75000* ref. Eng]
• ***Summary:*** AGRISEARCH incorporates five databases covering agriculture, food, and nutrition–worldwide. The five are: CRIS from the U.S. Department of Agriculture (USDA); ICAR (Inventory of Canadian Agri-Food Research) from the Canadian Agricultural Research Council; ARRIP (Australian Rural Research in Progress) from the Australian Standing Committee on Agriculture; SIS from the Special Program for African Agricultural Research (SPAAR, World Bank, Washington, DC); and AGREP (the permanent inventory of AGricultural REsearch Projects) from the Commission of the European Communities. The coverage is up to 10 years and the database contains 75,000+ records. About 5,000+ records are added annually. Address: 100 River Ridge Dr., Norwood, Massachusetts 02062-9742. Phone: 1-800-343-0064.

1593. *Caribbean Contact.*1984? Canadians experiment with soybean in Jamaica.
• ***Summary:*** In Jamaica, Plenty Canada is "conducting an integrated soy foods programme involving the growing of soybeans and other food crops and the introduction of soyfoods such tofu, soy milk, and tempeh to householders. The project, which began in Sept. 1983, is currently assisting over 40 farmers in the growing of soybeans... and has produced soy foods at nearly 30 demonstrations to well over a thousand Jamaicans." Plenty has conducted variety trials for over 200 varieties of soybeans with the Hillside Farmers Association. "Plenty is working with six schools in St. Ann parish to supply materials and training for establishing school gardens. The produce from these gardens will be used in the school lunch programmes...

"Generally, two types of demonstrations are provided. First the people are shown how to cook with tofu and soy milk and are given samples of the foods prepared. In the second demonstration, the actual production of these products is shown, and instruction sheets provided...

"Plenty Canada is currently seeking funding from the Canadian International Development Agency for a three year extension of the project in Jamaica. During this time, a small production facility for soy foods will be set up, nutritional study and training undertaken, and further school lunch programmes developed...

"Plenty Canada is also conducting projects in Antigua, Dominica, St. Lucia, and St. Vincent in the Caribbean and Lesotho in Southern Africa."

1594. *SoyaScan Notes.*1985. The ten largest university libraries in the USA and Canada in 1985 (Overview). Jan. 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** According to a ranking by the Association of Research Libraries, America's ten largest university libraries, based on library holdings are as follows (million volumes in library/current serials (thousands)/million dollars spent for materials): 1. Harvard [Massachusetts] (10.6/99.5/$6.2). 2. Univ. of California at Berkeley [California] (6.3/101/$4.3). 3. UCLA [California] (5.7/80.9/$4.9). 4. Yale [Connecticut] (7.9/52.2/$4.1). 5. Stanford [California] (5.0/46.5/$4.6). 6. Univ. of Texas (5.1/61.1/$6.2). 7. Univ. of Toronto [Ontario, Canada] (4.9/42.9/$4.4). 8. Univ. of Michigan (5.6/61.4/$4.3). 9. Columbia Univ. [New York] (5.2/60.5/$3.3) 10. Univ. of Illinois (6.4/93.9/3.5).

The association's index takes into account volumes held, gross number of volumes held, microfilms held, current serials received, expenditures for library materials (incl. binding, salaries and wages, and other operating expenses), and number of professional and nonprofessional staff members.

A simpler ranking by total volumes held (in millions) is: Harvard (10.4), Yale (7.7), Illinois (6.2), Cal Berkeley (6.1), Michigan (5.5), Columbia (5.2), Stanford (4.9), UCLA, Texas, Toronto.

1595. Sierra, Edward. 1985. Re: Plenty's work with soybeans in the Caribbean. Letter to William Shurtleff & Akiko Aoyagi Shurtleff at Soyfoods Center, Jan. 11. 2 p. Typed, without signature on Plenty letterhead.
• ***Summary:*** Thanks for joining Plenty with a kind donation. Plenty was founded in Oct. 1974. PAS stands for Plenty Ambulance Service.

On page 8 of the Tenth Anniversary Newsletter [about Oct. 1984] the top photo shows our soy tech and a rasta friend looking over *The Book of Tofu.* We have taken to heart your suggestion for spelling "soyfoods" as one word–an appropriate industry standard.

Plenty's work with soybeans and soyfoods in the Caribbean is going well. On Jamaica, Plenty Canada is funding some agricultural work with variety trials of soybeans and other vegetables.

"On St. Lucia, as a result of our work last year, there are 135 farmers now growing soybeans and plans call for setting up a "Soy Shop" [to sell soyfoods] there soon. The first Soy Shop is on the island of Dominica where Plenty volunteers Sara [sic, Sarah] & Norman Ayerst have launched an integrated soy program (agriculture, variety trials, soy demonstrations, etc.) which, last year, flowered into the Soy Shop. Sara, who did the soy demonstrations on Dominica, found that there was a popular and tasty food called "rootis" (pronounced 'roadie'), which are sauce & meat wrapped in dough and fried. She whipped together a tasty tofu recipe and popped that in, and they're a great success! I quote to you from Norman's most recent letter:

"'The soya shop is still doing quite well. We sell about 800 accras (fritters) per day (25 cents ea.). We're open Mon. thru Fri.–can't handle the weekends yet. Ice cream is also a big seller and when we get our own machine we have requests for wholesale lots of the ice cream. We recently put tempeh on the market and it sells slowly (but steadily), at this point–along with the tofu and bottled soymilk. We are planning for some promotion of these last three products–milkshakes, sandwiches, etc. Once the folks taste some appetizing dishes they're much more willing to take the product home in its raw form. There are a lot of vegetarians here and people interested in health, and everyone seems to have a great love of good food.

"'We're operating out of a big house in the Newton district of Roseau... A friend of ours has reopened our old shop under the name of "Soy Kweyole". The new shop is its own entity [self owned by the local folks, which was one of our original goals for the project... ed.] but we have provided backup in many ways and we supply the basic raw materials for the soyfoods they sell. They're going into baked goods–high protein breads, cakes, pies, etc. It looks like they are going to do very well.

"'We are just gearing up to go into soyflour production and sales–it's probably going to be a big seller, judging from our initial marketing survey. Soy fever has definitely hit these parts...It seems as though people are starting to see the economic benefits to soy (not to mention nutritional value) and our project has gotten its feet on the ground. People want to help move things in a positive direction.'

"One of the heart connections that has come of our work with soy in the Caribbean, is with the rastas. Many of them have long ago vowed to "not eat no flesh mon!" stick with "Ital"–godfood, pure stuff. Many were into soy but had none. One fellow, Ras Bongo on St. Vincent, had been given four soybean seeds by one on another island. Ras Bonga planted them, and carefully saved the seed each year, until he could afford to try some. Meanwhile, he asked around for soy, how to use it, recipes, ideas for growing them, but found little. When we showed up we were able to supply him with more seeds and show him how to cook soyfoods. This is one of the intangible rewards that come with the work." Address: Plenty USA, P.O. Box 90, Summertown, Tennessee 38483. Phone: (615) 964-3992.

1596. Associated Press (AP). 1985. Peking paper says cheap tofu in short supply. *Toronto Star (Ontario, Canada).* Jan. 30. p. D8.
• ***Summary:*** For the Chinese, tofu (or soybean curd) is a staple food and a chief source of protein–although many westerners find it tasteless and spongy.

"Rationed by the state, the cheapest variety is in particularly short supply in Peking, the official English-language *China Daily* news reports."

Production of tofu cannot keep up with the demand of Peking's five million consumers, however there is no incentive to increase output since the state maintains tofu's traditional price (29 cents Canadian per kilogram) despite the rising costs of energy and raw materials–said the newspaper.

Last year, factories in Peking made 30.6 million kilograms (67 million pounds) of tofu, up 33% from 1979. But even with ration coupons, it is not always available at state grocery stores. Each resident of Peking is allowed 680 grams (24 ounces or 1½ pounds) a month of the most popular kind.

1597. *CSY FYI (Central Soya Newsletter, Fort Wayne, Indiana).*1985. New processing plant a waterfront institution: Victory Soya Mills. Jan. p. 3-4.
• ***Summary:*** Central Soya acquired Victory Soya Mills in Toronto 7 months ago. Canada's largest soybean crushing plant, it processes 1,350 tons of soybeans daily, 7 days a week, 24 hours a day. It has recently been operating at near record volume since two of the mill's chief competitors (Mapleleaf Monarch and Canadian Vegetable Oil Products) have endured strikes in recent months.

Central Soya's first processing plant in Canada, it employs 118 people. Its main products are soy oil (for food and industrial uses), and soybean meal (used in livestock and poultry feeds). Other products include lecithin and soybean flour, both used in the baking and confectionery trades. The plant has been a Toronto waterfront institution since World War II. It was built during the early 1940s by financier E.P. Taylor, and originally operated as Sunsoy Products Ltd., the first [sic] soybean processor in Canada.

1598. **Product Name:** Tofreezi (New Name for Frozen Buddha Soy Ice Cream) [Mocha Royalle, Berry Banana, Amaretto, Pineapple Coconut, Chocolate Mint, or Maple Walnut].
**Manufacturer's Name:** Metta Tofu Products Ltd.
**Manufacturer's Address:** Wren Rd., Denman Island, BC, V0R 1T0, Canada.
**Date of Introduction:** 1985. February.
**Ingredients:** Incl. soymilk, tofu, honey, fruits, nuts, natural flavorings.
**Wt/Vol., Packaging, Price:** Half liter and full liter cartons.
**How Stored:** Frozen.
**New Product–Documentation:** Label. 1985, undated. Red and blue with black letters on white. Shurtleff & Aoyagi. 1985. Tofutti & Other Soy Ice Creams. p. 78. Product Alert. 1986. March 3. Lists flavors. "Tofreezi is 75% soymilk and tofu by volume." Leviton. 1986. East West. June. p. 37. Rated the highest of all soy ice creams in America.

1599. Shanmugasundaram, S. 1985. The Tropical Vegetable Information Service. *TVIS News* 1(1):1. Feb.
• ***Summary:*** The Tropical Vegetable Information Service was established by AVRDC with grant funds from the International Development Research Centre of Canada. The objective of the project is to strengthen and expand specialized information analysis activities on tropical vegetables, specifically mungbean, soybean, and Chinese cabbage. The goals of the program are to collect, store, and analyze documents, and to establish a computerized information retrieval system for these crops. To meet these goals, TVIS will be responsible for producing a computerized literature-retrieval service and a variety of publications. The retrieval service should be operational by May of 1985. Address: AVRDC, Shanhua, Taiwan.

1600. Shurtleff, William; Aoyagi, Akiko. 1985. Tofutti & other soy ice creams: Non-dairy frozen dessert industry and market. 2 vols. Lafayette, California: Soyfoods Center. Vol. 1, 144 p. Vol. 2, 214 p. Index. Feb. 28 cm. [129 ref]
• ***Summary:*** The first study of the rapidly emerging soy ice cream market, based on historical principles. Contents: Volume I. 1. Introduction. 2. What are non-dairy frozen desserts? Standards, terminology, and labeling laws. 3. History of non-dairy frozen desserts. United States and

Canada (1918–present), History of Tofu Time Inc. and Tofutti, East Asia (1936-), Europe (1946-), Third World countries (1970-), Australasia and the Middle East.

Pages 75-92, titled "The Tofutti Era and Tofutti Clones, contain histories and descriptions of four categories of non-dairy ice cream companies. Within each category, the companies are listed in the sequence that their products appeared: (1) Small soyfoods companies: Penguino's Inc. (New York), Green World (Idaho), Garden of Eatin' (California), Soy City Foods (Ontario, Canada), The Soy Shop (Georgia), Metta Tofu Co. (British Columbia, Canada), Island Spring (Washington state), Evolutionary Foods (Arizona), Midwest Tofu & Sprouts Co. (Nebraska), Cream of the Bean (Illinois). (2) Soyfoods companies that used a mixture of tofu or soymilk and soy protein isolates to make Tofutti-type products: Brightsong Light Foods (California), Farm Foods (Tennessee), White Wave (Colorado). (3) Dairy companies (or non-soyfoods companies) that launched Tofutti-style products: Presto Food Products (California), Colombo, Inc. (Massachusetts), Honey Hill Farms (California), Continental Yogurt (California), Gloria Vanderbilt / Frusen Gladje Ltd. (New York), Barricini Foods Inc. (New York), Parvelle Corp. (New York), Carvel Corp. (New York), Tuscan Dairy Farm (New Jersey), Golden Seal Riviera Ice Cream Co. (New York). (4) Innovative makers of non-dairy frozen desserts that are not soy-based: Olympus Industries (Washington, Yodolo), and Imagine Foods (Arkansas, Rice Dream).

4. The soy ice cream industry and market in the U.S. and worldwide. 5. Nutritional value of soy ice cream. 6. Directory of people, organizations, and publications connected with non-dairy frozen desserts. 7. Tofu standards and soy ice cream. 8. Technical information on soy ice cream production. Ingredients and sample ingredient listings; Formulas and processing techniques. 9. How to calculate the amount of tofu in a tofu ice cream. 10. Bibliography (129 entries). 11. Index. About The Soyfoods Center.

Volume II. Documents and Graphics Related to Soy Ice Cream. This volume contains early historical and current popular articles, product labels, posters, graphics, and corporate brochures. A rich source of information for marketing and product development, these also document the rapid growth of soy ice creams worldwide. The publication is not paginated. Contents: 12. Early history (1918-1969). 13. Farm Foods and Ice Bean (1974-). 14. Tofu Time and Tofutti (1980-). 15. Other Soy Ice Creams and General (1976-). 16. Technical information on soy ice cream production. This last section lists ingredients and recipes, and discusses regulations, labeling, production processes, and quality of soy-based frozen desserts–largely ice cream, but also popsicles, sherbets, custards, etc. Fermented or cultured soymilks are also discussed briefly.

As of Jan. 1998, both volumes are bound as one.

Note: This is the earliest document seen (Oct. 2001) that contains industry or market statistics for soy ice cream by geographical region. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1601. **Product Name:** Yves Tofu Wieners. Imitation Wiener (Meatless Hot Dogs).
**Manufacturer's Name:** Yves Natural Foods.
**Manufacturer's Address:** 1138 East George St., Vancouver, BC, V6A 2A8, Canada.
**Date of Introduction:** 1985. February.
**Ingredients:** Tofu, water, soybean oil, wheat gluten, egg albumen, wheat germ, nutritional yeast, sea salt, spices, hydrolized vegetable protein, natural hickory smoked flavor, beet powder, guar gum.
**Wt/Vol., Packaging, Price:** 8 wieners per 12 oz plastic pack. $2.89 retail.
**How Stored:** Refrigerated.
**Nutrition:** Per 1.6 oz wiener. calories 91, protein 7.8 gm, fat 9.8 gm, carbohydrate 3.0 gm, sodium 254 mg, cholesterol 0. 17% of protein RDA.
**New Product–Documentation:** Spot in Product Alert. 1986. March. Label. 1986, undated. "Soy product. Contains no meat." Ad in Natural Foods Merchandiser. 1987. March. p. 99. "Positively the best tasting tofu wieners you've ever tried. Made from fresh tofu and a special blend of fine natural ingredients." This ad (1/3 page, black and white) also appeared in East West Journal. 1987. June. p. 73. Leaflet. 1987. 8½ by 11 inches, color. Same title as ad. "Made from Fresh Tofu and a Special blend of Fine Natural Ingredients."

Talk with Tracy Wright, executive assistant to Yves Potvin. 1999. Nov. 24. This was the company's first product, launched in Feb. 1985.

Note: This is the earliest known commercial soy product made or sold by Yves. It is also the earliest record seen (Jan. 2010) concerning Yves.

1602. Kilgour, Christine. 1985. Re: Work with soyfoods for Plenty Canada in St. Lucia. Letter to William Shurtleff at Soyfoods Center, March 6. 2 p. Handwritten on Plenty letterhead. With envelope from St. Lucia.
• ***Summary:*** "Having received my 'soy training' [at The Farm] in Tennessee, I'm out in the field now sharing the knowledge. My husband John and I are living in St. Lucia..., where Norman & Sarah Ayerst have been doing a soy project. I recently saw a couple of letters you exchanged with Edward Sierra on The Farm and wondered if we could get in on your offer of a book or two on soyfoods...

"Soy, or 'soya' as we say in the Caribbean, is catching on like wildfire. What would we do without our old copy of *The Book of Tofu* or our wonderful new copy of *Tofu & Soymilk Production!* Apart from the text, Akiko's drawings are great. I've always admired her sure, fine hand. I've

enclosed my only U.S. dollar to help out with postage on a return letter–Sincerely, Christine Kilgour.

"P.S. We learned a new (to us) soyfood here from a Guyanese lady; she calls it tokara [tofu with the okara]. Curding the slurry all at once, then strain it. (No one wants to throw away the pulp or course.) This uses the whole bean, one less step than tofu. When seasoned up nicely, it can be fried, deep-fried, and is a tasty (similar in taste) replacement for what they call here an 'accra'–usually done with salt fish. How long would you say to boil the slurry before curding the whole thing–for good digestibility–remember it then gets fried after as well. We usually (boil) do it about 30 min. Sarah was doing it for an hour in Dominica, just to be sure. I'm interested in your opinion." Address: c/o Plenty, General Post Office, Castries, St. Lucia, West Indies.

1603. Flengmark, Poul. 1985. Solsikke og soyabønne–en nicheproduktion i Danmark? [Sunflower and soyabeans–A production niche in Denmark?]. *Dansk Froavl* 68(4):70-73. March. [Dan]

• ***Summary:*** Discusses soybean and sunflower cultivars, planting, soil requirements, fertilizer application, plant density, weeds, diseases, harvesting and utilization in Denmark. Soybeans must be inoculated with *Rhizobium japonicum* since these bacteria are not found in Danish soils. A table (p. 72) shows the yields of two soybean varieties from 1968 to 1973 at Roskilde. Donovans (from Canada) was tested from 1968 to 1971; its highest yield was 2,370 kg/ha in 1969, and its lowest yield was 1,200 kg/ha in 1968. Fiskeby V (from Sweden) was tested from 1969 to 1973; its highest yield was 2,220 kg/ha in 1969, and its lowest yield was 1,235 kg/ha in 1970. A photo (p. 73) shows soybeans growing at Roskilde. Address: Statens Forsoegsstation, Roskilde, Denmark.

1604. Gupta, Rajendra P.; Gupta, Rashmi R. 1985. Process for making soymilk with no beany flavor. *Canadian Patent Application* 477,902. March. *

1605. *J. of the American Oil Chemists' Soc.*1985. Soy pioneer bows out, others grow bigger. 62(3):474, 476. March.

• ***Summary:*** The soybean crushing industry is undergoing major restructuring as A.E. Staley Manufacturing Co., a pioneer in soybean processing, leaves the business. On 2 Jan. 1985 Cargill finalized its purchase of six soybean processing facilities from Ralston Purina. At that time it probably passed ADM to become America's largest soybean crusher. The plants acquired by Cargill are in Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Kansas City, Missouri; Louisville, Kentucky; and Raleigh, North Carolina. A 7th plant owned by Ralston Purina at Memphis, Tennessee, was not offered for sale, but was scheduled to be closed in February.

With this acquisition, Cargill now has 20 soybean crushing plants in the Midwest and Southeast. The location of each of Cargill's 14 other soybean crushing plants, with daily processing capacities ranging from 20,000 bushels to 120,000 bushels, are given.

Ten days later the A.E. Staley Manufacturing Co. announced it had sold its soybean crushing business to Illinois-based independent Soy Processors Co., owned by a general partnership of individuals associated with Archer Daniels Midland (ADM) and including ADM as a minority partner. With this, ADM probably recaptured its lead, but only by a slight edge.

In October Staley agreed to buy CFC Continental Inc., the nation's second largest supplier to the food service business. Ralston Purina, meanwhile, in October acquired ITT's Continental Baking Co.

Central Soya Co. has 9 soybean crushing plants, 7 of them in the USA at: Gibson City. Illinois; Decatur and Indianapolis, Indiana; Bellevue, Delphos, and Marion, Ohio; and Chattanooga, Tennessee. These 7 U.S. plants are said to have a total capacity of about 10,000 tons/day of soybeans. The 2 plants outside the U.S. are in Utrecht, The Netherlands, and Victory Soya Mills in Toronto, Ontario, Canada.

Ag Processing, a cooperative based in Omaha, Nebraska, operates 6 soybean crushing plants in the USA at: Van Buren, Arkansas; Eagle Grove, Sergeant Bluff, and Sheldon, Iowa; Dawson, Minnesota; and St. Joseph, Missouri. Total crushing capacity is estimated at 11,000 tons/day of soybeans. Ag processing is now entering the edible oil refining business, constructing its first refinery adjacent to its soybean crushing plant at St. Joseph, Missouri. Expected to be completed in 1985, it is rated to have a refining capacity of 12 tank cars (720,000 pounds) of soybean oil per day.

Two poultry-related firms that are building oil refineries next to their soybean crushing plants are Perdue Inc. of Salisbury, Maryland, and Townsends of Millsboro, Delaware. Each refinery will have a capacity of 12 tank cars (720,000 pounds) of soybean oil per day.

According to the *Soya Bluebook*, the capacities of Perdue's two crushing plants are 700 tons/day at Salisbury, Maryland, and 600 tons/day at Cofield, North Carolina. Townsend's single crushing plant has a 1,200 tons/day capacity.

1606. Laidlaw, Maggie; Mercer, Nina J.H. 1985. Serum cholesterol, triglyceride and lipoprotein response in hypercholesterolemic males to replacement of cow's milk with a soy beverage (Abstract). *Federation Proceedings (FASEB)* 44(5):1498 (Abst. #6360). March.

• ***Summary:*** Isolated soy protein partially replaced animal protein in the diet of 19 subjects for 56 days. The total cholesterol of all subjects was lowered 4%, but that of the responders was lowered 8.5%. There was no significant change in LDL or VLDL cholesterol. Address: Dep. of Family & Consumer Studies, Univ. of Guelph, Guelph, Ontario N1G 2W1, Canada.

1607. Lee, Judith Fox. 1985. [Plenty Canada has been expanding its work...] (Brochure). Lanark, ONT, Canada: PLENTY Canada. 4 p. March. [Eng]
Address: Lanark, ONT, Canada.

1608. *Plenty Bulletin (Summertown, Tennessee).*1985. Tragedy in Africa: The root causes. 1(2):1-4. March.
• ***Summary:*** Starvation in Ethiopia is now attracting headlines. This article discusses the roots of hunger in Africa and Plenty's work with soyfoods in Africa. "Since 1978 Plenty Canada, assisted by Plenty-USA with primary funding from Canada, has undertaken a variety of rural development projects in Lesotho. Last year, the Near East Foundation in New York City awarded a grant to Plenty-USA to send three consultants to Lesotho. The three were to study health care, agriculture, and the potential for soy foods in the region where our project is located and make recommendations for expanding development efforts in these fields."

"The Plenty project village is located in a mountainous region along the Quthing River in southeastern Lesotho. The area served by the project encompasses a population of approximately 11,000 Basotho people residing in 116 villages. All these villages are within a day's travel from the project headquarters. The project currently provides employment for 150 to 200 Basotho people each day in a variety of activities including... soyfoods processing."

1609. *Grocer (The) (England).*1985. Soya milk spearheads move into yogurt, ice cream. April 6. p. 23.
• ***Summary:*** Michael Cole, managing director of Soya Health Foods of Trafford Park, Manchester, reports that he is selling about £3 million worth of his new Sunrise soya milk each year, and producing 46,000 gallons a week in half-liter aseptic Tetra Pak cartons. Major grocery chains have shown great interest in the product. Most competing soya milks are imported to England. Cole imports only his soya beans–from Canada. His company's biggest competitor is Granose, which is selling through Safeway and other outlets.

Cole presently has to feed his okara, a by-product of soymilk production, to pigs. "But in the next few weeks we will be installing a vegetarian sausage and burger plant which will take care of that."

Cole is a former health food shop owner who has all been involved in the marketing and manufacturing side of the trade, not only in England but also in India and America.

A large photo shows Cole standing next to stacked cartons of his Sunrise Soya Milk. The caption reads: "'Soya yogurt possible–Michael Cole."

Note: This was the article that led to the founding of Genice in Wales. Ray Pierce, who was with Classic Ices in Wales at the time read the article, learned that Michael Cole of Soya Health Foods Ltd. was planning to make a soy ice cream, then contacted Cole and offered to work with him in developing the product. It became Classic Ice's first non-dairy ice cream. Seeing its potential, Ray and Irene Barclay left Classic Ices and started Genice. Address: Manchester, England.

1610. Meyer, Edwin W. 1985. Details on work with The Glidden Company (Interview). Conducted by William Shurtleff of Soyfoods Center, April 8. 4 p. transcript.
• ***Summary:*** Discusses: ADM's solvent extraction plant in Chicago, Norm Witte, Central Soya's Miracle Meal (the world's first dehulled soybean meal made with a desolventizer-toaster; launched in 1952, it revolutionized the poultry industry), Central Soya's first desolventizer-toaster started operation in Decatur in May 1950, Central Soya's soy protein concentrate plants, Robert Boyer and Frank Calvert, Norman F. Kruse [pronounced Cruze], Endre F. Sipos. Elmer B. Oberg.

Say Calumet Harbor, not Calumet River; Ed thinks they acquired the 2 country elevators on the rivers but may have added on something. Ed Wilhelm might know.

Promine was used mostly by a large sausage manufacturer in Detroit, Michigan, for its functional properties. It was looked at but never used by John Morrell & Co., Armour, Swift, or Kraft–which had an all-meat image and mentality; "they never touched it.

Glidden sold Morrell a lot of soybean grits for dog food, for years during the 1930s; Morrell had a dog food company in Iowa, which made a popular canned product.

Ed had to make a rapid exodus from the Glidden Co. on Laramie after ADM bought it. They wanted to get in quickly; he left some important documents behind.

ADM did sell their lecithin through the American Lecithin Co. in the early days, just like Glidden. Ask Joseph Eichberg about the exact nature of the agreement.

Ed wouldn't say that Glidden soy operations Chicago was struggling, but their profits were not up to Glidden's expectations so they were considered a weak division. World War II helped a lot financially, especially since the industrial protein was requisitioned by the U.S. Navy through NFS. Toward the end of the war Glidden was supplying soy flour for the relief programs to the liberated areas, especially Italy.

Oberg is too gracious to say that Central Soya bought Glidden largely for its research team. The main reason was the price was cheap; the whole works for $14 million,

including all the elevators. Central got a great deal. Some years later they sold the Calumet Harbor elevators to Cargill for $8 million. At that time Central Soya had only a small development group under Sipos, who is still with them. He reported to Norm Kruse, starting in 1953. True, they basically had no research team. It was of equal importance to many others.

Steroids: After 1953 they had a major contract with Charles Pfizer Co. to process steroids and to sell them an intermediate for making corticoid steroids / hormones. That was the main business. They also had a little business with Charles Strauss in Montreal, Canada. "After 1953 we toll processed for Pfizer alone (that means for a given sum you process material for a certain party) so we remained in the steroids business."

Ed was an Abbott–Glidden–Upjohn fellow at Northwestern University. Abbott Labs and Upjohn were very interested in Glidden's work; they were involved in an informal joint research operation. General Mills got into making soy sterols at their Kankakee plant. Glidden put them into the business in a way. Upjohn was buying sterols from General Mills for many years. Upjohn is still using soybeans for their corticoid hormones. General Mills sold that plant to Henkel A.G., a German company.

The forerunner of Promosoy (Central Soya's soy protein concentrate) was Protein 70 (also called Pro-70), developed by E.B. Oberg. The pilot plant was built in 1959 and the full commercial plant later at the Gibson City plant. Pro-70 was developed at Glidden by Sidney Circle. He started working on the concentrate after the soy protein isolate, in about 1953-54. Pro-70 was not commercialized until after Central Soya bought Glidden's Chemurgy Div. in 1958. It was commercialized under the name Pro-70. The term Promosoy was introduced in about 1960 [sic, 1962] with the Gibson City plant. Both were exactly the same product–a soy protein concentrated. Response, their textured soy protein concentrate, was developed later under Ed Meyer's supervision.

The first formula for Rich Freeze was developed by Jim Liggett in about 1963-64; Ed was director of research at the time. It was developed partly for the Japanese market. "We [Central Soya] had an affiliate, Dai Nippon pharmaceutical, which was selling our granular phosphatides in Japan. Dai Nippon also had a few food ingredients, principally plant gums. They thought they might sell Rich Freeze, but they bombed out" [failed].

The Cone and Brown patent which was the basis for Alpha Protein. Address: 1701 N. Sayre Ave., Chicago, Illinois 60635. Phone: 312-637-0936.

1611. Shearer, Maya. 1985. Re: Work with Plenty Canada. Letter to William Shurtleff at Soyfoods Center, April 17. 2 p. Typed, with signature on letterhead.

• ***Summary:*** Maya has been in British Columbia and Alberta, Canada, doing some development / education lectures and slide presentations on Plenty's work. Now she has returned to work at Plenty's head office in Ontario, is gathering resource information, and is planning to go to Sri Lanka in 2-3 months. She will soon be sending Soyfoods Center a copy of the Sri Lanka report, after it has been formally accepted.

In Sri Lanka: For the first year of the project she will be "based in Kandy, which is a wonderful place in the mountains, rich with history and Buddhist culture." "We will be setting up small soy processing dairies and will be doing Agricultural work as well at five locations in Sri Lanka."

Her friend Steve Goldberg (who was with her in Guatemala and Mexico) will also be going to work on the project in Sri Lanka. He may visit the Soyfoods Center to order publications. Maya's background, prior to her work in nutrition, was all in business–and she misses it. Steve's background is as a consultant to private and public organizations in personnel, management of systems, development education, etc. Address: Plenty Canada, R.R. 3, Lanark, Ontario K0G 1K0 Canada. Phone: (613) 278-2215.

1612. Shurtleff, William; Aoyagi, Akiko. 1985. Soyfoods industry and market: Directory and databook 1985. 5th ed. Lafayette, California: Soyfoods Center. 220 p. Index. April. 28 cm. Updated every 1-3 years with a bibliographic supplement. [360 ref]

• ***Summary:*** Contents: 1. Introduction. 2. Directory of soyfoods manufacturers. 3. Directory of soyfoods support industry: Goods & services. 4. The many types of soyfoods. 5. Historical: Historically most important books and serials, earliest references to individual soyfoods. 6. Year in review. 7. Soyfoods industry and market in the U.S. 8. Tofu industry and market in the U.S. and Canada. 9. Soymilk industry and market: Worldwide and in the U.S. 10. Tempeh industry and market in the U.S. 11. Soy sauce industry and market in the U.S. and Japan. 12. Miso industry and market in the U.S. and Japan. 13. Soynut industry and market in the U.S. 14. Natto industry and market in Japan. 15. Statistics on fermented soyfoods in East Asia. 16. Soyfoods in restaurants, delis & cafeterias. 17. Soybean crushing industry in the U.S. 18. Soy oil industry and market in the U.S. 19. Soy flour and cereal-soy blends industry and market worldwide. 20. Modern soy protein products industry and market in the U.S. 21. Soyfoods terminology and standards. 22. Names of soyfoods in major foreign languages. 23. Soybean production worldwide and country-by-country. 24. Key institutions working with soyfoods worldwide. 25. Measures, weights, and equivalents. 26. About the Soyfoods Center & soyfoods consulting services. 27. Bibliography.

In February 1977 a Gallup poll in America showed a remarkable shift in the public's awareness of and attitudes toward soyfoods. The sampling of 1,543 adults across the nation found that: 33% believe that soybeans will be the most important source of protein in the future–ahead of fish at 24% and meat at 21%. 55% believe that "soy products have a nutritional value equal or superior to that of meat." 54% reported that they "had eaten foods containing soy protein as a prime ingredient within the past 12 months." Younger age groups living in large cities and those with college or university educations had the most favorable attitudes toward soy protein, indicating that support for soyfoods is likely to grow in the future. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1613. Ayerst, Norman. 1985. Re: Work with Plenty in Dominica and Central America. Letter to William Shurtleff at Soyfoods Center, May 16. 3 p. Typed, with signature.
• ***Summary:*** "I received your message from Maya Shearer and am glad to hear of your interest in our Caribbean projects. Actually my wife [Sarah] and myself worked mostly on the island of Dominica. We spent 18 months there and returned to Canada on the 18th of Feb. '85.

"We worked on an integrated soybean project similar to the program that Laurie Praskin was involved in in Guatemala. My wife and I spent 6 months in Guatemala during 1980 with Laurie and all. At that time, I was responsible for the administration of the Solola Soy Dairy from the Canadian end.

"In Dominica we carried out the INTSOY variety trials and then went on spacing trails, companion planting trials and various other trials to test the long-range capacity of soybean growth in Dominica. Some of these trials were undertaken with the Government, some with the cooperative farming groups and some with individual farmers. We were somewhat overwhelmed with the response of farmers eager to try out soybeans–Dominica is a very agrarian society, by the way, and most people grow a portion of their own food. They are especially eager to find any new crops that can be sold on the local market–it is, overall, a very poor society. We have identified a few varieties that seem to be well suited for Dominica–one is R315. We obtained the original seed through the Intsoy programme and their seed originated in Cuba. It's a very fast growing variety (90 days to harvest) and seems to dry out well in the field even under damp conditions. There is definitely more work to do to identify the exact varieties suited for Dominica but I think we have made a good start and many Dominicans are now participating in the program.

"We opened our initial Soya Shop in downtown Roseau (the Capital pop. 12,000) in May of 1984. Originally, we produced soymilk and tofu which we incorporated into popular local recipes. A fritter that was tofu/okara/bean based became a very big hit in town and surpassed our expectations of immediate interest in soyfoods. A sandwich spread based on tofu/okara and 50% local vegetables was also very popular–and of course the soy based ice cream (especially peanut flavour) is very popular.

"From the original shop, we moved to the edge of town–the most densely populated area of Dominica–to larger premises on the main road south–down the coast. Here we were able to expand our production facility and go more into training programs and wholesaling products. (We do continue with the retail outlet using soyfoods in local recipes.)

"A second soy shop has opened in Roseau called Soy Kweyol. This was opened by a woman who had previously worked with our program. Her name is Natalie Andrews and she has had a history of experimentation with soybeans/soyfoods in Dominica. We are currently working with Natalie to produce flours from local produce (Natalie initiated this project 5 yrs. ago)–cassava, banana, pumpkin, breadfruit etc. With these flours we are adding toasted soyflour to bring up the protein content and experimenting with tastes and recipes to see what the potential of soyflour is in Dominica.

"Through the Ministry of Education we have been able to set up a series of soyfoods preparation courses–for the home and small business. These courses are part of their adult education program and summer school program. There is some talk of the schools incorporating the preparation of soyfoods into their home economics courses.

"The Soya Shop has been purchasing any soybeans that farmers are growing, with most being resold or given away as seed stock. This is the cycle that we are working towards being self perpetuating in the hands of Dominicans. We are working towards a number of small-scale farmers growing enough soybeans to supply the local market.

"I think that I have touched on the basic outline of the soy aspects of the Dominican project–we also have been working on community development projects such as building an addition onto a small rural school, supplying a school with lighting, building a breakwater with a fishermen's group etc -

"Plenty Canada has also undertaken an integrated soybean project in St. Lucia, Jamaica, and Antigua.

"I have enclosed some articles and part of a report on the Dominican project and hope that this gives you an idea of what we have been doing. I would appreciate receiving any comments or further queries from you. I have a high regard for your tofu books and we have used them often.

"My wife, Sarah, has become somewhat of an expert on soy cookery and nutrition over the past 15 years. She is very good at making soyfoods taste extremely delicious. The initial success of our Soya Shop in Dominica can be attributed, to a great degree, to Sarah's soy experience and the participation of some very enthusiastic Dominican women.

"As far as the slides go, I am currently working on duplicating my originals. I am also making prints from negatives. When I have this completed I will let you know and then perhaps we could make an arrangement whereby you can see them.

"Thanks again for your interest, wishing you all the best, Norman Ayerst."

The letter ends with two handwritten addresses on page 3: (1) Noble Bean, c/o Allan & Susan Brown, R.R. 4, MacDonald's Corners, Ontario, Canada. Sarah [Ayerst] has been working with Allan & Susan since we returned from Dominica. (2) Norman's home address.

Letter (e-mail) from Norman Ayerst. 2008. Aug. 3. "At the times we were working in Guatemala and Dominica, we were working for Plenty Canada–and Plenty Canada was in pretty close partnership with Plenty International on planning and executing the programs." Address: 64 Oxford St., Toronto, Ontario M5T 1P1, Canada. Phone: 416-920-2668.

1614. Shurtleff, William; Aoyagi, Akiko. 1985. History of tempeh: A fermented soyfood from Indonesia. 2nd ed. Lafayette, California: Soyfoods Center. 91 p. May. 28 cm. [402 ref]
• ***Summary:*** A slightly revised and updated version of the July 1984 edition. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1615. Crump, Constance. 1985. FDA probing use of local soy beverage. *Ann Arbor News (Michigan).* June 19.
• ***Summary:*** "The inquiry concerns Edensoy, a soy drink made by Eden Foods of Tecumseh and manufactured in Japan by the Marusan Co. A recall of the product's explanatory pamphlet is expected, probably today. In Toronto, Ontario [Canada], a woman fed her infant Edensoy as the child's only food for five months after she developed difficulty in nursing, said Mike Potter, president of Eden Foods. At six months of age, the baby was hospitalized for malnutrition." The FDA investigation was confirmed by Alan Hoeting, FDA district director in Detroit.

The pamphlet was written by Potter in 1983 to explain the uses of Edensoy. About 9,000 copies were distributed in 1983 and 1984. It contains one sentence [actually one page] which could easily be misinterpreted to mean that Edensoy could be used as an infant formula.

"Eden's Store and Deli, 330 Maynard, was once part of Eden Foods, but there has been no connection in ownership or management for several years." Address: News Staff reporter.

1616. Hillock, Lawrence. 1985. Soy food maker hopes to win over western palates [Stephen Yu and Victor Food Products Ltd. in Toronto]. *Globe & Mail (Toronto, ONT, Canada).* June 24. p. B7.
• ***Summary:*** Victor Food Products Ltd., Canada's largest tofu maker, produces 10 tons of soybean curd and related products each week. He sells these foods mostly to oriental enclaves, health food stores, and specialty sections of large supermarkets. Last year his gross sales were less than $1 million. Address: Canada.

1617. Lippert/Whitehead Inc. 1985. Tofu Time Inc. to distribute Tofutti in Canada (News release). 136 East 57th St., New York, NY 10022. 2 p. June.
• ***Summary:*** William Neilson Ltd./Ltee. of Toronto will be the exclusive distributor and manufacturer of Tofutti throughout Canada. Neilson Ltd., established in 1893, is one of Canada's oldest ice cream manufacturers and is an affiliate of George Weston Ltd., a major retail food conglomerate. Address: New York. Phone: 212-838-3777.

1618. **Product Name:** Tempeh.
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.
**Date of Introduction:** 1985. June.
**Ingredients:** Soybeans, water, culture.
**Wt/Vol., Packaging, Price:** 12 oz perforated plastic bag (not vacuum packed).
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Allan and Susan Brown of Noble Bean. 1998. June 22-24 (which see). In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land. There, in their third location, they once again started to manufacture commercial tempeh. Remember: They began in Lanark in June 1979 and continued in Toronto in June 1980.

1619. Plenty Canada. 1985. Plenty Canada project highlights (Brochure). Lanark, ONT, Canada. 6 p. June.
• ***Summary:*** Includes discussions of Plenty Canada soy projects in Sri Lanka, the Caribbean (Dominica, St. Lucia, Jamaica), and Lesotho. On Dominica, within 6 months of Plenty Canada setting up a Soy shop, one other successful Soy Shop (named Soy Kweyol) has been opened by a local Dominican who happened to be the first wholesale customer of the Plenty Soy Shop. On St. Lucia, a group of farmers at La Pelle succeeded in growing approximately 10 acres of soyabeans. Denn Farm, a commercial farm, grew 5 acres of soyabeans.

On Jamaica, over 1,000 people received actual training in soybean processing over a 1-year period.

Note: In 1985 Plenty Canada sent Soyfoods Center a 4 by 6 inch color photo (taken recently) of the Lesotho Soy Dairy, part of the Village Technology Training Centre (VTTC), with solar panels on the thatched roof and two Plenty volunteers seated on the thatched roof. Address: Lanark, ONT, Canada.

1620. **Product Name:** Tempeh Burgers, and Tofu Burgers.
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.
**Date of Introduction:** 1985. June.
**Ingredients:** Tofu (or tempeh), natural soy sauce, herbs and spices.
**Wt/Vol., Packaging, Price:** Tofu: 8 oz. Tempeh: 6 oz.
**How Stored:** Refrigerated.
**New Product–Documentation:** Labels. 1985. 3 inch diameter. Self adhesive. Brown (Tofu) or Green (Tempeh) on beige. "Ready to serve, or steam for 5 minutes. Meatless."

1621. **Product Name:** Tofuette (Soy Ice Cream).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1985. June.
**How Stored:** Frozen.
**New Product–Documentation:** Interview with Jon Cloud of Soy City Foods. 1985. He first starting making this soft serve ice cream in the summer of 1985. Now called Tofuette and sold coast to coast. There are 3 soy ice cream companies in Canada now.

1622. **Product Name:** Toffait (Non-Dairy Soy Ice Cream) [Chocolate, Vanilla Almond, or Wildberry].
**Manufacturer's Name:** Toffait Manufacturing Ltd.
**Manufacturer's Address:** 1003B–55th Ave. N.E., Calgary, ALB, T2E 6W1, Canada. Phone: 403-295-1008.
**Date of Introduction:** 1985. June.
**Ingredients:** Incl. isolated soy protein, white sugar, glucose, fructose.
**Wt/Vol., Packaging, Price:** 500 ml hard frozen packs.
**How Stored:** Frozen.
**Nutrition:** 150 calories per 100 gm.
**New Product–Documentation:** Poster. 1985, undated. 18 by 24 inches, color. "Toffait. Thinfully delicious." Poster. 1985. "How We Improved on the World's Favorite Dessert." Interview with Philip Choy. 1985. This product is very low calorie, with no added fat. It is made from soy protein isolates, with no tofu, since if it contained tofu, which has oil, dairy labeling restrictions would apply. Sold $300,000 in first 2 months in Alberta only. Press Release. 1985. With analyses. 9 p. Canadian Jewish News (Toronto, ONT). 1985. Marketing (Toronto, ONT). 1985. July 15. Toffait became available in grocery stores throughout Alberta in late June, 1985. Choy is an ice cream store proprietor.

1623. *Marketing (Toronto, Ontario, Canada).*1985. 'We all scream for–Toffait?' July 15.
• ***Summary:*** Toffait, made by Toffait Manufacturing of Calgary (Barry Sullivan is general manager), was recently launched in Alberta; it could be on supermarket shelves in eastern Canada before this fall. A black and white photo shows a Toffait ad titled "How we improved on the world's favorite dessert."

1624. Vansickle, Janice. 1985. Processing plant sold to U.S. firm. *Windsor Star (Essex County, Ontario, Canada).* July 20. p. A3.
• ***Summary:*** The sale of Maple Leaf Monarch, a soybean crushing plant on Maplewood Drive in Windsor, "was to have been completed Friday" [July 19] to Archer Daniels Midland Co. of Decatur, Illinois, for an undisclosed amount. The plant employs 90 unionized employees. A local union leader said at least 11 non-unionized employees were dismissed, but Dick Burket, vice-president of ADM, said his company is not planning any changes in either management or operations. Address: Star agriculture reporter.

1625. Gupta, Raj. 1985. Work with soymilk and tofu (Interview). *SoyaScan Notes.* July 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On 23 May 1985 a company that Raj helped to establish started production of tofu in India in Kanpur (a city in northern India in southern Uttar Pradesh, on the Ganges River, 250 miles southeast of Delhi; Population 1.2 million). Last year he bought and imported a Takai W30B tofu system–which can actually process 50 kg/hour of soybeans. There is a big demand for his tofu; he can't keep up with it. One month ago he was making 500 kg/day of tofu, but soon, when his packaging improves, he will be making 1,500 kg/day.

For packaging, he uses a heat-sealed pouch, which is sealed with a Takai K-1020 sealer. he makes his own plastic containers. His larger plan is to establish franchises, and to manufacture tofu equipment in India.

He has applied for a process patent (not a machine patent) on a cold grind process for making soymilk with no beany flavor. He wants to license the patent. The concept sounds like a breakthrough. He has patented it in India, the USA, and internationally. It is based on a special machine which can be made inexpensively, in small shops.

Another tofu company in India is Tofu India Ltd. One company that was located near Delhi is no longer in business.

Note: This is the earliest document seen (Feb. 2010) concerning the work of Raj Gupta with soyfoods. Address: PhD, 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 613-741-2558.

1626. Nyman, Judy. 1985. Frozen Tofu is the latest craze for Canadian consumers. *Toronto Star (Ontario, Canada).* July 31. p. D4.
• ***Summary:*** "Frozen tofu" refers to soy ice cream, called the "ultimate Yippie-turned-Yuppie treat." It has just become widely available in Canada.

1627. Haumann, Barbara Fitch. 1985. Trends of processing, consumption around the world. *J. of the American Oil Chemists' Soc.* 62(7):1070-76. July.
Address: JAOCS.

1628. Jason, Dan. 1985. Short-season soybeans. *Organic Gardening* 32:78-81. July.
• ***Summary:*** "Fresh green soybeans have a buttery, delicious flavor and cook fast." If you choose the proper short-season varieties, you can also raise soybeans to the dry-bean stage in northern climates. And the number of short-season varieties is growing. The author lives on Salt Spring Island, just northeast of Victoria, BC, about 50 degrees north latitude. He had good results with the soybean varieties Butterbeans (eaten green) and Black Jet (eaten dry), both available from Johnny's Selected Seeds, Albion, Maine 04910. Address: Fulford, BC, Canada.

1629. Plenty Canada. 1985. Sri Lanka Soy Utilization Project. R.R. #3, Lanark, ONT, K0G 1K0, Canada. 10 p. Unpublished manuscript.
• ***Summary:*** The 5-year project, aimed at increasing consumption of soyfoods in Sri Lanka, proposes to establish four soya nutrition centers in Kandy, Colombo, Vavuniya, and Tanamalwila. Each center will have equipment to make soymilk, tofu, soy ice cream, tempeh, and soy flour (to use to fortify wheat in rotti, pittu, etc.). Each center will conduct demonstrations and training classes to community groups. Address: Lanark, ONT, Canada. Phone: 613-278-2215.

1630. Voldeng, H.D.; Seitzer, J.F.; Hamilton, R.I. 1985. Maple Isle soybean. *Canadian J. of Plant Science* 65(3):777-79. July.
• ***Summary:*** Contents: Introduction. Pedigree and breeding methods. Performance. Other characteristics. Pedigree seed stocks. Address: Research Station, Agriculture Canada, Ottawa, ONT K1A 0C6, Canada.

1631. Voldeng, H.D.; Seitzer, J.F.; Hamilton, R.I. 1985. Maple Ridge soybean. *Canadian J. of Plant Science* 65(3):781-83. July.
• ***Summary:*** Contents: Introduction. Pedigree and breeding methods. Performance. Other characteristics. Pedigree seed stocks. "Maple Ridge is a soybean cultivar of early maturity, later than Maple Presto but earlier than Maple Amber. Seed yields are generally equal to those of Maple Amber and about 20% greater than those of Maple Presto." Address: Research Station, Agriculture Canada, Ottawa, ONT K1A 0C6, Canada.

1632. Datz, B. 1985. Augusta [Maine] woman's complaint gets [Edensoy] formula folders recalled. *Kennebec Journal (Augusta, Maine).* Aug. 3.
• ***Summary:*** Eden Foods has sold 8 million single serving packages of Edensoy in the last 2 years, according to company president Michael Potter in a phone interview. A six-month old Canadian infant was fed nothing but Edensoy for 5 months. Severely malnourished, the child developed rickets from a lack of vitamin D and vision problems from a lack of vitamin B. Edensoy was launched on the U.S. market in August 1983. Mary Owen, a dietitian from Augusta, Maine, has been vocal about raising questions the suitability of Edensoy for infants. She obtained a brochure describing Edensoy then in late 1983 wrote Eden Foods several questions about Edensoy's level of calories, protein, fat, minerals, and vitamins compared with breast milk. Michael Potter said that, until about 9 months ago, he didn't know about the requirements of the Infant Formula Act of 1980.

In April 1985 the FDA recalled Eden's brochure describing Edensoy "in response to false advertising and nutritional deficiencies of two soy drinks produced by another firm. Their brand names are Nutra-Milk and Kama-Mil."

1633. Kidd, Kenneth. 1985. Tofutti causes Big Apple stir... Marketing. *Toronto Star (Ontario, Canada).* Aug. 11. p. F4.
• ***Summary:*** As company directors sit around a board room table, eating Tofutti, the chairman suddenly exclaims: "Has the world gone totally tofutti?"

One director leaps onto the table and starts dancing, while the music of Little Richard's 1955 hit song "Tutti

Frutti" (All Rooty) swelled in the background. Note: This was Tofutti's first TV ad and Little Richard's first hit record.

The ad, now airing in New York City, has been quite a hit. David Mintz, inventor of Tofutti, says its "infectious." By making an ice cream out of tofu, Mintz has found an ingenious way of getting around kosher dietary laws and of parlaying this idea into a multi-million dollar business.

There are now more than 50 flavors of Tofutti, a tofu hamburger (almost ready; tentative name Tofutti MacFuttie), and even a chain of Tofutti Gourmet shops on the drawing boards. It all started in 1972. Tells the story of how Mintz says he invented Tofutti.

Tofutti is presently available at 36,000 outlets across the USA, and a worldwide launch is immanent. Mintz has just shipped his second order to Hong Kong. His next plans are for Singapore and Japan.

"William Nielson Ltd. has now started importing Tofutti into Canada in both hard 'ice-cream' take-home tubs and larger soft-serve containers for restaurants." However advertising claims about cholesterol content are not allowed by Health and Welfare Canada, so Neilson is asking for an amendment to the rules.

1634. *Country Folks (Palantine Bridge, New York).*1985. Consumer alert issued on "soy drinks" fed to infants. Aug. 12.
• ***Summary:*** "The Maine Department of Agriculture, Food and Rural Resources has issued a consumer alert warning parents that so-called 'soy drinks,' or soy 'milks,' should not be used as a sole source of nutrition for infants."

"The federal Food and Drug Administration recently issued several such warnings about specific brands of soy drinks often sold in health food stores. Earlier this year, a 6-month-old child in Canada developed rickets, vision problems and malnutrition after being fed a soy drink product called Edensoy as a sole source of nutrition for 5 months." Brands with serious nutritional deficiencies and false advertising included Nutra-Milk and Kama-Mil. Also published in The Journal (Lewiston-Auburn, Maine). Aug. 5.

Note: This is the earliest document seen in which the U.S. Food and Drug Administration uses the term "milk" to refer to soymilk. Address: Maine.

1635. Hamlin, Suzanne. 1985. Tofu dessert questioned as ice cream alternative. *Toronto Star (Ontario, Canada).* Aug. 14. p. D16.
• ***Summary:*** This is a summary of: Hamlin, Suzanne. 1985. "Tofutti: Can its time be up?" *New York Daily News.* Aug. 7. Address: New York Daily News.

1636. Gupta, Raj P. 1985. Re: Visit to Soyfoods Center, work with soymilk. Letter to William Shurtleff at Soyfoods Center, Aug. 24. 1 p. Typed, with signature.
• ***Summary:*** "It was indeed very nice meeting you last week. Your reaction to the soymilk samples I brought with me was very gratifying." Raj is enclosing a "proprietary submission agreement" and, after it is signed, will send a copy of the invention patent. Address: VP Tech., ProSoya Foods International, 627 Gaines Drive, Ottawa, ONT, K1J 7W7, Canada. Phone: 613-741-2558.

1637. McDermott, Lawrence. 1985. Plenty Canada's work with soybeans and soyfoods (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** An in-depth discussion of Plenty Canada's work with soyfoods in Sri Lanka, Lesotho, and the Caribbean (Dominica, St. Lucia, Jamaica, Haiti, Antigua, and St. Vincent). Address: Executive Director, Plenty Canada, ONT.

1638. **Product Name:** Tofu Glacé (Soy Ice Cream) [Classic Vanilla, Southern Pecan, Chocolaty Chocolate, Fudgy Mocha, Amaretto Chocolate Almond, Really Rocky Road, Strawberry Strawberry, or Minty Chocolate Chip].
**Manufacturer's Name:** Cuisine Nature. Made in Pennsylvania, by Lehigh Valley Dairies.
**Manufacturer's Address:** Montreal, QUE, Canada.
**Date of Introduction:** 1985. August.
**Ingredients:** Incl. Tofu, corn sweeteners, sugar, unsaturated vegetable oil.
**Wt/Vol., Packaging, Price:** Pint.
**How Stored:** Frozen.
**New Product–Documentation:** Spot. 1986. "Tofu Glace, a new frozen dessert product previously available only in Canada. In northeastern Pennsylvania Tofu Glace is produced exclusively by Lehigh Valley Dairies." (Note: Directory assistance shows this company to be located in Schuylkill (pronounced SKOO-kul) Haven, PA 17972. Phone: 717-385-1884). It is a non-dairy product. Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. They have a label. "This product, made by Bernie Clark of Cuisine Nature (he's rich) contains no tofu. His phone is 514-636-7916."

Soya Newsletter. 1988. July/Aug. p. 8. Address now given as 575 Lepine, Dorval, Quebec, Canada H9P 2R2. Contact Roland Cyr. Phone: 514-636-7916. Ingredients include tofu, soymilk, fresh fruits, nuts, and corn sweeteners. Flavors: Chocolate, Vanilla, Maple Walnut, Strawberry, Orange Mango, and Southern Pecan.

1639. *Modern Dairy (Toronto, ONT).*1985. Neilson launches 'Tofutti' [in Canada], seeks labeling amendment. Aug.
• ***Summary:*** William Neilson Ltd./Ltée. is seeking a labeling amendment from the Health Protection Branch of

Health and Welfare Canada to allow the label to read "Contains No Cholesterol" or "Cholesterol Free."

1640. O'Leary, James. 1985. Tempeh Mexicana. 50+ protein rich recipes. Vancouver, BC, Canada: Benedict Books, 115-8675 French St., V6P 4W5. 48 p. Aug. No index. 14 cm. [5 ref]
• ***Summary:*** Contents: What is tempeh? Tempeh: Deepfried, mockfried, smallfried. About all. How to make. Recipes. Addresses, books, other important matters.

Note: This little cookbook shows how nicely tempeh and Mexican food work together. Address: #115-8675 French St., Vancouver, BC, Canada.

1641. Sarwar, Ghulam; Peace, R.W.; Botting, H.G. 1985. Corrected relative net protein ratio (CRNPR) method on differences in rat and human requirements for sulfur amino acids. *J. of the Association of Official Analytical Chemists* 68(4):689-93. July/Aug. [30 ref]
• ***Summary:*** The rat's requirement for methionine is about 50% higher than that of humans. The limiting amino acid in soy protein is methionine. Address: Health and Welfare Canada, Food Directorate, Health Protection Branch, Tunney's Pasture, Ottawa, Ontario, Canada K1A 0L2.

1642. **Product Name:** Okara tempeh.
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1985. August.
**New Product–Documentation:** Interview with Jon Cloud. 1985. Aug. Talk with Lorraine Guardino of Soy City Foods. 1992. Feb. 18. The company still makes two types of tempeh.

1643. **Product Name:** Ice Cream Sandwiches [2 Flavors].
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1985. August.
**How Stored:** Frozen.
**New Product–Documentation:** Interview with Jon Cloud. 1985. Aug. They make their own soy ice cream.

1644. Soy City Foods. 1985. I love Soy City's vac pac soy foods: Tofu, Soy Pro, tempeh (Bumper sticker). 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada. 15 x 35 cm.
• ***Summary:*** This bumper sticker is green, red, orange, and yellow on white. A heart stands in place of the word "love." Address: Ontario, Canada.

1645. *FDA Consumer.*1985. Warning on soy drinks. 19(7):34. Sept.
• ***Summary:*** "Edensoy and similar drinks should not be used as an infant formula or substitute for mother's milk or sole source of nutrition, FDA has warned. The warning came in June after the agency learned from a Canadian hospital physician of a 6-month-old infant who had rickets due to vitamin D deficiency, vision problems due to vitamin A deficiency, and general malnutrition. It was reported that the infant had been consuming Edensoy as the sole source of nourishment for five months after its mother experienced difficulty in breast feeding...

"A pamphlet and various advertisements and other promotional materials distributed by Eden Foods since 1983 have erroneously suggested that Edensoy may be used as a substitute for mother's milk or as a substitute for infant formula. The pamphlet also states that 'Edensoy compares very favorably with cow's milk.' This statement is false. Soy drink products such as Edensoy are nutritionally inferior to milk...

"FDA advised Eden Foods about the Canadian incident on June 14, and the firm has cooperated fully with the agency."

1646. Jackobs, Joseph A.; Smyth, C.A.; Erickson, D.R. 1985. International soybean variety experiment: Tenth report of results, 1983. *INTSOY Series* No. 28. xiv + 113 p. Sept. (College of Agric., Univ. of Illinois at Urbana-Champaign).
• ***Summary:*** In the ISVEX trials, soybeans were tested in the following regions and countries (For the year 1983): Algeria, Argentina, Bangladesh, Bolivia, Burma, Cameroon, Chile, Colombia, Costa Rica, Cuba, Dominica, Ecuador, Egypt, El Salvador, Gabon, Gambia, Ghana, Guatemala, Guinea-Bissau, Honduras, Indonesia, Korea, Laos, Madagascar, Mali, Mexico, Morocco, Nepal, Pakistan, Paraguay, Peru, Philippines, Portugal, Puerto Rico, Saint Lucia, Senegal, Somalia, South Africa, Sri Lanka, Sudan, Thailand, Turkey, United States, Upper Volta, Venezuela, Yugoslavia, Zaire, Zambia, Zimbabwe.

(For the year 1982): Brazil, Burma, Cuba, Italy, Peru, Turkey, Zaire.

In Dominica, on 19 Nov. 1983, with Plenty Canada serving as the cooperator, 16 varieties of soybeans were planted at the Royal Botanical Gardens, Roseau. Jupiter gave the highest yield, 676.8 kg/ha.

1647. **Product Name:** [3 Grain with Soy Tempeh (Soy & Barley & Millet & Brown Rice)].
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.
**Date of Introduction:** 1985. September.
**Ingredients:** Organically grown millet, barley, brown rice, soybeans, rhizopus culture, apple cider vinegar.

**Wt/Vol., Packaging, Price:** 227 gm.
**How Stored:** Frozen.
**New Product–Documentation:** Label. 1985, undated. 4.5 inches square. Brown on yellow. At bottom of front panel: "Culturing fine tempeh since 1979." On the back are three recipes in English: Honey Curry Bake, Indonesian Fried Tempeh, North Atlantic Tempeh; Letter from Allan Brown. 1985. Aug. 7. 8 oz for $1.65. Letter (fax) from Allan Brown. 1998. Jan. 21. This tempeh was first sold in Sept. 1985.

1648. **Product Name:** Tofu Dream (Soy Ice Cream) [Vanilla, Chocolate, Strawberry, Maple Walnut, or Coffee].
**Manufacturer's Name:** Tofu Treats Ltd. (Marketer). Made in Canada by St. Clair Ice Cream Co.
**Manufacturer's Address:** 36 Rosevear Ave., Toronto, ONT, Canada. Phone: 416-699-1141.
**Date of Introduction:** 1985. September.
**How Stored:** Frozen.
**New Product–Documentation:** AdNews (Toronto, ONT). 1985. Aug. 6. "The Latest in Yuppie Food." Canadian Jewish News (Toronto, Ontario). 1985. Sept. 12. The product was developed by Arthur Herhold, former general manager of Farm Foods.

1649. Kates, Joanne. 1985. Tofu for a small planet [Stephen Yu and Victor Foods in Toronto]. *Globe & Mail (Toronto, ONT, Canada).* Oct. 4.
• ***Summary:*** Stephen Yu grew up in Canton, then fled to Hong Kong in 1959 with his family when he was 12. In 1969 he went to Halifax, Nova Scotia, to help his older brother run a Chinese restaurant. He soon owned 2 restaurants in Halifax, then went to California to study engineering at Pasadena College. One day a visiting professor at his food science course lectured on soybeans, food of the future. Mr. Yu was fascinated. He learned to make tofu working for the largest tofu maker in Los Angeles. He sold his 2 restaurants and his house, took his life savings out of the bank, and opened Victor Foods in Scarborough in 1978. A big leap forward came in 1980, when he got his products into supermarkets. "But he never forgets his basic market. Tofu puffs (deep fried tofu) are made for Chinatown, even though nobody else wants them."

"Today Kathleen O'Bannon, his staff home economist, makes tofu chicken pie and tofu chicken salad. Neither has a hint of chicken, save the chicken stock used to marinate the tofu. Yet both, thanks to the stock, taste chicken-like."

Stephen Yu now makes 2 tons of tofu a day, and sells a million dollars worth of tofu a year. He is now introducing a new extra firm tofu called Hi-Pro. He dreams of tofu french fries, pudding, yogurt, and cereal, plus Tofu Cup-a-Soup.

A photo shows Stephen Yu. Address: Canada.

1650. *Plenty Canada News (Lanark, Ontario, Canada).*1985. African drought continues. Oct. p. 1.
• ***Summary:*** "For the first time in over 6 months, it rained in Lesotho last week (Oct. 15)." Lesotho has been suffering from drought for the past 5 years. "Plenty has been providing emergency food supplies to about 90 people a week, over half of them children, since last January. These supplies include cornmeal, peas, and soyfoods from Plenty's soy-dairy at the Village Technology Training Centre in the Quthing Valley." A photo shows a Plenty volunteer examining a malnourished child in Lesotho. Address: Plenty Canada, R.R. 3, Lanark, ON K0G 1K0, Canada.

1651. *Plenty Canada News (Lanark, Ontario, Canada).*1985. St. Lucia soy shop opens. Oct. p. 2.
• ***Summary:*** "Plenty's soy shop/training centre in Castries, on the Caribbean island of St. Lucia, opened in July [1985] and became a success almost overnight. The centre trains soy food technicians, develops recipes to fit traditional tastes, and wholesales soy products to retail soyfood outlets. It also provides a market for soybeans produced by local farmers.

"Products of the centre, such as tofu, accras (soy fritters), and soy flour, are rapidly gaining popularity in St. Lucia.

"The soy centre is part of an effort to introduce new sources of protein which are inexpensive and can be produced locally. At present St. Lucia imports most of its protein foods."

A photo shows trainee Glen Moses standing in front of a motorized mill, which is grinding soaked soybeans to make tofu. Address: Plenty Canada, R.R. 3, Lanark, ON K0G 1K0, Canada.

1652. Wenzel, John S. 1985. Re: Work with soy at Griffith Laboratories Ltd. in Canada and developing countries. Letter to William Shurtleff at Soyfoods Center, Nov. 22–in response to inquiry of Nov. 12. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "You ask about my work with soya in Canada. Most of the work before retirement in 1982 from the Griffith Laboratories Ltd concerned: (1) Manufacture of textured soy protein and allied texturized products using soy and other protein materials; e.g. peas, meat, etc. (2) Investigation and manufacture of other products; e.g. soya concentrate, soya milk, spray dried full fat soya flour.

"Since July 1982 I have had a variety of consulting jobs with the Canadian International Development Agency and the Canadian Executive Service Organization on: (1) utilization of soybeans in Sri Lanka to make T.S.P. [textured soy protein] and full fat soya flour. (2) development of a T.S.P. industry in Thailand. (3) manufacture of soya milk in Sri Lanka."

"Over the years I have been interested in the utilization of soya in developing countries more from the standpoint of

industrial processing... but more on smaller scale processing which is where some of the countries must start.

"I do hope that our paths will cross in the future."
Address: J. Wenzel Food Technology Associates Inc., 14 MacDonnell St., Kingston, Ontario K7L 4B6, Canada. Phone: (613) 546-6826.

1653. **Product Name:** Grainwave Miso Mochi.
**Manufacturer's Name:** Grainwave.
**Manufacturer's Address:** 6726 West Coast Rd., Sooke, BC, V0S 1N0, Canada. Phone: 604-642-4424.
**Date of Introduction:** 1985. November.
**Ingredients:** Sweet brown rice, water, miso (soybeans, salt), sesame seeds.
**Wt/Vol., Packaging, Price:** 250 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1985. 4 inches square. Self adhesive. Red and yellow on white. "Ready to eat in 5 minutes. Whole grain. Cut with sharp knife and broil, fry, or bake until golden."

1654. Wolfe, Bernard M.; Giovannetti, Patricia M. 1985. Elevation of VLDL-cholesterol during substitution of soy protein for animal protein in diets of hypercholesterolemic Canadians. *Nutrition Reports International* 32(5):1057-65. Nov. [30 ref]
Address: Depts. of Medicine and Home Economics (Brescia College) of the Univ. of Western Ontario, London, Ontario, Canada.

1655. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Part I. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]
• ***Summary:*** "In 1971, a unique group of people settled in the Tennessee backwoods to live an alternative lifestyle, committed to living collectively off the land. The community of 200 people came to be known as The Farm and over the years grew to 1,500 residents, gaining international and domestic fame for its community ideals, lifestyle, alternative technologies, [midwifery], and vegetarian diet based on soybeans. Soy technologies practiced and developed on The Farm became the seed for many tofu and tempeh shops that sprang up around the world in the years that followed. Community members started the first [sic, sixth] commercial soy ice cream company, and the first soy 'deli.' Some went on to start several of the major tempeh shops across the United States and Canada and others helped start a network on international soy programs in underdeveloped countries. Innovative recipes developed by Farm members led to the publication of three cookbooks which have made a large contribution to the growing acceptance of soybeans and tofu in the American diet.

"When The Farm was first settled in 1971, most of the people were already vegetarians. There were a variety of reasons for their personal choices: (1) an unwillingness to kill in order to live (feelings which stemmed from religious beliefs similar to the Buddhist religion, as well as pacifist attitudes deepened during the Vietnam War); (2) a growing awareness that meat was too costly to produce and that if more people at lower on the food chain there would ultimately be more food to go around in the world; (3) evidence of the healthful benefits of a vegetarian diet; (4) a belief that the dairy industry practiced cruel and exploitive methods on animals and a reluctance to support that system.

After the community was established, the entire membership decided to adhere to a complete vegetarian [vegan] diet devoid of all animal products, including eggs and dairy. They wanted to create a self-sufficient community, eating primarily what they grew on the land. They also wanted to be an example of how people could eat foods lower on the food chain to help create a larger supply of food in the world. During the search for a nutritionally sound vegetarian diet, they settled on soybeans as the main form of vegetable protein, as soybeans have one of the highest and most complete protein contents and are more versatile than any other vegetable protein. Many of the members had already been eating tofu and other soy products before The Farm, but acquiring these foods in the middle of the Tennessee woods was not an easy job. Soybeans were readily available, as they were used as local cattle food, but the challenge was how to create healthy and appetizing foods from them. Besides the Asian population and some Seventh-day Adventists, there weren't many people in the U.S. at the time actually eating soybeans, let alone trying to use them as the main source of protein.

"There were not many physical resources available as the people arrived with few possessions, lived in buses and tents, and had little capital to work with (a typical Third World situation). Some people owned Corona hand mills and occasionally ground soybeans to make fresh milk or tofu, using the recipe in the Seventh Day Adventist's Ten Talents cookbook. Fearn Instant Soya Powder was purchased and used for making soymilk, tofu, yogurt, and 'soy butter'. Just a few families owned pressure cookers so people cooked large communal pots of soybeans, taking turns 'watching the pot,' since they boiled them for 16 to 20 hours, to be sure they were digestible.

"By 1972 the Farm had its own flour mill that ground soybeans into full-fat soy flour and soy grits. The community was then able to make fresher soymilk, and tofu, as well as add soy flour to baked goods for added protein. They developed a curded soy flour base that was spiced and used as a sandwich spread, and they also baked soy flour 'souffle.'

"During these early days while the diet was still being worked out, the young children were given eggs for their

protein source. Margaret Nofziger, the Farm's dietician, wanted to provide the babies and young children with a soy formula as a weaning food. She asked Alexander Lyon, a Farm member with a Ph.D. in microbiology, to research how the community could make the formula. He began an extensive research both in libraries and through correspondence. Fortunately, there were studies available about the uses of soy for human food consumption. Alexander, (Dr. Lyon) contacted Dr. Hesseltine and Dr. Wang of the Northern Regional Research Center in Peoria, Illinois, and Dr. Steinkraus of Cornell University in New York. These researchers provided a treasure of information to Dr. Lyon and to the soy technicians that followed. Other scientists who should be credited for their early and helpful research are Dr. Harry Miller with Loma Linda Foods and Malcolm Bourne with Cornell University.

"All of the information gathered by Dr. Lyon led to the start of the Farm Soy Dairy in 1972. After learning the basic processes involved in soy milk preparation, Alexander began collecting used equipment that could be adapted for the use of making soymilk. The original soy dairy was very small, with a production capacity of 20 gallons of soymilk a day, and expanded over the years as the soy technicians were able to find and add new equipment to their dairy. This dairy became a cross between a Japanese tofu shop and American ingenuity. The Farm Soy Dairy had no capital to start operations and no investors beside the Farm itself. Cash was hard to come by and as with all other commodities on the Farm, the products were distributed freely to community members. For these reasons, the soy technicians had to be creative and imaginative in how they obtained equipment and how they adapted such equipment to their needs. Over the years, they went to auctions, scrap metal yards and used restaurant equipment houses. They bought, bartered and traded for their equipment. They designed their own systems in their welding shop and then re-designed them to make improvements and to increase production. They became a school, learning as they went along. In 1975, Laurie Sythe Praskin, one of the early workers in soy dairy, succeeded Dr. Lyon in managing the operation. Over the next 4 years, with David Handel and Michael Halpin as equipment developers, weekly production increased to 800 gallons of soymilk, 600 lbs. of tofu, 80 gallons of soy yogurt, and a varied amount of soy ice cream." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

1656. Praskin, Laurie Sythe. 1985. The Farm soy history: An overview. Document part II. Los Gatos, California. 10 p. Dec. 1. Unpublished manuscript. [Eng]

• ***Summary:*** Continued: In 1975, Farm members started a company to promote the use of soybean products in the America diet. The company, named simply Farm Foods [Farm Food Company], began sales on the East Coast with full-fat soy flour (ground fresh on The Farm), TVP (texturized vegetable protein), Good Tasting Nutritional Yeast, split soybeans, and Tempeh Starter Kits (developed by Cynthia Bates and Dr. Lyon). In 1976, under the management of Leticia Coate and Robert Tepper, Farm Foods began participating in national health food trade shows. At the time, they were one of the only companies representing soyfoods. Along with their packaged products, they sold cookbooks and served free samples of tempeh, TVP chili, and nutritional yeast crackers.

"The products and recipes developed over the years led to the publication of three cookbooks: *The Farm Vegetarian Cookbook* (1975) and *Tofu Cookery* (Oct. 1982), edited by Louise Hagler, and *Tempeh Cookery* (March 1984), edited by Colleen Pride. These books made a major contribution in westernizing recipes previously Oriental in origin. They were available in all natural food stores throughout the country.

"The work with soy products on The Farm also inspired members to start two vegetarian restaurants; the Farm Foods Cafe [opened Aug. 1976], in San Rafael, California, managed by Robert Dolgin, was the first "soy deli" in the United States. Everybody's, located in Nashville, Tennessee [opened July 1980], was managed by Judd and Diane Hoffman.

"The acceptance by the public of Farm Foods Cafe was overwhelming, and although it only operated from 1976 to 1977, it pioneered the path for many tofu delis that have followed since. The unique characteristic of this deli was the tofu and tempeh shop producing fresh products located in the rear of the store. The Farm Foods Cafe also became the first [sic] company to market a non-dairy ice cream made from soybeans. This frozen dessert, marketed under the name of 'Farm Foods Ice Bean,' is still being sold in health food stores nationwide.

"In 1977-78, The Farm Foods Cafe closed, and the soy processing equipment was moved to San Francisco. Farm Food Company began wholesaling soy products throughout California under the management of Robert Tepper. They continued marketing Farm Foods Ice Bean, and added tofu salad [like eggless egg salad], 'tofu cheesecake,' a frozen soy yogurt dessert, and the first firm-pressed tofu to hit the California market. In 1980 it was decided to drop the perishable tofu business and concentrate on the nationwide distribution of Farm Foods Ice Bean. The plant in San Francisco was closed, and large scale production began in a Memphis, Tennessee, dairy and ice cream factory. This new location gave the company easier access to East Coast distributors, and they soon established additional warehouses in Connecticut and California.

By 1984, under the management of Ron Maxin and Michael Lee, the weekly production of The Farm Soy Dairy [in Summertown, Tennessee] was 1,000 lb of tofu, 150 gallons of soymilk, 20 gallons of soy yogurt, 20 gallons of

soy ice cream, 400 ice cream sandwiches, and 90 lb of tempeh. Today, the Soy Dairy produces an average of 5,000 gallons of soymilk a month for Farm Foods to use in Ice Bean production. The soymilk is shipped by tanker truck to the Ice Bean production plant [in Memphis], and the Farm Soy Dairy also markets its products in Nashville and Columbia, Tennessee.

"The Farm's uniquely controlled vegetarian diet led to two official studies of its effect on the children. In 1979, Dr. Jeffrey Hergenrather, et al., conducted a study on the pesticide levels in the breast milk of vegetarian nursing mothers on the Farm. He submitted a letter of his findings to the editor of the *New England Journal of Medicine*, March 26, 1981. His letter challenged a previous article written by Rogan, et al, (New England Journal of Med. 1980) which stated that 'there are no obvious dietary predictors' of chemical pollutant in human milk. Rogan went on to say 'For certain fat-soluble chemicals, nursing infants can be regarded as living at the top of the food chain and are exposed to much more than background levels.' Dr. Hergenrather's study included 12 women whose breast milk was analyzed for 17 chemical substances. When compared to the seven contaminants studied by Rogan, in all but one of the contaminants, which showed no difference in contaminant levels, the milk of the vegetarian women had lower levels of contamination.

"The second study was conducted by Jean Roberts Fulton in 1980 and was published in the *Journal of the American Dietetic Association.* She studied a group of the Farm nursery school children and found their amino acid and iron intake to be adequate. (The diet was low on calories, however.)

"The innovative methods used by the Farm soy technologists inspired many groups and individuals to start all over the world to train in the Farm Soy Dairy, and many who couldn't come personally were encouraged through correspondence. In 1977, Plenty, the non profit relief organization founded by the Farm, established an international training program whereby people from other countries could come and train in soybean processes and other technologies that The Farm had to offer. The Farm Soy Dairy received its first trainees from Guatemala and Mozambique.

"From the beginning days of the Farm Soy Dairy, the technicians realized the value that soybeans could have in Third World countries. Eventually they were able to share their knowledge and training in the field of soybeans by starting a dairy in an impoverished country. In 1979, Plenty Canada and Plenty USA sent Farm Soy Dairy technicians Laurie Sythe Praskin, Suzy Viavant and Richard Decker to Guatemala to help establish Plenty's first international soy dairy/tofu shop. Other technicians who trained on the Farm have gone on to help start soy programs with Plenty Canada in Lesotho (in Southern Africa, 1979-present), Jamaica (1983-present), St. Lucia (1983-present), and Dominica (1984-present).

"Many of the people who lived on The Farm and trained in the Soy Dairy or with Farm Foods have started their own soy companies or are working in underdeveloped countries. The common goal felt by all has been to provide healthful, delicious foods for all people, rich and poor alike. Because soybean products can be presented as gourmet dishes, yet can also be prepared very simply, they continue to be accepted by all classes of people." Continued. Address: 17969 Oak Dr., Los Gatos, California 95030.

1657. Loeks, David. 1985. Yukon New Crop Development Project: Report of the 1985 field season. Prepared for: Agriculture Canada, Government of Yukon, Yukon Livestock and Agricultural Assoc. 57 p. See p. 4, 26, 37-39. Dec. 12. Illust. 28 cm.

• ***Summary:*** First some background. The Yukon Territory was established in 1898. The gold rush of the 1890s first brought fame and 100,000 fortune hunters to the area.

In April 1985 C.A.S. Smith and R.H. Filteau, both of Whitehorse, Yukon, wrote a report titled "Yukon Agriculture 1984: State of the Industry" (46 p.). They noted: "On June 10, 1975 the minister of the Department of Indian affairs and Northern Development (DIAND) decreed a moratorium on the development of agricultural lands in the Yukon and Northwest Territories. The ostensible purpose of the moratorium was to allow time for resource inventories to be undertaken to prevent land use conflicts or inappropriate use of northern lands."

Then in 1983 a report by Hoyt, completed under contract for DIAND, recommended land transfers to facilitate the development of the agricultural industry in areas presently under federal control. The years 1983 and 1984 saw intense interest in Yukon agriculture. For the first time in 10 years, acquiring agricultural land became a realistic possibility. At the beginning of 1985 Yukon agriculture had reached a watershed. Major changes would follow the block land transfers. For the first time in nearly 100 years substantial quantities of agricultural land would be brought into agricultural production in Yukon.

In 1983, Mr. Dick Filteau, an experienced agronomist, came to Yukon to serve as Agricultural Development Advisor (ADA) to the Government of Yukon. 1985 was the first year of a three-year research effort, the Yukon New Crop Development Project, in which results were obtained. The effort was funded by Agriculture Canada and the Government of Yukon, and sponsored by the Yukon Livestock and Agricultural Association.

Filteau tested two varieties of soybeans (Maple Presto and Maple Ridge) for demonstration only at the following test sites: Sunnydale (near Dawson City), Stewart Crossing, Pelly Farm, Firth Farms (near Whitehorse), and Minto Bridge (near Mayo). A map shows the location of each site.

They are situated between 61º and 64º north latitude. The results were as follows: "In no site did these varieties of soybeans produce significant pods; in most sites they struggled with poor germination rate and tiny plants; and in one site they did not even appear. At Pelly Farm immature pods were produced, but they were badly frost damaged and withered. At Firth's, the plants were dead at 3 inches high."

Note: This is the earliest document seen (Jan. 2010) concerning soybeans in the Yukon Territory, Canada, or the cultivation of soybeans in the Yukon Territory. This document contains the earliest date seen for soybeans in the Yukon Territory, or the cultivation of soybeans in the Yukon Territory (1985). The source of these soybeans was Joe Tsukamoto at Brandon, Manitoba. After 1985 no soybeans were grown in the Yukon. For more details, see 1991 interviews with Joe Tsukamoto, and with Dick Filteau. Address: Project Manager, Whitehorse, Yukon.

1658. **Product Name:** [Tofu].
**Foreign Name:** Queso de Soya.
**Manufacturer's Name:** Centro de Soya, Soy Dairy.
**Manufacturer's Address:** Barrio San Bartolo, Molino Belen, Solola, Guatemala; Apartado Postal 118, 07091 Solola.
**Date of Introduction:** 1985.
**Ingredients:** Water, soybeans, coagulant (Epsom salts).
**Wt/Vol., Packaging, Price:** 1 lb blocks packed in plastic bags, sold at Q. 1.50 per pound.
**How Stored:** Refrigerated.
**Nutrition:** Moisture 79.7%. After drying: moisture 4.5%, ether extract (fat) 30.4%, crude fiber 0.12%, nitrogen 9.0%, protein 56.2%, ash 3.7%.
**New Product–Documentation:** Talk with Laurie Praskin. 1988. Dec. Most of this tofu is sold to vegetarian restaurants that cater to tourists in Panajachel, Guatemala City (Seventh-day Adventist), and Antigua (a big tourist center and the former capital of Guatemala). Letter from Amado del Valle. 1988. March 16. San Bartolo is the name of the indigenous community situated around the Center. It is comprised of 60 houses with 60 independent families. This community has benefited from the potable water project and system and the Centro de Soya through the help of Plenty Canada. Plenty's original idea was for the soy dairy to benefit the community. The community presently buys products from the soy dairy at reduced prices to stimulate production and improve their nutritional status. The Center also gives the community classes on the benefits of soybeans. Q. refers to Guatemala's monetary unit, the Quetzal. The Center does not yet have any commercial labels or legal receipts since it is not yet registered as a commercial enterprise under Guatemalan law.

Address: Swiss Federal Inst. of Technology (ETH), Crop Science Dep., CH-8307 Eschikon-Lindau, Switzerland.

1661. **Product Name:** Soya Nova Herb & Garlic Tofu.
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C.28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1985.
**Ingredients:** Incl. tofu, garlic, herbs.
**How Stored:** Refrigerated.
**New Product–Documentation:** Letter from Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Dec. 14. Soya Nova Tofu Shop introduced Herb & Garlic Tofu in 1985.

1662. **Product Name:** Soya Nova Tofu.
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C-28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1985.
**New Product–Documentation:** Two early entries in the Soyfoods Center NAMES database: (1) Chris Kodaly, R.R. #1, Mayne, BC, V0N 2U0, Canada. for Debbie Lauzon and Chris Kodaly. 1987. June 4. Nova Food at R.R. #1, Isabella Point Rd., Fulford Harbour, Saltspring Island, BC, V0S 1C0, Canada, is making tofu. Phone: 604-653-9259.

Talk with Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Oct. 20. Soya Nova Tofu Shop makes tofu at R.R. #2 Rourke Rd., C-28, Ganges, Saltspring Island, British Columbia, V0S 1E0, Canada. Phone: 604-537-9651. The owners are Chris and Debbie Kodaly. Saltspring is one of the "Gulf Islands" in the Straight of Georgia between Vancouver Island and southern southwest tip of the mainland of BC. They have been in business for 5-7 years. They started the business themselves and they have been in the same location for at least the last 5 years. They make tofu, herb tofu, and many other soyfood products.

They label their products. They make 700 lb/week of tofu (plain and herb), plus soysage, soysage pastries (made by a French pastry chef).

Letter from Deborah Lauzon. 1991. Feb. 6. They moved to Ganges in 1985.

Talk with Silverking. 1992. Sept. They have a new Takai pressure cooker and boiler. They used to make 900 to 1,000 lb/week of tofu, but now they hope to make that much in one day.

1663. **Product Name:** [Tofu Dessert].
**Foreign Name:** Tofu Dessert.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1985.
**Ingredients:** Water, soybeans, sugar, calcium sulphate, glucono-delta-lactone.
**Wt/Vol., Packaging, Price:** 10 oz (300 gm).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 5.5 by 3.5 inches. Red and white with color photo in middle of yogurt-like tofu surrounded by fruits (kiwi, strawberry, peaches) in a glass cup. "Pasteurized. No preservative." Product name also written in Chinese. Form filled out by Peter Joe. 1988. May 20. Gives date.

1664. **Product Name:** [Tofu Puffs].
**Foreign Name:** Souffles de Tofu.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1985.
**Ingredients:** Water, extract of soy, magnesium chloride, vegetable oil (canola and soybean). vegetable oil.
**Wt/Vol., Packaging, Price:** 95 gm (3.25 oz).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1987. 4 x 3 inches. Red and black on yellow. "Fully cooked. Keep refrigerated. Heat and serve." Form filled out by Peter Joe. 1988. May 20. Gives date.

1665. **Product Name:** Victolec Lecithin.
**Manufacturer's Name:** Victory Soya Mills Ltd. Div. of Central Soya Co., Inc.
**Manufacturer's Address:** 333 Lake Shore Blvd. East, Toronto, ONT, M5A 1C2, Canada.
**Date of Introduction:** 1985.
**New Product–Documentation:** Soya Bluebook. 1985. p. 77.

1666. Delisle, Jocelyne; Amiot, J.; Goulet, G.; Brisson, G.J.; Jones, J.D. 1985. Nutritive value of soybean, rapeseed, and wheat proteins, and various blends of these vegetable proteins and their fractions in rats. *Qualitas Plantarum–Plant Foods for Human Nutrition* 35(2):131-37. [20 ref]
• ***Summary:*** By blending vegetable proteins with other vegetable proteins, it is possible to obtain food proteins of higher nutritional value. The fraction 7S extracted from soybean protein and the fraction gliadin extracted from wheat protein have been showed to have very low nutritional value. Two of the major wheat fractions are wheat albumin-globulin (AG) and glutenin (G). Address: 1-3 Centre de Recherche en Nutrition, Universite Laval, Quebec, Canada G1K 7P4; 4. Food Research Inst., Agriculture Canada, Ottawa, ONT, Canada K1A 06C.

1667. Hamilton, R.I. 1985. Soybean bud blight: Seed transmission of the causal virus. In: R. Shibles, ed. 1985. World Soybean Research Conference III: Proceedings. Boulder, Colorado: Westview Press. xxiii + 1262 p. See p. 515-22. [33 ref]
• ***Summary:*** Contents: Introduction. Seed transmission of plant viruses: Basic aspects, seed transmission of TRSV in soybean. Re-examination of the process of seed transmission: Incorporation of viral RNA in the plant genome, viral replicative RNA, protected viral ss-RNA. Concluding remarks.

Bud blight of soybean, as a symptom, can be induced by at least 4 viruses. Tobacco ringspot virus (TRSV) is the most common incitant. The disease was first reported in Indiana, USA, in 1941 by Samson, who established TRSV as the causal virus. Address: Agriculture Canada Research Station, 6660 N.W. Marine Dr., Vancouver [BC], Canada V6T 1X2.

1668. Horrocks, Lloyd A.; Kanfer, Julian N.; Porcellati, Giuseppe. eds. 1985. Phospholipids in the nervous system. Vol. II. Physiological roles. New York, NY: Raven Press. 358 p.
• ***Summary:*** Discusses the physiological roles of lecithin. Address: 1. Dep. of Physiological Chemistry, College of Medicine, Ohio State Univ., Columbus, Ohio; 2. Dep. of Biochemistry, Univ. of Manitoba Medical School, Winnipeg, Manitoba, Canada; 3. Istituto di Biochimica, Universitá di Perugia Policlinico, Perugia, Italy.

1669. Hume, D.J.; Shanmugasundaram, S.; Beversdorf, W.D. 1985. Soyabean *(Glycine max* (L.) Merrill). In: R.J. Summerfield and E.H. Roberts, eds. 1985. Grain Legume Crops. London: Collins. xvi + 859 p. See p. 391-432. Illust. Index. 24 cm. [192 ref]
• ***Summary:*** Contents: Introduction: History, current status and future projections. Principal economic yield and uses of crop products. Principal farming systems. Botanical and agronomic features: Symbiotic nitrogen fixation potential. Principal limitations to production and yield: Developing countries, developed countries. Fertiliser requirements.

Quality of seed constituents. Germplasm resources. Principal breeding strategies: Adaptation to new geographic areas, breeding methodology, breeding objectives, seed quality, pest and disease tolerances, current trends in soyabean breeding. Avenues of communication among researchers (INTSOY, AVDRC, IITA, FAO). Prospects for larger and more stable yields.

Tables: (1) Area (1000 ha), yield (kg per ha), and production (1000 tonnes) of soyabeans from 1969-71 to 1982. (2) Maturity durations and productivity potentials of soyabeans in selected countries. (3) *Glycine* species collections around the world. (4) Sources of resistance among soyabeans to selected insect pests. (5) Sources of resistance among soyabeans to selected diseases.

Table 9 shows that there are soybean germplasm collections in 15 countries. This table has 4 columns: Country, location (city), curator, and no of accessions. AVRDC in Taiwan has the largest germplasm collection in one location (10,400 accessions, Tainan), followed by USA (9,648, Illinois and Mississippi), India (4,000, Pantnagar; 1,800 Amravati), Japan (3,541, Tsukuba; 200, Morioka), USSR (3,000, Leningrad), China (3,000 Jilin; 3,000 Hubei; 2,930 Shadong [sic, Shandong {W.-G. Shantung}]; 2,500 Beijing; 960 Heilungjiang [Heilongjiang]). Also: Australia 400, France 500, Nigeria 1,300, Indonesia 600, South Korea 2,833, North Korea 300, South Africa 600, Sweden 1,200, and Thailand 1,686. Address: 1&3. Univ. of Guelph, Dep. of Crop Science, Guelph, Ontario N1G 2W1, Canada; 2. Asian Vegetable Research and Development Centre (AVRDC), PO Box 42, Shanhua, Tainan 741, Taiwan, Republic of China;.

1670. Juvik, Gail A.; Bernard, R.L.; Kauffman, H.E. 1985. Directory of germplasm collections. 1. II. Food legumes (Soyabean). Rome, Italy: International Board for Plant Genetic Resources. 53 p. Co-sponsored by INTSOY. [11 ref]

• ***Summary:*** Soybean germplasm collections worldwide are listed (with address and number of accessions) in the following countries: Argentina, Australia, Austria, Bangladesh, Bolivia, Brazil (2 collections), Bulgaria, Canada, China (14 collections), Taiwan (3), Colombia, Czechoslovakia (2), France (4), Germany (East), Germany (West), Greece, Hungary (2), India (8), Indonesia (3), Italy, Japan (5), Korea (South, 2), Malaysia, Nepal, Nigeria, Papua New Guinea, Paraguay, Philippines, Poland, Portugal, Romania, Spain, Sri Lanka, Thailand (2), Turkey, USSR, United Kingdom, USA (5), Uruguay, Venezuela, Vietnam (2), Yugoslavia, Zambia, Zimbabwe.

The world's largest soybean germplasm collections are as follows: AVRDC, Tainan, Taiwan (12,200 accessions), National Seed Storage Laboratory (NSSL), Fort Collins, Colorado, USA (10,880), Univ. of Illinois, Urbana, IL, USA (8,368), Jilin Academy of Agricultural Sciences, Jilin, China (4,800), N.I. Vavilov All-Union Institute of Plant Industry (VIR), Leningrad, Moscow (4,700), All-India Coordinated Research Project on Soybean, G.B. Pant Univ. of Agriculture and Technology, Pantnagar, India (4,022), Suweon, South Korea (4,020), Tsukuba, Japan (3,741). USDA, Stoneville, Mississippi, USA (3,000).

A world map (p. 9-10) shows (1) The sites of all soybean germplasm collections, (2) the range of ancient cultivation of the soyabean (East and Southeast Asia), (3) range of the wild soybean (Glycine soja; in China and Japan), and (4) range of perennial Glycine (Australia, Papua New Guinea, Philippines, Taiwan, Melanesia, and Micronesia).

This document is "Available free to developing countries, but restricted distribution to developed countries." Address: 1&3. INTSOY, Univ. of Illinois at Urbana-Champaign; 2. USDA-ARS, Dep. of Agronomy.

1671. Ontario Soya-Bean Growers' Marketing Board. 1985. Soybeans: Nature's miracle–teaching unit. Chatham, Ontario, Canada: OSGMB. 33 p. Undated. 28 cm.

• ***Summary:*** This interesting portfolio of materials is designed to teach children in Ontario, Canada, about the growth development of a soybean from seed to mature plant, soybean cultivation, soybean processing and products, the importance of soybeans to Ontario's economy, and the Ontario Soya-Bean Growers' Marketing Board.

Contents: Introduction to teacher's unit. 1. From seed to pod: A brief history of soybeans in Canada, biology of the soybean seed, its germination and seedling growth, soybean nodules and rhizobia bacteria, parts of a young soybean plant, reproductive stages from flowering to maturity, corn heat units, tillage, word scramble.

2. Soybeans–Nature's miracle: A brief history of soybean utilization, ways that soybeans are used, soy oil, meal and soyfoods, recipes, word search. 3. Imports and exports: Importance of soybeans to the economy of Canada and Ontario, how soybeans get to market, The Ontario Soya-Bean Growers' Marketing Board.

A table on page 20 shows "Soymeal consumption by Ontario's livestock and poultry." Hogs consume 45% of the total (the total is 503,000 tonnes), poultry 34%, dairy cattle 20%, and beef cattle 1%. Page 22 notes that the bulk of Ontario's soybean exports (77%) are sold to East Asia–especially Japan, Hong Kong, Singapore, Malaysia, Indonesia, and Korea. Soyfoods are listed and discussed in a positive way, with recipes for: Bran muffins (with soy flour and soy oil). Tofamole (tofu guacamole). Tofu fruit pudding. Tofu shake.

Note: This is the earliest English-language document seen (Dec. 2003) that contains the term "Tofu shake."

The three largest farm crops in Ontario in terms of total area are hay (1,050,000 ha), grain corn (902,000 ha), and soybeans (425,000 ha). Address: Chatham, ONT, Canada.

1672. Shurtleff, William; Aoyagi, Akiko. 1985. When major soybean producing nations reached "takeoff" of 10,000 metric tons (Document part). In: Shurtleff and Aoyagi. 1985. Soyfoods Industry and Market: Directory and Databook. 5th ed. Lafayette, CA: Soyfoods Center. 202 p. See p. 168.
• ***Summary:*** Pre-1850 China proper, Manchuria, Korea, Japan, Taiwan, Indonesia. 1912 United States. 1925 USSR. 1942 Canada. 1946 Brazil, Thailand. 1955 Nigeria. 1956 Colombia. 1958 Vietnam (North and South combined). 1959 Yugoslavia. 1961 Argentina. 1962 Mexico. 1963 Paraguay. 1966 Romania. 1968 India. 1969 Turkey. 1971 Bulgaria. 1972 Iran, Nepal, Australia. 1974 South Africa, Hungary, Burma. 1975 Uruguay, Bolivia, Zimbabwe. 1976 Egypt. 1979 France. 1980 Philippines. 1673. **Product Name:** Tom Soya Foods Tofu.
**Manufacturer's Name:** Tom Soya Enterprises (Marketer). Made in Canada by Victor Food Products.
**Manufacturer's Address:** Toronto, ONT, Canada.
**Date of Introduction:** 1985?
**Ingredients:** Water, soya beans, calcium sulfate.
**Wt/Vol., Packaging, Price:** 500 gm packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
**How Stored:** Refrigerated.
**New Product–Documentation:** Label sent by Kathleen O'Bannon. 1989. March. Undated. 5 by 4.25 inches. Dark blue, light blue, orange, yellow, and white. Printed on film. Written in French and English. "Fresh soya bean curd. Cailles frais aux feves de soya." An illustration shows a smiling boy resembling Tom Sawyer walking with a straw hat, fishing pole over his shoulder, and rolled up, suspendered jeans.

Letter from Kathleen O'Bannon Baldinger. 1990. March 25. This company was started by Rabbi David Dreben, who was the principal of a Hebrew school in a northern suburb of Toronto. He had the Victor Food Products plant certified to use COR 77 on those products that VFP produced for him. "He marketed his tofu himself, mostly in small stores in the Jewish area of Toronto and in the northern suburbs. He did many cooking demonstrations at various meetings and clubs, encouraging people to use tofu in their kosher cooking. He sold a small quantity compared to the total output of VFP. He died prior to June 1986, possibly during 1985."

1674. Plenty Canada. 1986. The Soya Centre (Calendar). Castries, St. Lucia.
• ***Summary:*** This is the head of a calendar, 8½ by 11 inches. On the top three-fourths of the page is a large black-and-white photo of the Soya Centre, looking from the outside in through two open doors–on each of which is written "Soya Beans" in large diagonal letters, above an illustration of a soya bean plant. Inside are about 10 local black people. On the back right is a food retail counter and snack bar, staffed by several women. On the back wall is a blackboard with a price list and menu written on it in chalk.

On the bottom quarter, in large black letters is written "The Soya Centre" in an arch. A laughing Santa Claus on the left is holding the word "The." Below the arch is written the Center's address: "19 Grass St., Castries, St. Lucia. Tel: 26421." To the right of the arch is a line drawing of a dove, and below it: "With the Compliments of Plenty Canada and the Staff of the Soya Centre." The calendar itself is missing.

Talk with Maya Clarke of Ontario, Canada. 1998. June 25. Maya worked for 7 years as a nutritionist and soyfoods instructor/technician for Plenty Canada at this Soya Centre in St. Lucia. She remembers this calendar well but does not have a copy. "There could possibly be one in the Plenty archives" at Lanark, but she is not too sure. Plenty made a calendar like this for two years, and this was the first of the two. It was designed by Plenty and printed in Castries (the capital city, by the person who prints *The Voice* newspaper) in December 1985 and presented on 1 Jan. 1986 as a New Year's gift to the Center's popular customers and friends. The calendar had a photograph as the head, then one page for each month below. The soya bean plants on the two big doors were painted by a Rastafarian man named Papa. Many of the people shown in the picture, the same as those who came to the Centre, were Rastafarians, who are vegetarians (very important) and consider themselves members of the lost tribe of Israel. They esteem Marcus Garvey, who they consider one of their forerunners. Note: *Webster's Dictionary* (1985) defines Rastafarian (derived from *Ras Tafari*, the precoronation name of Haile Selassie), a word first used in 1955, as "an adherent of Rastafarianism." The latter word, first used in 1968, is defined as "a religious cult among black Jamaicans that teaches the eventual redemption of blacks and their return to Africa, employs ritualistic use of marijuana, forbids the cutting of hair [it is worn in long braids called dreadlocks (first used in 1960)], and venerates Haile Selassie as a god."

The Soya Centre, which was constructed specifically for this purpose by the team just before Maya (John Baranni and Christine Kilgour from Plenty with local labor), was located in the middle of a black ghetto in Castries, and there were lots of social problems in the area. In the back of the Centre was a soyfoods factory. The factory was used to train all the people who subsequently opened up soyfoods businesses in St. Lucia. "What went on with soyfoods in St. Lucia was very significant–much more so than what happened in Jamaica, etc. At any given time, up to ten local people worked (for pay) at the Centre. The Centre was self-sufficient, so the money from the foods they sold went to pay the workers. Two guys would start very early in the

morning (about 4:00 a.m.) to make soymilk and tofu. Then a crew of ladies would come in about 7:00 a.m. and use the tofu and soymilk to make second generation products from soymilk, tofu, and okara–such as "bakes" (like a little doughnut) and "accras" (like a fritter, in which the traditional salt cod was replaced by okara). The use of okara made the products more affordable. Tempeh was made at time, but it did not catch on as well as tofu and soymilk, and it was somewhat hard to get the spores. "Tofu caught on almost immediately "The local people just took it up; they just seemed to know what to do with it." Soymilk ice cream was one of the most popular products. Soymilk, imported soy flour, and okara were use to make little breads. Many people would bike or walk to the Centre to buy tofu in bulk over the counter–which was also a snack bar. The Centre was both a business and an education/training center. Many local Seventh-day Adventists came to cooking classes at the center, and Maya also taught classes in their churches, schools, and homes. Maya remembers that one day a 13-year-old kid named Sooner knocked on the door of the Center at 7 o'clock in the morning and said to her: "I want to know everything there is about soyfoods." She happily invited him in, and began to teach him. For a while there was a "Comments Book" at the Centre; in it people wrote soy poems and soy songs–some of which Maya still has.

At one time some 10-12 soyfoods businesses were started in St. Lucia by local people who had first trained at Plenty Canada's Soya Centre. About 6 of those businesses are still in operation. A good example is La Soyarie. The reasons the others did not survive had nothing to do with local acceptance of soyfoods; they failed largely for reasons related to money or business management skills.

St. Lucia is a very small (27 miles long) independent country; It was granted self-government by the British in 1967 and attained independence on 22 Feb. 1979. The population is about 160,000 (1998). About 90% of the population is of African descent, with a small minority of Europeans and a few Carib Indians. Bananas are the chief crop. The official language is English, but Creole is the language most widely spoken. It is largely an oral culture.

Note: This is the earliest calendar seen (Oct. 2001) that mentions soy. Address: 19 Grass St., Castries, St. Lucia. Phone: 26421.

1675. *Toronto Star (Ontario, Canada).*1986. Tempeh new to Toronto. Feb. 6. p. F5.
• ***Summary:*** "Soy based foods are available at more and more restaurants, specialty stores, and supermarkets, in response to a growing demand for lighter and meatless protein foods. For example, there has been a rapid rise in the popularity of tofu (soybean curd) and tofu based products.

"Once only for 'those who dare,' tofu is now available in all major supermarkets and in many major restaurants in Toronto.

"Moving quickly on the heels of tofu is tempeh, and Indonesian culinary delight."

Two varieties of tempeh (traditional soy tempeh and a lighter grain tempeh) is now being made by Soy City Foods in Toronto. They are served at: (1) Vegetarian Restaurant, 542 Yonge St.; (2) West End Vegetarian Restaurant, 2849 Dundas St. West.

Gives a recipe for Barbecued tempeh.

1676. deMan, J.M. 1986. The growing importance of plant proteins in food. *Notes on Agriculture (Guelph, Ontario)* 20(1):13-14. Feb.
• ***Summary:*** "If we look at the list of promising candidates for new foods of the future, soybean appear to be the best answer... Soy proteins are already widely used as food ingredients, e.g. in bread, and it appears certain that slowly but surely plant proteins will continue to play an increased role in the food supply." Soybeans and soy flour are among the least expensive sources of protein, and an acre of land can produce more protein from soybeans than from any other conventional farm crop. Table 3 shows the price of a kilogram of protein from various sources in 1984 in Guelph, Canada: Soybeans $1.11. Wheat $2.14. Bread $17.00. Milk $17.14. Ground beef $24.66. Tofu $25.00. Cheese $40.00. Yoghurt (dairy) $62.56. Sirloin steak $74.06. Address: Dep. of Food Science, Ontario Agricultural College, Univ. of Guelph, ONT, Canada.

1677. **Product Name:** Super Soy Drink (Organic Non Dairy Beverage).
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.
**Date of Introduction:** 1986. February.
**Ingredients:** Filtered water, organic soy beans, barley. Malted: Natural ingredients, barley malt, natural vanilla, sea salt. Mocha: Roasted chicory, dandelion, and carob.
**Wt/Vol., Packaging, Price:** 1 liter.
**How Stored:** Refrigerated.
**New Product–Documentation:** The Healing Exchange News. 1988. Jan. p. 7. "The only organic tofu and soymilk available in Victoria." Address: Sooke Soy Foods Ltd., 2625 Otter Point Rd., R.R. 2, Sooke, BC, V0S 1N0. Phone: 642-3263. Label. 1988, received. 5.5 by 4 inches. Self adhesive. Blue, green, and yellow on white. "Organic. Refrigerate. Use within 4 days after opening for quality, freshness."

1678. **Product Name:** Tofu Master Entice (Soymilk Ice Cream) [Chocolate, Strawberry, or Vanilla].
**Manufacturer's Name:** Tofu Master, Inc.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.

**Date of Introduction:** 1986. February
**Ingredients:** Soymilk sugar, corn syrup solids, partially hydrogenated coconut oil, natural and artificial flavour, monoglycerides, guar gum, locust bean gum, carrageenan, food color.
**Wt/Vol., Packaging, Price:** 100 ml cup.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Kathleen O'Bannon. 1990. March 7. Labels (mockups) for these 3 flavors. 2.75 inches diameter lids. "Frozen dessert–Desert au glace."

1679. **Product Name:** Tofu Master Tofu [Firm, or Soft], and Tofu Master Gourmet Tofu.
**Manufacturer's Name:** Tofu Masters, Inc.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1986. February.
**Ingredients:** 1. Soymilk, calcium sulphate; 2. Water, soybeans, calcium sulfate and/or magnesium chloride.
**Wt/Vol., Packaging, Price:** 1. 500 gm; 2. 10.6 oz (300 gm).
**How Stored:** Refrigerated.
**Nutrition:** 1. Per 100 gm.: Protein 7 gm, fat 3 gm, carbohydrates 1 gm, calories 58, sodium 2 mg, potassium 97 mg. 2. Per 4 oz (113 gm): Calories 120, protein 16 gm, carbohydrate 4 gm, fat 6 gm, cholesterol 0, sodium 0, potassium 180 mg. Percentage of U.S. RDA: Protein 26, calcium 45, iron 10.
**New Product–Documentation:** Talk with Kathleen O'Bannon. 1990. March 7. Label sent by Kathleen O'Bannon. 1990, March. 5.25 by 4.25 inches. Green, yellow, black, and red. Printed on film. Logo of a stylized rayed sun. UPC indicia.

Photocopy of Label sent by Kathleen. 1990. March. 7 by 5 inches. "Sodium free. Preservatives free. Cholesterol free. Product of Canada."

1680. Ward, A. Thomas; Reichert, Robert D. 1986. Comparison of the effect of cell wall and hull fiber from canola and soybean on the bioavailability for rats of minerals, protein and lipid. *J. of Nutrition* 116(2):233-41. Feb. [30 ref]
• ***Summary:*** Hull or cell wall material from canola or soybean or cellulose was added to a basal, semipurified diet at a level of 12% and fed to growing male rats. The apparent availability of copper, iron, calcium, phosphorus, and protein were lower when the fiber-containing diets diet were fed compared to the control diet. Cellulose diets and soybean cell wall diets had the fastest transit times through the digestive tract. Address: National Research Council of Canada, 110 Gymnasium Road, Saskatoon, Saskatchewan, Canada S7N 0W9.

1681. **Product Name:** [Yves Tranches Deli Slices. Bologna Style].
**Foreign Name:** Style Saucisson de Bologne.
**Manufacturer's Name:** Yves Natural Foods (Yves Fine Foods Inc.).
**Manufacturer's Address:** 1138 East Georgia St., Vancouver, BC, V6A 2A8, Canada.
**Date of Introduction:** 1986. March.
**Ingredients:** Tofu (soybeans, nigari, water), pure vegetable oil, wheat gluten, dried [egg] albumen, wheat germ, nutritional yeast, spices, hydrolysed vegetable protein, natural hickory smoked flavor, natural color, beet powder, sea salt, guar gum.
**Wt/Vol., Packaging, Price:** 6 oz (165 gm) vacuum packed. 155 gm retails for $2.29 (8/91).
**How Stored:** Refrigerated, 28 day shelf life. Or frozen.
**New Product–Documentation:** Label. 1987. 3.5 inch diameter. Self adhesive Yellow, red, and black. Self adhesive. A second self-adhesive label on the back lists ingredients, in black only. Company name is Yves Fine Foods Inc., Vancouver, Canada V6B 1G4. Soy Power Co. 1987. Catalog.

Label. 1991. Aug. new design. 4.5 by 5.5 inches. Plastic. Red, blue, white, and tan. "Yves Deli Slices do not contain any animal products and are prepared with fresh organic tofu."

1682. **Product Name:** Tofu.
**Manufacturer's Name:** Tai Foods Inc.
**Manufacturer's Address:** Muir St., Winnipeg, MAN, Canada. Phone: 204-694-0484.
**Date of Introduction:** 1986. April.
**New Product–Documentation:** Boughton. 1987. Small Business (Canada). Dec. p. 12, 14. "Tai Foods Tries for Tofu Converts."

1683. **Product Name:** Tofu Treat (Non-Dairy Soy Ice Cream) [Strawberry, Chocolate, or Vanilla].
**Manufacturer's Name:** Tai Foods Inc.
**Manufacturer's Address:** Muir St., Winnipeg, MAN, Canada. Phone: 204-694-0484.
**Date of Introduction:** 1986. April.
**How Stored:** Frozen.
**New Product–Documentation:** Boughton. 1987. Small Business (Canada). Dec. p. 12, 14. "Tai Foods Tries for Tofu Converts."

1684. Gupta, Raj P. 1986. Re: Selling tofu in Kanpur, India, and soymilk equipment to developing countries. Letter to William Shurtleff at Soyfoods Center, May 9. 1 p. Typed, with signature.
• ***Summary:*** "It is not even one year since we started selling tofu to consumers in Kanpur [India] and suddenly every one seems to be interested in soyfoods in India.

"There is a great deal of interest here in our process, and it is likely that we would have a tie up with a few companies for the use of our process. APV Crepaco (USA), APV Texmaco (India) and Kurihara (Japan) have begun making soymilk equipment based on our process. Some companies here are also interested in no-beany soymeal. I am hopeful that my extended stay here (up to the end of Aug. 1986) will help move things at a reasonable pace.

"Godrej, a large business house here, is setting up a 4000 liter/hour soymilk plant with know-how from Kibun and equipment from Alfa-Laval. Kalyan Solvent Extraction Limited is expected to setup a similar size plant with process and know-how from us and equipment considering to go into large scale soymilk production. In setting up small scale tofu and soymilk operation similar to ours in Kanpur. Several of them have made deposits with us of up to Rs.5000 for the purpose." Address: Ph.D., Vice President, ProSoya Foods International Inc., 801-275 Slater St., Ottawa, ONT, K1P 5H9, Canada. Phone: 613-237-5814.

1685. Beatty, Denise. 1986. 'Lactose intolerant' still need calcium. *Toronto Star (Ontario, Canada).* May 28. p. B4.
• ***Summary:*** If you are lactose intolerant, include non-milk sources of calcium in your diet, such as 1 cup cooked beans (soy, kidney, white; 100 mg calcium); ½ cup tofu (soybean curd; 145 mg calcium).

Lactose, the natural sugar in milk, has to be broken down (hydrolyzed) by an enzyme named lactase before it can be absorbed and used by the human body. If you don't have enough of the enzyme to break down / digest the amount of lactose you are consuming, the undigested sugar remains in the intestine, where it can cause diarrhea, cramps, and intestinal gas.

1686. Agricultural Research Centres: A world directory of organizations and programmes. 8th ed. 2 vols. 1986. Essex, England: Longman. 1138 p. 28 cm.
• ***Summary:*** Vol. 1 is A to M, and Vol. 2 is N to Z. Within each volume, the organizations are listed by country. There is a "title of establishments" index and a subject index. In the subject index, under soya beans (p. 1134) we find listings for organizations that are conducting soybean research in the following countries: Australia (6), Belgium (1), Bolivia (1), Brazil (5), Burkina Faso (1), Cameroon (1), Canada (4), French Overseas Departments (1) France (1), Honduras (1), Indonesia (1), Mexico (1), Peru (1), Romania (1), Sri Lanka (1), Swaziland (1), Taiwan (2), Thailand (2), United Kingdom (1), USA (4), Venezuela (1), Zambia (2), Zimbabwe (1).

1687. *Toronto Star (Ontario, Canada).*1986. Try the Kiku platter: Table for Two. June 24. p. H5.
• ***Summary:*** "Table for Two" is the Star's daily restaurant review. This is a review of the Japanese restaurant Kiku located at 1560 Yonge St. (at St. Clair Ave. Phone: 920-9922).

You are the chef at this recently opened restaurant, which is nearly identical to the first Kiku on King St. West. A as barbecue is sunk in the middle of each table.

"The menu offers several entrees that come with miso soup (containing soybean curd with [sic] tofu and green onion), steamed rice, three vegetables or salad, and green tea."

Note: Tofu is the same as soybean curd.

1688. Lynam, Frances. 1986. Happy birthday tofu, happy birthday tofu [David Mintz about to celebrate Tofutti's fifth birthday]. *Register (Shrewsbury, New Jersey).* June 25. p. 6B, 7B.
• ***Summary:*** "In 1971 Mintz read about tofu in a health magazine... For the next 10 years he spent all his free time creating Tofutti. 'It was a whole new world. It became an obsession.' Today more than 38,000 outlets in all 50 states carry the product. It is also sold in Canada, Australia, Korea, Hong Kong, and the U.S. Virgin Islands. Recently he developed an 'egg' without cholesterol called 'Eggwatchers' and a coffee whitener without milk."

1689. Hanes, Phyllis. 1986. Try designer ice cream for hot treat: Frozen, upscale novelties can be an expensive splurge. *Christian Science Monitor.* June 26. p. R41.
• ***Summary:*** The word "novelties" refers to "ice pops, fudge sticks, covered ice cream balls or squares, frozen fruit juices, frozen tofu or yogurt on a stick, and fancy ice cream cones, cups, or bars with or without sticks."

The United States leads the world in per capita production of ice cream and related products with 44.13 pints per person. Australia is 2nd with 37.21 pints (down 15.7%), followed by New Zealand (35.87), Canada (31.88), and Sweden (28.57).

1690. **Product Name:** Tofu, Soymilk, and Tofu Ice Cream.
**Manufacturer's Name:** Basics (The). Renamed Kootenay Soyfoods in May 1989. Renamed Kaslo Soyfoods in Feb. 1990. Renamed Silverking Soyafoods in Oct. 1990.
**Manufacturer's Address:** Box 933, Kaslo, BC, V0G 1M0, Canada. Phone: 604-353-7726.
**Date of Introduction:** 1986. June.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Greg Lundh, owner. 1988. Aug. 9. He started making tofu and soymilk in Sept. 1986, and introduced a tofu ice cream shortly thereafter. The latter was an instant hit. All of his tofu is made with nigari and delivered fresh to the homes of his 125 customers in his Volkswagen van. Most customers have standing orders. He features service and freshness. The business is very small but growing. Talk with Greg Lundh, owner. 1988. Aug. 24. The company started making tofu

and soymilk in June 1986. They started making the ice cream in about August 1986. Greg delivers his own products door to door.

Talk with Greg Lundh, owner. 1989. April 28. He now makes 300 lb of tofu a week, one day a week, using a boiling water grind. Still delivers door to door. His company is still unregistered. His only competitor in the interior of British Columbia, Okanagon Soyfoods, went out of business 10 days ago. Now he wants expand from a large blender up to a grinder.

Talk with Greg Lundh. 1990. Oct. 20. His company has been renamed 3 times, as shown above.

1691. deMan, J.M.; deMan, L.; Gupta, S. 1986. Texture and microstructure of soybean curd (tofu) as affected by different coagulants. *Food Microstructure* 5(1):83-89. [13 ref]

• ***Summary:*** Scanning electron microscopy is used to evaluate the microstructure of tofu. Among the 5 coagulants studied, 0.75% calcium sulfate and 0.4% glucono delta lactone (GDL) appeared to be most suitable for making tofu of high bulk weight and smooth texture. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1. Phone: 519-824-4120 x 2515.

1692. American Soybean Association. 1986. Soya Bluebook ’86. St. Louis, Missouri: American Soybean Assoc. 278 p. July. Index (bold face type indicates advertiser). 22 cm.

• ***Summary:*** Contents: Index of advertisers (p. 4). Soybeans: Your profit opportunity, by Dr. Kenneth L. Bader, CEO, ASA (p. 5). Organizations (by country, within each country alphabetically): For each gives the name, address, contact person, year founded, number of members, objectives and activities, publications. Countries are: USA, Australia, Austria, Bangladesh, Belgium, Brazil, Canada, England, Germany (Federal Republic of), Finland, France, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Malaysia, Mexico, Netherlands, Norway, Philippines, Portugal, Senegal, Spain, Sweden, Taiwan, Turkey, Yugoslavia, Zaire, Zimbabwe. U.S. agricultural education, research & extension (by state; mainly state agricultural / land-grant colleges), ASA international offices and world regions (colored world map and photo of each country director), government trading agencies.

Soy directory: Oil extraction plants / refineries (alphabetically by state in USA, then by country), soyfoods / edible soy products manufacturers (lecithin, soy flour, soy grits, soy protein concentrates & isolates, textured soy protein, binders, extenders, simulated meat products, soy oil products {margarine, shortening, cooking / salad oil, salad dressings}, soyfoods–beverages [soymilk], frozen desserts, soy sauce, tempeh, tofu, whole soybean snacks {soynuts}, other soy-based foods), within each product by country, producers of soy products for industrial manufacturers (by products, etc.): Industrial lecithin, industrial soy flour / soy protein, industrial soy oil, soy sterols and tocopherols, soybean fatty acids.

Soybean manufacturing support industries: Manufacturing equipment & supplies, soybean processing equipment & supplies, manufacturing services. Marketing and auxiliary services: Brokers, financial services, forwarding agents, marketing consultants, trading companies, transportation, warehousing–export / import.

Soy statistics (tables & graphs): Soya conversions [weights & measures], metric conversions, temperature conversions. U.S. soybean planting and harvesting dates (by state). U.S. soybean acreage, yield and production, 1925–1985 (by year). U.S. soybean planted acreage by state (1970–1985). U.S. soybean harvested acreage by state (1970–1985). U.S. soybean yield by state (1970–1985). U.S. soybean production by state (1970–1985). U.S. soybean production major crops (1920–1985): One graph each for soybeans, corn, wheat, and cotton. U.S. harvested acreage of major crops (1920–1985): One graph each for the big 4. U.S. yield per acre of major crops (1920–1985): One graph each for the big 4. Argentine soybean area, yield and production by province (1975-1986). Brazilian soybean area, yield and production by province (1975-1986). Canadian soybean production: Acreage, yield, production, farm price and value (1950-51–1984-85). Canadian soybean production and utilization (1950-1984, year beginning Aug. 1): Production, imports, supplies, exports of beans, processed for oil and meal, soy oil produced, soybean oilcake produced. World soybean production: Area and production in specified countries and the world total (1980/81–1985/86). Soybean production by major countries (one graph, 1925-1985): U.S., Brazil, PRC [China], Argentina. Share of world soybean production [percentage] by major countries (one graph, 1925-1985): Big 4. Soybean acreage by major countries (one graph, 1925-1985): Big 4. Share of world soybean acreage [percentage] by major countries (one graph, 1925-1985): Big 4. U.S. soybeans: Supply, disposition, acreage, yield and price (1970–1986). Soybean usage in the U.S. for crush and exports (one graph, 1925-1985, million bushels). U.S. soybean exports: Percent of total usage (one graph, 1925-1985). Argentine soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Brazilian soybeans and products (oil and meal): Supply and disposition (1975/76–1986/87). Prices of U.S. soybeans, No. 1 yellow: Average price per bushel, Illinois country shipping points (by year and month, 1950–1984, dollars). Prices of U.S. soybeans received by farmers: Average price per bushel (by year and month, 1950–1984, dollars). U.S. soybean price support operations (1945-1985, incl. CCC). U.S. soybean crop value: U.S. and major producing states (1925-1985): Illinois, Iowa, Indiana, Ohio, Missouri, Minnesota, Arkansas. Fold-out color map of U.S. soybean acreage by county. U.S. farm marketings of

soybeans: Percent of open market farm sales by month (1975/76–1984/85). Map of U.S. soybean processing plants. Value of U.S. soybean products per bushel and crush margin (1950-1984): Soy oil, soybean meal, soybean price (received by farmers, No. 1 yellow Illinois), margin (ditto). U.S. soybean meal: Prices paid by farmers–44% protein, dollars per 100 lbs, by year and month (1950-1984). U.S. soybean meal: Average wholesale price–44% protein, dollars per ton, bulk Decatur, Illinois, by year and month (1950–1984). U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance, by year and month, thousand short tons (1978/79–1984/85). U.S. soybean cake and meals: Supply, disposition and price (1977-1985): Soybean, cottonseed, linseed, peanut. Major world protein meals: Supply and utilization (1981/82–1985/86; Production, exports, imports, consumption, ending stocks): Soybean, cottonseed, rapeseed, sunflowerseed, fish, peanut, copra, linseed, palm kernel. World major oilseeds: Supply and utilization (1981/82–1985/86). World major vegetable and marine oils: Supply and utilization (1981/82–1985/86). Prices of U.S. soybean oil: Soy oil, domestic crude, average cents per pound in tank cars at Midwestern mills, by year and month (1950/51–1984/85). U.S. soybean utilization, by year (1960-1984): Food–Shortening, margarine, cooking and salad oils, other edible, total. Nonfood–Paint and varnish, resins and plastics, fatty acids, other inedible (incl. soap), total. Total domestic utilization. U.S. soybean oil value as percent of total soybean value (1930–1985). Note: Peaked at about 55% in 1930, fell to about 32% in 1980-81. U.S. soybean oil: Supply, disposition and price (1960-1985). U.S. edible fats and oils: Supply and disappearance (1978-1985): Coconut, corn, cottonseed, lard, palm, peanut, soybean, sunflower, tallow (edible). U.S. exports of soybeans, by year and month (1953–1984). U.S. soybean exports by port and country of destination (Sept. 1984–Aug. 1985): Ports are–St. Lawrence Seaway, Lakes, Atlantic, Gulf (by far the largest), Pacific, Interior. U.S. exports: Soybeans–Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oil–Volume of exports by country of destination (in metric tons) and total value (1981–1985). U.S. exports: Soybean oilseed cake and meal–Volume of exports by country of destination (in metric tons) and total value (1981–1985). Map of U.S. soybean exports by port areas: Sept. 1984–Aug. 1985 (1,000 bushels). U.S. exports of soybean, cottonseed and sunflowerseed oils: U.S. commercial and P.L. 480 exports–Volume of exports by region and country of destination (in metric tons) and total value (1979/80–1984/85; year beginning in October). U.S. exports: Soybean oil–P.L. 480, Title I and III, volume (in metric tons) and value (in $1,000) by country of destination (FY 1981–1985). U.S. exports of soybean and cottonseed oils: U.S. commercial and P.L. 480 exports (1950–1984, million lbs; incl. P.L. 480 as a percentage of the whole). Brazilian exports of soybeans and products to major countries (1,000 metric tons; 1976-1984). Graph of soybean & product exports by major countries (U.S., Brazil, Argentina) (soybean equivalent; 1970-1985). Graph of world share of soybean & product exports by major countries (U.S., Brazil, Argentina) (1970-1985). Note: U.S. share has fallen from 95% in 1970 to about 50% in 1984.

Glossary: General terms, soy protein terms. Standards & specifications: NSPA, Association of American Feed Control Officials (AAFCO), USDA (definitions and grades). Index. Address: P.O. Box 27300, St. Louis, Missouri 63141.

1693. deMan, J.M. 1986. Processing of protein-rich foods. In: V.H. Potty, et al. eds. 1986. Traditional Foods: Some Products and Technologies. 292 p. See p. 246-52. Aug. Presented at the UN University Workshop on "Traditional Food Technologies: Their Development and Integrated Utilisation with Emerging Technologies." Held June 1983 at CFTRI, Mysore, India. [17 ref]

• ***Summary:*** Under soybeans (the major crop discussed in this chapter), the author mentions tofu, soy milk, fried tofu and tofu puffs. Includes a proximate analysis of various Canadian soybean cultivars. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, N1G 2W1, Canada.

1694. Nielsen Marketing Research. 1986. Nielsen warehouse shipment service market snapshot: Total soya sauce (52 weeks to Aug. 30, 1986). 1 p. Unpublished manuscript.

• ***Summary:*** In the year prior to 30 Aug. 1986 shipments of soy sauce in Canada (excluding Yukon and Northwest Territories) were 493,100 imperial gallons, worth $8,916,000 at the retail level. Of this total, 64.6% by volume was sold in eastern Canada (Maritimes, Quebec, and Ontario), and 35.4% was sold in western Canada (Manitoba, Saskatchewan, Alberta, and British Columbia). Address: Canada.

1695. **Product Name:** Tofu Parlor (Soymilk Ice Cream) [Hard Pack, and Bar; Strawberry, Chocolate, or Vanilla].
**Manufacturer's Name:** Tofu Parlor Desserts / Tofu Restaurant and Ice Cream Parlor Ltd.
**Manufacturer's Address:** 304 Victoria Ave. East, Regina, SASK, S4N 0N7, Canada.
**Date of Introduction:** 1986. August
**Ingredients:** Soymilk, sugar, corn syrup solids, partially hydrogenated coconut oil, natural and artificial flavour, monoglycerides, guar gum, locust bean gum, carrageenan, food color.
**Wt/Vol., Packaging, Price:** 1 liter carton and 100 ml cup.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Kathleen O'Bannon. 1990. March 7.

Photocopy of Label. 1986? 13.5 by 5 inches. Written in both English and French. “Nutritious non-dairy dessert. An edible oil product. No preservatives added. No lactose.” Illustration of something vaguely resembling a soybean sprouting out of something vaguely resembling a hinged Styrofoam box.

Photocopy of label from Tofu Parlor Bar. The artwork was done in Vancouver in July 1986. 1 box contains 12 bars, 75 ml each. The text is written in English and French. “Tablettes Glacées au Tofu. A 3000 year old tradition.”

Leaflet. Undated. 4 by 8.5 inches. “Tofu Parlor. Nature’s dessert. Non dairy. No cholesterol. No lactose. No additives.” 32 calories per fluid ounce serving (less than half the calories of other frozen desserts). Yes, I want to know more about Tofu Parlor products and franchises, says a form at bottom.

1696. Tremblay, Yvon. 1986. Le tofu. 120 recettes faciles même si vous n’êtes pas végétarien [Tofu. 120 easy recipes even if you are not a vegetarian]. Montreal and Paris: Stanke Ltee. 137 p. Aug. Illust. No index. 21 cm. [Fre]
• ***Summary:*** Reviewed in Dietetique en Action. 1988. 1(2):30. Oct. Contents. Preface. Preparation of tofu. 1. Entrées. 2. Soups. 3. Salads. 4. Sauces and stuffings. 5. Main dishes. 6. Desserts. Address: 12080 Pasteur, Montreal, QUE, H3M 2P9, Canada.

1697. *Windsor Star (Essex County, Ontario, Canada).*1986. New dryers expected to end fire hazards. Sept. 23. p. A5.
• ***Summary:*** “Maple Leaf Monarch Company says new grain dryers to be installed in about 8 weeks should eliminate the nagging problems the company has had with fires.” The local labor union leader said he had records of 200 to 300 fires at the plant during 1983 and 1984, although most were small and quickly extinguished by the workers. A photo shows puff of smoke seen coming from a recent Maple Leaf Monarch fire.

1698. *Plenty Bulletin (Summertown, Tennessee).*1986. Jamaica soy. 2(3):1-3. Fall. [5 ref]
• ***Summary:*** “Recently, the Jamaican Government has launched an aggressive agricultural program (titled ‘AGRO 21’) which is designed to boost production of foods that can be grown locally, in order to decrease the need for precious foreign exchange... Consequently, soybean production has been conceived as one of the top priorities by the Ministry of Agriculture. Ironically the plan focuses on the use of soybeans to provide cooking oil and animal feed... With the participation of the Israelis and other foreign investors, soybeans are fast becoming one of the major field crops on the island...

“In 1983, Plenty USA’s sister organization, Plenty Canada, established an agricultural project on the north-central coast of Jamaica. Craig Bialick, an agronomist and soy foods technician who had worked 3 years with Plenty’s soy projects in Guatemala in the late 1970’s, was hired by Plenty Canada for the Jamaica project.

“Craig spent 15 months in Jamaica, June 1984-September 1985... He organized a school lunch program and set up a soy foods processing training center in Claremont, St. Ann. He also carried out numerous ‘soy demonstrations’ wherein local participants were taught how to prepare soy foods using only the facilities available in their home kitchens. 107 of these public demonstrations reached over 6,000 people from 4 different parishes on the island. Typical locations were schools, churches, clinics, youth clubs and weekly markets.”

The Country Farmhouse Project in Kingston, Jamaica is run with the help of two Jamaican young people, Rasino D’Aguilar and his wife, Mohi. This small-scale cottage industry, which has been in business for 1 year on a shoestring budget, makes soy ice cream, tofu, soy mayonnaise, and a variety of okara burgers. Some of their products are sold at a weekly market sponsored by the Jamaica Vegetarian Society.

Photos show: (1) Jamaican kids making soy ice cream in Kingston. (2) Rasimo D’Aguilar preparing soymilk for making tofu at the Country Farmhouse kitchen in Kingston, Jamaica.

1699. Plenty Canada. 1986. Plenty Canada: Our 10th year of service–self-help projects in the developing world since 1976 (Brochure). Lanark, Ontario, Canada. 10 panels. Back and front.
• ***Summary:*** Includes a detailed discussion of Plenty Canada’s projects in the Quthing Valley, Lesotho–which is inside = landlocked by the Republic of South Africa. Lesotho gained independence in 1966.

Black and white photos show: (1) Half of the Village Technology Training Center, a round mud-brick building with a conical thatched roof, with solar electric cells and a solar water heater on the roof. (2) Two Basotho village women at the Soy Centre inside this building; one is weighing tofu. (3) The village spring, which Plenty Canada tapped and piped clean water to the village for drinking, cooking, and irrigation. Address: Plenty Canada, R.R. 3, Lanark, ON K0G 1K0, Canada.

1700. **Product Name:** The Ultimate Tofu (Non-Dairy Frozen Dessert).
**Manufacturer’s Name:** Ultimate Tofu, Inc., of Mississauga and Eplett Dairies Co. Ltd. (The).
**Manufacturer’s Address:** Brampton, Ontario, Canada.
**Date of Introduction:** 1986. September.
**How Stored:** Frozen.
**New Product–Documentation:** Foodservice & Hospitality (Toronto). 1986. Sept. This company is the fourth largest dairy in the province.

1701. Brandenburg, Fred. 1986. Re: Enclosing photocopies of documents you requested. Letter to William Shurtleff at Soyfoods Center, Oct. 22. 1 p. Typed, with signature on letterhead.

• ***Summary:*** "Enclosed are photocopies of most of the documents you requested in your letter of June 21, 1986." The title pages of the OSGMB Annual Reports are not included.

"These documents are available in the archives of the University of Guelph library, in Guelph, Ontario, N1G 2W1. They will be happy to provide you with additional information regarding publications from the Ontario Agricultural College.

"Please accept this information with my compliments." Address: Secretary Manager, The Ontario Soya-bean Growers' Marketing Board, P.O. Box 1199, Chatham, Ontario N7M 5LB, Canada. Phone: 519-352-7730.

1702. Muendel, H.-H. 1986. Emergence and vigor of soybean in relation to initial seed moisture and soil temperature. *Agronomy Journal* 78(5):765-79. Sept/Oct. [18 ref]

• ***Summary:*** Phytron and field studies were used on two early maturing soybean varieties, Maple Presto, and King Grain X005 to assess the effects of initial seed moisture and soil temperature on emergence and seed yield of soybean. "Each 1ºC decrease in mean soil temperature between 17.3 and 8.5ºC resulted in a 2-day delay of emergence... Using early maturing cultivars and seed lots with high germinability and seeding when soil temperatures are above 10ºC are the recommendations for climatically marginal soybean areas such as southern Alberta." Address: Research scientist, New Crops Breeding, Canada Research Station, Lethbridge, Alberta, T1J 4B1, Canada.

1703. *Soybean Digest.*1986. ASA soybean processing short course [in Saskatoon, Saskatchewan, Canada]. Oct. p. 36.

• ***Summary:*** 24 people (oilseed processors, plant managers and engineers) from 14 countries attended to learn technical aspects of producing high-quality soybean meal and oil.

1704. Potter, Michael. 1986. History of Eden Foods: Building a soymilk plant in America (Interview). *SoyaScan Notes.* Dec. 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** On 1 August 1986 it was announced that a major new joint stock company, named American Soy Products, had been established to produce Edensoy soymilk in Saline, Michigan, 30 miles west of Detroit, at a new state-of-the-art manufacturing and packaging facility. Michael Potter played a major role in conceiving and pulling together this innovative, exciting, and promising new venture. In July 1983 Eden Foods launched their first Edensoy soymilk, made by Marusan Ai in Okazaki, Japan. It soon proved to be a great success. When Potter began to talk with Marusan Ai about building a soymilk plant in the USA, he found that they were wary. In 1982-83 Marusan had had extensive discussions with Hinode Tofu Co. in Los Angeles, California, about a soymilk joint venture, but the talks eventually broke down over small points; Marusan felt they had wasted a lot of time and money to no avail. So Potter focused on Muso. With competition eating into their domestic Japanese health food market, a venture in America looked promising. Yet neither Eden nor Muso had the capital to build a soymilk plant in America. Enter Kawatetsu Shoji, better known as Kawasho International. A big New York based firm with money, influence, power, and experience in international business and joint ventures, they were looking to diversify out of coal, steel, and other commodities, into branded foods. They already knew Eden Foods (they had been financing their growing Edensoy imports and inventories from Japan) and they liked the fact that Eden knew Japan and seemed to have a solid, growing product. Kawasho's endorsement of the project was enough to overcome Marusan's reluctance. And with Marusan came Seikensha, the Tokyo based company that had built Marusan's state-of-the-art soymilk equipment. The historic joint venture package, called American Soy Products, was officially founded in June 1985.

Gross investment in the new company was $10 million. Percentage ownership was Marusan Ai 25%, Kawatetsu Shoji (Kawasho Intl.) 25%, Muso 15%, Seikensha 10%, and Eden Foods Inc. 25%. The chairman of the board was Michael Potter of Eden Foods and the president was Mr. Hiroyasu Iwatsuki, Marusan's soymilk manager, who soon moved to Michigan to go to work.

Each partner had a unique and valuable set of skills to offer. As before, Eden Foods would continue to be responsible for marketing, selling, and distributing all soymilk made by the new company. Kawasho would oversee administration and financing. Marusan would take care of soymilk production. And Muso would coordinate international sales. Seikensha, which has patents on key pieces of soymilk manufacturing equipment, would supply the plant equipment.

Open houses in mid-September were attended by the media and a host of state dignitaries, including the Director of Michigan's Department of Agriculture, who called the new plant "a perfect marriage of high technology and the area's farming." These events, and additional promotion done by a newly-hired, local marketing and advertising firm named Group 243, gave the project extensive, very positive publicity. Widespread color print media advertising, focusing on Edensoy's new larger size package, was also started.

In late October 1986 the sparkling new 22,000 square foot stainless steel plant at Saline (12 miles northeast of Clinton and just south of Ann Arbor, in the southeast corner of Michigan) started test runs, which were carefully monitored by the FDA for 6 weeks. Both the Japanese soymilk equipment and the Swedish low-acid Tetra Brik packaging lines were said to be the most modern of their kind in the world. The company had spared no expense to "do it right." Japanese technicians now living in Saline were training American counterparts.

The factory and land had cost $2.3 million and equipment cost $4.3 million. The company committed $700,000 for startup costs, $1.8 million for marketing funds, and $700,000 for working capital. By November 1986 most of this money had been spent.

The new Edensoy was packaged in both regular (250 ml or 8.45 fl. oz. for $0.59) and large (1 liter for $1.99) Tetra Brik cartons, in plain, carob, and vanilla flavors. The new prices were significantly lower than before. For example, in 1984 (when it was historically least expensive) Edensoy in a 6-ounce retort pouch had retailed for $0.69 to $0.79, or an average of 12.3 cents per ounce. The new 250 ml (8.45 fl. oz.) pack retailed for only 7.0 cents per ounce (down 43%), while the liter size (33.8 fl. oz.) retailed for only 5.9 cents per ounce (less than half the retort pouch, and 16% less than the 250 ml pack). Yet compared with cow's milk at 54 cents per quart (32 fl. oz.) or 1.7 cents per ounce, the Edensoy products are still 3.5 to 4.1 times as expensive per ounce; a much lower ratio than in 1984 but still quite high.

A cornerstone of Eden's food procurement policy since 1973 was the support of local farmers. And Saline was in the heart of Michigan's soybean country. The estimated 85,000 bushels a year of soybeans used to make Edensoy will all be grown on contract with individual Michigan farmers located within a 10-mile radius of the plant. Beeson variety soybeans will be used; though low yielding for farmers, they have a low-oil, high-solids composition and give excellent soymilk. Numerous standard grade parameters will also be specified. Growers will typically receive premiums of 15-30% over conventional markets. By mid-1987 American Soy Products (ASP) hopes to start using organically grown soybeans.

One nice by-product of the new ASP plant was the fact that it was the only plant and Tetra Brik line located in that part of the USA especially designed to package low-acid foods; there were only two others in the entire country, both on the West Coast, and used mostly to pack milk. Thus a host of other companies, wishing to have their own low-acid products packed on Tetra Brik machines, started to line up to use ASP's equipment. This sort of contract packing would serve as an important source of income and keep the packaging operation running 24 hours a day.

ASP's initial run is scheduled to produce 100,000 packages of 250 ml equivalent. The company's first year sales goal is $5,000,000 produced on 2 shifts. But the first problem is to fill the 20 truckloads that were back ordered.

In November Eden Foods decided that on 1 Jan. 1987 they will stop serving as a wholesale distributor to retail stores in the Midwest (10% of their total business), drop 150 products, and serve as a master distributor, selling only through other distributors. This will allow additional attention to be paid to American Soy Products. Still big marketing and distribution questions remain: Will ASP use brokers? Go direct? Go through grocery distributors? Who does ASP see as their stiffest soymilk competition? Vitasoy and Sunsoy?

What about future plans? A French label for the Canadian market. Organic soybeans. The use of a grain (such as brown rice, barley, etc.) in the Edensoy formula. A cautious attempt to break into the mass market via super markets, but only after careful test marketing in specific areas. Eventually other similar plants in other parts of the United States.

American Soy Products and the new Edensoy are the most exciting soymilk ventures of 1986, and ones that the industry will be watching closely. Address: President, Eden Foods Inc., Clinton, Michigan.

1705. Agriculture Canada, Policy Branch, Ministry of Supply and Services. 1986. Handbook of selected agricultural statistics, 1986. Ottawa, Canada: Queen's

Printer and Controller of Stationery. Dec. Continues "Selected Agricultural Statistics for Canada and the Provinces."
• ***Summary:*** Page 53 gives yearly statistics which show that the area planted to soybeans in Canada and Ontario increased from 690,000 acres 1979 to an estimated 1,000,000 acres in 1986. Page 55 shows that the soybean yield increased during this period from 35.0 bushels per acre to 36.3 bu/acre. Page 57 shows that the total production increased from 24,150,000 bushels to 36,300,000. Address: Canada.

1706. *Soyanews (Sri Lanka).*1986. Canada's soya promotion project comes to Sri Lanka. 8(4):1, 5. Oct/Dec.
• ***Summary:*** Working with 25 selected families in each of 5 areas in the Kandy District, Plenty volunteers will teach cultivation of a new variety of soybeans as a home garden crop. Two more soya food centers for training and retailing will be opened. Ian Taylor is director of the Plenty Project.

1707. **Product Name:** Noelnog (Soymilk Eggnog, without Eggs or Dairy Products).
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1986. December.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16. The major market is Los Angeles.

1708. **Product Name:** Tripple Delight (Soy Protein Based Ice Cream).
**Manufacturer's Name:** Tripple Products Inc.
**Manufacturer's Address:** Victoria, BC, Canada.
**Date of Introduction:** 1986. December.
**How Stored:** Frozen.
**New Product–Documentation:** Food in Canada (Toronto). 1986. Dec. Tripple Delight, incorporated in February 1985 and headed by Don and Deedrie Ballard, has launched a soy protein-based ice cream and a soy protein-based chocolate drink. These have been developed in concert with Dr. William Powrie of the University of British Columbia Food Sciences Department.

1709. **Product Name:** Tripple Delight (Soy Protein Based Chocolate Drink).
**Manufacturer's Name:** Tripple Products Inc.
**Manufacturer's Address:** Victoria, BC, Canada.
**Date of Introduction:** 1986. December.
**New Product–Documentation:** Food in Canada (Toronto). 1986. Dec. Tripple Delight, incorporated in February 1985 and headed by Don and Deedrie Ballard, has launched a soy protein-based ice cream and a soy protein-based chocolate drink. These have been developed in concert with Dr. William Powrie of the University of British Columbia Food Sciences Department.

1710. **Product Name:** [Hydrolyzed Vegetable Protein {HVP}].
**Manufacturer's Name:** Champlain Industries Ltd.
**Manufacturer's Address:** 176 Principal Rd., Stanbridge Station, QUE, Canada. Main office: Mississauga, ONT, Canada.
**Date of Introduction:** 1986.
**New Product–Documentation:** Soya Bluebook. 1986. p. 89.

1711. **Product Name:** Soynuts.
**Manufacturer's Name:** Dayspring Soyacraft Corporation.
**Manufacturer's Address:** 626 Esquimalt Rd., No. 5., P.O. Box 7285, Station D., Victoria, BC, V9A 3L4, Canada.
**Date of Introduction:** 1986.
**New Product–Documentation:** Soya Bluebook. 1986. p. 108.

1712. **Product Name:** Tofu Pasta.
**Manufacturer's Name:** Dayspring Soyacraft Corporation.
**Manufacturer's Address:** 626 Esquimalt Rd., No. 5., P.O. Box 7285, Station D., Victoria, BC, V9A 3L4, Canada.
**Date of Introduction:** 1986.
**New Product–Documentation:** Soya Bluebook. 1986. p. 111.

1713. **Product Name:** Soysage Rolls.
**Manufacturer's Name:** Dayspring Soyacraft Corporation.
**Manufacturer's Address:** 626 Esquimalt Rd., No. 5., P.O. Box 7285, Station D., Victoria, BC, V9A 3L4, Canada.
**Date of Introduction:** 1986.
**New Product–Documentation:** Soya Bluebook. 1986. p. 111.

1714. Gupta, M.P.; Gupta, R.P.; Gupta, R.R. 1986. Food processing in oxygen-free environment [Soymilk]. *PCT International Patent Application* WO 86/05659. *
• ***Summary:*** Legumes are disintegrated and heated under vacuum in an oxygen free environment to inactivate lipoxygenase. The resulting soymilk is claimed to be bland and free from off-flavors or beany flavors. It also has no throat catching sensation or chalky mouthfeel. Address: Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave., Ottawa, ONT, K1P 5H9, Canada. Phone: OF 613-237-5814. HM 613-741-2558.

1715. Ontario Soya-Bean Growers' Marketing Board. 1986. Ontario soybeans in Japan (Color videotape). Chatham, Ontario, Canada. 23½ minutes. Undated.
• ***Summary:*** Shows how Ontario soybeans are used to make tofu, miso and natto in Japan. Includes interviews with end

users who make tofu, miso, and natto.

Note: This is the earliest known videotape about soy or tofu owned by Soyfoods Center. Address: Chatham, Ontario, Canada.

1716. **Product Name:** Tofu Dessert (With Fruit).
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1986.
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16.

1717. **Product Name:** Soya Drink [Honey Sweetened Chocolate, Honey Sweetened Vanilla/Almond, Sweetened Plain, Unsweetened Plain].
**Foreign Name:** Boisson de Soya (Sucré au Miel Chocolat, Sucré au Miel Vanille/Amande, Sucré, Non Secré).
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1986.
**Ingredients:** Vanilla/Almond: Soy milk (water, organically grown soya beans), honey, barley malt, natural flavours, locust bean gum, carrageenan, sea salt.
**Wt/Vol., Packaging, Price:** 1 litre carton.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16. Peter Joe of Sunrise now makes soymilk for the Chinese market and flavored soymilks for the supermarkets. 4 Labels. 1987. Vanilla/Almond: Brown, light green, and red on white. Illustration of a sun rising over the fields plus flower motif. "A good source of protein." Note the use of the term "soy milk" or "lait de soja" in the bi-lingual ingredient listing! Form filled out by Peter Joe. 1988. May 20. Gives date.

1718. **Product Name:** [Tofu Cutlets].
**Foreign Name:** Cotelettes de Tofu.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1986.
**Ingredients:** Water, extract of soy, calcium sulphate, magnesium chloride, vegetable oil.
**Wt/Vol., Packaging, Price:** 300 gm (10.6 oz).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 1987. 3.5 x 2.5 inches. Red and black on beige. Form filled out by Peter Joe. 1988. May 20. Gives date.

1719. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Tofu Unisoya.
**Manufacturer's Address:** 1020 St. Regis, St. Isidore, QUE, J0L 2A0, Canada. Phone: 514-454-3938.
**Date of Introduction:** 1986.
**New Product–Documentation:** Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. Unisoya was started in 1976 by Norbert Argiles. It was one of the first tofu shops in Quebec. Their tofu was sold in Montreal. Argiles worked for 10 years then burned out. He sold the company, which still exists. The present owner is Mr. Real Beaulieu, a farm family.

1720. **Product Name:** Soy Ice Cream.
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1986.
**How Stored:** Frozen.
**New Product–Documentation:** Soya Bluebook. 1986. p. 104.

1721. Agriculture Canada, Research Branch. 1986. Advancing agriculture. A history: Kentville Research Station. Kentville, Nova Scotia: ACRB. 185 p. See p. 82, 86-89. Illust. 23 cm.
• ***Summary:*** The chapter titled "Field Crops," by G.G. Smeltzer and M.C. McKenzie, notes (p. 86-88): "Gerald G. Smeltzer, with a B.Sc. degree in Agriculture from McGill University and with 16 years experience in extension work, was placed in charge of the illustration stations [model farms] in May 1953... The success of the ensilage corn program gave Smeltzer the needed impetus to turn his attention to problems of growing field peas, faba beans, soy beans [in 1954], grain sorghum, other new crops, and cereals... Smeltzer developed summer field meetings and displays of crop results during the winter... In 1966, Smeltzer won the 'Man of the Year' award from the Annapolis Valley media for his valuable contributions to agriculture, and after his retirement in 1978, he received a number of awards from grateful farmers' organizations."

The preparation of this history was initiated by Dr. G.M. Weaver, Director. The Kentville Experimental Station was established in 1911 at the behest of the Nova Scotia Fruit rowers Assoc. Experiments began in about 1912. Address: Kentville, Nova Scotia, Canada.

1722. Anstey, T.H. 1986. One hundred harvests: Research Branch, Agriculture Canada, 1886-1986. *Research Branch, Agriculture Canada, Historical Series* No. 27. xvi + 432 p. See p. 228-30. [6 ref]
• ***Summary:*** "William Saunders first planted soja [sic] bean on the Central Experimental Farm in 1897. Because all available varieties were long-seasoned and would not mature sufficiently to produce ripe seed, the soybean was harvested as hay when pods were about half filled. As

recently as the late 1930s no variety was available that would reliably mature seed when grown in Canada...

"The first effort to improve soybean for Canadian conditions was in 1923 when F. Dimmock organized extensive variety trials at Harrow. He transferred to the Forage Crops Division, Ottawa, in 1927 but continued to manage the Harrow soybean trials until C.W. Owen was appointed in 1929. Dimmock inaugurated a selection program within the Manchu variety to find earlier maturing varieties for southwestern Ontario. The first selection, A.K. (Harrow), was released in 1931. It was not until 1943, however, that Harosoy was released from the crossbreeding program started in 1936. The introduction of Harosoy from the Experimental Station, Harrow, marked the beginning of the commercial soybean industry in Canada. By 1959 Harosoy was the most important variety in Canada, occupying about 70,800 ha (75 percent of the soybean) in Ontario and about 1,620,000 ha (15 percent) in the United States.

"Dimmock at Ottawa and Owen at Harrow used germ plasm obtained from Harbin, China, to develop early varieties. They also freely exchanged parental material with the University of Minnesota; consequently the three programs produced similar varieties.

"The objectives of the Harrow and Ottawa programs were to develop varieties that would mature sufficiently early for all seed to ripen before harvest (125-130 days) and to have strong upright branches that held seed pods well above the ground for ease in harvesting...

"The Ottawa program emphasized production of early varieties because the growing season in the northern part of Ontario, Quebec, and Manitoba was about 10 days shorter than at Harrow. In 1961 L.S. Donovan assumed responsibility for the Ottawa soybean (and corn) breeding programs. His objective was to develop varieties of soybean that would mature in the Ottawa River valley of Quebec and Ontario and in southern Manitoba. To achieve this goal he turned to Sweden, which had obtained early maturing, day-neutral varieties from the Sakalin [sic, Sakhalin] Islands of northern Japan. By using this new germ plasm in combination with material from Germany, Donovan widened the genetic base of his breeding program and made outstanding progress... From this program came Maple Arrow (1976), Maple Amber (1981), and Maple Presto (1982). At the time of introduction, Maple Presto was the earliest maturing soybean licensed in Canada...

"Recently H.D. Voldeng of the Ottawa Research Station developed two edible varieties grown specifically for the Japanese market. To obtain the needed small seeds Voldeng turned to wild soybean from China, which has black seeds in small pods...

"In 1978, in cooperation with the Alberta Department of Agriculture, a soybean breeding program was initiated at Lethbridge. H.-H. Mündel was appointed to develop varieties suitable for irrigated lands." Address: Canada.

1723. Chang, Kwang-chih. 1986. The archaeology of ancient China. 4th ed. New Haven, Connecticut, and London: Yale University Press. xxv + 450 p. See p. 362. Illust. Index. 25 x 22 cm. [ soy ref]

• ***Summary:*** In Chapter 6, "The First Civilizations: The Three Dynasties," is a section titled "The rise of the Three Dynasties and their common characteristics." The three dynasties are Hsia (perhaps Erh-li-t'ou), Shang, and Chou, which existed from about 2000 B.C. to 207 B.C. The archaeological record shows that all three shared a number of common characteristics in both material culture and cultural processes. A map (p. 367) shows they were located in the area with the greatest distribution of copper and tin mines in ancient China; bronze is an alloy of copper and tin.

The author reviews the archaeological evidence and summarizes the shared characteristics. The people of all three civilizations were farmers of the millets: Foxtail millet *(Setaria italica)* and panic [broomcorn] millet *(Panicum miliaceum)*. They used bone, stone, and shell hoes and sickles, and mortars and pestles. "We know that the Shang and Chou also planted soybeans, wheat, and some rice, but this we know only from inscriptions and texts, which are unavailable for Erh-li-t'ou."

Note: In other words, soybeans have not been found in archaeological sites in early China.

The soybean is also mentioned in a table titled "Principal cultivated plants of China" (p. 80), based on H.L. Li (1966). It states that the soybean *(Glycine max)* is the principal legume of north China and that red beans [azuki] *(Phaseolus angularis)* are the main legume of south China / Southeast Asia. The two main cereals of north China are broomcorn millet *(Panicum miliaceum)* and foxtail millet *(Setaria italica)*, while rice and Job's tears *(Coix lacryma-jobi)* are the two main cereals of south China / Southeast Asia.

For an excellent history of "Modern and contemporary archaeology" in China, see p. 12-21. The modern period began after the revolution of 1911, and many important discoveries were made during the 1920s. "The Geological Survey of China, established in Peking in 1916, was the principal early instrument of the Western science of field work. The Western scientists working under it who exerted the strongest influence on China: A.W. Grabau (American), J.G. Andersson (Swedish), Davidson Black (Canadian), J.F. Weidenreich (German), and Pierre Teilhard de Chardin (French). Of these people, Andersson (fig. 5) undoubtedly exerted the strongest influence on Chinese archaeology (p. 13-14). He wrote: '1921 was a red-letter year: the Neolithic dwelling site at Yang Shao Ts'un, the Eocene mammals on the Yellow River, the Shao Kuo T'un cave deposit in Fengtien and the still more remarkable cave discovery at

Chou K'ou Tien, which became world famous by the work of those who followed after us'" (p. 14). Address: Prof. of Anthropology, Yale Univ., New Haven, Connecticut.

1724. Erasmus, Udo. 1986. Fats and oils: The complete guide to fats and oils in health and nutrition. Vancouver, BC, Canada: Alive Books. 363 p. Foreword by Jeffrey S. Bland, Ph.D. Illust. by Evelyn Mielke. Index. 23 cm. [131* ref]

• ***Summary:*** This is a very interesting and well-researched book, written for a lay audience by a layman (who was enrolled in medical school then dropped out in his search to understand the nature of health–the integration of a healthy body, mind and energy). It emphasizes the effects on health of fats and oil products, and discusses in detail the nature of the chemical changes to which industry subjects natural raw foodstuffs and the effects of these changes on nutritional qualities and health. It introduces the work of Dr. J. Budwig in the area of fats, oils, nutrition, and health to English-language readers.

Contents: Section One: Facing the fats–Molecules and components of fats and oils. 1. Fatty acids–an overview. 2. Naming the fatty acids. 3. Saturated fatty acids. 4. Sugars and starches, 5. Unsaturated fatty acids. 6. Essential fatty acids. 7. Triglycerides. 8. Phosphatides (phospholipids) and membranes. 9. Lecithin. 10. Cholesterol. 11. Essential nutrients.

Section Two: Life in the fat lane–Fats and oil business, processes, and promotion. 12. History of oil making. 13. The fats and oils business. 14. Oil making (commercial style). 15. Hydrogenation. 16. *Trans*-fatty acids. 17. Toxic products. 18. Free radicals. 19. Frying. 20. Advertising. 21. Polyunsaturates. 22. Vitamin E and polyunsaturates. 23. Cold-pressed oils. 24. Containers and storage of oils. 25. Labeling oil products.

Section Three: Fats and figures–The human body. 26. Body fat. 27. Fat consumption and daily requirement. 28. Digestion of fats and oils. 29. Metabolism of fats and oils. 30. Vitamin and mineral co-factors in fat metabolism. 31. Individuality. 32. Orthomolecular nutrition. 33. Stress and the battery of life. 34. Calories and fats. 35. Blood cholesterol: The plasma lipoproteins: HDL and LDL.

Section Four: Fat options–Fats in food products. 36. Diet controversy. 37. Fats in foods. 38. Cholesterol in foods. 39. Fats in meats. 40. Fats in milk and dairy products. 41. Fats in poultry. 42. Eggs. 43. Oils in seeds. 44. Butter versus margarine.

Section Five: Researching the fats–Findings, breakthroughs, and applications. 45. Oils from fish and other sea foods: EPA and DHA. 46. Oil of evening primrose. 47. Prostaglandins. 48. Flax. 49. The oil-protein combination. 50. Recipes. 51. Oil and sunshine. 52. Rating the diets for oils. 53. Wholesome nutrition.

Section Six: Fats and fates–fats and disease. 54. Changes in fat consumption and degenerative disease. 55. Fatty degeneration. 56. Cholesterol and disease. 57. Fats and aging. 58. Recommendations. 59. Health. Notes. Glossary. Bibliography.

The following is a list of the percentage of omega-3 fatty acids in vegetable oils: Flax oil 55%; chia seed oil 35%; pumpkin seed oil 15%; canola oil 10%; soy oil 9%; walnut oil 5%.

For decades refined oil has erroneously been called "cold pressed." Since processing temperatures in refining usually rise to 470ºF, the world "cold" does not apply. Refined oils are made clear and light by degumming (90º-120ºF), separation (140º-160ºF), bleaching (230ºF), and deodorizing (470ºF). Spectrum Natural's Extra certified organic Extra Virgin Olive Oil never exceeds 80ºF. Selling for $27.50 in hard-bound only, this book is available through Spectrum Marketing, Petaluma, California.

Note: The soybean, by far the world's leading oilseed, is not even listed in the index. But the soybean is mentioned very briefly on pages 11, 56.

The chapter titled "Hydrogenation" opens: "An excellent way to ruin the nutritional value (the essential fatty acids) of a sample of natural oil is to hydrogenate the oil... If the process is brought to completion all of the double bonds in the oil are saturated with hydrogen." Address: British Columbia, Canada.

1725. Johnson, W.E.; Smith, A.E. 1986. Indian Head Experimental Farm, 1886-1986. *Research Branch, Agriculture Canada, Historical Series* No. 23. 44 p.

• ***Summary:*** A good history of the Indian Head Experimental Farm in Saskatchewan, Canada, with many early photos. Page 10 contains a biography and photo of Angus MacKay, who introduced soybeans to Saskatchewan. Soybeans, however, are not mentioned in the book. The year 1886 is the centennial of the research branch, Agriculture Canada. Address: Research Branch, Agriculture Canada, P.O. Box 440, Regina, SASK, S4P 3Z2, Canada.

1726. Lu, Henry C. 1986. Chinese system of food cures: Prevention & remedies. New York, NY: Sterling Publishing Co., Inc. 192 p. Index. 23 cm. [11 ref]

• ***Summary:*** Chapter 7, titled "Legumes, grains, oils and seeds," discusses the following: Small red bean (adzuki bean): Edema, beriberi, jaundice, diarrhea, discharge of blood from anus, carbuncle swelling, mumps, cirrhotic ascites (p. 107). Bean curd (tofu): Pink eyes, diabetes, periodic diarrhea, sulfur poisoning (p. 111). Yellow soybean: Malnutrition in children, diarrhea, abdominal swelling, underweight, getosis (p. 111). Black soybean: Edema, beriberi, jaundice, rheumatism, muscular cramps, lockjaw, drug poisoning. Soybean oil: Gastric ulcer,

duodenal ulcer, intestinal obstruction. Soy sauce: Promotes digestion (p. 112).

Note: Although he was born in Taiwan, Dr. Lu was quite skeptical of traditional Chinese medicine. But during this twenties he developed an ailment that resisted every form of Western medical treatment. In desperation, he traveled to Taiwan and Hong Kong to consult with Chinese specialists. The results changed his life. A traditional Chinese doctor cured him in a few months. Dr. Liu already held a PhD in education and philosophy from the University of Alberta. But at age 32 he decided to change his field. He began by translating the *Nei Jing (Yellow Emperor's Classic of Internal Medicine)* into English. He went on to translate 25 other Chinese medical books into English, including 7 books on acupuncture that are now listed as required texts by the Board of Acupuncture examiners. In 1972 he began practicing traditional Chinese medicine and acupuncture. In 1986 he founded the Academy of Oriental Heritage (in Vancouver, British Columbia), which now (1999) has 15 full-time teachers and more than 100 students. Address: Academy of Oriental Heritage, P.O. Box 35057, Station E, Vancouver, BC V6M 4G1, Canada.

1727. Madison College Alumni Association. 1986. A pictorial history of Madison College, a school of divine origin 1904-1964. Madison, Tennessee. viii + 269 p. Illust. 28 cm.

• ***Summary:*** Several articles about Madison from other publications (e.g. Hastings 1938; Holman 1941) are reprinted in this book. Pages 42 gives a history of "The Madison Food Factory." There are photos of the outside and inside of the building on pages 43 and 46. "In a letter dated March 10, 1907, directed to the directors of the Nashville Sanitarium and Southern Union Conference Committee, Ellen G. White wrote: 'It would be a great advantage to the school in Madison if a food factory were put into operation in connection with the work of the school.'

"About this same year a large flakefood factory was built at Edgefield, near what is now known as Edenwold. The people of the South had not yet become conditioned to the eating of health foods; so the factory became a white elephant on the hands of the owners. It passed from hand to hand without success. [One of the operators was Jethro Kloss.] After much discussion on the part of the school faculty a decision was made to purchase the plant, dismantle it and bring it to Madison. It was opened in 1918. The plan was to begin in a small way and to educate the workers, step by step, in the new industry. Mr. and Mrs. Andrew Wheeler were in charge of the work, under the direction of Mrs. Druillard, who had had years of experience in other institutions.

"The purpose of the Food Factory was to produce foods that would be suitable substitutes for meat in the dietary of the vegetarian and others whose health required the elimination of animal products. Consequently most of the foods manufactured were rich in protein. The foods were made from such products as soy beans, peanuts, and gluten. Some of the trade names developed were Zoyburger, Yum, Mock Chicken, Nu-Steak, Not-Meat, Vigoroast, and Ches-O-Soy. A cereal substitute for coffee was Zoy-Koff (p. 42).

"Some of the men who played an important part in the later growth and development of the food factory were Joe Hansen, C.H. Dye, T.A. McFarland, Captain Calvin Bush, Edwin Bisalski, George Norris, Leslie Brooks, John Brownlee, H.M. Mathews and Frank Holland. Of this group, H.M. Mathews and John Brownlee played a very important part in experimentation and development of the foods. Dr. P.A. Webber and Ulma Doyle Register did outstanding work in research to develop better texture, more palatability, and greater nutritional value. Mr. E.M. Bisalski was outstanding in the experimentation and development of the foods. During his term as manager of the Factory, great expansion took place. A practically new plant, with one section four stories in height was constructed in 1941. Car loads of products were shipped to jobbers in Chicago, Boston, New York, and other large distributing centers until Madison products were found in all states and Canada.

"In August of 1964 Madison Foods was sold to Worthington Foods, Inc. Worthington, Ohio. The same products that had been produced in the past were continued to be available under the Madison label and brand names used in the past. Mr. K.P. Stepanske was appointed manager. The food factory was operated on the Madison Campus until 1972 when it was moved to Worthington, Ohio.

Elder Julius Gilbert White, a nationally-known health lecturer, came to Madison and delivered a 10-day series of lectures on health, with the use of illustrated slides. This led to the development of many health institutes and short courses at Madison from 1932-1940.

"Vegetarian Cafeterias: Another type of health work carried on by the Madison school was the operation of a treatment room and vegetarian cafeteria in Nashville. Workers drove back and forth each day from the school to Nashville. It was started in rented quarters in 1917. In 1922, because of advancing rents, a new building was constructed on a permanent location at 151 Sixth Ave. North. A successful work continued for over a decade. Advancing trend of business in the center of the city made the location undesirable and the business closed out and the building was sold. The Birmingham [Alabama] cafeteria was started in 1920."

There are photos of each graduating class. Pages 126-173 are biographical sketches, usually with a photo, of Madison "Personalities," including E.A. Sutherland, Bessie DeGraw Sutherland, Percy Magan, Nellie Druillard, Frances L. Dittes (1891-1979) and her sister Florence, Dr. Ulma Doyle Register, Dorothy Mathews, William Cruzen

Sandborn, and Mable H. Towery. Address: Madison, Tennessee.

1728. Ontario Soya-Bean Growers' Marketing Board. 1986. Ontario Soybeans: Presented with pride by the Ontario Soya-bean Growers' Marketing Board. Chatham, Ontario, Canada: OSGMB. 8 p. Undated. 28 cm.
• ***Summary:*** This color booklet is designed to promote soybeans grown in Ontario, Canada. It discusses: A brief history of soybeans in Ontario, Canada's soybean grading system, Ontario as Canada's 412,000 square mile Golden Bowl of agriculture, where and how soybeans are grown from pedigreed seed in Ontario, end uses for soybeans, details on Canada's 5 soybean grades, graph of protein and oil content of Eastern Canadian soybeans from 1975 to 1985, the Ontario Soya-bean Growers' Marketing Board (established in 1949) and its 25,000 members. Address: Chatham, ONT, Canada.

1729. Sanders, J.L. 1986. Maximum yield and maximum economic yield for soybean. In: S. Shanmugasundaram and E.W. Sulzberger, eds. 1986. Soybean in Tropical and Subtropical Cropping Systems. Shanhua, Taiwan: Asian Vegetable Research and Development Center. xv + 471 p. See p. 189-201. [24 ref]
• ***Summary:*** "This paper discusses the development of the concepts of maximum yield research (MYR) and maximum economic yield (MEY) of soybean in North America and their potential application in the tropics."

"The concepts of MYR and MEY have been widely adopted in North America by researchers and farmers."

"Maximum yields may not be economically practical, but agricultural scientists should not, for supposed economic reasons, fail to attempt to raise the limits on productivity imposed by technology."

"Maximum economic yields can be defined as the corresponding yield level where net profits are maximized in response to increasing inputs or improved production practices."

"'The difference between average yield and maximum economic yield is the world's greatest food reserve.' It also represents the farmer's greatest potential source of economic survival."

"Maximum yields or MEY of soybean can only be achieved through the integrated management or control of the following factors: (1) optimum soil fertility, (2) proper inoculation, (3) higher plant populations, (4) superior cultivar selection, (5) proper row spacing, (6) optimum planing date, (7) proper tillage, (8) good drainage, (9) supplemental irrigation, (10) pest control, (11) crop rotation, (12) multiple cropping, and (13) good harvesting techniques." Address: Potash and Phosphate Inst. of Canada, 555 Burnhamthorpe Road, Suite 507, Etobicoke, ONT, Canada M9C 2Y3.

1730. Shanmugasundaram, S.; Sulzberger, E.W. eds. 1986. Soybean in tropical and subtropical cropping systems: Proceedings of a symposium, Tsukuba, Japan, 26 September–1 October 1983. Revised ed. Shanhua, Taiwan: Asian Vegetable Research and Development Center. xv + 471 p. Illust. Index. 26 cm. [500+ ref. Eng]
• ***Summary:*** Note: The first edition, hardcover, published Oct. 1985, was recalled and discarded, due to errors in the text. Contents: Section 1. Cropping systems. 2. Plant breeding. 3. Management. 4. Diseases and insects. 5. Plant nutrition. 6. Physiology. 7. Economics. 8. Related topics. 59 chapters total. Symposium participants. Author index. Subject index.

In the Foreword, G.W. Sellek, Director General of AVRDC, notes that the proceedings of this symposium were published in two sections. The proceedings of the first section, recently published by the Tropical Agricultural Research Center of Japan (TARC), cover country reports and special research projects. These proceedings cover cropping systems. "In the recent past, research was aimed almost exclusively at raising soybean yields rather than developing cropping systems that provide the stability needed to grow soybeans under high-risk conditions. There also seems to be a greater sense of urgency to integrate cropping systems research with disciplines such as plant breeding, crop management, pest control, and plant nutrition." There is a strong "need to ensure that scientists from a variety of disciplines and backgrounds work together so that their research efforts are well coordinated." Address: AVRDC, Taiwan.

1731. **Product Name:** Vitasoy Tofu Pasta.
**Manufacturer's Name:** Mandarin Enterprises Ltd.
**Manufacturer's Address:** No. 13-12200 Vulcan Way, Richmond, BC, V6V 1S8, Canada.
**Date of Introduction:** 1986?
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16.

1732. **Product Name:** [VFP Organic Tofu: Fresh Soya Bean Curd].
**Foreign Name:** VFP Tofu Organique: Caillé Frais aux Fèves de Soya.
**Manufacturer's Name:** Victor Food Products, Ltd.
**Manufacturer's Address:** 102 Hymus Rd., Scarborough, ONT, M1L 2C9, Canada. Phone: 416-752-0161.
**Date of Introduction:** 1986?
**Ingredients:** Water, organically grown soya bean, magnesium chloride (chlorure de magnesium).
**Wt/Vol., Packaging, Price:** 500 gm packed in water in molded plastic tray with heat-sealed, peel-off plastic film lid.
**How Stored:** Refrigerated.

**New Product–Documentation:** Label. undated. 5 by 4.25 inches. Orange, green, yellow, and white. Printed on clear plastic film. Written in both English and French.

1733. Haren, Chuck. 1987. The Plenty Canada Soy Project in Dominica. *Plenty Bulletin (Summertown, Tennessee)* 3(1):4. Jan.
• ***Summary:*** A group of Dominicans, who have been working with Plenty Canada on a student/employee basis for 30 months, are organizing the Kari Soy Cooperative to produce soyfoods. Address: Plenty's soy processing education center, Roseau, Dominica, West Indies, Caribbean.

1734. **Product Name:** Vegetarian Nature's Patties Burger with Tofu [Original, or BBQ].
**Manufacturer's Name:** Nature's Path.
**Manufacturer's Address:** 9451 Van Horne Way, Richmond, BC, V6X 1W2 Canada. Phone: 604-278-4584.
**Date of Introduction:** 1987. January.
**Ingredients:** Tofu (organic soybeans, nigari, water), soya protein, sunflower seeds, brown rice, potato, rolled oats, sesame seeds, walnuts, gluten, tomato, onion, pimento, carrots, peppers, celery, sunflower oil, Engevita nutritional yeast, herbs and spices, tamari soy sauce, psyllium seed, molasses, dijon mustard.
**Wt/Vol., Packaging, Price:** Family size 10 x 3.3 oz patties, or 4 x 3 oz patties. Each is a plastic bag.
**How Stored:** Frozen.
**Nutrition:** Per 100 gm: Calories 236, protein 17.4 gm, carbohydrate 22.9 gm, fat 12.0 gm, sodium 185 mg, potassium 185 mg, fiber 1.5 gm.
**New Product–Documentation:** Leaflet. 1987, undated. 8½ by 11 inches, color. "Nature's Path Vegetarian Nature's Patties with Tofu. Contains no animal fats, eggs, dairy products, nitrates, or cholesterol. Succulent non-meat patties. 17% protein." Spot in Soya Newsletter. 1987. 1(4):6. "Made with tofu (17%) and a wide selection of grains and vegetables. Contains no egg or dairy products." Label. 1988. 10 by 5.5 inches. Plastic bag. Red, black, and blue on white with color photo of burger and vegetables. Letter from Rick Furdal, manager. 1988. April 4. They have moved to #170-2540 Simpson Rd., Richmond, BC V6X 2P9. Their restaurant, Woodlands Natural Foods, 2582 West Broadway, Vancouver, BC V6K 2G1 (Phone: 604-733-5411) makes over 100 fresh soyfoods recipes on a rotational basis.

1735. Ontario Soya-Bean Growers' Marketing Board. 1987. Ontario soybeans: International class (Color videotape). Chatham, Ontario, Canada. 4½ minutes.
• ***Summary:*** Ontario soybeans–both oil crushing soybeans and food soybeans–have earned a worldwide reputation for high quality at competitive prices. Shows soybean production in Ontario from the soybean plant to storage and shipping. Address: Chatham, Ontario, Canada.

1736. *SoyaScan Notes.*1987. New Trend: Increase in breeding of soybeans for specialized uses, including special food uses such as tofu, miso, and soy sprouts (Overview). Jan. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** This is part of the larger trend toward value added products and toward tailoring soybeans for export to food manufacturers in Japan. The new breeding work is being done by various countries (such as Canada and the USA), and by many universities, agricultural experiment stations, and private seed breeding companies within the USA. U.S. soyfoods companies will definitely benefit for this trend and should keep close track of new developments.

1737. Hanley, Marge. 1987. Some soybeans good eating for people. Soybeans not all alike; some tastier than others. *News (Indianapolis, Indiana).* Feb. 11. p. 31, 38.
• ***Summary:*** Farmer Ray Bower began championing eating whole edible soybeans in 1977. The 12-14 varieties of vegetable or edible ones are best for human consumption. Black soybeans are his favorite. They taste like red beans except they are more meaty. Soybeans are one of the lowest glycemic index legumes (51). Glycemic index rates foods according to how much and how fast they raise blood sugar after eating. Dr. David J.A. Jenkins at the University of Toronto, a pioneer in studying the effects of foods on blood sugar and cholesterol levels, said Bowers beans looked very good. To reduce gassiness, the biggest problem: Soak for 12 hours, change the soaking water several times, and discard the cooking water. A photo shows Bower.

1738. B.P.; C.R. 1987. L'irrésistible poussée des produits de substitution: Dossier produits laitiers [The irresistible push of substitute products: Dossier on dairy products]. *Marches Agricoles.* Feb. 16. p. 14. [Fre]
• ***Summary:*** Part 1 by B.P. is titled "The debate is launched concerning substitute dairy products." A table lists the following countries: Austria, Belgium, Canada, Denmark, UK, Finland, Japan, Netherlands, Switzerland, and the USA. Column 2 lists substitute products (such as cheese, cream, milk, melorine). Column 3 lists the market share of these products in 1983. And column 4 compares the price of the substitute with the real dairy product. For example, in the USA: imitation cream (non-dairy creamer) has 50% of the market and is less expensive. Imitation cheese has 5% of the market and is 30% less expensive. Flavored milklike drinks have 15% of the market and are 25% less expensive. No imitation products are shown to have a significant market share in Europe.

Part II by C.R. is about CAC in Colmar, its Cacoja subsidiary founded in Jan. 1987, and its Bioforme line of soymilks and soymilk desserts. Address: France.

1739. Hymowitz, Theodore. 1987. Introduction of the soybean to Illinois. *Economic Botany* 41(1):28-32. Feb. [44 ref]

• ***Summary:*** In 1851 the soybean was introduced to Illinois (via California), and thence to the rest of the Corn Belt. The introduction came about through a series of very unusual circumstances. In Dec. 1850 the barque *Auckland* left Hong Kong for San Francisco carrying sugar and other general merchandise. "About 500 miles off the coast of Japan the ship came across a Japanese junk floundering [foundering] on the sea. The [Japanese] crew, consisting of 17 persons, was removed from the junk and taken on board the *Auckland*, which continued on to San Francisco. The Japanese took aboard the *Auckland* some of their belongings and a box containing various items such as a log, chart, compass, gold and silver Japanese coins, etc. The box was presented to Capt. Jennings.

"On 4 March 1851 the *Auckland* arrived at the port of San Francisco. The Japanese were not permitted to leave the ship and were kept in quarantine until 16 March" because of the possibility of spreading disease.

By coincidence, waiting for a passenger ship to take him back to Alton, Illinois, via the Panama overland route, was Dr. Benjamin Franklin Edwards, a wealthy physician from Alton who had come to California in search of gold. "At port while waiting for his ship to take on provisions he probably examined the quarantined Japanese on the *Auckland* and received soybeans, called Japan peas, as a gift (Moore's Rural New Yorker 1853). The next day [March 16] the Japanese were permitted to go ashore." Dr. Edwards left San Francisco on 15 March 1851.

"On shore, because of their unusual dress and country of origin, the Japanese became instant celebrities" and were even guests at a masquerade ball. For details see the following 1851 San Francisco newspapers: *Daily Alta California* March 5, p. 2, col. 5. *Evening Picayune* March 5, p. 2. col. 5; March 17, p. 2, col. 5. *San Francisco Daily Herald* March 5, p. 3, col. 2; March 18, p. 2, col. 6.

"On April 29, 1851 Dr. Benjamin Franklin Edwards returned to Alton, Illinois carrying soybean seeds in his personal possessions." [Note that he took a first-class ship to the Isthmus of Panama, went overland by pack mule, then caught another first-class ship that took him up the Mississippi River to St. Louis, Missouri–a 6-week trip. The first transcontinental railroad, with its western terminus in Sacramento, was not completed until 14 years later, in May 1869].

In Illinois, Dr. Edwards gave the seeds to Alton businessman Mr. John H. Lea, who planted them in his garden in the summer of 1851 (A.H. Ernst. 1853. *Journal of the New York State Agricultural Society).* These events took place 3 years prior to the famous introduction of soybeans from Japan to the United States by the Perry Expedition.

After Lea harvested his soybean seeds, he distributed them to various places. Mr. J.J. [sic, J.R.] Jackson of Davenport, Iowa, wrote in 1854 that he had grown soybeans in 1852 and 1853; he was the first person to report growing soybeans in Iowa, now a major soybean producing state.

Since there was no local horticultural society in Alton, Illinois, Lea sent soybean seed to the Cincinnati Horticultural Society. In 1852 Mr. Andrew H. Ernst, a well-known horticulturist, planted and multiplied these seeds in his nursery, "Spring Garden" near Cincinnati, Ohio [3 citations]. After the 1852 harvest, Ernst sent soybean seeds to the New York State Agricultural Society, the Massachusetts Horticultural Society, and the U.S. Commissioner of Patents. Those organizations sent soybean seed to dozens of farmers throughout the United States. In 1855 "T.V.P." of Mount Carmel, Ohio, reported that he had cultivated soybeans "for the last three years and have disseminated [them] from Canada to Texas." "Most probably he received his soybean seeds from A.H. Ernst. His evaluation of soybeans as a potential new crop was amazingly astute..." (See T.V.P. 1855).

"Thus, by the end of 1854 the soybean seeds brought by Dr. Benjamin Franklin Edwards in 1851 from San Francisco to Alton, Illinois, were multiplied, disseminated, and evaluated by farmers throughout the United States."

In 1854, when Commodore Matthew Perry's Expedition opened Japan to western trade, the expedition's surgeon, Dr. Daniel Green, observed that the Japanese grew a particular kind of bean called the Japan pea (i.e. soybean) (Perry 1856, vol. 2, p. 85). In mid-1854 the expedition's agriculturist, Dr. James Morrow, obtained soybean seeds and sent them to the Commissioner of Patents, which distributed the seeds to farmers. "Thus from 1855 onward it is difficult to distinguish between soybean seed sources in farmers' reports. Did their soybean seeds originate from the Illinois accession or the Perry Expedition; perhaps they grew soybeans from both sources."

Note 1. This document contains the earliest date seen (June 2007) for soybeans in California (4 March 1851). It also contains the earliest date seen for soybeans in Illinois (29 April 1851), or the cultivation of soybeans in Illinois (summer 1851) (one of two documents). And it contains the earliest date seen for soybeans in Iowa, or the cultivation of soybeans in Iowa (1852).

Note 2. A longer version of this story by Robert Lee Zimmer titled "Scientist Turns Detective, Solves Soybean Mystery," appeared as an Associated Press Wire (14 Aug. 1987), which was widely syndicated.

Note 3. Talk with Ted Hymowitz. 1994. May 29. Benjamin Franklin Edwards was a founder of Shurtleff College in Alton, Illinois. Address: Crop Evolution Lab., Dep. of Agronomy, Univ. of Illinois at Urbana-Champaign, Urbana, IL 61801.

1740. Mercer, Nina J.H.; Carroll, K.K.; Giovannetti, P.M.; Steinke, F.H.; Wolfe, B.M. 1987. Effects on human plasma lipids of substituting soybean protein isolate for milk protein in the diet. *Nutrition Reports International* 35(2):279-87. Feb. [23 ref]
• ***Summary:*** 33 healthy adult volunteers were studied over a 12 week period during which they continued their usual diet. Each volunteer consumed 500 ml of 2% cow's milk for 6 weeks and 500 ml of an isolated soy protein beverage in a crossover design. Both beverages contained the same level of protein and 2% butterfat This simple dietary change produced a significant shift in the animal:plant protein ratio for 2.44 to 1.08. Although it had no significant effect on total plasma cholesterol (reduced by 5.7%), VLDL cholesterol decreased significantly. The authors concluded that "consumption of beverages based on soy protein isolate could assist in the dietary management of individuals with elevated fasting serum cholesterol levels." Address: Depts. of Biochemistry, Medicine, and Home Economics (Bresica College), Univ. of Western Ontario, London, Ontario, Canada.

1741. **Product Name:** Tofu, Pressed Tofu, Herbal Tofu, and Tempeh.
**Manufacturer's Name:** Okanagan Soyfoods.
**Manufacturer's Address:** Lumby, BC, Canada. Phone: 604-547-2257.
**Date of Introduction:** 1987. February.
**New Product–Documentation:** Talk with company. 1989. March 7. Talk with Greg Lundh. 1989. April 28. This company went out of business 10 days ago. Greg Warry of BC started the company. He bought a lot of equipment, then couldn't make the payments. He sold the company in the autumn of 1988 to his ex-partner. Several people ended up running it; a man named John from California, who had an Oriental wife, and a lady named Bee (Beatrice Berry?). Talk with a lady who hopes to buy the company. 1989. Oct. 30. Okanagan Soya Foods, located in a small place out in the country and run by Beatrice Berry, now makes about 2,000 cakes/month of tofu. The new owners want to make about 2,000 cakes/week when they start.

1742. McDermott, Lawrence. 1987. Guatemala [and the Plenty Soy Project]. *Plenty Canada News (Lanark, Ontario, Canada).* Winter 1986-87. p. 4-5.
• ***Summary:*** Larry visited the Plenty Soy Project in Guatemala in March 1985 and found the soy dairy still in good repair. This was Plenty's first country project in 1976-80. Villagers wanted the soy center reopened. Address: Executive Director, Plenty Canada, ONT.

1743. *Plenty Canada News (Lanark, Ontario, Canada).*1987. Plenty in the Caribbean [Soy projects on Jamaica, Dominica, and St. Lucia]. Winter 1986-87. p. 7-8.
• ***Summary:*** Plenty has active, pioneering programs with soyfoods processing, education, and soybean growing on these three Caribbean islands. On St. Lucia, for example, the Soya Centre, which opened in July 1985, has been processing up to 300 lb/week of soybeans and serves 200-300 people daily. Address: R.R. 3, Lanark, ONT, K0G 1K0, Canada.

1744. **Product Name:** [Micronized Soybeans].
**Foreign Name:** La Fève Soya Micronisee.
**Manufacturer's Name:** Semences Prograin Inc. (Micronisation Canada Inc.).
**Manufacturer's Address:** St-Cesaire, Quebec, J0L 1T0, Canada.
**Date of Introduction:** 1987. March.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**Nutrition:** Protein 37-38%, water 9-10%, oil 18-19%, fiber 4.5%...
**New Product–Documentation:** Ad in *La Terre de Chez Nous.* 1987. March 19. p. 35. "le soya micronise au Quebec."

1745. Saperstein, Hilary. 1987. Kosher "ice cream" fine with or without meat. *Jewish Journal (Fort Lauderdale, Florida).* April 23.
• ***Summary:*** "David Mintz grew up in an Orthodox Jewish family in New York. He attended Brooklyn College, where he majored in business. He initially joined his family's fur business. Then he founded a small grocery store in Mountaindale, New York. The population was 18 in the winter, thousands in the summer. One day he was reading a nutrition magazine and he read about tofu. Tofutti is now available in the Soviet Union, Japan, Australia, Canada, Hong Kong, and Singapore."

1746. **Product Name:** Tofu Franks.
**Manufacturer's Name:** MGM Brands.
**Manufacturer's Address:** 59 Howden Rd, Unit H., Scarborough, ONT, M1R 3C7, Canada. Phone: 416-752-6600.
**Date of Introduction:** 1987. April.
**New Product–Documentation:** Talk with company. 1988. March 2. He says Stephen Yu of Victor Foods is out of business! Tofu Masters was an interim company name.

1747. **Product Name:** [SoftShakes. Natural Non-Dairy Soy Beverage (Vanilla, or Light Chocolate)].
**Foreign Name:** Boisson Naturelle au Soya.
**Manufacturer's Name:** Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
**Manufacturer's Address:** 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
**Date of Introduction:** 1987. May.

**Ingredients:** Incl. soymilk, corn syrup solids instead of cane or beet sugar.
**Wt/Vol., Packaging, Price:** 250 ml Pure-Pak carton. Retails for $1.19.
**How Stored:** Refrigerated.
**New Product–Documentation:** Spot in Food in Canada (Toronto, ONT). 1987. May.

Talk with Ian Walker of Canada. 1995. May 15. The name of this company is now Les Aliments Tarasoy, run by Helen Wan, who speaks good English and broken French. Address: 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586. Fax: 514-659-6578. They now make soymilk, tofu, and soy cheese.

Talk with Helen Wan, sales manager. 1995. May 26. This company was founded in Dec. 1986 by a number of Chinese-Canadians, who own shares. Her brother, Billy Chin, is the president and one of the main founders. Softshake was one of their first products, introduced in the spring of 1987.

1748. **Product Name:** [Regular Tofu, Herb Tofu, and Tofu with Dehydrated Vegetables].
**Foreign Name:** Tofu Nature, Tofu Fines Herbes, Tofu au Legumes.
**Manufacturer's Name:** Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
**Manufacturer's Address:** 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
**Date of Introduction:** 1987. May.
**Wt/Vol., Packaging, Price:** 450 gm vacuum pack.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Helen Wan, sales manager. 1995. May 26. This was one of the company's first products, launched in the spring of 1987. The vacuum packaging gives the product a longer shelf life. Regular (plain) tofu is now the company's number 2 best-selling product.

1749. Tremblay, Yvon. 1987. Le tofu en restauration et institution [Tofu in restaurants and institutions]. *Restocafe–Quebec* 1(8):5. May. [Fre]
• ***Summary:*** The author argues for wider use of tofu in these places. Address: Quebec, Canada.

1750. Schurman, Hedda. 1987. Re: Sri Lanka project proposal. Letter to William Shurtleff at Soyfoods Center, June 1. 1 p. Handwritten, with signature on letterhead.
• ***Summary:*** "Enclosed is our order form and a copy of the Sri Lanka project proposal you had requested. The project will hopefully get fully underway in July or August 1987. We have had some delays due to the problems in northern Sri Lanka. We will no longer be working in Vavuniya" [in north central Sri Lanka]. Address: Plenty Canada, R.R. 3, Lanark, ONT, K0G 1K0, Canada. Phone: 613-278-2215.

1751. Central Soya Co., Inc. 1987. Central Soya signs agreement with Biotech Laboratory (News release). Fort Wayne, Indiana. 3 p. June 8.
• ***Summary:*** The multimillion dollar agreement is with Bio Techniques Laboratories, Inc. of Redmond, Washington and includes options for an equity position at future dates. Under terms of the agreement, Central Soya will fund and direct research activity at BTL. Steven N. Haye, formerly Manager of Central Soya of Canada, Ltd. has been named General Manager. Address: Fort Wayne, Indiana.

1752. Muir, A.; Kalnins, D. 1987. False advertising resulting in infant malnutrition. *Canadian Medical Association Journal* 136:1274. June 15. [5 ref]
• ***Summary:*** Documents the case of an infant who, at 6 weeks of age, was put on a soybean-based product called Eden-soy. "The health food retailer had supplied the parents with a 'professional looking', colorful monograph that advertised the drink as 'good for babies' and a 'quality substitute' for breast milk. Their family physician had endorsed the product after a cursory inspection of the brochure, and the infant was exclusively fed Eden-Soy, without vitamin supplementation." Four months later he had become wasted because the formula did not contain enough calories. He also had developed night blindness and rickets because the supplement did not contain sufficient quantities of vitamins A and D. Address: Div. of General Pediatrics, Dep. of Pediatrics, and Dep. of Food Services, Hospital for Sick Children, Toronto, ONT, Canada.

1753. *Soybean Update.*1987. Canada is willing to use grain production restraint if other major exporting countries follow suit. June 15. p. 3.
• ***Summary:*** "Canada also willing to re-evaluate all its subsidy programs, including the 'crow' benefit rail subsidy, objected to by the U.S."

1754. Johnson, Kirk. 1987. Hidden fats in whole foods diets. *East West.* June. p. 62-68.
• ***Summary:*** A full-page table (p. 65) titled "How the substitutes stack up" shows total fat and serving size for the following categories: Dairy products. Substitute dairy products. Meat. Substitute meat products. Frozen dinners. Miscellaneous. The substitute dairy products include: Tofu Cream Chie (21st Century). Soya Kaas (soy cheese from American Natural Snacks). Tofutti (Tofu Time). Le Tofu (Brightsong Foods). Ice Bean (Farm Foods). Tofu, silken (Nasoya). Tofu, soft (Nasoya). Tofu, firm (Nasoya). Soybean margarine (Willow Run). Soymilk (Edensoy). Soymilk (Health Valley). Soymilk (Vitasoy).

Substitute meat products include: Fakin' Bacon (Tempehworks). Tofu Wieners (Yves). Tofu Pups (Tempehworks). Vegie Burger (Bud, Inc.). Tofu Burger

(Bud, Inc.). Gardenburger (Wholesome & Hearty). Tofu Sausage (Vegetable Protein Co.). Tempeh, 3-grain (Tempehworks). Seitan ("wheat meat").

Meatless frozen dinners include: Tofu Lasagna (Legume). Meatless Pepper Steak with Kofu & Noodles (Legume). Sweet and Sour Tofu (Legume).

Miscellaneous products include: Nasoyannaise (Nasoya Foods). Salad dressing, Creamy Tofu (Nasoya). Miso.

1755. *Toyo Shinpo (Soyfoods News).*1987. Pari de mitsuketa honmono no tôfu. Munôyaku daizu tsukai parikko ni apiiru [Real tofu made in Paris with organically-grown soybeans and it appeals to the Parisians]. July 31. p. 13. [Jap; eng+]
• ***Summary:*** Mr. Noboru Sakaguchi, age 59, has a tofu shop located in Champaigny–only 20 minutes away from Paris. The shop opened 3 years ago and is called Daizou. The majority of the employees are French. Sakaguchi employs a Japanese plant manager, Mr. Takatashi Hiroyama, age 39. Mr. Sakaguchi also has a health foods store and restaurant, Le Bal en Bois. This is the parent company of Daizou. They produce about 1,000 cakes of tofu (1 cake = 380 gm) a day. Of these, 200 are made with organically grown soybeans and are vacuum packed. The company also uses regular soybeans from Canada and organically grown ones from the U.S. They use nigari in their tofu manufacturing process. They have been experimenting with silken tofu (kinugoshi) and have done market studies with some newly developed soymilk mayonnaise. Their tofu sells for 7 French francs per cake wholesale, and 9-12 francs retail. They sell their organic tofu for the same price as the regular cakes as a method of introducing it into the market. Right now, their big enemy is water that is too alkaline.

1756. American Soybean Association. 1987. Soya Bluebook '87. St. Louis, Missouri: American Soybean Assoc. 270 p. July. Index (bold face type indicates advertiser). 22 cm.
• ***Summary:*** This is the last issue of the *Soya Bluebook* published by the American Soybean Association. The section titled "Soy statistics (tables, charts, graphs) (p. 185-244) is a rich source of information, worldwide.

Before page 199 are two fold-out color maps (color coded by county): U.S. soybean production 1985, and U.S. soybean acreage 1985.

A full-page table (p. 235) shows U.S. exports of whole soybeans, 1982-1986–Volume of exports (in metric tons) by country of destination and total value each year. Region and country of destination: North America: Canada, Mexico, other, total. South America: Brazil, Colombia, Ecuador, Peru, Venezuela, other, total. Europe and Russia: Belgium & Luxembourg, Czechoslovakia, Denmark, France, Germany (West), Germany (East), Greece, Ireland, Italy, Netherlands, Norway, Portugal, Romania, Soviet Union, Spain, Switzerland, United Kingdom, Yugoslavia, other, total. Middle East. Africa. Asia: China–PRC, China–Taiwan, India, Indonesia, Japan, Korea (South), Pakistan, other, total. Australia & Oceania. Other unidentified. Grand total. Value of exports–total (million $). Address: P.O. Box 27300, St. Louis, Missouri 63141.

1757. Del Valle, Amado. 1987. Update on the Plenty Soy Project in Guatemala. San Bartolo, Solola, Guatemala. 2 p. Unpublished manuscript. [Eng]
• ***Summary:*** Thanks to the interest of the executive director of Plenty, Canada, the project reinitiated its activities in the middle of 1985. The three objectives are: 1. Agricultural, to develop and teach Guatemalan farmers to grow suitable soybean varieties. 2. Educational, to teach families and organizations soyfoods nutrition and recipe preparation. 3. Industrial, running the soy dairy in the community of San Bartolo, and making soymilk, tofu, soy ice cream, soy flour and soy coffee. From Jan. 1 to July 22, 1987 the soy dairy has produced 3,777 gallons of soymilk, 3,308 pounds of tofu, 865 gallons of soy ice cream, and 5,600 paletas (ice cream sticks), that have been sold in 4 areas of Guatemala. Address: Solola, San Bartolo, Guatemala.

1758. Lemieux, Sylvie. 1987. Le tofu à tout faire [A taste for tofu]. *Circulaire (La) (Quebec, Canada).* Aug. 22. [Fre; Eng]
• ***Summary:*** "Tofu is gradually gaining favor here in Quebec." Address: Quebec, Canada.

1759. Bernard, Richard L.; Juvik, Gail A.; Nelson, Randall L. 1987. USDA soybean germplasm collection inventory [1898-1944]. Vol. 1. *INTSOY Series* No. 30. vi + 80 p. Aug. [20 ref]
• ***Summary:*** The title page states: "Information on the origins of soybean and wild soybean germplasm including introduced and old United States and Canadian domestic varieties and foreign and domestic strains identified by FC and PI numbers up to PI 150.000 acquired through 1944 and maintained by the United States Department of Agriculture." Note: PI can stand for either "Plant Inventory" or "Plant Introduction."

Contents: Foreword. Curator staff. The USDA soybean germplasm collection: Introduction, history, PI numbers, divisions of the collection, maintenance of the collection, statistical summaries, United States and Canadian varieties, foreign introductions, appendixes, abbreviations (EAS, ARS, ES, INTSOY, USDA, and USRSL).

Statistical tables: 1. Number of strains by maturity group (MG, p. 4). This table is divided vertically into north (MG 000 to IV), south (MG V to X), and wild soybeans. There are columns for: Old domestic varieties (before 1946), FC strains (mostly from USA), PI strains to 150,000, and total. The three maturity groups with the greatest number of strains are III (479), II (436), and IV (376)–all in the north.

2. Number of strains by country of origin (p. 5). This table is divided vertically into old domestic varieties (before 1946), FC strains, PI strains to 150,000, grand total, and wild soybeans to PI 150,000. The countries that have contributed the most strains to the U.S. collection are: China 871, Korea 335, and Japan 288.

3. Number of PI strains by year from 1898 to 1945 (p. 6). Columns show: Year. Plant Inventory volume. Initial PI designation for all crops. Number of soybean PI designations plus number of domestic varieties derived from them. Number of strains in collection each year. Accumulative total. A total of 7,867 PI soybean strains were introduced out of a total 150,209 plant introductions (about 5.2% of the total was soybeans). 413 domestic varieties were derived from these soybean introductions. The most active years for soybean introduction were 1926-1932. In 1954 there were 1,524 soybeans in the collection, or only 19.4% of those introduced with PI numbers. The rest were lost or discarded.

4. Historical summary of soybean introduction, in four time periods (p. 7): 1898-1923 (26 years, 40 strains/year). 1924-1928 (5 years, 375 strains/year). 1929-1932 (4 years, 1,193 strains/year). 1933-1944 (12 years, 14 strains/year).

5. Soybean instructions from major collecting expeditions (p. 7). Frank N. Meyer in China, Korea, and USSR from 1906 to 1917 collected 114 soybean PI strains–including 1 wild soybean in 1913. P.H. Dorsett in China from 1924 to 1927 collected 969 PI strains–including 5 wild soybeans in 1925. P.H. Dorsett and W.J. Morse in China, Korea, and Japan from 1929 to 1932 collected 4,451 PI strains.

6. Source and identification of individual strains: Old domestic varieties (p. 8-19). 7. Source and identification of individual strains: FC [Forage Crop] strains (p. 20-23). 8. Source and identification of individual strains: PI strains (by year, 1907-1944, to PI 150.000; p. 24-59). A sample entry (p. 34) states: Collected in Japan by P.H. Dorsett and W.J. Morse, USDA Agricultural Explorers, in April to June 1929. Obtained at Nishigahara, Tokyo, on April 15. PI 80.466. Maturity Group V. 32 seeds. 'Okura Maru Daizu,' originally from Hokushu, used candied and the product is called 'Mimame' [sic, Nimame]. Note: Right below this is PI 80.468. Tsurunoko Daizu.

Source and identification of individual strains: Wild soybean strains (by year, 1925-1940, to PI 150.000).

Appendixes: 1. PI strains from which old domestic varieties were derived. 2. Old domestic varieties introduced without PI designation. 3. Old domestic varieties of hybrid or unknown origin. 4. FC strains summarized by country and year. 5. PI strains summarized by country and year: 1898 to 1944 (PI 1 to PI 150.000). 6. Chinese location names. 7. Korean location names.

The source, date, maturity group, and other information for the following 191 old domestic varieties (all of which are still in the USDA soybean germplasm collection) is given (p. 8-19): Acadian, Agate, A.K. [FC 30.761], A.K. [Kansas], A.K. (Harrow), Aksarben, Aoda, Arisoy, Arksoy, Arlington, Armredo, Austin, Avoyelles, Bansei, Bansei [Ames], Barchet, Bavender Special A, B, C, Biloxi, Blackeye, Black Eyebrow, Boone, Burwell, Capital, Cayuga, Charlee, Cherokee, Chestnut, Chief, Chusei, Clemson (from Nanjing, China in 1927; released in 1939), Cloud, CNS, Columbia, Creole, Delsoy, Delsta, Dixie, Dunfield, Earlyana, Early White Eyebrow, Easycook, Ebony, Elton, Emperor, Etum, Flambeau, Fuji, Funk Delicious, Funman, Gatan, Georgian, Giant Green, Gibson, Boku, Goldsoy, Granger, Green and Black, Guelph (from Japan in 1889 by Prof. W.P. Brooks, Massachusetts AES; called 'Medium Green' from 1903 to 1907), Habaro, Haberlandt, Hahto, Hahto [Michigan], Hakote, Harbinsoy, Harman, Harrel, Hayseed, Hidatsa, Higan, Hokkaido, Hollybrook, Hongkong, Hoosier, Hurrelbrink, Illington, Illini, Ilsoy, Imperial, Improved Pelican, Jefferson, J.E.W. 45, Jogun, Jogun [Ames], Kabott, Kagon, Kanro, Kanum, Kingston, Kingwa, Korean, Kura, Laredo, Lexington, Lincoln, Linman 533, Louisiana Green, Luthy, Macoupin, Magnolia, Mamloxi, Mammoth Yellow, Mamotan 6640, Mamredo, Manchu, Manchu [Lafayette], Manchu [Lafayette] B, Manchu [Madison], Manchu–Hudson, Manchu–Montreal, Manchu 3, Manchu 606, Manchu 2204, Manchukota, Manchuria, Manchuria 13177, Manchuria 20173, Mandarin, Mandarin (Ottawa), Mandarin 507, Mandell, Manitoba Brown, Mansoy, Medium Green, Mendota, Midwest, Miller 67, Mingo, Minsoy, Missoy, Monetta, Morse, Mukden, Nanda, Nansemond, Nela, Norredo, Norsoy, OAC 211, Ogden, Ogemaw, Old Dominion, Ontario, Osaya, Otootan, Pagoda, Palmetto, Pando, Patoka, Patterson, Peking, Peking S, Pennsoy, Pine Dell Perfection, Pluto, Pocahontas, Poland Yellow, Portugal, Ralsoy, Richland, Roanoke, Rokusun, Rose Non Pop, S-100, Sac, Sanga, Sato, Scioto, Seminole, Seneca, Shingto, Shiro, Sioux, Sooty, Sousei, Soysota, Tanner, Tarheel Black, Tastee, Tennessee Non Pop, Toku, Tokyo, Tortoise Egg, Viking, Virginia, Virginia S, Volstate, Waseda, Wea, White Biloxi, Willomi, Willomi B, Wilson, Wilson B, Wilson-Five, Wilson-Five B, Wilson-6, Wing Jet, Wisconsin Black, Wolverine, Woods Yellow, Yellow Marvel, Yelredo.

For each of these 191 varieties, a table gives the following information: Variety name, maturity group, source and other information [such as country of origin and year of introduction to the USA], prior designation [usually a P.I. number], year named or released, developer or sponsor, literature. The last column refers to a list of 20 bibliographic references in chronological order (from 1907 to 1977) on p. 18-19. Address: Univ. of Illinois.

1760. Bernard, Richard L.; Juvik, Gail A.; Nelson, Randall L. 1987. USDA soybean germplasm collection inventory.

Vol. 1: History and divisions of the collection (Document part). *INTSOY Series* No. 30. vi + 80 p. Aug. See p. 1-2.
• ***Summary:*** History (p. 1): "Prior to 1949 no consistent attempt was made to preserve soybean germplasm, and many introductions and old domestic varieties were discarded. The Soybean Germplasm Collection was established in 1949 with the objective to collect and maintain all significantly different soybean strains from throughout the world, with emphasis on the landraces of eastern Asia, where the soybean originated. The Collection was initially assembled by three USDA agronomists, J.L. Cartter and L.F. Williams at the U.S. Regional Soybean Laboratory, Urbana, Illinois, and E.E. Hartwig at Stoneville, Mississippi.

"When the Collection was established in 1949, all available strains were obtained from the USDA and state and Canadian agricultural experiment stations. A total of 1,524 PI strains or domestic varieties derived from PI strains were recovered and are now in the collection. This compares with 7,867 introductions made from 1898 to 1944."

Divisions of the Collection (p. 1): It is divided into six parts: "1. Domestic (United States and Canadian) varieties. Volume 1 includes introduced varieties named in the United States or Canada and other varieties developed before 1945.

"2. FC strains. These include foreign introductions and domestic strains, many of unknown origin, and are identified by a series of numbers assigned by the former Forage Crops Section of the USDA. This series was used until about 1957.

"3. PI strains. These consist of foreign introductions identified by numerical designations assigned by the Plant Introduction Office of the USDA. Strains up to PI 150.000 (introduced prior to 1945) are included in this volume.

"4. Wild soybeans. These are also identified by PI numbers, and strains up to PI 150.000 are included in Volume 1.

"5. Genetic collection.

"6. Perrenial *Glycine* species.

"Division 5 and 6 are not included in this publication. Information on them is available from the curator at Urbana." Address: Univ. of Illinois.

1761. *J. of the American Oil Chemists' Soc.*1987. World fats & oils report: Higher oil prices predicted. 64(8):1058-59, 1062, 1064, 1066-78, 1080-85. Aug. [1 ref]
• ***Summary:*** Statistics and general information on vegetable oil production, consumption, and trends in the following countries is given: Australia, Austria, Brazil, Canada, China, Czechoslovakia, Egypt, Finland, France, West Germany, East Germany, Hungary, India, Indonesia, Italy, Ivory Coast, Japan, Korea, Malaysia, Mexico, the Netherlands, Nigeria, Norway, Pakistan, Peru, the Philippines, Poland, Soviet Union, Spain, Sweden, Turkey, Uruguay, Venezuela, and Yugoslavia.

Tables include: 1. World production and consumption of major vegetable and marine oils. 2. Top 10 producers of major vegetable oils (USA, EEC 12 countries, Malaysia, China, Brazil, USSR, Indonesia, East Europe, Argentina, India. The oils: soybean, cottonseed, sunflowerseed, rapeseed, coconut, palm kernel, and palm oil). 3. Top 8 exporters of major edible oils (Malaysia, EEC 12 countries, Argentina, Philippines, USA, Singapore, Brazil, Indonesia). 4. Top 8 importers of major edible oils (EEC 12 countries, Africa, India, USA, Singapore, USSR, China, Pakistan). 5. Margarine, compound fat/shortening, and salad oil production for selected countries (USA, USSR, Japan, India, Pakistan, Netherlands, West Germany, UK, Canada, Poland, Brazil).

1762. **Product Name:** Chocolate Milk (Soymilk).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. August.
**Ingredients:** Soya milk, chocolate powder, sugar, salt.
**Wt/Vol., Packaging, Price:** Sold fresh over the counter in a small cup at Plenty Canada Soya Food Centre for Rs. 2/-.
**How Stored:** Unrefrigerated and perishable.
**Nutrition:** 3.2–3.4% protein.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre and talked with Mr. H.G. Jayatissa, project manager, and Miss Geethanjali Jayasena, soya technician.

The eleven products sold at this location were developed either by Plenty Canada or the Soya Foods Research Centre (SFRC) at Gannoruwa. In addition to these products, Plenty also sells products made by the SFRC, by Kundesale Cereal Factory, by Jane Soya Products, by C. Siriwardene, and by Kusuma Godalidde, plus soya beans (whole and split).

Since opening officially in September 1987, sales have increased by 30% a month. Commercial dried tempeh production is scheduled for May 1988 by a producer in collaboration with Plenty. Plans are underway for a Colombo Soya Food Centre and production facility as well as island-wide promotion of soya foods, and various activities to support small and medium scale soya food entrepreneurs. The soya promotion project will continue for a minimum of 4 years. Enquiries should be made to Ian Taylor, project director, Plenty, Box 95, Kandy, or the Plenty Canada head office at RR#3, Lanark, Ontario, K0G 1K0, Canada.

The company uses about 500 kg/month of soybeans (purchased from sellers/boutiques in Kandy for Rs. 9-9/50

per kg), 375 kg/month of soy flour (purchased from SFRC at Gannoruwa for Rs. 12/kg or from Kundesale for Rs. 18/kg), and 108 kg/month of soy flakes (purchased from Kundesale Cereal Factory for Rs. 22/kg). Consumers buy the products above all for their nutritional value, but also for good taste and economy.

1763. **Product Name:** Fresh Tofu.
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. August.
**Ingredients:** Soya milk, magnesium sulphate.
**Wt/Vol., Packaging, Price:** 200 gm plastic bag. Retails for Rs. 3/-.
**How Stored:** Unrefrigerated and perishable.
**Nutrition:** 8% protein.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987).

1764. **Product Name:** Ice Cream [Chocolate, Banana, Pineapple].
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. August.
**Ingredients:** Soya milk, corn oil, sugar, vanilla, salt. Plus chocolate powder, or fresh pineapple and pineapple essence, or fresh bananas.
**Wt/Vol., Packaging, Price:** Sold in plastic tubs to eat in or take out. Rs. 4/- each.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987).

1765. **Product Name:** Cutlets (Made with Okara).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. August.
**Ingredients:** Potatoes, soya milk residue [okara], onions, chilies, spices, salt, biscuit powder.
**Wt/Vol., Packaging, Price:** Each oval ball, 1 inch in diameter, retails for Rs. 1/5.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe for a deep-fried food.

1766. **Product Name:** Accras (A Small, Deep-Fried Meatless Okara Burger).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. August.
**Ingredients:** Soya milk residue, carrots, leeks, spices, curry leaves, white wheat flour.
**Wt/Vol., Packaging, Price:** Each patty, 2 inches in diameter, sells for Rs. 1/50.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe for a deep-fried food.

1767. Praskin, Laurie. 1987. Plenty, The Farm, and the Guatemala Soy Dairy (Interview). *SoyaScan Notes.* Sept. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** All the money for the Soy Dairy part of the Guatemala Project came from CIDA (the Canadian International Development Agency) through Plenty Canada. In those days Plenty USA and Plenty Canada were not seen as different. The volunteers were all from Plenty USA. The division between the two Plenty organizations started in 1982 after the Fri boat incident (Stephen's Hippy Navy) and Caribbean venture. Plenty Canada had to answer for everything that was done, and take responsibility for how their funds were spent. CIDA wants to give its money to Canadian groups and keep control in Canada. The Fri was a bad promotional idea. Now relations between Plenty Canada and USA are good again. Plenty USA will eventually be centered in Oakland (Peter Schweitzer). Plenty Canada has a multi million dollar a year budget; Plenty USA's budget is about $200,000. Address: 17969 Oak Dr., Los Gatos, California 95030.

1768. Keith L. Lippert Assocs. 1987. Tofutti Brands Inc. and Aur-Mark Holdings Co. Ltd. announce a "master developer" agreement for Canada (News release). 136 East 57th St., New York, NY 10022. 2 p. Sept. 21.
• ***Summary:*** Aur-Mark, a newly formed food and beverage distributor in Toronto, Canada, will become the exclusive manufacturer, distributor, and Master Franchisee for Tofutti Brands products in Canada. This agreement, which commenced on 30 June 1987, is expected to generate $300,000 to $500,000 in additional revenues in fiscal 1988. Address: New York.

1769. *Plenty Bulletin (Summertown, Tennessee).*1987. Business school grads help build soy dairy in the Caribbean. 3(3):1-4. Sept.

• ***Summary:*** A food processing kitchen and soy cafe was constructed on the northeast coast of Dominica on the Carib Indian Reserve by locals with help from 8 MBA volunteers from the Wharton School of Business [at the Univ. of Pennsylvania in Philadelphia]. Carib farmers are now selling soybeans to the Plenty Soy Center in Roseau, Dominica's capital. Each week the Center produces 100 lb of tofu, 25 lb of soysage, 20 lb of tempeh, 30-50 gallons of soy ice cream, and 30-40 gallons of soymilk. Most of these soyfoods are sold through two co-ops that are managed by Plenty-trained Dominican staffs: the Ebeneezer Women's Co-op in Marigot and the Kairi Soy Co-op on the outskirts of Roseau.

At the Soy Development Center in Roseau, Plenty Canada offers 2 six-week classes each year in home, village, or small industrial scale soyfoods processing. The staff also conducts two 16-hour training courses on other parts of the island mainly for home preparation of soyfoods. Fifteen farmers are growing ¼ acre each of soybeans. In Jamaica, Country Farmhouse Lifeline, a soyfoods production center in Kingston, makes 150 lb/week of tofu.

1770. **Product Name:** Fresh Tempeh.
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. September.
**Ingredients:** Split soybeans, tempeh culture.
**Wt/Vol., Packaging, Price:** 300 gm plastic bag retails for Rs. 4/50.
**Nutrition:** 19% protein.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987).

1771. **Product Name:** Tofu Roti (Tofu & Vegetable Filling Rolled in a Chapati).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. September.
**Ingredients:** Roti (Chapati): White wheat flour (3/4), soya flour (1/4), vegetable oil, salt. Filling: Potatoes, tofu, onions, chilies, spices, curry leaves.
**Wt/Vol., Packaging, Price:** Each roll, 12 inches long, retails for Rs. 4/-.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe.

1772. **Product Name:** Wattalappan (Soymilk Pudding).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. September.
**Ingredients:** Soya milk, jaggeri (unrefined sugar), vanilla, eggs, salt, spices.
**Wt/Vol., Packaging, Price:** Served in a small cup. Retails for Rs. 4/-.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe.

1773. **Product Name:** Vegetarian Wheat Cutlets (Seitan) [Garlic, Ginger, or Plain]. Renamed Wheatlets.
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Pt. Rd., R.R. 2, Sooke, BC, Canada V0S 1N0. Phone: 604-642-3263.
**Date of Introduction:** 1987. September.
**Ingredients:** Ginger: Gluten from organic wheat, water, shoyu (soybeans, wheat, salt), herbs and spices, kombu sea vegetables.
**Wt/Vol., Packaging, Price:** 225 gm (7.9 oz).
**How Stored:** Refrigerated.
**Nutrition:** Per 100 gm.: Calories 124, protein 15 gm, carbohydrates 6 gm, fat 1 gm.
**New Product–Documentation:** Leviton. 1982. In a Small Bright Building. Talk with and letter from Wayne Fatt. 1988. Sept. 28-29. The business was started in 1980 in a small building in Sooke, a community on the outskirts of Victoria. It has since relocated twice. In May 1988 Wayne Fatt purchased the company from Wayne Jolley, and in July 1988 moved from 2625 Otter Point Rd., R.R. 2, Sooke, BC, V0S 1N0 to a much larger facility at 4247 Dieppe, in Victoria. The company name is unchanged. They now make Wheatlets (seitan, formerly called Vegetarian Wheat Cutlets, launched in Sept. 1987), available in garlic, ginger, or plain flavors.

Label for Wheat Cutlets sent by Wayne Fatt. 1988. Sept. 6 by 4 inches. Self adhesive. Dark brown and white on orange-yellow. The product is now named "Grainwave Vegetarian Wheat Cutlets," made by Grainwave, Sooke, B.C. V0S 1N0.

1774. *Restaurants and Institutions.*1987. 1987 growth chains: The Tofutti Shop. Oct. 14. p. 52.
• ***Summary:*** The Tofutti Shop franchise projects sales of $2.5 million in 1987 with 4 units in operation by year end. The company-owned unit is located in New York City. The single existing franchise unit is in Teaneck, New Jersey. Annual sales per unit are $500,000 to $750,000. Checks average $2.75. The fee is $25,000 with 5% royalties. The

company spends 5% of sales on advertising. Franchise deals for Germany, Canada, and several Scandinavian countries are pending. The Soviet Union is showing interest in a Tofutti Shop. Address: Des Plaines, Illinois.

1775. Dagnoli, Judann. 1987. Tofutti spreads reach into Canada, Australia. Finland is next target. *Advertising Age.* Oct. 19.
• ***Summary:*** According to Steven Kass, chief financial officer, Zabbar Pty Ltd. is the Tofutti distributor in Australia, and Aur-Mark Holdings is the master developer and distributor in Canada. Canada has high per capita consumption of ice cream. New products include Tofutti Frutti (frozen dessert on a stick), Better than Cheesecake (cheeseless cheesecake), and Egg Watchers. They are trying to expand into areas besides dessert. The northeast is Tofutti's strongest market both because of its high per capita consumption of ice cream and its high percentage of Jewish population who keep kosher. In the U.S. Ketchum/Hicks & Greist, New York, handles Tofutti Brands' estimated $3 million ad budget. Kass said that drop in 1986 sales was due mainly to increasing competition in the crowded frozen novelty category. Address: Chicago, Illinois.

1776. Schecter, Andy. 1987. Early history of Northern Soy (Interview). *SoyaScan Notes.* Oct. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Zen Center kitchen at Rochester, New York used to import tofu from Toronto [in Ontario, Canada]. Then in about 1975 Jay Thompson, who worked in the kitchen, saw an article by William Shurtleff in *Mother Earth News* offering a free chapter from a book in progress describing how to make tofu. When the chapter arrived, the kitchen crew started making tofu in the Zen Center kitchen. The tofu makers were Jay Thompson, Martha (last name unknown), Greg Weaver, Greg Mello, and Andy Schecter. They would make about 20 pounds of tofu once or twice a week.

After 3-4 months they moved the operation in the basement of the Zen Center, where it was more efficient. Again they made about 20 pounds of tofu a batch, at least once a week and during sesshins [sic] as often as 2-3 times a week. All of the tofu was consumed within Zen Center. None was sold commercially.

Then in late 1976 Greg Mello and Greg Weaver started talking about starting a commercial business independent of Zen Center and outside of it. They took their tofu to Oriental food stores and the owners showed interest. So they bought a large stainless steel cooking pot and other utensils. But in late 1976 there were some arguments, so Greg Weaver suggested that Greg Mello do it alone. So they parted.

At that point Andy Schecter was planning on leaving the Zen Center staff. He got together with Greg Mello and they found a 900 square foot space at 277 North Goodman Street in Rochester. In January 1977 they established the company called The Tofu Shop and began construction of the plant. They bought an oil-fired boiler, built a platform for the cooking pot, built presses, curding barrels, etc. In May 1977 production began. Their first product was tofu, followed shortly by a generic (unbranded, unlabeled) soymilk in plain and carob-honey flavors, put up in quart canning jars.

In late 1977 Greg Mello decided to leave. So in January 1978 Andy brought in Greg Weaver. In mid-1978 Mello and Schecter realized that tofu sales were slow since most people did not know what it was or what to do with it. So they decided to open a soy deli to introduce prepared tofu dishes to the public. Weaver took charge of the deli, which opened in November 1978 under the name "The Tofu Shop" at 686 Monroe Ave. The startup costs were about $20,000. Since the manufacturing branch of the partnership was now without a name, they decided to call it Northern Soy. And since Schecter felt that he would need more managerial help in running Northern Soy, he brought a third partner, Norman Holland, in around November 1978.

The three partners all owning two businesses didn't get along very well, so they decided to separate the two businesses. Weaver would own the deli as an independent business, while Schecter and Holland would own Northern Soy. Since the name The Tofu Shop legally belonged to Northern Soy, Weaver was asked to find another name. After briefly trying "The Tofu Gardens," he settled on "The Lotus Cafe." This deli, the fifth soy deli to open in America, was a pioneer in developing delicious tofu and tempeh recipes and marketing them in an attractive way. Featured in a cover story in the first issue of Soycraft (later Soyfoods) magazine (summer 1979), it offered both sit-down (20 seats) and take-out service, featuring hot vegetarian lunches and dinners. By 1982 it was the largest soy deli in America in terms of average weekly sales ($4,800) and maximum weekly sales ($6,500). Names of 30 of its most popular tofu and tempeh recipes are given in the books *Tofu & Soymilk Production* (1979) and *Report on Soyfoods Delis, Cafes & Restaurants,* both by Shurtleff and Aoyagi.

Tempeh production was started [in about Nov. 1977] by Earl Lepper in his home. Then at some point in 1979 or 1980 he moved the operation into a corner of The Tofu Shop. Eventually he decided to sell his tiny business to The Tofu Shop so he could move to California.

The Lotus Cafe closed in August of 1984 or 1985, in debt and after Weaver's unsuccessful attempt to sell it. Weaver went to work for a computer literacy firm. All 3 are still bachelors. Address: 30 Somerton St., Rochester, New York.

1777. *Farm & Country (Toronto, ONT, Canada).*1987. Asians buying plenty: Soy. Oct. 27.

• ***Summary:*** Ontario has captured 66% of Singapore's 41,000-tonne market (soybean). Yet out of Japan's 500,000-tonne annual imports for tofu manufacture, Ontario supplies less than 3,000 tonnes. Canada applies more rigorous grade standards than the U.S., but Canada needs better beans, not just better grading. Buyers believe that American beans are higher in protein. Address: Ontario, Canada.

1778. Bradner, Norman. 1987. Soybeans for the food market. *Seed World (Des Plaines, Illinois).* Oct. p. 44.
• ***Summary:*** Thailand imports nearly 100,000 tonnes/year of soybeans for food use. Japan imports 65,000 to 70,000 tonnes of small beans to make natto. Natto beans can be less than 5 mm in diameter and have a yellow cotyledon and hilum. For tofu, soymilk and miso, importers want high protein, low oil, maximum water soluble proteins, low phytate, high 11S protein fraction, large seed size and high sugar content. But a variety judged good one year can be deemed unsuitable the next. Environmental conditions during seed development play a significant role in determining the final chemical composition. Address: Pulse Breeder, King Agro, Inc., Chatham, Ontario, Canada.

1779. **Product Name:** Tofu.
**Manufacturer's Name:** MGM Brands.
**Manufacturer's Address:** 59 Howden Rd, Unit H., Scarborough, ONT, M1R 3C7, Canada. Phone: 416-752-6600.
**Date of Introduction:** 1987. October.
**New Product–Documentation:** Talk with company. 1988. March 2.

1780. Ontario Ministry of Agriculture and Food. 1987. Soybean buyers mission from Japan, Hong Kong, Malaysia, Singapore, October 10-20, 1987. Toronto, Ontario, Canada: Ontario Ministry of Agriculture and Food. 23 p. 30 cm. Saddle stitched. [Eng]
• ***Summary:*** Contents: Mission members (with a photo of each). Itinerary. Japanese market for edible soybeans. General uses of edible soybeans in Hong Kong, Malaysia and Singapore. List of major importers in Asia (by country). Ontario soybean suppliers. Role of the Ontario Soya-Bean Growers Marketing Board (Chatham, Ontario).

This conference, which took place in Toronto, Chatham, and Harrow, Ontario, Canada, was sponsored by OMAF in Toronto. On the mission were 6 buyers from Japan (Takeya Miso Co., Asahi Industries [tofu maker], Takano Foods Co. [natto maker], Dah Cong Hong, Wako Shokuryo Co., and Gomei Shoji Co. [the last 3 is each an importer and wholesaler]), 2 from Hong Kong (Amoy Industries Ltd., and Chung Hing Co.), 3 from Malaysia (Sin Yong Huat Enterprises Sdn. Ltd, Yeo Hiap Seng (Malaysia) Ltd., and Chop Lee Kit Heng), and 2 buyers from Singapore (Eng Huat (S) Ltd. and Chop Hin Leong). Mike Hojo of OMAF/Tokyo was the mission leader.

The Japanese soybean market is about 5 million tons a year. Of this: Oil crushing 4,036,000 tons. Food 849,000 tons (17% of total), and feed (not crushed) 70,000 tons. From 1982 to 1986 domestic Japanese soybean production has decreased from 168,000 tons to 147,000 tons, while imports have increased from 4,344,000 tons to 4,857,000 tons. Demand for food soybeans has increased from 803,000 tons to 849,000 tons. Tofu, miso, and natto account for more than 94% of the total utilization of edible soybeans, roughly as follows: Tofu 500,000 tons, miso 200,000 tons, natto 100,000 tons.

In 1986 some 89.9% of Japan's soybean imports came from the USA, followed by China (6.7%), and Brazil (2.65%). That year the least expensive soybeans came from Brazil (US$219.86/ton), followed by USA ($221.36), China ($236.06), and Canada ($277.50). Note that Canadian soybeans are 25.3% more expensive than those from the USA. Chinese and Canadian soybeans are most widely used to make foods. Large Chinese soybeans are used to make tofu, medium sized for miso, and small for natto. Of the soybeans imported from the USA, 80-85% are imported from oil crushing because of their high oil content. The remaining 10-15%, or approximately 700,000 tons are food soybeans from Iowa, Ohio, or Michigan. Called "IOM" soybeans, they are used mainly to make tofu. Brazilian soybeans have a high oil content and are used for oil crushing only. The ocean freight cost for a 20-foot container shipped to Tokyo is as follows: USA west coast $1,000. Toronto, Canada $1,800. USA East Coast $2,000. Brazil $2,100. Argentina $2,500. But a large percentage of regular soybeans are loaded directly into ships, and travel at lower freight rates. Exports of food soybeans from Canada to Japan rose from 10,000 tons in 1979 to 26,000 tons in 1986, while those from China rose from 267,000 tons in 1979 to 323,000 tons in 1986.

Very detailed preferred characteristics are given for soybeans to make miso (6 characteristics), natto (5), and tofu (5). Canadian soybeans are recognized as superior to Chinese and American soybeans for food use. This is one reason they command a relatively higher price.

Hong Kong imports 28,100 tons/year of soybeans, and 63% of these come from Canada, followed by China (35%), and the USA (1.8%). Malaysia and Singapore import 124,800 tons/year, and 53% of these come from the USA, followed by Canada (31.7%), and China (8.2%). Most of the food soybeans in Malaysia and Singapore are used to make soymilk and tofu.

Soymilk: Vitasoy dominates the market in Hong Kong, whereas in Malaysia and Singapore the leading manufacturers are Yeo Hiap Seng, Cold Storage, Lam Soon, and Nestle. Soymilk consumption is increasing in these 3 countries, and in neighboring countries. Soymilk makers

believe there are four requirements for their products' success: It must taste good, must be priced competitively with soft drinks, must be perceived as a health food, and must be marketed properly.

Bean curd sheets and sticks [yuba] are very common snacks and dishes in Hong Kong, Malaysia, and Singapore. Manufacturers consider only Chinese and Canadian soybeans for these products. Canadian soybeans produce whiter soymilk and this whiter yuba. However the larger size of Chinese soybeans results in a larger yield. Manufacturers normally blend 60% of Canadian soybeans with 40% of Chinese soybeans to obtain a higher output of whiter sheets.

Major Japanese soybean importers include: Da Chong Hong (Japan) Ltd., Gomei Shoji Co. Ltd., C. Itoh & Co. Ltd., Mitsubishi Corp., Kanematsu-Gosho Ltd., Nichimen Corp., Marubeni Corp., Mitsui & Co. Ltd., Nissho Iwai Corp., Okura & Co. Ltd., Toyo Menka Kaisha Ltd., Wako Shokuryo Co. Ltd. Address: Ontario, Canada.

1781. *Plenty Canada News (Lanark, Ontario, Canada).*1987. Plenty Canada's soy project in St. Lucia. Fall. p. 6.
• ***Summary:*** A man named Christopher of Canaries in St. Lucia was given several weeks of informal training is soy processing and marketing at the Plenty Canada Soy Centre there by Maya Shearer. He has now started a small retail outlet for soyfoods in Canaries. Address: R.R. 3, Lanark, ONT, K0G 1K0, Canada.

1782. **Product Name:** Tempeh Sticks (Deep-fried without Batter).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. October.
**Ingredients:** Fresh tempeh, chicken soup cubes, white flour.
**Wt/Vol., Packaging, Price:** Each stick is 6 inches long and retails for Rs. 1/-.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987).

1783. *SoyaScan Notes.*1987. New Trend: Europe's hottest new soyfood product, smoked tofu, is almost unknown in America (Overview). Oct. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Recent European visitors and letters to the Soyfoods Center have praised the new varieties of smoked tofu made by many European tofu companies. They are surprised that this product is not better known in America. The earliest known commercial smoked tofu was produced in France in 1911 by Chinese soyfoods pioneer Li Yu-ying. In 1974 Komatsugawa Tofu in Japan made a smoked tofu inside a deep-fried tofu pouch, sold in oil in a sardine can. The earliest known smoked tofu in the Western world was introduced in June 1984 by L'Herberie in Montreal, Quebec, Canada. All of the recent European brands have been introduced since 1986. They are made in England (Caldron Foods, Regular Tofu Co., Full of Beans Soyfoods), Germany (Soyastern, Morgenland Pflanzenkost, Christian Nagel Tofumanufaktur), Netherlands (Manna Natuurvoeding, Heuschen-Schrouff B.V.).

1784. Zee, J.A.; Bourgeois, M.; Boudreau, A.; Breton, R.; Jones, J.D. 1987. Utilisation de la féverole dans la fabrication du tofu [Utilization of fava beans (broad beans) in the manufacture of tofu]. *Canadian Institute of Food Science and Technology Journal* 20(4):260-66. Oct. [28 ref. Fre; eng]
• ***Summary:*** Describes the optimal process, chemical composition, nutritive value, texture, and organoleptic properties of this product usually made from soybeans. Faba bean tofu was darker in color (beige), less firm, and slightly more bitter in taste than soybean tofu. Optimum yields of tofu from fava beans (also called "broad beans," *Vicia faba)* was 66.8% by weight and 44.8% of the protein, obtained with a bean:water ratio of 1:10. Increasing the amount of coagulant decreased the protein yield. GDL (glucono delta-lactone) gave the tofu a very pale color, but the protein yield was less than with other coagulant salts. Address: Dep. of Nutrition Humaine et de Consommation, Centre de Recherche en Nutrition, Université Laval, Quebec, QUE, G1K 7P4 Canada.

1785. Dickrell, Jim. 1987. To the year 2000: Soybeans face bleak export prospects. *Farmer (St. Paul, Minnesota).* Nov. 7. p. 12-13.
• ***Summary:*** It is not likely the jubilation of American soybean farmers from the early 1970s will return any time soon. U.S. soybean exports reached their peak of 25 million tonnes in 1981, and now stand at about 18 million tonnes. The main reason for the drop in buying by the 12 EEC countries during the 1980s has been the doubling of sunflower and rapeseed production. EEC soybean production, primarily in Italy, has also tripled in the past 2 years. The EEC has encouraged domestic oil crop production by paying lucrative subsidies to European oil crushers. They, in turn, have been able to offer growers high crop prices, about $15/bu for soybeans in Italy.

Japan has decreased its imports of soybeans, replacing them by Canadian canola (rapeseeds), which are less expensive, in part because they grow in Western Canada. Rapeseed oil is now the cheapest oil in world markets. Argentinian soybean yields now average 34.6 bu/acre

versus 31.7 in the USA. Eight years ago the U.S. had 65% of the world soybean market; now it has 49% Eastern European countries prefer buying soybeans from South Americans, mainly for political reasons. Address: Minnesota.

1786. Armstrong, Julian. 1987. Tofu or not tofu: It's hot then cold. *Gazette (The) (Montreal, QUE, Canada).* Nov. 11. p. E-3.
• ***Summary:*** A lavish and colorful buffet featuring tofu was served at the 19-hotel Canada Pacific chain. "Montreal tofu guru and cookbook author Yvon Tremblay and the Chateau Champlain's executive chef, Alain Monod, had produced a delicious variety of cold hors d'oeuvres, hot main courses, and cooling desserts..." The best dish was a curry (see recipe).

1787. Cloud, Jon. 1987. Breeding soybeans for food uses in Canada, the Organic Crop Improvement Association, new developments with okara, and Soy City Foods (Interview). Conducted by William Shurtleff of Soyfoods Center, Nov. 15. 2 p. transcript.
• ***Summary:*** Jon Cloud has done much work on breeding soybeans for food uses, especially for tofu. He started the Organic Crop Improvement Assoc. (OCIA) in Canada. It is now in 6 countries and 22 states in the USA. OFPANA has not progressed. He is doing exciting new work with soy mash overseas, with Griffith Labs. Soy City Foods is a corporation that is worker owned. Address: Soy City Foods, Toronto, ONT, Canada.

1788. Freedman, Alix M.; Waldholz, Michael. 1987. A different oil war breaks out, and now the fat is in the fire. Malaysia's palm-oil forces take on U.S. soybeaners; at issue: Health & money. *Wall Street Journal, European Edition.* Nov. 18. p. 1, 10.
• ***Summary:*** A cutting, comical review of the battles to date. All tropical fats account for only 5% of the $2,000 million cooking oil market; soy oil has 80%. The Malaysians, however, worry that the soybeaners' war of words will spill over U.S. borders and hurt their sales elsewhere in the world, where their major markets lie. American soybean farmers should be more worried about Canadian rapeseed oil, which has only 7% saturated fat. This is a trade issue which has been carried into the science and health arena. Malaysians and Filipinos raise the risk of Communist insurgency. Address: Heerlen, Netherlands.

1789. Johnson, Fred. 1987. Aseptic potentials: A number of products aseptically packaged in other countries could offer sound Canadian opportunities. *Food in Canada* 46(10):24-25. Nov.
• ***Summary:*** Morinaga Nutritional Foods Inc. of Los Angeles, California, reports skyrocketing sales of its tofu products in Tetra Brik cartons. From October 1984 to September 1985 it sold 1.9 million packages. From October 1985 to September 1986, sales almost tripled. Aseptic packaging of soups, sauces, puddings, vegetable oils and dressings, soybean milk, and tofu is detailed. Address: Toronto.

1790. LaBell, Fran. 1987. Canola/LEAR oil–low in saturated fat. *Food Processing (Chicago)* 48(12):73-74, 76, 78. Nov.
• ***Summary:*** Canola (rapeseed) oil contains less saturated fat than any other popular vegetable oil–only 6%, versus safflower oil 9%, sunflower oil 11%, corn oil 13%, olive oil 14%, soy oil 15%, peanut oil 18%, cottonseed oil 27%, lard 41%, palm oil 51%, beef tallow 52%, butterfat 66%, and coconut oil 92% (Agricultural Handbook No. 8-4, 1979). LEAR means low erucic acid rapeseed oil. It has excellent stability.

Less than 20 years ago, there was no canola oil used in the Canadian food supply. Now, 59% of the vegetable oil consumed in Canada is canola oil. The FDA added low erucic acid rapeseed oil (LEAR oil) to the GRAS list in January 1985. Approval of amended FDA labelling regulations is currently being sought so that the oil can be commonly and legally termed canola oil in the U.S., as it already is in Canada. "Attempts to use it in food were hindered by its high erucic acid and high glucinolate contents. Thanks to a plant breeding program, utilizing genetic engineering, Canadian scientists have reduced the erucic acid content from 26% or more to less than 1% in an oilseed. Canola oil has a low level of saturated fatty acids and excellent stability." The fry-life is considered exhausted when the fat has a consistent 1-inch foam. Address: Eastern editor.

1791. *Plenty Canada News (Lanark, Ontario, Canada).*1987. Report from Guatemala. Fall. p. 6.
• ***Summary:*** The Guatemala Integrated Rural Development programme was initiated in 1976 and withdrawn in 1980 due to violence in the region. It was reactivated in the 1985 fiscal year. Soy processing activities continue to gain in popularity, as shown by the large turnout for the demonstrations, the number of requests received for training by different agencies and the visits made by both government and non-government agencies to the Soy Centre in Solola. A three-day course on soyfood processing given by the local Plenty Soy Technician to five Alianza promoters, was in turn given by those five promoters to over 900 people during the next two months.

The Soy Centre serves as a model to demonstrate the economic viability of soy processing and to encourage private entrepreneurs to start income-generating activities in their own communities. A number of new foods have been developed locally as a result of Plenty's programme,

combining soy with traditional foods. Atole, a drink made with soy and cornflour, a sweetener, cinnamon and water, is one example. The combination of training and the loan by Plenty Canada of a basic soy kit (which becomes his own property after 3 years use), has motivated Christopher [of Canaries in St. Lucia] to start a small retail sales outlet for soy products in Canaries. This outlet has been in operation for several months and is doing quite well. Address: R.R. 3, Lanark, ONT, Canada KOG 1KO. Phone: 613-278-2416.

1792. **Product Name:** Tofreezi (New Name for Frozen Buddha Soy Ice Cream) [Mocha Royalle, Berry Banana, Amaretto, Pineapple Coconut, Chocolate Mint, or Maple Walnut].
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1987. November.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16. Sunrise bought this line of soy ice creams in November 1987 from Ray Lipovsky of Metta Tofu Products Ltd. on Denman Island. Ray is now consulting for Sunrise.

1793. Tremblay, Yvon; Milon, Richard. 1987. Pioneering tofu in Quebec (Interview). Conducted by William Shurtleff of Soyfoods Center, Dec. 11. 3 p. transcript.
• ***Summary:*** Tremblay, who became a vegetarian in 1974, first learned of tofu in 1975, when a macrobiotic man from Boston taught him how to make it in Quebec. He soon began to make tofu at home in Quebec 2-3 times a week, and served it to large groups for whom he was cooking. In July 1977 he opened his first restaurant, L'Envolee, a natural food and vegetarian restaurant in Quebec City. He made tofu by hand in the restaurant and used it in a number of recipes. In 1981 he was accepted into the prestigious Society of Chefs and Pastry Chefs of Quebec. That November he and Richard Milon started a company named Les Aliments Soyabec, Inc. making tofu and baked tofu, from tofu imported from Swan Gardens in Miami, Florida. To promote these products, Tremblay wrote a recipe book in French titled *The Magic of Tofu.* In 1986 his second book on tofu, titled *Tofu,* was published. By now his first book had sold 35,000 copies. Address: 1. 5387, Fabre St., Montreal, QUE, H2J 3W6 Canada; 2. Cuisine Naturelle Johnathan, 12080 Pasteur, Montreal, H3M 2P9, Canada.

1794. Boughton, Noelle. 1987. Tai Foods tries for tofu converts. *Small Business (Canada).* Dec. p. 12, 14.
• ***Summary:*** Nancy Tai, Taiwanese by birth, started making tofu in her own kitchen in 1982 for her husband who was allergic to dairy products. In 1985 the Tais moved to Winnipeg and in June 1985 incorporated Tai Foods Inc. Her startup costs were $200,000. In April 1986 she began production of tofu and Tofu Treat (a non-dairy frozen dessert) in 3 flavors. She uses 1,250 kg of soybeans a month. In 1986 Tai Foods had gross sales of $100,000 with 4 employees. This is expected to rise to $150,000 in 1987. Address: Winnipeg, MAN.

1795. deMan, L.; deMan, J.M.; Buzzell, R.I. 1987. Composition and properties of soymilk and tofu made from Ontario light hilum soybeans. *Canadian Institute of Food Science and Technology Journal* 20(5):363-67. Dec. [16 ref. Eng; fre]
Address: 1. DeMan Food Technology Services Inc., Guelph, ONT, N1H 6B5, Canada; 2. Dep. of Food Science, Univ. of Guelph, Guelph, ONT, N1G 2W1; 3. Agriculture Canada, Research Station, Harrow, ONT, N0R 1G0, Canada.

1796. **Product Name:** Chinese Tempeh Rolls.
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. December.
**Ingredients:** Fresh or dried tempeh, chilies, onions, spices, salt, white wheat flour, soya flour, biscuit powder, pepper.
**Wt/Vol., Packaging, Price:** Each roll, 3.5 inches long and 1 inch diameter, retails for Rs. 3/-.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). The product is adapted from a local recipe for a deep-fried food.

1797. **Product Name:** Pancake (Rolled with Filling).
**Manufacturer's Name:** Plenty Canada Soya Utilization Project.
**Manufacturer's Address:** 88A Kotugodella Vidiya (Postal Box 95), Kandy, Sri Lanka.
**Date of Introduction:** 1987. December.
**Ingredients:** Pancake: White wheat flour (3/4), soya flour (1/4), turmeric, salt. Filling: Coconut, sugar, vanilla, salt.
**Wt/Vol., Packaging, Price:** Each roll, 6 inches long, retails for Rs. 2/-.
**New Product–Documentation:** Form filled out by Jane Gleason. On 23 March 1988 she visited the Plenty Canada Soya Food Centre. For details see Chocolate Milk (Aug. 1987). Adapted from a local recipe.

1798. **Product Name:** Splits (Split Soybeans).
**Manufacturer's Name:** Plenty Canada.
**Manufacturer's Address:** Soya Food Centre, 88A Kotugodella Vidiya, Kandy, Sri Lanka.
**Date of Introduction:** 1987. December.
**Ingredients:** Soybeans.

**Wt/Vol., Packaging, Price:** 500 gm bag with label retails for Rs. 8.
**How Stored:** Shelf stable.
**New Product–Documentation:** Label. 1988. 6 by 2 inches. Purple on white paper. Form filled out by Jane Gleason. On 23 March 1988 she met with Miss Geethanjal Jayasena, Soya Technician, Plenty Canada. These dry split soya beans are sold for home use or to small scale soyfood producers.

1799. **Product Name:** Country Nuggets (Soynuts) [Chocolate, Carob, Yogurt, Butter-Toffee, Onion-Garlic, Salted, or Natural].
**Manufacturer's Name:** Ridgetown Country Harvest.
**Manufacturer's Address:** Box 908, Ridgetown, ONT, N0P 2C0, Canada. Phone: 519-674-0620 or 0631. In Toronto: 416-778-0007.
**Date of Introduction:** 1987. December.
**New Product–Documentation:** Talk with Jim Boak of RCH. 1988. Sept. 1. His line of soynuts was launched just before Christmas 1987. The soynuts are roasted by INARI in Michigan, then coated and boxed in Canada. Soon to be launched are Honey-Garlic, and Barbecue flavors. The Chocolate and Honey-Garlic flavors are new, not sold by INARI. He is also working with Growth Country Foods of Columbus Grove, Ohio.

1800. Shurtleff, William. 1987. Breeding and marketing soybeans for food uses: The basic approach. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549. 4 p. April. Unpublished manuscript. [1 ref]
• ***Summary:*** There are four key components in developing a program to become a leading supplier of soybeans to the soyfoods industry: Information, specifications, research & development, and education. Details of a computer data entry screen and suggestions for four computer-generated graphs are given. Includes notes on a talk with Jon Cloud of Soy City Foods in Toronto concerning his long-term work in developing soybean varieties for food uses, and with the Organic Crop Improvement Association. Address: Soyfoods Center, Lafayette, California.

1801. *Soyanews (Sri Lanka).*1987. Plenty Soya centre opens in Kandy. 9(2):1-2. Dec.
• ***Summary:*** "One of the main objectives of the project is to have the Soya Centre act as a central point from which all of the soya products available in Sri Lanka can be obtained at a reasonable cost and in consistent supply. Another major objective is to assist community groups and small businessmen to set up their own small scale soya processing operations." The opening took place on 28 September 1987. Mr. Ian Taylor of Plenty Canada is the director.

"This is the first stage of a five year soya promotion project funded by the Canadian International Development Agency (CIDA) and implemented by Plenty Canada in collaboration with the Soybean Food Research Centre (SFRC) at Gannoruwa and various local non-governmental agencies." The Soya Food Centre is equipped to manufacture a wide range of soya based products including ice cream, stuffed rotis, soya watalappam, fresh as well as dried tempeh and cutlets. One of the main objectives of the project is to have the Soya Centre act as a central point from which all of the soya products available in Sri Lanka can be obtained at a reasonable cost and consistent supply.

The Plenty Soya Food Centre is open from Monday to Saturday and is located on the main floor of the Y.M.C.A. at No. 88A, Kotagodella Vidiya, Kandy. The project is a result of a collaboration with Plenty's Field Director, Mr. Ian Taylor in November, 1986.

1802. *Soybean Digest.*1987. More oilseeds? Dec. p. 51.
• ***Summary:*** USDA estimates for 1987: Italy's soybean production will reach a record 1.3 million tons. Canada's rapeseed crop will grow to 3.7 million tons. And French sunflower production will hit a new record 2.5 million tons.

1803. Tofutti Brands Inc. 1987. Tofutti. Annual report. Rahway, New Jersey. 14 p. Dec.
• ***Summary:*** The fiscal year ended January 2, 1988. Net sales for the 53 week period were $7,705518 versus $11,602,910 for the 52 week period ending August 2, 1986. The Company's operating loss was $2,560,645 as compared to an operating loss of $1,384,156 for the fiscal year ended August 2, 1986. The most important problem faced by Tofutti Brands last year was the rebuilding of its national distribution. The Company's first international license agreement was signed in June 1987 with Aur-Mark Holdings Co. Ltd. of Toronto, Canada, for the manufacture and sale of Tofutti Brand nondairy frozen desserts in Canada. The Company also signed an agreement in September 1987 with Zabbar Pty. Ltd., an Australian company, for the manufacture and sale of Tofutti Brand nondairy frozen desserts in Australia. The Company's first franchise shop in Teaneck, New Jersey was opened for business on March 3, 1987. The Company acquired the Tofutti Franchise Shop in Teaneck during October 1987. The Company-owned shop in Carteret, New Jersey was closed in January 1987.

David Mintz owns 50.8% of the Common Stock while Francis I. Mullin, III (President and Chief Operating Officer since August 1986) owns 2.2%. They are the biggest stockholders in the company. Mullin received $221,173 in cash compensation, while Mintz received $102,923. The Company entered into a 3-year employment agreement with Mr. Mullin commencing on August 18, 1986, in which he will receive an annual base salary of not less than $217,000. Mullin will also receive an annual bonus equal to a percentage of the increase, if any, in net sales and net

income of the Company. Address: 1098 Randolph Ave., Rahway, New Jersey 07065.

1804. **Product Name:** Quinoa Tempeh.
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.
**Date of Introduction:** 1987.
**How Stored:** Frozen.
**New Product–Documentation:** Letter (fax) from Allan Brown. 1998. Jan. 21. This tempeh was first sold in 1987.

1805. **Product Name:** Soysage.
**Manufacturer's Name:** Plenty Canada Soya Shop. Renamed Soy Development Center by 1987.
**Manufacturer's Address:** Roseau, Dominica.
**Date of Introduction:** 1987.
**New Product–Documentation:** Plenty Bulletin. 1987. Fall. p. 4.

1806. **Product Name:** Soya Nova Okara Spread (sold in bulk).
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C-28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1987.
**Ingredients:** Organically grown soybeans, brown rice, tamari, unrefined oils, fresh onions, garlic, carrots, herbs, spices.
**How Stored:** Refrigerated.
**New Product–Documentation:** Letter from Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Dec. 14. Soya Nova Tofu Shop introduced Okara Spread in 1987.

Leaflet sent by Deborah Lauzon. 1991. Feb. 6. "Soya Nova Tofu Shop." Describes the product.

1807. **Product Name:** Yves Tofu Chili Dogs (Meatless Hot Dogs Made with Tofu).
**Manufacturer's Name:** Yves Natural Foods.
**Manufacturer's Address:** 1138 East Georgia St., Vancouver, BC, V6A 2A8, Canada. Phone: 604-251-1345.
**Date of Introduction:** 1987.
**Wt/Vol., Packaging, Price:** 12 oz per package of 9. Vacuum packed.
**How Stored:** Refrigerated, 38 day shelf life.
**New Product–Documentation:** Talk with Michael Weiner. 1987. Dec. 16. "Made from a special blend of authentic Mexican Style spices and seasonings," they come 8 to a pack and can be refrigerated for up to 35 days. Leaflet. 1988. April. "Introducing Yves Tofu Chili Dogs."

Spot in SoyaFoods. 1990. Dec. Yves' tofu delicatessen line is now available in the UK. The meatless products include tofu wieners, Mexican style tofu chili dogs, and tofu deli slices.

1808. Central Soya Co. 1987. Central Soya. 1987 employee annual report. Ft. Wayne, Indiana. 23 p. 28 cm.
• ***Summary:*** Globalization of Central Soya began in earnest in 1987, including the opening of a European sales office for Chemurgy. In that Division, textured concentrates have enjoyed an increase in demand, due primarily to greater usage in school lunch programs. However, despite successful projects to expand soy concentrate capacity at Remington, Indiana, and texturized capabilities at Gibson City, Illinois, demand continues to challenge the Division's ability to supply. Engineering and design of a new soy concentrate plant is well underway, with completion scheduled for 1989.

Income Statement ($ in millions unaudited):

Net Sales (Total): 1987 = $1,522.8; 1986 = $1,381.7

Earnings: Refined Soya Products: 1987 = $21.1; 1986 = $10.9

Net Income: 1987 = $8.7; 1986 = $1.8

Facilities include: Soybean Processing (Ohio: Bellevue, Delphos, Marion; Indiana: Decatur, Indianapolis; Chattanooga, Tennessee; Gibson City, Illinois; Toronto, Ontario, Canada; Utrecht, the Netherlands).

Soy Proteins and Lecithins (Ohio: Bellevue, Marion; Indiana: Decatur, Remington; Gibson City, Illinois).
Address: P.O. Box 1400, Fort Wayne, Indiana 46801-1400.

1809. Kimpinski, J.; Arsenault, W.J.; Macleod, J.A. 1987. Root-lesion nematodes in tobacco on Prince Edward Island. *Lighter* 57(3-4):31-33. [5 ref]*
Address: Agriculture Canada Research Station, Charlottetown, PEI, Canada.

1810. Leavenworth, Donald H. 1987. Soybeans in the '90s–World supply and demand. *ASTA (American Seed Trade Assoc.)* 16:1-13.
• ***Summary:*** Outlines eleven major changes that have taken place in the world soybean economy during the past six years, most of them negative for the U.S. soybean industry. 1. Drop in annual crushing capacity utilization from 80% to 70%. 2. Exports of oil and meal have declined. 3. Plants have been closed permanently. 4. Crushing volume peaked in 1979-80. 5. The U.S. share of the world market has declined though the total market is growing 5% a year. 6. Production of rapeseed and sunflower seed have increased rapidly in the EEC. 7. The strong dollar has encouraged developing countries to develop oilseed self sufficiency. 8. Malaysia and Indonesia have increased palm oil production. 9. Rapeseed varieties have been improved and Canola oil is now Canada's leading oil. 10. Crushing capacity in Brazil and Argentina have grown dramatically because of high taxes on soybean exports. 11. The 1981 farm bill gave U.S.

farmers a fixed loan rate averaging $5.02 leading to high U.S. soybean prices. Address: Cargill, Inc., Minneapolis, Minnesota.

1811. Ontario Soya-Bean Growers' Marketing Board. 1987. Soybeans: The original Canadian oilseed (Leaflet). Chatham, Ontario, Canada. 8 panels. Undated. 22 x 10 cm.
• ***Summary:*** Contents: Who we are. What we do: Research, market development, government relations, market information, advance payment program. Pricing. How soys are used (soybeans are crushed at plants in Toronto, Hamilton, and Windsor). Marketing channels.

"Established in 1949, the Ontario Soya-Bean Growers' Marketing Board is an elected group of farmers from across Ontario, that represents the specific interests of the province's soybean producers. The Board works with processors, grain elevators and the government to create a fair return to the grower for his soybean crop.

"The Board's office is located in Chatham, where it is surrounded by the five counties that produce 76% of Ontario's soybeans." A map shows the soybean growing regions in Ontario. Address: Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1812. Shurtleff, William; Aoyagi, Akiko. 1987. Soymilk industry and market: Updates from 1984 to 1987. Lafayette, California: Soyfoods Center. 17 + 59 p. Index. 28 cm. [165 ref]
• ***Summary:*** This 1987 update to the Soyfood Center's two-volume 1984 *Soymilk Industry and Market* has two parts: (1) Year in Reviewing, describing key events and trends each year from 1984 to 1986. (2) A bibliography of soymilk from January 1987 to late 1987, based on records in the SoyaScan database; at the end is a 10-page index. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549.

1813. Williams, Robert C. 1987. Fordson, Farmall, and Poppin' Johnny: A history of the farm tractor and its impact on America. Urbana, Illinois: University of Illinois. ix + 232 p. Illust. Index. 24 cm.
• ***Summary:*** A superb, highly readable yet carefully researched and analyzed history of the tractor in America. "It is divided into two large sections. The first (chapters 1 through 6) trace the chronological development of the tractor. The second (chapters 7 through 9) describe some of the social and economic consequences of the tractor and examines its impact on the farm and the individual farmer.

"Of all the farm implements, the tractor has had the greatest impact on rural life." "In one generation between 1920 and 1950, most farms in the United States changed from dependence on draft animals to dependence on mechanical power." Clearly one of the most important machines developed in the twentieth century, the tractor played a pivotal role in the "great migration from the countryside to the cities that began in the 1920s and continued through the 1950s–a time when farm production increased despite a decrease in the supply of farm labor."

Wayne D. Rasmussen (1962) has argued that "there were two major revolutions in American Agriculture: one occurred when horses and mules replaced hand tools and human muscle, and a second one when engines replaced equine muscle."

The early tractors were powered by steam from an external fire source; thus they could be called "external combustion engines." Many were used primarily as a source of power or threshing grains. They were large and unwieldy, but by the early 1880s most were self-propelled. In about 1863, Henry Ford, at the age of 12 encountered such a steam traction engine on a road near Detroit. It changed his life–and the history of the tractor–for he was determined to improve on it.

In 1892 John Froelich built the first mechanically successful gasoline tractor; it powered a thresher and pulled the rig from the field.

Surprisingly it was World War I that sparked the rise of the farm tractor in America. The European War caused an enormous drain on America's supply of horses, mules, and farm labor. "Tractor promoters used the threat of shortages to full advantage. Beginning in May 1917, Raymond Olney, the editor of *Power Farming*, pleaded with farmers to use tractors to release men for the armed services and to provide the food the allies needed. Even non-farm journals sounded a similar plea. Tractors were good for the nation, and farmers who bought tractors helped win the war... By prodigious exertion, U.S. tractor makers rolled out 62,742 units in 1917. That same year, Henry Ford launched the Fordson tractor–the first tractor produced by automobile-style mass-production assembly line methods. He first committed to make tractors in Britain, yielding to intense diplomatic pressure from the British government which desperately needed tractors for the wartime food effort. The Fordson's price tag of $750 f.o.b. was far below that of the competition, and it sold well. In Jan. 1922 Ford slashed the price to an all-time low of $395. Ford's output of tractors was impressive. In March 1918, eighty units a day were rolling off the assembly line, with production expanding toward a goal of 300 units per day by December 1918. In 1920 Ford boasted that he had sold 100,000 tractors. That number represented almost twice the number of tractors in use when the Fordson was unveiled just 3 years earlier. During the 1920s Fordsons probably accounted for more than half the tractors built in America (p. 49).

Ford's big competitor was International Harvester (IH), whose main product was tractors. Cyrus H. McCormick, grandson of Cyrus Hall McCormick (who in 1831 invented the reaper) and later president of the family's IH empire, described the two warring companies as they went to battle:

"Ford was backed by the most popular commercial name of the time and by the uncounted millions earned for him by his epoch-making car; and he was trying to capture a business with which he had no previous contact. International had on its side many years of training gained from contact with farmers, less capital by far, and utter inexperience with defeat.

"The six-year fight will stand as an epic in industrial competition, but in 1927 International finally surpassed Ford in the number of tractors sold to farmers. By 1928, Ford Motor Company discontinued building the Fordson in North America, and virtually withdrew from the tractor industry. International Harvester and the implement industry won its desperate fight, but the victory came in the middle of a severe agricultural depression. It was, like most victories, the result of several strengths in the winner and several weaknesses in the loser.

"Ford's mechanical surrogate in the battle with International was the Fordson tractor. At the time of its introduction, the Fordson was a remarkable machine. Henry Ford's refusal to update his tractor–similar to his freezing of the designs of the Model T and Model A–should not be permitted to overshadow the real contribution of the automaker's little gray machine.

"In its brief lifetime, the Fordson accomplished some notable feats. It imposed its configuration upon so many tractors that the design came to be thought of as the conventional pattern for tractors. It introduced mass production into the industry for the first time, making tractors economically attractive to large numbers of farmers. And despite its ultimate failure, it accelerated the trend toward carefully designed 'automotive type' engineering. Each of these accomplishments merits explanation."

"The Fordson was the first mass-produced tractor, and all of its other attributes were really ancillaries to this fact. Mass production changed the tractor itself, it revolutionized the industry, and it made the tractor effectively available to the farmer for the first time. Even after the harrowing threat that the Fordson gave to his company, Cyrus H. McCormick still acknowledged the credit due to the Fordson. 'It is questionable,' he wrote, 'if the business of making tractors would have become a large scale industry had it not been for Ford...In 1918, the manufacturing methods employed by all tractor manufacturers were derived from implement and not automotive standards, and they were hardly up to date in terms of manufacturing progress.' The Fordson changed that.

"Mass production and the Ford-Harvester price war lowered the price of tractors to the point where a tractor cost 'less than the price of a good team of horses.'"

"Perhaps the kindest obituary for the Fordson was written long after the heat of rivalry had cooled. It was written by one who could pensively reflect upon a noble, fallen enemy. The Fordson, McCormick wrote, 'would operate successfully in so many conditions that huge numbers were sold; but it failed in so many places that ultimately farmers would have no more of it... The Fordson was a perfect theoretical answer to an imperfect practical problem.'

"By introducing mass production, the Fordson brought down the price of the tractor to the point that a much larger number of farmers could try using tractors. But it did not issue in a perfectly adapted or even a mechanically perfected machine. Rather, it increased the capital requirements and market potential of the industry to a point that such improvements were imperative. And it intensified competition to the point that further innovation was virtually inevitable."

The early tractors were designed mostly for pulling plows; they were not designed for row crops. Address: Clarendon, Texas.

1814. Wynne, Dave; Javaheri, Fereidoon. comp. and ed. 1987. Soyabean cooking in Zambia. Republic of Zambia, Dept. of Agriculture. 48 p. 22 cm. 1st ed. 1985.
• ***Summary:*** Contents: Acknowledgements. Foreword. Nutritional information. 1. Basic recipes. 2. General use. 3. Urban use. 4. Specialty recipes. Publication of this book was fully by the Lint Company of Zambia (LINTCO). The Mennonite Central Committee and ZAMARE gave support. Many recipes were developed by Mrs. Barbara Wynne, Mr. Lee Holland, or Miss Mabuya; most of the rest came from the *More-with-Less Cookbook,* by Doris Janzen Longacre, and Favorite Recipes by the American Women's Club in Lusaka. Surveys carried out by the National Food and Nutrition Commission (NFNC) and published in Dec. 1980 found a high incidence of malnutrition in Zambia, particularly in children aged 0-4 years. Soybeans can help greatly to alleviate this problem.

Talk with Hea-Ran Lee Ashraf. Dave Wynne was a Mennonite Missionary, and Fred Javaheri was also a missionary but working for the Zambian government. Fred, an Iranian with Canadian citizenship, has a deep, long-term dedication to soybeans with great energy, enthusiasm, and a sound knowledge of his resources. Hea-Ran believes that without these two men, the soybean program in Zambia would not exist today. Their group now also publishes a quarterly periodical titled *Soybean Newsletter.* Address: 2. Soyabean Coordinator, Mt. Makulu Central Research Station, Chilanga, Zambia.

1815. Quigley, Brian. 1988. Bremer Foods Corp. and soy yogurt in Quebec (Interview). *SoyaScan Notes.* Jan. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Brian has done extensive research on a fermented soy yogurt by renting space at the St. Hyacinthe Food Research Center, which is owned by the federal government. He expects to launch a soy yogurt in Sept.

1988, and will also make tofu. He will start with whole soybeans (not isolates) and has purchased some equipment. His process is unique. He did not like Jofu, and he feels his product is vastly superior. It is 60% as acidic as typical dairy yogurt, is almost as white, and is sweetened with only honey rather than sugar. It is targeted at new yogurt eaters, those who dislike the high acidity of dairy yogurt. Tomsun is the only tofu in Quebec supermarkets. So he feels Tomsun will be his main competition in yogurt and tofu. He will be able to undersell Tomsun. Quebec has the highest per capita yogurt consumption of any province or state in North America; it has doubled in the past 6 years and is growing at 15-20% a year. Note that on 29 Oct. 1987 Martin DeLint of Montreal called to discuss this product. Address: Bremer Foods Corp., 3600 Casavant West, St. Hyacinthe, QUE, J2S 8E3, Canada. Phone: 514-773-1105.

1816. Muendel, H.-H. 1988. Soybeans: Current status and potential. *Agriculture Canada Research Station, Lethbridge, Weekly Letter* No. 2819. Feb. 24. 1 p.

• ***Summary:*** "Over the past decade a number of southern Alberta growers have tried growing small areas of soybean. Yields have been variable, depending on variety, time and depth of seeding, weed control, and harvesting equipment. In excess of 2 tonnes per hectare (30 bushels per acre) were achieved commercially. The major problem encountered was the lack of ready markets at sustained attractive prices.

"Several early maturing varieties suitable for production under irrigation in southern Alberta have been released in recent years: Maple Ridge and Maple Amber from the Agriculture Canada Research Station at Ottawa and KG20 by King Grain Limited.

"Research by Agriculture Canada at the Lethbridge Research Station and Vauxhall Substation and by Alberta Agriculture at Brooks and Bow Island has determined some of the agronomic requirements and characteristics of soybean.

"A number of commercial enterprises are now showing interest in Alberta-grown soybean. Recent developments of test processing and whole bean extrusion for animal feed are encouraging and other commercial processing interests as well as marketing into the tofu-tempeh human food markets are being explored. Whereas farmers in southern Alberta had no ready market for their soybeans in the past, this major obstacle to local production may soon cease to exist."

Note: As of April 1991, Dr. Hans-Henning Muendel was on official leave with an assignment to the organization of BARD project (Barani [Rainfed] Agricultural R&D) in Pakistan, administered by Agriculture Canada. He is at G.P.O. Box 1785, Islamabad, Pakistan. Address: Plant Breeder, Lethbridge, ALB, Canada. Phone: 403-327-4561.

1817. Acker, Duane. 1988. Aid, USAID, and U.S. agriculture. *International Agriculture Newsletter (Univ. of Illinois)* No. 117. p. 1-3. Feb.

• ***Summary:*** U.S. technical assistance projects did not cause the sharp drop in exports of U.S. commodities experienced since 1981. Factors that did contribute to the decline include: the prolonged high value of the dollar; reduced economic growth; the heavy debt load of low and middle income countries; an increase in agricultural production from 18 to 60% since 1975 in Argentina, Australia, Canada, China, and the European Economic Community (EEC); high farm subsidies in EEC countries; pricing U.S. grain above world levels; and import duties and other constraints.

There are five principles that apply to the development of Third World countries: (1) Poor people and poor countries do not buy much. (2) Strengthening and increasing the productivity of that part of the private sector that employs the most workers in a developing country will usually produce the most rapid economic growth. (3) improved nutrition improves productivity. (4) As income goes up diets diversify. With higher incomes, people want a better diet which is often reflected in the demand for meat. (5) As economics develop, countries increase both imports and exports. Exports are essential to help finance imports.

Developing countries that increased per capita food production the most rapidly also increased their imports of U.S. agricultural products most rapidly.

USAID, allied to the U.S. State Department, celebrated its 25th anniversary in 1986. Address: Director for Food and Agriculture, U.S. Agency for International Development (USAID).

1818. Aspinall, G.O. 1988. Chemistry of soybean carbohydrates. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 117-29. [32 ref]

• ***Summary:*** Discusses: Oligosaccharides. Polysaccharides: Structural analysis, extraction and fractionation, soybean starch, neutral polysaccharides associated with soybean pectin, soybean pectin, arabinoglucuronoxylan, xyloglucan, polysaccharides of soybean hulls. Address: Dep. of Chemistry, York Univ., North York, Toronto, Ontario M3J 1P3, Canada.

1819. Lovell, Richard T. 1988. Use of soybean products in diets for aquaculture species: Revised. In: L. McCann, ed. 1988. Soybean Utilization Alternatives. St. Paul, MN: Univ. of Minnesota Center for Alternative Crops and Products. vi + 429 p. See p. 235-65. [58 ref]

• ***Summary:*** Discusses: Nutritional requirements of aquaculture species: Protein and amino acids, energy, vitamins, minerals, essential fatty acids and sterols. Diet preparation. Nutritional value of soybean meal for fish:

Protein and amino acids, available energy, available minerals, essential fatty acids. Use of soybean meal in fish feeds: Replacement of fish meal, palatability, antinutritional factors in soybeans, full-fat roasted soybean meal, supplementing soybean meal with synthetic amino acids.

Fish farming, or aquaculture, has demonstrated extremely rapid growth during the last decade. Reasons for this are increasing demand for fish worldwide, especially in the more developed countries, diminishing supplies and increasing costs of sea-caught fish, more consistency in supply and quality of cultured fish, utilization of resources unsuitable for other types of food production, and attractive investment opportunities in aquaculture. Channel catfish farming in the U.S. has grown from almost obscurity in the late 1960's to an annual yield of approximately 300,000 tons in 1985. Farming of penaeid (marine) shrimp is presently the fastest growing aquaculture venture worldwide. World production was estimated at approximately 85,000 tons in 1984. Other cultured food fish of rapidly rising importance are coldwater salmon which are grown in net pens in the northern oceans, such as around Canada and Norway. The majority of salmon eaten in northern Europe comes from pens. Other commercial aquaculture species are eels, tilapia, carps, milkfish, sea bream, sea bass, yellowtail tuna, and more.

Intensive culture of fish for food is the fastest growing food production industry in the world. Fish feeds require large amounts of protein-rich ingredients. Fish meal has traditionally been the basis for most commercial fish feeds. It is highly nutritious for all commercial fish species, but it is also expensive. Address: Dep. of Fisheries and Allied Aquaculture, Auburn Univ., Alabama.

1820. McDaniel, M.R.; Chan, N. 1988. Masking of soy protein flavor by tomato sauce. *J. of Food Science* 53(1):93-96,101. Jan/Feb. [33 ref]
• ***Summary:*** Flavor interaction in a model system consisting of 5% (w/w) soy protein in a series of tomato sauces containing 55-100% commercial tomato paste was evaluated by six trained panelists. Individual odors and flavors of the soy protein became indistinguishable in soy/tomato mixtures. There was a substantial reduction in the overall soy odor, flavor, and aftertaste with the increase in tomato concentration. Address: 1. Dep. of Food Science & Technology, Oregon State Univ., Corvallis, OR 97331-6602; 2. graduate student, Dep. of Foods & Nutrition, Univ. of Manitoba, Winnipeg, Canada.

1821. Muendel, H.-H.; Schaalje, G.B. 1988. Use of near infrared reflectance spectroscopy to screen soybean lines for plant nitrogen. *Crop Science* 28(1):157-62. Jan/Feb. [20 ref]
• ***Summary:*** "The basic principles and procedures of near infrared reflectance spectroscopy (NIRS) use have been detailed by Rotolo (1979) and Shenk et al. (1981). Speed, ease of operation, and a reasonable degree of accuracy are attributes that have made NIRS attractive in numerous applications." The NIRS calibrations were on the average more highly predictable for predicting nitrogen content of soybeans than either one of two Kjeldahl determinations. Address: Agriculture Canada Research Station, Lethbridge, ALB, Canada T1J 4B1.

1822. *Soya Newsletter (Bar Harbor, Maine).*1988. New process and equipment for making non-beany soymilk unveiled. Cold-grind method suitable for small and large plant applications. Jan/Feb. p. 13.
• ***Summary:*** The key to the process is grinding the beans in unheated water under a vacuum to eliminate oxygen. ProSoya Foods International Inc., Ottawa, Canada recently announced that patents for a new process and equipment are pending in several countries and that a patent has recently been allowed in the U.S. for equipment to produce a non-beany tasting soymilk. To reduce oxygen to a few parts per million, a special air/water tight vessel was designed with a small hammermill grinder built into the bottom. The new cold-grind method produces soymilk and tofu as wholesome as the traditional cold-grind method, but without the beany flavor. Crown Iron Works Corp. of Minneapolis, Minnesota, in association with ProSoya, is developing equipment which will use the new process to produce non-beany tasting soy flakes.

For more information contact Raj Gupta, ProSoya Foods International Inc., 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 612-745-9115.

1823. Davis, Bob. 1988. Light Foods and the tofu hot dog market in America (Interview). *SoyaScan Notes.* March 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are three major companies making tofu hot dogs for the U.S. market (not including Loma Linda and Worthington, which use isolates rather than tofu): Light Foods, Bob's company which originated the idea, has about 40% of the market, especially the West Coast. Lightlife Foods (formerly Tempehworks) has about 40%, especially East Coast, and Yves (from Canada) has about 20% nationwide.

Bob still has bad feelings about the way Lightlife Foods took away his East Coast market. Originally, Tempehworks was Light Foods' master distributor for tofu hot dogs on the East Coast. Then for about 6 months Tempehworks stopped paying for the product they were receiving. (They eventually paid later). Suddenly they dropped the Light Foods tofu hot dogs and came out with a competing product of their own, named Tofu Pups. It was quite similar except that it was free of egg whites. Tempehworks told many distributors and retailers that Light Foods was going or had gone out of business, as a way of getting them to switch products. Davis received letters from 35-40 stores and many

customers asking why he went out of business or why he started making Tofu Pups. Shortly thereafter Tempehworks changed its company name to Lightlife Foods, not much different from Light Foods. This combination of events destroyed the market for Light Foods' tofu hot dogs on the East Coast. They had no East Coast distribution for 6 months. Light Foods considered litigation, but didn't have the money. Now Light Foods is coming out with a new meatless hot dog containing no egg whites. Address: 12125 East Brookview Dr., Grass Valley, California 95945. Phone: 916-273-2218.

1824. *Soyanews (Sri Lanka).*1988. Soyanews to be published quarterly. 10(1):2. Jan/March.
• ***Summary:*** The editor of Soyanews writes, "Commencing 1988 *Soyanews* will be published quarterly instead of half-yearly. This welcome return to a quarterly publication has been made possible by generous assistance from Plenty Canada, who has graciously undertaken to bear the costs for printing on behalf of the Department of Agriculture."

1825. Vansickle, Janice. 1988. Soys take root in organic market. *Windsor Star (Essex County, Ontario, Canada).* April 9.
• ***Summary:*** Jon Cloud is a transplanted "dirt farmer" from mountainous Vermont and now the production manager for Soy City Foods. Their products include soymilk, tofu, tempeh, falafels, burgers, and granola. Cloud became a [Vietnam] war protestor while in college, and opted into being a 60's back-to-the-land disciple after burning out in the urban jungle. The Organic Crop Improvement Association in Ontario has attracted 300 members during its five years of existence and 50 now have their farms certified as organic. Includes a picture of Cloud with company products such as Grain Tempeh and Falafels. Address: Ontario, Canada.

1826. Acompañado, Marita F. 1988. IDRC supports soybean workshop. *PCARRD Monitor* 16(4):4-5. April.
• ***Summary:*** IDRC is the International Development Research Centre (IDRC) in Canada. The Philippine Council for Agriculture, Forestry and Natural Resources Research and Development (PCARRD) coordinated a workshop which aimed at developing and packaging a comprehensive nutrition-focused multi-disciplinary and interagency research and development (R & D) program on soybean. The soybean-based Nutrition Workshop, which took place in Puerto Azul, Ternate, Cavite on 27-28 April 1988, was made possible through the support of the IDRC in Canada. It was participated in by 25 agency heads/researchers. The group visited the Soybean Pilot Project site in Nueva Ecija. Address: Science Research Specialist, PCARRD, Philippines.

1827. Business Trend Analysts, Inc. 1988. The market for salad dressings, sauces and condiments. 2171 Jericho Turnpike, Commack, NY 11725. 260 p. Price: $750.
• ***Summary:*** Sauces include the following table sauces: Ketchup, meat (incl. steak, worcestershire, vegetable, and seafood sauces), barbecue, Mexican (incl. chili, taco, enchilada, etc.), prepared mustard, and soy and teriyaki. Gravies, dips, and dry sauce mixes are not included. Ketchup is the largest segment, about 40% of the total. It has grown at 4.6% annually from 1982-87, but growing faster during the same time are soy and teriyaki sauce (10.3%), barbecue sauce (11.4%), and Mexican sauce (9.2%). In 1977 soy and teriyaki revenues represented 3.1% of total sauce sales, compared to 6.7% in 1987. BTA expects the market to grow at 8.9% annually reaching $280 million in 1997. Kikkoman, the leading producer of soy sauce in the U.S. sells most of its product is the western portion of the country. In 1987 it launched a national ad campaign to expand to the rest of the country.

According to U.S. Dept. of Commerce statistics, sales of soy and teriyaki sauce (in million dollars) and market percentage have grown from $7.7 and 1.8% in 1972, to $25.0 and 3.1% in 1977, to $50.1 and 4.9% in 1980, to $98.1 and 6.0% in 1985, and to an estimated $132.0 and 7.0% in 1988. Other estimated market shares in 1988 were ketchup 39.2%, meat 19.6%, barbecue 14.4%, Mexican 12.1%, and prepared mustard 7.8%. Thus soy and teriyaki have the smallest share.

But the growth rate for soy and teriyaki sales have been slowing, in part due to lower inflation rates. The rate was 26.6% in 1972-77, 24.2% in 1977-82, 10.3% in 1982-87, and a projected 8.9% in 1987-97. In this latter period the growth rate is higher than for any other sauce category.

In 1987 for leading U.S. soy sauce producers, sales and market share were: Kikkoman Foods Inc. $49 million and 41% market share; La Choy Food Products (Subsidiary Beatrice/Hunt-Wesson) $43 million and 36%; Nabisco Brands Inc. (Subsidiary RJR Nabisco), maker of Chun King, $12 million and 10%. All others, $16 million and 13%. Note: Chun King Frozen Foods line was sold to ConAgra, Inc. (Omaha, Nebraska) in 1987. Nabisco still owns the soy sauce and other packaged goods. the U.S. soy and teriyaki market, an estimated 41%., with 1987 sales of $49 million.

According to Department of commerce statistics, U.S. imports of "thin" soy sauce have grown steadily from 13.3 million lb in 1978, to 15.9 in 1980, to 29.6 in 1985, and an estimated 40.0 in 1987. In 1986 roughly 38.9% of this came from Japan, followed by 26.9% from Hong Kong, 12.8% from China, 12.0% from Taiwan, and 9.3% from Others (incl. South Korea, Canada, and Philippines). These imports of 32.5 million lb in 1986 were worth $13.9 million. Between 1980 and 1986 roughly 2,500 lb/year of soy sauce have been exported, a negligible amount. The main

destinations were West Germany, Canada, and Mexico. Address: Commack, New York.

1828. Golbitz, Peter. 1988. Long life tofu: Wave of the future? *Soya Newsletter (Bar Harbor, Maine).* March/April. p. 7, 12.

• ***Summary:*** Morinaga Nutritional Foods, Inc., Los Angeles, California, and Kikkoman International Inc. of San Francisco, California, are both marketing long-life tofu, produced in Japan exclusively for export to the U.S. and other countries. (A Japanese governmental agency has forbidden the companies to market these products in Japan for fear that they threaten the existence of the fresh tofu industry, which consists of at least 30,000, small and localized, tofu shops.)

Kikkoman's product, Kikkoman Tofu, is also produced using a patented, though different process, packed in a foil retort pack. The product is produced by Kikkoman Corporation, at their Noda, Japan plant. The principle behind both products is really very simple. Cooled liquid soymilk is mixed with a heat reactive coagulant, packaged in a container, heated to activate the coagulant and then cooled. The major difference between Kikkoman's and Morinaga's product is when and where the sterilization of the package and product occurs.

Morinaga's process consists of: sterilizing the soymilk with UHT processing, cooling, adding coagulants glucono delta-lactone (GDL) and calcium chloride, filling into a sterile Tetra Pak, sealing, heating the package with water just hot enough to activate the GDL, and then cooling.

With the Kikkoman Tofu, the sterilization of the product is achieved after packaging. Coagulants GDL and calcium chloride are added. It is then filled into a retort pack, sealed, and heated at temperatures high enough to activate the coagulant and sterilize the finished product. Both the Kikkoman and the Morinaga tofus tend to be slightly more expensive than regular tofu. Silken (unpressed) tofu is unfamiliar in the U.S., and no company has yet come out with a pressed tofu that doesn't require any refrigeration.

Sales of Mori-Nu are up between 40 and 50% over last year, and unit sales of the product put Morinaga among the top five tofu companies in the U.S. Kikkoman's product has been on the market for more than a year and is also reportedly making healthy sales gains. Morinaga's product is currently being shipped to 36 countries world-wide, with the U.S. being the largest consumer by far. Kikkoman also reports that they are shipping their product to Europe, Australia and Canada, but again, the biggest volume is in the U.S. Address: Soyatech, Bar Harbor, Maine.

1829. Kikkoman International Inc. 1988. Kikkoman. Ahead of its time for 358 years (Ad). *Prepared Foods* 157(4):119. April.

• ***Summary:*** This 8.5 by 11-inch, color photo ad shows a large (20 fl oz) bottle of Kikkoman naturally brewed soy sauce against a black and purple background. Green, computer-graphics circles are superimposed on the bottle. "Since 1630, Kikkoman has produced premium, naturally brewed soy sauce that has yet to be equaled." Available from over 20 distribution centers in the U.S. and Canada.

This ad also appeared in the March 1989 issue (p. 5) of this magazine. Address: P.O. Box 784, San Francisco, California 94101. Phone: 415-956-7750.

1830. Koo, Winston W.K.; Kaplan, L.A.; Krug-Wispe, S.K. 1988. Aluminum contamination of infant formulas. *J. of Parenteral & Enteral Nutrition* 12(2):170-73. April. [17 ref]

• ***Summary:*** Aluminum concentration was measured in 175 samples of infant formulas. Among these, 5 brands of liquid soy formulas were tested. The aluminum content in micrograms per liter was as follows, first the range then the median: Isomil 603-1084 (756), Isomil SF 910-1460 (1286), Prosobee 684-2346 (1427), Nursoy 557-1840 (709), and Soyalac 455 (1 sample). Thus the soy-based liquid infant formulas were found to have 455 to 2,346 micrograms/liter of aluminum; the average value was 964 micrograms per liter of aluminum.

Three powdered soy formulas were tested. The aluminum content is given in micrograms per gram: Prosobee 5.3-10.2 (6.6), Nursoy 4.19-4.24 (4.22), and Soyalac 3.5 (1 sample).

"Aluminum content was lowest in human milk (less than 50 micrograms/liter), whole cow milk,... skim milk, and cow milk with 2% fat... We speculate that raw materials such as soybean, additives such as calcium and phosphorus, manufacturing processes and storage containers are potential sources of contamination of infant formulas.

"Aluminum is the third most abundant naturally occurring element, and the most common metallic element, comprising approximately 8.8% of the earth's crust. It is therefore not surprising that aluminum is ubiquitous in nature... Plants may accumulate different amounts of aluminum depending on the aluminum content and acid-base status of the soil. It is conceivable that soybeans could be a potential source of aluminum contamination for soy-based formulas. However, the extremely high aluminum concentration of milk formulas with highly modified protein, carbohydrate or fat contents and multiple additives would support the contention that manufacturing process and the additives such as calcium and phosphorus compounds are other potential sources of aluminum contamination...

"The renal excretion of aluminum is incomplete even in infants with normal renal function. Thus, it would seem reasonable to minimize the aluminum contamination of all nutrient sources, including infant formulas." Address: Dep. of Pediatrics, Univ. of Alberta, Edmonton, ALB, Canada,

and Dep. of Pathology and Lab. Medicine, Univ. of Cincinnati, Ohio.

1831. Lang, Kerri-Sue. 1988. A growth market for organic foods. *Country Guide (Winnipeg).* April. p. 20-22.
• ***Summary:*** In 1980, the USDA defined organic farming as "a production system that avoids, or largely excludes, the use of synthetically compounded fertilizers, pesticides, growth regulators and livestock feed additives to the maximum extent feasible. Organic farming systems rely upon crop rotations, animal manures, legumes, green manures, off-farm organic wastes, mechanical cultivation, mineral bearing rocks, and aspects of biological pest control to maintain soil productivity and tilth, to supply plant nutrients, and to control insects, weeds and other pests. The Organic Foods Production Association of North America (OFPANA) was founded in 1985. About 25 farmers contract organically-grown soybeans with Toronto-based Soy City Foods.

Organic food producers feel strongly that organic foods are healthier and more nutritious than conventionally grown foods, but scientific data does not yet support this claim. Ontario farmers requesting organic certification must have abstained from using prohibited fertilizers for at least one year and pesticides for 3 years. Prohibited fertilizers include anhydrous ammonia, ammonium nitrate, diammonium phosphate, most sewage sludge, triple superphosphate, muriate of potash, and potassium chloride. Prohibited soil additives include quick lime and slaked or hydrated lime.

Certified organic growers are inspected annually at their own expense ($150). They also sign a licensing agreement and pay a fee to use the Ontario association's logo. The logo fee is based on gross sales. Organic soybean yields last year were about 20% below the normal provincial average. Jon Cloud, part-owner of Soy City Foods in Toronto, says most of his contract growers experience a 25% yield reduction in their first 3 years of organic production. But a premium for the beans, along with reduced input costs, brings net returns to at least the level that could be expected under conventional crop management.

Last year, about 25 farmers grew organic soybeans on about 320 acres under contract with Soy City Foods. Highest yield was 45 bushels per acre; average was 32 bushels. Right now, says Cloud, the company could use 2,000 acres of organically-grown soybeans. Premium prices for organic beans are $8.50 a bushel. The firm produces several soy-based foods for human consumption. These include soy burgers, falafel (spicy patties traditional in some parts of the Middle East), a base for soy pate, tempeh, tofu, and soy milk. Contract growers are supplied with seed because Soy City wants beans with high protein and low oil content. Organic farmers don't spend $40 an acre on herbicides. Not do they put tonnes of commercial fertilizer on their fields. And they sell their crops at a 15% to 20% premium. Weeds, he adds, are controlled by non-chemical procedures such as crop rotation and cultivation, which cost little.

Hugh Martin, a soils and crops specialist with the Ontario Ministry of Agriculture and Food says organic farming will be a significant part of agriculture in the future. Most organic growers he works with have an ingrained stewardship ethic and are concerned about soil conservation. He says, "After about 5 years of organic farming, the organic matter content of soil increases. Improved porosity allows water to penetrate quickly. There's less runoff."

Color photos show the storefront of Soy City Foods "Soy Food Information Centre" and 3 of the company's products: Soyettes, Tempeh, and Falafels. Address: Winnipeg, Manitoba, Canada.

1832. **Product Name:** Tofu Pasta [Mixed Rotini, Whole Wheat Fettucine, Whole Wheat Spinach Fettuccine, Whole Wheat Herb Fettucine, Linguini, Buckwheat Linguini].
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.
**Date of Introduction:** 1988. April.
**Ingredients:** Herb Fettucini: Organic 100% whole wheat durum, organic tofu (organic soybeans, water, nigari [magnesium chloride–an extract of sea water]), herbs.
**Wt/Vol., Packaging, Price:** 320 gm / 11.3 oz.
**How Stored:** Refrigerated.
**New Product–Documentation:** Labels. 1988. 5.5 by 4 inches. Self adhesive. Blue, green, and yellow on white. "Quick 'n Easy. Cook in boiling salted water 3-4 minutes. Serve with favorite sauce and garden fresh vegetables." Introduced April 1988.

1833. **Product Name:** Herb Tofu.
**Manufacturer's Name:** Sooke Soy Foods Ltd.
**Manufacturer's Address:** 2625 Otter Point Rd., R.R. 2, Sooke, Vancouver Island, BC, V0S 1N0, Canada. Phone: 642-3263.
**Date of Introduction:** 1988. April.
**New Product–Documentation:** Letter from Wayne Fatt. 1988. Sept. 29. The product was introduced in April 1988.

1834. Gupta, Rajendra P.; Gupta, Rashmi R. Assignors to Prosoya Corp. (Maryland Heights, Missouri). 1988. Equipment for making no-beany flavor soymilk. *U.S. Patent* 4,744,524. May 17. 7 p. Application filed 1 April 1987. 3 drawings. [6 ref]
• ***Summary:*** "The equipment grinds soybeans totally in an aqueous medium at room temperature without trapping any air [but not in a vacuum], cooking the resulting slurry, and

separating the undissolved solids to extract soymilk. The fact that no heat needs to be given to soybeans prior to or during the grinding operation yields very high percentage of solids in soybeans as dissolved solids in soymilk without rendering chalkiness found in the soymilks made employing the hot ground and blanching methods.

Talk with Raj Gupta. 1988. The bean-to-water ratio is critical to the success of the process. Aug. 10. APV-Crepaco is making the equipment for them, and selling it for about $25,000 for a 90 liter/hour system. Address: [Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave.], Ottawa, ONT, K1P 5H9, Canada. Phone: 613-745-9115 or 613-744-4401.

1835. *Graphic (Brooklyn, New York).*1988. The "scoop" on David Mintz, the father of Tofutti. May 25.
• ***Summary:*** David Mintz, a successful kosher caterer from Brooklyn, never believed tofu could change his life, but it has. In 1972, while searching for a milk substitute for kosher desserts, pastries, pies and sauces, he discovered tofu. In 1981, he introduced Tofutti ice cream to the world. More than 38,000 outlets in all 50 states–including supermarkets, health food stores, groceries, gourmet shops and department stores–carry the product. Tofutti is also available in Canada, Japan, Australia, Korea, Hong Kong, and the U.S. Virgin Islands.

1836. Haumann, Barbara F.; Baldwin, A.R. 1988. Feature. Update: Fats and oils industry changes. *J. of the American Oil Chemists' Soc.* 65(5):702-04, 706, 708, 710-13. May.
• ***Summary:*** Dramatic changes have occurred in the worlds' fats and oils industry during the past 25 years. U.S. soybeans, the major factor in world fats and oils trade in 1961, have encountered increasing competition from soybeans produced in South America as well as from palm oil, sunflowerseed and rapeseed. U.S. soybean dominance of world oilseed trade during the 1950s and 1960s began to crack in the 1970s. U.S. embargoes on soybean exports in 1973 and 1980 led Europeans, the Soviets and the Japanese to look for alternate sources of supply. They found Brazil and Argentina willing to learn how to grow soybeans for the export market. Ohio State University researcher Norman Rask has estimated total costs of producing a bushel of soybeans at $6.62 in the U.S., $5.39 in Brazil and $4.06 in Argentina.

In the world soybean market, Brazil's share of international trade has grown from 3% in 1981/82 to 14% in 1984/85; in the same time span, Argentina's market share rose from 6% to 13%. Meanwhile, the U.S. share declined from 82% to 65%. In world soybean oil markets, Argentina's share has grown from 3% in 1981/82 to 14% in 1984/85. Brazil's share has increased from 24% to 27%; the U.S. share has fallen from 27% to 20%. U.S. soybean growing area peaked in 1980 at 70 million acres. In recent years, it has declined, with only 56.4 million acres harvested in 1987. U.S. soybean accounted for 65.9% of all world oilseed trade volume in 1979/80. By 1986/87, its share had dropped to 55%. The 1982 Census of Manufactures counted 243 vegetable oil mills operating in the U.S. in 1982. Of these, soybean oil mills had increased to 137 establishments, versus 121 in 1977.

The U.S. Food and Drug Administration (FDA) in 1985 ruled that low erucic acid rapeseed oil could be used in food products in the U.S. The first company to act on this was Procter & Gamble, which in 1986 reformulated its Puritan cooking oil to contain 100% canola oil. The phenomenal increase in corn oil production has been due to enzymatic processes for high fructose corn syrup and a gas tax subsidy on fuel alcohol. Consolidation, mergers, buyouts, and restructurings have led to increasing concentration of capacity in the hands of a few international companies whose operations range from seed cultivation through shipping and export to complete processing. This has led to fewer locations that process larger quantities of oilseeds.

U.S. based soybean processors are expanding their foreign investments in an attempt to escape relatively high U.S. soybean prices as well as to circumvent trade barriers. These include Archer Daniels Midland Co. (ADM), Bunge, Cargill, and Continental Grain. Since 1982, ADM also has held a 45% interest in Alfred C. Toepfer International, a large commodities trading firm with headquarters in Hamburg, West Germany. In 1984, a National Institutes of Health panel recommended that Americans limit their cholesterol intake to less than 300 mg/day, fat intake to 30% of total calories in their diet, saturated fat intake to less than 10% of calories, and polyunsaturated fat intake to a maximum of 10% of calories.

There are a number of possible developments to watch during the next 20 years, including: Soybeans with low or zero linolenic acid; soybeans with higher yields (possibly hybrids) with broader adaptability to increase overall production; increased consolidation of oilseed processing. As world markets for oilseeds and oilseed products increase, market shares for soybeans and soybean products will decline. Address: JAOCS.

1837. *Ontario Export Soybeans (OSGMB).*1988. General historical overview [of soybeans in Ontario]. 1(1):1. May.
• ***Summary:*** Concerning exports: Ontario has been exporting soybeans since at least the 1950s and likely prior to the dates shown (1960-64). It is not unreasonable to say that Ontario has been involved in exporting soybeans almost since it started producing them.

A table shows that during the 5 crop years 1960-1964, Ontario exported on average 65,090 tonnes/year; this was 42.8% of marketings. From 1965 to 1974 Ontario soybean exports decreased, both in absolute terms and as a percentage of marketings, falling to 24,307 tonnes in 1970-

74, only 8.0% of marketings. Then both figures began to rise. In 1985-86 exports averaged 169,277 tonnes/year, or 17.1% of marketings. Address: Chatham, Ontario, Canada.

1838. *Ontario Export Soybeans (OSGMB).*1988—. Serial/ periodical. Chatham, ONT, Canada: Ontario Soybean Growers' Marketing Board. Vol. 1, No. 1. May 1988. Biannual.

• ***Summary:*** Talk with Fred Brandenburg of OSGMB. 1992. June 11. This periodical started in May 1988 and is published about twice a year in May and October. By Oct. 1991 (Vol. 5, No. 1) it was printed with green and black ink on yellow paper, 1 page, front and back. It is different from the OSGMB Newsletter, and is sent mainly to the people and organizations with whom OSGMB has made contact in its export market development.

Continued by *Canadian Export Soybeans* in May 1994 (Vol. 7, No. 2). This bi-annual newsletter was formerly 2 pages, green on yellow; it is now 4 pages, dark green and brown on tan. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

1839. Ontario Soya-bean Growers' Marketing Board. 1988. Report on export market development mission of the Ontario soybean industry, March 19th–April 3rd, 1988. Chatham, Ontario, Canada. 23 p. May. 28 cm. Spiral bound. [Eng]

• ***Summary:*** This report was prepared by Owen Dobbyn, John Cunningham, Maurice Waddick, and Fred Brandenburg of OSGMB. Contents: Japan. The Japanese soybean market. Visits: Japan Miso Co-operative Industrial Assoc. (M. Iida, chairman), Japan Packaged Tofu Assoc. (H. Kijima, Exec. Secy.), Federation of Japan Natto Manufacturers Cooperative Society (Mr. Ohse), Takano Foods Co. Ltd. (E. Takano, president, uses 7,000 to 8,000 tonnes of soybeans annually to make natto), Home Foods Co. Ltd (Home Shokuhin, Y. Murai. managing director, has 160 employees and 3 tofu factories that use 300 tonnes of soybeans/month; owned by Wako Shokuryo, the #1 wholesaler of soybeans in Japan), Japan Oilseed Processors Assoc. (JOPA; H. Higashimori, managing director). Japan Oil and Fat Importers & Exporters Assoc. (JOFIEA; I. Shimizu, exec. director), Canadian Embassy, Tokyo.

Hong Kong. Soybean imports. Visits: The Hong Kong Soya-Bean Products Co. Ltd. (makers of Vitasoy soymilk), Amoy Industries (International) Ltd.

Malaysia. Soybean imports 1984, 1985, 1986. Visits: Ace Canning (owned by Lam Soon). Yeo Hiap Seng (Malaysia) Berhad (soymilk), Cheong Chuan (Hup Kee) Sdn. Bhd. (traditional fermented soysauce), Sin Yong Huat Enterprises Sdn. Bhd. (soybean importers), Syarikat Perniagaan Cheon Fatt (tofu manufacturer).

Singapore. Soybean imports (1983-1986). Visits: Sin Seng Lee Trading Co. (Pte.) Ltd. (claims to import 60% of soybeans to Singapore). Conclusions for each country. Recommendations for future action. Future export development missions. Accomplishments. Competition.

In Japan, 842,000 tonnes soybeans are used to make foods, as follows (in tonnes, p. 1): Tofu 456,000, miso 180,000, natto 90,000, dried-frozen tofu 30,000, boiled soybeans 23,000, soybean powder [probably kinako] 10,000, soymilk, 7,000, soysauce 5,000, other 41,000. The suppliers of these edible soybeans are (in tonnes): USA 400,000, China 280,000, Japanese domestic 280,000, Canada 24,000. Total Japanese soybean imports: 5,000,000 tonnes. Of this 4,036,000 tonnes (81%) are used for crushing, 842,000 tonnes for food, and 70,000 tonnes for feed (not crushed). The Japanese market for soybeans is very large for both crushing and food use, but is not growing. The beans for crushing come mostly from the USA and South America.

Preferred characteristics of soybeans for each type of soyfood are given. For example, for miso: Low oil, high protein, high sugar, white hilum. For tofu: High sugars (glucose, sucrose), moisture content 10-12.5%, new crop preferred to old, protein 40%, oil 19-20%, hilum color is not very important but white is preferred, varietal consistency; preferred varieties are Beeson, Amsoy, Corsoy. Natto: Most important is small size, 5.5 mm or less, clean beans free of foreign material, high sugar content (saccharose, stachyose, which bacillus needs to work), less oil, must absorb water well. Soymilk: Good flavor, low moisture (10%), low percentage of splits (too high can cause rancidity), low oil, high protein.

In Japan, vegetable oil consumption has increased 2.5 times in the past 20 years to 45.17 gm/capita/day in 1986. Soyoil and canola oil together account for 85% of production. Canola is replacing soybean oil. If the oil market is strong, the 30 Japanese crushers crush more canola, but if protein is strong they crush more soybeans. U.S. soybeans have too much foreign material; new contracts have a penalty for > 2% FM.

In Hong Kong, 6,000,000 cases of Vitasoy brand soymilk are produced annually. The company uses 2,500 tonnes/year of soybeans, 80% of which are grown in Canada. It uses 100 to 200 tonnes of organic soybeans for Vitasoy exported to U.S. health food stores. Using 15 Tetra Pak machines, production takes place 24 hours/day (3 shifts), 6 days a week. Contacts: Patrick Cheung (marketing manager), and Raymond Yuen (commercial manager).

Amoy Industries, the largest maker of soy sauce in this part of the world, produces 6,000 tonnes/year. The company was established 80 years ago in Amoy, eastern China, moved to Hong Kong in 1949; 50% was purchased by Pillsbury in 1983. Uses 2 containers of soybeans/week, 100% from Ontario for the past 5 years.

Malaysia soybean imports rose from 174,400 tonnes in 1984 to 255,200 tonnes in 1986. The main suppliers in 1986

were China (56.2% of total), Vietnam (15.8%), and Argentina (14.3%). Ace Canning uses ton tonnes/month of soybeans (presently all from China) to make soymilk. They have 7 Tetra Pak machines. Yeo Hiap Seng (Malaysia) is the largest soymilk producer in Malaysia, making 25,000 liters/year using 9 Tetra Pak machines. They use 1,250 tonnes of soybeans (80 containers) per year, all Canadian.

In Singapore, soybean imports rose from 28,287 tonnes in 1983 to 41,571 tonnes in 1986. In 1986, some 66% came from Canada, 16.6% from China, and the rest from others.

The major competition for food quality soybeans in these four countries at present comes from China. The Chinese have improved their soybean quality and appear to be actively seeking to increase their market share. In the long run, however, China may choose to reduce its soybean exports in order to increase meat consumption in China. This could lead to new market opportunities for Canada in these four countries. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

1840. *Plenty Canada News (Lanark, Ontario, Canada).*1988. Guatemala Project. Spring. p. 1.
• ***Summary:*** In the Quiche area of Guatemala, the Soy Dairy is a multifaceted facility, one of the prime aims of which is to provide training. Instruction is provided to villages and technicians from other development organizations. One of the most successful marketing schemes is the ice cream carts; one-person operations which sell a variety of local fruit flavored soy ice cream popsicles. Each one of these merchants is able to generate enough income to support his/her family. Address: R.R. 3, Lanark, ONT, Canada KOG 1KO.

1841. *Plenty Canada News (Lanark, Ontario, Canada).*1988. Soy promotion project in Sri Lanka. Spring. p. 3.
• ***Summary:*** Soy promotion project in Sri Lanka. Plenty Canada's soy utilization project in Sri Lanka is designed to assist Sri Lankans to use soy products for human consumption. This is achieved by using an integrated approach learned through Plenty Canada's experience in Central America, the Caribbean and Africa. The first stage of this five-year project was to set up a Soy Centre in Kandy to retail, and thereby popularize soy-based products. Soy Centre in Kandy was officially opened on Nov. 13, 1987. Plenty Canada's two volunteers and eight Sri Lankan counterparts have been busy producing a wide range of soyfoods for retail and wholesale consumption (flour, dhal, flakes, splits, dried tempeh and cocktail snacks).

At the Centre people can also learn methods of processing, retailing, and ways to set up their own income-generating activities. Demonstrations are given in near village communities. Address: R.R. 3, Lanark, ONT, Canada KOG 1KO.

1842. *Plenty Canada News (Lanark, Ontario, Canada).*1988. Caribbean conference [held by Plenty Canada on soyfoods]. Spring. p. 5.
• ***Summary:*** Plenty Canada's Soybean, Agricultural & Soy Processing Conference was held in the Commonwealth of Dominica from Oct. 27 to 30, 1987. The workshop/seminar had three major objectives: 1. To identify the major areas of success and problems in implementing Agriculture and Soy processing programmes in the Caribbean region and Guatemala. 2. To seek solutions for these problems. 3. To foster more direct and continuing communication among the participants and their colleagues in the four different countries. The St. Lucian Soy Technician demonstrated the use of sea water as a curding agent [for tofu] instead of calcium sulphate or magnesium sulphate which has to be imported. The conference was attended by at least 11 delegates from Plenty Canada's projects in St. Lucia, Jamaica and Guatemala. A photo shows the 11 attendees. Address: R.R. 3, Lanark, ONT, Canada KOG 1KO.

1843. Yu, Stephen. 1988. Victor Food Products, Ltd. (Toronto, ONT), Canada's largest tofu manufacturer, is bankrupt (Interview). *SoyaScan Notes.* June 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company went bankrupt in July 1987. The equipment will be auctioned off on 21 June 1988. The causes of the bankruptcy: Overexpansion. He was trying to grow too fast. He had arrangements and contracts with a client, who did not fulfill his commitment. He overexpanded because of that contract.

He was an early tofu company in Canada but not the first one. He does not know if he will go back onto the soyfoods field. He is now working at the business of one of his brother in laws. He must sell the company to pay off large company and personal debts. It was a tremendous personal disaster, touching him more than the company. Address: Kitchener, Canada. Phone: 519-741-0922.

1844. Lamron Sales. 1988. Public auction: Dairy and food processing equipment (Ad). *Toronto Star (Ontario, Canada).* June 20. p. B4.
• ***Summary:*** "We have been instructed by Laventhol and Horwath Limited Receiver-Manager to liquidate the assets of Victor Food Products Limited and Tofu Masters Inc. In detailed lots. Tuesday, June 21, 1988, 10:00 a.m. 102 Hymus Road, Scarborough, Ontario."

Gives the name of each piece of equipment.

1845. Noble Bean. 1988. Noble Bean Tempeh Products (Ad). *Vegetarian Times.* June. p. 70.
• ***Summary:*** "Coast to coast. Cultured, organic soybeans and grains. An excellent source of protein. Made with TLC

[tender loving care] & country fresh spring water. Culturing fine tempeh since 1979."

Note: This is the earliest document seen (Jan. 2010) concerning the Noble Bean (company) and tempeh. Address: R.R. 1, McDonalds Corners, ONT, K0G 1M0, Canada. Phone: 613-278-2305.

1846. *Soya Newsletter (Bar Harbor, Maine).*1988. New process for culturing tofu available. May/June. p. 10.
• ***Summary:*** A new process to culture tofu into a yogurt-type food is available for sale or licensing by Steve Rowat of Yofu Development (Canada). The process, which has a Canadian patent and a patent pending in Japan, is titled, "Process Permitting the Culturing of Tofu with Yogurt-Forming Bacteria". Contact: Steve Rowat, Yofu Development (Canada), Box 93, Merricksville, ONT, Canada K0G 1N0. Telephone: 613-269-4483. Address: Yofu Development (Canada), Box 93, Merrickville, ONT, K0G 1N0. Phone: 613-269-4483.

1847. Udesky, James. 1988. The book of soba. Tokyo and New York: Kodansha International. 166 p. Foreword by William Shurtleff. Illust. Index. 27 cm. [50* ref]
• ***Summary:*** Contents. Foreword. Introduction. I. Making soba. Homemade soba noodles. Broth. Noodle dishes. Country cooking. Groat cooking. Variations and desserts. Ingredients. II. About soba. Nutrition. Buckwheat: From seed to table. History. III. Appendices. The soba dining experience. Selected soba restaurants in Japan. Oriental, natural, and specialty food stores in the United States and Canada. Bibliography.

Soy-related recipes include: Deep-fried tofu pouches in "Fox Soba" (kitsune soba). White miso in broiled soba dumplings with miso sauce. Soba noodles in miso stew. Cold soba noodles with natto and sesame. Natto in soba pasty. Soy-Soba noodles (with raw whole soybeans). Soy sauce is used in many recipes.

The excellent "Ingredients" section (p. 91-98), gives definitions of several soyfoods, including miso, natto, okara, soy sauce, tofu, and tofu–thin deep-fried (abura-age, usu-age). The definition is especially good: "Natto: This rich soybean product with a cheeselike flavor is still underestimated, unappreciated, and misunderstood, mainly because the sticky 'threads' resulting from its special fermentation process are strong and stubborn, making it pretty tricky for beginners to eat. Natto can be made easily at home with soy beans, 'natto spore' (now available at major health-food dealers on both coasts), a pot, and a box... If allowed to sit too long on store shelves, the beans become overripe. Although you cannot check the quality until you open up the package at home, the best natto should have a light, tannish color and still be moist and a little puffy. Too dark a color indicates overripening and a correspondingly bitter taste. To remedy this situation somewhat, stir the beans together with chopsticks or a spoon and combine with chopped onions, wasabi horseradish, and soy sauce. Since this food is the result of bacterial action, no preservative can be used. Thus, natto should be eaten as soon as possible."

Mr. Udesky had a chance to prepare homemade soy sauce while living with Mr. Noboru Muramoto (author of *Healing Ourselves)* from 1971 to 1975.

For a complementary review, see Jean Pearce. 1991. Nov. 10. *Japan Times.*

Letter from James Udesky. 1997. April 21. The hardcover edition of *The Book of Soba* has now sold 12,000 copies in Japan and abroad, and 3,000 copies of a new soft-cover pocketbook edition (246 p.; 18.2 cm) was published by Kodansha International in Dec. 1995. An article on soba titled "The Art of Noodles," by Udesky appeared in *Japan Quarterly* (April-June 1997, p. 32-42; it contains a large color photo of him rolling out soba dough). Udesky is living in Tokyo, has lived in Japan (except for a 3-month break in 1988) since 1988, married a Japanese woman in 1990, for the last 2 years has worked for a medical equipment importer and taught English part-time at Dentsu Inc. to survive financially, has established a company named Udesky Communications, and continues his practice of making traditional Japanese soba. He has plans for a new book titled "Basic Techniques of Udon Making." Address: Heim R1 #103, Meguro Honcho 6-18-3, Meguro-ku, Tokyo 152, Japan. Or: The Soba Center, P.O. Box 72, Winnetka, Illinois 60093-0072.

1848. Angus Reid Associates Inc. 1988. Ontario soybean growers' attitudes and opinions regarding issues associated with export assistance–Results of an opinion survey. Canada. 25 + 6 + 111 p. July. 28 cm. Spiral bound.
• ***Summary:*** 1. Executive summary: Study highlights, implications. 2. Introduction: Research objectives, research approach.

3. Study findings: Sample description (respondent age, farm size), federal government performance (voting patterns, overall government performance, handling of selected agricultural issues, performance of elected representatives), soybean and canola industries (issues confronting the soybean industry, export assistance, canola industry perceptions), support for oilseed processors (importance of processors, Ontario Oilseed Industry Association).

Appendix A: Questionnaire. Appendix B: Detailed tables.

"On an unaided basis nearly equal proportions of soybean growers perceive the two major problems facing the soybean industry are poor crop prices [including high crop input prices] and the need for export opportunities for soybeans." Address: Canada.

1849. IDRC/IITA/IAR&T. 1988. Soybean utilization project: Annual progress report 1987–1988. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 21 p. July.
• ***Summary:*** IDRC is the International Development Research Centre of Canada. IAR&T is the Institute for Agricultural Research and Training at the Obafemi Awolowo University. Contents: Introduction. Documentation of the status of soybean utilization in Nigeria (specific objective A). Development of household level technology (specific objectives B and D): Development of recipes, setting up relevant assays and training of technical staff, nutritional evaluation of soy foods, training of extension home economist, training in project villages, activities of the trained government social development officers. Future program. Address: IITA, PMB 5320, Oyo Road, Ibadan, Nigeria.

1850. Perera, A.M.S. 1988. Re: Soyanews print runs. Letter to William Shurtleff at Soyfoods Center, Sept. 21. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Soyanews is now once again printed quarterly with assistance from Plenty Canada. The print runs for the three languages in which it is printed are English 7,500 copies, Sinhala 25,000 copies, and Tamil 7,500 copies. Address: Editor Soyanews, Education & Training Div., Dep. of Agriculture, P.O. Box 10, Peradeniya, Sri Lanka. Phone: 08-88340.

1851. **Product Name:** [Tofu Filaments].
**Foreign Name:** Filaments du Tofu.
**Manufacturer's Name:** Les Aliments Horium Foods Inc.
**Manufacturer's Address:** 1050 rue Lacasse Street, C1-18, Montreal, QUE, H4C 2Z3, Canada. Phone: 514-933-4605.
**Date of Introduction:** 1988. September.
**Ingredients:** Organic soybeans, natural salt or sea salt, purified water.
**How Stored:** Refrigerated.
**New Product–Documentation:** Form filled out by Mr. Chong-Hong Ho, owner. 1988. Nov. 11. The product was launched several months ago.

1852. *Soyanews (Sri Lanka).*1988. Soya foods at Katugastota Mahapola. 10(3):5. July/Sept.
• ***Summary:*** "In the second week of August, 1988, the Plenty Canada Soya Food Centre extended its popularising activities to the Mahapola held at St. Anthonys' College, Katugastota with great success. Those who visited the Plenty Canada Soya Stall had the choice of a wide array of snacks to choose from, including cutlets, rolls, dhall, tempeh sticks, soya toffee, aluwa and coffee.

"Freshly prepared soya coffee proved to be one of the most popular drinks... Because of its good taste and affordable price, almost everyone who visited the stall had a cup of coffee and took a packet home."

1853. *Soyanews (Sri Lanka).*1988. Harnessing the sun for better nutrition. 10(3):1. July/Sept.
• ***Summary:*** "Tempeh, produced in Indonesia for hundreds of years, has recently found favour in Sri Lanka as a high quality substitute for dried fish. It has also proven popular in dishes calling for eggplant, baby jack and chicken." When dried to a moisture content of 12%, it has a long shelf life without refrigeration. Now Plenty Canada, working in cooperation with the Intermediate Technology Development Group (I.T.D.G.) and Sarvodaya, have developed a low cost solar powered cabinet dryer, which dries tempeh in less than half the time of traditional techniques with no losses to birds or insects. Plenty Canada hopes to introduce their new solar powered dryers to village and farm groups interested in the production of commercial quantities of dried tempeh.

1854. Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. Origins and pedigrees of public soybean varieties in the United States and Canada. *USDA Technical Bulletin* No. 1746. 68 p. Oct. [20 ref]
• ***Summary:*** Contents: Old domestic varieties. Modern domestic varieties from public institutions. Germplasm resources information network. Tables: 1. Number of U.S. and Canadian soybean varieties by maturity group. 2. Number of U.S. and Canadian soybean varieties by country of origin. 3. Origins and pedigrees of old domestic soybean varieties. 4. Lost old domestic soybean varieties. 5. Literature on old domestic soybean varieties in chronological order. 6. Origins and pedigrees of modern domestic soybean varieties from public institutions. 7. Genetic information on backcross-derived public soybean varieties. 8. Genetic information on backcross-derived soybean parental lines. 9. Public soybean variety registrations and licenses. 10. Corrections to published pedigree information.

Abstract: "In this report are described the origins of the 440 U.S. and Canadian soybean varieties that are maintained in the USDA Germplasm Collection at Urbana, Illinois, and Stoneville, Mississippi. Varieties in commercial use before the mid-1940's were mostly introductions, and this report includes for each the geographic place of origin, the person or institution that provided the seeds, the foreign variety name (if any), as well as information about when it was released and who released it in the United States or Canada. Modern varieties have been developed by hybridization and selection. In this bulletin, the pedigree is specified and where and when each variety was developed and released. This information allows researchers and breeders to trace modern soybean varieties back to their introduced ancestors and facilitates breeding plans and

evaluation of the germplasm base of the current commercial soybean crop."

Table 4, titled "Lost old domestic varieties," lists the source of each: Acme–PI 14.954 from Shanghai, China, in 1905. Akasoya–From Japan via Indiana. Allison Black–D.T. Allison, Tennessee. Amherst–PI 4.913 (PI 17.275) from Japan in 1900. Arikara–O. Will Company, North Dakota. Arkan–PI 87.050 from Niummen, Keisho Nando, Korea, in 1930. Arksoy 2913–Arkansas Experiment Station, Marianna (similar to 'Arksoy'). Auburn–PI 21.079A from Tieling, Manchuria, China, in 1907. Baird–PI 6.414 (PI 22.333) from Pyongyang [P'yongyang], Korea, in 1901. Biltan–Selection from 'Otootan', South Africa.

Brindle–PI 20.407 from Merkoechofka, Siberia, in 1906. Brooks–PI 16.789 from Hangchow, China, in 1905. Brownie–PI 6.414 (PI 17.256) from Pyongyang, Korea, in 1901. Buckshot–PI 6.334 (PI 17.251) from Tokyo, Japan, in 1901. Burnette–From Farmville, North Carolina. Butterball–PI 8.433 (PI 17.273) from Japan in 1902, via Rhode Island AES [Agricultural Experiment Station] in 1903. Chame–PI 80.473 from Tokyo, Japan, in 1929. Chang–PI 54.610-2 from Changchun, Kirin, China, in 1921. Chernie–PI 18.227 from Khabarovsk, Siberia, in 1906. Chinaton Echo–From Harrow, Ontario, Canada.

Chiquita–PI 27.707 from Hankow, China, in 1910. Chuku–La Choy Company, Ohio. Cibao–From El Salvador. Delnoshat–Delta Station selection 6679, Mississippi. Delredo–From Mississippi. DeSoto–Ohio farmer. Dortchsoy No. 2–Dortch Seed Company, Arkansas (selected from 'Ogden', similar to 'Ogden'). Dortchsoy No. 6–Dortch Seed Company, Arkansas. Dortchsoy No. 7–Dortch See Company, Arkansas. Doxie–Georgia Experiment Station.

Duggar–PI 17.268C, a selection from 'Ito San.' Early Brown–PI 25.130 and PI 25.161 from Tennessee AES and Indiana AES in 1909. Eda–PI 17.257 from Japan in 1890. Edgecombe–R.P. Cocke, Williamsburg, Virginia. Edna–PI 6.312 (PI 17.252C) from Tokyo, Japan, in 1901. Edward–PI 14.953 from Shanghai, China, in 1905. Fairchild–PI 19.184 from Newchwang, Manchuria, China, in 1906. Farnham–PI 22.312 from Shanghai, China, in 1908. Feed All–A.M. Johnson, North Carolina. Flat King–PI 6.312 (PI 17.252) from Tokyo, Japan, in 1901.

Flava–PI 16.789A from Hangchow, China, in 1905. Gala–Georgia Experiment Station. Gem–P.B. Hutchins, Missouri. George Washington–From Virginia. Giant Yellow–PI 22.415 from Naples, Italy, in 1908. Golden–Harrow Experiment Station, Ontario, Canada. Goshen Prolific–Farmer selection, North Carolina. Hamilton–From USDA number 23 by Ohio Experiment Station in 1909. Hankow–PI 6.559 from beyond Chiu Niu, China, in 1901. Hansen–PI 20.409 from Merkoechofka, Siberia, in 1906.

Hay Boy–Farmer selection, North Carolina. Herman–From North Carolina. Hiro–PI 86.038 from Obihiro, Hokkaido, Japan, in 1930. Hope–PI 6.335 (PI 17.267) from Tokyo, Japan, in 1901. Ignotum–E.E. Evans, Michigan. Italian–Canada Experiment Station. Ito San–PI 17.268 from Japan in 1890. Jet–PI 17.861 from Sachon, China, in 1906. Johnsoy–A.E. Johnson, North Carolina. Kentucky A–Kentucky Experiment Station selection.

Kia–Illinois Experiment Station selection. Kungchuling–From Manchuria, China. Looney No. 2–Farmer selection, Tennessee. Lowrie–PI 22.898A from Paotingfu, Chihli, China, in 1908. Loxitan–Delta Experiment Station selection, Mississippi. Ludeke–Farmer selection, North Carolina. LZ–Louisiana Experiment Station selection. Mammoth Brown–Unknown. Manhattan–PI 6.333 (PI 17.277) from Tokyo, Japan, in 1901. Matthews–Farmer selection, Georgia.

Merko–PI 20.412 from Merkoechofka, Siberia, in 1906. Meyer–PI 17.852 from Peking, China, in 1906. Midunk–Funk Brothers Seed Company, Illinois. Mikado–Farmer selection, Indiana. Misstucky–Farmer selection, Kentucky. Morgan–PI 22.633 from Sheklung, Kwongtung [Kwangtung / Guangdong], China, in 1908. Mount Carmel–PI 70.218-2 from Wuchiatzu, Manchuria, China, in 1926. Mukden No. 4–Wisconsin Experiment Station selection. Nanking–PI 71.597 from Nanking, China, in 1927 (see CNS, p. 6). Nanksoy–PI 104.881 from Nanking, China, in 1934.

Nansemond Early–Farmer selection, Virginia. Natsu–PI 19.984 from Yokohama, Japan, in 1907. Nemo–PI 19.985 from Yokohama, Japan, in 1907. Nielsen–PI 22.644B from Hangchow, Chekiang, China, in 1908. Nigra–PI 22.407 from Hong Kong, China, in 1908. Nuttall–PI 6.416 (PI 17.253) from Pyongyang, Korea, in 1901. Okute–PI 19.986 from Yokohama, Japan, in 1907. Oloxi–Coker's Seed Company, South Carolina. Otoxi–From South Africa. Ozark–PI 37.272 from Kogen Province, Korea, in 1914.

Pee Dee–Coker's Seed Company, South Carolina. Pingsu–PI 18.259 from Tschang-ping-tsu, China, in 1906. Preston–Virginia Experiment Station selection. Quillian–Farmer selection, Oklahoma. Rattlesnake–Kentucky Experiment Station selection. Riceland–PI 20.797 from Shanghai, China, in 1907. Rila–Marsh Foundation, Ohio. Sainte Anne–Canada Experiment Station selection. Samarow–PI 17.260 from J.M. Thorburn and Company in 1902. Saskatoon–Farmer selection, Canada.

Sedo–PI 23.229 from Tientsin, Chihli, China, in 1908. Sherwood–PI 17.862 from Tientsin, China, in 1906. Southern Green–PI 62.839 from Nanking, China, in 1925. Southern Prolific–PI 37.250 from Keiki Province, Korea, in 1914. Stuart–PI 22.644 from Hangchow, Chekiang, China, in 1908. Summerland–Canada Experiment Station selection [British Columbia]. Suru–PI 89.128 from Kyojo, Korea, in 1930. Swan–PI 22.379 from Canton, Kwangtung, China, in 1908. Taha–PI 21.999 from Boshan, Shantung, China, in 1907. Tanloxi–Delta Station selection 483, Mississippi.

Tashing–PI 20.854 from Harbin, Manchuria, China, in 1907. Tensas–PI 104.881 from Nanking, China, in 1934 (same as Nanksoy). Texoil–Farmer selection, Texas. Tinzan–From Australia. Trenton–PI 24.610, a selection from 'Mammoth (Yellow)' in Kentucky in 1904. Trinitaria–From El Salvador. U.S.-5–PI 54.563-5 from Jungchiangko, Shengking [Liaoning], China, in 1921. Vilnensis–From Poland. Vireo–PI 22.874 from Tokyo, Japan, in 1908. White Eyebrow–PI 30.745 from Wulukai, Kirin, China, in 1911.

Yellow Biloxi–North Carolina Experiment Station selection. Yokotenn–PI 19.981 from Yokohama, Japan, in 1907. Yosho–PI 6.314 (PI 17.262) from Tokyo, Japan, in 1901.

Talk with Dr. Richard Bernard. 1998. July 12. He considers this to be his best publication on this subject, but it is quite similar to *INTSOY Series* No. 30 titled "USDA soybean germplasm collection inventory. Vol. 1," published in August 1987. Address: 1-2. Urbana, Illinois; 3-4. Stoneville, Mississippi.

1855. Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. 1988. Origins and pedigrees of public soybean varieties in the United States and Canada: Introduction (Document part). *USDA Technical Bulletin* No. 1746. 68 p. Oct. See p. 1-2.

• ***Summary:*** In the Introduction, the section titled "Old domestic varieties" states: "In table 3 are listed 204 strains (140 north and 64 south) of old domestic varieties. Most of them were developed of sponsored by public institutions, but a few are from private individuals, seed companies, or other private sources and are included here to provide a complete list of varieties developed before 1947. Many of them were of foreign origin and were grown commercially exactly as introduced, whereas others were selections from seed lots that were heterogeneous when introduced or that became heterogeneous after introduction, probably by outcrossing or mixture. The ancestry of several may be traced to the same introduction. For example, there are 18 varieties derived from PI 30.593 (Manchu). Some of the names reflect their common origin: A.K. and A.K. (Harrow); Manchu, Hudson Manchu, Montreal Manchu, Manchu 3, Manchu 606, and Manchu 2204; Manchuria, Manchuria 13177, and Manchuria 20173; Mandarin, Mandarin (Ottawa), and Mandarin 507; and Wilson, Wilson-Five, and Wilson-6."

"Also included in table 3 are old domestic varieties selected from hybrids of known parents. The first of these hybrids was Ogemaw developed in 1902 [by E.E. Evans of West Branch, Michigan]. Little is known of this early breeding work and the two parental varieties are not in the collection. Several selections from natural crosses in Mammoth Yellow with presumed known male parents were released in the 1920's in Mississippi and South Carolina (Mamloxi, Mamotan 6640, Mamredo, and Yelredo).

"Modern soybean variety development using hybridization followed by selection began in 1939 with the release of Pagoda, developed by F. Dimmock at the Canada Department of Agriculture in Ottawa, followed the next year by the release of Chief, developed by C.M. Woodworth at the Illinois Agricultural Experiment Station (AES), and Ogden, developed by H.P. Ogden at the Tennessee AES. During the 1940's there were eight additional selections from known hybrids: Lincoln and Viking at the Illinois AES; Gibson at the Indiana AES; Tennessee Non Pop and Volstate at the Tennessee AES; Capital at Ottawa, Canada; and Acadian and Nela at the Louisiana AES... All varieties in table 3 were developed prior to 1950 except two foreign introductions from the mid-1960's (Miller 67 and Patterson) and a 1966 release of a reselection (Wilson-6) from an old introduced variety."

"The Soybean Germplasm Collection was started in 1949 [at Urbana, Illinois]. All old U.S. and Canadian varieties and foreign (FC and PI) strains were sought throughout the country. Many old domestic varieties, including some of the most popular ones such as Ito San, had been discarded and could not be found. These lost varieties are listed in table 4..." Address: 1-2. Urbana, Illinois; 3-4. Stoneville, Mississippi.

1856. Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. Origins and pedigrees of public soybean varieties in the United States and Canada: Public soybean variety registrations and licenses (Document part). *USDA Technical Bulletin* No. 1746. 68 p. Oct. See p. 62-67. [4 ref]

• ***Summary:*** This very interesting long table is divided into two parts. Part I lists nine "old domestic varieties" of soybeans. For each variety it gives the name (listed alphabetically), the registration or license number (from 1 to 18), and the reference–from 1943 to 1955. Most references in this section (from 1943-52) are in the *Journal of the American Society of Agronomy*–which in 1953 was renamed *Agronomy Journal.* The first soybean variety to be registered was Boone, in 1943.

Part II lists about 5 pages of "modern public varieties." The same format is used. For registrations from 1953 to 1960, this information appears in the *Agronomy Journal.* Thereafter it appears in *Crop Science*–starting with Registration No. 34. Canadian varieties are registered in the *Canadian J. of Plant Sciences.*

The Canadian varieties are: Acme (1960), Altona (1966), Bicentennial (1986), Comet (1960), Crest, Harcor (1976), Hardome, Harlon (1976), Harosoy (1955), Harwood (1971), Maple Amber, Maple Arrow, Maple Donovan, Maple Isle, Maple Presto, Maple Ridge, Merit (1960), Morsoy (1970), OAC Aries (1987), OAC Libra (1986), OAC Pisces (1986), OAC Scorpio (1987), Portage (1966),

Vansoy (1972). Address: 1-2. Urbana, Illinois; 3-4. Stoneville, Mississippi.

1857. Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. 1988. Origins and pedigrees of public soybean varieties in the United States and Canada: Table 6–Origins and pedigrees of modern domestic soybean varieties from public institutions (Document part). *USDA Technical Bulletin* No. 1746. 68 p. Oct. See p. 32-59.

• ***Summary:*** For each variety, the following information is given in tabular form: Variety name, maturity group, pedigree, prior designation, year licensed or released, developer. The varieties, listed alphabetically, are: Acme (Canada), Ada, Adams, Adelphia, Alamo, Altona (Canada), Amcor, Amsoy, Amsoy 71, Anoka, Bay, Bedford, Beeson, Beeson 80, Bethel, Bicentennial (Canada), Bienville, Blackhawk, Bonus, Bossier, Bradley, Bragg, Braxton, BSR 101, BSR 201, BSR 301, BSR 302, Calland, Cartter, Celest, Centennial, Century, Century 84, Chamberlain, Chico, Chippewa, Chippewa 64, Clark, Clark 63, Clay, CN210, CN290, Cobb, Coles, Columbus, Comet (Canada), Corsoy, Corsoy 79, Crawford, Crest (Canada), Cumberland, Curtis, Custer, Cutler, Cutler 71, Dare, Dassel, Davis, Dawson, Delmar, DeSoto, Disoy, Dorman, Douglas, Dowling, Dunn, Duocrop, Dyer, Egyptian, Elf, Elgin, Emerald, Epps, Essex, Evans *, Fayette, Ford, Forrest, Foster, Franklin, Fremont, Gail, GaSoy 17, Gnome, Gnome 85, Gordon, Govan, Grande, Grant, Gregg, Hack, Harcor (Canada), Hardee, Hardin, Hardome (Canada), Hark, Harlon (Canada), Harly (Canada), Harosoy (Canada), Harosoy 63 (Illinois, USA), Harper, Harwood (Canada), Hawkeye, Hawkeye 63, Henry, Hill, Hobbit, Hodgson, Hodgson 78, Hood, Hood 75, Hoyt, Hutton, Jackson, James, Jeff, Johnston, Jupiter, Jupiter-R, Kahala, Kaikoo, Kailua, Kanrich, Keller, Kent, Kershaw, Kim, Kino, Kirby, Lakota, Lawrence, Lee, Lee 68, Lee 74, Leflore, Lindarin, Lindarin 63, Logan, Mack, Madison, Magna, Maple Amber (Canada), Maple Arrow (Canada), Maple Donovan (Canada), Maple Isle (Canada), Maple Presto (Canada), Maple Ridge (Canada), Marion, McCall, Mead, Merit (Canada), Miami, Miles, Mokapu Summer, Monroe, Morgan, Morsoy (Canada), Narow, Nathan, Nebsoy, Norchief, Norman, OAC Aries (Canada), OAC Libra (Canada), OAC Pisces (Canada), OAC Scorpio (Canada), Oakland, Oksoy, Ozzie, Pella, Pella 86, Perry, Pershing, Pickett, Pickett 71, Pixie, Platte, Pomona, Portage (Canada), Preston, Prize, Protana, Provar, Pyramid, Rampage, Ransom, Regal, Renville, Rillito, Ripley, Ross, Scott, Semmes, Shelby, Sherman, Shore, Sibley, Simpson, Sloan, Sohoma, Sparks, Sprite, Stafford, Steele, Swift, TN 4-86, TN 5-85, Toano, Tracy, Tracy-M, Traverse, Union, Vance, Vansoy (Canada), Verde, Vickery, Vinton, Vinton 81, Wabash, Ware, Wayne, Weber, Weber 84, Wells, Wells II, Wilkin, Will, Williams, Williams 79, Williams 82, Winchester, Wirth, Woodworth, Wright, Wye, York, Young, Zane.

* Concerning Evans: Maturity Group: 0. Pedigree: Merit x Harosoy. Prior designation: M61.96. Year licensed or released: 1974. Developer: Minnesota AES and USDA. Address: 1-2. Urbana, Illinois; 3-4. Stoneville, Mississippi.

**Manufacturer's Address:** 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.
**Date of Introduction:** 1988. October.
**New Product–Documentation:** Talk with Giles Goulet of Nutrisoya. 1990. Oct. 19. This company started making soyfoods in Oct. 1988, when they introduced tofu.

Update: 1995 May. Giles Goulet left in Sept. 1994 and no longer owns shares in the company. They now make three types of tofu: Herbs & Spices, Pimento & Onion, and Natural.

Note 1. This is the earliest known commercial soy product made or sold by Nutrisoya. It is also the earliest record seen (Oct. 2001) concerning Nutrisoya.

Note 2. As of Sept. 2001 this company's name is Nutrisoya Foods, Inc. The address has not changed. Phone: 450-796-4261. Contact: Nick Feldman, President. They make soymilk, tofu, and tofu products.

1859. Oilseeds Division, Grain Marketing Bureau, Grains and Oilseeds Branch, Agriculture Canada. 1988. Oilseed sector profile. Ottawa, Ontario, Canada. 65 p. Oct. 28 cm. [3 ref]

• ***Summary:*** Contents: Foreword. Introduction. The production subsector. The processing subsector: Background, industry structure, industry performance. The marketing subsector: Oilseeds marketing, processed oilseed products marketing, hedging. The marketing environment: Domestic, international markets. A look into the future. Appendix A: The role of the federal government in the Canadian oilseed industry. Appendix B: Oilseed industry directory, industry associations, oilseed processing companies, oilseed trading companies & coops, research / educational institutions, government, others. Appendix C: Tables. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8374.

1860. *Soybean Digest.*1988. Soviets need U.S. beans. Oct. p. 21N.

• ***Summary:*** "... said Victor Lishchenko of the Inst. of U.S. and Canadian Studies in Moscow, 'Cooperation between the U.S. and Gosagroprom (the Soviet ministry of agriculture) is very important to us economically.'" The USSR is expected to double its soymeal imports from the U.S. from 1.2 million tonnes to 2.4 million in the upcoming year.

1861. Roller, Ron. 1988. Justice Department lawsuit against Eden Foods (Interview). *SoyaScan Notes.* Nov. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The FDA filed the original charges then (since they do not prosecute cases), they turned the case over to the Justice Department, which in May 1988 filed 32 counts of criminal charges against Eden Foods. The problem relates to two things: (1) The original pamphlet which claimed that Edensoy is good for babies. The FDA case is that the product was promoted as an infant formula, in violation of the Infant Formula Act. An infant formula may be promoted only as a sole source of nutrition for infants. It is not a dual use product. Eden did a voluntary recall at a cost of about $45,000. (2) After the FDA told Edensoy to stop distributing the pamphlet, Eden Foods subsequently, probably accidentally, sent out (sold) some 20-50 more. That apparent willful flaunting of authority was what made the FDA pursue the case vigorously. They only prosecute 5-7 cases a year. The original counts were worth over $1 million in fines. The prosecutor is the same person who did the Gerber case. It is serious. Eden's attorneys advised that they plead to lesser charges and try for a plea bargain. Ten counts are worth $100,000 and about 22 are worth $1,000 each. Now it looks like the charge may be $150,000. Also Mike Potter is being charged personally, and faces potential but unlikely jail time.

There is only one known case where an infant was adversely affected by Edensoy. This infant lived in Toronto, Canada, and its physician said the child has completely recovered. There was no permanent damage. Address: Eden Foods, Clinton, Michigan.

1862. Archer Daniels Midland Co. 1988. First quarter report to shareholders. Box 1470, Decatur, IL 62525. 16 p.
• ***Summary:*** President Randall's Report–stated that the greatest concern of Americans in the 1990s will be the environment. 1. ADM now has in operation eleven large fluid bed boilers for cogeneration of power and process steam. 2. Worldwide technology has been licensed for using a special grade of starch to render disposable plastics degradable. 3. Ethanol is a third contribution to clean environment. Ethanol fuels have a high oxygen content, a major factor in reducing carbon monoxide poisoning of the atmosphere.

"There is a tremendous demand all over the world for soy protein products to replace subsidized milk powder. Our soy protein concentrate plant is completed and is now operational. We will double its size in early 1989 and are making plans to double it again before 1990, in response to the new demand.

"We are also doubling the size of our edible soy protein isolate plant, with plans for further increases in 1989 and beyond. We are constructing a plant for industrial isolates for the paper industry, to be sold in conjunction with our corn starches.

ADM now produces soybean flour, grits, TVP, concentrate and isolate, the most complete line of edible soy products of any producer.

Chairman Andreas' Report–The U.S. Government has more control over what the farmers plan and the prices they receive today than they have ever had in history.

Government imposed embargoes cause massive restructuring of world trade and processing. Examples: Immediately after the 1980 embargo, the following fundamental permanent adjustments in world trade occurred: 1. The EEC, in emergency meetings, alarmed that the U.S. would cut off exports for political reasons, resolved to become self-sufficient, particularly in oilseeds, with the result that they increased production of wheat and have become a large surplus producer of wheat. 2. Japan, equally alarmed, immediately made $1,000 million available to Brazil to expand soybean production 300%. 3. The Soviet Union took its order book to Brazil, Canada, Argentina, Australia, and the EEC, cutting the U.S. from a 75% supplier to a 25% supplier. 4. Canada and Australia responded with 20% increases in production. Address: Decatur, Illinois.

1863. DeBoer, H.; Hacker, R.R.; Leeson, S.; Wagemans, V. 1988. Fish protein concentrate (Conmar 80) or refined soy flour as substitutes for skim milk powder in calf milk replacers. *Canadian J. of Animal Science* 68(4):1155-61. Dec. [22 ref]
Address: Dep. of Animal and Poultry Science, Univ. of Guelph, Guelph, Ontario, Canada N1G 2W1.

1864. **Product Name:** Frozya Frozen Dessert Product (With Sodium Caseinate) [French Vanilla, Chocolate, or Mocha Fudge Almond].
**Manufacturer's Name:** Frozya Industries, Inc.
**Manufacturer's Address:** 1803 Douglas St. #301, Victoria, BC, V8T 5C3, Canada. Phone: 604-386-7743.
**Date of Introduction:** 1988. December.
**Ingredients:** Basic ingredients in all 3 are: Water, sugar, corn syrup solids, malto-dextrin, canola oil, isolated soy protein, sodium caseinate, liquid egg yolk, mono- and diglycerides, guar gum, locust bean gum, polysorbate 80, carrageenan, salt, malt extract, citric acid, natural and artificial flavors.
**Wt/Vol., Packaging, Price:** Gallon and 4 liter tubs.
**How Stored:** Frozen.
**Nutrition:** 99.9% lactose free.
**New Product–Documentation:** Soya Newsletter. 1988. Sept/Dec. p. 11. Contact Herm Hamhuis or Deedrie Ballard. Note: Ballard (with her husband Don) were owners of Tripple Products Inc. (in Victoria, BC), which launched Tripple Delight, a soy ice cream, in about Dec. 1986.

1865. *Soy Ink Journal (St. Louis, Missouri, and Reston, Virginia).*1988. Publishers report good results with soy ink. 1(1):1-4. Undated.
• ***Summary:*** This colorful 4-page undated newspaper, printed using soy color and black inks, was published by the American Soybean Association (ASA) in St. Louis, Missouri, and the USDA in conjunction with the American Newspaper Publishers Association (ANPA) in Reston, Virginia, to promote the use of soy ink. The first issue contains articles such as the following: ANPA gets the ball rolling: Research keys soy inks success. Why should papers switch to soy ink? Bulk delivery of Soy-ANPA-INK available from major ink companies. The environmental advantage: Soy oil inks utilize biodegradable ingredients, making disposal easier. Future Mizzou grads learn benefits of soy ink. Canada on the soy ink fast track. Farm press pushes for expanded use of soybean oil ink in the United States. Vegetable oil report: They are not all alike. Soy oil supply should remain steady in upcoming years.

Talk with Stu Ellis of the American Soybean Association. 1992. Sept. 11. He is ASA associate director of domestic marketing and has been actively involved with the soy ink campaign since early 1989 when he joined ASA. The first issue (called Vol. 1, No. 1) was published in late 1988, the second (called Vol. 2, No. 1) was published in June 1989 and the third (called Vol. 3, No. 1) in June 1990. About 15,000 copies of the last issue were printed and distributed free of charge. Only these three issues were published. These publications were designed to tell the newspaper industry about soy ink. Since 1990 the focus of soy ink marketing has switched to commercial printers and magazines using news releases and brochures. To date, 75 ink manufacturers and 1,600 newspapers and commercial printers have licensed ASA's SoySeal.

1866. Zee, John A.; Boudreau, A.; Bourgeois, M.; Breton, R. 1988. Chemical composition and nutritional quality of faba bean (Vicia faba L. Minor) based tofu. *J. of Food Science* 53(6):1772-74, 1781. Nov/Dec. [36 ref]
• ***Summary:*** Tofu was made from both soybeans and faba beans (coagulated with magnesium chloride), then its chemical composition and antinutritional factors were analyzed. On a dry basis, both types of tofu had higher protein contents (55.7% and 82.0% for soy and faba bean tofu respectively). On a dry basis, faba bean tofu contained only 1.5% lipids compared with 34.4% for soybean tofu. Antinutritional and flatulence factors were much lower in faba bean tofu. Both types of tofu are comparable in terms of digestibility and amino acid availability.

Aside from favism, the faba bean contains fewer antinutritional and flatulence factors than soybeans, about one-fifth as much trypsin inhibitor, and considerably less raffinose and stachyose–which cause flatulence. Address: 1,3-4. Département de Nutrition Humaine et de Consommation; 2. Dep. de Sciences et Technologie des Aliments. All: Univ. Laval, Quebec, G1K 7P4 Canada.

1867. *FAO Yearbook–Production.*1988-2004. Serial/periodical. Rome, Italy: Food and Agricultural Organization of the United Nations. Yearly. ca. 350 p.

1868. Khorasani, G.R.; Sauer, W.C.; Ozimek, L.; Kennelly, J.J. 1988. The utilization of soybean protein concentrate by the preruminant calf. In: University of Alberta 67th Annual Feeders Day Report. See p. 19. *

1869. **Product Name:** [Soyolait (Natural Soy Drink)].
**Foreign Name:** Soyolait.
**Manufacturer's Name:** Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
**Manufacturer's Address:** 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
**Date of Introduction:** 1988.
**Wt/Vol., Packaging, Price:** 1 liter Pure-Pak carton.
**How Stored:** Refrigerated, 21 day shelf life at 3ºC.
**New Product–Documentation:** Talk with Helen Wan, sales manager. 1995. May 26. In 1988 they introduced *Soyolait*, a 1-liter soya drink that is presently the company's best-selling product and also the best-selling fresh soymilk in Quebec. It is sold fresh in Pure-Pak cartons, and has a remarkable 21-day shelf life at 3ºC. The product is made and packaged entirely at their plant. It is sweetened with barley malt extract and sold only in Quebec, and mostly at natural food stores. It is consumed by Caucasian-Canadians rather than by Chinese-Canadians (who prefer a sugar-sweetened product). Soyolait is less expensive than Edensoy, since the packaging is less expensive.

1870. **Product Name:** Tempeh with Sea Veggies.
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.
**Date of Introduction:** 1988.
**How Stored:** Frozen.
**New Product–Documentation:** Letter (fax) from Allan Brown. 1998. Jan. 21. This tempeh was first sold in 1988.

1871. **Product Name:** [Tofu Teriyaki].
**Foreign Name:** Tofu Teriyaki.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1988.
**Ingredients:** Tofu (water, soybeans, calcium sulphate, magnesium chloride, vegetable oil). Sauce: Water, soy sauce, sugar, cornstarch, ginger, garlic, sesame oil, spices.

**Wt/Vol., Packaging, Price:** 10 oz (300 gm).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 5.5 by 3.5 inches. With color photo in middle of tofu teriyaki on pasta. "Pasteurized. No preservative." Product name also written in Chinese. Form filled out by Peter Joe. 1988. May 20. Gives date.

1872. **Product Name:** [Tofu Sweet N' Sour].
**Foreign Name:** Tofu Aigre-Doux.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada. Phone: 604-254-0701.
**Date of Introduction:** 1988.
**Ingredients:** Tofu (water, soybeans, calcium sulphate, magnesium chloride, vegetable oil). Sauce: Water, sugar, vinegar, tomato paste, soy sauce, cornstarch (modified), salt, citric acid.
**Wt/Vol., Packaging, Price:** 10 oz (300 gm).
**How Stored:** Refrigerated.
**New Product–Documentation:** Label. 5.5 by 3.5 inches. With color photo in middle. "Pasteurized. No preservative." Product name also written in Chinese. Form filled out by Peter Joe. 1988. May 20. Gives date.

1876. Theses on soybeans and soyfoods: Dissertation Abstracts (Database search report). 1989. 234 p. Jan. 20. 28 cm. Unpublished manuscript. [1106 ref]
• ***Summary:*** The Dissertation Abstracts database contains virtually every American PhD dissertation accepted at an accredited institution since 1861. A search yielded 1,106 theses on soybeans and soyfoods not including records with the terms pathogen*, Disease*, weeds, or insect* in the title or abstract. * = truncated term.

It contained the following number of theses on soyfoods: Soymilk 9-14, tofu 6, tempeh 6, miso 4, soy sauce 3, and natto 2.

The most valuable records for us are in the subject categories Food Science & Technology; Health Sciences, Nutrition; and Economics, Agricultural. Other subject categories include: Agriculture (Agronomy, Animal Culture & Nutrition, General, Plant Culture, Plant Physiology); Biochemistry; Botany; Chemistry (Agricultural and Biological, Analytical); Engineering, Chemical; Entomology.

A count of the records in which we were interested by state where the thesis was written shows the following: Illinois 128, Iowa 68, Indiana 37, New York 30, Missouri 28, Michigan 26, Minnesota 25, and Ohio 17.

1877. *Plenty Canada News (Lanark, Ontario, Canada).*1989. Volunteers receive recognition. Winter 1988/89. p. 1.
• ***Summary:*** "Five Plenty supporters are soon to receive a certificate acknowledging their 'significant contribution' to Plenty's work. These certificates, to be signed by the President of CIDA, are being given to many Canadians across the country in celebration of 20 years of voluntary sector and Canadian government partnership in international development.

"The five Plenty supporters are: Allan Brown, Jim Creighton, Percy Henkelman, Kathleen Purdy, Valerie Unwin."

"Allan Brown, from McDonald's Corners, Ontario, a founding member and the first Executive Director of Plenty Canada who has continued his support of the organization ever since."

Note: Allan Brown, and his wife Susan, founders of Noble Bean in Sept. 1979, were pioneer tempeh makers in Canada. Address: R.R. #3, Lanark, Ontario K0G 1K0, Canada. Phone: (613) 278-2215.

1878. Adams, James Lee. 1989. The soy agenda... From your ASA president. *Soybean Update.* Feb. 20. p. 3.
• ***Summary:*** The U.S. soybean market is under attack by foreigners. "Three fourths of U.S. consumers who buy

soyoil don't realize it... The average [U.S.] farmer invests just three-fourths of one cent per bushel [of soybeans]. Canadian rapeseed growers are investing double! And the Malaysian palm producers are investing 10 times a much as you!"

1879. Okonek, Douglas V.; Sullivan, T.J.; Nebesh, O.; Hastert, R.C. 1989. Hydrogenation of canola and soybean oils: A comparison. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1731-36. [5 ref]

• ***Summary:*** "The early 1986 decision by the Food and Drug Administration to allow low erucic acid rapeseed (LEAR) oil to be used in edible oil products sparked considerable interest in the properties and performance of canola, the copyrighted Canadian name for LEAR oil. One major U.S. edible oil producer formulated a premium salad oil product as 100% canola...

"Canola contains trace amounts of sulfur from the glucosinolates in the oil while soybean contains almost no detectable sulfur. Sulfur is a well known nickel catalyst poison...

"Conclusions: 1. Canola oil hydrogenation requires more catalyst than soybean oil to achieve the same IV [iodine value] in the same reaction time. This is attributed primarily to the sulfur content of the canola oil. 2. The rate of *trans*-isomerization per unit IV reduction is greater for canola oil. Again, this is attributed to the presence of sulfur in the canola oil." Address: Engelhard Corp., P.O. Box 22126, Cleveland, Ohio 44122.

1880. *Ontario Soybean Growers' Marketing Board Newsletter.*1989. Forty years of progress. Feb. p. 1.

• ***Summary:*** The Ontario Soybean Growers' Marketing Board was established in 1949 under the Farm Products Marketing Act. It is celebrating its 40th anniversary in 1989. The adoption of a new logo with the spelling of "soybean" is one of the most visible events marking the anniversary. In 1949, 11 directors represented some 6,000 growers in 6 districts; and 90,000 acres of soybeans were grown. In 1989, 15 directors represent over 24,000 growers in 8 districts across the province.

In 1988, 1,280,000 acres of soybeans were grown and soybeans ranked number one in farm cash receipts for Ontario crops, according to preliminary estimates from O.M.A.F. "Worth over $351,000,000 in 1988 the soybean industry continues to expand and represents a valuable part of Ontario's agricultural economy." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

1881. *Ontario Soybean Growers' Marketing Board Newsletter.*1989—. Serial/periodical. Chatham, ONT, Canada. OSGMB: Vol. 1, No. 1. Feb. 1989.

• ***Summary:*** This monthly newsletter began as a 4-page publication, typewritten on beige non-glossy paper, with the two sheets of paper stapled together. The banner at the top of page 1 included the logo, date, address, and phone number.

By Feb. 1990 the four pages were printed on one large, folded sheet of beige paper with a larger typeface. The logo no longer appeared at the top of page 1.

By June 1992 the newsletter was typeset, with 3 columns per page. The logo again appeared at the top of page 1.

By June 1993 the monthly newsletter had changed and improved dramatically. It was now 8 pages long, with saddle stitch binding, a green border containing a soybean motif around each page, printed in two colors (green and black) on glossy white paper. There were 3 columns on each page and many photographs. This format continued until December 2003, when it was discontinued in printed form. It migrated to the Internet as a 1 page report of much lower quality. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

1882. Ontario Soybean Growers' Marketing Board. 1989. 40 years of progress: Fortieth anniversary, 1949-1999. Chatham, Ontario, Canada: OSGMB. 49 p. 22 x 28 cm.

• ***Summary:*** Contents: A message from the Ontario Minister of Agriculture and Food (Jack Riddell). Chairman's message (Ted McGrail). History of soybeans in Ontario (p. 3). Year by year: 1948-1989–One page is devoted to each year. The 3-element / column format is the same for most years and pages, except when there is a photo of the new staff person or a special photo is added: (a) A portrait photo of the chairman for that year. (b) Brief statement of important developments that year (mostly soybean price, production, acreage, yield, support price or deficiency payments). (c) Names of the director(s) from each of the six districts–1. Elgin. 2. Essex. 3. Pelee Island. 4. Kent. 5. Lambton. 6. Middlesex. Page 47 briefly summarizes 40 years of progress.

Four graphs (p. 48-49) show changes related to Ontario soybeans from 1949 to 1989: (1) Soybean acreage grew from 104,000 acres to 1,290,000 acres; the most rapid growth occurred after 1976. Annual average yields and 5-year average yields have increased steadily–the 5-year average from about 18 bushels/acre in 1949 to about 36 bushels in 1989. Soybean production grew from about 3 million bushels in 1949 to a peak of about 45 million bushels in 1987. The soybean crop value (farm cash receipts) grew from almost nothing in 1949 to over $351 million in 1988; rapid growth began after 1971 and 1976.

Chronology of some important events extracted mainly from individual years.

"1949–The Ontario Soya-Bean Growers' Marketing Board was established under the Farm Products Marketing

Act. Under the provisions of the new regulations eleven soybean growers were elected as directors to the board. Together they represented some 6,000 soybean producers in six Ontario districts. The first office of the board was located in the office of the Agricultural Representative in Essex, and Angus McKinney was the first secretary. K.A. Standing acted as assistant on a part-time basis. Board operations were financed during the 1949-50 crop year by one half cent per bushel license fee [like the later U.S. checkoff fee].

"1950–The license fee was increased [doubled] from one-half cent to one cent per bushel, the level at which it remained until 1959.

"1951–The first annual convention of soybean growers was held Feb. 15-16, 1951 at the Community Hall, Chatham [County of Kent]. Imports from the U.S. were totalling about 5 million bushels annually.

1952–K.A. Standing became general manager (with portrait photo). The board established its office in Chatham sharing facilities and staff of one secretary with the Ontario Seed Corn Marketing Board on Market Street. The first task was to set up a complete grower records system.

"1953–Expansion of office requirements resulted in a move to new quarters on Fourth Street in Chatham.

1954–The OSGMB organized the first export of Canadian soybeans. The shipment was made from Port Stanley [Ontario] to interests in the United Kingdom. Initiated to generate competition in the domestic market, exports were to continue in every succeeding year. Some 1,492,000 bushels of soybeans were exported during the 1954-55 crop year.

1956–The number of elected directors increased to 14 from 11.

1957–The average price of soybeans paid to growers dropped to $1.95 per bushel–the lowest since World War II. The board pressed for legislation to stabilize returns to growers.

"1958–The board was successful in having soybeans brought under the Agricultural Stabilization Act. The crop was supported at $2.10 per bushel. The average price paid to growers was $1.90, resulting in a deficiency payment of 19.6 cents per bushel for a total of $1,200,000 paid to growers. The office was moved from Fourth Street to Wellington Street West in Chatham. Otis McGregor became assistant secretary-manager (with portrait photo).

Note. Letter (e-mail) from Kim Cooper formerly of OSGMB. 2010. Feb. 18. The growers always had to pay a premium to take part in income stabilization programs. So it was not simply a government subsidy. At first, the premiums had to be paid up front, but after a few years, the premiums were deducted from the payout, if there was any payout.

1960–L.R. Addeman became information officer for both the soybean and wheat boards.

1963–The ban on coloured margarine is lifted in Ontario.

"1964–Increased emphasis was put on [soybean] research when federal and provincial programs were brought under a coordinated plan.

"1965–Domestic crushings reached a 16-year high at 20.8 million bushels, as did soybean imports at 16.5 million. There was no price support in 1965 and succeeding crops, the last having been applied to the 1964 crop at $2.15 per bushel."

1970–Canadian soybean production first tops 10 million bushels.

1973–The first shipment of Ontario soybeans (Harsoy variety) was made to Japan. The Ontario Soybean Symposium was held at Ridgetown College of Agricultural Technology, sponsored by the Board, the Ministry of Agriculture, and Food and Agriculture Canada. K.A. Standing became general manager of both the soybean and wheat boards and Otis McGregor was appointed marketing manager of both boards.

1974–D. Sanderson became secretary to the Ontario soybean and wheat boards.

1975–The Soybean Board established its own separate office in a rented building on Kell Drive in Chatham. Otis McGregor became secretary manager of the Soybean Board.

1977–The metric system started to be used in agriculture in Canada; metric ton (tonne) officially replaced bushel. "An Advance Payment Program was established for soybeans under the federal Advance Payments for Crops Act. The program provided interest free loans to producers who stored their soybean crop at harvest for future sale." A record high yield average of 39 bushels per acre was set. Mario Baletto became market information coordinator.

"1979–The Board initiated a program to promote soybeans as a food product and hired home economist Linda Lantz to manage the program. Soybeans were the featured crop at the Royal Agricultural Winter Fair.

"1980–Soybeans began trading duty free between Canada and the United States following the elimination of a 60 cent per bushel tariff, via the General Agreement on Tariffs and Trade" (GATT). Fred Brandenburg became assistant secretary manager.

"1982–The Board participated in a soybean export market development mission to Japan, Hong Kong, Malaysia, Singapore, and Korea; it was organized by the Ontario Ministry of Agriculture and Food. Continued low prices trigger stabilization payments of 38 cents per bushel federally and 37 cents per bushel provincially."

1983–Two new districts were formed, bringing the total to 8. District 7 ran east to the Quebec border reflecting the advance of soybean production to the north and east from its traditional area.

1984–A new office for the Board was erected at 180 Riverside Drive in Chatham. "A two-day conference–the

Ontario Soybean Symposium–and an incoming mission of soybean buyers from the Far East [East Asia] and Europe were sponsored jointly" by OSGMB and OMAF. "Prices dropped again making a provincial stabilization payment of 36 cents per bushel necessary." Note: Stabilization support prices are based on an average of market prices for the past five years.

1985–Fred Brandenburg became secretary manager of the board and John Davidse became executive assistant to the board. "Ontario became self-sufficient in soybean production for the first time as the 37,000,000 bushel crop exceeded the 33,165,000 bushel crush. Low prices continued as did stabilization payments–42 cents per bushel from the federal program and 39 cents from the provincial program."

1986–"Ontario's single biggest soybean export sale of 50,000 tonnes was made to the USSR." Low soybean prices paid to producers continued. In addition to federal and provincial stabilization payments, "the Special Canadian Grains Program paid soybean growers on the basis of 18 cents per bushel."

1987–Tino Breuer became marketing specialist. Districts were again redistributed to reflect the average soybean production in each.

1989–The Board celebrates its 40th birthday with a new logo and a change in the spelling of its name from "Soya-Bean" to "Soybean." 15 directors now represent 24,000 growers in 8 districts across the province. 1,280,000 acres of soybeans were grown in 1988–more than 14 times as many as in 1948. Soybeans are Ontario's #1 cash crop, worth over $350 million in farm cash receipts in 1988. Address: P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

1883. Shanmugasundaram, S. 1989. Directory of mungbean and soybean researchers. AVRDC, P.O. Box 205, Shanhua, Tainan, Taiwan. vi + 134 p. Over 750 listings. Feb. 26 cm. [Eng]

• ***Summary:*** A directory of professionals working on these two leguminous crops. Contents: Preface. Abbreviations. Explanatory note (describes a typical listing). Directory: Mungbean researchers, soybean researchers, mungbean and soybean researchers. Indexes (by country of nationality): Mungbean index. Soybean index. Mungbean and soybean index.

Printing of this publication was supported, in part, by the Tropical Vegetable Information Service, a project funded by the International Development Research Centre (IDRC) of Canada. Address: Tainan, Taiwan.

1884. Shanmugasundaram, S. 1989. Global cooperation for the improvement of soybean research and development. In: A.J. Pascale, ed. 1989. World Soybean Research Conference IV. Buenos Aires: Continuing Committee. xxviii + 2152 p. See p. 1939-47. [17 ref]

• ***Summary:*** "Soybeans became a global crop after its introduction and adoption as an industrial crop in the U.S.A. The collaboration between China and the U.S.A. on soybean germplasm collection marked the beginning of global cooperation for soybean research and development. A number of international agricultural research centers such as AVRDC, UN/ESCAP CGPRT Centre, IBPGR, IITA, INTSOY, and IRRI presently conduct worldwide research and development activities on soybean... Their problem-oriented research activities with an interdisciplinary approach should be continued to help improve soybean production, processing, marketing and utilization particularly in the densely populated, developing countries in Asia and Africa. At least 400 to 600 million children in the world's 60 poorest countries suffer from chronic malnutrition and more than one fourth of the world's population suffer from hunger during some part of each year. Soybeans with 40% protein and 20% oil could help alleviate protein and caloric malnutrition. FAO/UNDP, USAID, ACIAR, IDRC, Winrock International and World Bank, among others, are the major funding agencies which encourage and support the research and development activities of soybean. The global cooperation includes regional networking, germplasm exchange, specific research activities, manpower training, workshops, conferences and information exchange. A consolidation of such support for integrating various forces is being proposed to further promote the research and development effort on soybeans...

"INTSOY initiated the International Soybean Variety Experiment (ISVEX trials). From 1973 to 1985, more than 2,000 ISVEX trials were distributed to 132 countries around the world. INTSOY also received a number of breeding lines from cooperators in 34 countries and included them in a preliminary screening program called "The Soybean International Experimental Variety Evaluation (SIEVE) and Soybean Preliminary Observation Trial (SPOT). India, Sri Lanka, Peru, Egypt, Turkey, Ecuador, Costa Rica, Nepal and Guatemala are among the more than 20 countries now commercially growing soybean varieties introduced through INTSOY trials...

"Institutions and agencies involved in soybean: Category I. Production and utilization research: Asian Vegetable Research and Development Center (AVRDC), International Board for Plant Genetic Resources (IBPGR), International Food Policy Research Institute (IFPRI), International Institute of Tropical Agriculture (IITA), International Soybean Program (INTSOY), International Rice Research Institute (IRRI), United Nations Economic Social Commission for Asia and the Pacific's Coarse Grains, Pulses, Root and Tuber Crops Centre (UN ESCAP/

CGPRT Centre), European Cooperative Research Network on Soybean (ECNS).

"Category II. Marketing research: American Soybean Associations in various countries, ESCAP CGPRT Centre, Food and Agriculture Organization of the United Nations (FAO), IFPRI, Soyfoods Center.

"Category III. Funding agencies: United Nations Development Programme (UNDP), Food and Agriculture Organization of the United Nations (FAO), United States Agency for International Development (USAID), Australian Centre for International Agricultural Research (ACIAR), International Development Research Centre (IDRC), Canadian International Development Agency (CIDA), Winrock International, World Bank, Asian Development Bank, Japan International Cooperation Agency (JICA), Institut de Recherches Agronomiques Tropicales et des Cultures Vivrieres (IRAT), Agency for Technical Cooperation (GTZ).

"The AVRDC commenced its soybean research with the goal of developing stable, high yielding soybeans for the tropics and subtropics. Since 1973, AVRDC has accumulated more than 11,000 accessions of soybean. The Center has provided more than 31,000 breeding lines and varieties to 164 scientists in 56 countries. AVRDC Soybean Evaluation Trial Network (ASET) was initiated in 1980." Address: Asian Vegetable R&D Center, P.O. Box 205, Taipei 10099 Taiwan.

1885. Rowat, Steve. 1989. Process for production of a cultured tofu and product produced therefrom. *U.S. Patent* 4,816,266. March 28. 4 p. Application filed 19 June 1987. [6 ref]

• ***Summary:*** Tofu is mixed with a bacterial starter commonly used in making yogurt then blended/pureed (as with a VCM). The result is a smooth puree which, when incubated, yields a product with increased shelf life, and improved flavor, digestibility, and nutritional value. Yofu is a Canadian trade mark.

The author gives his address in correspondence as: Yofu Development, Box 93, Merrickville, ONT, K0G 1N0, Canada. Also granted as Canadian Patent 1,243,238. Address: 62 Renfrew Ave., Ottawa, ONT, K1S 1Z5, Canada. Phone: 613-269-4483.

1886. *Agri-Book Magazine (Exeter, ONT, Canada).*1989. Beans in Canada. 15(5):1-38.

• ***Summary:*** This entire issue is about soybeans in Canada, with emphasis on soybean production. Articles include: Reduced tillage tests management. Genes and genies. Bioherbicides target weeds. Weed control: What happened, why, and what's ahead. The American Seed Trade Association (ASTA) and the Free Trade Agreement. ASTA Conference. Quebec soybeans. What's new in pest control. Extruding soybean explained. Soybean pest perspective. Think ink! (soybean ink). Board Briefs (OSGMB; a photo shows Fred Brandenburg). Varietal variations.

1887. **Product Name:** Astronuts.
**Manufacturer's Name:** Grove Country Foods Canada Inc.
**Manufacturer's Address:** 2 Morgan St., Ridgetown, ONT, N0P 2C0, Canada. Phone: 519-674-0631.
**Date of Introduction:** 1989. March.
**Ingredients:** Milk chocolate (containing sugar, milk powder, cocoa butter, chocolate liquor, chocolate liquor, soya lecithin, and vanilla), roasted soya nuts, dextrin, confectioners shellac, glucose.
**Wt/Vol., Packaging, Price:** 80 gm paperboard box.
**How Stored:** Shelf stable.
**New Product–Documentation:** Label (sample). 1989. Received March 6 from manufacturer. 2.76 by 5/8 inches. Paperboard box. Orange, yellow, and brown. Illustration of astronaut floating upside down among celestial bodies in space. "Chocolate with an out of this world nutty crunch" (Also written in French). Address on box (different from cover letter) is Suite 313, 500 Danforth Ave., Toronto, ONT, M4K 1P6. Phone: 416-778-0007. Soyfoods Center product evaluation. Delicious. Letter. 1988. March. This new product, under development for 18 months, is made from whole roasted soybeans covered with milk chocolate. The company owners (partners) are Jim Patterson, Jim Boak, and Steve Posthumus. The company is looking for investors.

Talk with Fred Brandenburg of Ontario Soybean Grower's Marketing Board. 1991. Jan. 23. This company was in business for only 1-2 years, then they went bankrupt. They were a marketing company. They sold a line of soynuts (made by INARI Ltd.–the Stuttmans–in Michigan) that were roasted in the USA and chocolate-dipped in Ontario. James Patterson was president. Their main office was in Toronto; they had another office in Ridgetown, Ontario.

1888. Kohn, Florrie. 1989. Is canola coming? *Soybean Digest.* March. p. 8-10.

• ***Summary:*** An estimated 65,000 acres of canola are now planted in the U.S. Rapeseed now ranks as the world's third most widely grown oilseed. "Most rapeseed oils contain more than 40% erucic acid, which health experts link to heart disease. Canadian plant breeders created canola just over 20 years ago when they developed a rapeseed containing less than 5% erucic acid. Since then, they've trimmed the erucic acid in most canola to less than 2%...

"Four years ago FDA granted canola GRAS status. And in 1988, it stopped requiring food companies to identify canola oil as 'low erucic acid rapeseed oil' (LEAR) on food labels... Calgene, a California company that's invested heavily in developing canola varieties tailored to the U.S...

"ASA [American Soybean Assoc.] needs to think about bringing U.S. canola growers under its umbrella... Farmers see canola as an alternative to planting winter wheat...

"In addition to handling canola at its facility in Windsor, Canada [ADM Agri-Industries Ltd.], Archer Daniels Midland Co. (ADM) is switching its newly purchased processing plant in Velva, North Dakota, to canola...

"Several years ago, Procter & Gamble (P&G) switched its Puritan brand cooking oil from a soy/sunflower blend to 100% canola." A sidebar notes, "Canola oil in Canada accounts for more than 60% of the vegetable oil products, including over 80% of all salad oils. Canada grows more canola than any other country in the world...

"The European Community (EC) encourages its farmers to grow double zero (00) rapeseed, equivalent to canola."

1889. Smith, Preston. 1989. GATT talks stall in Montreal. *Soybean Digest.* March. p. 41-42.
• ***Summary:*** The European Community (EC) is not about to eliminate farm subsidies. "The EC and the U.S. have wide differences not only in agricultural policies, but also food philosophies. During and after World War II, Europeans faced real hunger; the U.S. escaped such peril. The EC food policy is built around security; ours is centered on providing the populace with cheap food. Our agricultural trade policy ideal is for more exports and more free trade. Increasingly, the EC trade policy is based on protectionism as the 12 nations become a 'United Europe' by 1992.

"Since 1979, farm program costs in the EC have doubled. In 1988, the EC spent $25 billion or 72% of its operating budget on farm programs. Worldwide, countries spend $150 billion a year subsidizing their farmers."

1890. *SoyaScan Notes.*1989. The best libraries and centers in Canada for doing research on soybeans and soyfoods (Overview). Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Best is the National Archives (National Library of Canada) at 395 Wellington St., Ottawa, ONT, K1A 0N4, Canada. They own 1 million volumes, 21,000 current periodicals, 65,000 dissertations/theses, 2 million government documents, 3,869 linear feet of manuscripts. It is especially good for historical research. All materials are computerized back to the 1920s.

Second best is the University of Guelph Library in Guelph, ONT, N1G 2W1, Canada.

Third best is the Agriculture Canada Library (Canadian Dept. of Agriculture Library), Sir John Carling Bldg., Room 245, Ottawa, ONT, K1A 0C5, Canada. Phone: 613-995-7851. Founded in 1910, this library owns 1 million volumes. See especially their Plant Research Centre Library.

Fourth best is probably the library of the Ontario Soybean Growers' Marketing Board, 175 Keil Drive South (Box 1199), Chatham, ONT, NM7 5L8. Phone: 519-352-7730.

Fifth best is probably the library of The Globe and Mail (which is billed as "Canada's National Newspaper") in Toronto. They have clipping files going back to the 1930s, by company, subject, and name. The librarian is usually willing to check these free of charge–unless it turns into a large project.

The Canada Institute for Scientific and Technical Information, Montreal Rd., Ottawa, ONT, K1A 0S2 (founded 1974) is also good; Information on Demand has their only "runner" in Canada there. The Metropolitan Toronto Library at 789 Yonge St., Toronto, ONT, M4W 2G8 is the largest library in Canada, but does not specialize in agriculture. The University of Toronto, which holds 4.8 million volumes, is the largest university library in Canada, but they too do not specialize in Agriculture. Note that all these libraries are in Ontario province. Start at Ottawa, which is about 100 miles west of Montreal. Then go to Toronto, which is about 300 miles southwest of Ottawa. Guelph is about 50 miles southwest of Toronto. Chatham is about 150 miles southwest of Guelph. For research on Henry Ford's work with soybeans, go 50 miles southwest to Dearborn and Detroit, Michigan.

1891. Thompson, Jay. 1989. Early work with tofu at Rochester Zen Center (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** "The Zen Center of Rochester was founded by Kapleau roshi in 1966. In about 1974 we started by importing tofu from Toronto. I would go to a Korean [Chinese?] shop named Yet Sing at #11 Baldwin Street. It looked like a normal residential home near a popular dress store named Morningstar. But when you descended to the basement it looked like a scene out of Dante's inferno. Everybody had hip boots on. There was ankle deep water, steam everywhere, and you could just see these laboring bodies through the mist. It seemed like there were 20-30 people in the basement working very hard. You had to clamber over huge bags of soybeans on pallets. No one spoke English. You used fingers with the front man to say how much you wanted. They only had one product as far as I could tell. I carried the tofu away in about eight number 10 cans filled with water. I would take the bus back across the Canadian border and many a time I was given a hard time by the customs officials. I hauled tofu down from Toronto once or twice a month for several years. When Zen students from Toronto came down for sesshin, we always asked them to bring tofu. One reason we wanted to start making our own tofu was that this trip was so difficult."

Jay first got in touch with William Shurtleff when he read a small letter Shurtleff had written to the *East West Journal* (15 June 1975, p. 3). In about August 1975 he wrote Shurtleff in Japan and got back a typed sheet describing how to make tofu on a home scale. In a second letter he requested instructions for making tofu on a larger scale.

"We made tofu in the kitchen a few times, realized we couldn't make enough at that scale, then used the instructions to build a small shop in the basement of Zen Center. We got a beam with a weight on it for pressing, installed a candy stove and a big pot. Greg Mello built the shop. Being in charge of the kitchen, and since this was a kitchen project, I was actively involved. Mello and Greg Weaver eventually took that small shop to a larger shop on North Goodman Street. The basement shop existed for several years. Once the commercial shop began, our kitchen bought tofu from them rather than making it ourselves. Mello left the Zen Center staff when the tofu shop went commercial. Andy Schecter and Norman Holland soon joined the shop.

"There were two favorite ways of serving tofu at the Zen Center: Tofu with Tahini Sauce, and Tofu Sticks, which were somewhat like fish sticks, make by baking breaded tofu, then serving it with tartare sauce." Address: Rochester, New York. Phone: 716-275-6779 Office.

1892. Thompson, Martha Gifford. 1989. Early work with tofu at Rochester Zen Center (Interview). *SoyaScan Notes.* April 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The staff of 30-50 people in the Zen Center kitchen prepared strictly vegetarian meals. Kapleau roshi at that point had a dairy allergy, so very few dairy products were used in the meals. The diet was almost a vegan one. The Toronto Zen Center, was an affiliate group nearby in Canada. In Toronto, which has a large Asian population, were at least three tofu shops: one very small family-run Korean shop on Baldwin Street (which is no longer there), one on Avenue Road (perhaps Chinese run), and a third on Dundas Road. A member of the kitchen staff would make the 2½ hour trip to Toronto, go the shop on Baldwin Street (which had no name) to buy tofu. "The first room was stacked to the ceiling with soybeans. Down in the basement were many people slogging around making tofu. It was quite a scene, and nobody spoke any English. At that point we realized that we could make tofu ourselves. The trip to Toronto was always a hassle. You always got stopped at the border; they always thought you were smuggling something. Jay Thompson took the lead in setting up tofu making facilities. Kapleau roshi was very excited about and supportive of the project, in part because he had practiced for so long in Japan, and in part because he likes projects, right livelihood, and soyfoods. Once the shop was set up in the basement, we also made a lot of soymilk, yuba, and soy yogurt, and served spicy curds; we tried everything! The tofu shop of course never received any financial support from Zen Center." Address: Rochester, New York. Phone: 716-461-5388 Home.

1893. Rose, Richard. 1989. Re: Personal observations on soyfoods at Natural Foods Expo in Anaheim, California. Letter to William Shurtleff at Soyfoods Center, April 19. 1 p.

• ***Summary:*** "Nothing was especially noteworthy this year. Mandarin Soyfoods and Turtle Island had booths for the first time and were moderately well-received. Luke Lukoskie of Island Spring shared a booth with Kathryn Bennett and her Mexican food. White Wave had 2 booths and an expanded product line, including dressings, hot dogs, and cheese.

"Did you know that Yves tofu hot dogs are being served this year at Candlestick Park! Health Valley is the U.S. distributor of the hot dogs.

"Golden Soy Foods, Nasoya, Quong Hop and Sonoma Specialty Foods had no booth this year. Tomsun Foods shared a booth with their Los Angeles distributor. Jofu is back, but still needs improvement.

"Soymage sour cream was shown. It has no casein but does have soy protein isolates along with tofu. It was mediocre. However, Soya Kaas cream cheese with casein was absolutely awful, with poor flavor and mouthfeel. Cholesterol and organic was very big at the show. The Soyfoods Pavilion was indistinguishable, with only a banner up high at one end. Within the 'pavilion' was The Book Publishing Co. and Kashi (no soy), and about 1 or 2 other non-soy exhibitors.

"Gordon Bennett said the SAA board hired a part-time secretary to handle its affairs. She has an office next door to Golbitz. SAA will have more money this year and more programs. Ask the new secretary for a copy of the minutes." Address: President, Rose International, P.O. Box 2687, Petaluma, California 94953-2687. Phone: 707-778-7721.

1894. DeSilver, Drew. 1989. Eden Foods pleads guilty to infant formula violations: Paradise lost. *Vegetarian Times.* April. p. 9-10. [1 ref]

• ***Summary:*** "Eden Foods was fined $110,000 in January after pleading guilty to 11 counts of violating the federal Infant Formula Act, which sets nutritional standards for products sold as infant formula. Company president Michael J. Potter, who pleaded guilty to one charge of violating the act, was sentenced to 30 days in jail, two years' probation and a $25,000 fine. Both Eden's and Potter's penalties were the maximum allowable.

"The 12 misdemeanor charges, filed last year in the U.S. District Court in Detroit, involved a promotional pamphlet that Potter wrote in 1983 for Edensoy brand

soymilk. The Food and Drug Administration and the Justice Department charged that a pamphlet paragraph headed 'Good for Babies' said Edensoy was a 'quality substitute' for mother's milk, when in fact it lacks adequate amounts of several nutrients, including vitamins A, B-12, C, D and E, thiamin, pantothenic acid, calcium and iodine...

"The pamphlet attracted the attention of the FDA, which in October 19893 notified Eden that it was in violation of the Infant Formula Act. Eden immediately agreed to stop distributing the pamphlets and told a few of its large distributors to stop using them.

"There the matter stood until 1985, when a child suffering from malnutrition and failure to thrive was admitted to a Toronto hospital. The mother said she had seen a copy of the pamphlet at a natural food store and had been feeding the infant nothing but Edensoy. When the FDA learned about the infant (who eventually recovered with no ill effects), it ordered Eden to recall all the pamphlets. The FDA also called in the Justice Department, which filed charged against Eden and Potter in July 1988... Potter doesn't deny that he and Eden broke the law, but he says it was unintentional...

"In 1978, the Syntex Corp. promoted a product called Neosoy as an infant formula. Neosoy was deficient in chloride and was blamed for causing neurological damage to at least 80 children. The FDA wanted to prosecute Syntex, Gibbs said, but in 1984 the Justice Department decided not to. In another case, which occurred in 1985, the department filed 12 misdemeanor counts against Wyeth Laboratories for marketing a formula that lacked vitamin B-6. Wyeth pleaded guilty and received what was then the maximum fine, $1,000 per count. The total fine was only $12,000...

"Last year Eden made a $142,000 profit–slightly more than Eden's and Potter's combined fines."

1895. **Product Name:** Mandarin Soyfoods Tofu Patties, Tofu Patties with Cheese, or Garden Patties.
**Manufacturer's Name:** Mandarin Enterprises Ltd.
**Manufacturer's Address:** 11031 Bridgeport Rd. #107, Richmond, BC, V6X 3A2, Canada.
**Date of Introduction:** 1989. April.
**Ingredients:** Garden Patties: Tofu (organically grown soybeans, water, magnesium chloride [purified nigari]), soybean fibre [probably okara], soy grits, fresh onions, fresh carrots, fresh celery, fresh green peppers, whole wheat flour, sunflower oil, crushed tomatoes, sesame seeds, hydrolysed plant protein, seasoning, sea salt, spices.
**Wt/Vol., Packaging, Price:** 2 patties. 170 gm (6 oz). Pinched ends box.
**How Stored:** Refrigerated or frozen.
**Nutrition:** Garden Patties: Per 100 gm.: Calories 173, protein 22.5 gm, carbohydrates 17.6 gm, fat 2.2 gm, dietary fiber 3 gm, sodium 650 mg, potassium 300 mg.
**New Product–Documentation:** Leaflet. 1989. April. "New. Introducing... Mandarin patties. Three savory varieties. Prepared with tofu and garden-fresh vegetables, Mandarin Patties are ready to eat in just 5 minutes. So easy to prepare: bake, broil or fry, pop in a pita, bagel, burrito, baste or bar-b-que... Mandarin Enterprises has been making quality soyfoods in Canada since 1976." Shows color illustrations of a pattie in burger buns, and each of the three packages. Each package contains 2 patties and has the name in French along the bottom.

Soya Newsletter. 1989. May/June. p. 8.

Labels for all 3 products sent by Gerry Blanchard. 1992. Jan. 22. 7 by 5.5 inches. Paperboard sleeve. Illustration of a tofu burger with trimmings between buns, surrounded by a tomato, green pepper, celery stalk, and sliced onion. "Ready in 5 minutes. Prepared with tofu, savoury herbs & vegetables. Cholesterol free. Microwaveable. Heat and serve." Called "Pâtés Jardinières" in French.

Two leaflets for all 6 Mandarin patties also sent. One shows a huge illustration of a burger with the 6 packages below it. The other shows the six packages lined up in a typical produce case.

1896. *Ontario Soybean Growers' Marketing Board Newsletter.*1989. Soybean industry settles 1989 marketing agreement. April. p. 1.
• ***Summary:*** "Representatives of Ontario's soybean growers, dealers and processors signed a marketing agreement for the 1989 soybean crop year. The agreement establishes a minimum pricing formula for Ontario soybeans and the maximum fees charged to growers by dealers for handling and drying the soybean crop. Ontario soybean prices are based on international export markets." Address: Chatham, ONT, Canada. Phone: 519-352-7730.

1897. Plenty Canada. 1989. Re: Work with soyfoods. Come with me to Jamaica... Letter for fund raising sent to supporters, April. 3 p.
• ***Summary:*** Michael Shook, Development Education Officer, writes that Plenty Canada has a soy nutrition program in Jamaica, which includes soy foods demonstrations. Various Jamaican mothers "have been cooking with soy since Plenty's program began in this area three years ago." Plenty provides "soy processing kits." Address: R.R. 3, Lanark, ONT, K0G 1K0, Canada. Phone: 613-278-2215.

1898. Shurtleff, William; Aoyagi, Akiko. comps. 1989. Bibliography of soya in Canada: 633 references from 1855 to 1989. Lafayette, California: Soyfoods Center. 112 p. Subject/geographical index. Author/company index. Partially annotated. Printed April 22. 28 cm. [633 ref]

• ***Summary:*** This is the most comprehensive bibliography ever published on soybeans and soyfoods in Canada. One of more than 40 bibliographies on soybeans and soyfoods published by the Soyfoods Center, it lists all known documents (both published and unpublished) and commercial products in chronological order, making it a powerful tool for understanding the subject from an historical point of view from its earliest beginnings. 67% of all records (and most of the current records) contain a summary. An analysis of the composition of this bibliography (by language, document type, year, leading countries, states, and organizations) and details on how to use the bibliography are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 415-283-2991.

1899. Cloud, Jon. 1989. Tofu shops in Ontario (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soy City Foods is the only Caucasian-run tofu manufacturer of the 13 tofu companies in Ontario. The earliest tofu manufacturer he knows was Yet Sing on Baldwin Street, which probably started in the 1960s. They are still in business, but they don't talk much to Caucasians. Pyung Wa is on Baldwin Street.

Some years ago Stephen Yu of Victor Food Products wanted to expand his company. So he sold half of his interest in the company to members of the Rajneesh spiritual community. During the next few years the company didn't make money, so a guy named something like Bodhi-dharma moved in and put pressure on Stephen. Things began to go down hill. A number of his best workers left and started competing companies. T'ang, his foreman, left and started a company in Toronto (John doesn't know the name) that sells only to the Chinese market. Eventually Victor Foods declared bankruptcy. Address: Soy City Foods, Toronto, ONT, Canada.

1900. Lucking, Evelyn. 1989. Tetra Pak moves its headquarters and main library to Lausanne, Switzerland, from Lund, Sweden (Interview). *SoyaScan Notes.* May 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The new address is Tetra Pak Rausing S.A., Case Postale 181, 1009 Pully/Lausanne, Switzerland. The move took place in about 1987. There is no one person in the company specifically in charge of soymilk.

Note: According to David Wiesenfeld in Connecticut, the packs should be called "Tetra Brik Aseptic cartons" and never Tetra Packs, etc. By 1990 the company had started to use the term "Ever-Fresh" instead of "aseptic" for marketing. Address: Marketing Services Mgr., Tetra Pak Inc., 200 Van Dorf Rd., Aurora, ONT, L4G 3G8, Canada. Phone: 416-727-0171.

1901. *FDA Consumer.*1989. Not like mother made. 23(4):30-31. May.
• ***Summary:*** Describes the alleged illegal sale of Edensoy soymilk as "quality substitute" for mother's milk by Eden Foods of Michigan. "By 1985, the new soy drink accounted for one-third of Eden Foods' $5.5 million annual sales, and 35 percent of sales of all similar products in the nation's health food market, according to industry reports."

"Because of the illness in Canada–the sole report of injury from Edensoy–Eden Foods voluntarily issued a nationwide Class I recall..."

1902. Preisnitz, Heidi. 1989. Between the cracks: Making tempeh a family business–A series of profiles about people who are living the art they believe in. *Natural Life (Ontario, Canada)* Spring.
• ***Summary:*** A photo shows "The Noble Bean family: producers of tempeh and growers and distributors of Shiitake mushrooms at their home-based workplace near Elphin, Ontario." All are standing on an old pickup truck.

1903. Samman, Samir; Khosla, P.; Carroll, K.K. 1989. Metabolism of low density lipoprotein apolipoprotein B in rabbits fed semipurified diets containing casein or soy protein isolate. In: L.A. Johnson, ed. 1989. New Technologies for Value-Added Products from Protein and Co-Products: Symposium Proceedings. Ames, Iowa: Center for Crops Utilization Research. 312 p. See p. 69-72. Unnumbered. [10 ref]
• ***Summary:*** Contents: Introduction. Experiment 1: Turnover of LDL. Experiment 2: A cross-over study of LDL kinetics. Experiment 3: Receptor-dependent uptake of LDL. Discussion. Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada.

1904. Central Soya Co., Inc. 1989. Central Soya to purchase Canadian processing plant (News release). Fort Wayne, Indiana. 2 p. June 27.
• ***Summary:*** "Central Soya Company, Inc. has agreed to purchase the Canadian Vegetable Oil Processing Operation (CVOP) of Canada Packers, Inc. in a move to further strengthen both its soybean processing and its new canola processing business. CVOP operates a plant in Hamilton, Ontario, that crushes soybeans and canola and manufactures lecithin. The purchase, subject to regulatory approvals, is expected to be completed in September...

"The Hamilton plant, a port facility with 130 employees, serves Eastern North America, and draws beans from Southwestern Ontario and canola from Western Canada...

"Canada Packers, the parent company of CVOP, operates several vegetable oil refineries, some of which are supplied with crude oil by CVOP...

"Headquartered in Fort Wayne, Indiana, Central Soya operates more than 65 plants and facilities worldwide. Central Soya is a member of the Ferruzzi Agro-Industrial Group, based in Ravenna, Italy." Address: Barry G. Collinsworth, Fort Wayne, Indiana. Phone: (219) 425-5591.

1905. Thomas, R.; deMan, J.M.; deMan, L. 1989. Soymilk and tofu properties as influenced by soybean storage conditions. *J. of the American Oil Chemists' Soc.* 66(6):777-82. June. [14 ref]
• ***Summary:*** After soybeans have been stored for 8 months, the amount of protein extracted into soymilk decreases by about 14% compared with the initial extractability, whether the soybeans are stored at 20º or 30ºC, at relative humidities of 65% or 85%. Tofu made from soybean that were stored at 85% relative humidity became less uniform in microstructure near the end of the storage period. The volume of whey resulting as a by-product of the tofu increased with soybean storage time. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

1906. Chandra, Ranjit Kumar; Puri, S.; Hamed, A. 1989. Influence of maternal diet during lactation and use of formula feeds on development of atopic eczema in high risk infants. *British Medical J., Clinical Research edition* 299(6693):228-230. July 22. [17 ref]
• ***Summary:*** Eczema was less common and milder in babies who were breast fed. Of the three formulas tested, casein hydrolysate caused the least eczema (22%), followed by soy milk (Prosobee, 63%), and cow's milk (70%). Address: Memorial Univ. of Newfoundland, Janeway Child Health Centre, Newfoundland A1A 1R8, Canada.

1907. Dawson, R.J. 1989. Concerns in regulating vegetable food proteins. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 230-33.
• ***Summary:*** "Vegetable food proteins, being nutrients and not additives in most countries are subject to general food legislation, which is based on quality protection, safety, nutritive value and organoleptic criteria. In addition they are subject to regulation for use as food ingredients. There are many countries in the world, e.g., Belgium, Canada, Denmark, Finland, France, Federal Republic of Germany, India, Ireland, Italy, Japan, Luxembourg, Netherlands, New Zealand, Peru, Sweden, U.K., U.S.A. and EEC, which have established national and group regulations for the use of vegetable proteins in food.

Contents: Assessment of the present situation. Codex Alimentarius Commission: It was established as an intergovernmental body in 1962 by FAO and WHO to ensure fair practices in international trade and protect the health of the consumer; It has established more than 200 individual commodity standards. Creation of a Codex Committee on Vegetable Proteins (CCVP) in 1978. Activities of the CCVP: Elaboration of international standards for vegetable protein foods. Codex criteria applicable to commodities: Regulation of the use of vegetable proteins in food, use of VPP [vegetable protein products] for their functional properties, use of VPP to increase content of utilizable protein, use of VPP in partial or complete substitution of the animal protein in foods, use of VPP as sole protein source in products with new identities, quantitative methods for the differentiation of vegetable and animal protein. Address: Food and Agriculture Organization of the United Nations, Via Delle Terme di Caracalla, 00100 Rome, Italy.

1908. deKieffer, Donald E. 1989. Government-imposed restrictions on international trade in proteins. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 17-24.
• ***Summary:*** Contents: Abstract. Introduction (Theory of competitive advantage, cartelization, deregulation). The problem: World oversupply of protein products. Government interventions in oilseeds: The European Community (proposed EC consumption tax, European import barriers, EC policy on rapeseed, Spain's domestic consumption quota, Spain's export subsidies, Portugal's domestic consumption quota), Brazil (differential export taxes, preferential export financing, tax exemptions and deductions, minimum price system), Argentina (the Reembolso, the differential export tax system, price support system), Malaysia (differential export duty system), Japan, the United States (the guaranteed loan program, PL-480 and GSM credit programs, tropical oils bill, the drought bill, import barriers), Canada. Government interventions in dairy trade: European Community, United States, Canada. Government interventions in dairy trade. Discussion.

"Japan is a major importer of oilseeds and oilseed products... Imports of U.S. soybeans for crushing alone amounted to $784 million last year." However Japan "maintains a monopolistic import regime that combines high tariffs and nontariff trade barriers designed to protect Japan's processing industries." Japan's government "requires that formula feed contain specific amounts of domestic cornmeal and 2% fish meal for on-farm mixing intended for resale. These requirements limit the incorporation of alternative products in the mixture. The U.S., for example, has been able to export soybeans to Japan, but not soymeal. If Japanese farmers were able to eliminate expensive fish meal from the feed, exporters argue, they could replace it with imported soybean meal."

A photo shows Donald deKieffer. Address: Pillsbury, Madison & Sutro, Suite 1100, 1667 K St. N.W.,

Washington, DC 20006.

1909. Hesser, J.M. 1989. World food uses of vital wheat gluten. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 116-22. Contains 2 pictures and 12 tables. [11 ref]
• ***Summary:*** Contents: Abstract. Introduction: Functional properties: Composition and general properties, Codex Alimentarius International Standard for vital wheat gluten, viscoelasticity, water absorption, pH effects, flavor, nutritional properties, Protein Efficiency Ratio of wheat gluten blended with soy flour in various ratios.

Applications: Milling and flour fortification, bakery products, breakfast cereals, meat, fish and poultry products, pasta, cheese analogs and pizza, nutritional snacks, breadings, batter mixes, coatings and flavorings, pet foods, aquaculture feeds. New applications.

World production, consumption and capacity: Comparison of wheat gluten production by major geographical areas–1980 and 1987, 1987 EEC wheat gluten capacity and production by country, worldwide end uses for wheat gluten in 1980 and 1987. World market: Overview of 1987 supply and trade by major geographical regions, Australian, European and North American wheat gluten consumption by end-use amount (in 1,000 tons) and percent, Argentine wheat gluten demand by end-use, Japanese wheat gluten demand by end-use. Product quality. Acknowledgment. A photo shows J.M. Hesser.

The Protein Efficiency Ratio of wheat gluten is low (only 0.8), compared with 2.0 for soy flour; but a 30:70 blend has a PER of 2.4.

The world's major wheat gluten producing areas in tons (1980 / 1987) are: Europe 29,500 / 132,300 (89% of this is produced in EEC countries), North America (USA, Canada, and Mexico) 30,000 / 54,000, Australia 24,000 / 45,000, South America 2,000 / 7,000, Japan 3,000 / 6,700.

1987 EEC wheat gluten production by country: Netherlands 24,000, United Kingdom 22,500, Germany 22,000, France 20,000, Others 11,800: Total: 118,300.

Changes in worldwide end-use patterns for wheat gluten 1980 / 1987 (percent): Baking 77 / 63, milling (flour fortification) 4 / 14, meats 0 / 5, pet foods 10 / 8, cereals 3 / 2, other 6 / 8.

Overview of 1987 wheat gluten production / net imports / consumption by major geographical regions (tons): Europe (EEC) 118,300 / -20,000 / 98,300, North America 54,000 / 35,600 / 89,600, Australia 45,000 / -26,900 / 18,100, Japan 6,700 / 3,300 / 10,000, South America 7,000 / -2,500 / 4,500. Address: International Wheat Gluten Assoc., 4510 W. 89th St., Prairie Village, Kansas 66207. Phone: 913-341-1155 or 1156.

1910. McKinnon, P.J.; Christensen, D.A. 1989. Canola meal for livestock and poultry. In: T.H. Applewhite, ed. 1989. Proceedings of the World Congress on Vegetable Protein Utilization in Human Foods and Animal Feedstuffs. Champaign, IL: American Oil Chemists' Society. xii + 575 p. See p. 449-62. [43 ref]
• ***Summary:*** Contents: Abstract. Introduction. Nutrient content of canola meal. Canola meal for pigs. Canola meal for poultry. Canola meal for dairy cattle.

"Canola meal could be considered an early progeny of biotechnology. Canola was genetically developed from rapeseed to result in an oilseed that yields a protein meal low in sulphur containing compounds referred to as glucosinolates." A photo shows one of the authors. Address: 1. Canola Crushers of Western Canada. No. 170, 14315-118 Avenue, Edmonton, Alberta, Canada T4L 4S6; 2. Dep. of Animal and Poultry Science, Univ. of Saskatchewan, Saskatoon, SASK, Canada S7N 0W0.

1911. Reeder, John. 1989. U.S. import/export statistics on soy products (Interview). *SoyaScan Notes.* Aug. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John's specialty is tracking statistics on fats, oils, and oilseeds, plus natural gums and resins. The main publication carrying soy-related import statistics is titled "U.S. Imports for Consumption: U.S. Census Bureau Publication IM146." It is published by the Foreign Trade Div. of the U.S. Census Bureau and is available in a monthly published paper version, or on microfiche, or in electronic database form. With soy, it covers soybeans (Heading/subheading 1201.00), soy flour (1208.10), and soy sauce (2103.10). Miso and tofu statistics are lumped in with hundreds of other minor products in the catch-all basket category "Edible Preparations."

In the tariff part of the report, for each item there is an article description, units of quantity (e.g. kg), and rates of duty (general, special, or 2). For example, soy sauce has a general duty rate of 3%, which is granted to all "most favored nations." The "Special" column shows that it is imported duty free from countries with the codes A (Generalized System of Preferences, applied to many developing countries), E (CBERA or Caribbean Basin Economic Recovery Act), or IL (Israel). CA = Canada gets a reduced rate of 2.7%, which will be reduced to zero over the next 5-10 years under the recent Canadian Free Trade Agreement. Column 2, indicates that a 35% import duty applies to most Communist countries, except those (such as China) with "Most Favored Nation" status, when get the General rate.

In the imports part of the report, under each product (e.g. soy sauce, thin = soy sauce) there is a listing of countries, sorted by region from which the USA imports. After each country there may be the codes GSP (the amount of product imported under the lower General System of

Preferences rate, because it has been shown to be as domestic product of that country), and OGN (the amount of product imported under the General rate because it has not been proved to be a domestic product), plus a total for the two. Then statistics for the current month and cumulative from January to date, of the quantity imported (which may be reported in two sets of units, Qty-1 and Qty-2, such as pounds and gallons), the customs value (the Free on Board or FOB value declared by the importer at the foreign port of export), and the calculated duty received by the U.S. based on the customs value.

The report is also available at federal depository libraries, such as Univ. of California at Berkeley. On 1 Jan. 1989 the way of reporting data was changed to the "Harmonized Tariff Schedule of the United States" from the old "Tariff Schedule of the United States" (TSUS) system. This changes some nomenclature and makes the U.S. reporting more similar to that of may other countries, which facilitates determining tariffs and quotas on given items.

Corresponding export statistics are given in another report titled "Schedule B: U.S. Exports of Domestic Merchandise, FT410" published monthly by the U.S. Census Bureau. Each product has the same product code (e.g., soy sauce is 2103.10).

Another publication is the Directory of International Trade Analysts: Commodity Agreements.

Good databases for searching soy-related data are Disclosure, and Nexus (business news). Address: U.S. International Trade Commission, Agricultural Div., Washington, DC 20436. Phone: 202-252-1319.

1912. Chandra, Ranjit Kumar; Singh, G.; Shridhara, B. 1989. Effect of feeding whey hydrolysate, soy and conventional cow milk formulas on incidence of atopic disease in high risk infants. *Annals of Allergy* 63(2):102-06. Aug. [26 ref]

• ***Summary:*** Some of the infants were fed Similac or Isomil infant formulas. "It is concluded that exclusive breast feeding for more than 4 months is partially protective against the development of atopic disease among high risk infants. Among those not breast-fed, feeding a milk/whey hydrolysate formula to infants at high risk because of history of atopy among first-degree relatives reduces the incidence of atopic disease and this approach is significantly beneficial compared with breast feeding without maternal dietary restriction or feeding a soy-based formula." Address: Dep. of Pediatrics, Memorial Univ. of Newfoundland, and the Immunology Lab., Janeway Child Health Centre, St. John's Newfoundland, Canada.

1913. National Oilseed Processors Association. 1989. Yearbook and trading rules 1989-1990. Washington, DC. [iv] + 123 + 11 p. 23 cm.

• ***Summary:*** On the cover (but not the title page) is written: Effective August 1, 1989. Contents: Constitution and by-laws. Officers and directors. Executive office. Members. Associate members. Standing committees. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}), sampling of soybean meal {at origin} (automatic mechanic sampler, pneumatic probe sampler, probe sampler), sampling of soybean meal (at barge loading transfer facilities), official weighmaster application, semi-annual scale report, certification of installation of automatic sampler & mechanical divider (at origin), semi-annual certification of automatic sampler & mechanical divider (at origin), certification of installation of automatic sampler & mechanical divider (at barge loading transfer facility), semi-annual certification of automatic sampler & mechanical divider (at barge loading transfer facility), official referee laboratories (meal), official NSPA soybean meal sample bag. Soybean meal export trading rules: Minimum blending procedures for export meal blended at ports, sampling of soybean meal (at vessel loading facilities), weighing of soybean meal (at vessel loading facilities), certification of installation of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of automatic sampler & mechanical divider (at vessel loading facility), semi-annual certification of scales at vessel loading facilities. Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (NSPA tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Uniform soybean oil export contract. Foreign trade definitions (for information purposes only) Appendix 1.

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers (executive committee)–Chairman: James W. Lindsay, Ag Processing Inc a cooperative [AGP], Vice Chairman: C. Lockwood Marine, Central Soya Co., Inc. Secretary: John March, Cargill, Inc. Treasurer: John Burritt, National Sun Industries, Inc. Immediate past chairman: John G. Reed, Jr., Archer Daniels Midland Co.

Executive staff: President: Sheldon J. Hauck. Executive vice president: Brose A. McVey.

Board of directors (alphabetically by company; each member company may have up to two representatives on the board; only the first of these may vote): James W.

Lindsay & William C. Lester, Ag Processing Inc a cooperative. John G. Reed, Jr. & Michael D. Andreas, Archer Daniels Midland Co. John March & Thomas O. Palmby, Cargill, Inc. C. Lockwood Marine & David H. Swanson, Central Soya Co., Inc. David B. Mulhollem & Bernard Steinweg, Continental Grain Co. Ian White & Donald G. Foster, Elders Oilseeds Inc. Merritt E. Petersen & Stan Eichten, Honeymead Products Co. John Burritt & Jeff Berkow, National Sun Industries, Inc. John M. Wright & Henry E. O'Bryan, Owensboro Grain Co., Inc. Sewell L. Spedden & William Bohan, Perdue Incorporated. Paul D. Otto & J. Richard Galloway, Quincy Soybean Co. James K. Smith & Richard E. Bell, Riceland Foods, Inc. Thomas L. Harper, Southern Soya Corp. D. Daryl Houghton & P. Coleman Townsend, Townsends, Inc.

Executive office, Washington, DC: President, Sheldon J. Hauck. Executive vice president: Brose A. McVey. Administrative asst.: Steven C. Kemp. Legislative asst.: Elizabeth A. Loudy. General counsel: Elroy H. Wolff, Sidley & Austin. Special counsel: Richard O. Cunningham, Steptoe & Johnson.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board and votes}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 34. After the name of each personal member is given with his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Ag Processing Inc a cooperative (21); Van Buren, Arkansas; Eagle Grove, Iowa; Manning, Iowa; Mason City, Iowa; Sergeant Bluff, Iowa; Sheldon, Iowa; Dawson, Minnesota; St. Joseph, Missouri. Omaha, Nebraska. Archer Daniels Midland Co. (23); Archer Daniels Midland Co. (24); Little Rock, Arkansas; Augusta, Georgia; Valdosta, Georgia; Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Taylorville, Illinois; Frankfort, Indiana; Des Moines, Iowa; Fredonia, Kansas; Destrehan, Louisiana; Mankato, Minnesota; Red Wing, Minnesota; Kansas City, Missouri; Mexico, Missouri; Clarksdale, Mississippi; Fremont, Nebraska; Lincoln, Nebraska; Fostoria, Ohio; Kershaw, South Carolina; Memphis, Tennessee. Cargill, Inc. (20); Osceola, Arkansas; Gainesville, Georgia; Lafayette, Indiana; Cedar Rapids, Iowa; Des Moines, Iowa; Iowa Falls, Iowa; Sioux City, Iowa; Washington, Iowa; Bloomington, Illinois; Chicago, Illinois; Wichita, Kansas; Burnsville, Minnesota; Minneapolis, Minnesota; South Savage, Minnesota; Wayzata, Minnesota; Kansas City, Missouri; Fayetteville, North Carolina; Raleigh, North Carolina; Sidney, Ohio; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (13); Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Bellevue, Ohio; Marion, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (8); Guntersville, Alabama; Chicago, Illinois; New York City, New York. Elders Oilseeds Inc. (3); Culbertson, Montana; Blaine, Washington. Honeymead Products Co. (3); Mankato, Minnesota. National Sun Industries, Inc. (3); Minneapolis, Minnesota. Owensboro Grain Co., Inc. (4); Owensboro, Kentucky. Perdue Incorporated (4); Salisbury, Maryland; Cofield, North Carolina. Quincy Soybean Co. (6); Helena, Arkansas, Quincy, Illinois. Riceland Foods, Inc. (7); Stuttgart, Arkansas. Southern Soya Corp. (2); Estill, South Carolina. Townsend's Inc. (2); Millsboro, Delaware.

Associate Members: ADM Agri-Industries Ltd., Windsor, Ontario, Canada. Beatrice / Hunt-Wesson, Fullerton, California. Best Foods, a Unit of CPC International Inc., Englewood Cliffs, New Jersey. Bestel Inc., Minneapolis, Minnesota. C&T Refinery, Inc., Richmond, Virginia. Con Agra Poultry Co., El Dorado, Arkansas. Conti-Quincy Export Co., New York City, New York. Louis Dreyfus, Wilton, Connecticut. Empire Kosher Poultry, Inc., Mifflintown, Pennsylvania. Garnac Grain Co., Overland Park, Kansas. Goldman Sachs–J. Aron Div., New York City, New York. K&L Feeds, Inc., Selinsgrove, Pennsylvania. Kraft Food Ingredients Corp., Glenview, Illinois; Memphis, Tennessee. Krohn Trading Limited Partnership, New Orleans, Louisiana. Lever Bros Company, Inc., New York City, New York. Overseas Commodities Corp., Minneapolis, Minnesota. Pilgrim's Pride Corp., Pittsburg, Texas. Pillsbury Co. (The), Overland, Kansas; Minneapolis, Minnesota. Procter & Gamble Co., Cincinnati, Ohio. Purina Mills, Inc., St. Louis, Missouri. Ralston Purina Co., St. Louis, Missouri. Schouten International, Inc., Minneapolis, Minnesota. A.E. Staley Manufacturing, Decatur, Illinois. Alfred C. Toepfer International, Inc., New York City, New York (Knud Winkelman). Tradecom, Inc., Boca Raton, Florida. Van Den Bergh Foods Co., Chicago, Illinois.

Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given–Crusher committees: Canola, flaxseed, safflower seed, sunflower seed. International trade policy. Soybean meal trading rules. Soybean oil trading rules. Safety, health, and loss prevention. Technical. Address: 1255 Twenty-Third St., N.W., Washington, DC 20037. Phone: 202/452-8040. Telex: 248959. Fax: 202/833-3636.

1914. *SoyaScan Notes.*1989. Sixty-five books on tofu have been published in the Western World since 1970 (Overview). Sept. 17. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Definition: The work must be more than 48 pages long, must have the word "tofu" or its equivalent in the title, and must be written in a non-Asian language. It may be either a popular or a professional/technical work.

By country of publication, 40 of these books (61% of the total) have been published in the USA, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil. By region of publication: North America 46 (71% of the total), Europe 15, East Asia 5, and Latin America 1.

By language, 49 of these books (75%) have been published in English, 7 in French, 6 in German, and 1 each in Italian, Portuguese, and Swedish.

By year of publication, the first of these books was published in 1974; eleven (17% of the total) were published from 1974 to 1979, forty (62%) from 1980 to 1984, and fourteen (22%) from 1985 to 1989. The peak years of publication were 1981 and 1982, when 12 books on tofu were published each year.

The best sellers among these books have been *The Book of Tofu* by Shurtleff & Aoyagi (1975, Ballantine Books, Autumn Press, and Ten Speed Press, about 450,000 copies sold in English editions and 9,000 in foreign editions), *Tofu Cookery* by Louis Hagler (1982, The Book Publishing Co., about 175,000 copies sold), *The Tofu Cookbook* by Cathy Bauer and Juel Andersen (1979, Rodale Press, 105,500 copies sold, still in print), *Cook with Tofu* by Christina Clarke (1981, Avon Books, 57,500 copies printed; still in print), and *Tofu, Tempeh, & Other Soy Delights* by Camille Cusumano (1984, Rodale Press, 25,688 copies sold; out of print). These best-sellers have sold a combined total of 822,700 copies, and all tofu books have probably sold over 1 million copies.

1915. **Product Name:** Tofu Burgers, Teriyaki Burgers, Miso Burgers, Tofu Nuggets [Plain, or Barbeque].
**Manufacturer's Name:** La Soyarie.
**Manufacturer's Address:** 25 rue St. Etienee, Hull, QUE, J8X 1H5, Canada. Phone: 613-235-5356.
**Date of Introduction:** 1989. October.
**Ingredients:** Incl. tofu, soy sauce.
**How Stored:** Refrigerated.
**New Product–Documentation:** Soya Bluebook. 1989. p. 102-03. Contact: Koichi Watanabe, President.

SoyaCow Newsletter. 1994. July/Sept. Mr. Koichi Watanabe is president of La Soyarie in Hull, Quebec.

1916. **Product Name:** Nature's Patties [Original, or B.B.Q.].
**Manufacturer's Name:** Nature's Path Foods Inc.
**Manufacturer's Address:** 170-2540 Simpson Rd., Richmond, BC, V6X 2P9, Canada. Phone: 604-278-2923.
**Date of Introduction:** 1989. October.
**New Product–Documentation:** Soya Bluebook. 1989. p. 103. Contact: Arran Stephens, President [formerly founder and president of Lifestream, a natural foods distributor in Canada].

1917. Agriculture Canada Research Station, Horrow. 1989. Description of variety: Harovinton. Harrow, Ontario, Canada. 2 p. Nov. 9. Unpublished typescript.
• ***Summary:*** Harovinton is a "Large-seeded tofu-type soybean. Registration date: May 24, 1989. Registration No.: 3118... Harovinton, tested as OX733, was developed by the Agriculture Canada Research Station, Harrow. This variety was derived from the cross Vinton x Vinton 81, made in 1982." Vinton is susceptible to Phytophthora (a fungus) and tolerant of metribuzin (an herbicide) applied at recommended rates. Growth habit: indeterminate.

"Seed characteristics: Shape: spherical flattened. Size: large; 23 grams per 100 seeds. Seed coat: dull yellow. Hilum colour: yellow. Oil content: lower than Corsoy (18.6% vs. 20.1%). Protein content: higher than Corsoy 79 (44.9% vs. 40.9%). Seed coat peroxidase activity: high.

Maturity: 3100 heat units (Ontario). Performance and adaptation: In yield trials conducted in 1986, 1987 and 1988 at Harrow, Malden and Woodslee, Harovinton yielded about 6% less than Corsoy 79. Harovinton is shorter, more lodging tolerant, and earlier maturing than Corsoy 79... The yield of soymilk and tofu per kilogram of Harovinton beans was 4% and 11% greater, respectively, than for Corsoy 79." Maintenance of breeder seed: Agriculture Canada, Research Station, Harrow, Ontario. Canadian distributor: Canada Packers.

Note 1. This is the earliest document seen (Jan. 2010) that mentions the soybean variety Harovinton.

Note 2. The letterhead reads: "Agriculture Canada, Food Production and Inspection Branch, Seed Division." No address is given. Address: Harrow, Ontario, Canada.

1918. Harovinton: New Canadian domestic soybean variety. Large-seeded and/or vegetable-type soybean. 1989. Seed color: Yellow (dull), hilum yellow.
• ***Summary:*** Sources: Agriculture Canada Research Station, Harrow. 1989. "Description of variety: Harovinton." Harrow, Ontario, Canada. 2 p. Unpublished typescript. Nov. 9. Harovinton is a "Large-seeded tofu-type soybean. Registration date: May 24, 1989. Registration No.: 3118."

Ontario Ministry of Agriculture and Food. 1990. *Soybean Buyers Mission from New Markets, July 1-7, 1990.* Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. See p. 40. Appendix 5, titled "Development of soybean varieties," states: "Researchers at the Agriculture Canada Research Station in Harrow have focused on the

development of varieties for the manufacture of tofu. With help from the OSGMB, a new variety named Harovinton, was recently released from this breeding program. This variety was higher than average protein content, white hilum and large seed size to better suit the needs of the tofu and soymilk manufacturers.

"To secure the best marketing and promotion of this variety to overseas buyers, exclusive marketing rights were given to the International Trade Division of Canada Packers Inc. and Wheatley Elevators Ltd. Both companies have extensive soybean export trading experience."

Bernard, Richard L. 1999. "Historical list of publicly developed North American specialty soybean cultivars to 1989: Large seeded." Year released: 1989. Developed by: Ontario, Harrow. Cultivar: Harovinton. Maturity group: I. Parentage: *Hm Rpsl-c* from Vinton x Vinton 81.

Note: Harovinton was the first food-grade soybean variety developed in Canada for the Japanese tofu industry, and helped pave the way in establishing Canadian food-grade soybeans as a premium quality product in Asia. Address: USA.

1919. O'Bannon, Kathleen. 1989. The last years of Victor Food Products in Canada (Interview). *SoyaScan Notes.* Dec. 7, and 6 March 1990. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The problems started in three areas. First was the growing competition from small Chinese tofu companies. There were 6-10 little Asian-Canadian tofu makers, some making tofu in a bathtub in their basements, and selling it for cut-rate prices. One even attempted to get into Stephen's plant, disguised as a food inspector, to spy on/study his equipment. Stephen wanted to get out of the "Chinese tofu wars." The second cause was the two gay followers of the Indian guru Rajneesh. One day they came seeking employment, saying that they had made tofu in Poona for years. George Harris (Bodhi-dharma) was the good guy; Kathleen hired him after a careful background check. But when he left to live on the Rajneesh commune in Oregon (where he ended up staying for nearly a year), his partner, Kirti (Joe Lewis) took his place. Joe Lewis turned out to be a malicious character–at times pure evil. The Rajneesh commune in Oregon would not let him live there, which angered him. He became the bookkeeper and office manager. He made life so difficult for Kathleen and ruined the good friendship that she had had with Stephen Yu (he deliberately connived to turn each against the other), that she finally felt compelled to leave the company in 1984. Joe Lewis falsified the company books, making it look like the company had more accounts receivable that was the case; this led local banks to refuse key loans to the company and to distrust Stephen. Joe Lewis charged the company for more time than he was working, messed up the office, then finally got into a big fight with Stephen. The Rajneesh guys were talking about suing Stephen. Finally Stephen fired them both.

The third cause was Bing, who was one of Stephen's long-time key production employees. He was very chummy with the Rajneesh guys. Bing left and told everything he knew to somebody else down-town, found somebody with money, set up a business in Chinatown and competed fiercely with Stephen.

After Kathleen left the first time but before Joe Lewis was fired, someone approached Stephen Yu about a joint venture making soymilk ice cream with a company named Tofu Parlor (formally Tofu Restaurant and Ice Cream Parlors, 304 Victoria Ave. East, Regina, SASK, S4N 0N7, Canada [near Saskatoon]. Owner: Wayne Knipple), which was already making soymilk ice cream. Stephen found one or two investors. One was John van Kessel, a 55-year-old chain-smoking accountant and computer expert, who was part of Tofu Parlor, invested money in Victor Food Products (VFP), liked to tell dirty jokes. The other was Larry Ginsberg. Stephen did a great deal of original research, using custom-designed equipment, to develop a new process for making excellent quality soymilk and ice cream from that soymilk. He worked with Guelph University researchers (such as Dr. Leni DeMann, a woman) to eliminate the gas and chalky flavor from soymilk. Kathleen and others thought this ice cream tasted better than Haagen-Dazs, and many people felt that the soymilk and the ice cream had great potential. But the Chinese on the Board of Directors VFP wanted Stephen to behave like a Chinese and just make tofu. They were opposed to the ice cream venture and they tied his hands.

In order to get around this limitation, in late 1985 or early 1986 Stephen decided to start a new corporation (at the same address as VFP–102 Hymus Road, Scarborough, Ontario, Canada M1L 2C9) named Tofu Master Inc. Van Kessel and Ginsberg owned part of it. The Chinese on the board of VFP had nothing to do with the new company. VFP would focus its marketing on the Asian-Canadian market and Tofu Master would aim for the Caucasian market. Stephen could now do more R&D. Stephen then brought in some new people to do the soymilk production. Tofu Master launched a firm and a soft tofu Tofu Master brand, and Entice (the soy ice cream) under the Tofu Parlor brand. The ice cream was made in a small, independent dairy in Toronto, and certified kosher. It came in individual small (100 ml) cups in chocolate, strawberry, and vanilla flavors. Stephen had the rights to sell to foodservice institutions and hospitals; Tofu Parlor in Saskatchewan had rights to the retail market. Saskatchewan also made a Tofu Parlor Bar (ice cream on a stick). Stephen also developed a remarkable vacuum packed Tofu Master Gourmet Tofu (in Barbecue, Herb & Green Onion, Cheese, and Bacon flavors). When he vacuum packed this tofu (either sliced or in whole cakes) in a remarkable machine he had, the process sucked the flavors

into the tofu. But the banks wouldn't loan him the money to market the products because of what Joe Lewis had done, so it never was launched. By this time Stephen had lost so much face with the Chinese that they didn't want him to do anything that was not Chinese. He had to fight this attitude the whole way. Tofu Master was apparently the cause of the company's bankruptcy, for the project was never completed.

After Stephen fired Joe Lewis, Kathleen came in for 7 months. She ran the plant, did the recipes and promotion and marketing, and straightened up the office after Joe Lewis had messed things up. She helped promote the new ice cream. After that she got in an accident when she tripped on something and fell. She injured her neck, her lungs collapsed, and her back and neck were out for a year. She was very ill and had to have surgery. She left in Sept. 1987 and moved to Santa Fe, New Mexico, where she is now living. The company was still very much alive at that time. The company sold the equipment from the bankruptcy in April 1988. When she returned in November 1988 to do a health foods trade show in Toronto she was very surprised to hear that Victor Food Products had gone under. She can only assume that the people who were calling the shots had made big mistakes. Kathleen was very close to Stephen and felt very badly about what happened to him. Apparently after the bankruptcy he went to work with his brother-in-law who ran a Gold Chin fast food Chinese restaurant franchise.

Kathleen first made tofu in the early 1970s in her barn. She has followed the Sikh philosophy, was a yoga teacher for 8 years. He company in Toronto was named Natural Light Publications. She wrote a cookbook titled "Tofu: How to do it book," which was scheduled to be published in the winter of 1983 and to be sold with a stainless steel tofu kit that Stephen Yu was developing, to be produced in China. The kit turned out to be too expensive to make, so neither the kit nor the book was ever sold. Kathleen is now writing a book on "Nutrition and the Bible" and doing 6 home videos on cooking with natural foods. She wants to lecture on health and nutrition. Udo Erasmus has written a good book titled *Fats and Oils* published by Alive Press. It argues that butter is a safer product than margarine. Heating oils causes the free radicals to break off. They circulate in the body, causing many diseases and problems. Address: 227 Ojo de la Vaca, Santa Fe, New Mexico 87505. Phone: 505-983-5961.

1920. Rogers, Wally. 1989. The Continuous Cooking System sold by Bean Machines, Inc. (Interview). *SoyaScan Notes.* Dec. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Larry Needleman began to develop this cooker in about 1983. It is a continuous, pressurized system. The first one was purchased by Silver Sprout in San Francisco in 1984 for about $17,000. They were never able to make it work, and eventually they junked it. On 1 Aug. 1984 Wally Rogers moved to California and soon he and Steve Fiering bought Bean Machines from Larry Needleman. Wally and Tim Huang did a lot of work on the cooker at the University of California at Davis. The second one was ordered by Tomsun Foods, but they never installed or paid for it. That one is now used by China Rose (formerly Rosewood Foods and The Soy Plant) in Ann Arbor, Michigan. Purchased by them in Dec. 1988, it has a capacity of 300 gallons/hour. Two other systems have been sold: One in Sept. 1989 to Unisoya in Montreal, Canada (600 gallons/hour), and one in Nov. 1989 to Soyfoods of America (800 gallons/hour; Tim Huang now works there). Mr. Eng Lim of Mandarin Enterprises in Richmond (near Vancouver), BC, Canada, is also thinking of buying one. The current price of a 300 gallon/hour system with a cooking time of 2 minutes is $28,500 FOB Hayward, California. The corresponding price of a 600 gallons/hour system is $34,500. The system's modular design allows for simple and inexpensive expansion. The system meets all dairy standards, operates at 230ºF and is CIP.

Note: After the interview, Rogers sent two product description sheets and a color photo of the system.

Update: Talk with Wally Rogers. 1991. Nov. 4. Wally has now installed 6 continuous cookers. The latest showcase system, installed at cost, is at Wildwood Natural Foods in Santa Cruz. It reduced the number of workers by two and saved 2 cents/pound on the cost of making tofu. Wally sold a system to a dairy in Peru. They plant to blend soymilk with cow's milk to reduce the cost; the soymilk will cost 18 cents/liter. They will also sell soymilk in plastic bags. Wally now offers a soymilk system that can produce soymilk whose flavor is as good as that from an Alfa-Laval or an APV/DTD system but whose equipment cost is only 10-15% as much–with a continuous cooker. Tim Huang has left Soyfoods of America for a new career in medicine in Chicago, Illinois. Wally likes the Nichii Microsoy flakes.

Update: Talk with Wally Rogers. 1994. Aug. 22. Other companies that have purchased his Continuous Cooking System are: Wildwood Natural Foods (California; 300 gallons/hour capacity), Les Aliments Alfa (Bolivia, South America; 600 gallons/hour), Northern Soy (Rochester, New York; 500 gallons/hour), Mandarin Enterprises (Vancouver, BC, Canada; 300 gallons/hour). White Wave (Boulder, Colorado).

He now also sells a centrifuge for soymilk extraction, priced at $19,500 FOB San Francisco. It is made in China and has no expensive screens to replace. The capacity is approximately 150 to 200 kg of dry soybeans per hour, with a 3 horsepower motor.

Talk with an owner of a Bean Machines cooker. 1998. Aug. 25. The slurry is cooked in a long tube, under pressure, at various temperatures starting at 212ºF, reaching a peak of 230ºF, and falling to 200ºF at the exit end.

Address: President, Bean Machines Inc., 390 Liberty St. #2, San Francisco, California 94114. Phone: 415-285-9411.

1921. **Product Name:** Soya Nova Marinated Tofu Slices [Spicy, Curry, or Barbecue].
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C-28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1989.
**Ingredients:** Tofu: Organically grown soybeans, nigari, well water. Marinade: Water, tamari soy sauce, unrefined oil (safflower and toasted sesame oil), herbs, spices, fresh onion, garlic.
**How Stored:** Refrigerated.
**New Product–Documentation:** Letter from Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Dec. 14. Soya Nova Tofu Shop introduced this product in 1989.

1922. Al-Guboury, A.A.; Jawad, I.M. 1989. [Chemical characteristics of oils extracted from soybean varieties grown in Iraq and the effect of planting sites on their properties]. *J. of King Saud University, Agricultural Sciences* 1(1-2):121-132. [26 ref. Ara; eng]*
Address: Agricultural and Water Resources Center, Jadiriyah, Baghdad, Iraq.

1923. Thompson, Lilian U. 1989. Nutritional and physiological effects of phytic acid. In: J.E. Kinsella and W.E. Soucie, eds. 1989. Food Proteins. Champaign, Illinois: American Oil Chemists' Society. vii + 440 p. See p. 410-31. [134* ref]
• ***Summary:*** Contents: Introduction. Phytic acid in the food and its reactions. Mineral Bioavailability: Method of processing, added vs. endogenous PA [phytic acid], the presence of other mineral binding components such as dietary fiber, oxalic acid and tannins which may compete with PA for binding with minerals, dietary protein concentration, presence of dietary, intestinal or bacterial phytase, whether the PA is taken in the same meal as the mineral source or in separate meals, presence of other minerals, metabolic adaptation to a high PA diet. Protein digestion and absorption. Starch digestion and absorption. Phytic acid and colonic health. Conclusion. Address: Dep. of Nutritional Sciences, Faculty of Medicine, Univ. of Toronto, Toronto, Ontario, Canada.

1924. IITA Grain Legume Improvement Program (GLIP). 1989? IITA/IAR&T/IDRC Soybean utilization project. Ibadan, Nigeria: International Institute of Tropical Agriculture. (Internal circulation). Undated. *
• ***Summary:*** IDRC is the International Development Research Centre of Canada. Address: Ibadan, Nigeria.

1925. Gouvernement du Québec, Ministère de l'Agriculture, des Pêcheries et de l'Alimentation, Conseil des Productions Végétales du Quebec (CPVQ). 1990. Soya culture [Soybean cultivation]. Quebec, Canada. 47 p. AGDEX 141/20. 28 cm. [Fre]
• ***Summary:*** This French-language booklet about soybean production and utilization in Quebec, was compiled by a committee of 12 experts. Contents: Introduction: The importance of soya, perspectives and the development of the market. Preparation of the soil and seedbed prior to sowing: The particular needs of soya, soil management, reduced working of the soil. Fertilizers: The needs of soya. Inoculation: The needs of soya, techniques of inoculation. Sowing: Choice of the proper variety/cultivar, seed drills, sowing. Harvest, drying and storage. Utilization of soya in animal production: Advantages and disadvantages, technological treatments applied to whole soybeans, feeding of dairy cows, feeding of pigs and sows, feeding of poultry, quality of processed soybeans, conclusion.

Table 1 shows that soybean area in Quebec increased from 1,400 ha in 1981, to 12,500 ha in 1988, and an estimated 19,000 ha in 1989. Soybean production grew from 7,200 tonnes in 1985, to 28,600 tonnes, to an estimated 45,000 tonnes in 1989. Table 2 shows 9 soybean processing plants in Quebec; these have a total annual capacity of 95,000 tonnes. There are no solvent extraction plants. The largest plants do extrusion and micronization.
Address: Quebec.

1926. Smith, Preston. 1990. Agriculture's free trade advocate: How Aussies deal with fewer subsidies. *Soybean Digest.* Jan. p. 28d-e.
• ***Summary:*** "At this Senate confirmation hearing, Secretary of Agriculture Clayton Yeutter, who might consider himself the epitome of free-traders, said, 'We need to break the bonds between government and agriculture.'...

"During his last three years as U.S. Trade Representative, Yeutter headed up the U.S. proposal to the General Agreement on Tariffs and Trade (GATT) to phase out all trade-distorting agricultural subsidies worldwide. But no matter how bold this proposal is, Yeutter has reiterated that the U.S. will not 'unilaterally disarm' its agricultural subsidies until everybody else does.

"If the U.S. were looking for a model of free enterprise and trade–and one that shows a unilateral phase-out of subsidies–it could easily look to Australia. In 1982, the Australian government decided to deregulate its industries, such as banking, shipping and agriculture. In short, Australia has decided not only to speak free trade, but also to phase out farm subsidies, regardless if any other country does...

"A 1987 Economic Research Service study says Australia had one of the lowest producer subsidy equivalents (PSE) in the world. PSE is the portion of

farmers' gross income that comes from government assistance... During 1982 to 1986, Japan had an average PSE of 72%, the European Community was at 35%, Canada 31%, the U.S. and New Zealand each 25% and Australia 11%...

"In 1901, Australia gained independence from Britain... Unlike the U.S., where programs date from the 1930s and have grown in the 1980s, the Australian key farm programs started in the late 1950s and faded in the 1970s."

1927. Quigley, Brian. 1990. New developments with Bremer Foods Corp. and soy yogurt in Quebec (Interview). *SoyaScan Notes.* Feb. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** His cultured soy yogurt, which he feels is of higher quality than any American soy yogurt he has tasted, will be called Yofrutti. It may also contain Bifido bacteria [Bifidus]. The company is also working on an ice cream that will be called Bremer's Natura. A unique dairy law in Quebec prohibits the sale of any non-dairy yogurt in Quebec, but does not prohibit manufacture for export. The basis of all their products is their unique process for making a good-tasting, high-yielding soymilk. Address: Bremer Foods Corp., 3600 Casavant West, St. Hyacinthe, QUE, J2S 8E3, Canada. Phone: 514-773-1105.

1928. **Product Name:** Herb Tofu.
**Manufacturer's Name:** Kaslo Soyfoods. Renamed Silverking Soyafoods in Oct. 1990.
**Manufacturer's Address:** Box 933, Kaslo, BC, V0G 1M0, Canada. Phone: 604-353-7726.
**Date of Introduction:** 1990. February.
**Ingredients:** Soymilk, coagulant, garlic, basil, dill, chives, parsley, sometimes a little tarragon (fresh or dried).
**Wt/Vol., Packaging, Price:** Bulk.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Greg Lundh, owner. 1990. Oct. 20. He started making this product in Feb. 1990. The company name at that time was Kaslo Soyfoods. In Oct. 1990 he changed the company name to Silverking Soyafoods and moved to Silverking Group, Box #20, Nelson, BC V1L 1C9, Canada. He uses Corsoy or Vinton soybeans, usually certified organic. He buys some of his soybeans from Sunrise; brokers will not deal with his company because it is too small. The herbs listed above are added to the soymilk before coagulation. The only organic soybeans grown in Canada are grown in Ontario and they are all bought up by a big tofu maker in Toronto. He has no labels for any of his products. They are all sold bulk, to avoid packaging. 50% of all his products are sold door to door in homes, and 50% are sold in bulk pails to stores.

1929. Yu, Stephen. 1990. New developments with tofu in Toronto (Interview). *SoyaScan Notes.* March 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Stephen is again working with soyfoods after the bankruptcy of Victor Food Products in about June 1988. He is now working as a consultant, and his main project is to "consolidate all of the tofu makers in the area and help them to go into the market as one team." He is also trying to act as a communicator between the Soybean Marketing Board/Agricultural Canada and the tofu makers. He also has a family, with children aged 3 and 6, to support. In the last few days he has visited 6-7 tofu companies in Toronto; they all welcomed him with open arms and gave him the information he requested–although he does not know how true it is. He would like to work as a researcher for Soyfoods Center in Canada ($50/hour), and to trade information. He will send a list of what he wants to know. He is interested in knowing the amounts of various soyfoods (such as Vitasoy soymilk, Kikkoman soy sauce and tofu, etc.) imported to Canada.

He started to make soyfoods in Canada in Feb. 1978. His first three products were tofu, tofu pudding (daufu-fa), and soymilk.

He knows a man in Canada who is doing a market study of the low-tech soyfoods industry in that country. He is an independent person who is working for the Soybean Marketing Board. The study concerns the overall picture of soybean use in Canada. The most interest is in tofu, and Stephen is doing the tofu and soymilk section of the report. Stephen can put us in touch. Stephen personally lost $750,000 when Victor Food Products went Bankrupt.

Update: Talk with Stephen Yu on 8 July 1990. The report cost about $70,000 to produce. He is not sure if it will be published. He is not busy nowadays, but does not feel like working on a history of his company. Address: 525 Highland Road West, Kitchener, ONT, N2M 5K1, Canada. Phone: 519-741-0922.

1930. O'Bannon-Baldinger, Kathleen. 1990. Re: Stephen Yu of Victor Food Products petitioned the Canadian government to allow magnesium chloride to be used as a food ingredient. Letter to William Shurtleff at Soyfoods Center, March 9. 1 p. [1 ref]
• ***Summary:*** The petition was accepted in July 1981, and published in the Canadian government's list of acceptable food additives. The use was permitted only for tofu at a maximum level of 0.3%, calculated as the anhydrous salt. Address: 227 Ojo de la Vaca, Santa Fe, New Mexico 87505. Phone: 505-983-5961.

1931. *SoyaScan Notes.*1990. Use of *Bifidobacterium* species in dairylike soymilk products (Overview). March 15. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** A growing number of soy yogurts, dairy milks, and cultured milks (such as Yakult) in Europe, Japan, and Canada are being promoted as containing species "Bifido"

(pronounced BIF-uh-doe) or "Bifidus" bacteria. Keum et al. (1984) used *Bifidobacterium bifidum* as a starter for soymilk yogurt with good results. Sakai et al. (1987) showed that *Bifidobacterium breve* grown on soymilk assimilates the flatulence-causing oligosaccharides stachyose and raffinose in preference to sucrose, and hydrolyzes galactosyl compounds.

Talk with Brian Quigley of Canada. 1990. March 15. These bacteria are found in the large/lower intestine of newborn infants, but they gradually disappear a few months after birth. If these bacteria are ingested by adults, they supposedly go into the digestive tract, where they survive and kill bad bacteria. By eating a food containing these bacteria, an adult is replenishing his/her digestive tract with a bacteria found there at birth but lost. Some studies ascribe amazing benefits (anti-carcinogen, etc.) to this organism. Chris Hansen's Lab. in Milwaukee, Wisconsin, has done extensive work on this organism in Europe and the USA. They have worked with Yoplait in France and other companies to develop good strains. Products now containing the bacterium are often labeled "BA" or "Bifido Active." In Japan, the bacteria are sold in pill form. Researchers at Laval University in Quebec, Canada, have also done considerable research on these bacteria.

*Bergey's Manual of Systematic Bacteriology* (1984) lists 32 species of *Bifidobacterium,* including the species *bifidum* and *breve* (p. 1424). "Distinction of two serovars have been made. Serovar A predominates in the feces of human adults, while B predominates in that of neonates (Reuter 1963)."

A search for the term "Bifidobacterium" the MEDLINE database from 1986 to the present lists 78 publications.

1932. *Agri-Book Magazine (Exeter, ONT, Canada).*1990. Beans in Canada. 16(5):1-36. March.
• ***Summary:*** This entire issue is about soybeans in Canada, with emphasis on soybean production. Articles include: Reviewing ridge tillage. Grading by oil and protein content. Soybeans submit to taste test (by Japanese tofu buyers). The Quebec bean comeback. Weed control in soybeans. Takeya Miso Co. Soybean cyst nematode. Soybean breeding.

1933. Ontario Soybean Growers' Marketing Board. 1990. A profile of the Canadian soyfoods market–Characteristics and potential. Box 1199, Chatham, ONT N7M 5L8, Canada. vi + 40 p. March. 28 cm. Spiral bound.
• ***Summary:*** Contents: 1. Introduction: Background, study objectives. 2. Research procedures: Data limitations, data collection (data sources). 3. The soyfood market: Soyfood production and utilization, domestic production, imports and exports (introduction, whole soybeans, soy flours and meals, soy oil, soy sauce, protein substances, cream and other substances, bran & soy hulls, soy meal oil cake), balance, conclusions regarding opportunities.

4. Soybeans for food purposes: Natto beans (background, market characteristics, market potential), whole bean soyfoods (introduction, soynuts, full fatted soy flours, soymilk, tofu, soy sprouts, tempeh, miso, natto, soy sauce), foods from soy ingredients (introduction, defatted soy flakes, soy protein concentrate, soy protein isolates, textured soy protein, consumption and imports). 5. Organic soyfoods: Introduction, organizations (major players, labelling requirements, certification), organic soybeans, organic soyfoods, market opportunities, recommendations.

6. Market estimates: Introduction, conversion rates, market characteristics (introduction, ethnic characteristics, immigration trends, implications), soyfood consumption (production). 7. Soyfood products: Introduction, new products (whole bean products, products from soy components), existing products (products with potential for growth). 8. Marketing strategy: Introduction, respondent requests (background), market opportunities (traditional soyfoods, new products), systems development (system information needs, human resources, production research), institutional needs.

This study was commissioned by the Ontario Soybean Growers' Marketing Board to provide a description of the Ontario soyfood industry. "Production and utilization: In the 1988 crop year, approximately 1.12 million tonnes of soybeans were produced on 1.28 million acres in Ontario. Approximately 86% of the soybeans were sold through the Board, with the remainder being fed or retained on the farms where they were grown. In 1988, 860 thousand tonnes of soybeans were crushed in Canada to produce soybean meal and soy oil, and 272 thousand tonnes were exported.

"Imports and Exports: Canada had a negative balance, a deficit, of almost $190 million in the value of soybeans and soy products traded. This is just over half a million dollars per day. Our largest single area of exports is whole soybeans for human foods. The percentage of these beans going to the major markets in 1988 were: USA, 37%; Pacific Rim Countries, 34%; and Europe and other 29%. Our greatest imbalance in exports and imports is in soybean meal or oil cake. Canadian crushers are unable to maximize their sales of oil cake because of difficulties in selling surplus soybean oil in the US. Soy oil being sold into the US presently faces a tariff of 18% which is decreasing at the rate of 2.25% per year as per the Canada United States Trade Agreement...

"Institutional development: We suggest the Board initiate the establishment of a Soyfood Development Association similar in structure and function to the Canola Council of Canada... There is a need to begin to bring all industry stakeholders together to systematically identify problems, information and research needs; develop data bases; and cooperatively promote the soyfood industry."

Soybeans for food purposes: The total volume of soybeans consumed as soyfoods in Vancouver (BC), Toronto (Ontario), and Montreal (Quebec) was estimated at about 6,000 tonnes, and imports were estimated to be equivalent to 8,000 tonnes of soyfoods.

Miso: One large Vancouver producer and one Toronto producer estimated that the volume of soybeans used to make miso in Canada is only about 35 tonnes/year.

Modern Soy Protein Products: Soy flour, concentrates, isolates, and textured soy protein products. Roughly 2,400 tonnes of soybeans are used in Canada for the production of these products, and 5,600 tonnes of soybeans are used to make the imported products (only bakery flour and extruded flour are made in Canada). Almost 1,000 tonnes of soy protein concentrates and isolates, and 400 texture soy proteins were imported, 83% from the USA. Total exports were 800 tonnes, of which 578 tonnes went to the USA. Soy flour (full-fat): The term "flour" generally signifies that the material has been ground finely enough to pass through a 100-mesh screen. Only relatively small volumes of full-fat soy flours are used directly as human foods. Some are used in bread, crackers, and pastry products. 5 companies in Canada make 1,538 tonnes of soy flour worth $495,000.

Natto: Canadians sells roughly 8 to 10 thousand tonnes of natto beans in Japan each year. Natto-type beans are "created by screening out the small beans from among regular food grade soybeans which have white hilums" (p. 15). In Japan about 100,000 tons/year of soybeans are used to make natto. Recently, Canada (via 3 companies–First Line Seeds, W.G. Thompson, and King Grain) has supplied about 10% of this market. Ontario produces about 8,000 to 10,000 tonnes of natto beans. Competition is expected to increase from U.S. seed breeders.

Soymilk: There are presently no large Canadian soymilk manufacturers. A plant is being built by an international trading company near Vancouver (YHS Pacific Fruit Concentrates Ltd., owned by Yeo Hiap Seng). It will supply both the local market and the Western U.S. market when it goes on stream later this year. A high proportion of imported soymilk is organic. Two brands account for 3/4 of all imports: Edensoy and Vitasoy. A high proportion of all soymilk imports are certified organic. This emphasis makes it difficult for Canadian producers to compete because of the shortage of organic soybeans in Canada. Consumption of soymilk is increasing at about 10% a year. Prices range from $1.50 to $2.75 per liter, with the organic product commanding the higher prices. Just under 100 tonnes of soybeans are used to produce soymilk in Canada: Vancouver 42 tonnes, Toronto 30 tonnes, Montreal 25 tonnes, plus imports 240 tonnes. 1 kg of soybeans produces 16.5 kg of soymilk.

Soynuts: The volume of soynuts made in Canada is quite small. One Toronto company [Grove Country Foods Canada, Inc.; they were in business 1-2 years, but were out of business by Jan. 1991], which began operation in Nov. 1988, sells a line of roasted nuts, which are roasted in the USA and chocolate-dipped in Ontario. Production was only a few tonnes in 1989 and is estimated to be about 10 tonnes in 1990.

Soy sauce: In 1986, according to Statistics Canada data, 2,503 tonnes of soy sauce were produced by 6 firms. The value was $2,161 per tonne for a total of $5,411,000. In 1988 Canada imported 5,680 tonnes of soy sauce valued at $4 million, primarily from China, the United States, Hong Kong, and Japan. Exports were 58 tonnes valued at $65,000. The major Canadian producers are China Lily and Sun Fresh in Toronto, Wong Wing and VH in Montreal, and Golden Dragon in Vancouver. The value of Toronto production is currently estimated to be about $5 million.

Soy sprouts: One Toronto manufacturer uses 20-25 tonnes of soybeans per year.

Tofu: About 3,300 tonnes of soybeans are used to produce tofu in Canada, more than any other soyfood. The volume of soybeans used is estimated at 1,400 tonnes in Toronto, 1,200 tonnes in Quebec (when a relatively large operation in Hull [La Soyarie, Inc.], near Ottawa, which exports to Ontario is included), 625-700 tonnes in Vancouver, and 125 tonnes for imported tofu. 1 kg of soybeans produces 2.4 kg of tofu.

Tempeh: Only about 33 tonnes of soybeans are used to make tempeh in Canada, and an estimated 15-20 tonnes in Ontario. Imports are relatively small. 1 kg of soybeans produces 1.6 kg of tempeh. Very few firms produce tempeh in Canada. One producer claims to have over half the Ontario market. A major distributor suggested they sold 4-5 times as much tofu as tempeh.

Soybean crushing: Since 1986 the number of firms crushing soybeans and producing soy oil has decreased from 3 to 2 [Central Soya owns two plants; in 1990 they bought the Canadian Vegetable Oil Processing (CVOP) plant in Hamilton, Ontario, formerly owned by Canada Packers Inc. They purchased Victory Soya Mills in Toronto in early 1985. So now 2 firms own 3 plants]. In 1986 the three plants made 95,108 tonnes of crude soy oil worth $57,271,000. Two firms made deodorized soy oil, but the volume and value were confidential. Less than $2 million of any type of soy oil is imported.

Consumption of soyfoods in Canada is strongly linked to Asian-Canadians. A table (p. 32) shows that according to the 1986 census, there were about 444,000 people of East- and Southeast Asian origin living in three major Canadian cities: Vancouver (155,105 people comprised 11.2% of the city's population), Toronto (234,325 people comprised 6.8%), and Montreal (55,585 people comprised 2.4%). Thus Toronto was by far the largest market, but Vancouver had the highest density of Asian-Canadians. A similar table (p. 33) updates the previous table to 1988. Immigration has increased sharply since then.

Note: This is the earliest document seen (Feb. 2002) that uses the term "food grade" (or "food-grade") in connection with Canadian soybeans (see p. 15). Address: Chatham, ONT, Canada.

1934. *Soyanews (Sri Lanka).*1990. Soya workshop. 12(1):3. Jan.
• ***Summary:*** "A workshop was held by 'Plenty Canada' at Rochdale Hall, Multi-Purpose Cooperative Society Building in Kandy on March 19th 1990 for Soya entrepreneurs in the Soya field. 115 Soya processing entrepreneurs participated.

"The opening ceremony was graced by the Field Director, Plenty Canada Mr. P. Dudding. The inaugural speech was made by Dr. M. Sikurajapathy, Co-ordinator Soyabean Food Research Centre, Gannoruwa... The entrepreneurs displayed their varieties of soya food preparations and dishes... Participants were very happy to have gathered informations, that are useful in their small scale business and self employments.

"All participants were treated generously by Plenty Canada with varieties of Soya delicacies, Soya milk and a sumptuous lunch finished with delicious soy ice cream."

Next to this article, and continued on the next page, is a listing of "soya products sales outlets," with their addresses. In Kandy, there are 29 soya distributors and retailers (all co-ops), and 2 super markets. There are also 27 other private outlets (no co-ops), mostly in Kandy. These include: Jane Soya Products (Anniwatta, Kandy); Dharshana Soya Products (Halloluwa, Kandy); 2 Soya Sales Outlets (one at 44 Main St., Osupensala, Mawanella, and one at Henawella, Kadugannawa). In Colombo, there are 8 super markets and 4 private outlets.

Address: [Raj Gupta, ProSoya Foods International Inc., 801-275 Slater Ave.], Ottawa, ONT, K1P 5H9, Canada. Phone: 613-745-9115 or 613-744-4401.

1936. Caplan, Frieda. 1990. Selling tofu at Frieda's Finest, and maintaining good, fresh quality (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Frieda founded this company in 1962. She used to be president but Karen Caplan, her daughter (age 35) is now president. The original company name was Frieda's Specialties Inc. They added Frieda's Finest to the name in about 1976-77. The company carries "The highest quality selection of exotic produce and the most incredible edibles." She started selling tofu under the manufacturer's label in Jan. 1977 for a Chinese New Year promotion to see if the product would sell (she does not recall who the manufacturer was). Bill Mizono of Azumaya introduced her to Hinode Tofu Co. and Mr. Yamauchi. On 26 June 1977 she began to sell firm tofu under the Frieda's Finest label. It was made by Hinoichi in Los Angeles. "Hinoichi is the most wonderful company to work with. They have great integrity. We are their only account where they pay for all the film and all the packaging. I think we're now their biggest customer." In 1983 the brand was changed from Frieda's Finest to Frieda of California. Since 1979 tofu has been one of Frieda's best-selling products, and has been in the top 6 since 1982.

As part of Frieda's Consumer Program, there are recipes on each package, and the consumer is invited to write in for more recipes and information. The firm tofu has different recipes from the soft. The latter was just introduced this week. Bess Petlak is the consumer relations specialist. They get a great many letters about tofu, with a surprising percentage coming from first-time users. About 90% of these are requesting more recipes and compliments. The company has two product lines that contain tofu: The Slim Line (low calorie) and the Foods of the Oriental Line. There is a recipe brochure for each product line. The Slim Line Vegetable Guide (1987) defines tofu but does not give a recipe.

Frieda's has a program to keep tofu stored at low temperatures. First, the tofu is pasteurized and quickly cooled by the manufacturer, then all of it is packed in crushed ice in waxed cardboard boxes. On each case carton is written "Tofu. Pasteurized–Perishable. 12/19 oz. tubs. This side up. Keep at 32º-35ºF. Do not freeze. Keep refrigerated."

Hinoichi delivers daily within 30 minutes after the tofu is made and they are located right around the corner. In hot weather, Frieda adds more ice. Frieda ships all tofu in refrigerated trucks, and retailers are advised to keep it as cold as possible without freezing it. "Much of our tofu is sold on a bed of ice. They ice all the cut melons. There isn't a department that doesn't have an icing machine. Since Jan. 1977 we have never issued one credit in all these years on quality" (i.e. has had no problems with poor tofu quality) "except for one air shipment to Hawaii when 3 of the film lids came off. Each individual package lid says, 'Change water daily. Keep refrigerated.'

"I am so mad at Morinaga for the negative publicity for tofu they are putting out. This is the most destructive thing that has ever happened to the tofu industry. For me, it was totally shameful. I've never seen anything like this in the produce business in all these years–never! Its very demeaning and insulting. Like one lettuce grower criticizing another who uses pesticides. You build an industry by positives, not by negatives. If everybody does well, they'll do well. I've confronted Art Mio on these statements he's making. In addition he feels that the Maine ban on aseptic

cartons only applies to milk, not to his tofu. But industry people disagree with him." The rise of Mori-Nu aseptic tofu has not cut into her market for fresh tofu at all, but it has created a new market for aseptic soft tofu. To respond to this, Frieda is launching a fresh soft tofu this week.

In 1978 tofu was #40 on the company's list of the top 40 best-sellers. It rose to #12 in 1979, #8 in 1980, #7 in 1981, #4 in 1982, #2 in 1984, #4 in 1986, #3 in 1987, and #4 in 1988 (kiwi fruit, pearl onions, and egg rolls beat it out). Every year, without exception, tofu volume has increased, and it has increased more rapidly in recent years. Frieda's now sells over 300 products.

In 1982 Frieda addressed the Food Writers of America at the FMI and *Better Homes and Gardens*, when Doris Edie was editor, came out with a special diet and exercise edition of the magazine. In the preface it highlighted tofu and told them to buy it in their produce department. Frieda only sells her products in the produce department. Though her tofu is much more expensive than Nasoya's, it sells very well in competition on the Eastern Seaboard, Toronto, etc. People buy for quality not for price, and they buy the Frieda Line and the program–with the guaranteed refund for any returns. Address: Founder, Frieda's Finest / Produce Specialties Inc., P.O. Box 58488, Los Angeles, California 90058. Phone: 213-627-2981.

1937. Shimizu, Teruo. 1990. Recent developments at Miyako Oriental Foods (Interview). *SoyaScan Notes.* April 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Miyako is presently making about 900 metric tons/year of miso, making them the largest miso manufacturer in America. This is up 30% compared with three years ago (when the dollar/yen exchange rate changed dramatically), but there has not been much increase during the past 2 years. About 80% of sales are to the Asian-American market (including small exports to Japanese in Mexico), and 20% to the natural foods market. Westbrae, a former customer, is now buying their miso from Canada. They are now trying to increase their sales to the Korean-American market. The younger generation of Korean-Americans finds the flavor of Korean miso to be too strong. They (and some Korean restaurants) like to mix equal parts of Miyako rice miso with Korean miso. Some Korean restaurants have switched to using only Japanese miso. One reason is that the quality of Korean miso is inconsistent.

They are selling quite a bit of dry koji to Grainaissance and to Cedarlane, both of whom use it to make amazake. Two years ago Miyako purchased an expensive, automatic, computer-controlled rotary koji fermenter from Nagata Brewery Machinery Co. (the biggest company; they also sold such a machine to Takara USA, the sake maker). It is working very well for them. The only other manufacturer of such fermenters is Fujiwara in Okayama. Address: Vice President, Miyako Oriental Foods Inc., 4287 Puente Ave., Baldwin Park, California 91706. Phone: 818-962-9633.

1938. Toronto Star. 1990. Next week in the Star: The future of food–Wednesday (Ad). *Toronto Star (Ontario, Canada).* April 28. p. E37.
• ***Summary:*** "Set your cooking appliances to the 21st century as Marion Kane presents a futuristic look at some new-age recipes. From tempting tempeh to fabulous fajitas, you'll discover how to be environmentally friendly and health conscious without giving up any good, old-fashioned flavor. The food section lands Wednesday."

1939. Inforesults Ltd. 1990. Canadian soyfood directory. Brampton, Ontario, Canada. 22 p. April 6. 28 cm.
• ***Summary:*** This directory, prepared for the Ontario Soybean Growers' Marketing Board (P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8), lists individuals and organizations involved in the production of soybeans and soyfoods in Canada. The majority of listings are for commercial firms. The directory includes the name of the firm or individual, address, postal code, phone number, contact person, activities (any of 10 types, such as manufacturer, exporter, importer), products (any of 18 types, including soymilk, tofu, soybeans, or services), and whether or not the products are claimed to be organic. The various listings are sorted by province, and within province by company name. Address: Information Research Consultants, Suite 204, The Mill, 60 Queen St., East Brampton, ONT L6V 1A9 Canada. Phone: (416) 453-1174.

1940. Bagley, Hannah. 1990. Re: Recollections of soynut butter in Canada during World War II. Letter to Claire & Jim Wickens of Lafayette, California, May 6. 2 p.
• ***Summary:*** During the war she lived on Vancouver Island in Canada and was unable to get peanut butter; she doesn't know if it was also unavailable in the rest of Canada. It was called "Soya Bean Butter." She bought it in a small country store. It came in a small jar or a can like jam. The label was plain brown, stuck to the can, with a picture of a soybean on it. The product was about the same price as peanut butter. She has not seen the product for years.

Note: This is the earliest English-language document seen (April 2005) that uses the term "Soya Bean Butter" to refer to soynut butter. Address: 142 Howard Ave., Nanaimo, BC, V9R 3R1, Canada.

1941. Leggott, Merton. 1990. Flakee Mills Infranizer uses new electronic process for infrared processing of seeds, including soybeans for foods and feeds (Interview). *SoyaScan Notes.* June 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Mr. Leggott of Flakee Mills in Lincoln, Nebraska, developed this new machine and several new

processes and began to market the machine in about May 1989. The new process is called infranizing. His machines are now in operation in the USA, Canada, and Europe, and some are used to process soybeans, especially for textured livestock feeds. He has patents pending on both the process and the equipment. He feels that his equipment is much more efficient than an extruder to make livestock feeds from whole (full-fat) soybeans. He can also increase the capacity of an extruder by placing his machine upstream from it. He feels that his machine makes a product that is far superior to an extruded product in terms of nutritional value and palatability, etc. Much of the problem with extrusion is the cost of maintenance on the extruder. Any time you use heat you are using infrared radiation. One old process used gas (propane or natural gas) as the energy source. His source is electric, but both give infrared energy, as does the sun. The key to his process is the intensities/wave lengths of infrared that he is working with. His process cooks the product from the inside out. Rick Williams is his sales manager. Address: Owner, Flakee Mills Inc., 4343 N.W. 38th St., Lincoln, Nebraska 68524. Phone: 402-470-2188.

1942. *Soya International (Bar Harbor, Maine).*1990. Yves Tofu Wieners up to bat at Candlestick Park. April/June. p. 3. • ***Summary:*** This product, made by Yves Fine Foods of Vancouver, BC, Canada, will be served at San Francisco Giants baseball games in Candlestick Park, San Francisco, this year, in a new eggless variety and a larger ballpark size. This will be the second year that meatless tofu hot dogs have been available along with meat hot dogs at concession stands in the stadium.

1943. **Product Name:** Yeo's Soy Bean Drink.
**Manufacturer's Name:** YHS Pacific Fruit Concentrates Ltd. (Yeo Hiap Seng).
**Manufacturer's Address:** 11880 Machrina Way, Richmond (near Vancouver), BC, V7A 4V1, Canada. Phone: 604-277-7707.
**Date of Introduction:** 1990. June.
**Wt/Vol., Packaging, Price:** Can.
**New Product–Documentation:** Ontario Soybean Growers' Marketing Board (OSGMB). 1990. "A profile of the Canadian soyfood market–Characteristics and potential." March. p. ii, 19. "A [soymilk] plant is being established near Vancouver, BC, which will supply both that and the Western U.S. market." The plant "is being built by an international trading company." Talk with Fred Brandenburg of the OSGMB. 1991. Jan. 23. This plan is run by Yeo Hiap Seng. It opened in March 1990, and he attended the gala opening; they had the press there, a print packet, news releases, and the whole works. The plant is quite impressive and definitely state-of-the-art. They only have one line right now, making soymilk in cans. They bought a bankrupt co-op that was already making fruit juices. In early Oct. 1990 the *Vancouver Sun* and *The Province* (from Vancouver) both ran stories on the company.

Talk with Wimsey Lam of YHS. 1991. Jan. 29. The company started producing canned soy bean milk in June 1990. They presently have only one soy product.

1944. **Product Name:** Tofu Garden Patties [With Garden Vegetables or With Mushrooms and Soya Cheddar Cheese].
**Manufacturer's Name:** Yves Fine Foods Inc.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver V6A 2A8, B.C., Canada. Phone: 604-251-1345.
**Date of Introduction:** 1990. June.
**Ingredients:** With Garden Vegetables: Tofu, (water, organic soybeans, magnesium chloride), stone ground whole wheat flour, gluten, fresh carrots, green peppers, celery, onions, crushed tomato, soy grits, garlic powder, seasonings, rice syrup solids.
**Wt/Vol., Packaging, Price:** 6 oz package. Retails for $1.99 (7/90).
**New Product–Documentation:** Soya International. 1990. April/June. p. 22. The ingredients for Tofu Garden Patties with Mushrooms and Soya Cheddar Cheese are: Tofu, soya cheese (tofu, soy oil, casein, salt, citric acid, lecithin, natural flavor, guar gum, annatto seed), stone ground whole wheat flour, gluten, mushrooms, soy grits, garlic powder, seasonings, rice syrup solids. Contact: Yves Potvin.

Spot in Health Foods Business. 1991. Jan. p. 76. "The burgers are made with either fresh vegetables and spices, or with mushrooms and soya cheddar cheese."

1945. **Product Name:** Yves Veggie Tofu Wieners.
**Manufacturer's Name:** Yves Fine Foods Inc.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver V6A 2A8, B.C., Canada. Phone: 604-251-1345.
**Date of Introduction:** 1990. June.
**Ingredients:** Tofu (water, organic soybeans, magnesium chloride), soy protein, canola oil, wheat gluten, unmodified wheat starch, natural smoke flavors, beet powder (coloring), paprika (coloring), tamari sauce, spices, guar gum.
**Wt/Vol., Packaging, Price:** 10 oz package. Retails for $2.19 (7/90). 12 oz vacuum pack retails for $3.29 (6/92, California).
**New Product–Documentation:** Soya International. 1990. April/June. p. 22. Contact: Yves Potvin. Spot in Health Foods Business. 1991. Jan. p. 76. Shows a small black-and-white photo of the package.

Ad (color, 2/3 page) in *Natural Foods Merchandiser.* 1992. April. p. 94. "Yves Veggie Cuisine." Shows packages of Veggie Wieners and Burger Burgers.

Product with Label purchased at Open Sesame in Lafayette, California. 1992. June. 3.5 by 10 inches. Vacuum pack. Red, yellow, blue-green, and black on white. Color photo of a wiener with trimmings in a bun. "Contains no meat. Cholesterol free. Made with 100% organic soybeans.

No preservatives. Low in saturated fat. Since 1985 we have been committed to providing you with the highest quality in healthy, easy to prepare entrées. Always cholesterol and preservative free..." The company name is now Yves Veggie Cuisine Inc. The president is Yves Potvin.

1946. Hsiao, Laurence. 1990. Role of Taiwan soybean importers. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 13-15. [Eng]

• ***Summary:*** In Taiwan, soybeans are imported primarily from the USA. During the days of the Soybean Importers Joint Committee (SIJC) other countries producing soybeans complained that the Taiwanese market was, in effect, closed. However since soybean import liberalization on 1 July 1988, the SIJC was abandoned, yet almost all soybeans are still imported from the USA.

While SIJC was active, each importer declared his requirement based on import volume the preceding year plus or minus 10%. Then the Committee reported to the Government Authority, which invited tenders from suppliers. Because soyfood manufacturers had to rely on soybean oil millers for their supply, the quality was greatly restricted. Hence Taiwanese consumers did not enjoy the high quality of tofu and soymilk found in other countries.

Although soybean imports are bound by the "Sino-America Grains Agreement," which requires that Taiwan purchase at least 1.2 million tonnes/year of soybeans from the USA, the importers now have more flexibility in dealing with the suppliers. Thus the market is now more price-oriented. But food soybeans are still imported in the same way. Hence, soyfood manufacturers still complain about their poor quality.

Preliminary research has shown that the yield of tofu from Ontario special quality white hilum soybeans is 15% higher than from U.S. #2 soybeans. In Taiwan, most food soybeans are sold in 50 kg bags in small lots of 10-25 tonnes/lot. The author advises Ontario suppliers to promote their soybeans on the basis of yield and quality, and to try to build these factors into their price structure. In conclusion, in Taiwan the market for food soybeans is undeveloped. The time is ripe for Canadian soybean exporters to penetrate this market. "Initially you may find that price is a major factor. Do not be discouraged."

Addendum: The following documents are available from the Ontario Soybean Growers' Marketing Board: 1. Sino-America Grains Procurement Agreement. 2. Bulk Carrier Charter Agreement. 3. Soybean Importers Joint Committee Tender Invitation. 4. Chronology of 1988 Soybean Shipments to Taiwan. 5. Sales Agreement of Paraguayan Soybeans. Address: Vice President, Sun Ford Conglomerate Corp., 21 Lin 1 Street, Taipei, Taiwan. Phone: (02) 321-1005.

1947. Loh, Michael. 1990. An overview of export opportunities in the new markets. In: Ontario Ministry of Agriculture and Food, ed. 1990. Soybean Buyers Mission from New Markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. July. See p. 10-12. [Eng]

• ***Summary:*** It has been almost 20 years since the first container load of soybeans grown in Ontario was shipped to Japan. By the end of 1989, Ontario was exporting more than $25 million worth of soybeans to Japan, Hong Kong, Malaysia, and Singapore. Now the new markets for Ontario soybeans are Korea, Taiwan, the Philippines, and Indonesia.

In Korea, trade restrictions have eased on soybeans and other agricultural products. With hefty trade surpluses, Korea is under pressure to balance trade. Korea soybean imports jumped from only 428,000 tons in 1979 to 1,100,000 tons in 1989. About 120,000 tons of the imported soybeans are for food use, as follows: Tofu 100,000 tons (83% of the total), soymilk 17,000 tons, and soy sprouts 2,000 tons. Nearly all of Korea's soybean imports come from the USA.

Taiwan ranks second, after Japan, in terms of best prospects for agricultural exports. The strong Taiwanese currency has made exports less expensive. Burgeoning trade surpluses have led to increasing pressures from trading partners, like the USA, to balance trade. So Taiwan has liberalized imports by lowering tariffs and eliminating non-tariff barriers. "U.S. soybean exporters took advantage of their dominant market position in Taiwan to expand sales. Backed by aggressive trade negotiators, the American soybean industry has enhanced its competitive position by securing a 5-year supply agreement contract with the Government of Taiwan. The agreement calls for the purchase of 5.7 million tons of U.S. soybeans over a five-year period from July 1, 1986 to June 30, 1991. As a result the United States has over 75% of the market share. Taiwan's annual requirements of food soybeans are estimated at 250,000–300,000 tons. With recent market opening measures announced by the Taiwanese government, direct sales of food soybeans to end-users are now permitted."

Philippines: In Feb. 1987 Michael led a mission to the Philippines, and contacted a buyer. Ontario soybeans were first shipped to that country later in 1987. The Philippines import about 10,000 to 15,000 tons/year of soybeans for food use, and this is expected to increase in the near future. Filipro, Inc., which is the Philippines' licensee for Nestle S.A., reported increasing market acceptance of its re-launched powdered soya milk product Vita (chocolate flavor), and a soy-based baby cereal named Ceresoy.

Indonesia: Ontario soybeans (worth $4.2 million) were first sold to Indonesia in 1980 after Canada's first mission there that year. 90% of the 1.7 to 2.0 million tons of

soybeans required by Indonesia are used for food. Tempeh is a delicious Indonesian food and Indonesia requires over 750,000 tons/year of soybeans to make tempeh. Address: Senior Representative, Asia/Pacific Region, Ontario Ministry of Agriculture and Food (OMAF), Tokyo, Japan.

1948. Ontario Ministry of Agriculture and Food. 1990. Soybean buyers mission from new markets, July 1-7, 1990. Tokyo, Japan: Ontario Ministry of Agriculture and Food. 61 p. 30 cm. Saddle stitched. [Eng]
• ***Summary:*** This conference took place in Ontario, Canada. On the mission were two buyers each from Indonesia (P.T. Indofood Interna Corp., BULOG), Philippines (Universal Robina Corp., Paritas Trading Corp.), and Taiwan (Sun Ford Mfg. Corp, Great Wall Enterprise Co.). Michael Loh of OMAF/Tokyo was the mission leader. Contents: Background and purpose. Mission members. Itinerary. Seminar agenda. Canada's soybean industry, by Fred Brandenburg of OSGMB. An overview of export opportunities in the new markets (Korea, Taiwan, Philippines, Indonesia), by Michael Loh of OMAF, Tokyo. Role of Taiwan Soybean Importers, by Laurence Hsiao of Sun Ford Conglomerate Corp. Soybean market in Indonesia, by A. Saifullah of BULOG, Indonesia. 1952. Sand, Avraham. 1990. Pioneering soyfoods and natural foods in Israel (Interview). *SoyaScan Notes.* Sept. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Avraham first went to Israel in 1975 and stayed for about a year. During this time he and Avraham Leider and one other person founded Israel's first natural foods company, named Amud Ha Shachar (Pillar of Dawn) and located in Jerusalem. The first product they made was granola, followed by whole wheat flour, bulgur wheat, brown rice (which they packaged), and date bars. With this company established, a number of Americans and other westerners who had recently immigrated to Israel and were connected with the company approached the Sachnut, the Jewish government agency which helps finance Jewish cooperative settlements. They asked to be given a moshav. A moshav is like a kibbutz (a cooperative agrarian, rural settlement) except that the families have their own homes and land, and the children live at home. In 1976 the Sachnut gave the group a piece of land, infested with scorpions, upon which nine other groups had tried and failed since 1948 to establish a successful community. The Sachnut also financed a small natural foods factory and bakery on the moshav, complete with an oven and a packaging machine. The moshav was named Moshav Me'or Modi'im, located at Doar Na Hamercaz, in the Judean Hills between Jerusalem an Tel Aviv, Israel.

Avraham returned to North America for several years. While living in a community of 5-6 people in Nova Scotia, Canada, he was introduced to tofu by people who made tofu for the community, but he did not make tofu there himself.

Between 1975 and 1990 Avraham has spent a total of 8 years in Israel. The rest of the time he was in the USA or Canada or travelling. Avraham returned to the moshav in 1978 and that year he established Israel's earliest known tofu shop as part of Pillar of Dawn. The tofu was made in

the same bakery room as the granola, especially in the evenings when the granola wasn't being made. Originally the community scale shop was established solely to make tofu for the 25 or so families living on the Moshav. Tofu production was small, averaging 50 lb/day of tofu one day a week, using a Corona mill grinder powered by a washing machine motor. The tofu was curded using bittern (nigari) from a salt factory on the Dead Sea. The Moshav owned the tofu company collectively and financed it. Avraham was the motivating force that got the operation started with temporary help initially from Yaacov Sack and Moshe Reuben. About 3-6 months after tofu production began, they started to make tempeh. Then Ben Zion Solomon joined Avraham 6-12 months after the company started and they worked together like equal partners for several years as the tofu and tempeh makers. Solomon was also making quite a bit of miso on the moshav (with a little help from Sand). They also introduced soymilk. At some point, they began to sell their tofu and miso at a few health food stores in Jerusalem. As far as Avraham knows, his was the first company to make tofu, tempeh, miso, or soymilk in Israel. They developed a 1-page informational pamphlet, written in Hebrew on one side and English on the other, explaining what tofu was and how it was made, plus some recipes. At that time Israelis, other than recent immigrants from America, didn't know what tofu was.

They reached the point where they decided to buy large scale equipment (from Takai) and set up a real commercial shop on the moshav that could produce 500 to 1,000 lb/day of tofu. The Sachnut indicated that they would be willing to help set up this new business. So in about 1979 or 1980 Avraham traveled to the USA and did a lot of study to learn about tofu equipment, products, and processes in small to medium sized shops. He visited about 20 tofu shops nationwide (most were very open and helpful) and collected information in a notebook. He worked at the Soy Plant in Ann Arbor, Michigan, for approximately a year in about 1980. From time to time he shared information with his father, Ralph Sand, who was doing research on non-dairy cheese and tofu at Anderson Clayton at the time. At the last minute the Sachnut pulled out and decided not to finance the project, so the expansion never took place. They continued to make tofu on a small scale. But the moshav was suffering economically so in about 1981 Avraham and his wife, unable to make a living there, left and returned to the USA. The little soyfoods plant dissolved but shortly thereafter a commercial operation (probably Golden Jerusalem Tofu) started in Jerusalem and the people on the moshav bought their tofu from Jerusalem.

During the time that Avraham made soyfoods in Israel (1978-81) there was a lot happening with soya. There was a man called the "Soya King" ("Hamelech Soya," probably Eliahu Navot) who was famous in Israel as the country's soybean pioneer. Avraham thinks he lived in Herzlia/Herzliyya, just north of Tel Aviv, but he died in about 1979 or 1980 several months before Avraham was able to meet him. Avraham went to his home town and met his widow, who told him a little about her husband's work with soya.

The most popular food use of soybeans in the late 1970s was in textured soy flour (like TVP). These products were made in Israel by 1 or 2 big companies and sold in supermarkets in very stylish packages indicating that the manufacturers were well established. There were several flavors and large amounts were sold. He does not know the name or address of the manufacturer, but he got the feeling that Eliahu Navot had at least helped inspire these products; he may have helped to develop them.

In America, Avraham set up a soy deli named Sand-Munches in Madison, Wisconsin. They bought tofu from Bountiful Bean in Madison and made and sold tofu sandwiches, nori rolls, tofu salad, tempeh salad, various tofu spreads. They sold to health food stores and had a sandwich cart on the campus.

Avraham was in on the soyfoods wave at the very beginning, but after it became more established and mainstream he felt that his work had been done in that area, so he moved into the field of aroma therapy, inhaling aromatic essential oils from herbs, where he has been working for the last 8-9 years. It is a very powerful form of herbal medicine. He has developed several product lines under the Tiferet brand (a term taken from the Tree of Life in the Cabala) which he markets in health food stores in the USA and overseas. Address: 210 Crest Dr., Eugene, Oregon 97405. Phone: 503-344-7019.

1953. Lo, Yvonne. 1990. Recent developments with Vitasoy in Hong Kong and America (Interview). *SoyaScan Notes.* Sept. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Nasoya Foods, Inc. is now a subsidiary (not a division) of Vitasoy (USA) Ltd. Note that Nasoya has changed from a limited partnership to a corporation. The parent company in Hong Kong will soon change its name from Hong Kong Soya Bean Products Co. Ltd. to Vitasoy International Holdings Ltd. They had a hard time choosing between "Vitasoy International" and "Vita International." Choice of the former name may indicate that "there will be a whole new look at the company philosophy." Presently the company produces many non-soy beverages. The labels of all of the company's products made in Hong Kong will have to be reprinted.

Building a soymilk manufacturing plant in America may soon make sense for Vitasoy (USA) Ltd. "It was something we had in mind when we decided to acquire Nasoya."

The parent company has produced a 14-minute color video, The Vitasoy Story, for its 50th anniversary. Part of the company sales kit, it is available in two versions, one

narrated in English and one in Chinese. The film portion of the two is identical.

K.S. Lo's collection of Yixing Chinese teapots is now touring the USA, and he will soon be lecturing on the subject in San Francisco on Sept. 22 at the Chinese Culture Center.

Note: Concerning ownership of Vitasoy (USA) Ltd., This company was originally established by Yvonne and Irene Lo, daughters of K.S. Lo, in San Francisco in Jan. 1989 as The Soya Bean Products Co., N.A. Inc. They immediately began to import Vitasoy from Hong Kong, and to distribute it first in Canada, then after Feb. 1981 to the USA. By mid-1982 they were selling some 3.2 million cartons of Vitasoy in the USA. The venture was so successful that in April 1982, to raise capital and facilitate long-term operations with Hong Kong Soya Bean Products Co. Ltd., Yvonne and Irene sold their company to HKSBPC, which renamed the affiliate Vitasoy USA, Inc. The parent company now began to take a serious interest in the U.S. market. In 1983 U.S. sales of Vitasoy rose 60% to 5 million cartons (328,125 gallons). Address: President, Vitasoy (USA) Ltd., 99 Park Lane, Brisbane, California 94005. Phone: 415-467-8888.

1954. *Soya International (Bar Harbor, Maine).*1990. Bean Machines installs three new systems in North America. July/Sept. p. 3.
• ***Summary:*** San-Francisco based Bean Machines Inc. has recently installed their new continuous tubular cooking systems, used for making tofu and soymilk, in plants at Ann Arbor, Michigan, Duarte, California, and Quebec, Canada. Capacities range from 300 to 900 gallons/hour. Contact Bean Machines at P.O. Box 2122, Mill Valley, CA 94242. Phone: 415-285-9411.

1955. **Product Name:** Soya Nova Soya Sage Rolls.
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C-28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1990. September.
**Ingredients:** Incl. okara, tofu, brown rice, fresh onions, garlic, carrots, chili peppers (seasonal), olive oil, safflower oil, herbs and spices.
**How Stored:** Refrigerated.
**New Product–Documentation:** Letter from Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Dec. 14. Soya Nova Tofu Shop introduced this product in Sept. 1990. Labels are not yet available.

Talk with Debbie Lauzon. 1990. Dec. 28. "I now have a really cute little cottage industry. I met a master pastry chef from France named Pascal Pellerin. He worked at Tassajara in California for a while. When I saw that he was unemployed I put him at work in the tofu shop. We came up with some really nice Soyasage Rolls... They use okara and are made in French puff pastry and can be sold frozen. Just bake and serve. The inside has okara, tofu, brown rice, olive oil, herbs, spices, etc."

Leaflet sent by Deborah Lauzon. 1991. Feb. 6. "Soya Nova Tofu Shop." Describes the rolls and lists ingredients.

1956. Ford, Ashley. 1990. Milking the soybean: Asian firm opens drink plant. *Province (The) (or The Vancouver Sun) (Canada).* Oct. 3.
• ***Summary:*** "Yeo Hiap Seng Ltd. of Singapore has been turning Ontario's soybeans into high-protein drinks for over two decades... This week, the company will open a $13-million soybean-juice plant adjoining its juice-concentrate plant in Chilliwack... Chalk the investment up to a victory for the U.S.-Canadian free-trade agreement. Yeo says the agreement, plus the availability of high-quality soybeans, persuaded it to put in a plant at Chilliwack...

"In 1988, the company purchased the adjoining Pacific Fruit & Concentrates Ltd. from the East Chilliwack Co-operative for about $3 million. It is now known as YHS Pacific Fruit Concentrates Ltd. Last year, it also purchased Chun King, the oriental food division of RJR Nabisco, based in Windsor [Ontario, Canada]. The new plant will produce 300 cans a minute of a variety of soybean drinks for the Canadian and U.S. markets. The state-of-the art-factory will create 32 new jobs...

"At the beginning of the century [in 1900], family patriarch Yeo Keng Lian began fermenting and selling soya sauce in Fujian province... Initially, soya sauce provided Yeo's business success. In 1955, the company started producing soybean drinks, and has since gone on to produce other foods."

A photo shows Bill Chia showing off the canning line at Yeo's new soymilk plant. Note: This factory is a major Canadian consumer of soybeans for food/beverage use, but about 90% of the finished soymilk is exported to Asia–especially Singapore. Address: Business Reporter, Canada.

1957. Gupta, Raj. 1990. ProSoya is introducing Soya Cow, a small, low-cost soymilk system for Indian villages (Interview). *SoyaScan Notes.* Oct. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The new Soya Cow unit, which now sells for $2,000 and will eventually (hopefully) sell for $1,000 makes one 20-liter batch of low-beany-flavor soymilk every 30 minutes. The machine grinds the beans, cooks the slurry, and presses out the soymilk. It does not require the use of steam: any fuel can be used. The beans are cooked immersed in water with no air in the vessel, but they are not under a vacuum, since that is too high-tech for villages and developing countries, leading to maintenance problems.

By comparison the Mechanical Cow from Brazil makes 70 liters per batch, but requires the use of steam and costs

$10,000 to $15,000. Address: 627 Gaines Dr., Ottawa, ONT, K1J 7W7, Canada. Phone: 613-744-4401.

1958. AGP–Ag Processing Inc a cooperative. 1990. Annual report: Partners–Working together in food production. 11717 Burt St., Burt Plaza, Suite 200, Omaha, Nebraska 68154-1581. 24 p. 31 cm.
• ***Summary:*** Net sales for 1990 (year ended Aug. 31) were $848.621 million, down 10.4% from $946.707 million in 1989. Earnings before income taxes: $65.200 million, up 40.3% from the $46.483 million in 1989.

AGP "retired all Class B Preferred stock held by Land O'Lakes and Farmland Industries, and issued a cash payout of remaining allocated patronage equities."

Note: Talk with Bell Lester (expert on AGP history) of Omaha, Nebraska. 2007. Nov. 6. The Class B Preferred stock was really money that Land O'Lakes and Farmland Industries invested in AGP on the original day of reorganization in 1983. By retiring or redeeming that preferred stock, AGP is basically paying back that debt. AGP did the same thing with the AGP members–members of the old Boone Valley–who had loaned AGP startup capital and been given an equivalent amount of Class B Preferred stock. In 1982 and 1983, Bill had gone out and raised that money for AGP's capitalization.

AGP also acquired the Lincoln, Nebraska, grain terminal. Stockholders from Utah, New York, Mississippi, and Canada came aboard. The company now has 8 soybean processing plants.

On pages 2-12 is an excellent year by year history of AGP, with good "big picture" context and background information for each year, sidebar quotations, and many color photos including Lindsay, Knobbe, and each member of the board of directors. AGP "was the product of a forced marriage in the uncertain early 1980s." CEO Lindsay says (p. 11): "I started mentioning the word 'profits' when I first came to the company. Back in the old days, cooperatives used the word 'savings.' That word has the connotation that you're not there to try to make money for the company so it can grow and sustain itself. I think cooperatives are now coming to the realization that they have to finance the business they're in. Our most significant accomplishment in the past seven years has been the dramatic improvement in our financial position–going from 135 percent debt to equity [ratio] down to the 20 percent level, paying off the Class A & B preferred stock on which we were originally committed." "At AGP, we never forget that everything we do begins in the field and returns to the farmstead." On the rear cover (for the first time): "Printed with Soy Ink." Address: Omaha, Nebraska.

1959. Business Trend Analysts, Inc. 1990. The market for salad dressings, sauces and condiments. 2171 Jericho Turnpike, Commack, NY 11725. 275 p. Price: $895.
• ***Summary:*** This is an update of the 1988 edition. Sauces include the following table sauces: Ketchup, meat (incl. steak, worcestershire, vegetable, and seafood sauces), barbecue, Mexican (incl. chili, taco, enchilada, etc.), prepared mustard, and soy and teriyaki. Gravies, dips, and dry sauce mixes are not included. Ketchup is the largest segment. Address: Commack, New York.

1960. MacNeil/Lehrer Newshour. 1990. Infant mortality, worldwide and in the United States. Television broadcast. PBS. Oct. 3. *
• ***Summary:*** On average, 40,000 children under the age of 5 die each day worldwide, mostly from preventable illnesses and diseases, and from malnutrition. In America every year some 40,000 babies die before the age of 1. The main cause is low birth weight, but a major cause is maternal drug abuse, especially cocaine and crack cocaine. 30% of the pregnant women in America do not have adequate access to prenatal care. The USA is 20th from the top on a ranking of countries by infant mortality rate. Japan has the world's lowest (i.e. best) infant mortality rate, followed by Sweden, Finland, Switzerland, Canada, Ireland, Netherlands, France, Denmark, and East Germany. Below the USA are Israel and Greece.

1961. ProSoya Foods International Inc. 1990. An affordable soya milk technology: High quality soya milk production equipment for any budget (Leaflet). Ottawa, Ontario, Canada. 1 p. PSF-SC20. Oct.
• ***Summary:*** "ProSoya recently completed the development of equipment capable of making non-beany tasting soya milk in 20 litre batches every 30 minutes. The table top size equipment costing under $3,000 can use almost any source of electricity and heat. It is ideally suited for schools, hospitals, and other institutions, cottage industry, and second generation soymilk and tofu product manufacturers.

"The equipment, dubbed SoyaCow-20, has three components: an air-less grinder, a scraped surface pressure cooker, and a filter press. Steeped soya beans are put in the grinder through a hopper and the machine filled with water. The grinder motor is run for a few minutes and the ground bean slurry is transferred to the cooker by opening a valve. The slurry is cooked at 15 lb per square inch pressure by direct heat from a natural gas, kerosene, coal, or wood stove. The cooked slurry is expelled to the filter press to extract soya milk."

A table compares 4 processes for making soymilk: Cold grind, hot grind, hot blanch, and airless grind. Ten variables are compared, such as processing chemicals, grind (hot/cold), soya milk solids (dissolved/suspended), odour & taste, flavoring. etc. Concerning odour and taste: The cold grind is rancid and cereal, the hot grind is less rancid & cereal, the hot blanch is roasted nut & cereal, and the airless grind is cereal & cereal. Concerning mouth feel: The cold

grind is smooth, the hot grind is chalky, the hot blanch is very chalky, and the airless grind is smooth. Concerning protein yield: The cold grind is 70-90%, the hot grind is 60-80%, the hot blanch is up to 98%, and the airless grind is 70-90%. Concerning basic plant cost: The cold grind is low, the hot grind is medium to very high, the hot blanch is high, and the airless grind is low.

"For more information, contact ProSoya Foods International, Inc. 627 Gaines Drive, Ottawa, Canada K1J 7W7, Telephone 613/745-9115, Fax 613/744-3548, or Raylons Metal Works, Ramkrishna Mandir Marg, J.B. Nagar, Andheri (East), Bombay, India 400 059, Telephone 022/632-3288."

Note: PSF stands for ProSoya Foods. SC20 stands for Soya Cow–20 liters/batch. Address: 627 Gaines Dr., Ottawa, ONT, Canada K1J 7W7.

1962. **Product Name:** Soya Nova Tofu Pumpkin Tarts.
**Manufacturer's Name:** Soya Nova Tofu Shop.
**Manufacturer's Address:** R.R. #2 Rourke Road, C.28, Ganges, Saltspring Island, BC, V0S 1E0, Canada. Phone: 604-537-9651.
**Date of Introduction:** 1990. October.
**Ingredients:** Incl. tofu.
**How Stored:** Refrigerated.
**New Product–Documentation:** Letter from Greg Lundh of Silverking Soya Foods in Nelson, BC, Canada. 1990. Dec. 14. Soya Nova Tofu Shop introduced this product in about Sept. 1990. Labels are not yet available.

Talk with Debbie Lauzon of Soya Nova. 1990. Dec. 28. This product was introduced in about Oct. 1990, as soon as the pumpkins were ready. "I now have a really cute little cottage industry. I met a master pastry chef from France named Pascal Pellerin. He worked at Tassajara in California for a while. When I saw that he was unemployed I put him at work in the tofu shop. We came up with some really nice Soyasage Rolls, then when the pumpkins were ripe, we started making the Pumpkin Tarts. We use only fresh pumpkins, never canned. They sold really well."

1963. YHS Pacific Fruit Concentrates. 1990. YHS Pacific Fruit Concentrates in Chilliwack descendant of 90-year-old family company headquartered in Singapore (News release). Chilliwack, BC, Canada. 2 p. Oct.
• ***Summary:*** Contains a good history of the company. The history up to 1962 is basically the same as that given by Shurtleff & Aoyagi in Feb. 1984. Then it continues: "Throughout the next two decades, Yeo's continued to expand and innovate: this was the first company in the world to pack soya bean drinks in paper tetra-paks using the ultra high temperature process. In addition, the company acquired the franchises for international brands such as Pepsi and 7-Up, Mirinda and Schweppes.

"In 1989, Yeo's purchased Chun King, the oriental division of RJR Nabisco based in Windsor, Ontario, and bought Pacific Fruit & Concentrates Limited located in Chilliwack, B.C.

"Today with associated companies, plants and 4,000 staff members around the globe, and with its products exported to 35 countries, Yeo Hiap Seng Ltd. is still guided by the Yeo family and still adheres to the original formula for success: provide quality products and unite to succeed."

Note: The company's offices and headquarters are in Richmond, B.C. The soymilk plant is located in Chilliwack (population 9,000) about 55 miles to the east, on the south bank of the Fraser River, only about 10 miles north of the U.S.-Canada Border. Address: Chilliwack, BC, Canada. Phone: 604-277-7707.

1964. YHS Pacific Fruit Concentrates. 1990. Fact sheet: YHS Pacific Fruit Concentrates Ltd.: New soya bean drink plant opens (News release). Chilliwack, BC, Canada. 1 p. Plus 2 pages of flow charts. Oct.
• ***Summary:*** "The plant: 80,000 square foot plant on 4.5 acres. Construction and equipment cost: $13 million... Production capacity: 300 cans of soya bean drinks per minute. Employees: 32 full-time. Market: output will go to Canada and the U.S.A. At present, the parent company in Singapore exports the soya bean drink to its North American markets...

"The company: YHS Pacific Fruit Concentrates Ltd. bought from the East Chilliwack Cooperative in 1988 by Yeo Hiap Seng Ltd. of Singapore.

"Yeo Hiap Seng Ltd.: YHS began in 1900 in China manufacturing soya sauce. Canned food production added in the 50s, and in the 70s YHS acquired franchises from Pepsi-Cola International to pack and distribute products. Company now also into prawn farming and Budweiser beer distribution." Address: Chilliwack, BC, Canada. Phone: 604-277-7707.

1965. Raley, Wade. 1990. This Elphin business is full of beans! *Lanark Era (The).* Nov. 12. p. 9, 20.
• ***Summary:*** About the Noble Bean, a tempeh manufacturing company owned and run by Allan and Susan Brown near Elfin, in Ontario, Canada. They make the tempeh in a trailer next to their home.

"'We turn 10 to 12 tons of dry soybeans into 50,000 eight and 10-ounce packages of tempeh annually," said Allan. "We've been getting busier every year since we started the business 11 years ago.'

"A Toronto native, Allan met Susan, who was from Tennessee, in 1969 while he was living in the United States.

"The couple were introduced to tempeh shortly after they became vegetarians in 1970.

"We learned how to make it from other vegetarians, but didn't consider mass producing tempeh until 1979,' said

Allan, who moved to this area in 1976. 'Susan and I started very small; our first shop was a two-bedroom apartment we were renting in McDonald's Corners.'

"A year later, Allan and Susan moved their fledgling business to the famous Kensington market area in Toronto because 'that's where the market for tempeh was.'"

The Browns bought their first equipment from a 60-year-old man [Robert Walker] for $200. They are still using it today. Allan spent the first 5 years distributing his tempeh himself. They started producing 48 pounds a day, but that amount has steadily increased. By 1985 they were making 120 pounds/day. An outside distributor had also begun to introduce Noble Bean products to eastern Canada.

"Today, The Noble Bean is a thriving company. It generated over $50,000 in sales last year and employs two part-time staff, Susan Barrett and Debbi Bova, in addition to Allan and Susan."

"The couple have introduced a secondary product to the market called Casey's Maple Pecan and Honey Walnut Cookies. The all-natural cookies are named after their 11-year-old son. The couple have a second son, Marty, age two."

Allan and Susan made Casey's Cookies in two flavors (Maple Pecan and Honey Walnut) for 1½ years in 1990 and 1991. Ingredients in Maple Pecan: Organic whole wheat flour, pecans, maple syrup, canola oil. Address: Lanark, ONT, Canada.

1966. Baldridge, Don. 1990. Soybean trials and production in Montana (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are 8 agricultural research centers in Montana. Most of the research on soybeans has been the southern agricultural station, the Huntley research station, east of Billings, Montana. He conducted soybean trials 15 to 20 years ago. He spent 25 years at Huntley. The director of Huntley now is Gil Stallknecht (Phone: 406-348-3400). That station works on agronomy, soils, and livestock and for the past 2 years they have been growing rather large blocks of soybeans to work into livestock rations in their feedlot.

Soybean trials have also been conducted at Sidney in far northeast Montana (contact Dr. Jerald Bergman; phone 406-482-2208. He has been there a long time), and (during the last few years) at Bozeman. They have been in the comparisons on a very limited scale. Each center puts out a progress report each year.

George Cramer, head of Cramer Irrigation & Seed Co. (P.O. Box 432, Hysham, MT 59038) is a seed sales who also raises cattle. He has grown soybeans on a commercial scale for about 10-12 years for use in feeds, mostly in his own feedlot. Some of the varieties being tested originated in Canada; they are early maturing. Yields are low and the crop is not very economical. There are probably no publications advising Montana farmers how to grow soybeans. There may be some statistics on use of soybeans in feeds in Montana. Address: Prof. of Extension Agronomy, Montana State Univ., Bozeman, MT 59717. Phone: 406-994-5688.

1967. Fuller, Catherine. 1990. Success: A tale of eight local business successes. *Shared Vision (Vancouver, British Columbia, Canada).* Nov. No. 27. p. 8-9.
• ***Summary:*** The first success story discussed is Nature's Path, founded by Arran Stephens. Arran was one of thousands of young people who had gone to India during the late 1960s searching for spiritual answers. He wanted to go to the source. He spent 7 months with Sant Kirpal Singh "... who was considered to be, and still is, one of the great masters of this century."

Shortly after returning home, he decided to provide good wholesome food "'in a city that had no eating establishment for those who wanted either macro foods or vegetarian foods. I felt that opening a restaurant would be a good service and a good way of earning a living.'"

In 1967, the Golden Lotus Restaurant opened at 4th Avenue and Bayswater in Vancouver. Though it was slow going at the start, he persevered. A year later he returned to India (the restaurant was run by close friends), had a marriage arranged by Kirpal Singh, and fell in love with the bride (Ratana)–in that order. He gives a lot of credit to his wife and children to whatever he has achieved.

On 1 Jan. 1970 Lifestream opened at 4th and Burrard. The company grew rapidly until by 1981 it had about 100 employees and operations in Ontario and throughout Canada. But partnership disagreements resulted in the sale of Lifestream in 1981.

In 1985, he began Nature's Path, which sold Manna Bread. Again he had a hit on his hands and the company expanded into the production of Manna Breakfast Cereals. This spring they opened the first all-natural breakfast cereal plant in North America.

Over the years Arran has encountered "the inevitable rocky sections of the path, but they became times of learning and growing, of introspection and reflection. 'I would like to believe that the success of a business is due to a faithful commitment to my spiritual practice of meditation... that there is an element of grace, or whatever you want to call it, working in our lives.

"'I would like to think that the measure of spirituality is only the extent that we live it. It is what we practice, not so much what we profess, that counts.

"'I believe that you cannot sacrifice your spiritual focus for any reason–money or otherwise. No matter what anyone else does, the experience that I've had in my relationship to both my spiritual practice and my teacher has been so transcendent that to forget them would make me a hypocrite of the greatest order. It is very, very essential to be true, as far as is humanly possible, to your vision, and not to be

deflected from your goal. Our goal is not only a material one. We should, as my father put it, leave this world a better place than when we found it.'

"'One other thing is that I feel it's important that every business, as it become successful, must return something to the community.'

"Nature's Path Foods Inc., 7453 Progress Way, Delta, BC V4G 1E8."

The second success story in Woodlands, founded by Ratana Stephens. "Arran and Ratana Stephens' Woodlands, a spacious 100-seat natural foods restaurant, is a long way from the Golden Lotus restaurant days of the late '60s.

"Ratana, in 1969 the new bride of Golden Lotus owner Arran, arrived in Vancouver from India and started to work at the restaurant almost immediately. Born in the Punjab, she had been well educated, having received a Masters in English literature, Bachelor of Psychology, and a degree in Sanskrit from Agra University.

"In 1971, Golden Lotus became Lifestream health food store at 4th & Burrard. In the back was a small health food restaurant called Mother Nature's Inn. Lifestream eventually expanded to two stores, the second one on Broadway at Trafalgar. In its heyday, the company grew to include a wholesale natural foods distribution business with a warehouse and bakery in North Vancouver."

"Arran and Ratana sold Lifestream, the distribution company, and eventually closed the Fourth Avenue store. The Broadway Lifestream store was sold just last year and became Kitsilano Natural Foods. Ownership of Woodlands, the restaurant upstairs of the Broadway location, stayed with the couple, and Ratana continued to run it today."

The cash register at this vegetarian restaurant rings 400 to 500 times a day. She believes that a vegetarian diet is better nutritionally and better for the environment. He has to juggle things to balance her commitment to her family, her children, and her work. Where is their family's favorite place to eat out? At Woodlands!

"As part of their four-year tradition, Woodlands again this year is opening their doors on Christmas Day for the lonely and needy. Free vegetarian Christmas dinner will be available 4-6 p.m. 2582 Broadway, Vancouver.

Two photos (one in color) show Arran Stephens. One shows Ratana Stephens standing in front of a carved wooden sign for the Woodlands natural foods, vegetarian restaurant.

1968. **Product Name:** Chocoya (Chocolate Soymilk), and Natura (Natural Soymilk) [Original, Strawberry, or Vanilla].
**Manufacturer's Name:** Nutrisoya, Inc.
**Manufacturer's Address:** 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.
**Date of Introduction:** 1990. November.
**Wt/Vol., Packaging, Price:** Natura: 250 ml and 1 liter Tetra Brik Aseptic cartons; Chocoya: 250 ml Tetra Brik Aseptic cartons.
**How Stored:** Shelf stable; refrigerate after opening.
**New Product–Documentation:** Leaflet from Quebec Government House in New York City. 1990. Oct. 15. This new line of natural soy beverages will be displayed at Booth #1346 at the Natural Foods Expo East in Philadelphia, Nov. 2-4. Contact: Mr. Giles Goulet.

Talk with Giles Goulet of Nutrisoya. 1990. Oct. 19. This company started making soyfoods in Oct. 1988, when they introduced tofu. Their next products will be the two soymilk products listed above, which will be launched in Canada in early November. The company has a large, modern plant. Chocoya, to be sold to the mass market, tastes as good as dairy milk. Natur-A, which comes in 3 flavors, is a purely natural soymilk, to be sold in natural stores. They use some (but not all) organic soybeans for the Natur-A. They grow their own soybeans on their own land. He is NOT a co-author (with main author J. Delisle) of the 1985 article titled "Nutritive value of soybean, rapeseed, and wheat proteins,..."

Ad in Natural Foods Merchandiser. 1990. Nov. "Rediscover a healthy drinking pleasure." Shows color photos of Chocoya and Natura (note spelling). Both are in French.

Talk with Johnathan Shore of Outremont, Quebec. 1994. Aug. 9. Natura is a Canadian soymilk product made in a government complex in St. Hyacinthe. It is made with added oil and honey, and sold in a Tetra Pak carton. It is marketed as a low-end (less expensive) product.

Update: 1995. May 15. Nick Feldman is president of the company (see 1995 interview). They are dependent to a significant degree on a government grant for their financial survival.

Update: As of Jan. 1998 their strawberry soymilk is still sold in New York City.

1969. Taira, Harue. 1990. Quality of soybeans for processed foods in Japan. *JARQ (Japan Agricultural Research Quarterly)* 24(3):224-30. Dec. [7 ref. Eng]
• ***Summary:*** Contents: Abstract. Introduction. Quality for food processing: Tofu, miso, natto. Variation of bean quality and suitability for processing. Factors inducing variations in the chemical composition and suitabilities for processing.

Figures show: (1) Consumption of soybeans in Japan in 1988 (1,000 tonnes): Total: 4,663 tonnes. Oil and meal 77%. Food 19%. Other 4%. Food products: 886 tonnes. Tofu and abura-age 57%. Kori-tofu 3%. Miso 20%. Natto: 11%. Other 9%. Individual food products (* An additional 69,000 tonnes are consumed in the form of cooked whole soybeans, yuba, kinako, moyashi {sprouts}, and others). Tofu and abura-age 505 tonnes. IOM and other USA 83%. Japan 11%. China 6%. Kori-tofu 29 tonnes. IOM and other USA 72%. China 28%. Natto 100 tonnes. China 50%. USA and Canada 30%. Japan 20%. Miso 179 tonnes. China 86%.

Japan 11%. IOM 3%. Soy sauce: Defatted soybean flakes 183 tonnes (97%) and whole soybeans 5 tonnes (3%).

(2) Frequency distribution of solid matter extractability in soybean milk (105 samples; 60 cultivars and 7 lines)–for varieties Enrei, Fukuyutaka, Akishirome, Akiyoshi, Tamahomare, Fujimijiro, Hyuuga, Shirosenari. Average value of U.S. soybeans. Mode: 79%. Range 70-82%.

(3) Correlation between protein and sucrose content in soybeans. Inversely correlated. The more protein, the less sucrose. (4) Correlation between hardness of steamed seeds and ammonia nitrogen content in natto. Directly correlated. The harder the steamed seeds, the more ammonia nitrogen in the finished natto.

(5) Variation in chemical composition and suitabilities of soybeans for processing: Raw soybeans for processing, soybean milk for tofu, steamed seeds for miso, natto, cooked soybeans.

Tables: (1) Relationship between soybeans and processed foods in raw soybeans, soybean milk, and steamed seeds. (2) Chemical composition and suitability of soybeans from USA, China, and Japan for processing into tofu, miso, natto, cooked soybeans. Varieties: Enrei, Fukuyutaka, IOM (USA; low protein, high oil), Tamahomare, Kitamusume, Miyagishirome (large seeded), Nattoshoryu (small seeded), Chinese (low protein, high carbohydrate). Address: Dep. of Utilization, National Food Research Inst., Ministry of Agriculture & Forestry, Koto-ku, Tokyo.

1970. USDA Foreign Agricultural Service, Information Systems Management Div., Database Administration Branch. 1990. The world's leading soybean crushing countries: Statistics by country, 1964-1990. FAS USDA Oilseeds/Products, Room 5638 South, 14th and Independence Ave. S.W., Washington, DC 20250-1000. 9 p. 28 x 38 cm computer printout.

• ***Summary:*** A search by Debby Pumphrey of the FACTS (Foreign Agricultural Commodity and Trade Statistics) database, for the amount of soybeans [commodity code: 2222000] crushed for domestic consumption by various countries worldwide, gives the following results, with all countries that crushed more than 500,000 tonnes ranked in descending order of amount of soybeans crushed. All figures are in metric tons (tonnes):

For the year 1990: USA 32,523,000, Brazil 13,700,000, Argentina 7,250,000, China 4,400,000, Japan 3,550,000, Netherlands 2,760,000, Germany, 2,550,000, Spain 2,300,000, Italy 2,025,000, India 1,785,000, Mexico 1,670,000, Taiwan 1,650,000, USSR 1,445,000, Belgium-Luxembourg 1,180,000, Canada 1,100,000, South Korea 840,000, Romania 789,000, Portugal 610,000, and United Kingdom 605,000.

In 1990 a total of 88,515,000 tonnes of soybeans were crushed worldwide. Of this total, the USA crushed 36.7%, Brazil crushed 15.5%, and Argentina crushed 8.2%.

For the year 1964/65: USA 13,036,000, Japan 1,460,000, China 1,304,000, West Germany 1,290,000, Canada 528,000. In 1964/65 a total of 21,357,000 tonnes of soybeans were crushed worldwide. Of this total, the USA crushed 61.0%, Japan crushed 6.8%, China crushed 6.1%, Brazil crushed 1.3%, and Argentina crushed 0.02%.

Note: At the top of the computer report is printed: Global Economic Data Exchange System [GEDES]. CP [Commodity Program] Subsystem–Commodity/Attribute Model. Crushing statistics are given for 175 countries from 1964/65 to 1990. Address: Washington, DC. Phone: 202-382-8232 or 202-447-4989.

1971. **Product Name:** Mandarin Soyfoods Garden Patties [Bar-B-Que, Cajun, and Teriyaki].
**Manufacturer's Name:** Mandarin Enterprises Ltd.
**Manufacturer's Address:** 11031 Bridgeport Rd. #107, Richmond, BC, V6X 3A2, Canada.
**Date of Introduction:** 1990.
**Ingredients:** Bar-B-Que: Tofu (organically grown soybeans, water, magnesium chloride [purified nigari]), brown rice, soybean fibre [probably okara], soy grits, brown rice flour, fresh onions, fresh carrots, fresh celery, fresh green peppers, crushed tomatoes, sesame seeds, rice syrup solids, sea salt, spices, tomato powder, powdered fruit solids, sunflower oil, smoke and spice extracts, natural flavor, spinach powder.
**Wt/Vol., Packaging, Price:** 2 patties. 170 gm (6 oz). Pinched ends box.
**How Stored:** Refrigerated or frozen.
**Nutrition:** Per 100 gm.: Calories 255, protein 10.3 gm, carbohydrates 27 gm, fat 6.0 gm (polyunsaturates 3.7 gm, monounsaturates 1.1 gm, saturates 0.6 gm, cholesterol 0 mg), dietary fiber 2.2 gm, sodium 1050 mg, potassium 425 mg.
**New Product–Documentation:** This is the line extension of 3 products launched in 1989. Talk with Gerry Blanchard of Natural Promotions, Vancouver, BC, Canada. 1992. Jan. 22. His company developed the packages/labels for these products. Mandarin now has 10-11 distributors in the USA. Six flavors are now available.

Label for Bar-B-Que sent by Gerry Blanchard. 1992. Jan. 22. 7 by 5.5 inches. Paperboard sleeve. Red, brown, and dark green on tan and light green. Illustration of a tofu burger with trimmings between buns, surrounded by a tomato, green pepper, celery stalk, and sliced onion. Silhouette of a cowboy riding a horse and swinging a lasso. "Ready in 3 minutes. Prepared with tofu, savoury herbs & vegetables. Cholesterol free. Microwaveable. Heat and serve." Called "Pâtés Jardinières" in French.

Two leaflets for all 6 Mandarin patties also sent. One shows a huge illustration of a burger with the 6 packages below it. The other shows the six packages lined up in a

typical produce case. On the back is a list of ingredients and nutritional composition for each flavor.

Ad in Vegetarian Times. 1992. April. "Mandarin Soy Foods. Since 1976 we have been committed to producing the finest in great tasting soyfoods. For a free copy of our newsletter "Soy News," just circle our number below."

1972. **Product Name:** [Amazing Grains–Roast Seitan (Organic)].
**Foreign Name:** Amazing Grains Rôti de Seitan (Biologique).
**Manufacturer's Name:** Noble Bean.
**Manufacturer's Address:** R.R. 1, McDonalds Corners (near Elphin), Ontario K0G 1M0, Canada. Phone: 613-278-2305.
**Date of Introduction:** 1990.
**Ingredients:** Certified organic wheat flour, spring water, peanut butter, canola oil, tamari, spices.
**Wt/Vol., Packaging, Price:** 6 oz.
**How Stored:** Refrigerated or frozen.
**New Product–Documentation:** Letter and photocopies of Labels from Allan Brown. 1998. Jan. 21. This product was made for 8 months in 1990.

1973. **Product Name:** [Extra Firm Tofu (Fine Herbs, or Pimento & Onion)].
**Foreign Name:** Tofu *(Fines Herbes, or Piment-Oignon)*.
**Manufacturer's Name:** Nutrisoya Inc.
**Manufacturer's Address:** 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.
**Date of Introduction:** 1990.
**How Stored:** Vacuum packed.
**New Product–Documentation:** Talk with Nick Feldman, president of Nutrisoya. 1995. May 17. These two flavored tofu products, curded with magnesium chloride, were both introduced in about 1990. The company also still makes its natural tofu.

1980. **Product Name:** Tofu.
**Manufacturer's Name:** Kootenay Natural Tofu.
**Manufacturer's Address:** Box 81, Silverton, BC, Canada V0G 2B0.
**Date of Introduction:** 1990?
**How Stored:** Refrigerated.

**New Product–Documentation:** Talk with Ed Westlind. 2000. Oct. 6. This company was started by Tim "Pedro" Hook, who was a college football player in the USA. He made tofu for about a year then sold the business to Ed and his wife. Ed would guess that the company was started in 1989 or 1990. Shortly after buying the tofu company, the Westlind's went through a divorce. Ed put all the tofu equipment in a warehouse, which it remains today. Note: Kootenay (pronounced KOOT-uh-nee) is the name of a river, a lake, and a national park in southeastern British Columbia, Canada.

1981. **Product Name:** [Tofu Ice Cream].
**Manufacturer's Name:** Les Aliments Multisoya Inc.
**Manufacturer's Address:** 1925 Route 139, Roxton-Sud, QUE, J0H 1Z0, Canada.
**Date of Introduction:** 1990?
**New Product–Documentation:** Talk with Harris Claude. 1991. March 20. This is the only product he makes currently. He used to make tofu but local bureaucrats shut him down saying that the whey he discharged into the sewage system was causing too much environmental pollution. He is now developing a soy yogurt. The labels have been printed.

1982. Kane, Marion. 1991. The cutting edge. *Toronto Star (Ontario, Canada).* Jan. 2. p. D8.
• ***Summary:*** In Japan, people are now enjoying foods made from soybeans bred and grown in Canada.

Plant breeders at Agriculture Canada have developed two soybean varieties for specialized markets in East Asia. Harovinton is a large-seeded variety used to make tofu. Nattosan is a small-seeded variety used to make natto, a popular fermented Japanese soy food.

"Let's take a cue from the Japanese and start finding tasty ways to prepare tofu here on home turf. After all, its the perfect protein alternative to meat."

1983. Agriculture Canada, Oilseeds Division, Grain Marketing Bureau, Grains and Oilseeds Branch, 1991. Oilseed sector profile. Ottawa, Ontario, Canada. 18 + 1 + 8 p. Jan. 28 cm. Spiral bound. [3 ref]
• ***Summary:*** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, composition, subsector performance. 3. The processing subsector: Background, processes, industry structure, production, subsector performance. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing. 5. The marketing environment: Domestic, international markets.

Appendix A: Role of the federal government in the Canadian oilseed industry. Appendix B. Oilseed industry directory.

Table 7 shows that Canada can be divided into three regions: The Maritimes, Central Canada (Ontario, Quebec), and Western Canada.

Table 8 shows soybean exports by major markets. Canada exports more soybeans to the USA by far than to any other country. No. 2 is Japan.

A very important association is the Ontario Oilseed Industry Association, 1185 Eglinton Ave. E, Suite 101, Don Mills, Ontario M3C 3C6. Phone: (416) 429-1073. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

1984. **Product Name:** Hot & Spicy Tofu, Curry Tofu, and Horseradish Tofu.
**Manufacturer's Name:** Silverking Soyafoods.
**Manufacturer's Address:** Silverking Group, Box #20, Nelson, BC V1L 1C9, Canada. Phone: 604-353-7726.
**Date of Introduction:** 1991. January.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Greg Lundh, owner. 1992. Jan. 8. He started making these products in about Jan. 1991. They are all sold bulk, to avoid packaging, and thus have no labels. Hot & Spicy is the best seller. Horseradish has been discontinued.

1985. Tetra Pak Inc. 1991. Use of UHT/Aseptic white dairy milk in Europe and other countries, 1989. 889 Bridgeport Ave., Shelton, CT 06489. 2 p. Feb. 5. Unpublished manuscript.
• ***Summary:*** The following statistics are from Tetra Pak Statistics in Lausanne, Switzerland. In western Europe, 27,896 million liters of milk are consumed in total. Of this, 24,108 million liters are consumed in the eleven EEC countries. Countries not in the EEC are Austria, Cyprus, Finland, Iceland, Norway, Sweden, Switzerland, and Turkey. The four countries with the largest total milk consumption are the UK (6,687 million liters), France (3,735), Spain (3,624), and Germany (3,470). Of the all the milk consumed in Europe, 9,660 million liters (35% of the total) is packaged in UHT/Aseptic cartons. Of the all the milk consumed in the EEC, 9,376 million liters (39% of the EEC total) is packaged in UHT/Aseptic cartons. The four countries in which UHT/Aseptic packaging is most widely used are France (3,000 million liters; 80% of all milk in France), Spain (2,125; 59%), Germany (1,578; 45%), and Italy (1,497; 52%).

Outside of Europe, the world's biggest dairy milk consumers are: USA (24,429 million liters; 0.2% UHT/Aseptic), India (5,001; 0.4%), Japan (4,803; 4%), Mexico (2,895; 8%), and Canada (2,504; 0%). Countries with the highest percentage of UHT packaging are Yemen (39 million liters of milk consumed; 95% in UHT), Pakistan (97; 92%), Saudi Arabia (158; 82%), Thailand (34; 70%),

Singapore (28; 64%), and Chile (151; 61%). Address: Shelton, Connecticut.

1986. Brandenburg, Fred. 1991. Soybean production in various Canadian provinces (Interview). *SoyaScan Notes.* Feb. 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** "In Canada, Nova Scotia and Prince Edward Island have grown soybeans and are growing them now. I think Alberta is still experimenting, probably at the federal government's Lethbridge Research Station, Canada Dept. of Agriculture (P.O. Box 3000, Main, Lethbridge, Alberta, T1J 4B1, Canada. Phone: 403-327-4561). For more information on soybean cultivation in Prince Edward Island, Nova Scotia, and possibly even New Brunswick, I would first try the Atlantic Grains Council (P.O. Box 308, Kentville, Nova Scotia, B4N 3X1, Canada. Secretary Manager: A.F. McKae. Phone: 902-678-7712. Fax: 902-678-1215).

"I have not heard of soybeans being grown in Saskatchewan or Newfoundland, but the people at Lethbridge might know about any work in Saskatchewan. I know that soybeans have been grown at Lethbridge and they have been tried in southern Manitoba, so it seems likely that soybeans would have been also tried in Saskatchewan, which is in between. However the southern part of Saskatchewan is pretty much a dessert. Even wheat has a hard time growing there. In Saskatoon, Saskatchewan, there is a protein and oilseed pilot plant named POS. Ask for Roy A. Carr, president. They contract research work mostly with canola but if anyone knows about soybeans in Saskatchewan, they would likely be the ones.

Like the United States, Canada has at least one agricultural experiment station in each province. Ontario has two experimental stations, one university, and an agricultural college that all have soybean breeding programs.

Note: The southernmost portion of various Canadian provinces are at the following north latitudes: Ontario 42º. Nova Scotia 43º. New Brunswick 45º. Prince Edward Island 46º. Newfoundland 47º. Alberta and Saskatchewan 49º. It is interesting to note that in Sweden, soybeans have been grown successfully at Uppsala and Helsingfors (60º), Fiskeby, Norrköping 58º 30', and the Kalmar-Oland region (56-57º; here they are grown commercially). Address: Secretary/Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

1987. Shen, C.F.; deMan, L.; Buzzell, R.I.; deMan, J.M. 1991. Yield and quality of tofu as affected by soybean and soymilk characteristics: Glucono-delta-lactone coagulant. *J. of Food Science* 56(1):109-12. Jan/Feb. [14 ref]

• ***Summary:*** Nine soybean cultivars were compared for their suitability in making tofu. The yield of tofu was not influenced by the size of the soybeans. There is a correlation between the tofu yield and the protein and calcium content of both the soybeans and the soymilk. The protein content of the soymilk also influences the texture of the tofu. Address: Dep. of Food Science, Univ. of Guelph, Guelph, Ontario, Canada N1G 2W1 and Research Station, Agriculture Canada, Harrow, Ontario, Canada N0R 1G0.

1988. Downey, R.K. 1991. Re: Cultivation of soybeans in Saskatchewan and Manitoba provinces, and in the Northwest Territories, Canada. Questions answered on Soyfoods Center letterhead (dated 10 March 1991) and returned to SC on 11 March 1991. Letters (faxes) to William Shurtleff at Soyfoods Center, March 8 and 11. 1 p. [1 ref]

• ***Summary:*** Soybeans were first grown in Saskatchewan province at Indian Head in 1898, as reported by Angus MacKay in 1899. At that time Indian Head and Saskatchewan were part of the Northwest Territories.

"With regard to the cultivation of soybeans in Saskatchewan, I doubt very much whether soybeans were ever grown in any quantity for commercial purposes, either for forage or grain. The number of heat units and the length of the growing season are not sufficient to provide a competitive yield to other competing crop plants in Saskatchewan, particularly with the maturity of the early soybean introductions.

"Soybeans were commercially produced, however, in Manitoba, but I am not sure what year this cultivation was first begun. You might want to inquire from Dr. Baldur Stefansson at the University of Manitoba (Plant Science Dept., Winnipeg, MAN, R3T 2N2. Phone: 204-474-8221) since he was involved in breeding soybeans in the early 1950's and he may have investigated their previous history in that province. Stef is now retired but comes into the office frequently.

"If soybeans were ever grown in what is today the Northwest Territories, it would have been at the Canada Agric. Research Farm at mile 1019 on the Alaska Highway. If they were grown, it should be reported in the station's annual report. The station was closed about 10 years ago. We'll see if we can find anything in the reports of the retired station head."

Note: This is the earliest document seen (Jan. 2010) showing that soybeans were once grown in the Northwest Territories. However the boundaries have shifted. We known of no documents showing that soybeans were cultivated in today's Northwest Territories, however this document offers a lead. Address: Head, Oilseeds Section, Research Station, 107 Science Crescent, Saskatoon, Saskatchewan, S7N 0X2, Canada. Phone: 306-975-7014.

1989. Downey, R.K. 1991. Re: Cultivation of soybeans in Saskatchewan and in the Northwest Territories, Canada.

Letter to William Shurtleff at Soyfoods Center, March 14. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** He has done a little more digging with regard to testing of soybeans in the North West Territories, and he has contacted Mr. Joe Tsukamoto, 32-19th Street, Brandon, Manitoba, Canada R7B 1K2. Mr. Tsukamoto has just retired from Manitoba Agriculture but was previously in charge of the Agriculture Canada Research Farm at Mile 10-19 on the Alaska Highway. That Station is, of course, in the Yukon territory and not in the North West Territories. Joe indicated that at Mile 10-19 they never attempted to grow beans of any type because they were subject to frost almost any month of the year due to the close proximity of the glaciers.

However, Joe did suggest that they might have grown the Maple Presto at Fort Simpson [in the Northwest Territories] about 7-10 years ago. The person who was doing demonstrations at that location at that time was Mr. Dick Filteau.

He suggests that Shurtleff might want to contact the librarian at the Central Agricultural Library in Ottawa to review the annual reports from that location to determine whether soybeans were ever tested at that research farm. Note: See 1991 SoyaScan interview with Filteau. Address: Head, Oilseeds Section, Research Station, 107 Science Crescent, Saskatoon, Saskatchewan, S7N 0X2, Canada. Phone: 306-975-7014.

1990. Bertin, Oliver. 1991. Two Toronto terminals closing: Move will hurt soybean farmers. *Globe & Mail (Toronto, ONT, Canada).* March 16. p. B9. Metro edition.
• ***Summary:*** The Canada Malting Co. Ltd. and Victory Soya Mills Ltd., "two of Canada's most important grain terminals, are closing, in moves industry experts say will have major ramifications for farmers, consumers and the port of Toronto."

The "Victory Soya Mills Ltd. plant was closed this week and the 80 employees are cleaning out the last of the soybeans, a process that will take about 6 weeks. The plant has not yet been sold. Victory's general manager, Murray Davis, said the closing will have 'major, major ramifications' for farmers, consumers and industry because it was the largest and most important soybean crusher in Canada. 'When you take a 15- or 20-million-bushel crush out of the system you have to feel the impact,' he said...

"Ontario soybean farmers, however, said they were 'reeling at the news' that the plant would close. 'It's as though our worst nightmare has come to life,' said Larry Miehls, president of the Ontario Soybean Growers Marketing Board. 'Our whole industry is being turned upside down.'

"Mr. Miehls said the closing will threaten the viability of Canada's soybean industry and reduce competition because there were only three crushers in Canada, and Victory was the largest. Farmers will now have to ship their beans to U.S. crushers–an expensive proposition–or risk getting a lower price from the two crushers left in Canada. Both of these plants are foreign owned. Central Soya Inc. has a plant in Hamilton that it bought some years ago from Toronto-based Canada Packers Inc., while Archer-Daniels-Midland Co. of Decatur, Illinois owns a plant in Windsor, Ontario [ADM Agri-Industries Ltd.]...

"Soybeans are grown by more than 25,000 farmers, or one-third of all the farmers in Ontario. Moreover, it is one of Ontario's most important crops, with sales last year of about $350-million...

"Mr. Davis said the Victory plant was closed for many reasons. It was becoming increasingly difficult to get soybean trucks into downtown Toronto, municipal taxes were too high and the Harbourfront development was getting closer. But the soybean industry has also suffered as a result of government policies. The federal government subsidizes the shipment of a competing product, canola seed, from Western Canada, but does not subsidize soybean crushing. Victory has also suffered under the Canada-U.S. free-trade agreement. The U.S. levies an 18-per-cent tariff on soybean oil imports, while Canada charges only 5 per cent on oil coming in. This, industry officials said, has made it difficult for Canadian crushers to compete.

"The closing of the two installations marks the end of an era for Toronto as a major grain port. The giant grain freighters that carried barley and soybeans through the Great Lakes have stopped coming, and the last of the grain elevators that marked the Toronto skyline for decades will eventually be torn down, said Toronto Harbourmaster James Brewster." Address: Agriculture & Food Reporter, Canada.

1991. Burns, Howard. 1991. Plant closing upsets soybean producers: The only other two soybean processing plants in Ontario can't handle all the beans processed in the province. *London Free Press (Ontario, Canada).* March 19.
• ***Summary:*** Central Soya of Canada has closed its soybean processing plant in Toronto. According to Larry Miehls, head of the Ontario Soybean Growers' Marketing Board "The shutdown adds to the uncertainty of farmers preparing to plant what was to have been the largest soybean crop in Ontario history... The marketing board may be forced to look for new export buyers to make up for the loss but there's a down side to that. Miehls said the price farmers get is usually better at home than abroad. The closing also eliminates about two million bushels of storage space badly needed at harvest time. 'What are we going to do with our beans?' The two remaining plants, one in Windsor [ADM Agri-Industries Ltd.] and the other in Hamilton, can't handle all the soybeans produced in Ontario, he said."

1992. *Toronto Star (Ontario, Canada).*1991. Soya mill closing may speed growth, official suggests. March 19. p. A4.

• ***Summary:*** The closing of Victory Soya Mills on the Toronto waterfront presents an opportunity for major redevelopment of the area, says the Ontario government's waterfront adviser, Duncan Allen.

A development group has proposed a mix of industry, stores and housing on a 10-hectare (25 acre) site that includes the Victory Mills' silos and the former Canada Malting Co. property.

Victory Soya Mills hasn't been losing a lot of money, but it hasn't been earning sufficient return on invested capital for its owners, Central Soya Inc. of Fort Wayne, Indiana–according to Murray Davis, Victory's general manager. About 62 workers will lose their jobs when the plant's operations are wound down during the next few weeks.

The plant had processed about one third of Ontario's soybean crop into oil (for cooking oil and margarine) and protein-rich meal (for livestock feed).

1993. Tsukamoto, Joe. 1991. Soybeans in the Yukon Territory and in Manitoba, Canada (Interview). *SoyaScan Notes.* March 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Mr. Tsukamoto was the last director of the Whitehorse Experimental Farm (also called the Agricultural Research Station at Haines Junction, and Mile 10-19 Research Station (on the Alaska Highway); previously called Whitehorse Experimental Substation). This organization no longer exists. He was there for about 13 years, then he left for Manitoba when the Farm was closed by the government in about 1967. In about 1983 the Yukon Territorial Government government had just declared agriculture an industry, and they wanted to become self sufficient in perishable, goods, livestock, etc. So they asked him if he would come back from Manitoba to take charge of agricultural work. Since he had other obligations at the time, he recommended Dick Filteau (from Texas), who had just retired and who had extensive experience in this field. Filteau was hired by the Yukon Territorial Government as an advisor on a contract basis; he arrived there in 1983. Using daylength-insensitive soybean varieties provided by Joe, Filteau conducted soybean variety trials at 4-6 locations in the Yukon Territory for 2-3 years to see if they could be used as a protein supplement in livestock seeds. A summary of the results was tabulated and are probably available from the Director, Department of Agriculture, Yukon Territorial Government, in Whitehorse. Some of the plants grew well, especially in areas like Dawson City away from the ice sheets; near the ice sheets frost was the major problem. He thinks that soybeans are not presently being grown now in the Yukon Territory.

Joe doubts that soybeans have ever been tested by a government organization in the Northwest Territories; agriculture may not be declared an industry there.

Concerning soybeans in Manitoba, he was director of the soybean program in that province. The first daylength-sensitive varieties (Altona, and Portage) were tested in Manitoba in about 1961. These were developed by the pioneer, Dr. Baldur Stefansson, who also started the canola program and became world renowned in the latter field. The first daylength-insensitive varieties, Maple Presto and Maple Ridge, were also developed under this program, and introduced in about 1982 and 1985 respectively. They originated from Finnish varieties [sic, actually Swedish varieties from Dr. Sven Holmberg, especially Fiskeby V, according to Dr. Harvey Voldeng], probably developed by Dr. Harvey Voldeng at Ottawa. He is "the" federal soybean breeder in Canada.

The difference between daylength-sensitive and insensitive is that if you plant the insensitive one early in the spring, it will flower early, whereas the insensitive one, no matter when you plant it, will flower at a certain time of year (determined by the balance of light and dark hours).

In the early 1980s a peak of roughly 16,000 acres of soybeans were grown in south-central Manitoba. The government promoted the crop, then canola was given a premium price and soybean acreage began to decline. Today about 1,000 acres of daylength-insensitive soybean varieties are still grown in Manitoba, mostly for seed that is sold to North Dakota and Minnesota. The seed of these daylength-insensitive varieties is superior to the Maturity Group 0 or I varieties grown in the United States.

Joe was formerly an agronomist with the Manitoba Department of Agriculture, Brandon, Manitoba. His mandate was to investigate alternative crops. He retired about 1 month ago. Prior to that he worked for many years to develop about 6 lines of small-seeded natto varieties for export to Japan. He worked with a Japanese merchant and the Japan Natto Association. They are now being tested in Japan for commercial acceptance. Address: 32 19th St., Brandon, MAN, R7B 1K2, Canada. Phone: 204-727-5243.

1994. *Windsor Star (Essex County, Ontario, Canada).*1991. Windsor firm may gain from plant closure. March 22. p. 8B.

• ***Summary:*** "Windsor's ADM Agri Industries Ltd. [also known as Maple Leaf Monarch] became one of only two soybean processors left in Canada this week when a soybean crushing plant in Toronto [Victory Soya Mills Ltd.] closed its doors." Soybean farmers said "the closure is just another sign of their industry in crisis... Prior to the closing, all three Ontario processing plants were operating at 60-percent capacity, so the other two plants [including a plant in Hamilton run by Central Soya of Canada] should be able to take up the slack."

Larry Miehls, chairman of the Ontario Soybean Growers' Marketing Board, said: "'We've known for several years that the soybean processing industry has been having major problems, but we were hoping that they could

hang on until market conditions improve.' Miehls complained that western Canadian canola, which competes with soybean oil and meal, is supported with government subsidies, making it hard for soy farmers to compete. In addition, Ottawa has been slow to achieve free trade in soybean oil with the U.S., he said, and the Toronto plant closing makes the situation worse." John Davidse of the OSGMB added that "Growers need to become more efficient or work to develop export markets."

Note: Windsor is the southernmost of these three ports, located in the heart of Ontario's soybean growing area at the southwest end of Lake Erie across from Detroit, Michigan. Hamilton is the next farthest north, almost 200 miles to the northeast, on the southwestern end of Lake Ontario. Toronto, the farthest north, is also on Lake Ontario, about 40 miles northeast of Hamilton, and the furthest from the center of Ontario's soybean growing area.

1995. Kaldy, M.S. 1991. Re: Soybean production in Alberta and Canada. Letter to William Shurtleff at Soyfoods Center, March 26. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "In the paper I published in 1972 in *Economic Botany,* I was working with data representing average values for all Canada and not specifically for Alberta. Commercial growing of soybean in Canada is concentrated in the province of Ontario. Soybean is also grown in the provinces of Quebec, Nova Scotia, Prince Edward Island and Manitoba on a smaller scale. My soybean data, therefore, reflects conditions in Ontario and to a lesser extent the other provinces named above, but not in Alberta.

"Individual farmers have tried growing soybean in Alberta periodically, but no written record is available. The soybean breeding program in Alberta was initiated in 1978. This breeding program has, however, been closed as of this writing. I am enclosing related reference materials on this work. These are the earliest documents I was able to find for soybean growing in Alberta." Address: Research Scientist, Crop Sciences Section, Research Station, P.O. Box 3000, Main, Lethbridge, Alberta, T1J 4B1, Canada. Phone: 403-327-4561.

1996. CSP Foods Ltd.; Central Soya of Canada Ltd. 1991. CSP Foods Ltd. and Central Soya of Canada Ltd. have signed a letter of intent to purchase the edible oils business of Canada Packers Inc. (News release). Canada. 7 p. March 27.
• ***Summary:*** "The purchase includes edible oil refineries in Montreal, Toronto and Wainwright, Alberta, and an oilseed crushing business at Fort Saskatchewan, Alberta, and a seed gathering station at Humboldt, Saskatchewan. A 50% ownership in Prairie Margarine Inc. of Edmonton is also part of the deal... The edible oil business of Canada Packers employs 400 people and generated consolidated sales of approximately $250-million in the fiscal year ended March 31, 1990.

"CSP Foods Ltd. is jointly owned by Saskatchewan Wheat Pool and Manitoba Pool Elevators and is the major processor of canola and sunflower seed in western Canada. It operates crushing and refining facilities at Altona, Manitoba and Nipawin, Saskatchewan. CSP Foods has a crush plant at Harrowby, Manitoba, a refinery at Dundas, Ontario and a 50% ownership in Prairie Margarine Inc. of Edmonton, Alberta.

"CSP Foods is a leading marketer of canola oil and meal products into the North American marketplace. CSP Foods employs 290 people and generated consolidated sales of approximately $200 million in the fiscal year ended March 31, 1991.

"Central Soya of Canada Limited operates a soya/canola crush plant at Hamilton, Ontario and is a subsidiary of Central Soya Company Inc."

"This acquisition will combine three Canadian companies into one. On a North American basis, the new company is estimated to have three percent of the Edible Oils market. This compares to US market shares for ADM, Cargill and Bunge of 33, 20 and 12 percent, respectively...

"Canola is Canada's major oilseed crop, accounting for 65-70 percent of Canadian oilseed production. It is second only to wheat in terms of gross farm revenue, averaging $850-900 million per year. Japan is the predominant export market for canola seed, taking up to 90 percent of total exports and up to 60 percent of canola production. The balance of the crop is sold to the domestic crushing sector, most of which is located in Western Canada."

"Central Soya of Canada Ltd. operates a soy/canola crush plant at Hamilton, Ontario with a soya crush of 365,000 tonnes a year (1,270 tonnes a day) and a canola crush of 227,000 tonnes a year (700 tonnes a day). The crushing canola and soya can take place simultaneously."

Also gives details on: The agreement in principle. Canada Packers Ltd. Assets. CSP Foods Ltd. current operations. Central Soya of Canada Ltd. current operations. New company structure (CSP Foods and Central Soya will each own 50% of the new company and both will provide three Board members or partners to the new company). Rationale for the purchase and merger. The impact on the market place. The impact on producers. Chart of assets of the 3 companies. One map shows the new company's oilseed refineries in Canada, and another map shows its oilseed crushing plants.

1997. *Agri-Book Magazine (Exeter, ONT, Canada).*1991. Beans in Canada. 17(5):1-36. March.
• ***Summary:*** This entire issue is about soybeans in Canada, with emphasis on soybean production. Articles include: On-farm roasting improves hog productivity. Soyboard (OSGMB) activities (incl. the new SoyOil symbol). Weed

control update. Marketing. Sustainable agriculture: Growing soybeans as an investment. Soybean breeding.

1998. *Farm & Country (Toronto, ONT, Canada).*1991. Where to put 2 million bushels? 55(11):12-13. March 26. *
• ***Summary:*** Discusses the closing of the Victory Soya Mills plant in Toronto, Ontario, Canada.

1999. Kerntke, Ulrich. 1991. Soya: Not just for eccentrics. *Dragoco Report* No. 3. p. 83-97. [5 ref. Eng]
• ***Summary:*** An interesting overview of soybean production worldwide and the markets for tofu and soymilk in Europe. Figure 1 is a bar chart ranking countries that produce more than 1 million tonnes of soybeans by their yields in tonnes per hectare. The country with the highest yield by far is Italy (approx. 3.1 tonnes/ha), followed by Canada (2.3), USA (2.2), Argentina (2.1), Paraguay (1.8), Brazil (1.7), China (1.3), Indonesia (1.1), and India (0.8 tonnes/ha). Figure 2 is a graph of soybean production in 4 major countries and others from 1935 to 1990. Figure 3 shows world market share of soybean production among 4 major countries and others from 1935 to 1990. The U.S. market share grew steadily until about 1965, but has fallen ever since. Brazil's market share showed significant growth after 1965, and Argentina's after 1975. Figure 4 shows the number of countries producing more than 100,000 tonnes of soybeans from 1935 to 1990. This number stayed steady at about 6-7 from 1935 to 1965, then rapidly increased to 15 in 1975 and 27 in 1990. Figures 6 and 7 are bar charts showing consumption of tofu in 1986, with projections to 1992 in France, Great Britain, Germany, Netherlands, and the rest of the EC (especially Switzerland). In 1992 for tofu, Germany is expected to be the leader followed by Great Britain and France. For soymilk, Great Britain is expected to be by far the leader, followed by Germany and France. The source of the tofu and soymilk information is Institut für Agrarpolitik, Stuttgart. Address: Product Manager, Flavor Div., Dragoco, Gerberding & Co. GmbH, D-3450 Holzminden, Germany. Phone: (05531) 704 327.

2000. Filteau, Dick. 1991. Growing soybeans in the Yukon Territory, Canada (Interview). *SoyaScan Notes.* April 11-12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dick first planted soybeans (the Maple Presto and Maple Ridge varieties), in May 1985 in the Yukon Territory. He obtained these soybeans from Joe Tsukamoto of Brandon, Manitoba. Joe was the last director of the research station at Haines Junction in the southwest Yukon until it was closed in 1968. The tests were such a failure and he did not try them again in 1986 or afterwards. As far as he knows, these were the first soybeans ever grown in the Yukon.

He feels the two main reasons for the failure were the cold and the photoperiod. The extended daylight did not allow the soybeans to get enough sleep. They need a certain number of hours of darkness each day. From mid-May to mid-July there are 20 hours of daylight each day. The plants grew but most did not bloom, and what few pods there were did not contain seeds. The crucifera (cabbage family) and turnips grow like crazy under these conditions, yielding world records for size.

He is quite sure that soybeans have never been grown in the Northwest Territories. He has not heard of them being grown on Prince Edward Island (PEI), which exports mainly potatoes and is called "spud island." If soybeans were grown, it would be on a small scale. To check, contact the PEI Department of Agriculture, or see the Agricultural Institute of Canada (AIC) Directory; this is a professional organization for the institutes of agrologists in each of the provinces; its head offices are in Ottawa.

The basic land situation in the Yukon is that the Canadian federal government controls 99.9% of the land. The federal government can release land to the territory, which can then lease or sell it. A block transfer of land usually takes place from the federal government to the territorial government. Only about 27,000 people now live in the entire territory. There is relatively little private ownership of land, except by homeowners in the city of Whitehorse. There has not yet been a resolution to land claim problems with the native Indians. The Yukon's main agricultural crops are grass (used as feed/hay for the 2,000+ horses), sod (used as grass for lawns around homes, mainly in Whitehorse), and vegetables (often grown under plastic covers or in greenhouses). Not much grain is grown, except for a little barley. Address: Lot 58, 2801 East Harrison, Harlington, Texas 78550. Phone: 512-421-4586.

2001. *Toronto Star (Ontario, Canada).*1991. Ontario soybean growers crushed by plant closing [Victory Soya Mills]. April 11. p. C1, C10. *
• ***Summary:*** Central Soya Co., Inc. has decided to close this pioneering plant.

2002. Yakabushi, Konrad. 1991. Ontario soybean growers crushed by plant closing. *Toronto Star (Ontario, Canada).* April 11. p. C1, C10.
• ***Summary:*** Last month Victory Soya Mills, Ontario's largest soybean crusher, ceased operations and padlocked the doors of its plant on Lakeshore Blvd. East, thus closing a chapter in Toronto's history.

For almost 50 years, "convoys of trucks had converged on Queen's Quay during the dying days of Indian summer to unload" the harvest of many Ontario farms at the soybean crushing facility.

While some Toronto residents will hardly miss the mile-long traffic snarls, "the closure has left many others with a wistful sense that an annual rite of autumn and a historic Toronto landmark, are soon to be lost forever."

But for many of Ontario's 25,000 soybean farmers, whose crops were crushed by Victory Soya Mills, the plant closure raises more serious issues; where will they sell their crops in the future? Central Soya Co. Inc. (Fort Wayne, Indiana), the plant's owner blames the demise "on several factors, including high municipal taxes, traffic problems and encroaching development on the city's waterfront." Bill Campbell, vice-president of processing at Central Soya, says the basic problem was that "the plant was unable to operate profitably in that environment." The larger problem is that there is an excess of soybean crushing capacity in North America.

Soybean farmers point to federal policies aimed at promoting production of canola, a competing oilseed grown on the Prairies to the west. Even today, "Ottawa subsidizes the shipment of canola to Eastern Canada and, during the 1970s, handed out grants to encourage the construction of canola crushers in the West. Central Soya told the Ontario Soybean Growers' Marketing Board that the plant might be spared if the Board could get the government to change some of those policies.

Built in 1944 during World War II, the plant was a key factor in the birth and development of Ontario's (and Canada's) soybean industry. Production rose rapidly during the 1970s "as continent-wide health concerns sparked a move away from animal fats to vegetable oils." Soybeans even found their way onto Canadian dining tables in the form of margarine, salad and cooking oils, soyburgers, tofu, and soy flour in baked goods. Moreover, soybeans were increasingly used in industrial applications from printing inks to paints, and soybean meal became the standard protein source in livestock and poultry feeds.

Today Ontario grows 95% of Canada's soybeans and 70% of these are grown in southwestern Ontario, which stretches further south than Detroit or Ann Arbor, Michigan.

Until last year, about 85% of Ontario's soybean crop was crushed in Canada yielding two value-added products: crude soybean oil and protein-rich soybean meal. But with the closure of Victory Soya Mills, about one-third of Canada's soybean crushing capacity and roughly 2 million bushels of soybean storage space have been eliminated, farmers will have to sell their soybeans anywhere they can.

Central Soya, which owns a smaller soybean crushing plant in Hamilton, Ontario, "says it is considering expanding that plant to make up for the lost capacity in Toronto.

The only other Canadian plant that crushes soybeans is ADM Agri-Industries, Ltd. (dba Maple Leaf Monarch), in Windsor, Ontario, owned by ADM of Decatur, Illinois.

It seems clear that the plant closure will hurt Ontario soybean farmers, in both the short and long terms. They may end up having more of their soybeans crushed in the United States and they will surely have to expand their markets overseas.

Photos show: (1) The Victory Soya Mills plant and silos. (2) Jim Allin, a soybean grower, standing next to a large sack of Pioneer brand soybean seed.

2003. MacLeod, John A. 1991. The history and rapid rise of soybeans on Prince Edward Island, Canada (Interview). *SoyaScan Notes.* April 12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** John, whose main interest is in soils, arrived at his present work on Prince Edward Island (PEI) in the fall of 1971. He has been told (but has never been able to verify it) that during the 1930s or 1940s a little soybean evaluation was conducted on PEI. The station librarian may be able to find something published on this. He is quite sure that soybeans arrived on PEI in the early 1970s. The testing of early varieties at that time was conducted by J. Brian Sanderson; he would have written up the results which would have been published in the Station's Research Summary. John has never heard of soybeans being grown in the Northwest Territories. In 1978 soybeans first started to be grown commercially on PEI; it was a cooperative project involving three private farmers and the experiment station. The crop did well and was used for seed to grow a bigger crop the next year.

A new era for soybeans in the Canadian Maritime Provinces began in the 1970s when Mr. Jerry Smeltzer, who was working at the Kentville research station in Nova Scotia, evaluated some varieties developed/bred by Dr. Harvey Voldeng, Canada's leading soybean breeder at the Agricultural Canada Central Experimental Farm, Ottawa, Ontario, Canada. Mr. Smeltzer has retired and is living in Kentville.

The big change in the soybean situation has been in the last 5-10 years with the introduction of some early varieties that have cold tolerance. The first promising variety was Maple Presto, which was very early maturing but a little low yielding. From that they learned that tolerance to cold was more important than earliness. New varieties, which are much better than Maple Presto and Maple Ridge, have taken soybeans from a "nothing crop" on PEI five years ago to an extremely important expanding acreage crop today. About 6,000 acres of soybeans were grown on PEI last year. The new varieties are Maple Isle and Maple Amber (developed by Dr. Voldeng), KG-20 (from King Grain), Baron, and Bicentennial (from the breeding program at Univ. of Guelph). Production guides for soybeans in the Atlantic Region, a soybean production bulletin, and a general crop production guide have been published. Statistics Canada still does not recognize soybeans as a crop here, so there are no good statistics, but there are estimates. These should be available at his station's library. 1985 was a very good year, and 1990 was even better. The soybeans are harvested as seed with a standard grain combine (using a different flexible header), roasted (for non-ruminants), then ground,

mixed with minerals, and fed to livestock, mainly hogs, together mainly with barley. The arrival of the roaster played a major role in helping the crop to grow. Soybeans are not hogged down because the beans ripen too late in the fall and the hogs are all housed.

Note: R.K. Downey, head of the Oilseeds Section, Agriculture Canada Research Station, Saskatoon, Saskatchewan, notes that Prince Edward Island has a very desirable climate and is a highly sought after summer resort area. The soils are very fertile and deep. Soybeans have not become a larger crop there mainly because of the difficulty of transporting a small amount of seed to a crusher or a major livestock market. Address: Research Scientist, Soils & Crops, Agriculture Canada, Charlottetown Research Station, P.O. Box 1210, Charlottetown, PE C1A 7MB, Canada. Phone: 902-566-6848.

2004. Messina, Mark; Barnes, Stephen. 1991. The role of soy products in reducing risk of cancer: Commentary. *J. of the National Cancer Institute* 83(8):541-45. April 17. [83 ref]

• ***Summary:*** Contents: Introduction. Isoflavones in cancer prevention. Protease inhibitors. Phytosterols and saponins. Inositol hexaphosphate [phytic acid]. Phytochemical variation. Isoflavones in plant physiology. Soybean processing. Discussion.

This is the report of a workshop held June 26-27, 1990, at the Guest Quarters Hotel in Bethesda, Maryland. Workshop members were Donna Baird, National Institute of Environmental Health Sciences, Research Triangle Park, North Carolina; Stephen Barnes, University of Alabama at Birmingham, Birmingham, Alabama; David L. Brandon, Western Regional Research Center, USDA, Albany, California; James A. Duke, Agricultural Research Service, USDA, Beltsville, Maryland; Ernst Graf, The Pillsbury Co., Minneapolis, Minnesota; Ann R. Kennedy, University of Pennsylvania Medical School, Philadelphia; Renee M. Kosslak, Iowa State University, Ames; Irvin E. Liener, University of Minnesota, St. Paul; Mark Messina, National Cancer Institute, Bethesda, Maryland; Frank L. Meyskens, University of California, Irvine, California; A. Venket Rao, University of Toronto, Ontario, Canada; Kenneth D.R. Setchell, Children's Hospital, Cincinnati, Ohio; Bernie F. Szuhaj, Central Soya, Fort Wayne, Indiana.

"Since the initial recognition that diet plays a role in the etiology of certain cancers, particularly cancers of the breast and colon, considerable progress has been made in identifying dietary patterns associated with cancer risk. There is general agreement that a high-fat, low-fiber diet, like that consumed by much of the industrialized world, increases cancer risk and that plant-based diets, rich in whole grains, legumes, and fruits and vegetables, are protective...

"The recent workshop on The Role of Soy Products in Cancer Prevention, sponsored by the National Cancer Institute, had two objectives: (1) to evaluate the role of soybeans, food products derived from soybeans, and specific components of soybeans in the dietary prevention of cancer and (2) to recommend research initiatives and approaches for further studies of the effect of soy intake on human cancer risk. The meeting was chaired by Stephen Barnes and organized by Mark Messina."

Concerning isoflavones in cancer prevention: "Setchell concluded his presentation with a reminder (a) that all weak estrogens also have antiestrogenic activity; (b) that tamoxifen, which has been used therapeutically for breast cancer, is structurally related to some of the phytoestrogens; and (c) that vegetarians, who may have a lower risk of certain cancers, excrete higher levels of phytoestrogens." Mentions "soy molasses, a concentrate of the aqueous alcohol extract of soy flour" (p. 542).

Concerning phytosterols and saponins: "A. Venket Rao presented evidence for the reduction of colon cancer by phytosterols and saponins. Both substances are common constituents of plants, but the concentration in soybeans is particularly high... Rao said that while nutritional interest in phytosterols and saponins has focused on their cholesterol-lowering properties, some data suggest that these compounds may be anticarcinogens.

"Ernst Graf discussed the rationale for the hypothesis in which inositol 1,2,3,4,5,6- hexaphosphate ($IP_6$), not fiber, is postulated to be responsible for the inverse correlation between the incidence of colon cancer and the consumption of fiber-rich foods. Soybeans are an especially rich source, containing about 1.4% on a dry weight basis. This compound is well known to inhibit mineral absorption. It forms tight chelates with a variety of polyvalent metals such as calcium, zinc, and iron." However Graf noted that the ability to bind metal ions, particularly iron, may provide the basis for the anticarcinogenic effects of this compound. The iron may be a key factor, via the Haber-Weiss reaction, in the production of hydroxyl radicals, which are postulated to play a role in causing some cancers.

James Duke discussed phytochemical variation in soybeans, noting that the isoflavone content varies tremendously according to the plant part, variety, year harvested, and geographic location. In addition, as much as fivefold variation was found among different phenolic acids in soybeans, many of which have also been investigated as potential anticarcinogens.

Renee Kosslak noted that isoflavones play a role in plant physiology and survival. The isoflavones daidzein and genistein are the major inducers of the nodulation genes in *Bradyrhizobium* bacteria, which form nodules on soybeans. Kosslak suggested that if future research shows isoflavones and/or phytoestrogens to be important dietary factors in cancer prevention and if the demand for soyfoods

materializes, it may be possible to manipulate levels of these compounds in soybeans, using root fluorescence as a marker.

"The consensus of the meeting was that there are sufficient data to justify studying the impact of soybean intake on cancer risk in humans. There were three workshop recommendations. First, future dietary studies involving soybeans should be carried out using soy products rather than isolated compounds, since soybeans appear to contain several potential anticarcinogens... Second, standardized and improved analytical methods are needed so that the contents of all soy-based materials employed in soybean research, whether soybean fractions or soy products, can be accurately described. This methodology will allow for valid comparisons among studies. Third, basic research on the absorption, metabolism, and physiology of potential anticarcinogens in humans should be conducted. This research will likely help to determine the clinical relevancy of these compounds and to provide a basis for selecting specific soy products for use in future dietary studies."

Note: This is the earliest English-language document seen (April 2005) that contains the term "soy molasses." Letter (e-mail) from Daniel Chajuss. 2004. April 15. The soy molasses used in this experiment was obtained from Central Soya, many years after Central Soya bought the soy protein concentrate and soy molasses plant from Aarhus Oliefabriek A/S, Aarhus, Denmark–a plant that Hayes General Engineering had designed and had given a license to use to Aarhus Oliefabriek together with the name "soy molasses." Letter (e-mail) from Mark Messina. 2005. April 18. Stephen Barnes was the source of the term "soy molasses" in this paper, not Mark. Address: 1. Diet and Cancer Branch, Div. of Cancer Prevention and Control, National Cancer Inst., 9000 Rockville Pike, Bldg. EPN–Room 212C, Bethesda, Maryland 20892; 2. Univ. of Alabama at Birmingham, Birmingham, Alabama. Phone: 301-496-8573.

2005. Stefansson, B.R. 1991. Re: Work with soybeans in Manitoba, Canada. Letters to William Shurtleff at Soyfoods Center, April 17 and May 6–in reply to inquiry. 2 p. Typed, with signature.
• ***Summary:*** "I think that there was some work on soybeans at the Manitoba Agricultural College somewhere around 1912-1916. Apparently a variety named Manitoba Brown was released. I was not able to find a reference to this work.

"I began work on edible oil seeds in 1952. At that time an oil seed crushing plant (Coop Vegetable Oils) was operating at Altona, Manitoba. This plant was built to crush sunflower seed but production was not sufficient to supply the requirements of the plant. Consequently, my assignment was to see what could be done to improve the local supply of edible oil seed for crushing. We observed a number of crops but the conventional wisdom at the time suggested that I do some work with soybeans. These projects were initiated in 1952. Two varieties (Portage 1964 and Altona 1966) were released... Some local farm production of soybeans (see data enclosed) developed at this time... The soybean projects at the University of Manitoba were terminated in 1965. It had become obvious that soybeans were not well adapted to conditions in the Canadian Prairies. Since then most of my time was devoted to developing rapeseed or rapeseed/canola for this area. Rapeseed has provided substantial supplies of oil seeds for crushing in Western Canada.

"Attempts to introduce soybeans to the Canadian prairies have continued over a long time but without success. It seems to me that major changes in the adaptation of the crop would be required for successful commercial production in this area." Address: Prof. Emeritus, 923 Crescent Drive, Winnipeg, Manitoba, Canada; Former Prof. at Plant Science Dep., Univ. of Manitoba, Winnipeg, MAN, Canada R3T 2N2.

2006. Downey, R.K. 1991. Re: Cultivation of soybeans in Saskatchewan and in the Northwest Territories, Canada. Letter to William Shurtleff at Soyfoods Center, April 23. 1 p. Typed, with signature on letterhead. [1 ref]
• ***Summary:*** "Thanks for your letter of April 15 and the enclosures outlining the information you obtained from Joe Tsukamoto and Dick Filteau on soybeans in northern Canada." Note that Prince Edward Island has a very desirable climate and is highly sought after as a summer resort area. "The soils are very fertile and deep, and I would be very much surprised if soybeans have not been experimented with on the island. They would not have been established, mainly because of the difficulty of transporting a small amount of seed to a crusher or a major livestock market.

"I would suggest that you write to the Director of the Agriculture Canada Research Station, P.O. Box 1210, Charlottetown, Prince Edward Island C1A 7MB, requesting him to provide you with information on testing and utilization of soybeans in the province." Address: Head, Oilseeds Section, Research Station, 107 Science Crescent, Saskatoon, Saskatchewan, S7N 0X2, Canada. Phone: 306-975-7014.

2007. Smeltzer, Gerald G. 1991. Work with soybeans in Nova Scotia (Interview). *SoyaScan Notes*. April 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jerry worked at the Agricultural Research Center at Kentville, Nova Scotia. From 1938 to 1953 he worked there for the Nova Scotia government doing extension work. He worked there for the Canadian federal government from 1953 to 1978, and started working with soybeans in 1954. He now lives in Kentville about 2 miles from the station.

He thinks that soybeans were introduced at Kentville in about 1915; that was when the station began its work and they tested many crops in those early years. A history of the Kentville station may contain that information. When he started his work with soybeans in 1954, one or two farmers were growing small plots of soybeans commercially. He got his germplasm from Dr. Harvey Voldeng at the research center in Ottawa. He worked with varieties like Altona and Maple Arrow. Soybean acreage in Nova Scotia reached its peak of about 4,000 to 5,000 acres in about 1985. Today he thinks that less than 1,000 acres are grown, and they are slightly subsidized. The soybeans are mostly run through a extruder and used only in feeds for dairy cattle. No oil is extracted. The main two barriers to expansion of the crop are killing frosts (in mid-May or mid-September) and economics. As far as he knows, no research work is presently being done with soybeans in Nova Scotia. Some work was done by Jim Langille (who was his counterpart at Nappan [pronounced nuh-PAN], but who has passed away).

Smeltzer (who retired in 1978 and now raises honey bees) wrote an unpublished 60-page summary of his research on soybeans (especially variety trials) in Nova Scotia during his 27 years with the federal government. After he retired they shredded almost every copy except one, which he now has and would like to share. Dr. George Jones, formerly from the University of Guelph and now working with soybeans in Prince Edward Island, also has a copy and he made copies for his coworkers. Smeltzer also published an article on soybean fertility. Address: 148 Belcher St., Kentville, NS B4N 1C9, Canada. Phone: 902-678-2793.

2008. Buzzell, R.I.; Anderson, T.R.; Hamill, A.S.; Welacky, T.W. 1991. Harovinton soybean. *Canadian J. of Plant Science* 71(2):525-26. April. [4 ref. Eng; fre]

• ***Summary:*** "Harovinton is a large-seeded soybean cultivar with a greater protein content than oilseed cultivars and is suitable for tofu production... Production will be on a contract basis with Canada Packers, Inc."

"Registration number 3118 was issued for Harovinton as a tofu-type soybean, by the Variety of Registration Office, Seed Division, Food Production and Inspection Branch of Agriculture Canada." Address: Research Station, Agriculture Canada, Harrow, Ontario, N0R 1G0, Canada.

2009. *Ontario Soybean Growers' Marketing Board Newsletter.*1991. Victory Soya Mills closes–permanently. April. p. 1.

• ***Summary:*** "The cornerstone of Canada's soybean industry was shattered in mid-March when Central Soya of Canada Ltd. announced that they were permanently closing their Toronto soybean crushing plant. Built in 1944 during World War II and called 'Victory Soy Mills', the plant effectively established the soybean industry in this country with a massive public relations campaign to encourage Ontario farmers to grow soybeans.

"The Toronto plant was purchased by Central Soya in 1985. They invested millions of dollars to upgrade it and make it one of their most efficient soybean crushing facilities. Central Soya also owns the soybean and canola crushing facility in Hamilton, Ontario and is owned itself by Gruppo Ferruzzi SpA of Italy. Ontario has one other soy/canola crushing plant located at Windsor, which is owned by Archer Daniels Midland [ADM Agri-Industries Ltd.].

"Several reasons have been cited for closing Victory Soya Mills including a number of federal and provincial programs which have benefited the canola industry at the expense of the soybean industry. These include grants to build canola crushing facilities during the 1970's and transportation subsidies which still help to ship canola seed and canola products to eastern Canadian markets. The plant's location on the harbourfront of Toronto was also a factor. In addition to high real estate value and high taxes, truck access has become difficult in recent years.

"Closing the plant means that Canada will lose more than one third of its soybean processing capacity, over two million bushels of storage and 80 jobs. This comes at a time when Ontario farmers are expected to plant their biggest-ever soybean crop." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2010. *Toronto Star (Ontario, Canada).*1991. Canada Packers agrees to sell edible oils unit to joint venture. May 28. p. B5.

• ***Summary:*** Canada Packers Inc., Canada's largest food processing company, announced yesterday that it "has signed a letter of intent to sell its edible oils division to a joint venture company to be formed by Central Soya of Canada Ltd. and CSP Foods Ltd."

The "transaction is subject to the completion of a final purchase and sale agreement and to regulatory approvals."

The division includes an oilseed crushing business in Fort Sasakatchewan, Alberta.

"Central Soya of Canada is a unit of Central Soya Co., while CSP Foods is jointly owned by the Saskatchewan Wheat Pool and Manitoba Pool Elevators."

2011. Rowland, D.C. 1991. Re: Establishment of Canadian postal codes. Letter to William Shurtleff at Soyfoods Center, May 30. 1 p. Typed, with signature on letterhead.

• ***Summary:*** The Canadian postal code was introduced as a pilot project in the city of Ottawa in the fall of 1970. It was formally introduced in this city in the spring of 1971. The extension nationwide was completed in the spring of 1973.

The Canadian postal code is comprised of a six character Alpha-Numeric code in the format ANA NAN, where A is an alphabetical character and N is a numeric character; for example, K1A 0B1. The first 3 characters

represent the Forward Sortation Area and the second 3 represent the Local Delivery Unit.

Two-letter provincial and territorial symbols were first introduced at about the same time as the postal code through an international agreement with the United States. The official use of the two-letter symbols (not abbreviations) became effective on 1 Jan. 1982. These symbols are AB = Alberta, BC = British Columbia, LB = Labrador, MB = Manitoba, NB = New Brunswick, NF = Newfoundland, NS = Nova Scotia, NT = Northwest Territories, ON = Ontario, PE = Prince Edward Island, PQ or QC = Quebec, SK = Saskatchewan, YT = Yukon Territory. Address: Corporate Manager, Customer Servic, Canada Post Corp., Ottawa, Ontario K1A 0B1, Canada.

2012. Kane, Marion. 1991. Nifty Canadian invention a boon to the Third World. *Toronto Star (Ontario, Canada).* June 19. p. D2.
• ***Summary:*** The Soya Cow, invented by Raj Gupta, is a machine that makes palatable, low-cost, high-protein soymilk in Hyderabad, India, at one of the Child Haven homes for poor children. The machine is a breakthrough in technology; no oxygen enters during the grinding of the soybeans, and this eliminates the "beany" flavor found in most soymilks. A photo shows two workers near the compact machine.

2013. *Contact (Plenty Canada).*1991. The promise of soy foods: Sri Lanka. 1(3):1-3.
• ***Summary:*** A photo shows Muttiah Jeyabalan, a native Sri Lankan, who is Plenty Canada's Program Officer for Asia and the Caribbean. Since 1985 he has taken a major part in developing Plenty Canada's program that provides two benefits to Sri Lankans: nutrition and economic opportunity. Plenty Canada's project has recently received $4.7 million funding from CIDA, the Canadian International Development Agency, as it enters its second 5-year phase. In the first 4-year phase of the Soya promotion program, two soy centers were established, one in Kandy and one in Colombo. The emphasis was on training, including extension programs, that assisted women's groups in starting income-generating soy-related businesses. In Sri Lanka, food is traditionally a woman's business. Soya products needed to be popularized and marketed to the general public. The key soyfoods were soy nuts, tofu, ice cream, popsicles, cakes, fried beans, yogurt, curries and tempeh. "Thirty Sri Lankan enterprises, mostly women-run, were initiated and are now self-sufficient." Soyfoods were incorporated in traditional local dishes. Soy ice cream is very popular. Janine Dudding is a Plenty Canada advisor to the Sri Lanka project. Peter Dudding is project director. Address: R.R. #3, Lanark, ONT, K0G 9Z9, Canada. Phone: (613) 278-2215.

2014. *Contact (Plenty Canada).*1991. A hopeful effort: San Bartolo soy products [in Guatemala]. 1(3):4-5.
• ***Summary:*** A photo shows 5 Guatemalans, 3 in traditional Mayan dress, standing behind an ice cream and popsicle truck labeled Ricos Helados de Soya. "After ten years of operation, Plenty's Soy Centre in [Solola], Guatemala, is approaching self-sufficiency... the centre is now an established micro-enterprise with a proven product line." It is administered by ADEEC (Guatemalan Association of Economic, Cultural and Educational Development), a native-based non-governmental organization (NGO) directed by Roderico Teni, with Sebastian Sub Xol as Asst. Director. "As in Sri Lanka, the introduction of soy products to the general population is much faster when sold as ready-to-eat items or when easily incorporated into a traditional dish." Soy ice cream and popsicles are extremely popular, but "the most accepted product has been the soy cheese, tofu, which is cooked with tomatoes and other vegetables instead of or as a supplement to eggs.

"The major success, however, has been in the approach to other Guatemalan institutions. 'Now we are beginning to see much larger orders, particularly the soy milk and the tofu,' Sub Xol said. 'Even commercial ice-cream makers, who use a lot of dairy milk, are starting to use our soy milk, which is about half the price of dairy milk.' Teni emphasized that by selling soy products to the larger institutions, particularly schools, orphanages and hospitals, the protein-rich supplement gets to the people who need it most."

Note: Plenty International (Jan. 1994) notes that this company is now named Alimentos San Bartolo, located at Apartado Postal 118, Solola, San Bartolo, Guatemala. Phone: 502-514896. Address: R.R. #3, Lanark, ONT, K0G 9Z9, Canada. Phone: (613) 278-2215.

2015. Early history of Wenger Manufacturing, Inc., founded by Joe and Louis Wenger. 1991. Sabetha, Kansas. 9 p. Unpublished typescript. July 31. 28 cm.
• ***Summary:*** "Joe and Louis Wenger founded Wenger Manufacturing, Inc. (then the Wenger Mixer Company) in Sabetha, Kansas, in 1935. The company today designs and manufactures industrial food, pet food, and aquatic feed processing machinery for a world market.

"The Wenger brothers, born at the turn of the century, grew up on a farm near Lamar, Missouri. Following the death of their parents, Joe and Louis–the youngest in a family of 9 sons–moved to Sabetha, Kansas to work on the farms of their older brothers who had moved previously to the Kansas community. The Wengers built and operated a small custom feed mill which serviced the local farm community. Because financial resources were short in 1930, much of the machinery required in the mill was manufactured by the brothers themselves from scrap metal and parts salvaged from area junk yards. Some of the

milling equipment built by Joe and Lou was unique at that time and attracted the attention of other area millers who offered to purchase similar machines for their own operations.

"The entrepreneurial seed was planted and the Wenger feed mill was soon being utilized as a testing-ground for the novel process machinery being created by the ambitious young brothers. Calling on feed millers in adjacent states, returning to Sabetha to build whatever machines they'd just sold, their confidence was being fueled by the early successes of their products in this specialized marketplace. Until 1941, all equipment was manufactured in a barn located near the rural homes of the two brothers. The first production items manufactured in this small "factory" were machines designed to mix and blend molasses and other liquid feed ingredients with dry feedstuffs such as grain and ground alfalfa. The Wengers became recognized as a major supplier of such machinery to the milling industry. Mid-50's milestones for Louis and Joe Wenger include their exploration with international trade, and it was about this time that they were joined in their business by their sons, LaVon and Don, a partnership that continues today.

"Among the company's early successes was the design and marketing of the first commercial process for pelletizing livestock feeds formulated with high levels of molasses, a product heretofore unavailable in their industry. This equipment became the cornerstone for the development of more sophisticated processing equipment and by 1957, the company had developed an industrial process and produced the first commercial machines for the continuous processing and cooking of the dry commercial petfoods now commonplace in our supermarkets, and for feeds for commercial aquatic species such as catfish, trout & shrimp. In 1961, the Wenger family produced the first extrusion cookers for use in the food processing industry which included machinery for the production of many snack foods, breakfast cereals, and other processed foodstuffs.

"As the first manufacturers of commercial cooking extruders for food and petfood–like most profitable businesses in profitable markets–Wenger quickly attracted competition. Many of the competitive machines are of foreign manufacture. And many are unabashed copies of the Wenger extruders. Within the markets pioneered by Wenger, the process of cooking grain base recipes to improve nutritional value, eliminate bacteriological activity, and improve organoleptic properties is still frequently referred to generically as the "Wenger process".

"Today the Sabetha firm founded by Joe & Louis Wenger specializes in the manufacture of a complete range of state-of-the-art commercial extrusion-cooking systems sized to accommodate laboratory and research applications to very large production applications with capacities as high as 30,000 pounds/hour. In addition to the cooking extruders, such systems may include continuous drying and toasting ovens (many as large as rail cars and mobile homes), industrial mixing equipment capable of intimately blending recipes as large as 10,000 pounds per batch, plus ancillary equipment such as flaking rolls for cereals and enrobers which apply seasonings or sugar to snacks, cereals, and other foods."

"Approximately 90% of the 'Texturized Vegetable Proteins' used worldwide are processed on Wenger machines."

"Neither Joe nor Louis Wenger were privileged with formal higher educations..."

"Wenger markets through two discrete sales divisions. The Industrial Division, officed at the company's Sabetha headquarters, is responsible for the firm's U.S. and Canadian equipment sales. The Export Division, Wenger International Inc., a Kansas city based independent affiliate, has its office at Crown Center Square, Kansas City, Missouri, and is responsible for all Wenger equipment sales outside the Continental U.S. and Canada. Wenger International has subsidiary offices in Antwerpen, Belgium, and Taichung City, Taiwan."

"Over 50% of Wenger's production is exported annually."

"All Wenger manufacturing, engineering, administrative, and research facilities are located at Sabetha. Approximately 175 thousand square feet of plant is used for the various manufacturing, warehousing, and research operations required. A 45,000 sq. ft. adjunct is scheduled to be constructed soon. The company's annual payroll exceeded 6 million dollars in 1990 with 170 full-time non-union employees who participate in a 7 million dollar company-funded profit sharing trust."

"All Wenger's plant expansions and equipment acquisitions–from the barn that functioned as the brothers' first 2-man 'factory' to today's modern, CNC equipped state-of-the-art manufacturing plant–have been financed and built entirely with their own resources."

"Wenger Manufacturing, Inc. remains privately held."

"Joe & Louis Wenger, now in their 80's, remain active and retain offices in the company they founded nearly 60 years ago."

2016. Carroll, Kenneth K. 1991. Review of clinical studies on cholesterol-lowering response to soy protein. *J. of the American Dietetic Assoc.* 91(7):820-27. July. [81 ref]
• ***Summary:*** Contents: Introduction. Effects of soy-protein diets on normocholesterolemic subjects. Effects of soy-protein diets on hypercholesterolemic subjects. Effects of soy-protein diets on different lipoprotein cholesterol and triglyceride levels. Possible reasons for varying responses of plasma or serum cholesterol to soy-protein diets: Characteristics of subjects, composition of diets, dietary protocols. Mechanism of action of dietary protein. Conclusions.

"Experiments on animals have shown that soybean protein has hypocholesterolemic and antiatherogenic properties. In human beings, substitution of soy protein for dietary animal protein or addition of soy protein to the diet lowers total and low-density-lipoprotein cholesterol levels in individuals with hypercholesterolemia. Reductions of 20% or more have been obtained with diets high in protein (about 20% of total energy) and relatively low in fat. Triglycerides are also decreased, particularly in subjects with hypertriglyceridemia, but soy-protein diets appear to have little effect on high-density-lipoprotein cholesterol levels. Responses are similar in men and women, but may be greater in younger than in older subjects... The mechanism of action is not known... Although the hypocholesterolemic response to dietary soy protein has been observed by a number of European research groups, substitution of soy protein for animal protein in North American diets has generally had little effect, for reasons that are still not clear." Address: Director of the Human Nutrition Center and Member of the Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada.

2017. Central Soya Co. 1991. 1990 annual report. Ft. Wayne, Indiana. 28 p. 28 cm.
• ***Summary:*** "The Company's 1990 financial performance reflects a significant increase over 1989. Net earnings increased 54% to $23.3 million in 1990 from $15.1 million the previous year." Net sales however decreased to $1,950.2 million in 1990 from $2,318.5 million in 1989.

"The Company's Chemurgy Division, which produced record sales and earnings again in 1990, successfully launched production in March at its new soy protein concentrate plant, the largest expansion project in the Company's history, at the Bellevue, Ohio multipurpose facility... New technology was used to produce a new soy concentrate product named Promoveal, designed as a nutritionally improved high protein milk replacer for use in specialty animal feed formulations... At Chattanooga, Tennessee, the soybean and canola processing plant and the vegetable oil refinery were scheduled to discontinue operations... At Toronto, Ontario, location problems and a lack of accessibility to vegetable oil markets prohibited profitable operation, and production was discontinued in March, 1991...

"Restructuring: The Processing and Refined Soya Products Groups were consolidated into the Oilseed Products Group which, along with the Animal Feed Group, now comprise the two major operating groups of Central Soya. Even more significantly, during 1990 the foundation was put in place for a reorganization of the Company's assets into a holding company–CSY Agri-Processing, Inc... CSY Agri-Processing, Inc. will be the parent company for three primary units, each of which will enjoy greater autonomy. The units include Central Soya Company, Inc.; Provimi Holding B.V... and Innovative Pork Concepts, Inc...

"Effective January 1, 1990, the Ferruzzi-owned European crushing operations were reorganized into a new company, Cereol. The Central Soya Utrecht [Netherlands] facility was sold to this group in early 1990... In May, an agreement was signed with Sojaprotein in Becej, Yugoslavia to manufacture and market soy protein concentrates under the name Central Protein, D.O.O."

Note: This is the earliest document seen (May 2005) that mentions Cereol. Address: P.O. Box 1400, Fort Wayne, Indiana 46801-1400.

2018. *INTSOY Newsletter (Urbana, Illinois).*1991. Popularity of soyfoods receives major boost in Sri Lanka. No. 43. p. 1-2. July.
• ***Summary:*** "Efforts by Plenty Canada to popularize processed soybean foods for improved nutrition and as a new income source are showing widespread success in Sri Lanka." The Canadian International Development Agency (CIDA) has agreed to fund the project with $4.7 million (Canadian) for 5 years. The program in soybean utilization is carried out in collaboration with the Sri Lankan Ministry of Agricultural Development and Research, and the Ministry of Planning Implementation.

"Plenty Canada has now completed Phase I of the project, which links more than 150 producers and retail outlets into an integrated marketing network. Two processing and retail centers are operating–one in Kandy and the other in Colombo. Retail outlets operating in Kandy, Colombo, and 9 other districts currently sell more than 35 processed soybean products. Sales for 1991 are projected at more than $Canadian 100,000...

"Products that are available include: soy ice cream, soy yogurt, tempeh, soy meat, soy instant dhal, soy-cereal mix, soy cocktail mix, and soy flour... Because of the increased demand for these products, Plenty Canada is considering setting up its own processing facility by the end of the year."

Photos show: (1) People lined up at a Sri Lanka Soya Utilization Project mobile kitchen. (2) Many of the packaged soy products that are sold.

2019. Laurin, Danielle; Jacques, H.; Moorjani, S.; Steinke, F.H.; Gagné, C.; Brun, D.; Lupien, P-J. 1991. Effects of a soy-protein beverage on plasma lipoproteins in children with familial hypercholesterolemia. *American J. of Clinical Nutrition* 54(1):98-103. July. [43 ref]
Address: 2. Département de nutrition humaine et de consommation, Pavillon Paul-Comtois, Université Laval, Québec, Canada.

2020. Kane, Marion. 1991. The cutting edge: Sink teeth into vegetarian fare. *Toronto Star (Ontario, Canada).* Aug. 28. p.

C3.
• ***Summary:*** At the seventh annual Vegetarian Food Faire at Harborfront's York Quay Centre, there will be plenty of mouth-watering food and info to get your teeth into. But there won't be any meat.

The Faire will be held on Sept. 7 and 8, from 11 a.m. to 6 p.m., sponsored by the Toronto Vegetarian Association. It "addresses what the group calls the 'four cornerstones of a vegetarian lifestyle: health, animal rights, environmental concerns and the elimination of world hunger." Soy City Foods will be there to prepare barbecued veggie burgers, tempeh stew, vegetable curries, tofu pot pies, and non-dairy brownies.

Dr. David Jenkins, of the Univ. of Toronto's nutrition department will explain the nutritional benefits of a vegetarian diet.

A large photo shows Penny Cassel of Soy City Foods as she shows off her Tempeh Reuben sandwich, a vegetarian delight. "Tempeh is an Asian food prepared by fermenting soybeans."

2021. Archer Daniels Midland Co. 1991. Annual report. P.O. Box 1470, Decatur, IL 62525. 33 p. Sept.
• ***Summary:*** Net sales and other operating income for 1991 (year ended June 30) were $8,468 million, up 9.2% from 1990. Net earnings for 1991 were $466.7 million, down 3.5% from 1990. Shareholders' equity (net worth) is $3,922 million, up 9.8% from 1990.

"Foreign oilseeds operations were strengthened with the acquisition of a major softseed plant in Erith, U.K., and several plants in Canada. Soy protein facilities currently being added to the Europoort plant in The Netherlands should be in operation by year's end and a marketing arrangement to supply Loders Croklaan, B.V., with soy protein concentrate gives the plant a good production base to begin operations."

"ADM now operates 136 U.S. processing plants and owns, or has an ownership interest in, 34 foreign plants in seven countries. The Company 149 terminal, country, and river grain elevators." A 2-page color photo (p. 2-3) shows "ADM's Europoort plant, near Rotterdam, the world's largest soybean processing facility. Construction is underway for the addition of a vegetable oil refinery, soy protein plants and a second cogeneration unit." ADM's "oilseed processing operations operated at lower profit levels. Export margins were reduced due to heavily subsidized South American and European oilseed product sales."

"The protein specialties division expanded its position as the world's largest supplier of value-added soy proteins this year. Construction began on a facility at Europoort to produce soy protein concentrates, isolated soy proteins and the specialized raw material from which these products are formulated. The facility will serve the growing demand in Europe and the USSR for food and animal feed ingredients.

"ADM will produce a line of soy protein concentrates which Loders Croklaan will market to the animal feed industry in Western Europe. The combination of ADM's production technology and Loders Croklaan's leadership position in the animal feed ingredient market will provide a major improvement in efficiency. Products will be supplied from the Europoort facility.

"Consumer acceptance of the all-vegetable protein food item, Midland Harvest's Harvest Burger, has been encouraging and exceeds expectations. This low-fat, cholesterol-free, reduced calorie product is being sold in selected U.S. markets and in several international markets, notably England and other European Community countries, the USSR, Czechoslovakia, Finland, Mexico and Canada.

"Haldane Food Groups acquired two additional companies: Granose Foods Ltd., a pioneer in the health food industry, and Unisoya [on 21 Dec. 1990], a soya milk production company. Additional bottling capacity was installed at Saucemasters Limited when the company moved operations to a larger facility shared with Snackmasters Limited, a newly formed company manufacturing snack meals. These TVP-based products are used with either noodles or rice and are sold through supermarkets and health food stores. Genice Limited added more yogurts and non-dairy ice creams to its product range. Frozen meals from both Vegetarian Cuisine Limited and Vegetarian Feasts Limited increased their market share. Production at the leased Coventry factory was transferred to the Granose factory at Newport Pagnell, where additional land is available for further expansion."

Page 32 lists the many ADM divisions worldwide. In Europe, key soyfoods-related divisions are: The British Arkady Co. Ltd. (William Pringle, Division Director), and ADM International Ltd. (John R. Mahlich, Managing Director). Both are located in the UK. Note: The Haldane Foods Group (Peter Fitch, Managing Director), which is currently under British Arkady, will soon become an independent division. Since 1985 Peter Fitch and John Mahlich have skillfully acquired 11 of England's most important natural-, vegetarian-, and soyfood manufacturing companies to make the Haldane Foods Group unique in the world as a professional, efficient, and innovative group with a very promising future in a rapidly growing market.

Note: In Dec. 1990, ADM started making soy protein concentrates at its plant in Europoort, Netherlands. Address: Decatur, Illinois.

2022. **Product Name:** Tofu.
**Manufacturer's Name:** Capital Bean Products Co.
**Manufacturer's Address:** 8-4095 Belgreen Dr. (P.O. Box 465), Gloucester, ONT, K1G 3N2, Canada. Phone: 613-737-1095. Fax 613-738-0489.

**Date of Introduction:** 1991. September.
**New Product–Documentation:** Letter (fax) from Ken Yip, president. 1992. Jan. 23. The company (which is also known as Kitchen Sprouts Farm) started producing silken tofu on 8 Sept. 1991, and now produces 23,500 lb/month.

2023. *Contact (Plenty Canada).*1991. Profile: A cooperant couple. 1(4):8. Summer.
• ***Summary:*** A photo shows Peter Dudding, Plenty Canada's Sri Lanka project director, and Jane Dudding, soya advisor. "Through training and entrepreneur support, more than 55 small soya businesses have been established that have stood the test of time and are profitable. Plenty Canada also provides employment to about 140 Sri Lankans."

Note: Over 9,000 people now donate money to Plenty Canada. Address: R.R. #3, Lanark, ONT, K0G 9Z9, Canada. Phone: (613) 278-2215.

2024. Gehl, David. 1991. Re: Field trials with soybeans at the experimental farm, Indian Head, Saskatchewan, Canada. Letter to William Shurtleff at Soyfoods Center, Oct. 1–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "In the early field trials, soybeans were found to be unadapted for field production in this area because there was insufficient heat units in most years. Soybeans were, however, included as a green manure, fallow substitute in a cereal rotation experiment. However, the 60 lb per acre seeding rate for soybeans was a serious obstacle to adoption of this practice. Since this early work soybeans have been grown here off and on when earlier maturing varieties have been introduced. The most recent tests conducted on the Indian Head Experimental Farm were in 1982 when frost prevented maturation and harvesting (as was the case in 1897). A Soybean Field Trial was sown and harvested in 1981. There were 13 varieties. The highest yielded 835 kg/ha. An early variety from southern Ontario, Maple Presto, averaged only 676 kg/ha." Address: Head, Seed Increase Unit, Experimental Farm, Box 760, Indian Head, SASK S0G 2K0, Canada.

2025. AGP–Ag Processing Inc a cooperative. 1991. Annual report: Partners in food production. 11717 Burt St., Omaha, Nebraska 68154-1581. 24 p. 28 cm.
• ***Summary:*** Net sales for 1991 (year ended Aug. 31) were $864.675 million, up 1.9% from $848.621 million in 1990. Earnings before income taxes: $43.016 million, down 14.1% from the $65.200 million in 1990. Contains an 8-year summary of consolidated operating and financial statistics.

The truck department expanded. A special division of Engineering and a Rail Transport Specialist were added. AGP Grain Cooperative organized and sold stock to local cooperatives. On 1 March 1991 AGP acquired a full-service vegetable oil refinery in Denison, Texas. A color aerial photo shows the plant.

Bar charts (p. 13-15) show annually, from 1984 to 1989: (1) Capital spending. (2) Depreciation. (3) Capitalization. (4) Long term debt to equity ratio. (5) Long term debt. (6) Members' equity. (7) Earnings before taxes. (8) Earnings before taxes to equity ratio. Contains many color photos, including top management and the Board of Directors, currently made up of four farmers and five cooperative elevator managers.

Membership: At fiscal year end, there were 381 active local cooperatives and 11 regional cooperatives located in 15 states and Canada. These AGP stockholders represent more than 300,000 farmers. Address: Omaha, Nebraska.

2026. *J. of the American College of Nutrition.*1991. Letters to the editor and author's responses: *Trans* fatty acids. 10(5):510-21. Oct. [74 ref]
• ***Summary:*** These nine letters show that U.S. per capita intake of *trans* fatty acids is a highly controversial subject. Letter #1, by Applewhite and Hunter (p. 510-11; 17 refs), is in response to a 1990 article by Enig, Keeney, and Sampugna.

Letter #2, by Enig, Keeney, Sampugna, and Atal (p. 512-14; 13 refs) is in response to letter #1.

Letter #3, by L.S. de Villiers of South Africa (p. 515; 10 refs) is in response to the same 1990 article by Enig, Keeney, and Sampugna.

Letter #4, by Scott M. Grundy of Southwestern Medical Center, Dallas, Texas (p. 515-16; 2 refs) is in response to the same 1990 article by Enig, Keeney, and Sampugna.

Letter #5, by Bruce J. Holub, Nutrition Research Centre for Health Promotion and Disease Prevention, University of Guelph, Ontario, Canada (p. 516-17; 2 refs) is in response to the same 1990 article by Enig, Keeney, and Sampugna.

Letter #6, by Fred A. Kummerow, 205 Burnsides Research Lab., University of Urbana, Illinois (p. 517; 2 refs) is in response to the same 1990 article by Enig, Keeney, and Sampugna.

Letter #7, by Enig, Keeney, Sampugna, and Atal (p. 517-18; 7 refs) is in response to the letters by Drs. de Villiers, Grundy, Holub, and Kummerow.

Letter #8, by Martijn B. Katan of Wageningen Agricultural University, Netherlands (p. 518-19; 3 refs) is in response to the same 1990 article by Enig, Keeney, and Sampugna.

Letter #9, by Enig, Keeney, Sampugna, and Atal (p. 519-21; 21 refs) is in response to the letter by Dr. Katan.

2027. *Ontario Export Soybeans (OSGMB).*1991. Preliminary crop quality evaluation. 5(1):2. Oct.
• ***Summary:*** The hot, dry growing conditions this season have raised oil levels in Ontario soybeans and lowered protein content. Percentage protein (on a dry basis; zero moisture) averaged 38% over the 28 samples tested, and oil content averaged 22.7%.

Two graphs show the changing average protein and oil content of Ontario soybeans from 1970 to 1990. Oil content has risen steadily from a low of 19.5% in 1970 to a high of 22.7% in 1990. Protein has fallen from a high of 44% in 1970 to a low of 38% in 1990. Address: Chatham, Ontario, Canada.

2028. *SoyaFoods (ASA, Europe).*1991. A green Europe? 2(2):3. Autumn. [1 ref]
• ***Summary:*** Europanel, a network of market research and information organizations based in 13 European countries plus Brazil, the USA, and Canada surveyed 28,047 households to determine the amount of environmental sensitivity in European countries. "Germany, Norway, Sweden and German-speaking Switzerland and Austria have the highest percentage (58%-62%) of environmentally conscious citizens. All other countries with the exception of France can be described as being to an average degree sensitive to environmental problems (41%-55%) whilst France has the lowest score at 29%."

2029. *Ottawa Citizen (Ontario, Canada).*1991. Milking a soya cow in order to feed the hungry. Nov. 24. p. E3.
• ***Summary:*** The SoyaCow, invented by Raj Gupta, is a machine that makes palatable, low-cost, high-protein soymilk. One machine is already helping to feed more than 100 poor children at a home run by Child Haven International in Hyderabad, India. "Child Haven, which began the project about two years ago, is now in the midst of building the first dozen machines. A machine costs about $3,000 but the price will fall as greater volumes are produced." A photo shows the compact SoyaCow machine.

2030. Bloyd-Peshkin, Sharon. 1991. Just soy moo. *Vegetarian Times.* Nov. p. 20.
• ***Summary:*** Every Canadian province has a law prohibiting the manufacture and sale of imitation dairy products, such as soy cheeses, ice creams, milk, etc. "The only exceptions to these laws are margarine, nondairy coffee whiteners, nondairy dessert toppings and infant formula, all of which may be sold."

"Two rationales are behind these laws, which have been on the books as long as 50 years. First, imitation dairy products are considered nutritionally inferior to their dairy counterparts, and fool consumers into thinking they are getting the nutritional benefits of dairy products when they are not... And second, imitation dairy products compete with real dairy products, harming the financial well-being of dairy farmers and processors."

2031. University of Guelph. 1991. Reopening ceremonies: Zavitz hall. Guelph, Ontario, Canada. 4 panels. 14 x 22 cm.
• ***Summary:*** This attractive invitation card is printed with black ink on flecked gray paper. On the front panel is an architectural drawing (by Lett Smith Architects) of the front of Zavitz Hall, at the University of Guelph, showing the renovations. The two inside panels state that the ceremonies will take place on Monday, November 11, 1991, at 5:00 p.m. in the Department of Fine Art Gallery, Room 210, Zavitz Hall. The names and titles of the six people comprising the "platform party" are given, including Dr. Brian Segal, President, Univ. of Guelph. The program includes acknowledgments and introductions, opening remarks, commentary, ribbon cutting, and reception and tours to follow.

On the back panel is a brief history: "Zavitz Hall was built in 1914 and was named in honour of Charles Zavitz, a graduate of the Ontario Agricultural College and head of department of field husbandry which was the building's first tenant.

"Art classes have been taught in Zavitz Hall since the Fine Art Department's formation under the Federal Colleges in 1964.

"In 1989, the University's Board of Governors accepted the recommendation of a feasibility study completed by Lett/Smitt Associates Ltd. of Toronto and approved a renovation program for the building.

"A book will be published later this year in celebration of the reopening of Zavitz Hall."

Note: The building was constructed from plans made to the last detail by Dr. Zavitz and his staff. Address: Guelph, Ontario, Canada.

2032. Lewis, David L. 1991. Henry Ford and the magic beanstalk. Paper presented to the Ontario Soybean Growers' Marketing Board. 8 p. Dec. 6. At annual meeting held in London, Onratia, Canada.
• ***Summary:*** Much of this interesting presentation are taken from the author's original and very authoritative book, *The Public Image of Henry Ford* (1976, see p. 282-85). "Henry Ford mostly is remembered for his Model T, mass production methods and the five-dollar day which doubled his workers' pay. But he should be equally remembered for his extensive soybean experimentation and research into plastics, his last great achievement and the work that delighted him more than any other.

"Ford grew up on a farm near Detroit, and had a lifelong interest in improving the lot of the farmer. As early as 1907 he experimented with a motorized tractor which he called an "automobile plow." During the 'teens and 'twenties he designed and built the Fordson tractor.

"In early 1928, Ford became interested in a new agricultural concept, farm chemurgy; that is, putting chemistry and allied sciences to work for agriculture. The auto king was chiefly interested in finding new industrial uses for farm crops, although he also hoped to find new ways to use crops for food.

"In 1929 Ford established a laboratory in Dearborn and began experiments to determine which plants or legumes offered the most promise. After extensive research, he decided in 1931–exactly 60 years ago–to focus attention on the soybean."

The author then presents an interesting and carefully documented discussion of Henry Ford's work growing soybeans and testing soybean varieties in Michigan, soybean plastics and the "plastic car," contemporary media comments on this car (see record for 1941), development of soybean fiber Ford's suit and tie made from soybeans (by 1938), Ford's unsuccessful attempts early in World War II to interest the U.S. armed forces in making uniforms out of soybean fabric, sale for the fiber fabrication process and machinery to The Drackett Company, of Cincinnati [Ohio], in Nov. 1943, work of Ford and Edsel Ruddiman with soyfoods."Ford also advanced his ideas about the soybean and chemurgy with exhibits and a film. In 1934, he planted a small plot of soybeans and exhibited soybean processing machinery in his company's exhibit area at the Chicago World's Fair. Similar exhibits were shown at various state, regional, and world's fairs during the 1930s. In 1935 the Ford Company produced and distributed *Farm of the Future*, a sound-slide film which illustrated Henry Ford's views on the importance of chemurgy.

"Ford's frequent declaration, 'soybeans will make millions of dollars of added income for farmers... and provide industry with materials to make needed things nobody even knows about now' was proved correct by the passage of time."

Today soybeans are still grown on Henry Ford's former Dearborn estate, Fair Lane. In fact, about 400 of the 2,300 Ford-owned acres surrounding Ford World Headquarters, located adjacent to the Ford estate, are devoted to soybean cultivation, a fact which amazes foreign visitors.

"Soybean cultivation does seem remarkable on property valued at hundreds of thousands of dollars per acre. But growing soybeans serves a practical purpose, according to George Anderson, manager of corporate real estate for Ford Motor Land Development Corporation. 'It creates an economic value and saves us from weed control,' he says.

"Anderson, who monitors 255 million square feet of Ford office and factory space around the world, has a sentimental attachment to the soybean fields remaining in Dearborn.

"'You watch the wind gently blowing the fields, and it's like an ocean,' he says. 'When you see a soybean field, it's a thing of beauty...'

"As for Henry Ford, through his experimentation, and the publicity he gave it, he made a substantial contribution to the increased utilization of the soybean. His work in this field, started when he was in his late sixties and carried forward until he was 80 years of age, is the outstanding achievement of his declining years. Even at 80, Ford found boyish delight in helping to prove that there was industrial and culinary magic in a beanstalk.

"All North Americans are beneficiaries of that magic, most of all soybean growers and those allied with them. If you and your Marketing Board ever designate a patron saint, or wish to memorialize a Champion of the Soybean, may I respectfully suggest that you consider Henry Ford for the honor. Were he alive, I'm sure that no other recognition would please him more. I'm also sure that he'd come to your ceremony in a soybean-derived car, wearing a soybean suit–*and* expect every dish in our luncheon to be based entirely on soybeans."

Note: Prof. Lewis is now (Dec. 1992) finishing a new book on the history of the Ford Motor Co. from 1956 to the present. It is sort of a continuation of the 3-volume work by Nevins and Hill (1954-1963). Address: Prof., School of Business Administration (Room B3253), Univ. of Michigan, Ann Arbor, MI 48109-1234. Phone: 313-764-9540.

2033. Ontario Soybean Growers' Marketing Board. 1991. Annual report. Box 1199, Chatham, ONT N7M 5L8, Canada. 20 p. 28 cm.
• ***Summary:*** This is a report for the year 1991. For a sample table of contents, see the 1992 issue. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2034. **Product Name:** Soymilk, and Cloth-Wrapped Tofu (Bou Bow Daufu).
**Manufacturer's Name:** Pak Fok Food Products Inc.
**Manufacturer's Address:** 2370 Midland Ave., Unit A-26 Winco Business Park, Scarborough, ONT, M1S 5C6, Canada. Phone: 416-299-7952.
**Date of Introduction:** 1991. December.
**New Product–Documentation:** Talk with Simon Kwan, owner. 1992. Oct. 8. Followed by a letter dated Oct. 9. He began making these two products in Dec. 1991, first the soymilk and then the tofu–which was the first tofu of its kind in Toronto. The texture of Bou Bow Tofu is very smooth and delicate, but it is very labor intensive to make. Mr. Kwan bought this company (the name has not changed) on 9 Oct. 1990 from Tony Lam, who was the second owner. The company was founded on 1 Jan. 1989 by Mr. Hok Chung Sung at the present address, probably under the name Dragon & Dragon Food Products. Pak Fok distributes its own products in the Toronto area.

2035. **Product Name:** Harvest Dinner Pattie.
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2847 Dundas St. West, Toronto, ONT, M6P 1Y6, Canada. Phone: 416-762-1257.
**Date of Introduction:** 1991. December.
**Ingredients:** Incl. soy mash [okara].
**New Product–Documentation:** Talk with Lorraine Guardino of Soy City Foods. 1992. Feb. 18. This product,

made with soy mash (okara) comes in an oval shape and is being sold as a main course. It currently does not have a chewy texture–but the consumer does not expect it to be chewy. It was first sold in mid-December 1991.

2036. **Product Name:** Tempeh Pâté.
**Manufacturer's Name:** Big Carrot Natural Foods Store (The).
**Manufacturer's Address:** Toronto, Canada.
**Date of Introduction:** 1991.
**Ingredients:** Incl. tempeh, carrots, tamari.
**New Product–Documentation:** Talk with (call from) RoseAnn Lawrence of Santa Rosa, California (Phone: 707-573-0596). This is the best natural foods store and deli she has ever seen. They even have their own cookbook–but it doesn't contain the recipe for this product. The pâté is made and sold in the store's deli. The recipe is a secret but the ingredients are on the label. It is sold in the form of a big loaf, like meatloaf, and the tempeh adds a chunky consistency. It is delicious spread on pita bread.

2037. Ontario Soybean Growers' Marketing Board. 1991. Tofu: The miracle food of the 90s. Box 1199, Chatham, ONT N7M 5L8, Canada. 22 p. 23 x 10 cm.
• ***Summary:*** This attractive and upbeat full-color booklet begins with an introduction and nutritional information, followed by 9 tofu recipes. Accompanying each recipe is a full-page color photo and a nutritional analysis. The tofu recipes: Two bean tofu chili. Jalapeno-cheddar corn muffins. Tofu vegetable pizza. Spicy tofu with green vegetables and noodles. Hot and sour soup. Chocolate orange sauce for angel food cake. Low-fat tofu cheesecake. Tofu antipasto. Fruity tofu cooker [smoothie].

Talk with Fred Brandenburg of the Ontario Soybean Growers' Marketing Board. 1994. Oct. 20. This is the single most popular publication ever issued by OSGMB. More than 100,000 have been printed since 1991. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2038. **Product Name:** Soymilk (in Glass Milk Bottle).
**Manufacturer's Name:** Soy City Foods.
**Manufacturer's Address:** 2849 Dundas St. W., Toronto, ONT, M6P 1Y6, Canada.
**Date of Introduction:** 1991.
**Wt/Vol., Packaging, Price:** Bottle.
**New Product–Documentation:** Interview with Jon Cloud of Soy City Foods. 1991. Jan. 28. His company will soon be launching a soymilk sold in recyclable milk bottles. He never went with Tetra Pak because he didn't like their cartons. He will send a label when it comes out.

He is now working closely with the government to develop soybeans that are free of trypsin. He wants to develop better testing procedures. He found that the better the soybean nodulation, the lower the trypsin inhibitor content of the beans.

2039. Chelf, Vicki Rae. 1991. Cooking with the right side of the brain: Creative vegetarian cooking. Garden City Park, NY: Avery Publishing Group Inc. viii + 283 p. Illust. incl. many color plates. Index. 28 cm.
• ***Summary:*** This vegetarian cookbook, which contains over 500 healthful recipes, shows a strong macrobiotic influence. The extensive glossary of ingredients includes good descriptions of adzuki beans, many sea vegetables, amaranth, amasake, gluten, gluten flour, koji, kudzu, miso, mochi, natto, natto miso, okara, quinoa, seitan, shoyu, silken tofu, soybeans, tamari, tempeh, tofu, and T.V.P. (Textured Vegetable Protein). All of these ingredients are used in recipes. There are at least 26 tofu recipes, 6 seitan recipes, and 4 tempeh recipes.

The author, who also illustrated this book, has been a vegetarian for 16 years. While living in Quebec, Canada, she wrote several French-language vegetarian cookbooks. The right side of the brain controls thoughts and actions that are creative, intuitive, spontaneous, and artistic, whereas the left side controls more logical, concise, analytical, and scientific thinking. Conventional education encourages development of the left side of the brain. This book encourages creative experimentation and improvisation with the recipes given.

2040. *FAO Food and Nutrition Paper.*1991. Report of joint FAO/WHO expert consultation on protein quality evaluation. No. 51. 66 p.
• ***Summary:*** In response to recommendations of the 5th session of the Codex Committee on Vegetable Proteins (CCVP) held in Ottawa, Canada, a joint FAO/WHO Expert Consultation on Protein Quality Evaluation was held in Bethesda, Maryland, USA from December 4-8 1989... This publication is a report of that meeting's findings.

"The Consultation concluded that the protein digestibility-corrected amino acid score method was the most suitable approach for routine evaluation of protein quality for humans and recommended the adoption of this method as an official method at international level." Address: Bethesda, Maryland, USA.

2041. Gouvernement du Québec, Ministère de l'Agriculture, des Pêcheries et de l'Alimentation, Conseil des Productions Végétales du Quebec (CPVQ). 1991. Oléoprotéagineux: Cultivars recommandés en 1991 [Oleoprotein seeds: Cultivars recommended in 1991 (Leaflet)]. Quebec, Canada. 2 p. 36 cm. [Fre]
• ***Summary:*** 16 varieties of soybeans are analyzed for areas with more than 2500 corn Heat Units; 4 varieties of soybeans are analyzed for areas with less than 2500 corn Heat Units. Address: Quebec, Canada.

2042. Hymowitz, T.; Bernard, R.L. 1991. Origin of the soybean and germplasm introduction and development in North America. In: H.L. Shands and L. Wiesner, eds. 1991-1992. Use of Plant Introductions in Cultivar Development: Proceedings of a symposium sponsored by Division C-1 of the Crop Science Society of America in Las Vegas, Nevada, 19 Oct. 1989. 2 vols. Part 1. CSSA Special Publication Number 17. Madison, Wisconsin: Crop Science Society of America (CSSA). 164 p. See p. 147-64. Chap. 9. Crop Science Society of America Special Publication No. 17. [34 ref]

• ***Summary:*** Contents: Introduction. Origin of the genus *glycine.* Origin of the soybean. Introduction of the soybean to North America (by Samuel Bowen in 1765). Experiment stations and technology. Introduced soybean germplasm. Cultivar development. *Glycine soja.* Wild perennial *glycine* species.

"The genus *Glycine* Willd is divided into two subgenera, *Glycine* and *Soja* (Moench) F.J. Herm. The subgenus *Glycine* contains 15 wild perennial species (Singh et al., 1988; Tindale and Craven, 1988). Thirteen of the species *[G. albicans* Tind. and Craven, *G. arenaria* Tind., *G. curvata* Tind., *G. canescens* F.J. Herm., *G. clandestina* Wendl., *G. curvata* Tind., *G. cyrtoloba* Tind., *G. falcata* Benth., *G. hirticaulis* Tind. and Craven, *G. lactovirens* Tind. and Craven, *G. latifolia* (Benth.) Newell and Hymowitz, *G. latrobeana* (Meissn.) Benth. and *G. microphylla* (Benth.) Tind.] are indigenous to Australia. All carry 2*n* = 40 chromosomes (diploid) except for *G. hirticaulis* which is tetraploid, 2*n* = 80.

"*Glycine tabacina* (Labill.) Benth. with 2*n* = 40 or 80 chromosomes, has been found in Australia, Taiwan, south Pacific Islands (New Caledonia, Fiji, Tonga, Vanuatu, Niue) and west central Pacific Islands (Mariana, Ryukyu). All accessions of *G. tabacina* collected outside of Australia are tetraploid (2*n* = 80) and even within Australia, tetraploids predominate over diploid forms. *Glycine tomentella* Hayata has been found in Australia (2*n* = 38, 40, 78, or 80), Papua New Guinea (2*n* = 40, 78 or 80), Indonesia (2*n* = 80), Philippines (2*n* = 80), and Taiwan (2*n* = 80). Singh et al. (1987, 1989) demonstrated that the complexes of *G. tabacina* and *G. tomentella* evolved through allopolyploidization in Australia."

"The soybean was first introduced to North America in 1765 by Samuel Bowen, a seaman employed by the East India Company. Bowen brought soybean from China via London to Greenwich, his residence in the province of Georgia. Situated a few kilometers east of Savannah, the 180 ha of Greenwich (now a cemetery) became the center of his farming and manufacturing enterprises.

"By the late 1850s, soybean was evaluated for forage potential by many farmers throughout the USA (Hymowitz, 1987). However, the scientific approach for evaluating the crop had to wait until the emergence of the agricultural experiment stations at land grant institutions during the latter part of the nineteenth century."

Table 9-1 (p. 154-57) shows "Ancestral cultivars and their occurrence in pedigrees of U.S.- Canadian publicly developed grain-type soybean cultivars (excluding backcross-developed isolines covered in Table 3). Part A of this table is a summary by maturity group and part B is a summary by decade of release. Each part is divided into number of descendant cultivars, northern ancestors, southern ancestors, ancestors chosen for pest resistance, other, and number of ancestral cultivars. The ten most important northern ancestors (in descending order of importance with the number of occurrences in pedigrees in parentheses) are: Mandarin (143), Manchu (121), Richland (119), A.K. (108), Dunfield (83), Mukden (73), No. 171 (30), Pakota (27), L37-1355 (25), and Manitoba Brown (14). The 13 most important southern ancestors are: CNS (118), Tokyo (109), PI54610 (108), S-100 (82), Roanoke (42), Haberlandt (40), Arksoy (40), Palmetto (34), Biloxi (9), PI 60406 (7), Ototan (7), Laredo (4), Mammoth Yellow (5).

Table 9-2 (p. 158-59) shows the "Origins of major ancestral cultivars of the 221 cultivars developed at public institutions in the USA and Canada." For each cultivar is given: Descendant cultivars, maturity group, year of introduction, country and locality of origin, and original cultivar name.

Table 9-3 (p. 161) shows "Sources of genes backcrossed into domestic public soybean cultivars." The named varieties are Kanro, Mukden, Arksoy, Higan, Kingwa, and CNS. All 8 of the most important northern cultivars originated in China. Of the 12 most important southern cultivars, 9 originated in China, 2 in Korea, and 2 or 3 in Japan. Address: Univ. of Illinois, Urbana, Illinois.

2043. Li, R.A.; Gupta, U.C. 1991. Extraction of soil boron for predicting its availability to plants. *Pedosphere* 1(2):137-144. [14 ref]*
Address: Dep. of Soil Science, Zhejiang Agricultural Univ., Hangzhou 310029, China.

2044. Soy City Foods vegetarian cookbook. 1991. Toronto, Ontario, Canada: The Golden Age Food, Ltd. 145 p. 28 cm.

• ***Summary:*** Contents: Dips, spreads & sauces. Soups & salads. Side dishes. Quick & easy recipes. Harvest dinner main dishes. Tempeh main dishes. Tofu main dishes. Other main dishes. Breakfast & brunch. Desserts. Holiday recipes. Glossary. Products made by Soy City Foods: Harvest dinner patties. Falafels. Grain tempeh. Tofu. All soybeans are organically grown, and certified by OCIA.

Some history: In 1975, The Golden Age Food Limited opened the Vegetarian Restaurant in downtown Toronto. In order to produce healthy soy-based products from

organically-grown soybeans, the restaurant created its own production facility, Soy City Foods. Address: 2847 Dundas Street West, Toronto, ONT M6P 1Y6, Canada. Phone: (416) 762-1257.

2045. Sunrise tofu cookbook. Revised edition. 1991. Vancouver, BC, Canada: Sunrise Markets Inc. 96 p. 22 cm. Spiral bound.
• ***Summary:*** Contents: Sunrise Markets Inc., What is tofu? Sunrise tofu. Cooking hints. Soups. Salads. Dressings and dips. Entrees. Desserts. Nutritional breakdown of Sunrise Tofu. Other Sunrise products. Glossary. Metric conversions. Substitutions and equivalents. Feedback.

"Sunrise Markets Inc. was founded in the early 1960s by Leslie Joe. With the help of his wife Susan and children, Leslie built Sunrise into Canada's largest producer of soy food products." The rear cover shows labels of 4 Sunrise tofu products. Other products are described on pages 91-92. The book contains "over 65 quick & easy recipes." Address: Sunrise Markets Inc., 729 Powell St., Vancouver, BC V6A 1H5, Canada.

2046. Tremblay, Yvon. 1991. La santé de la terre: le petit guide santé des anées 1990: le soya et ses dérivés (lait de soya, tempeh, miso, etc.) ansi que le sarrasin et le seitan [The health of the earth: the little health guide for 1990: soybeans and soyfoods (soymilk, tempeh, miso, etc.) as well as buckwheat and seitan]. Address: Que.

2047. University of Illinois, Dep. of Agronomy. 1992. USDA Soybean Germplasm Collection: Introduced and old domestic varieties of the United States and Canada. Urbana, Illinois. 2 p. Jan. 21. Unpublished typescript. 28 cm.
• ***Summary:*** Lists 202 old domestic soybean varieties that are currently in the USDA Germplasm Collection. For each variety is given: Country of origin. Maturity group. Code letters for the following: Stem termination (indeterminate, semi-determinate, determinate), flower color, pubescence color, pubescence form, pubescence density, pod color, seed coat luster, seed coat color, hylum color, and other unique characteristics.

Across the top of page 1 is a horizontal table. In the top row are 13 maturity groups from 000 to X. In the second row are the number of varieties belonging to each maturity group, plus the total (202).

Note: Dr. Richard Bernard sent this document to Soyfoods Center in Dec. 1998. On it he wrote a "v" to the left of the following varieties, which he believes to be a large-seeded vegetable-type soybeans: Agate, Aoda, Bansei, Bansei [Ames, Iowa], Chusei, Easycook, Emperor, Etum, Fuji, Funk Delicious, Giant Green, Goku, Green and Black, Hahto, Hahto [Michigan], Higan, Hokkaido, Imperial, Jefferson, Jogun, Jogun [Ames, Iowa], Kanum [probably 1941-47], Kura, Osaya, Rokusun, Sac, Sanga, Sato, Shiro, Sousei, Tastee, Toku, Tortoise Egg, Waseda, Wolverine. Address: Univ. of Illinois, Urbana, Illinois.

2048. University of Illinois, Dep. of Agronomy. 1992. USDA Soybean Germplasm Collection: Private varieties (United States and Canada). Urbana, Illinois. 1 p. Jan. 21. Unpublished typescript. 28 cm.
• ***Summary:*** Lists 28 public soybean varieties that are currently in the USDA Germplasm Collection. For each variety is given: Year the variety was licensed or released. Maturity group. Code letters for the following: Stem termination (indeterminate, semi-determinate, determinate; all but one are indeterminate), flower color (purple or white), pubescence color (tawny, light tawny, or gray), pubescence form (erect, appressed, or semi-appressed), pubescence density (normal, sparse, semi-sparse, or semi-dense), pod color (black, brown, or tan), seed coat luster (dull, shiny, intermediate, or bloom), seed coat color (yellow, green, gray, black, brown, reddish brown, tan, imperfect black, or buff; may have prefix light or dark), hylum color (same abbreviations as seed coat), and other unique characteristics.

Across the top of page 1 is a horizontal table. In the top row are 13 maturity groups from 000 to X. In the second row are the number of varieties belonging to each maturity group, plus the total (28).

Note: One variety, Patterson Jade (1973) is a large-seeded vegetable-type soybean. Address: Univ. of Illinois, Urbana, Illinois.

2049. Larson, Donald W.; Rask, Norman. 1992. Industry note: Changing competitiveness in world soybean markets. *Agribusiness: An International Journal* 8(1):79-91. Jan. [11 ref]
• ***Summary:*** Contents: Introduction. World soybean production. Soybean and soybean product trade shares. Factors affecting competitiveness and trade: Costs of production, government policy. Conclusions. The GATT negotiations and the New Economic Order are based on the assumption of competitiveness in world markets. The landed cost of soybeans in Japan and at Rotterdam [Netherlands] favors Argentina and Brazil over the USA. The USA has steadily lost export market share for soybeans and soy products, from about 95% in early 1979 to 45% in 1990. During this time the Brazilian share has grown to 30% and the Argentine share to 16%. A fundamental shift from the export of soybeans to the export of more soybean products has occurred largely because of policies favoring product exports from Argentina and Brazil.

Tables show: (1) Soybean area harvested in six major producing countries in five groups of selected years from

1974 to 1990, and the percentage change during this time. The percentage changes are: Argentina +16,333%, Paraguay +10,000%, Brazil +96%, USA +20%, and China -43%. (2) Comparative soybean yields in the USA, Canada, Argentina, Brazil, Australia, and the world in 7 groups of years from 1975 to 1990. Canada usually has the highest yields. (3) Soybean production costs in Argentina ($127/acre), Brazil ($145/acre), and USA ($192/acre). (4) Production and marketing costs for soybeans landed in Rotterdam and Japan for Argentina, Brazil, and USA. In each port, Argentina has the lowest landed costs and USA has the highest.

Bar charts show: (1) Percentage shares of world soybean exports by major exporters (USA, EC-12, Argentina, Brazil, Paraguay, Others) 1980-1990. (2) Percentage shares of world soybean oil exports by major exporters (USA, EC-12, Argentina, Brazil, Others) 1980-1990. (3) Percentage shares of world soybean meal exports by major exporters (USA, EC-12, Argentina, Brazil, Others) 1980-1990. Address: Professors in the Dep. of Agricultural Economics and Rural Sociology, The Ohio State Univ.

2050. Roller, Ron. 1992. Work with and history of Eden Foods in Michigan. Part I. To 1980 (Interview). *SoyaScan Notes.* Feb. 25-26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ron was born in 1953 and he first met Mike Potter in 1961. The Potter and Roller families both lived in a northern suburb of Detroit. Ron had some friends who were friends of the people who ran the macrobiotic natural food store named Joyous Revival. That store was started by Carl Weinstein, Scott Halizon, and Howard Tannenbaum. Mike Potter worked in the store and soon became its manager. Through that connection, Mike started to travel to Ann Arbor to sell food at the free rock and roll concerts. Ron started to go with him (for fun), and they would cook rice and vegetables. A this time, Ron met Tim Redmond and Bill Bolduc. At age 15, through Mike's influence and interest in macrobiotics, Ron began to eat rice and vegetables as part of his daily diet.

Ron's sister and Mike had taken a trip to visit Muramoto-sensei at Miramichi, near Fort Bragg, California. At age 16, Ron attended a macrobiotic summer camp for a few weeks there. That was his first educational contact with macrobiotics.

In early 1971, while Mike was working at Joyous Revival, he was married. A little later that year he moved to Ann Arbor and began working at the Eden Foods retail store. Several years later Ron moved to Ann Arbor. In the fall of 1972 Ron began to work part-time for Eden Foods while he was going to school at Eastern Michigan University at Ypsilanti, studying biology and chemistry. His first job was to get the store at 330 Maynard Street ready to move into–painting, building grain bins and shelves, etc. Ron worked part time at Maynard St. in the deli, stocking shelves, etc. Many of the other employees also worked part-time.

Ron dropped out of the University and began to work full-time for Eden Foods when the company moved out of the Quonset hut and into the warehouse (shared with Midwest Natural) on Ann Street. He now began to work in the wholesale operation. After a 10-month leave of absence doing woodworking in the suburbs of Detroit, Ron returned before the warehouse moved to Platt Road; he helped with that move in the spring of 1974. When Mike Gordon, Eden's buyer at Platt Rd., decided to go back to school, Ron stepped into his job. It seemed like a very big responsibility since the company now had annual sales of about $1.5 million.

In 1976 Ron (age 23) took his first trip to China and Japan; he traveled with Mike Potter, who had taken his first trip there in 1973 or 1974. 23They also visited Muso in Japan. Later Ron made several trips to China and Japan by himself. From 1976 until the fire in 1979, Eden was doing more business with China than with Japan. The main Chinese imports were ginseng (the most important), nigari, azuki beans, Chinese medicinal herbs, tea, bamboo cookware, arrowroot flour, etc. Ben Zarcot of Fmali Herbs in California was also a big importer of ginseng from China.

After the move to Platt Rd., Eden's wholesale business (selling to natural/health food stores) continued to expand very rapidly. At that time, the full-line "super-distributors" came into being: Midwest Natural Foods, Health Food Inc. in Chicago, Tree of Life, etc. These companies, which tried to carry almost every product the industry offers, increased the number of products they carried to more than 2,000 from only several hundred, in order to provide natural/ health food retail stores with "one-stop shopping" Many of these products were ones that Eden refused, on principle, to carry. Erewhon later tried to become a super-distributor and it was a major cause of Erewhon's downfall.

Eden now started to sell a few products Eden brand to other distributors–especially their herbs imported from China, but also commodities such as nigari, bulk soybeans, etc. Their first customer was Gene Newman of Manna Foods, Inc., in Scarborough, Ontario, Canada. For a while Eden sold truckloads of Michigan-grown soybeans to tofu makers such as Nasoya. That business gradually fell off as tofu makers cultivated local sources for their soybeans.

Ron introduced Cliff Adler into Eden Foods. In the summer of 1976 Cliff started to work at Eden and invested some money in the company by buying shares. He had a lot talent in the area of sales–he was a real go-getter in marketing–and he soon made many close friends in the company.

At some point, probably shortly after the fire, a number of employees got stock in Eden Foods, including Ron

Roller, Bill Swaney, Mark Cook, and several others who left the company before the move to Clinton.

In Nov. 1979, just before the fire, 55 people worked for Eden Foods, which had annual sales of about $4 million. Sales were growing and the company was distributing about 2,300 items as they tried to compete with the "super-distributors." Eden sold no refrigerated or frozen foods, and no dairy products. The company had two warehouses. The big one, about 12,000 square feet, held almost all the food, plus the mill, the main office, the roaster, and the packaging machines. The smaller one, 4,000 square feet located not far away, was a truck repair garage and storage place for mostly non-food items plus a bottling line and a little overflow food. The night of the fire, the big warehouse was as full as it had ever been. The fire burned for a week while Eden's employees watched. It totally destroyed the big warehouse and the offices, and everything in them, sparing only the smaller warehouse. The next day, all but 7 people had been laid off. There was nothing for them to do.

The remaining employees were Mike Potter, Tim Redmond, Cliff Adler, Ron Roller, Bill Swaney (warehouse manager), Chris Burnham (warehouse), and Bena Burda (sales). They cleared out the small warehouse, and trimmed their product line to about 300 items.

Within 2 weeks after the fire, operating out of the smaller warehouse that they were leasing, Eden was sending out food to customers. They contracted with People's Warehouse in Ann Arbor to mill the large amounts of flours (including soy flour) that Eden sold; a little later Quincy Milling in Quincy, Michigan, took over Eden's milling. Cash was very tight for along time, so there was little marketing or promotion. All 180 vendors to whom Eden owed money were put on a payment plan, and they were gradually paid off. The insurance company paid Eden only $100,000 quickly. The space was also so tight that inventory had to be moved out of the warehouse each day and moved back in each night. Then they rented some additional warehouse space on Phoenix Drive in Ann Arbor, 6-7 miles away. About a year after the fire, Eden bought an existing warehouse in Clinton, Michigan and moved in during 1980 to get more space. They set the mill back up. By now sales were increasing slowly, but they were still feeling the pressure of the "super-distributors," as products proliferated in the natural foods market. Continued. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2051. DeBona, Don. 1992. Miso in Europe (Interview). *SoyaScan Notes.* Feb. 29 and April 19. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Don has had 2-3 offers (though not serious enough) to go to Europe to build and run a miso factories. When a really serious offer for a major joint venture is made, backed by sufficient capital, he would like to do it. He would provide the production (and maybe the marketing) expertise. In about 1985 Don trained Jan Kerremans, a Belgian, from Lima Foods in the south of France, in how to make miso–after they had started and weren't doing very well. After that, Lima got their miso production under control, but then Jan left at about the same time that Lima Foods was sold–Don is not sure which came first. Jan was a minor partner in Lima Foods. The Gevaert family sold Lima in about 1987-88 to Vibec, a consortium in Canada. At that time Lima had a lot of financial problems. Then in about 1989 Lima was purchased from the Canadian company by Euronature, a large France-based international food company. Lima is presently doing well, and their traditional high standards of food quality are completely supported by Euronature. Mark Callebert is the manager of Lima; Pierre Gevaert no longer owns any part of Lima and is no longer active with the company. Lima is no longer making miso at their old mill on a river in the south of France. Lima also made rice cakes and ground their sea salt at that old mill. This mill was the Gevaert's personal getaway and farmhouse, and he thinks they kept it when they first sold Lima, and no longer process food there. The Lima rice cakes may now be made in Belgium. Don thinks Lima Foods is now stronger than they were 5 years ago. Great Eastern Sun was the first company to import Lima's miso into America, starting in about 1984, and they were the sole importer for about 18 months until Lima appointed Eden as their exclusive U.S. agent. Don's current contact at Lima Foods is Mark Callebert. Don buys a lot of their salt in containers, directly from Europe, but he has to run the money and paperwork through Eden Foods. Don has exported several containers of miso to Europe through Sjon Welters' wife's brother, Adelbert, who used to work with Manna Foods in the Netherlands. He has also exported some to Erika Lemberger of EuroHealth. Bernard Faber also wants import Don's miso. After the Chernobyl nuclear disaster, Mitoku's sales of miso to Europe reached a new high, from which they have since dropped.

There is currently no major miso manufacturer in Europe. There is a small miso plant in Bristol, England named Source Foods, founded and run by Paul Chaplin, who Don trained at American Miso Co. for about 2 months. Chris at Mitoku recently told Don that Italy has recently become Mitoku's biggest market for natural food products in Europe.

In short, there is great potential for miso in Europe, including Eastern Europe, although the political instability of Eastern Europe makes for a very risky financial environment there. Its a high risk, high gain situation. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

2052. *Agri-Book Magazine (Exeter, ONT, Canada).*1992. Beans in Canada. 18(4):1-36. Feb.
• ***Summary:*** This entire issue is about soybeans in Canada, with emphasis on soybean production. Articles include: Crop management: The bean counter. Higher yields from sub-irrigation. Marketing. The Northrop King commitment. Bean diseases and defences. Soyboard (OSGMB) activities: Beans, automobiles and genetic taxi-cabs. Ad by Soy City Foods offering to pay top dollar for organically grown soybeans and teach farmers how to grows such beans (p. 21). Reducing the tillage cost. Variety performance key to choice. Inoculation with bacteria. Meeting the challenge of weed control. Ad for Nitragin inoculants.

2053. Kushi, Michio. 1992. Introduction to *Culinary Treasures of Japan,* by John and Jan Belleme. 16 p. Jan. Unpublished manuscript.
• ***Summary:*** This manuscript, which was published in a condensed form in the actual book, tells the story of Mitoku and their work to export traditional Japanese natural foods to the Western world. Michio Kushi was instrumental in getting Mr. Akiyoshi Kazama involved in this work. Mr. Kushi, who became a World Federalist after World War II, came to the U.S. in Nov. 1949 to study at Columbia University. He continuously sought ways of establishing world peace, and increasingly came to believe that a proper diet is the basis for health, happiness, and peace.

In April 1966 the author's wife, Aveline, opened a small store named Erewhon in Boston. Michio began to search for a Japanese source for foods that Erewhon would sell. He was introduced to Mr. Kazama (who lived in Tokyo) through a Japanese friend, Mr. Obayashi, who resided at that time in New York City. Michio felt that Mr. Kazama understood his desire for foods of high quality. So Mr. Kazama "began his search for food producers and manufacturers who were sincere and willing to supply the kind of quality we requested. I know that for him, at that time, it was a great gamble. It was also a painstaking and slow step-by-step process."

Mr. Kazama was born on 1 Feb. 1930 in Yamanashi prefecture. He graduated from Waseda University in Tokyo, then was selected to study business in the United States. After arriving in Chicago, Illinois, he was drafted by the U.S. government to serve in the American Army in Korea and in Japan from 1956 to 1958. Upon his return to Japan, he settled in Tokyo where he became an import agent for a German company dealing in optics and electronics. After the Kushis contacted him, he became involved in the emerging natural food business. [He founded a company named Mitoku. Mi = Michio. To = Tomoko (Aveline's given name in Japanese). Ku = Kushi].

In 1968 Mr. Kazama made his first shipment of Japanese natural foods to Erewhon; the order was worth $3,000. The Kushis first met Mr. Kazama in Boston in 1970. Over the years, the volume of Mitoku's exports steadily grew, and expanded to Europe, Australia, and the Middle East. Today Mitoku ships its products to about 35 countries. Approximately 40% of Mitoku's exports go to America, 40% to Europe, and 20% to Australia and other regions. Annual sales are about $10 million. Among the major suppliers are Sendai Miso Shoyu Co. Ltd., Hatcho Miso Co. Ltd., Hagoromo Miso, Ltd., Hanamaruki Miso Co. Ltd, San Iku Foods Co. Ltd.

Distributors of Mitoku's products include the following: In the USA: Westbrae Natural Foods Inc., Great Eastern Sun Inc., U.S. Mills Inc., Tree of Life Inc., and Shojin Natural Foods (Hawaii). In Canada: Koyo Foods Inc., Flora Distributors Ltd., and Timbuktu. In Costa Rica: Distribuidora de Productos Macrobioticos S.A. In England: Sunwheel Foods Ltd, Clearspring Natural Grocer, Meridian Foods Ltd. In France: Celnat, Tama. In Belgium: Lima N.V. In the United Arab Emirates: Emirates Trading & Marketing Est. In South Africa: Key Health. In Austria: Naturkostladen, Lebenszeichen. In Switzerland: S'lotusbluemli, Terrasana, Futonhaus. In Sweden: Kung Markatta. In Norway: Alternative Import. In Finland: Makro Bios. In Portugal: Armazens Da Matinha. In Spain: Kunga. In Italy: La Finestra Sul Cielo, Probios S.R.L., Dalla Terra al Cielo, Solo Natura. In Israel: Tivoli Ltd. In Australia: Pureharvest. In New Zealand: Enso. In Singapore: Nature's Best. In Yugoslavia: General Export. In Japan: Seibu Department Stores Ltd., Tokyu Department Stores Ltd. Among the countries reached indirectly through trans-shipment are Hungary, reached through Austria, various South American countries reached through the United States, and other countries such as Poland, Czechoslovakia, Iceland, Andorra, Ireland and the Caribbean Islands."

As Mitoku developed its international operations, Mr. Kazama hired many students from Western countries, including Blake Rankin (USA), Ferro Ledvinka (Italy), Christopher Geoffrey Dawson (New Zealand, starting 1979), Robbie Swinnerton (England), Terrie Adams (USA), and Michelle Harbroun (France).

"For the past 10 years, Mitoku has echoed and supported the macrobiotic perspective with its motto 'Isshoku-Dogen.' These words, though they have been forgotten in the last few centuries by the very people in the health care field who should remember them well, mean literally 'medicine and food have the same source,' and can be translated as 'food *is* medicine.' This saying has been used and known as part of the ancestral heritage of wisdom transmitted from generation to generation for several thousand years in Oriental countries such as China, Korea and Japan.

"In an attempt to preserve Japanese traditions, Japan has instituted a 'Living Treasures' program granting official recognition and support to [living masters in] various cultural areas such as theater, music, dance, sculpture,

carpentry, weaving... and arts and crafts. Ironically, though, Japan has not granted the same official recognition to its traditional methods of food processing and production in spite of the fact that increasingly large numbers of people throughout the world are now appreciating traditionally processed Japanese food products and have become aware of their important health benefits. The Japanese traditional arts of producing miso, soysauce, tofu, natto, amazake, rice vinegar, sake, mirin, condiments and pickles as well as cooking methods and preparation are unique among the culinary practices of the world... These foods are also works of art... It is my hope and recommendation that official recognition and support be granted by the 'Living Treasures of Japan' to those who have dedicated their life to the traditional art of food production and processing in spite of the hardships and commercial disadvantages they are compelled to face in business competition and present-day economical conditions." Address: 62 Buckminster Rd., Brookline, Massachusetts 02146.

2054. *Globe & Mail (Toronto, ONT, Canada).*1992. Maple Leaf Foods concludes sale. March 21.
• ***Summary:*** "Maple Leaf Foods Inc. of Toronto has signed a final agreement to sell its edible oils division to CanAmera Foods, a joint venture company formed between Central Soya of Canada Ltd. and CSP Foods Ltd., for about $105-million in cash... It said the division has annual sales of about $250-million, has edible oil refineries in Toronto, Montreal, and Wainwright, Alberta, an oil seed crushing business in Fort Saskatchewan, Alberta, and a 50-per-cent ownership in Prairie Margarine Inc. of Edmonton" [Alberta]. Address: Canada.

2055. Weissman, John. 1992. Pioneering work with seitan, Wheatmeat, and Tan Pops in America, mid-1976 to 1992 (Interview). *SoyaScan Notes.* March 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: In the fall of 1976 John formally founded the Vegetable Protein Company, registered with the city of Cambridge, and moved his operation out of his home into a commercial shop in Central Square at 140 River St. in Cambridge. Robert Allen left the company to begin a new career in the field of men's clothing. In 1976-77 John tried to get a trademark for Wheatmeat but was unable to because I.T.T. (Wonderbread) owned the trademark for a bread product. With Tan Pops as the main cash product from 1976-1978, the business became a real commercial business and began to grow. Selling as many as 85 Tan Pops a day at Erewhon alone, he began to earn a modest living For the first time, John began to use machines to help him in making his products. In 1977 he developed a portion-control method for the Tan Pops, running the seitan through a meat grinder, and forming them into cylinders, like a fat sausage, rather than the former slabs. John also began to experiment with new ingredients in the Wheatmeat and Tan Pops–such as vital wheat gluten, which he purchased from Ogilvie Ltd. in Montreal, Quebec, Canada. Other ingredients used included oat bran and oat flour mixed with wheat, whole toasted soy flour. The formula was constantly changing. At one point the main ingredients in the Tan Pop were vital wheat gluten and whole wheat flour. Neither Wheatmeat or Tan Pops were ever made entirely from vital wheat gluten.

In addition to the Wheatmeat Tan Pop, John developed and made a Tofu Pop, introducing it in the spring of 1977. He bought squares of plain pressed tofu (3 inches on a side and 3/4 inch thick) from a Chinese retail food store in Boston's Chinatown–he does not recall the company's name and he is not sure if they made the tofu or bought it from elsewhere. Later he bought tofu from Yah Kee, a Chinese tofu maker. He skewered the pressed tofu squares, coated them with his dry flour mix and corn batter, and deep-fried them. He first sold these at the very first Bread & Circus natural food store purchased by Anthony Harnett in Brookline. The product was introduced just after Anthony bought the store–but it was discontinued after a month or so, because it sold slowly; the unflavored tofu was too bland.

One day in the spring of 1979 he realized that deep-frying was unhealthy, and that day he and an employee moved his Pitco deep-fryer down to the basement, thus starting the "Vegetable Protein Museum of Natural History"–and stopped making Tan Pops. At that point he reformulated the Solar Burgers by adding TVP (they were made from a mixture of seitan and soy in various forms, incl. soynuts and TVP). He also made a TVP chili, which he thinks was called Vegetarian Chili.

In about 1978-79 John introduced another new product to salad bars around Boston. Named Smoky Soy Bits, it was a combination of TVP and gluten (produced by Ogilvie Ltd. in Canada) made into bacon-like bits, but without hydrogenated oils or salt (he used tamari instead). It was an "all natural" product–to the extent that TVP is natural.

In Nov. 1980 John introduced Weissman's Original Tofu Sausage, which tasted like bologna. A 6-ounce mixture of spices and tofu in a cellulose casing, it was cooked in a smokehouse. His company made it for the first 4 years and it eventually became his best-selling item. As its popularity increased, he phased out retail sales of Wheatmeat and Solar Burgers, and sold these Tofu Sausages to restaurants in bulk. After this period he invented only tofu products.

In 1983 John invented Pasta Pals, a tofu-gluten meatball. He discontinued it when Lipton Tea Inc. brought the trademark from him in late 1984. Lipton still owns the registered trademark.

In May 1984 John had to leave his food plant at 140 River Street in Cambridge. So he arranged with Michael Cohen to make the Tofu Sausage at his plant in Greenfield,

Massachusetts. This was disastrous for John, since the product's new poor quality almost ended any reputation it had left in the marketplace. But it was quite an education for John. In January 1985 he took back the product and began making it for himself again.

In the fall of 1984 John arranged with Ademar Reis, owner of Season's Harvest (a sandwich maker who was John's first customer for bulk-packed Solar Burgers in 1976) to have the Solar Burger made at Ademar's shop. John also wanted him to make Smoky Soy Bits and showed him how. Reis made the products for John briefly in late 1984, however this situation did not work out for John either. But it did for Ademar, who to this day makes soy "bacon" after the manner John showed him, using textured soy flour or concentrate, and flavorings similar to or the same as those from raw material sources which John supplied to him. Reis now also makes a tofu meatball.

In 1985 John changed the company name to VegPro. He continued to make Solar Burgers and Wheatmeat, but from then on he only invented and worked on tofu products. In about 1986, based on the success of his Weissman's Original Tofu Sausage (6 oz), he introduced a new Tofu Savvy line of products (starting with a 3-lb Boloney), each in a 2-3 lb loaf shape like a meatloaf, and sold to delis. He buys his tofu from a tofu maker in Massachusetts. With names like Tofu Salsa Savvy (bulgur and tofu), Curry (with brown rice and veggies), Spice-Seed, and Boloney, these are offshoots of the tofu sausage, but they involve a highly proprietary process that John has developed. Delis sell the sliced loaves for use in sandwiches.

In 1990 he began to test market (in one Bread & Circus store) two new types of tofu franks: Good Dogs, and Bad Good Dogs (hot & spicy), each with a registered trademark. They were only on the market for 1-2 months because they didn't keep well–but he still feels they are excellent products. He made them himself because he doesn't like to have them made on meat processing machines.

Today John works as a very creative solo craftsman and a chef, still making a line of food products himself, including the Weissman's Original Tofu Sausage (6 oz), and the Tofu Savvy line. His products are sold at about 10 outlets, including five Bread & Circus stores, plus some co-ops, restaurants, and health-food stores.

He no longer makes Solar Burgers, but someone from California is making another product with that name.

On 19 April 1988 John received federal trademark #1,485,401 for Wheatmeat. He knows of people in Utah and Pennsylvania who are using his registered trademark, Wheatmeat, illegally.

John, now age 43, is a musician, selling foods he has developed, and writing a novel. He is almost a vegetarian, but he eats some fish. Address: VegPro Co., 133 Nottinghill Rd., Brighton, Massachusetts 02135.

2056. *SoyaCow Newsletter (Ottawa, Canada).*1992. Child Haven sends six SoyaCows to India with CIDA's help. 1(1):1. Jan/March.
• ***Summary:*** "Child Haven International of Maxville, Ontario, has purchased six SoyaCow systems for their Soya Milk Cottage Industry Project in India. The project is supported by the Canadian International Development Agency and charitable donations from the public. The machines are reported to be running well without problem. Unskilled women with minimum training are able to operate the machines and make soya milk, tofu, soya yogurt, okara, etc., and many delicious and nutritious products."

A photo shows Child Haven's directors, Fred and Bonnie Cappuccino, as they take delivery of six SoyaCows from ProSoya's president, Rashmi Gupta [Raj Gupta's wife]. The SoyaCows are arranged on two handsome stands. Below each is a stainless steel tofu forming box.

Note: As of May 1999 Child Haven is located at: R.R. #1, Maxville, Ontario, K0C 1T0, Canada. Phone: 613-527-2829. Attn: Bonnie and Fred Cappuccino.

2057. *SoyaCow Newsletter (Ottawa, Canada).*1992. SoyaCows to Malawi and Guatemala. 1(1):1. Jan/March.
• ***Summary:*** "Ekwendeni Hospital in Malawi (Africa) has ordered a SoyaCow with electric boiler. Another SoyaCow system has been purchased by ADEEC in Guatemala through Plenty Canada. The machine will be used in a project to establish the feasibility of the SoyaCow concept and to train people in the operation of the machine."

2058. *SoyaCow Newsletter (Ottawa, Canada).*1992. Two stage grinder improves yield of Alexandria SoyaCow. 1(1):1. Jan/March.
• ***Summary:*** "The SoyaCow system operational for over six months at the Candlestick restaurant in Alexandria, Ontario, has been upgraded to use the same two stage grinder as used in the latest SoyaCow systems. This has resulted in a dramatic increase in the soya milk yield and reduced the soya bean grinding time."

2059. *SoyaCow Newsletter.*1992—. Serial/periodical. Ottawa, Canada. The Soya Cow Centre. Vol. 1, No. 1. Jan/March 1992. Editors: Raj Gupta and Grant Wood.
• ***Summary:*** The SoyaCow, invented by Indian scientist Raj Gupta, makes high-quality soymilk for low cost. Vol. 1, No. 1 was actually published in April 1992. Talk with Brian Harrigan of ProSoya in Ottawa. 1999. May 11. The SoyaCow Newsletter was discontinued about 18 months ago, due to lack of time. Address: 9 Veery Lane, Ottawa K1J 8X4, Canada.

2060. DeBona, Don; Callebert, Mark. 1992. Update on Lima Foods and Euronature (Interview). *SoyaScan Notes.*

April 19 and 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The following is based on a talk that Don had in North Carolina with Mark Callebert, general manager of Lima Foods in Belgium, then a direct interview with Mark in Belgium on April 23, followed by a letter from Mark on June 16 with exact dates. Mark has worked with Lima for about 16 years (since 1 Sept. 1975).

The Gevaert family sold Lima in May 1988 to a company named Vibec in Quebec, Canada. Vibec was a construction company (they were not involved with foods) and the owners spoke French. The contact with Vibec was made via Henry Lucy, a Frenchman who was on the Lima board of directors (and also a shareholder), who was a friend of Michio Kushi (Michio had healed Henry's wife), who had quite a lot of money, and who also had a construction company in Africa. Michio was also on the Lima board for a while. Vibec purchased Lima as a way of getting involved in the new European market without borders which will begin at the end of 1993. However Pierre Gevaert and his son, Daniel (who was production manager at Lima, France), kept their property and mill in the south of France where Lima used to make miso. At that time Lima had a lot of financial problems. Pierre Gevaert owned the majority of the stock in Lima, and his relatives (mostly his brothers and sisters) owned the rest. Mark and Frank Stevens (Pierre Gevaert's son-in-law) played key roles in negotiating the deal, then stayed on to run the company. On 22 April 1989 Lima purchased Jonathan P.V.B.A., which is still a fully owned subsidiary (daughter company) of Lima. But the marriage of Lima (a Belgian natural foods company) and Vibec (a Canadian construction company) was a strange one, and for that reason it didn't last long.

Then in September 1989 Lima was purchased from Vibec by Euronature (pronounced as in French, YU-ro na-TYUR), a large international food company headquartered in Paris, France. Euronature is a holding company that was founded in June 1989; the president of Euronature was able to raise a lot of money from banks and insurance companies to create the holding company. Frank Stevens was killed in an automobile accident in Nov. 1989.

Lima is presently doing well, is financially very solid, and the future looks bright. Lima has sales of about $15 million a year, but the company is not yet profitable. Mark feels that they will become profitable when sales reach about $17 million/year. Their traditional high standards of food quality are completely supported by Euronature. Pierre Gevaert (born 21 July 1928 now in his mid-60s) no longer owns any part of Lima and neither he nor his son have been active with the company since it was purchased by Euronature. Pierre lives in the south of France and works on his organic farm there. Lima is still headquartered at Sint-Martens-Latem in Belgium.

Euronature has 4 major divisions: (1) Natural foods division, including Lima Foods, Lima's bakery and muesli factory, and several natural foods distribution companies; (2) Gourmet division; (3) Seafoods division (Euronature's largest), with branches scattered throughout Europe; (4) French specialty foods division.

Lima's largest product lines are their muesli products (which they make at their own plant), their bakery (located 6 km from Sint-Martens-Latem in Belgium), their sesame division (they make tahini and gomashio, and were one of the first to grow sesame seeds organically), and their tomato canning division (located in the south of France, it makes tomato sauces and ratatouille). Lima's leading soyfood products are tamari, shoyu, organic miso, their soymilk products (including regular and Mocha-Soy soymilk, and Soy Desserts, all made by Alpro in Belgium), fresh tofu salads, and tofu in cans and jars. Imports from Japan are now quite small, representing only about 10% of Lima's total sales. Although Lima no longer makes its own miso, it still sells quite a lot of miso–much of it from past batches made by Jan Kerremans in the south of France. Lima is now looking for other sources, including American Miso Co. in North Carolina. Jan now works part time as a consultant for Alpro in Belgium.

Jonathan's main products are now seitan and tofu (both fresh [pasteurized] and in jars), plus many second-generation products made from seitan and tofu, such as fresh tofu spreads, tofu pates, seitan brochettes, etc. Jonathan makes all of the seitan, tofu, and related products sold by Lima. Address: General Manager, American Miso Co., Route 3, Box 541, Rutherfordton, North Carolina 28139. Phone: 704-287-2940.

2061. Kennedy, Mike. 1992. Plant to transform soybean oil to fuel will be built in KCK [Kansas City, Kansas]. *Kansas City Star (Missouri).* April 27. p. B2. Metropolitan section.

• ***Summary:*** At Kansas City's Earth Day celebration, Sunday [April 26], at Penn Valley Park, Interchem Industries, Inc., based in Leawood, Kansas, announced that it plans to make diesel fuel from soybean oil in Kansas City, Kansas.

Bill Ayres, executive vice president of Interchem, said the "biodiesel" fuel creates less pollution when burned and requires no engine modification. "You just pour it in your tank," and drive away. With Ayres were Thomas Verry, director of field services for the Missouri Soybean Merchandising Council [MSMC], and Vince Schoemel, mayor of St. Louis.

Schoemel, a Democrat, who is running for governor of Missouri, said he strongly supports use of alternative fuels to reduce pollution and reliance on foreign energy, and to create jobs.

Ayres said Interchem planned to break ground Friday for the plant, which will have a capacity of 3 million gallons

per year of "soy diesel fuel." It will be built near Third and Lyons streets in Kansas City, Kansas. In January [1992], Interchem opened a demonstration plant in Kansas City, Kansas, that produces the soybean fuel. The Missouri Soybean Merchandising Council has provided funding to do research on the soybean diesel fuel.

Interchem's biodiesel sells for about $1.50 per gallon, compared with about $1.00 for regular diesel. Ayres added, that as the federal government begins enforcing more stringent clean air standards, biodiesel could become more economical.

Verry (of MSMC) said that converting soybean oil into diesel fuel is a way to reduce the glut of oil that is now on the market. So, farmers are excited about this project.

In 1989, Interchem changed its name from Pyrotech Inc. Besides its Leawood office, Interchem has an office in Vancouver, British Columbia, Canada.

2062. **Product Name:** Yves Veggie Cuisine Burger Burgers (Fat Free–Contains No Meat).
**Manufacturer's Name:** Yves Veggie Cuisine.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver V6A 2A8, B.C., Canada. Phone: 604-251-1345.
**Date of Introduction:** 1992. April.
**Ingredients:** Water, onions, textured soy protein, wheat gluten, soy protein isolate, brown rice syrup solids, pea fiber, onion powder, malt extract, yeast extract, salt, tomato paste, Dijon mustard, rice flour, natural flavor, vegetable gums.
**Wt/Vol., Packaging, Price:** 2 patties in 6 oz (170 gm) paperboard box.
**How Stored:** Refrigerated or frozen.
**Nutrition:** Per patty (85 gm): Calories 83, calories from fat 0, total fat 0 gm (0% daily value; saturated fat 0.0 gm), cholesterol 0 mg, sodium 380 mg (16%), total carbohydrate 9 gm (dietary fiber 4 gm [15%], sugars 6 gm), protein 11 gm. Calcium 6%, iron 9%, vitamin C 2%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Ad (color, 2/3 page) in *Natural Foods Merchandiser.* 1992. April. p. 94. "Yves Veggie Cuisine." Shows packages of Veggie Wieners and Burger Burgers.

Product with Label purchased at Safeway in Lafayette, California. 1996. June. 5 by 3½ by 1 inch paperboard sleeve. Red, yellow, and black on white. Photo on front panel of a burger with grill marks atop lettuce and tomatoes below a sesame bun. "Contains no meat. Fat free."

2063. Adlercreutz, Herman; Hämäläinen, E.; Gorbach, S.; Goldin, B. 1992. Dietary phyto-oestrogens and the menopause in Japan (Letter to the editor). *Lancet* 339(8803):1233. May 16. [7 ref]
• ***Summary:*** The authors of this letter theorize that diet is a possible reason for the differences in menopause symptoms between Japanese and American women. The scientists had studied the phyto-estrogen excretion of a small sample of Japanese women with mean age 50 eating "a traditional Japanese low-fat diet". Phyto-estrogens come from plants; when consumed, they act like endogenous estrogens, the estrogens produced by the body. Menopausal symptoms are associated with a drop in a woman's production of endogenous estrogens.

The Japanese women excreted up to 1,000 times more phyto-estrogens than American women consuming a Western diet. This result was a positive finding for the Japanese subjects; the scientists attributed the high levels with high intake of soyfoods, which are rich in phyto-estrogens.

Although the scientists did not specifically study the effects of phyto-estrogens on menopause, they believe that soyfoods may act like a hormone replacement "pill", closing the gap created when endogenous estrogen levels drop during menopause.

Note: According to Peter Golbitz of Soyatech, Japanese eat an average of 26 pounds of soyfoods per person each year, while Americans eat only about 4 pounds. Address: 1-2. Dep. of Clinical Chemistry, Univ. of Helsinki, SF-00290 Helsinki, Finland; 3-4. Nutrition/Infection Unit, Dep. of Community Health, Tufts Univ. School of Medicine, Boston, Massachusetts.

2064. *Ontario Export Soybeans (OSGMB).*1992. Ontario soya to Cuba? 5(2):2. May.
• ***Summary:*** Two members of the "Ontario Soybean Growers' Marketing Board visited Cuba on an export trade mission between March 1 to 8. During the week they visited a crushing plant, a farming enterprise, the Cuban Food Research Institute and had several meetings with officials from their import agency, Alimport..."

"The Ontario soybean industry has an immediate opportunity in soy-protein products of soy flour and textured vegetable protein." Address: Chatham, Ontario, Canada.

2065. Ontario Soybean Growers' Marketing Board. 1992. Soybean symposium scheduled for 1993 (News release). Chatham, Ontario, Canada. 1 p.
• ***Summary:*** "The Ontario Soybean Growers' Marketing Board will celebrate the 100th anniversary of soybean production in Canada by holding a Soybean Symposium from March 28th to 30th, 1993. The two-day event will feature international speakers, a trade show, educational displays and special events.

"The last soybean conference in Ontario was held in 1984. Next year's symposium will bring together representatives from every facet of the industry to discuss issues from market development to climatology, from world trends to innovative food products. The symposium will be

held in co-operation with industry stakeholders and government."

"In 1893, Canada started producing soybeans. Today Canadian farmers produce 53 million bushels of soybeans annually and export over 20% of that total.

"The conference will be held at the Constellation Hotel in Toronto... Further information is available by contacting the Ontario Soybean Growers' Marketing Board in Chatham, Ontario or by calling 519-352-7730." The conference is being organized by Ginty Jocius & Associates, Guelph, Ontario, Canada.

Note: The first three Canadian soybean conferences were held in April, May, and June of 1936. On 11-12 Sept. 1973 the Ontario Soya-Bean Growers' Marketing Board sponsored the Ontario Soybean Symposium at Ridgetown College of Agricultural Technology in Ontario. On 8 Jan. 1979 the Ontario Ministry of Agriculture sponsored a conference on Soybeans, Cereals, and Land Management, also at Ridgetown. Then on 18-20 March 1984 the Ontario Soya-Bean Growers' Marketing Board sponsored the largest Canadian soybean symposium to date, titled "Ontario Soybeans... A journey into the next century," held in Toronto.

Note: According to the April 1993 OSGMB Newsletter (p. 4), over 350 people attended this symposium. Address: Chatham, ONT, Canada.

2066. Bergh, Barbara. 1992. The Canadian oilseed processing sector: A profile. In: Statistics Canada. 1992. Grain Trade of Canada 1990-91. Ottawa, ONT, Canada: Statistics Canada. See p. 23-32. [Eng; Fre]

• ***Summary:*** Contents: Oilseed situation. Crushing industry. Vegetable oils. Vegetable oilmeals. Economic value of the industry. Policy issues and recommendations by the Canola Marketing Task Force. "The main oilseed crops produced in Canada are [in descending order of the amount produced], canola, soybeans, flaxseed and sunflower seed. There has been an almost continuous increase in the production of oilseeds since 1950, with the largest increase being in canola production which will reach a record 4.3 million tonnes in 1988/89. There was a record 1.3 million tonnes of soybeans produced in 1990/91. A bar chart shows the amount of Canada's four major oilseeds produced every 5 years from 1950 to 1990. "Only small amounts of oilseeds are imported into Canada, but significant amounts are exported. In 1990/91, 99% of canola exports went to Japan, while soybean exports were destined mainly for the U.S., Netherlands, Portugal, Hong Kong, Japan and Singapore."

One of Canada's three soybean crushing plants closed in 1991 causing a drop in soybean crush capacity from 3,700 to 2,500 tonnes per day. Of this, CanAmera Foods in Hamilton, Ontario, has 1,270 tonnes, and ADM Agri-Industries Ltd. [in Windsor, Ontario] has 1,250.

"The two major oilseeds processed in Canada are canola and soybeans, with small amounts of sunflower seed and flaxseed also being crushed. Canola is crushed mainly for its oil as its seed yields about 40% oil and 60% meal. Soybeans are crushed more for the meal since they yield about 78% meal and only 17.5% oil. Sunflower seed yields 42% oil and 35.5% meal, while flaxseed yields 34% oil and 63% meal...

"In 1990/91, 44% of the domestic canola crop was crushed, compared with 72% for soybeans, 70% for sunflower seed and 1% for flaxseed."

"In 1990/91, 0.8 million tons of crude vegetable oils were produced in Canada... Canola oil accounted for 74% of total vegetable oil production in Canada, followed by soybean oil at 21%, sunflower oil at 4% and linseed oil at 1%. In addition, approximately 25.0 thousand tonnes of corn oil are produced annually."

"Soybean meal is the major vegetable oilmeal used in Canada, accounting for 76% of the total oilmeal consumption in 1990/91. Canola meal is next, accounting for 22% of total domestic use, followed by sunflower and linseed meals which accounted for 1% or less." Soybean meal contains 48% protein, whereas canola meal contains only 36-37% protein; it contains more fiber than soybean meal and has less digestible energy.

As of 1 Jan. 1992, Canadian soybeans, crude soybean oil, soybean meal, canola seed, crude and refined canola oil and meal all have tariff-free access to the USA. Refined soybean oil will be duty free as of 1 Jan. 1995. Address: Market Analyst, Canadian Oilseed Processors Assoc., 1010-360 Main St., Winnipeg, Manitoba R3C 3Z3, Canada. Phone: 204-942-3408.

2067. *Ontario Soybean Growers' Marketing Board Newsletter.*1992. Soybeans in Canada: Beyond 100 years. June. p. 1.

• ***Summary:*** "On March 28th to 30th of 1993, the Ontario Soybean Growers' Marketing Board will celebrate the 100th anniversary of soybean production in Canada. A two-day Soybean Symposium will be held at the Regal Constellation Hotel in Toronto. The event will feature international speakers, a trade show, educational and historical displays and a variety of special events. Representatives from every facet of the soybean industry will be involved and topics such as market development, climatology, world trends and innovative food products will be discussed. The symposium will be held in co-operation with industry stakeholders and the federal and provincial governments." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2068. *Ontario Soybean Growers' Marketing Board Newsletter.*1992. Printed with soy ink. June. p. 2.

• ***Summary:*** "The Ontario Soybean Growers' Marketing Board has initiated the 'Soyseal' program in Canada. With the American Soybean Association permission the Soybean Board has modified the U.S. soyseal logo into a distinctive Canadian logo. The logo is to be used for non-food uses of soybean oil. Industrial applications such as soyoil inks, lubricants, emulsions and dust suppressants are just a few of the applications. The soyseal is distinct from the Soymark (featured in our last newsletter) but is meant for parallel applications in the non-food or industrial sector.

"The Board has already been approached for copies of the logo which will be displayed on product package labels printed with soyoil ink. Soyoil inks are environmentally friendly, less toxic and have numerous other beneficial aspects over petroleum-based inks. The Board is petitioning both levels of governments to formulate policies to have all their printed material done with soyoil ink.

"The logo will mostly appear in all black ink, as printed above, but some applications may have the maple leaf and oil droplet outlined in red." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2069. *SoyaCow Newsletter (Ottawa, Canada).*1992. CIDA funds Child Haven to buy seven more SoyaCows. 1(2):1. April/June.

• ***Summary:*** "Child Haven of Maxville, Ontario, has received funding from the Canadian International Development Agency in support of the IIIrd phase of their soymilk cottage industry project in India.

"... Child Haven have ordered seven complete SoyaCow WS-20S systems to add to their 9 systems purchased earlier. Each system is capable of producing about 15 litres of soymilk every half an hour using 1.5 kg soybeans."

Child Haven's project director for India is Hart Jansson. Phone: (613) 837-2235.

Note: The company name and address on the envelope in which this newsletter was sent is: "ProSoya Foods International Inc., 9 Veery Lane, Ottawa, Canada K1J 8X4."

2070. *SoyaCow Newsletter (Ottawa, Canada).*1992. Plenty Canada buys a SoyaCow. 1(2):1. April/June.

• ***Summary:*** "Plenty Canada has ordered a SoyaCow WS-20S system with electric steam generator for installation at their head office in Lanark, Ontario. According to Nancy McDermott, the machine will be used to give demonstrations and provide training to the people visiting Plenty from their projects around the world. The machine will also be accessible to local people for producing soyfoods for consumption and sale."

2071. Carroll, Jerry. 1992. Vegetable oil-fueled world cruise: Innovative sailboat to test new soybean diesel on 2½ year trip. *San Francisco Chronicle.* July 3. p. B3. People section.

• ***Summary:*** About Bryan Peterson and his Sunrider boat, which is a Canadian-made Zodiac with a rigid "V" fiberglass hull and inflatable buoyancy tubes which lets it dance lightly over the waves that other boats would have to plow through. The voyage is meant to tell the world about the benefits of "soy diesel," the fuel that will power Sunrider around the globe. Peterson has 90 sponsors, including the United Soybean Board (which represents 400,000 farmers), Interchem Industries of Leawood, Kansas (an alternative energy company founded 6 years ago), Earth Day International, the government of British Columbia, Canada. Interchem plans to deliver 25,000 gallons of "soybean diesel" fuel to the 228 ports where Peterson plans to land.

Bill Ayres of Interchem says: "'We started supplying the first soy diesel in small quantities and batches last August... We started off with a pickup truck at the University of Missouri.' Currently mass-transit systems in St. Louis and Kansas City, Missouri, are blending the new fuel with regular diesel fuel and testing it on buses.

Discusses Peterson's remarkable and diverse background and resumé. He now lives in Fairfield, Iowa, with his wife, Janice, who works for Maharishi International University. "Peterson himself has practiced transcendental meditation for 24 years and has taught it." 2½ years ago he started planning this trip in order to do something about the environment and something he would enjoy. A photo shows Peterson and the boat.

2072. Bernard, Richard L.; Nelson, R.J. 1992. Origins and pedigrees of public soybean varieties in the United States and Canada: 1987 to 1991–(1) Additions to Table 6; (2) Corrections and additional information; (3) Additions to Table 9; (4) Table updating USDA Soybean Germplasm Collection. *USDA Technical Bulletin* No. 1746. 11 p. July. [1 ref]

• ***Summary:*** These four unpublished photocopied documents are intended to update and make corrections in *USDA Technical Bulletin* No. 1746, issued in Oct. 1988.

Part (1), "Additions to Table 6," gives details about the following new varieties: Amcor 89, Archer (Developer: Iowa and Puerto Rico AES), Avery, Bass, Bell, Bert, Brim, Brock, Bryan, Buckshot 723, Burlison, Camp, Canatto, Chapman, Choska, Colquitt, Conrad, Cook, Cordell, Corsica, Crockett, Crowley, Delsoy 4210, Delsoy 4500, Delsoy 4710, Delsoy 4900, Dunbar, Edison, Elgin 87, Erie, Flyer, Glenwood, GR8836, GR8936, Hagood, Hamilton, Hardin 91, Haroson, Harovinton, Harper 87, Hartwig, Hayes, Hobbit 87, Howard, HP201, HP202, HP203, HP204, Hutcheson, IA1001, IA1002, IA1003, IA2001, IA2002, IA2003, IA2004, IA2005, IA2007, IA2009, IA2010 (Note: IA varieties are all from Iowa and Puerto Rico AES), IL1,

IL2 (Note: IL varieties are from the Illinois AES), Jack, Kasota, Kato, Kenwood, Kunitz, Lamar, Leslie, Linford, Lloyd, LN83-2356, LS201, LS301, Manokin, Maple Glen, Marcus, Merrimax, Minnatto, Narow M, Nattawa, Nattosan, Newton, Nile, OAC Dorado, OAC Eclipse, OAC Frontier, OAC Musca, OAC Shire, OAC Talbot, OAC Vision (Note: OAC varieties are all from the University of Guelph, Ontario, Canada), Padre, Pennyrile, Perrin, Pharaoh, Proto, RCAT Alliance, RCAT Angora, RCAT Persian (Note: RCAT varieties are from Ridgetown College of Agricultural Technology, Ridgetown, Ontario, Canada), Resnik, Rhodes, Sharkey, Spencer, Sprite 87, Spry, SS201, SS202, Stonewall, Sturdy, Thomas, Twiggs, Walters. Note: This is the earliest document seen (Aug. 1999) that mentions the soybean variety Merrimax.

Part (2), "Corrections and additional information," makes corrections in Table 3, most in the pedigree information (Improved Pelican, Lincoln, Pagoda) and Table 6 (Anoka, Acme {Canada} and Crest, Bradley, Chico, Custer, Sloan, Swift). Also contains a page titled "Comments on pedigrees." "The most common error we have found is the reversal of male and female. Since in soybean breeding it appears to make little if any difference, the cross A x B has sometimes been recorded B x A. Some breeders make no distinction in their records between reciprocal crosses. We have made some corrections but this error may still be present in some pedigrees."

Part (3) Additions to Table 9 gives new information about "Registrations of 1987 to 1991 public soybean varieties." The new varieties are: Amcor 89, Archer, Avery, Bell, Bryan, Burlison, Chapman, Colquitt, Conrad, Cordell, Crockett, Delsoy 4500, Delsoy 4900, Edison, Edison 87, Flyer, Glenwood, GR8836, GR8936, Hamilton, Harper 87, Hayes, Hobbit 87, HP201, HP202, HP203, HP204, Hutcheson, IL1, IL2, Jack, Kasota, Kato, Kenwood, Kunitz, Lamar, Linford, Lloyd, LN83-2356, LS201, LS301, Marcus, Minnatto, Newton, Padre, Pennyrile, Perrin, Proto, Resnik, Sharkey, Spencer, Sprite 87, SS201, SS202, Stonewall, Sturdy, Thomas, Twiggs, Walters.

For each variety is given the Registration Number and the citation for the registration in *Crop Science* (year, volume, and pages). Registration numbers above 273 carry the prefix "CV-". e.g., CV-274.

Additional information for varieties listed in Bulletin 1746, p. 62-67. Missing details are given for: Cartter, CN210, CN290, Corsoy 79, Fayette, Gnome 85, Hobbit, Hoyte, Pixie, Ripley, Sprite, TN4-86, Will, Williams 79, Williams 82.

(4) Table updating USDA Soybean Germplasm Collection. Vertical columns are 13 maturity groups from 000 to X, plus the total for that row. Horizontal rows are (with totals): Pre-1945 public cultivars (202), Post-1945 public cultivars (315), Private cultivars (28), Clark isolines (276), Harosoy isolines (119), Williams isolines (62), Other isolines (37), Genetic types (145), Germplasm releases (52), FC accessions *(G. max)* (90), PI accessions *(G. max)* (11,581), PI accessions *(G. soja)* (1,034), Column totals. The top 4 maturity groups in terms of number of total varieties are: IV (3,168), V (2,195), II (1,735) and III (1,544). The bottom 4 maturity groups in terms of number of total varieties are: IX (159), X (163), 000 (209) and VIII (362). Address: Univ. of Illinois. Urbana, Illinois.

2073. Statistics Canada, Agriculture Div. 1992. Agricultural profile of Prince Edward Island. Part 1. Ottawa, Ontario, Canada: Publications Division, Statistics Canada. 33 p. See p. 11. July. Catalogue 95-310. [Eng; Fre]
• ***Summary:*** According to Canada's agricultural census, in 1991 on Price Edward Island, 110 farms in 3 counties reported growing soybeans as follows: Queens County–55 farms grew soybeans on 3,340 acres (1,352 hectares); Kings County–26 farms grew soybeans on 1,671 acres (676 hectares); Prince County–29 farms grew soybeans on 866 acres (350 hectares). Address: Ottawa, Ontario, Canada.

2074. *Health Foods Business.*1992. Helping local rainforest. Aug. p. 63.
• ***Summary:*** "Sharon's Finest contributed $2,600 to the Sierra Club of Western Canada to help save the temperate Rainforests on Vancouver Island. The donation was made available through the 5% titheing policy from the Canadian sales of TofuRella. Sharon's donated $1,700 last year. On hand to receive the check from Sharon's Finest president Richard Rose was Lindsay Brown of the Sierra Club." A photo shows Richard Rose (with long hair) presenting the check to Lindsay Brown.

2075. *Ontario Soybean Growers' Marketing Board Newsletter.*1992. Crushers form new association. Aug. p. 3.
• ***Summary:*** "The Ontario Soybean Growers' Marketing Board congratulates the newly formed Canadian Oilseed Processors Association (COPA) as they begin operation in Winnipeg.

"COPA represents the common interests of crushers across Canada who process soybeans, canola, linseed and other oilseeds. Currently, there are four companies involved in the oilseed processing business in Canada, down from nine only a few years ago. These companies are ADM Agri-Industries, CanAmera Foods, Canbra foods and Northern Lite." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2076. Galloway, Gloria. 1992. Lifeless looking bean curd can soar to tasty heights. *Windsor Star (Essex County, Ontario, Canada).* Sept. 30.
• ***Summary:*** Jon Cloud runs two Toronto vegetarian restaurants and Soy City Foods, a soyfoods production and distribution company. Hugh McLean of Heatherton, Nova

Scotia, near Antigonish, produces more tofu than anyone else in the Maritime provinces–just 180 to 220 kg per week–in a tiny 2x3 meter room at the back of his family's house.

A photo shows 2 packages of tofu; one, named To-Fu-De-Light, looks like a pudding. It is almond flavored and has Chinese characters written on the package. Address: The Canadian Press.

2077. Agriculture Canada, National Grains Bureau. 1992. A study to compare the grain marketing systems in Ontario, Michigan and Ohio. Winnepeg, Manitoba, Canada. vi + 68 + 21 p. Sept. 28 cm. Spiral bound.
• ***Summary:*** This report was issued under the Grains 2000 program. Contents: Executive summary. 1. Introduction and background. 2. Production patterns. 3. Marketing patterns and trends. 4. Nature of the grain marketing industry. 5. Price trends and relationships. 6. Country grain elevator charges and discounts. 7. Grain elevator costs and performance. 8. Transportation cost comparison. 9. Competitiveness assessment overview. 10. Recommendations for the Ontario grain industry. Appendices: A. Canadian grades and standards. B. U.S. grades and standards. C. Posted board price data 1989-1991. D. Ontario Grain & Feed Dealers Association conversion tables. Address: Winnipeg, Manitoba, Canada.

2078. **Product Name:** La Soya: Authentic and Natural Soy Sauce of China.
**Manufacturer's Name:** Amasi International Inc. (Importer). Made in China.
**Manufacturer's Address:** 378, Isabey, Montreal, QUE H4T 1W1, Canada. Phone: 514-738-3000.
**Date of Introduction:** 1992. September.
**Ingredients:** Water, whole soybeans, whole wheat, sea salt.
**Wt/Vol., Packaging, Price:** 15 fl oz (450 ml) glass bottle or 2.64 U.S. gallons (10 liters) tin.
**How Stored:** Shelf stable.
**New Product–Documentation:** Leaflet from Natural Products Expo East. 1992. Sept. 11-13. Baltimore, Maryland. "The taste of a thousand seasons... La sauce aux mille saisons." This is an authentic Chinese soy sauce.

2079. Pfeiffer, Jeanine M. 1992. Work on soybean utilization at IITA in Nigeria (Interview). *SoyaScan Notes.* Oct. 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** While she was doing research on soybeans at IITA in Nigeria (during June-Dec. 1989), work on soybean utilization (soyfoods) was becoming a little more important, mainly because IDRC (the International Development and Research Center) in Canada began funding the soybean utilization program, starting in about 1987 or 1988, and continuing until about 1990 or 1991. This funding meant that scientists were interested in it and that there were funds for Nigerian NARCs (National Agricultural Research Centers) to put some money interest into it. This program also supported her research in Nigeria. At IITA's Grain Legumes Improvement Program, the food technology labs were located near the soybean breeders and entomologists and Ken Dashiell had a very close working relationship with the person in charge of the food technology program. When she was at IITA, utilization was really being pushed, in part because of pressure from the U.S. State Department, which felt it would create more soybean consumers to which the USA could export more soybeans.

She thinks that the interest in utilization is continuing, despite shake-ups at IITA, in part because Ken Dashiell, the soybean breeder at IITA, is now head of the Grain Legumes Improvement Program. IITA's support of the soybean breeding and production program seems to be increasing steadily. Address: Dep. of Agronomy, 220 Hunt Hall, Univ. of California, Davis, CA 95617. Phone: 916-752-1703.

2080. AGP–Ag Processing Inc a cooperative. 1992. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 24 p. 28 cm.
• ***Summary:*** Net sales for 1992 (year ended Aug. 31) were $1,126.667 million, up 30.0% from $864.675 million in 1991. Earnings before income taxes: $43.236 million, up 0.5% from the $43.016 million in 1991. Contains a 9-year summary of consolidated operating and financial statistics.

AGP is the largest cooperative soybean processing company in the world. "On December 2, 1991 AGP entered into a partnership agreement with Archer Daniels Midland [ADM] to purchase International Multifoods' North American Ag Operations which included Supersweet Feeds, Supersweet Agri Centers, the Supersweet Research Farms, a Grain Division, and Masterfeeds in Canada. In conjunction with this came the acquisition of ADM Feed Corp. with its formula feed mills and pet food operations. The two U.S. feed divisions have been merged into one under Supersweet Feeds... Pet Foods was set up as a separate division in 1991." AGP manages all these operations for the partnership [of which it is the majority partner] under the name AGP, L.P.; it "operates 19 feed manufacturing plants, 3 pet food plants and 29 Agri Centers located throughout the midwest." The Agri Centers are "retail stores selling feed and other farm supplies."

AGP tells the story of its origins in the book *Soybeans, Cooperatives, and Ag Processing Inc.*, by Margaret Finnerty, which is published in 1992. Address: Omaha, Nebraska.

2081. CSY Agri-Processing, Inc. 1992. Fact sheet (Brochure). Fort Wayne, Indiana: Public Relations Dept., Central Soya Co., Inc. 4 p. 28 cm.

• ***Summary:*** CSY Agri-Processing, Inc. is an international agribusiness company with holdings in the oilseed processing, feed manufacturing, and pork processing industries. The corporation is a Ferruzzi-Montedison company, operating as a member of the Eridania Beghin-Say agro-industrial group. The five primary holdings of CSY Agri-Processing, Inc. are Central Soya Company, Inc.,–Oilseed Products Group, Central Soya Feed Company, Inc., Provimi Holding B.V., Innovative Pork Concepts, and CanAmera Foods.

CSY Agri-Processing generates more than $2 billion in annual sales, and its various businesses employ approximately 4,000 people. Almost all of the holding company's principal operations–soybean processing, feed manufacturing, grain merchandising, vegetable oil refining, the manufacture of soy proteins and lecithins, and pork processing–involve the acquisition of agricultural products and their resale in processed form. The company is headquartered in Fort Wayne, Indiana, and counts among its holdings more than 70 plants and facilities throughout the world.

The five primary holdings are: (1) Central Soya Company, Inc.–Oilseed Products Group, which operates nine complexes and has 3 divisions: Soybean Processing Div. (owns 6 soybean processing plants with a capacity to crush about 100 million bushels annually), Refined Oil Div. (refines more than 600 million pounds of vegetable oils annually), and Chemurgy Div. (a world leader in the manufacture and marketing of soy proteins, lecithins, and related products).

(2) Central Soya Feed Co. has 3 divisions: Domestic Feed Div. (whose brands include Master Mix, Tindle Feeds, Farmacy, and Lipscomb's), Animal Health and Nutrition Div., and International Feed Div.

(3) Provimi Holding B.V. is the holding company for CSY Agri-Processing's European Feed operations, which include 14 feed and premix plants in Portugal, France, Switzerland, The Netherlands, Belgium, Greece, Italy, Poland and Hungary. Provimi Holding's operations market more than 200 basic poultry, swine, dairy, beef and specialty feeds under the Master Mix, Provimi, Protector, Celtic, and Vetem brand names.

(4) Innovative Pork Concepts is a CSY Agri-Processing unit that has formed a pork processing joint venture with Mitsubishi Corporation and Mitsubishi International Corporation. The joint venture, named Indiana Packers Co., operates a 300,000 square foot automated pork processing facility with a capacity to process 600 hogs per hour in Delphi, Indiana.

(5) CanAmera Foods is a Canadian oilseed processing and vegetable oil refining joint venture, formed in March of 1992. It is Canada's largest oilseed processing and refining business, and was formed through the combining of the operations of CSP Foods Ltd. and Central Soya of Canada Ltd., and the subsequent acquisition of the edible oils business of Maple Leaf Foods by the new venture. CanAmera Foods operates five crushing plants and five edible oil refineries.

The fully integrated, equally-owned joint venture has a strong presence throughout Canada and good access to U.S. and offshore markets. Its strategically located plants have both soybean and canola crushing capability, and produce a broad line of edible oil products marketed under well-known trademarks and brand names.

"Research: Heavy emphasis is placed on research and technology by each of the operating units of CSY Agri-Processing. Research is divided into two groups: Feed Research, with operations in Decatur, Indiana and Kerkdriel, The Netherlands; and Oilseeds Research, headquartered in Fort Wayne."

Note: Central Soya's parent company is Eridania Beghin-Say (EBS), which is headquartered in Paris. This is a newly formed agro-industrial group, that includes anything related to food and processing of agricultural products or commodities. It does market some foods at the retail level. Eridania was an oilseed processor and Beghin-Say processed sugar beets. One company in the group processes starch. Central Soya is the only U.S. company in the group; the rest are in Europe. Cereol is a conglomerate of European soybean crushers. Between 1985 and today, the Eridania Beghin-Say's revenues have more than quadrupled to more than $9,400 million, making it the 6th largest food company in the world considering food products exclusively. "This growth has placed Eridania Beghin-Say in important leadership positions within the EC and North American markets in the sugar, starch and starch derivatives, oilseed processing, and animal feed areas, as well as in certain major segments of the consumer food products area such as consumer oils, sauces, condiments, and spices. EBS's entry into the consumer food products market with well-known brands like Lesieur, Kiope, Carapelli and Ducros has constituted one of the most important components of the company's growth strategy." Address: P.O. Box 1400, Fort Wayne, Indiana 46801-1400. Phone: 219/425-5100.

2082. Hesser, J.M. 1992. The world wheat gluten market (Interview). *SoyaScan Notes.* Oct. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In March 1981 Matt took over management of the International Wheat Gluten Assoc. (IWGA); it was the first association he managed. At the time, there were 11 members, all manufacturers of dry powdered wheat gluten from Canada, Australia, and American. His first project was to bring European (western and eastern), and Japanese manufacturers into the association. Today the IWGA has 23 members from around the world; all are still manufacturers of dry powdered wheat gluten. The annual output of the

individual member companies ranges from about 4,000 tonnes to 35,000 tonnes. Companies that make wet wheat gluten tend to be very small, often cottage industries.

IWGA publishes a quarterly newsletter sent to members and an annual newsletter with a circulation of about 350. Address: International Wheat Gluten Assoc., 4510 W. 89th St., Prairie Village, Kansas 66207. Phone: 913-341-1155 or 1156.

2083. *Ontario Soybean Growers' Marketing Board Newsletter.*1992. Chicago Board of Trade hampers Ontario soys. Oct. p. 5.

• ***Summary:*** "More than a year ago the Ontario Soybean Growers' Marketing Board informed government officials that Canadian soybean producers may be shut out of the world's largest soybean market.

"Last year the Chicago Board of Trade (Cbot) announced its certificate of origin ruling to dovetail the futures markets with the U.S. Export Enhancement Program."

The Soybean Board has fought to reverse or lessen the impact of this decision, with the support of Canada's soybean industry and the help of government officials at External Affairs in Washington and Agriculture Canada's Grain Marketing Bureau. These efforts have come to no avail so far.

"With the full implementation of the ruling as of September 1, 1992 our concerns are materializing. This rule of origin limits Canada's ability to compete. We are losing access to the U.S. soybean processor market and are being effectively blocked in accessing export routes via the highly efficient U.S. transportation system, even on a fee for services basis.

"The CBOT action blocks us from competing for resources on a level playing field. It bottle necks the flow of our soybeans backing them into the Canadian market. Once our crushers are full, the soybeans must be exported. To meet any export price Canadian soybeans must then move through our less efficient, higher cost delivery system. This means *every soybean bushel produced* will be priced on the lowest export price.

"For the most part Ontario soybean growers have been supportive of the free trade initiative of CUSTA, NAFTA, and GATT. Soybeans had moved freely between the U.S. and Canada since the last successful GATT round in 1977-79. We now face the opposite of a more open and freer market." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2084. Archer Daniels Midland Co. 1992. First quarter report to shareholders, and a report on the 69th annual shareholders meeting. Decatur, Illinois. 8 p.

• ***Summary:*** "Your company continues to build for the future. Last year our capital expenditures exceeded $900 million; this year we spent an additional $600 million. In the last three years our capital expenditures exceeded two billion dollars, and that was still well below our cash flow for the same period...

"Ogilvie Mills of Canada was acquired, along with a joint venture partnership to operate Pillsbury's four U.S. mills. The Ogilvie acquisition also made ADM one of the largest producers of wheat starch and vital wheat gluten, a major product for the baking industry...

"Our oilseed crushing division purchased a canola crushing plant in western Canada, further consolidating our position as the world's leading crusher of canola... Our crushing division now operates 45 plants, crushing soybeans, cottonseed, corn germ, flax, canola, and sunflower seed, and refines the oil in 14 refineries.

"Our edible soy protein business continues to grow. A large, ultra-modern soy protein concentrate plant was commissioned at Rotterdam [Netherlands]. Our edible soy protein business–concentrate, isolate, and soy flour products–increased 25 percent for the year. Production of Harvest Burger, our soy concentrate-based meat substitute, is selling at record levels in the U.S., Russia, and England...

"We are in a growth industry. Feeding people is our business. Each year there are nearly 100 million more people to feed on the face of the earth...

"We consistently lead the charts in sales per employee in our industry. People often ask me how we do so much business with so few people. My answer is that it's our culture, central to everything we do. Every company has a personality, just like every person. The basis of our culture, or personality, is very simple: we stay in the business we know. We concentrate on one major objective, and that is the return to our stockholders. We remain entrepreneurial, concentrating on only those matters essential to running a successful business... We keep meetings, memos, policies, and procedures to a minimum. We treat everyone as an individual, giving him or her the tools and the authority to do the job. We don't second-guess, and we don't criticize for honest mistakes."

"ADM is a company with no fixed management committees, no organizational charts, no bells, no whistles, and no gimmicks–just good pay and hard work." Address: Decatur, Illinois.

2085. Griffis, Gil; Wiedermann, Lars. 1992. Marketing food-quality soybeans in Japan: A manual on how to profit from the niche market in Japan for value-added soybeans. 5th ed. St. Louis, Missouri: United Soybean Board. 25 p. Nov. 28 cm.

• ***Summary:*** Contents: Introduction. Japan: Desired soybean characteristics, tofu (procedure for making tofu, desired soybean characteristics, color of hilum, seed size {the larger the better, preferably more than 20 grams/100 beans}, color of cotyledons, hull, composition, special notes, American

interpretation), miso (same categories of information as tofu), natto (ditto; seed size: The smaller the better, with a maximum of 5.5 mm diameter. Round shape is preferred to oval in order to limit swelling during the soaking and boiling processes), food quality soybean varieties (name, maturity zone, release year, used to make what soyfoods), distribution channels, marketing channels, protocol, pricing, organically-grown soybeans.

Taiwan: Introduction, list of major buyers, users, and trade associations. Korea. Southeast Asia. United States.

Appendix I. Distribution systems for soybeans used for food in Japan: Tofu, natto, miso. Appendix II. Food soybean imports by country of origin, 1984-1991. USA is the largest supplier (845,000 tonnes in 1991), followed by China (279,000), then Canada (28,000). Total imports, which have stayed about constant during this period, were 1,152,000 tonnes in 1991.

Appendix III. Distribution by usage of soybeans used for food–1991, direct use only in tonnes (metric tons). Tofu: 607,000 tonnes total, of which 562,000 come from the USA and Canada, 25,000 from China, and 40,000 from Japan. Up 2% from 1989.

Miso: 171,000 tonnes total, of which 38,000 come from the USA and Canada, 121,000 from China, and 12,000 from Japan. Up 0.5% from 1989.

Natto: 147,000 tonnes total, of which 87,000 come from the USA and Canada, 50,000 from China, and 10,000 from Japan. Up 9% from 1989.

Other: 39,000 tonnes total, of which 20,000 come from the USA and Canada, none from China, and 19,000 from Japan. Total food use of 964,000 tons is up 2% from 1989. Source: Japanese trade newspapers and trade associations. These figures do not include a estimated 492,000 tonnes of soybeans used indirectly (in the form of defatted soybean meal) for soy sauce, 222,000 tonnes used for soy protein, and 20,000 tonnes for other indirect uses.

Appendix IV. Directory of direct importers of food-quality soybeans. Appendix V. Traders of food-quality soybeans. Appendix VI. Soy food organizations in Japan (tofu, miso, soymilk, packaged tofu, natto). Appendix VII. Helpful contacts.

Food quality soybean varieties (with maturity group / zone, and year released; table, p. 5): Chico (00, 1983), Grande (0, 1976), Proto (0, 1989), Minnatto (0, 1989), NattoKing (I, 1988), Disoy (I, 1967), Vinton (I, 1978), Vinton 81 (I, 1981), King Natto (I, 1985), Kato (I, 1989), Magna (II, 1967), Prize (II, 1967), Marion (II, 1976), LS201 (II, 1989), Provar (II, 1969), Beeson (II, 1969), Kanrich (III, 1956), Kim (III, 1956), LS301 (III, 1989), Verde (III, 1967), IL2 (III, 1989; from Illinois), Hawk (III, ?), Emerald (IV, 1975), Vance (V, 1986), Camp (V, 1989), Hartz 936X (VI, 1981), Hartz 914 (VI, 1989), Hartz 922 (VI 1989), Merrimax (?, 1986).

Note: This report was originally published in Sept. 1989, mainly for use by the the American Soybean Association office in Tokyo. Address: 1. Division Director for Asia; 2. Country Director for Japan. Both: American Soybean Assoc.

2086. Brandenburg, Fred. 1992. What is the Ontario Soybean Growers' Marketing Board (Interview). *SoyaScan Notes.* Dec. 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Any farmer who grows and sells soybeans in the province of Ontario is deemed to be a member of the Ontario Soybean Growers' Marketing Board. There is an automatic checkoff of $1.00 (Canadian) per metric ton when the farmer first sells his soybeans. This checkoff supports the activities of the Board. Therefore this Board is an association of soybean growers quite similar to the American Soybean Association. Address: Secretary/ Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

2087. Ontario Soybean Growers' Marketing Board. 1992. Annual report. Box 1199, Chatham, ONT N7M 5L8, Canada. 24 p. 28 cm.

• ***Summary:*** This is a report for the year 1992. Contents: Mission statement. Chairman's message (Larry Miehls). Secretary manager's message (Fred Brandenburg, Dec. 1992). OSGMB summary of major activities in 1992. Auditor's report and balance sheet. 1992 soybean & research funding (incl. breeding of soybeans for tofu and natto). Ontario soybeans–supply and demand, 1989-1992. Soybeans: Area, production and farm value, by county, 1991, with provincial totals [including county and district totals], 1986-1991. Ontario marketings, 1989-91. Ontario soybeans: Production, crushings, imports, exports. 1991 crop year marketing by county. Ontario soybean exports by destination in metric tons. Soybean meal: Canadian imports and exports. Soybean oil: Canadian imports and exports. Quality of the 1991 soybean crop by county (in terms of mean oil content and mean protein content). Cash prices for Ontario soybeans (1990-1992). Ontario basis values (cents over futures). Weekly adjusted producer basis. Soybean supply and demand, 1990-1992: USA, world. OSGMB appointments for 1992 (officers and committees). 1992 district committee members of soybean board. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2088. *SoyaCow Newsletter (Ottawa, Canada).*1992. Child Haven ships more SC-20's to India. 1(4):1. Oct/Dec.

• ***Summary:*** "Six SoyaCows of the latest model were shipped to India by air on November 30, 1992. Child Haven, Maxville, Ontario, a registered charity in Canada,

USA and India, is in the third year of CIDA funding for its Soymilk Cottage Industry project in India.

"The machines will be installed at six selected sites by Ankur Services of Hyderabad. They have already installed six Soya-Cow machines sent earlier."

2089. Vachunova, Alena. 1992. Soybeans in Czechoslovakia. *Eurosoya* No. 9. p. 62-65. Dec. [Eng]
• ***Summary:*** The first soybeans were grown in Czechoslovakia during the 1880s as part of the trials of Professor Haberlandt of Vienna, which showed that soybeans could be acclimatized to Central Europe. The results were more experimental than practical. "This crop evoked more attention during wartime. At the beginning of the 20th century soybean was grown on larger areas in Slovakia around Galanta and Velke Sarovce, and after World War I also in the Czech lands in the areas surrounding Pohorelice and Znojmo. Dr. Ing. Chmelar (1917) and Prof. Dr. Ing. Hromadko (1923) were enthusiastic propagators of soybean. Many research institutes (in Prague, Tabor, Roudnice, Citoliby, Litol near Lysa, Brno, Lednice) became involved in studies of soybean. The Czech Department of Agricultural Council carried out experiments on 25 sites, 34 agricultural schools, the provincial pomological institute in Prague and many individual persons carried out station experiments...

"Yet soybeans did not become widely accepted and applied until after World War II when the varieties Hodoninska Zluta, Kromerizska, Dunajka, and Zora were bred." Further progress was achieved during the 1980s when varieties with higher performance and 15-16 days earlier maturity were bred. These new varieties included Ajda from Horni Mostenice (approved in 1984), Sluna, and Polanka from Uhersky Ostroh (1986 and 1989, respectively).

"The Agricultural Central Control and Testing Institute (ACCTI) is involved in the testing and approval of foreign varieties. In addition, the Research Institute for Plant Production in Piest'any was chosen as the main workplace for investigations and preservation of the world assortment of soybean... For over 20 years the Breeding and Research Institute in Uhersky Ostroh has tested more than 400 varieties of which 180 have been described and maintained in a germinating condition... The best foreign variety for growing in Bohemia and Moravia has proved to be the Canadian variety Maple Arrow which is sufficiently early and adaptable and which gives stable yields in our conditions."

During the 1980s the soybean was introduced into the Czech crop system using the latest scientific and practical knowledge. "In Slovakia this crop system was carried out in the agricultural farms Kamenicna and Cicarovce, in the Czech lands in the agricultural farms Uherske Hradiste and Sedlec near Mikulov. The results were good and so the area was extended to the expected acreage of about 5000 hectares [by 1985].

"The special-interest association SOJA, founded in 1991, links up with the crop system and associates breeders, growers, seed propagators and soybean processors. This association has not yet accomplished its function due to the monopolistic position of the processing industry...

"In the Czech lands, breeding is conducted in Uhersky Ostroh, Horni Mostenice and Zelesice, in Slovakia in Topolniky and Piest'any. These breeding activities are aimed at earliness, performance, plant architecture, resistance against lodging and podding." Address: Mendeleum Lednice, Nadrazni, 69144 Lednice, Czech Republic.

2090. Faulkner, W.L.; Egan, L.A.; Anderson, D.M. 1992. Apparent and true digestibility of dry matter, crude protein and amino acids in diets for mature silver foxes. In: 1992. Progress in Fur Animal Science. Norwegian J. of Agricultural Sciences. Suppl. 9, p. 268-274. [9 ref. Eng]* Address: Nova Scotia Agricultural College, Dep. of Animal Science, P.O. 2091. Peace, R.W.; Sarwar, Ghulam; Touchburn, S.P. 1992. Trypsin inhibitor levels in soy-based infant formulas and commercial soy protein isolates and concentrates. *Food Research International (Ottawa, Ontario, Canada)* 25:137-41.
• ***Summary:*** Soy protein concentrates had levels of trypsin inhibitors intermediate to those in the raw soybeans and soy protein isolates tested. "Infant formulas also varied with ready-to-feed forms generally having higher, and concentrates and powders lower levels of activity. Residual trypsin inhibitor contents of the infant formulas tested ranged from 3 to 28% of the highest levels measured in raw soy samples." Note: This 28% figure is surprisingly high! Address: 1-2. Health and Welfare Canada, Bureau of Nutritional Sciences, Food Directorate, Health Protection Branch, Tunney's Pasture, Ottawa, Ontario, Canada K1A 0L2.

2092. Broehl, Wayne G., Jr. 1992. Cargill: Trading the world's grain. Hanover, New Hampshire, and London: University Press of New England (Dartmouth College). xx + 1007 p. Illust. Index. 24 cm.
• ***Summary:*** Cargill, one of the world's great multinational commodity trading companies, is one of the largest corporations in the USA, with annual sales of over $44 billion. It is the largest privately owned U.S. company, with almost all ownership in the hands of the Cargill and MacMillan families. In descending order of size in this industry are Cargill, Continental Grain, Louis Dreyfus, and Bunge y Born. All are privately owned, each by a dominant family. Only Cargill has been in the USA from its birth.

Though it is now 125 years old, Cargill has had only five CEOs (p. xvii).

The soybean arrives: Cargill purchased and stored some soybeans in 1935 and continued the same small transactions in 1936, though none remained in inventory at the year's end. Cargill began to take notice of soybeans in mid-1936 when the Chicago Board of Trade initiated a soybean futures contract as a new source of revenue. Cargill leadership expressed little interest in soybean processing, which was already in the hands of "big fellows" like ADM, Staley, Allied Mills, Glidden, and Spencer Kellogg & Sons (p. 447).

Cargill's work with soybeans is discussed extensively, starting with Chapter 15, "Cargill in World War II" (p. 617+). In 1942 President Roosevelt persuaded Congress to pass price-control legislation, creating the powerful OPA, the Office of Price Administration. It had a dramatic effect on U.S. agriculture. Meat and poultry were increasingly in short supply, so feed grains took priority over food grains. Corn and even surplus wheat was used as feed. Labor shortages in agriculture led to more mechanization and fertilizer use rose dramatically (p. 618). Soybeans became a key ingredient in animal feeds, and Cargill began purchasing in larger quantities. The OPA ceilings on soybean meal were so low that it was much more profitable for crushers to put their meal into their own feeds, rather than sell it. Against this background, in Jan. 1943, Cargill announced the purchase (for $300,000) of a soybean mill and feed plant, the Iowa Milling Co., in Cedar Rapids, Iowa [from Joe Sinaiko]; the initial push came from Julius Hendel.

Then in Oct. 1943 additional soybean crushing capacity was acquired through the purchase of the Plymouth Processing Mills (capacity: 75 tons/day of soybean meal) of Fort Dodge, Iowa.

Later that same month another soybean crushing plant was purchased–the Illinois Soy Products Company (soybean crushing capacity: 3,900 bushels/day) of Springfield, Illinois. These were small facilities and none used solvent extraction, but they represented a beginning; soybean crushing soon became a major part of for Cargill as the company worked to diversify (p. 665-66).

In May 1945, again with Hendel's leadership, Cargill purchased the Honeymead Products Co. in Cedar Rapids, Iowa. It had a feed plant with a capacity of 300 tons/day and a soybean solvent extraction plant (designed by Allis-Chalmers Co.) which initially had a capacity of 50 tons/day, expanded to 130 tons/day. Cargill called Honeymead their "West Side Plant"–but they forgot to buy the Honeymead name. The Andreas family sold the company because Dwayne Andreas had been classified 1-A in the draft (the highest priority for being drafted). The Andreas family owned the property and Dwayne agreed to join Cargill. Cargill asked the draft board for and received a 3-month deferment. At the end of that time the Pacific war was over. Andreas soon became a vice president of Cargill, the youngest in the company's history. "He thought like an owner" (p. 682, 687). Later, other Andreas family members resurrected the Honeymead name for their new oilseed crushing plant at Mankato, Minnesota (p. 683).

Rocky reconversion after World War II. During World War II there was a major increase in scientific livestock feeding, using nutritionally balanced feeds–in response to the shortage of all feeds. Cargill already owned the profitable Blue Square feed operation, but they wanted to expand it. So in Oct. 1945 Cargill purchased (for $1.6 million) the entire capital stock of Nutrena Mills Inc., a leading Midwest feed manufacturer with three mills (Kansas City and Coffeeville [Coffeyville], Kansas; and Sioux City, Iowa) and a combined capacity of 23,000 tons/month. Nutrena, now 25 years old, was one of the industry pioneers in both feeds and feed sacks (p. 688).

During World War II, the all-out agricultural production in the USA led to record output. Total production of soybeans increased from 78 million bushels in 1943 to 193 million bushels in 1945. Yet Cargill and others had great difficulty in obtaining the soybeans they needed. Gilbert C. Fite describes the agricultural revolution that took place during the war (p. 695-96). There was great pressure on government price administrators to loosen or remove controls; when they finally started to do, in May 1946, inflation followed. Julius Hendel wisely remarked: "The cure for high prices is high prices." The ceiling price on soybeans was not removed until 17 Oct. 1946 (p. 703).

Dwayne Andreas has a good idea and receives a $10,000 bonus (p. 704). Nutrena and Honeymead cause organizational problems. Centralization vs. decentralization. Tension between the Grain Division and the Oil Division–especially over soybean purchasing. The Alfred P. Sloan model of decentralized management at General Motors is widely imitated. By the early 1950s Cargill was decentralized (p. 707-712).

Chapter 17, "Korean War and Tradax beginnings." After World War II came the cold war, Truman Doctrine, NATO, and the Korean War. In agriculture, the New Deal policies of the 1930s continued essentially unchanged (p. 737-38). In 1950 Cargill purchased a new oilseed / soybean processing plant (capacity: 700 tons/day) in Chicago for more than $2 million. By 1951 the Oil Division was renamed the Vegetable Oil Division (p. 745). The Cargill Oats Case of May 1954. In Oct. 1954 ADM pleads guilty to CCC allegations. Selling oat futures vs. soybean futures (p. 761). 1952–Dwayne Andreas "resignation" after his unauthorized trip to Russia in April. He went on to an outstanding career, first with his family's company, then as an executive with the company that bought it, the Grain Terminal Association (later called Farmers Union Grain Terminal Association), and finally as CEO and a major

owner of ADM. He was replaced by M.D. "Pete" McVay as head of the Oil Division (p. 762-64).

1954–Cargill begins international trading with the move to Montreal of Kerrgill, a subsidiary of Cargill Internacional. It was soon renamed Tradax Canada Ltd. Cargill's headquarters on Lake Wayzata, Minnetonka, Minnesota (p. 774-75).

1953 Jan.–Dwight D. Eisenhower is inaugurated as president. In July 1953 he settled the Korean war. Ezra Taft Benson advocates a new farm policy, a return to a free market economy and flexible price supports (p. 776-77). 1955 Sept.–Julius Hendel retires. He was considered the "dean of grain trading." He had pioneered Cargill's grain laboratory in the 1920s, introduced scientific mixed feeds in the 1940s, and designed Cargill's renowned training program. (p. 782-85).

Eisenhower's second term in office (1956-60) is an era of farm surpluses. The P.L. 480 or "Food for Peace" shipments were an "heroic attempt to insulate some of this production from commercial channels." They totaled over $1 billion each year from 1956 into the 1960s. In 1959 Cargill had sales of $1.089 billion, making it the 34th largest company in the USA (p. 786-87). The Chase Manhattan Bank's consulting report and analysis of Cargill is blunt, credible, very positive but with many important suggestions for change; the soybean was the star of the Oil Division (p. 868-71). Summary of Cargill, 1963-1991 (p. 874-75).

• ***Summary:*** Contents: Introduction. Environment. Chronology and prehistory: China, Korea, Japan. Initial speculations (Japan). Archaeobotany and recent research. Northeast spread of plant husbandry. The cultigens: Barley *(Hordeum vulgare),* barnyard millet *(Echinochloa utilis),* broomcorn or common millet *(Panicum miliaceum),* foxtail millet *(Setaria italica* ssp. *italica),* rice *(Oryza sativa [Oryzae sativa]),* wheat *(Triticum aestivum),* adzuki and mung beans *(Vigna angularis* and *Vigna radiatus),* hemp *(Cannabis sativa),* melon *(Cucumis melo), (),* beefsteak plant and *egoma (Perilla frutescens),* other cultigens (incl. buckwheat, soybean, pea). Discussion and directions for future research. Acknowledgments.

The time span covered by this chapter ranges from about 8500 B.P. to 100 B.P. The origin of agriculture in China can be dated from about 7000 B.P. "The prevailing view is that agriculture began in Korea and Japan in the third millennium B.P. with the initiation of rice-based agrarian societies by both the diffusion of crops and ideas and the migration of people. Evidence is mounting, however, for earlier archaeological origins in these two areas" (p. 7).

In China, any cite with ceramics and no evidence of metallurgy is considered Neolithic. Pottery-bearing sites before 8500 B.P. are termed early Neolithic (p. 13). During the Neolithic, dependence on food production gradually increased.

Illustrations show: (1) Map of 10 vegetation zones of East Asia. (2) Diagram summarizing Northeast Asian chronology in northern China, Korea, southwest Japan, and Northeast Japan, from 8000 B.P. to 500 B.P. Arrow width is roughly proportional to the degree of dependence on food production. (3) Map showing location of 59 East Asian sites [archaeological, in China, Korea, and Japan] mentioned in the text. • ***Summary:*** "a new company created from the Sunsoy Products branch of Canadian... Mills soon leased a site at the southeast corner of Fleet and Parliament streets"

2096. CSY Agri-Processing, Inc. Gruppo Ferruzzi. 1992. 1991 annual report. Fort Wayne, Indiana. 28 p. 28 cm.
• ***Summary:*** David H. Swanson is chairman, president, and CEO of this newly established CSY Agri-Processing holding company (based on Central Soya Co.), which consists of the Oilseed Products Group, Animal Feed Group, Provimi Holding, and Innovative Pork Concepts. CSY Agri-Processing is a Ferruzzi-Montedison [pronounced fe-RUZ-zee mont-ED-uh-sun] company, operating as a member of the Eridania/Beghin-Say [pronounced er-uh-DAH-nee-uh bay-gun-SAY] agro-industrial group.

Net sales increased in 1991 to $2,060 million from $1,950 million the previous year, and earnings before financing costs, taxes, and minority interest increased 20.8%, to $64.4 million from $53.3 million.

Several strategic alliances were formed in 1991. First, the "joint venture, named CanAmera Foods, has assets and markets that make it the premier crushing and refining business across Canada. The new company is comprised of the assets of the Maple Leaf Foods Edible Oils Division, CSP Foods, Ltd., and Central Soya's Hamilton, Ontario, soybean and canola processing plant. Assets of the new entity include former Maple Leaf refineries in Toronto, Montreal and Wainwright, Alberta; an oilseed crushing

plant in Fort Saskatchewan; and a seed gathering station in Humboldt, Saskatchewan. Assets contributed by our joint venture partner, CSP Foods, the major processor of canola and sunflower seed in Western Canada, include crushing and refining facilities at Altona, Manitoba, and Nipawin, Saskatchewan; and a crushing plant at Harroby, Manitoba. A margarine manufacturing business in Edmonton, Alberta, formerly owned jointly by Maple Leaf and CSP Foods, is also part of CanAmera Foods operations. With expanded markets created in part by the U.S.-Canada Free Trade Pact, and the synergies and expertise offered through the strategic combination of talent and assets, we believe this joint venture has outstanding potential.

"Another joint venture, announced subsequent to year-end, will increase our penetration of lecithin markets in Europe and several other key areas of the world. Central Soya Company and the Stern-Wywiol Group, a leading European marketer of lecithin products, agreed to merge the European lecithin operations of the two companies. The new partnership, Stern Lecithin and Soja GmbH & Co. K.G., will be equally owned by the joint venture partners and will be among the largest companies operating in the European lecithin sector." Address: P.O. Box 1400, Fort Wayne, Indiana 46801-1400. Phone: 219/425-5100.

2097. Food and Agricultural Organization of the United Nations. 1992. Soybeans: Area harvested, yield, and production. *FAO Yearbook–Production (Rome, Italy)* 46:115-16.

• ***Summary:*** The following nations are listed for the first time as soybean producers in the *FAO Production Yearbook.* F = FAO estimate. * = Unofficial figure. Burkina Faso: Harvested 5,000F ha in 1990, 1991, and 1992.

Panama: Harvested 1,000 ha per year in 1979-1981, 7,000 ha in 1990, 6,000 ha in 1991, and 3,000 ha in 1992.

Honduras is no longer listed, but reappeared in 1994. Achieved yields of 747 kg/ha in 1991.

Syria: Harvested 5,000* ha in 1991 and 1992.

Albania: Harvested 4,000 ha in 1979-81, 10,000 ha in 1990, 9,000F ha in 1991, and 10,000F ha in 1992. Note: This is the earliest document seen (May 2003) that contains statistics on soybean production in Albania.

Bosnia and Herzegovina: Harvested 8,000 ha in 1990, 6,000* ha in 1991, and 5,000F ha in 1992.

Croatia: Harvested 27,000 ha in 1990, 23,000 ha in 1991, and 26,000 ha in 1992.

Macedonia: Achieved yields of 1,314 kg/ha in 1990, 1,833 kg/ha in 1991, and 1,600 kg/ha in 1992.

Slovenia: Achieved yields of 1,692 kg/ha in 1990, 2,000 kg/ha in 1991, and 978 kg/ha in 1992.

Former Soviet Republics–Azerbaijan: Harvested 1,000* ha in 1990, 1,000* ha in 1991, and 1,000F ha in 1992.

Georgia: Harvested 8,000 ha in 1990, 6,000 ha in 1991, and 6,000F ha in 1992.

Kazakhstan: Harvested 23,000* ha in 1990, 18,000* ha in 1991, and 19,000F ha in 1992.

Moldova: Harvested 26,000* ha in 1990, 20,000* ha in 1991, and 20,000F ha in 1992.

Russia (Russian Federation): Harvested 741,000 ha in 1979-81, 675,000 ha in 1990, 664,000 ha in 1991, and 632,000 ha in 1992.

Ukraine: Harvested 69,000 ha in 1979-81, 87,000 ha in 1990, 100,000 ha in 1991, and 100,000F ha in 1992.

Thus in 1992 the former Soviet Union harvested 800,000F hectares of soybeans. The leading countries, in descending order of soybean production, were Russia, Ukraine, Moldova, and Kazakhstan.

2098. Gupta, Umesh C. 1992. Characterization of the iron status in plant parts and its relation to soil pH on acid soils. *J. of Plant Nutrition* 15(10):1531-1540. [18 ref]

• ***Summary:*** The highest concentrations of iron in plant tissue in Prince Edward Island (P.E.I.) were found in potatoes, carrots, broccoli, soybeans, and in the lower leaves of tobacco. In the case of soybeans, the whole vegetative tops contained as much iron as did the grain, indicating greater translocation of minerals from the vegetative parts to the seeds. Soybean seeds contained a much higher concentration of iron than cereal grains. On most P.E.I. soils, pH had no significant effect on the iron concentration of the plant tissue. Address: Research Branch, Research Station, Agriculture Canada, Charlottetown, Prince Edward Island, Canada C1A 7M8.

2104. McGarry, Michael J.; Schmitz, Andrew. 1992. The world grain trade: Grain marketing, institutions, and policies. Boulder, Colorado: Westview Press. xx + 510 p. Illust. No index. Maps. 24 cm. [15 soy ref]
• ***Summary:*** This very interesting book, which is crippled by the lack of an index, has the following contents: Part I: Argentina. 1. Background. 2. The grain sub-sector. 3. Policies affecting the grain sub-sector. 4. Institutions affecting the grain sub-sector. 5. Grain marketing. 6. Future directions. 7. Statistical annex, maps, bibliography.

Part II: Brazil. 8. Background. 9. The grain sub-sector 10. Policies affecting the grain sub-sector. 11. Institutions affecting the grain sub-sector. 12. Grain marketing. 13. Future directions. 14. Statistical annex, maps, bibliography.

Part III: Australia. 15. Background. 16. Grain production and marketing. 17. Public policy. 18. The Australian Wheat Board. Bibliography.

Part IV: Canada. 19. Background. 20. Grain production and marketing. 21. Programs affecting prairie agriculture. 22. Conclusions. Bibliography.

Part V: United States. 23. Social and economic environment. 24. Grain production. 25. Grain marketing. 26. Policies and group actions that affect grain markets. 27. Conclusions. Bibliography.

The "Preface" notes that grain represents the single most important component of world food consumption, accounting for about 60% of calories consumed. Total production of cereal grains (wheat, coarse grains, and rice) is about 1,890 million metric tons (mmt), of which about 12% is traded. World production of oilseeds is about 215 mmt, of which about 18% is traded. The five countries discussed in this book grow about 25% of the world's cereal grains, and they export over 60% of all the grain traded internationally. They also produce about 50% of the world's oilseeds and account for 75% of the oilseeds traded.

Several of the key issues discussed by this book include: (1) Deregulation of the grain industry in many countries. (2) How important is the effects of macroeconomic policy on grain production and marketing.

Soybeans are mentioned throughout the parts on Argentina and Brazil. The "Background" section at the start of each part gives deep insights into the policies of that part which profoundly affect its production and marketing, economics and politics of grains. Address: 1. Chief, Agriculture Div., Technical Dep., Latin America and the Caribbean Region, World Bank.

2105. Ontario Soybean Growers' Marketing Board. 1992. 1992 dealer's manual. Box 1199, Chatham, ONT N7M 5L8, Canada. 28 p. 28 cm.
• ***Summary:*** Contents: Ontario Soybean Growers' Marketing Plan (Regulations 378 and 379 of Revised Regulations of Ontario, 1980, as amended... (Aug. 1987)). Regulation 1-192. Application for license as a dealer in soybeans. License as a producer of soybeans. Soybean dealer license for 1992 crop. Ontario soybean order (Interprovincial and Export Trade). Ontario Soybean Marketing Levies Order (Canada Gazette). 1992 Soybean Marketing Agreement. 1992 soybean conversion table (wet pounds to dry tonnes). Dealer monthly soybean report information. Grading soybeans–Canadian Grain Commission. Soybeans–recommended varieties and description (For each variety is given: Variety name. Heat units required. Hilum color. Seeds per kilogram. Phytophthora root rot reduction–% plant loss. Distributor). 1991 Eastern Canadian soybean survey–by grade and by county. Soybean advance payment program. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2106. Santos, D.T. 1992. Soybean cultivation in the Philippines. In: Increasing Soybean Production in Asia: Proceedings of a Workshop. 1992. Bogor, Indonesia: CGPRT Centre. 187 p. See p. 137-50. Held 21-24 Aug. 1990 at Phitsanulok, Thailand.
• ***Summary:*** Contents: Introduction. Development of the soybean industry: Nestlé Philippines' soybean operations (Nestlé soya farm, commercial soy production, soy loan and buy-back scheme, soy sourcing beyond Tupi, growth requirements and adaptability of soybean, soybean cropping systems), crop research and development, extension programme. Appendix 1: Soybeans–maize monocropping (crop rotation). Appendix 2: Maize–soybeans–crop rotation (three consecutive maize followed by soybeans). Appendix 3: Maize–soybeans intercropping (6 rows corn -4 rows soybeans). Appendix 4: Wet season 1988–soybean researchers at Nestle soya farm Tupi South Cotabato.

"Soybean, first cultivated in China during the eleventh century BC, was introduced into trading regions of the Philippines in the fifteenth century AD. Its cultivation and use spread throughout the Philippines and then the western hemisphere in the nineteenth century. Soybean... is considered by scientists and economists to be a major food source for the future. Although currently produced in small quantities, both traditional and new soybean products such as soya cheese, soybean curd, and miso, and Nestle's Twin, Vita, Soyex and Ceresoy, are popular with Filipinos.

"Development of the soybean industry: Soybean production in the Philippines has developed in response to an increasing demand. Varietal selection and development commenced in the early 1930s. In the 1970s, the Philippines Council for Agriculture and Resources Research and Development (PCARRD), in cooperation with the University of the Philippines at Los Baños and the Department of Agriculture, introduced the National Soybean Production Programme (NSPP) which promoted development of, and self sufficiency in, soybean... Under the programme, soybean planting was established throughout the country. A large soybean extraction plant with a 50 ton daily capacity was built by the Philippines Asia Food Industries Corporation in the early 1980s to produce the livestock industry's requirements of soybean oil and meal as well as soy-based food products.

"However, the combined impact of limited raw materials, the 1984 recession and some external political pressures led to the closure in 1986 of the factory and the NSPP. Individual initiatives among former participants allowed research and development activities to continue.

"PCARRD is currently engaged in a comprehensive nutrition-based programme covering soy production, post-harvesting processing, marketing, product utilization and development of improved varieties. This programme is funded by the International Research and Development Center of Canada."

"Nestlé Philippines' soybean operations: During the last ten years, Nestlé Philippines has developed new soy-based products with the assistance of Nestlé Switzerland. These include Vita Choco Drink, Twin, Ceresoy and Soyex.

"Nestlé Philippines, through Nestlé Soya Farm, continues to identify promising soy varieties and to generate the appropriate production and post-harvesting processing techniques to ensure its factory receives high quality raw materials.

"Nestlé soya farm: This six hectare soy research and demonstration farm in Tupi, South Cotabato has three main functions: production, crop research, and development and extension." Address: Nestlé Philippines, Inc., Agricultural Services Dep., 335 Gil Puyat Ave., Makati, Metro Manila, Philippines.

2107. Shirai, Keiko; Gutierrez-Durán, M.; Marshall, V.M.E.; Revah-Moiseev, S.; García-Garibay, M. 1992. Production of a yogurt-like product from plant foodstuffs and whey. Sensory evaluation and physical attributes. *J. of the Science of Food and Agriculture (London)* 59(2):205-10. [12 ref]

• ***Summary:*** The yogurt-like product described on the previous pages of this issue had good viscosity and stability to syneresis. Its acceptability was good, and made better by the addition of sugar or flavors. A combination of starter strains was very important to get good acceptability. Initially a commercial yogurt culture (Rosell Institute, Inc., Montreal, Canada) was used, but it led to a strong bitter aftertaste in the mixed culture, so it was not used again. The ropy strains *Lactobacillus delbrueckii* ssp *bulgaricus* NCFB 2722 and *Streptococcus salivarius* ssp *thermophilus* NCFB 859, from the National Collection of Food Bacteria (Reading, UK), and commercial plain yogurt were therefore used as inocula. Address: 1-2&5. Departamento de Biotecnología, Universidad Autónoma Metropolitana, Iztapalapa, AP 55-535 Mexico; 3. School of Biological and Molecular Sciences, Oxford Polytechnic, Oxford OX3 0BP, United Kingdom.

2108. Brandenburg, Fred. 1993. Subsidized preferential railroad freight rates for canola and canola products in Canada (Interview). *SoyaScan Notes.* Jan. 13. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Canola seed and canola products (oil and meal), traveling from western Canada either westward to the west coast (for export) or eastward to Thunder Bay, Ontario, receive subsidized rail rates. Canola products (oil or meal) traveling from Thunder Bay eastward move at the government-mandated Minimum Compensatory Rate (MCR), which is a lowest rate that the railroads can legally charge; it just covers their variable costs. MCRs in Canada, which started in about 1975-76, apply only to canola oil and meal. The government favors canola over soybeans for political reasons–which have a long history. In about 1912 the Crow Rate was initiated as a perpetually high rate for shipping grain out of western Canada's 3 prairie states. Its purpose was to assure that the railroads made a profit. In about the 1950s or 1960s the rate shifted to being a low rate, below the commercial rate, and federal government started to pay a subsidy to the railroads. The government currently pays a subsidy of about $700 million a year to the railroads. The Crow Rate was replaced by the Western Grain Transportation Act (WGTA) of 1984, but it basically does the same thing. People still speak of the government subsidy as the "Crow benefit."

The main change that the Ontario Soybean Growers' Marketing Board (OSGMB) would like to see is discontinuance of the MCR subsidy for canola oil and meal east of Thunder Bay since this subsidy gives these products

an unfair advantage over soy oil and meal. OSGMB and the railroads both oppose the MCRs and both think that eliminating them would probably increase canola shipping costs only a small amount. In Canada, there used to be the western canola crushers and the eastern soybean crushers. Now that Canada's crushing industry has undergone a major rationalization, the major companies also oppose the MCRs; it is no longer an east-west canola versus soya issue any more.

Other issues actively debated now are: (1) Why not pay the subsidy to the farmers rather than the railroads; (2) Isn't the subsidy really just a subsidy for Japan, which buys almost all of the exported canola. Address: Secretary/ Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

2109. Brandenburg, Fred. 1993. Update on soybean crushing in Canada (Interview). *SoyaScan Notes.* Jan. 13. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In recent years, Canada's crushing industry has undergone an extensive rationalization and American companies have become major players. ADM has a crush plant in Ontario which crushes canola and soybeans, and a crushing plant in Alberta which crushes canola. Central Soya is now a partner in CanAmera, which has crush plants on Ontario, Manitoba, and several other places.

In Aug. 1984 Central Soya Co. bought Victory Soya Mills (built in 1944) in Toronto, then shut it down in March 1991. The buildings have been standing inactive for several years on the Toronto waterfront. Central Soya would like have the property rezoned as residential, tear down the mill buildings, then sell the property and make a lot of money. They would use that money to upgrade their plant in Hamilton, Ontario, which has both a soybean crushing line and separate canola crushing line.

What used to be the CVOP soybean crushing plant in Hamilton (formerly owned by Canada Packers, Inc.) was sold to Central Soya Co., Inc. in Sept. 1989. The plant came to be named Central Soya of Canada Ltd. In March 1992 Central Soya of Canada Ltd. and CSP Foods formed CanAmera Foods, a joint venture, combining their crushing and refining operations, and together bought all the crushing and refining interests of Maple Leaf Foods (formerly Canada Packers Inc., including refineries in Toronto and Montreal, and a crush plant and refinery in western Canada). CSP had several crush plants. Address: Secretary/ Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

2110. AGP–Ag Processing Inc a cooperative. 1993. Presentation to [Alternative] Agricultural Research & Commercialization Center, for biodiesel commercialization. Omaha, Nebraska: AGP. 8 p. 28 cm.
• ***Summary:*** Contents: Introduction: Biodiesel overview, economic viability, engine manufacturers, supply. Technology: Chemistry and engineering, the commercialization program. Capabilities and qualifications: Ag Processing Inc. Conclusions. Appendices: National Soy Fuels Advisory Committee data. Comprehensive National Energy Policy Act, summary of final motor vehicle fleet and fuel provisions of H.R. 776, Title III: Alternative Fuels, Federal Programs. Soy diesel as a replacement for diesel fuel, project update, Dep. of Agricultural Engineering, Univ. of Missouri-Columbia. Biodiesel Alert, Vol. 1, No. 1, Dec. 1992. Bio-diesel, an alternative fuel for short-term introduction report, Connecticut Transit. Diester, the European biofuel for Engines, F. Staat. Catalytic conversion of vegetable oils to diesel additives, Saskatchewan Research Council Report [Canada]. Biodiesel–A challenge for the '90s: From agriculture to environmental protection, C. Rocchietta.

New technology: "Today, research and development is focused primarily on fuels derived through the transesterification of vegetable oils and tallows. Transesterification is a process whereby the heavy glycerin portion of the oil is separated out." Address: 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047.

2111. *Agri-Book Magazine (Exeter, ONT, Canada).*1993. Beans in Canada. 19(3):1-23. Jan.
• ***Summary:*** This entire special issue is about soybeans in Canada, with emphasis on soybean production. The magazine is printed with soy ink. Articles include: Top yields with no-till. Ten myths about conservation tillage. Ontario Soybean Growers' Marketing Board Newsletter–new format (insert). Ad for symposium "Soybeans in Canada: Beyond 100 Years," organized by the Ontario Soybean Growers' Marketing Board, to be held 28-30 March 1993 in Toronto, Ontario, Canada at the Regal Constellation Hotel; gives names and photos of speakers. Breeding the soybeans of the future. Genetic ingenuity.

In the Newsletter, an article titled "Profile of Larry Miehls, Soybean Board Chairman," notes: "Sixty-five percent of Ontario's soybeans are grown in five counties–Essex, Kent, Lambton, Middlesex, and Elgin... Today the majority of acres goes to two Ontario crushing plants. Twenty percent of the crop is exported and half of that is for human consumption." Therefore breeders need to concentrate on developing soybeans with more sugar, more protein, and less oil. "There is also a trend toward whole roasted beans for animal feed, and I see this as a major area of growth... For food quality soybeans, Japan remains the board's largest export customer.

"Pacific rim customers are interested in buying Ontario soybeans because of their high quality. Canada is also credited with strict grading standards, good processing people–the cleaners and the baggers–and farmers who keep up-to-date. Natto and tofu quality soybeans are popular among the Pacific rim customers. 'The breeders have done a good job of developing beans to meet customer needs...

"'The Harovinton, a tofu bean, was developed at the Harrow Research Station with a lot of board support. It's really starting to take off,' says Larry."

2112. Ontario Soybean Growers' Marketing Board. 1993. Soybeans in Canada: Beyond 100 years–The symposium of the century (Leaflet). Box 1199, Chatham, ONT N7M 5L8, Canada. 8 panels. Front and back. 28 cm.
• ***Summary:*** This glossy color leaflet (black on light orange) announces the symposium that will celebrate 100 years of soybeans in Canada. It will be held on 28-30 March 1993 at the Regal Constellation Hotel in Toronto, Ontario. Hosted by the Ontario Soybean Growers' Marketing Board, the Ontario Ministry of Food, and Agriculture Canada. It gives the full program including the date, time, presentation title and speaker's name. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2113. **Product Name:** White Wave Tofruit (Soy Yogurt) [Strawberry / Fraise].
**Manufacturer's Name:** White Wave, Inc.
**Manufacturer's Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
**Date of Introduction:** 1993. January.
**Ingredients:** Water, organically-grown soybeans [made into soymilk], brown rice syrup, strawberries, concentrated pineapple, peach and pear juices, tapioca starch, natural fruit flavors, vanilla, pectin, guar gum, carrageenan, natural colour, citric acid, bacterial culture. Our soybeans are organically grown and processed in accordance with the California Organic Foods Act of 1990.
**Wt/Vol., Packaging, Price:** 6 oz plastic (HDPE) cup. Retails for $0.79 to $1.09.
**How Stored:** Refrigerated.
**Nutrition:** Per 6 oz.: Calories 162 (600 kj), protein 6.0 gm, carbohydrates 30 gm, fat 2.0 gm.
**New Product–Documentation:** Label sent by Lon Stromnes of White Wave. 1993. Feb. 26. This product, introduced in Jan. 1993, is very similar to White Wave Dairyless except that it is labeled for the Canadian market. Red, dark blue, light blue, and white. "Made with live bacterial cultures including acidophilus and bifidus."

2114. University of Illinois, Dep. of Agronomy. 1993. USDA Soybean Germplasm Collection: Public varieties (United States and Canada). Urbana, Illinois. 3 p. Feb. 16. Unpublished typescript. 28 cm.
• ***Summary:*** Lists 338 public soybean varieties that are currently in the USDA Germplasm Collection. For each variety is given: Year the variety was licensed or released. Maturity group. Code letters for the following: Stem termination (indeterminate, semi-determinate, determinate), flower color, pubescence color, pubescence form, pubescence density, pod color, seed coat luster, seed coat color, hylum color, and other unique characteristics.

Across the top of page 1 is a horizontal table. In the top row are 13 maturity groups from 000 to X. In the second row are the number of varieties belonging to each maturity group, plus the total (338).

Note: This document was sent to Soyfoods Center by Dr. Richard Bernard in Dec. 1998. On it he wrote a "v" to the left of the following varieties, which he believes to be a large-seeded vegetable-type soybeans: Disoy (1967), Emerald (1975), Grande (1976), Kahala (1969), Kaikoo (1969), Kailua (1969), Kanrich (1956), Kim (1956), LS201 (1990), LS301 (1990), Magna (1967), Merrimax (1986), Mokapu Summer (1969), Prize (1967), Verde (1967), Vinton (1978), Vinton 81 (1981).

He also wrote a "n" to the left of the following varieties, which he believes to be a small-seeded soybeans released for natto or sprouts: Camp (1989), Canatto (1985), Chico (1983), IL1 (1989), IL2 (1989) (Note: IL varieties are from Illinois), Minnatto (1989), Nattawa (1981), Nattosan (1989), SS201 (1989), SS202 (1989), Vance (1986).

At the end he wrote in the names of large-seeded vegetable-type soybeans released from 1992 to 1997: IA2012, IA2016, IA2020, IA2034, IA3001, IA3002, IA3006 (Note: IA varieties are from the Iowa and Puerto Rico AES), Ohio FG1, Ohio FG2, Saturn. He also wrote in the names of small-seeded natto- or sprout-type soybeans released from 1992 to 1997: AC Pinson?, Danatto, IA2005, IA2023, IA2024, IA2035, IA3007, IA3008, IA4001, Mercury, Micron, Peral, TNS? Address: Univ. of Illinois, Urbana, Illinois.

2115. Sanderson, J. Brian. 1993. The history of soybeans on Prince Edward Island, Canada (Interview). *SoyaScan Notes.* Feb. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Brian is sure that soybeans were tested on Prince Edward Island (PEI) as a forage crop at the Agriculture Canada Research Station in 1934. This information is in the Charlottetown Research Station Progress Report 1932-1936 inclusive (which he will send) but the first year of testing is not clearly stated. However knowing the way that Agriculture Canada often worked, sending seed for testing to various stations at the same time, they may have been tested on PEI a year or two earlier, as they were at Lennoxville, Quebec (1933) and Fredericton, New Brunswick (1933).

In the summer of 1974, Brian reintroduced soybeans to PEI using some numbered varieties developed by Dr. Harvey Voldeng's breeding program. No soybeans had been grown on PEI for many years before that time.

During the last few years, soybean acreage on PEI has increased substantially because of new short-season varieties which came out of the Voldeng breeding program. Brian ran the program until the end of the season in 1978, then he went back to the University. In 1979 Dr. George Jones took over Brian's work with soybean breeding and development on PEI. At that time, as Brian recalls, there was no commercial soybean acreage on PEI; they were still in the testing phase with one extremely early variety available to them–Maple Presto. That was the variety that really started soybeans on PEI. Maple Presto is no longer being used because it was found to be too early for PEI! In about 1982-83 soybeans were first grown commercially on PEI. In 1991 approximately 6,000 acres of soybeans were grown on PEI, and in 1992 an estimated 9,000 acres were grown; this acreage is steadily increasing. The soybeans are grown mainly for their seeds which are used in hog and dairy rations on farms. In the early days, whole (full-fat) soybeans which had not been heat treated were fed to dairy cattle (ruminants). The unheated soybeans were first ground in a mill (the type used for cereal grains) then fed fairly soon to the cattle before the oil could go rancid. Then extrusion cookers started to be used in about 1988-89; this made it possible to feed soybeans to hogs and chickens.

Dr. George Jones is a native islander and thus might know some of the early history. He has been a teacher for about 40 years; he started off specializing in corn but in later years he has been into soybeans. He is probably a wealth of information on both PEI and Ontario. Two other key men in Ontario are Wally Beversdorf in Guelph and Dr. Voldeng of Agriculture Canada in Ottawa. Address: P.Ag., Biologist, Potato Management, Agriculture Canada, Charlottetown Research Station, P.O. Box 1210, Charlottetown, PE C1A 7M8, Canada. Phone: 902-566-6842.

2116. Badani, Bernard. 1993. Edible soybean mission report, Korea, Indonesia, Taiwan, February 1993. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. iii + 14 + 17 p. 28 cm. Spiral bound.
• ***Summary:*** Contents: Foreword. Acknowledgements. Mission members: Tino Breuer, Ron MacDougall, Dr. Gary Ablett, Jim Lowe, Bernard Badani. 1. Visit to Korea: Executive summary, report, conclusions, recommended follow-up. 2. Visit to Indonesia: Executive summary, report, background, price structure, quality requirements, conclusions, recommended follow-up. 3. Visit to Taiwan: Executive summary, report, background, price structures, conclusions, recommended follow-up. Appendix A. List of contacts (photocopies of business cards of people met on the trip). List of 26 invitees for Canadian soybean seminar in Seoul (15 Feb. 1993), including academic researchers, government, soybean crushers, soysauce association, tofu association, food-related media, soybean milk manufacturers (Kwangja General Foods Co., Namyang Dairy Co., Lotte-Chilsung Beverage Co., Samyuk Foods Co., Dong-A/Otzka Co., Dr. Chung's Foods, See Joo Industry Co.). List of participants for Indonesia and business cards from Indonesia (incl. Primkopti, Sarpindo, Ikapti, Yeo's-P.T. Salim Graha). Business cards from Taiwan. Address: Oilseeds Div., Grain Marketing Bureau, Grains and Oilseeds Branch, Agriculture Canada, Ottawa.

2117. Ontario Soybean Growers' Marketing Board. 1993. [Canadian soybean seminar]. 32 p. Held 15 Feb. 1993 in Seoul, Korea. [Kor]
• ***Summary:*** Contains Korean translations of papers presented by Tino Breuer and Gary R. Ablett, plus a statement about soybean grading and grades in Canada.

2118. Voldeng, Harvey D. 1993. Work with breeding short-season soybeans in Canada (Interview). *SoyaScan Notes.* March 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The first soybean work at the Central Experimental Farm was begun in the late 1920s by Dr. Dimmock. Dr. Voldeng earned a BSc and MSc at the University of Saskatchewan in Saskatoon in crop science with an emphasis on breeding and genetics. He then earned his PhD in corn physiology at the University of Oxford (Dep. of Agriculture) in England. Then in 1968 he returned to Canada and began work at Ottawa until about 1974 in field crop physiology of corn with Dr. Lorne Donovan, who was the successor to Dr. Dimmock. Dimmock had worked with both corn and soybeans, and when Dimmock retired in about 1960, Dr. Donovan took over his work on both of these crops. Before Dr. Donovan, other breeders had used the Swedish germplasm and elite Fiskeby varieties (some pure lines registered in Sweden by Dr. Sven A. Holmberg), but Dr. Donovan used it in a much bigger way. "When you look into Dr. Holmberg's work, it was remarkable. He was a very, very good soybean breeder. Nobody in Europe, even up until now, has conducted breeding programs on the scale and with the number of crosses that he did." He got big results on a small budget, with funding coming mostly from a small private seed company and perhaps some from the Swedish government.

Starting in 1974 (just after the U.S. soybean embargo) Dr. Voldeng began to work mostly on soybeans with Dr. Donovan, using growth chambers (artificial warm environments) and manipulating photoperiod, to cross the very early material from Sweden with Corn Belt (Iowa-Illinois) varieties such as Amsoy, Corsoy, and with Harsoy. This work as very successful. The key to the success was

that the Swedish germplasm brought insensitivity to photoperiod and tolerance to colder temperatures; moreover, the plants matured very quickly.

The first really important soybean variety to come out of the program run by Dr. Donovan and Dr. Voldeng was Maple Arrow. Dick Buzzell made the cross at Harrow, Dr. Donovan made the selections, and Dr. Voldeng took the variety through the registration process. This variety introduced a new era for soybeans in Canada. Not only was it early, it was stable and reliable and high yielding. It allowed soybeans to be planted farther and farther north in Canada and it raised yields. The northernmost testing station for these varieties in Canada was at Melfort (53º north latitude) in central Saskatchewan. Maple Presto was an extremely early variety with good shattering resistance and high oil content, but it was never a success commercially because the extreme earliness resulted in a sacrifice of too much yield.

The two varieties that have been most successful commercially, Maple Glen and Maple Donovan, have come out in the last 7-8 years. Each has good yield, stability, earliness, and adaptation. In Ontario, high-yielding, stable varieties such as Maple Glen, Donovan, Arrow, Amber have made soybeans a competitive profitable crop. These varieties have both increased yields and acreage on the edges of the traditional southern counties and allowed soybeans to be grown profitably farther and farther north. Maple Arrow, because it could be harvested in only about 120 days, was found work very well in rotation with winter wheat. It allowed the 2-crop rotation work better, allowing earlier planting of winter wheat, making it more profitable, and allowing it to move northward. Maple Isle and Maple Amber, which are relatively early, have been key varieties on Prince Edward Island. He knows of none of his varieties that have been tested in Newfoundland.

The many new soybean varieties developed by Dr. Voldeng's program have been registered (including a full description of the variety with a registration number) with the Seeds Division, Food Production and Inspection, of the Canadian government but he has not published many articles concerning his work. Recently he, Dr. Wally Beversdorf (the senior author) at Guelph, Dr. R.I. Buzzell at Harrow, Dr. Gary Ablett at Ridgetown (Kent County, Ontario), have written a chapter on soybeans in a book that will soon be published on the history of plant breeding in Canada. Address: Agriculture Canada, Central Experimental Farm (CEF), Building #110, Ottawa, ONT K1A 0C6, Canada. Phone: 613-995-3700 x 7653.

2119. Bergh, Barbara. 1993. The Canadian Oilseed Processors Association (Interview). *SoyaScan Notes.* March 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Canadian Oilseed Processors Association (COPA) is a trade association representing Canadian oilseed crushers. Thus it is similar to the National Oilseed Processors Association (NOPA) in the USA. The organization was founded in 1978 as the Canola Crushers of Western Canada; the name was changed to the present name on 1 June 1992. The main oilseeds crushed in Canada are, in descending order of the amount produced, canola, soya, flaxseed, and sunflower seed. Address: Market Analyst, Canadian Oilseed Processors Assoc., 1010-360 Main St., Winnipeg, Manitoba R3C 3Z3, Canada. Phone: 204-942-3408.

2120. Shurtleff, William; Aoyagi, Akiko. comps. 1993. Soya in Canada–Bibliography and sourcebook 1855-1993: Detailed information on 780 published documents (extensively annotated bibliography), 221 commercial soy products, 115 original interviews (many full text) and overviews, 93 unpublished archival documents. Lafayette, California: Soyfoods Center. 305 p. Subject/geographical index. Author/company index. Language index. Printed March 9. 28 cm. [1098 ref]
• ***Summary:*** This is the most comprehensive book ever published about soybeans and soyfoods in Canada. Its scope includes all aspects of the subject from 1855 to the present. It is also the single most current and useful source of information on this subject, since 90% of all records contain a summary/abstract averaging 164 words in length.

This is one of more than 40 books on soybeans and soyfoods being compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 39 different document types, both published and unpublished; every known publication on the subject in every language–including many in French; 115 original Soyfoods Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of soybeans and soyfoods in Canada from their earliest beginnings to the present.

Compiled one record at a time over a period of 17 years, the bibliographic records in this book feature (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

It also includes details on 221 commercial soy products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as references to and summaries of advertisements, articles, patents, etc.) are also given.

Details on how to use the bibliography, a complete subject and geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2121. *SoyaCow Newsletter (Ottawa, Canada).*1993. SoyaCow SC-20 "mooves" west to Saskatoon. 2(1):1. Jan/March.
• ***Summary:*** "The Sweet Carrot Cafe, the top vegetarian restaurant in the province of Saskatchewan, is setting up its 'micro-soydairy' and will offer fresh soymilk as well as other soy-based foods. This will not only augment their existing menu at the restaurant, but will also form the heart of their new 'SoyaCow–Health Bar Deli' slated to open along side the restaurant. This will be the second Canadian retail project in a developing franchise system. Other locations are due to open in Ontario in the fall."

Note: The Sweet Carrot Cafe is owned by George and Wendy Conquergood. The SC-20 has a cooker capacity of 20 liters. It can make 3 batches of soymilk per hour, or about 40 liters/hour. Talk with George Conquergood of IPC in Vancouver, BC, Canada. 1999. May 10. His Sweet Carrot Cafe in Saskatoon had their SoyaCow SC-20 in operation in early 1993, before Rainbow Foods in Ottawa. So Sweet Carrot Cafe was the first company to make commercial products using a SoyaCow. When George first went to Ottawa to meet Raj, Rainbow was in the process of expanding the store into new location, and building their kitchen in the health food store. But George already had a restaurant, a kitchen, and a coffee bar–named Caps Coffee Bar. Rainbow did open their little Health Bar Deli within the health food store. Rainbow didn't understand the importance of sanitation when dealing with the protein in a milk alternative. Cleaning the glass bottles properly was a horrendous job, but one that has to be done meticulously–lest bacterial spoilage occur when the bottle is refilled. Rainbow was unable to maintain consistent quality in their operation, so they had to shut down after a short time. Sweet Carrot and Rainbow used the same glass bottles, with the SoyaCow logo painted on the bottles. When they first ordered the bottles, they shared the order. Since George has his SoyaCow working before Rainbow, he did some consulting with Rainbow, through Frank Daller, to help Rainbow get started. George also developed the formulas that both companies used. He used to be on the phone with Frank on almost a daily basis. George was conceptualizing this Health Bar Deli concept as a potential franchise operation.

2122. *SoyaCow Newsletter (Ottawa, Canada).*1993. New SoyaCow logo. 2(1):1. Jan/March.
• ***Summary:*** A new version of the SoyaCow logo has been designed, and is shown here. It is a vertical oval, with the face of a cow superimposed on the large letter "S." Across the bottom, in all uppercase letters, is written "SoyaCow." The original logo was useful mostly in a wide, horizontal orientation. "The new logo is already in use on returnable glass bottles."

2123. *SoyaCow Newsletter (Ottawa, Canada).*1993. 2,000 L/H soymilk system planned. 2(1):1. Jan/March.
• ***Summary:*** "An industrial, continuous-process version of the SoyaCow is on the drawing boards and slated for development in 1994." The SC 2000 will be designed to produce up to 2,000 liters of soymilk per hour. "The project is currently under consideration by companies in North America and Europe" [such as APV-Crepaco].

2124. **Product Name:** Soymilk (Natural, Original, Maple, Vanilla, Chocolate, or Nog), Soybé Soy Ice Cream (many flavors, constantly changing), Soy Yogurt (Natural or Vanilla Flavors) tofu, and Soyanaise (soy mayonnaise).
**Manufacturer's Name:** Sweet Carrot Café–Health Bar & Deli.
**Manufacturer's Address:** 702 14th St. East, Saskatoon, SK, S7N 0P7 Canada.
**Date of Introduction:** 1993. March.
**Wt/Vol., Packaging, Price:** Bottle.
**New Product–Documentation:** *SoyaCow Newsletter* (Ottawa, Canada). 1993. Jan/March. p. 1. "SoyaCow SC-20 "mooves" west to Saskatoon." "The Sweet Carrot Cafe, the top vegetarian restaurant in the province of Saskatchewan, is setting up its 'micro-soydairy' and will offer fresh soymilk as well as other soy-based foods. This will not only augment their existing menu at the restaurant, but will also form the heart of their new 'SoyaCow–Health Bar Deli' slated to open along side the restaurant. This will be the second Canadian retail project in a developing franchise system."

*SoyaCow Newsletter* (Ottawa, Canada). 1993. April/June. p. 1-2. "SC-20 complements fine vegetarian restaurant and top natural foods store." The Sweet Carrot Cafe in Saskatoon uses a SoyaCow SC-20 to produce fresh non-beany soymilk for direct sale and formulation into value-added products. They also feature returnable glass bottles of the soymilk in several flavours. The Sweet Carrot Cafe is a fine [vegetarian] restaurant, featuring a grand piano, tablecloths, and wine. Owners George and Wendy Conquergood have added a Health Bar & Deli, made possible by a new SoyaCow. A photo shows George Conquergood with his SC-20 at the Sweet Carrot Cafe.

Talk with George Conquergood of International ProSoya Corporation (IPC) in Vancouver, BC, Canada.

1999. April 21. George started this gourmet vegetarian restaurant in 1992. In early 1993 he bought a Soya Cow SC-20 and started the Soya Cow Health Bar Deli, where (by about March 1993) he sold at least five soy products, both as part of the menu and for takeout. The soymilk for takeout was always sold in 1-liter glass bottles, with a SoyaCow logo stamped into the glass. Only the soy ice creams were sold under a brand, Soybé. The Soy Nog (soymilk flavor; which was not a brand) was introduced in December 1993, but people liked it so much that George continued to make it thereafter all year long. The soy ice cream was sold in 500 ml round hardpack plastic tubs. There were no fixed flavors; every day was a new surprise–such as Blueberry-Mint, Strawberry-Banana-Peach, and one like a Butter Pecan with nuts, etc. George is a very creative person and he likes to try new things with foods. In the garage of his home in Saskatoon he has an archival file box containing all of the recipes and notes from his restaurant days. After March 1994 George also sold Gelato Fresco, a soy ice cream made by Hart Melvin of Toronto using a SoyaCow SC-20. The soy yogurt was fermented; the two flavors were sold in 250 ml yogurt tubs. The tofu was sold pre-cut into 500 gm bricks, wrapped with plastic wrap (not packed in water), and refrigerated. The Soyanaise (soy mayonnaise) was sold in a 250 ml see-through plastic tub. Each product had a label, printed by a computer. George's dates are a little earlier than those published in *The SoyaCow Newsletter* since it typically published at least several months after the events it reported.

2125. Tanner, Jack W. 1993. The first one hundred years. Paper presented at Soybeans in Canada: Beyond 100 Years, a symposium organized by the Ontario Soybean Growers' Marketing Board. 6 p. Held 28-30 March 1993 in Toronto, Ontario, Canada at the Regal Constellation Hotel.
• ***Summary:*** An outstanding summary of soybean history in Canada during its first 100 years, focusing on key milestones and the people who made them happen. Begins with a good biography of Charles A. Zavitz, who was "the first in Canada and one of the few on the continent who changed soybeans in North America from the status of horticultural curiosity into the beginnings of the major oilseed crop in the world."

"The first recorded crop yield tests (1887) at Guelph were in his handwriting and involved trials on wheat, oats, barley, and fertilizer. When a third year was added to the diploma program which offered a degree from the University of Toronto, Zavitz took the additional year and he and four companions were the first degree graduates from the OAC in 1888. Zavitz continued in his field research endeavours and in 1893 was put in full charge of all field research, a position he held for some 35 years. In 1904, when the Field Husbandry Department (later named Department of Crop Science) was formed, he was named Professor and Head of Department."

"Zavitz began a world-wide search for germplasm of many crops for evaluation under Ontario conditions." He did pioneering work with barley, potatoes, alfalfa, and open-pollinated corn. In 1924 it was estimated that "the increases in crop yields resulting from varieties released by Zavitz had a value of 161 million dollars.

"Zavitz was also an early pioneer in the use of small plots for research." His plots were one-hundredth of an acre (rod-row). His careful research and his practice of testing each crop "for a minimum of five years enabled him to avoid much experimental error and gave his conclusions a reliability unachieved by contemporaries using one-quarter acre plots for shorter periods.

"Another unique program championed by Zavitz deserves mention before moving on to his role in soybeans. The Ontario Agricultural and Experimental Union was established in 1886. Zavitz, a student at the time, was a founding member. Membership originally was to be restricted to students and alumni of the College, however this restriction soon disappeared. The Experimental Union, driven by the efforts of Zavitz, sent packets of seed to farmers for evaluation on their farms. Notes were recorded on disease, lodging, maturity, yield and seed quality and the results returned to Zavitz for assessment. Farmers were free to increase any variety they thought to be superior. Starting with 12 members in 1886, by 1888 there were over 100 members. In 1891 2,642 packets were sent out; by 1896, over 11,000 packets sent out; and by 1924, packets had been sent to over 200,000 farmers. Thousands of farmers took train excursions to the College each year to view Zavitz's plots. In 1904 alone, between 35,000 and 40,000 farmers visited the College in the month of June. In the other direction, Zavitz and his cohorts spent a great deal of time speaking to farmers in their own communities. They travelled by train and horse and buggy. A quote from Zavitz's diary (February 11, 1887) gives some indication of his dedication in this regard. 'Prof. Brown and Zavitz to Coldstream on speaking engagement, missed connecting trains in London so they walked the 16 miles to Coldstream, taking from 9:40 p.m. until 3:15 a.m."

"In 1893, Dr. Zavitz received five soybean lines from Dr. C. Georgeson in Kansas, who had obtained seed from Japan three years earlier. After assessment of these initial lines, Zavitz set about to import many other lines from Asia. Zavitz evaluated over 100 lines over the next several years, most for a minimum of five years... In 1918, Zavitz selected a superior line from the Siberian line, Habaro No. 20405. In 1923, this line, OAC 211, became the first soybean registered in Canada." (Continued). Address: Crop Science Dep., Univ. of Guelph, Guelph, Ontario, Canada.

2126. Tanner, Jack W. 1993. The first one hundred years (Continued–Document part II). Paper presented at Soybeans in Canada: Beyond 100 Years, a symposium organized by the Ontario Soybean Growers' Marketing Board. 6 p. Held 28-30 March 1993 in Toronto, Ontario, Canada at the Regal Constellation Hotel.

• ***Summary:*** Continued from page 3. "Honours of C.A. Zavitz: First Degree Class of OAC, 1888. First Head of Department of Field Husbandry, 1904. Published in Volume 1 of Agronomy Journal, 1907, 1908, 1909. First Canadian Fellow of American Society of Agronomy, 1915. Doctor of Science (Hon.), University of Toronto, 1916. Doctor of Laws, University of Western Ontario, 1935. Inductee, Canadian Agricultural Hall of Fame, 1977."

After Zavitz's introduction in 1893, William Saunders began soybean research at the Central Experimental Farm (CEF) in Ottawa, Ontario. In 1923 Fred Dimmock started the Harrow soybean program; when he moved to Ottawa, Cass Owen took over the soybean research at Harrow. By the end of the 1930s, six soybean varieties had been registered in Canada: OAC 211 (1923), AK (Harrow) (1933, Harrow), Mandarin (Ottawa) (1934, CEF), Kabott (1937, CEF), Goldsoy (1938, OAC), and Pagoda (1939, CEF).

In 1932 some 7,781 acres of soybeans were reported in Canada, increasing to 10,000–11,000 acres by 1940.

"The first record of commercial soybean production occurred in Essex and Kent counties in 1925. The first Ontario Department of Agriculture extension bulletin to mention soybeans in 1932 listed its uses for hay, soiling crop, pasture, ensilage, seed for oil and meal, and straw. The crop was perceived by farmers as an excellent annual forage. Beans for were shipped to the Dominion Linseed Oil mill in Baden and to the first soybean crushing plant in Chatham which opened in 1934... Victory Soya Mills, constructed in 1944 in Toronto, played a key role in the development of soybeans in Ontario. The company aggressively promoted the crop in late 1940s and 1950s. The company produced bulletins, conducted yield competitions, and produced newspaper articles, movies and newsletters. It also provided extension persons, Ivan Roberts and Ralph Chamberlain to promote the crop. However, the crop was slow to expand out of the traditional 5-country area of the southwest part of the province.

"One of the most momentous occurrences in soybean development dates back to 1936 when Cass Owen at the Harrow Research Station made the original cross that ultimately resulted in the variety Harosoy. Released in 1951, Harosoy dominated the Canadian acreage for more than 35 years. It became the major variety in the U.S. and constituted 26% of the total U.S. acreage in 1966, including 42% of the crop in Illinois, 48% in Indiana, 46% in Ohio and 58% of Michigan's crop. Subsequent varieties developed by Buzzell at Harrow have continued to provide outstanding varieties to the farmers of that area.

"Another milestone in the evolution of the soybean crop in Ontario came in January 1949 with the establishment of the Ontario Soya-Bean Growers' Marketing Board. Established initially to improve marketing procedures to reduce price instability, the Board's role now includes negotiations with the trade, provision of market information relating to the oilseed industry to its members, government lobbying, market development both domestically and internationally, creation of promotional material, administration of government programs and support of research. With regard to the latter, the Board has provided approximately $1.3 million in research support in the past 10 years. The initial membership of the Board has grown from 1722 in 1949 to 17,272 in 1991."

Throughout the 1950s and 1960s, "much effort was put forward towards expanding the soybean acreage into the shorter season parts of the Province. While recognizing that weed control, lack of decent nodulation and appropriate equipment were deterrents, the major limitation was the lack of decent varieties. Bluntly put, they were dogs. The release of Maple Arrow by Harvey Voldeng from the Ottawa program represented the break that was needed to move the crop. The cross, between Harosoy and an early Swedish line, 840-7-3, was made by Buzzell for Lorne Donovan, the breeder at Ottawa who had preceded Voldeng. Dave Hume at Guelph with major support from the OMAF Plant Industry Branch mounted major research and extension programs for expansion of the crop. The crop has since created its own momentum, fueled by a whole series of outstanding early varieties developed by Voldeng at Ottawa and Beversdorf at Guelph.

"A few other names require mention. George Jones, an early promoter of the crop, weed control wizard and successful breeder, Baldur Stefansson in Manitoba who laboured for 20 years attempting to establish the crop in the west, abandoned the idea and subsequently became one of the fathers of the canola industry; and Brian Buttery at Harrow who has worked to improve our understanding of yield in soybeans.

"Special mention should be made too of the contribution of the Colleges of Agricultural Technology, especially Ridgetown. RCAT has, since its inception, provided excellent production and varietal information to the farmers of the area.

"The first private line, XK 505, was supported for registration in 1973. There are currently 4 public and 4 private full-time breeding programs in Ontario. In addition, several American-based companies evaluate and submit lines for registration the list of excellent varieties available augers well for the future.

"My role at this conference was to look back. It has been an eventful and exciting 100 years for the soybean crop and those dedicated to its expansion. But times are changing and, I expect, 'we ain't seen nothing yet'. The

20% oil 40% protein bean has served us well but there are already changes afoot in the marketplace. The soybean which was one of the first truly industrial crops must be modified to compete in the future. The development of natto beans at Ottawa and the shift of Harrow to concentrate on edible beans for export are but the beginning. Compositional changes in fatty acid distribution and protein are already underway. Changes in morphology and growth habit of the plant appear to offer new promise for higher yielding, more broadly adapted varieties. The new technologies of molecular genetics, while slow to reach soybeans, are on the verge of enabling the development of beans whose attributes may be limited only by the imagination of those of us who are over 30 years old. The future starts tomorrow. Somehow, I feel that Zavitz is looking down at all this, and, I suspect, he is smiling." Address: Crop Science Dep., Univ. of Guelph, Guelph, Ontario, Canada.

2127. *SoyaScan Notes.*1993. The world's most active countries with respect to soybeans and soyfoods, as of 1 April 1993 (Overview). April 1. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** A tally by country on the SoyaScan database (which currently contains 42,087 bibliographic references relating to soybeans and soyfoods) shows the following countries to have the largest number of listings relating to soya (over 200): United States of America 21,459, Japan 5,599 Germany 2,053 United Kingdom 1,986, China 1,844, France 1,601, India 1,222, Canada 1,112, Indonesia 993, Brazil 873, Netherlands 809, Manchuria 733, USSR 665, Italy 596, Australia 467, Korea 463, Taiwan 460, Belgium 400, Austria 375, Mexico 371, Switzerland 353, Sri Lanka 341, Philippines 323, Yugoslavia 321, Nigeria 312, Sweden 289, Argentina 244, Israel 240, Czechoslovakia 237, Denmark 225, Bulgaria 219, Malaysia 214, Thailand 214, South Africa 207, Spain 204, Russia 203.

2128. Jones, Dennis; Kuller, Lewis H.; Marckmann, Peter. 1993. *Trans* fatty acids and dieting. *Lancet* 341(8852):1093-94. April 24. [15 ref]
• ***Summary:*** These three letters to the editor comment on the following article: Willett, Walter C. et al. 1993. "Intake of *trans* fatty acids and risk of coronary heart disease among women." *Lancet* 341:581-85. March 6. Willett, the lead author of the original article, is from Channing Lab., Dep. of Medicine, Harvard Medical School, Massachusetts.

The writer of the first letter, Dennis Jones of Canada, states: "Scientists in essential fatty acid (EFA) research have long been aware of the negative effects of *trans* fatty acids on EFA metabolism, and more recently attention has been drawn to deleterious effects in adults and in infants. Warnings about health hazards of *trans* fatty acids have hitherto gone unheeded. That situation may now change, and the public should become aware that the partially hydrogenated domestic oils are, in fact, greater health hazards than dairy products and natural saturated fats."

2129. Gupta, R.P.; Gupta, R.R.; Wood, G.W. 1993. The SoyaCow resource book. Maxville, Ontario, Canada: Child Haven International. 131 p. 28 cm. [1 ref]
• ***Summary:*** Contents: Preface. 1. Introduction: Soya beans, soya milk, okara, tofu. 2. SoyaCow–Knowing it: Advantages of the SoyaCow, SoyaCow components, SoyaCow inputs, SoyaCow outputs, who needs SoyaCow, SoyaCow's economics, business plan, larger than SoyaCow machines, smaller than SoyaCow machines. 3. SoyaCow–Getting it: Preparations, ordering, receiving and unpacking, assembly, installation and testing. 4. SoyaCow–Using it: Preparation, making soya milk base, making tofu, soya yogurt (dahi), soya cream cheese, soya cottage cheese, finishing. 5. Formulations and recipes: Soya milk (dairy like, pistachio flavour, almond flavour, banana flavour, chocolate, malt, maple) tofu (tofu salad, tofu rice salad, tofu cheese squares, tofu fried rice, tofu uttapam, tofu snack sticks), soya yogurt (lassi, other sweet drinks, salted drink, raita). Figures (21 figures). Appendices: A comparison of basic soya milk processes, a sample SoyaCow cost-benefit analysis: USA/Canada, a sample SoyaCow cost-benefit analysis: India, consultants, organizations, SoyaCow training, suppliers, some SoyaCow installations, SoyaCow order form, service centres, assembly, trouble shooting guide for grinder/cooker, weekly log, periodic maintenance and repair, the SoyaCow newsletters. Address: [Ottawa, Ontario, Canada].

2130. *Ontario Export Soybeans (OSGMB).*1993. Happenings. 6(2):-2. May.
• ***Summary:*** "March 28-30, 1993 the Ontario Soybean Growers' Marketing Board in conjunction with Agriculture Canada and the Ontario Ministry of Agriculture and Food, staged 'Soybeans in Canada: Beyond 100 Years,' a symposium marking 100 years of soybeans in Canada. Over 350 delegates and 30 exhibitors made the show a tremendous success. A strong list of internationally renowned speakers drew large crowds. Mr. Tetsu Minagawa, of Mitsubishi, Tokyo, spoke on Japan's market for soyfood products. Mr. Michael Loh, Export Development Officer of the Ontario Ministry of Agriculture and Food (OMAF), highlighted the potential for soybeans in the Asia Pacific region as we approach the year 2000.

"In conjunction with the Symposium the Board sent Centennial awards to companies in the Asia/Pacific region, in recognition of their important contributions to expanding the market potential for Canadian soybeans."

Presentations were made in three countries by Michael Loh on behalf of OSGMB. The companies recognized were:

In Hong Kong: Dah Chong Hong Ltd., Vitasoy International Holdings Ltd., and Law Man Tung Trading Co. Ltd.

In Singapore: Singapore Sin Seng Lee Trading Co., Asia Corporation, and Yam Thye & Co.

In Malaysia: Yeo Hiap Seng, Chop Lee Kit Heng, Tan Ban Huat, Tung Lieng Trading Co., Thye Huat Chan, and Lun Heng. Address: Chatham, Ontario, Canada.

2131. Weiner, Michael. 1993. New developments with Amano and Yamashita (Interview). *SoyaScan Notes.* June 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Michael works as a consultant for Peter Joe of Sunrise Market Ltd. and with Amano Foods. He used to consult with Mandarin Enterprises in British Columbia. Now his main work is as a broker, representing various U.S. companies such as Vitasoy, Knudsen, Santa Cruz, etc. Amano still makes all of Westbrae's organic miso. Amano is trying to construct a 60,000 square foot plant. They had a joint venture with Yamashita but it fell apart. Now Yamashita is constructing their own 60,000 square foot soy sauce plant in Oregon. The ground breaking will take place in a couple of weeks. Michael does not feel that this will be much of a threat to Amano, which plans to sell a lot of Amano products in supermarkets. The market is big and growing rapidly. Soyfoods now are given large amounts of shelf space (8-16 linear feet) in the produce section of all supermarkets in western Canada (British Columbia, Alberta, and Manitoba). A major reason for this is that Mandarin and Sunrise have an excellent relationship with the people in charge of the produce section in western Canadian supermarkets. Initially Michael helped to establish some of these relationships; these companies got a few facings for their tofu. Then Mandarin added their tofu burgers. Then Sunrise added Yves Wieners and soy cheese. The products sold, which is proof that exposure will work. Michael was involved in trying to make the same thing happen in Ontario with the Loblaws chain, and in Quebec, but they were never allowed to give the program a try–not even in 1-2 stores.

Safeway supermarkets are so sold on soyfoods that they have developed special open-front, vertical, refrigerated "Tofu Products" cases that are placed adjacent to the produce case, but have a lower temperature. They are quite large and contain everything from soy drinks to tofu, soy cheese to meatless hot dogs. Soyfoods are very widely available on Vancouver Island.

Sunrise and Michael jointly import Mori-Nu tofu into Canada from Japan. Also Sunrise distributes some juice products for which Michael is the broker. Mori-Nu does not sell well in supermarkets because it's retail price is too high. Address: President, New Age Marketing, P.O. Box 39590, White Rock, BC, V4A 9P3, Canada. Phone: 604-538-0127.

2132. Eridania Béghin-Say (Ferruzzi Group). 1993. Annual report 1992. 54, avenue Hoche, BP 47108, 75360 Paris Cedex 08, France. 72 p. [Eng]
• ***Summary:*** This is the first year since its founding that Central Soya does not have its own annual report. It is now a subsidiary of Eridania Béghin-Say (whose chairman and CEO is Renato Pico) and its activities are now shown in the section of this report titled "Crushing and refining: Cereol, Central Soya." This includes Cereol Benelux (Netherlands), Cereol Deutschland (Germany), Cereol France, Cereol Iberica (Spain), Cereol Italia (Italy), Cereol Magyarorszag (Hungary), CSY Agri-Processing (USA), Central Soya Co. (USA), Central Soya of Canada, Central Soya Aarhus.

"1992 was a good year for Eridania Béghin-Say. Operating profit rose to more than FF 3.6 billion, 35% higher than the previous year, with net earnings of around FF 1.3 billion, showing a 70% increase."

"In 1992, Cereol's 19 plants crushed more than 5,400,000 tons of oilseeds, 27.3% more than in 1991. Almost two-thirds of the raw material crushed was soybeans (+13.5% over 1991), with the remainder composed primarily of sunflower and rapeseed (+62% more than in 1991)." Address: Paris, France.

2133. *SoyaCow Newsletter (Ottawa, Canada).*1993. European patent helps ProSoya's new partners. 2(2):1. April/June.
• ***Summary:*** "With the successful process patent for non-beany soymilk, ProSoya has now initiated development of the European market with the help of TAN AB of Sweden and UPDATE GmbH of Germany.

"Ted Nordquist of TAN AB, is an internationally known soyfoods production expert who is specializing in the worldwide development of the SC-2000, the 2000 L/H–continuous-process, industrial system offered by ProSoya. UPDATE GmbH is a Frankfurt-based marketing and communication company headed by Horst Daller and Rainer Wilkens. It specializes in ethical and progressive products and will develop European territories for the retail SC-20 and wholesale SC-100 systems and franchises."

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. Horst Daller is the older brother of Frank Daller, who worked for ProSoya in Ottawa, Canada.

2134. *SoyaCow Newsletter (Ottawa, Canada).*1993. Wholesale soymilk and ice cream production with SC-100. 2(2):1-2. April/June.
• ***Summary:*** "Using the economical 400 litre/hour SC-100 batch system, Moulins aux Abenakis of Ste. Clair, Quebec, was the first company to make 'SoyaCow' non-beany soymilk for wholesale distribution. Now, ProSoya has begun a new development with Gelato Fresco, a top quality, natural ice cream company in Toronto, Canada, and Milan, Italy. The first shipment of 'SoyaCow' non-dairy ice cream

has already been make, thanks to the smaller SC-20 installed as a pilot system."

2135. *SoyaCow Newsletter (Ottawa, Canada).*1993. SC-20 complements fine vegetarian restaurant and top natural foods store. 2(2):1-2. April/June.
• ***Summary:*** "The Sweet Carrot Cafe in Saskatoon and Rainbow Foods in Ottawa are the first Canadian retail sites for the SoyaCow SC-20... Both locations produce fresh non-beany soymilk for direct sale and formulation into value-added products like shakes, yogurt, pudding, okara baked goods, tofu, etc. They also feature returnable glass bottles of the soymilk in several flavours." The Sweet Carrot Cafe is a fine [vegetarian] restaurant, featuring a grand piano, tablecloths, and wine. Owners George and Wendy Conquergood have added a Health Bar & Deli, made possible by a new SoyaCow.

"The newly-enlarged 5,700 square foot Rainbow Foods in Ottawa is the largest health and natural products store between Toronto and Montreal. Owners Janet and Mike Kaplan see the production of high-quality fresh soymilk as a major feature of their full-service operation... Their "Healthy Deli" with the SoyaCow comprises over 1,000 square feet of the total business, and customers can see the micro-soydairy operation from the fast-food counter."

Photos show: (1) George Conquergood with his SC-20 at the Sweet Carrot Cafe. (2) The SoyaCow SC-20 at Rainbow Foods, owned by Janet and Mike Kaplan. Note: The SC-20 at Sweet Carrot Cafe was in operation before the one at Rainbow Foods. The soymilk made at Sweet Carrot Cafe was the first commercial soymilk made by any model of SoyaCow.

2136. **Product Name:** White Wave Tofruit (Soy Yogurt) [Raspberry / Framboise].
**Manufacturer's Name:** White Wave, Inc.
**Manufacturer's Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
**Date of Introduction:** 1993. June.
**Ingredients:** Water, organically-grown soybeans [made into soymilk], brown rice syrup, concentrated pineapple, peach and pear juices, raspberries, tapioca starch, natural fruit flavors, vanilla, pectin, guar gum, carrageenan, natural colour, citric acid, bacterial culture. Our soybeans are organically grown and processed in accordance with the California Organic Foods Act of 1990.
**Wt/Vol., Packaging, Price:** 6 oz plastic (HDPE) cup.
**How Stored:** Refrigerated.
**Nutrition:** Per 6 oz.: Calories 162 (600 kj), protein 6.0 gm, carbohydrates 30 gm, fat 2.0 gm.
**New Product–Documentation:** Label brought by Steve Demos. 1993. July 31. 3.25 inches diameter at lid, 3 inches high. This product is very similar to White Wave Dairyless except that it is labeled for the Canadian market. Red, dark blue, turquoise, and white. Front panel: "Made with live bacterial cultures including acidophilus and bifidus. Cultured soya dessert." No writing appears on the lid.

2137. Bolduc, Bill. 1993. Current work with soymilk and organically-grown soybeans (Interview). *SoyaScan Notes.* Aug. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bill Shurtleff tells Bill Bolduc that he has heard that Bolduc's company is now making soymilk for Westbrae Natural Foods. Bolduc admits that this is correct. Shurtleff says that he cannot imagine how Bolduc is doing this, since a modern soymilk plant typically costs about $1.5 million. Bolduc answers that he purchased the soymilk plant owned by Grove Country Foods in an auction on 4 April 1993. This plant used the University of Illinois process for making soymilk.

Note: Grove Country Foods, USA, is located at 720 S. Main St., Columbus Grove, Ohio. Phone: 419-659-5636 (office) or -2920 (plant). The two main people involved in the company were Dr. Carl Hastings and Prof. Alvin I. Nelson, both food scientists from the University of Illinois. The basic idea of the company was to commercialize new soy products and processes (such as soynuts, soy yogurt, soy ice cream, and soymilk) developed at the University of Illinois. By December 1988 they were in test production of several products but were in need of funds for commercial production and marketing. In early 1989 Grove Country Foods Canada Inc. (located in Ridgetown, Ontario, Canada) introduced Astronuts, a type of soynuts apparently made by some other company, but the company went bankrupt after 1-2 years.

Bill has modified the Illinois process for making soymilk extensively. For example, he removes the okara from the soymilk. Completing these modifications has taken several months, and his company is "now in a start-up mode making soymilk." Their refrigeration was under-sized so they lost several loads of product to spoilage. This week they are installing another compressor, etc. The system now works very well if they go slowly, but they need to be able to produce twice as much soymilk as they presently can before he will be satisfied. Now it takes several days to produce a tanker full of soymilk. Westbrae is being patient and supportive even though the process is "a bit bumpy."

Bill is only making Westbrae's regular soymilks–not their Malteds, which he thinks are still made by Hinoichi in Los Angeles. The only soymilk Bill makes is Westbrae's. He ships this soymilk in a tanker to a separate facility nearby in the Midwest that packages the soymilk in Tetra Brik Aseptic cartons for Westbrae. Westbrae now has their regular soymilk (the same product sold under the same brand) made by two companies (Pacific Foods of Oregon and Bill's Organic Processing Corp.) using two different processes. Bill started because Pacific ran out of capacity. Westbrae

likes the flavor of Bill's soymilk as well as they like Pacific's–even though Pacific's technology is much more expensive than Bill's. Bill has dramatically altered the Illinois process but he has decided not to try to patent his altered process.

Within about 2 months Bill expects to have a new soymilk product on the market with another partner (similar to Westbrae, but whose name is confidential) in a new package [perhaps an extended shelf-life (ESL) gable top carton]. After that, Bill hopes to diversify his customer base and his product mix. To do that he hopes to start by making a fresh, UHT Processed, refrigerated soy-based frozen dessert mix (for soft-serve soy ice cream) packaged at another facility, located very nearby, in 2-gallon bags with a 60-day shelf life.

Bill sees the future of soymilk packaging as being in the relatively new extended shelf life gable top carton that is sold refrigerated. This package, which is made by Tetra Pak and Evergreen, is significantly less expensive than the traditional Tetra Brik carton. It is now becoming quite popular in the Midwest and the East Coast because of its lower cost. It can cut at least $1.00 off the wholesale price of a case (12 quarts) of soymilk, which leads to even bigger savings at the retail level. And the product has a shelf life of 60-90 days refrigerated. Co-packers nearby own the new gable-top packaging equipment. Most of America's major soymilk companies are looking carefully at this package, it requires a whole new distribution system–refrigerated trucks. Bill knows that there will be a soymilk product on the market in the extended shelf life gable top package by this fall. Bill will make it for another company. The rest is confidential. He just ran the first test batch last Thursday, and now he is doing shelf-life tests. His smaller company has several advantages over the bigger soymilk companies; his company is very lean and can move very quickly. He is not controlled by any multinational corporations.

Bill has a separate company named Organic Marketing that exports organically grown soybeans to Europe; he started Organic Marketing in about 1989 and it was the precursor to Organic Processing. Bill was acting as marketing coordinator for the Ohio Ecological Food and Farm Association (the organic growers of Ohio). First he sold a lot of organically grown soybeans to Dan Burke of Pacific Soybean & Grain, then he started exporting. He met Jerry Fowler, a British-born man who has a company named Manna International in Ontario, Canada. Bill likes very much to do business with Jerry because he has a very good overview of the market, is cooperative with the growers, and pays good money to the growers for organic soybeans. Bill exports his organic soybeans via Montreal to England, where they are used by the Haldane Foods Group (which is owned by ADM).

Update: Talk with Ron Roller, CEO of American Soy Products (ASP). 1993. Sept. 4. Bill Bolduc is making plain soymilk and shipping it up to Grand Rapids, Michigan, for formulation and Tetra Brik packaging for Westbrae. ASP negotiated with Westbrae for a long time, but Westbrae finally went with Pacific Foods and Bolduc; there were many reasons for this but they are mostly political. Address: President, Organic Processing Corp., 305 N. Walnut St., Yellow Springs, Ohio 45387. Phone: 800-647-2326 OF.

2138. Stuber, Lorenz; Stuber, Ellen Figueroa de. 1993. Re: Work with soya, Soyane, and Comida Para Todos in Guatemala. Letter to William Shurtleff at Soyfoods Center, Aug. 20. 3 p. Handwritten. [Eng]

• ***Summary:*** "We would like to thank you for all of the information and inspiration that we got from your book *The Book of Tofu*. We are vegetarians and for years we have been making and eating tofu.

"In 1985 we started a little project to help the poor people in Guatemala. We had a little vegetarian restaurant in Panajachel and we distributed the daily leftovers to people that need food. At the same time we started a little project of food distribution at the garbage dump in Guatemala City. We helped to fund our project by selling Guatemalan hand crafts in Switzerland. There we met some people who were interest in our work and with their financial help we were able to expand our project (Comida Para Todos–Food for Mankind).

"We presently go 4 times each week to the garbage dump and to Peronia (a slum outside Guatemala City). Each day we take a hot meal made with rice, vegetables, beans, and tortillas (containing some okara) plus a fruit drink to about 150 children and poor people.

"This year we started a program in 2 little schools in the countryside, where we take whole wheat bread (containing some okara), marmalade, and fruit-flavored soya drink (soya milk) daily to 150 children. We distribute the food at our own cost. We have a little piece of land 30 km from the city where we built a big kitchen for this project and also for our own income. We would like to sell soy products on a large scale at inexpensive prices which could help relieve the malnutrition of so many Guatemalan people.

"We have done some tests in making soya milk (natural, fruit flavored, and chocolate), which we store in plastic bottles and refrigerate. But it usually spoils within 3-4 days, and sometimes even gels and spoils the day after it was made. "We got a cheap vacuum packaging machine for packing natural tofu, fried tofu, and soyaburgers, and now we have started experiments to see how long these products will stay fresh under refrigeration." They order a copy of *Tofu & Soymilk Production* and ask for advice in solving their problems.

A color photo shows a little Guatemalan boy pouring soymilk from a large teapot into two 1-liter plastic bottles held by little girls. Other kids are standing around drinking soymilk out of cups.

Follow-up response to questions from William Shurtleff of Soyfoods Center. 1993. Oct. 9. Since 1985 they have known about the soy dairy (which Plenty Canada had helped to establish) in San Bartolo, Solola, Guatemala. In July 1985 they started buying tofu and soy ice cream from San Bartolo for their vegetarian restaurant in Panajachel. They fried the tofu and sold it at the restaurant. In July 1989 they started to make tofu, soymilk, tortillas with okara, whole wheat bread with okara, and soyaburgers. In January 1993 they established Soyane and started to sell the first four of these foods, which they make at Nueva Goverdhana, km. 34 Carretera hacia Antigua, Santa Lucia Milpas Altas, Guatemala. Phone: 030-7179 / 030-7181. They are still working on developing labels; a sample of a generic label (which can be used on any of their soyfood products) is enclosed. As of October 1993 they sell the following amounts of each soyfood product: Tofu 42 kg/week (sold mostly to Korean people), soymilk 350 liters/week (distributed to 150 school children), tortillas with okara 15 kg/week (distributed to the people at the dump), and whole wheat bread with okara (110 kg of which is distributed to school children). Address: Soyane, Comida Para Todos, Apdo. Post. 2812, Guatemala City, Guatemala. Phone: 030-7179 or 030-7181.

2139. *Ontario Soybean Growers' Marketing Board Newsletter.*1993. Market clout for [U.S. soybean] farmers: Symposium highlight. Aug. p. 2.
• ***Summary:*** Thousands of U.S. soybean growers have joined Marketing Plus, "a new kind of marketing co-op that gives them a strong enough voice to counterbalance the marketing clout of industrial buyers. Steve Halloran, Nebraska farmer and president of the U.S. National Farmers Organization, said the co-op will gain market control over 15 percent of the U.S. soybean, corn and wheat crops. Halloran thinks thousands more will start selling their crops through the three year old Marketing Plus plan. He estimates the plan will sign up 30,000 of the 285,000 full-time farmers who produce 85 per cent of U.S. agricultural output. 'That's a very feasible goal,' Halloran said. 'We're doubling our numbers every 30 weeks.'

"To join, farmers tell Marketing Plus how many bushels they'll sell through the plan, where they'd like to deliver the crops, and at what time of year they'd like to receive sales income. Farmers pay a nine-cent a bushel marketing fee. The program lets farmers concentrate on how to produce their crops, while leaving the complex and often emotionally-fraught job of selling their crops to experts at Marketing Plus, Halloran said.

"Studies in Iowa show Marketing Plus has consistently sold in the top third of the market, while only 22 per cent of farmers who sell their own crops sell that high. Indeed, 45 per cent of farmers sell year in and year out into the bottom third. That means that many farmers who sign up for Marketing Plus automatically get better returns, Halloran said. But, he added, that's just the start.

"As the plan gains control over more bushels, it'll have more market clout and be able to negotiate more big-volume sales, he said. It will also give farmers an alternative so they won't be pressed to sell into local market gluts, since the co-op will be big enough to ship large quantities to deficit areas." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2140. Tenuta, Albert. 1993. Soybean cyst nematode. *Ontario Soybean Growers' Marketing Board Newsletter.* Aug. p. 2.
• ***Summary:*** "The soybean cyst nematode (SCN) has been a major pest of soybeans for at least a century and maybe much longer. It was first reported in Japan in 1915 and since has been found in Egypt, Korea, China, Taiwan, Columbia, Argentina, Brazil (unconfirmed), the United States and Canada. In 1954, the nematode was found for the first time in North America in Hanover County, North Carolina. This particular area has a history of growing flower bulbs imported from Japan. The first report of soybean cyst nematode in Canada occurred in two fields in Kent County in 1987 and has since been identified in five other counties."

"What is soybean cyst nematode?... It is called a cyst nematode because the swollen, egg-filled adult female (200-600 eggs) is referred to as the 'cyst stage'." Address: Ridgetown College of Agricultural Technology, Ridgetown, ONT, Canada.

2141. Todd, Daniel; Zhang, Lei. 1993. Political and technical factors impinging on port operations: The case of Manchuria. *GeoJournal* 30(4):441-54. Aug. [28 ref]
• ***Summary:*** "Five key events have shaped port-hinterland relations in Manchuria, and accordingly, have dictated the scale and scope of port operations. They are, in chronological order: (1) The Treaty of Tientsin and the attendant opening of Newchang (Yingkou) to foreign trade in 1862. (2) The lease to Russia in 1898 of the tip of the Liaodong peninsula and the founding thereon of the port of Dalny (Dalian). (3) The seizure of Dalian by Japan in 19O5. (4) The closure of Manchuria's ports to foreign trade with the accession of communist rule in China in 1949, and (5) The reversal of that policy in no uncertain terms during the 1980s consequent upon China's conversion to "open port" thinking.

"Scarcely acknowledged because less perceptible, changes in the technology governing the characteristics and employment of ships have been equally critical in regulating port operations in this part of northern China. In particular, the twin driving forces leading to ship enlargement and specialisation have induced fundamental reorganisation of both waterfront and inland transfer facilities."

In 1907, the Japanese opened two ports on the Yalu river: Dandong and its outport of stillborn Tatungkow. Dandong, by far the larger of the two, was designed to take small steamers of 2,000 tons and as a transshipment point for Yalu River junks. Yet it was constrained from the outset by its location 40 km from the mouth of the Yalu. By 1917 it exported mostly [soy] beans and bean cake.

Figures show: (1) Map of contemporary Manchuria with major ports, cities, railroads, provincial boundaries, and mineral-rich areas. (2) Early port trade of Yingkou and Dalian. Dalian trade began in 1907 and passed Yingkou in about 1912. (3) Today's port facilities of Dalian. (4) Port throughput of Dalian and Yingkou after 1952; Dalian has grown rapidly to 49.5 in 1990, compared with 2.37 for Yingkou. (5) Map of hinterlands of Dalian and Yingkou ports. Address: Dep. of Geography, Univ. of Manitoba, R3T 2N2 Winnipeg, Manitoba, Canada.

2142. *SoyaCow Newsletter (Ottawa, Canada).*1993. El Salvador Project for Plenty Canada. 2(3):2. July/Sept.
• ***Summary:*** "Two more SoyaCows were recently ordered by the Canadian branch of Plenty. This organization, known worldwide for its humanitarian agricultural reform programs, is installing the SC-20 systems in San Salvador. A local El Salvador program manager has been brought to Ottawa for hands-on system training."

2143. *SoyaCow Newsletter (Ottawa, Canada).*1993. Child Haven hires a Ph.D. for SoyaCow project in India. 2(3):1-2. July/Sept.
• ***Summary:*** Child Haven International, charitable organization based in Maxville, Ontario, Canada, has hired Ratan Sharma, a PhD in dairy science, "to look after the 17 SoyaCows in India which were acquired with the help of the Canadian International Development Agency over the past several years. Dr. Sharma will be responsible for setting up The SoyaCow Centre in India." He will ensure that all the SoyaCows in India "function profitably to provide employment to women by selling protein-rich foods at affordable prices.

"Dr. Sharma has specialized in the development of soymilk-based Indian foods, especially sweets. The Centre will assist the Indian SoyaCow manufacturer in marketing the machine. In addition, it will provide operator training, public education, product development and marketing assistance, and SoyaCow servicing. The Centre's location is yet to be decided."

2144. *SoyaCow Newsletter (Ottawa, Canada).*1993. Myanmar (Burma) soya food project. 2(3):2. July/Sept.
• ***Summary:*** "At the initiative of the California-based firm, Zin International, a SoyaCow SC-20 system has been sent to Rangoon for a pilot soyfood project. Zin International is headed by Thet Zin, a former United Nations Official in the Food and Agriculture Organization (FAO). He and his son and partner, Adalbert, are spearheading a grassroots agricultural reform initiative in Myanmar which they hope will eventually spread into other countries in Indochina."

2145. *SoyaCow Newsletter (Ottawa, Canada).*1993. $20 billion soymilk market potential worldwide. 2(3):1. July/Sept.
• ***Summary:*** In Canada alone the potential for soymilk sales is over $400 million. In Canada, the per capita consumption of fluid dairy milk (not including ice cream, yogurt, cheese, etc.) is about 100 litres a year. Since 5 million Canadians have lactose intolerance (according to McNeil Consumer Products, Guelph, Ontario), these people could potentially be consuming soymilk at the same rate that others consume dairy milk, amounting to 500 million litres worth about $400 million. This translates into a $4 billion potential in the USA, and conservatively $10 billion worldwide. Soymilk consumption in the form of non-dairy desserts, yogurt, and cheese could easily double this estimate.

"Why then is the current annual consumption of soymilk a meager 0.13 litre, or 0.65 litre for the lactose tolerant population?

"The answer to this question is related to the quality and cost of the soymilk available currently in the market." The soymilk sold in Canada by Eden Foods, Vitasoy, and Westbrae is expensive–$2.00 to $3.00 per litre compared with $1.25 for fresh dairy milk.

2146. Austin, Ruth; Miller, Carolyn. 1993. Hercules Incorporated and HVP (Interview). *SoyaScan Notes.* Oct. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Hercules Incorporated acquired the plant at 79 E. State St., Harbor Beach, Michigan 48441, and they manufactured HVP there for many years. They sold their HVP operations in Aug. 1990 to Champlain Industries Inc. (31 Styertowne Rd., Clifton, New Jersey 07012. Contact Joe Hresko. Phone: 201-778-4900). The plant is still in Harbor Beach and most of the HVP are still manufactured there, but orders should be placed with Clifton, New Jersey. The company also makes autolyzed yeast products in Clifton, New Jersey. Champlain Industries is a Canadian-owned company. The parent company is Champlain Industries Ltd. with headquarters at Cornwall, Mississauga, Ontario, Canada.

Carolyn Miller, who works for Hercules, coordinated the writing of a history of the company, which began on 1 Jan. 1913 as a manufacturer of explosives. It was created as a result of a divestiture by the Du Pont Co. The book was actually written by business historians. Address: Hercules Incorporated, Hercules Plaza, Wilmington, Delaware 19894. Phone: 302-594-5000.

2147. *At Guelph (Ontario, Canada).*1993. Charles Zavitz legacy lives on as Crop Science marks 25 years. Oct. 13.
• ***Summary:*** Contains a brief biography of Dr. Zavitz, a crop science pioneer at OAC. A large photo shows the roll-top desk used by Dr. Zavitz, which has been donated to OAC by his grandson, Jim Zavitz (shown seated in front of the desk). Prof. Jack Tanner, Crop Science, is shown to the left of the desk.

2148. *At Guelph (Ontario, Canada).*1993. Soybean research begins second century: Research report. Oct. 13.
• ***Summary:*** A century ago, in 1893, Guelph crop science pioneer Charles Zavitz introduced soybeans to Ontario [and to Canada]. Soybeans "have become one of the province's major agricultural success stories. To celebrate the anniversary, the Ontario Soybean Growers Marketing Board presented a plaque to the Department of Crop Science on Oct. 6 as faculty and staff met to mark yet another campus milestone–the 25th anniversary of the Crop Science Building, a facility inspired by Zavitz's research efforts. Representing the soybean growers was Susan Iler, executive assistant, and Rod Ricker, chairman of the board's research committee."

"Today, soybeans are one of Ontario's biggest crops... In the past decade, Ontario soybean production has more than doubled to 1.76 million acres. Soybeans now occupy as much land as the province's green corn crop. Average yields have jumped more than 60 per cent, making soybeans an incredible success story in Ontario Agriculture."

Prof. Jack Tanner, who runs the soybean research program in the Dept. of Crop Science, says that the development of short-season, high-yield cultivars is a major plant-breeding achievement. The Guelph program is one of four public soybean breeding programs in Ontario province.

2149. Roller, Ron. 1993. The soymilk and rice beverage markets in the USA and Canada (Interview). *SoyaScan Notes.* Oct. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ron has some new very accurate and reliable numbers which show in 1992, in the USA and Canada, about 8.1 million gallons of soymilk and 1.4 million gallons of rice milk were sold. In 1993 about 9.8 million gallons of soymilk and 2.3 million gallons of rice milk were sold. The total amount sold in Canada is quite small compared to that sold in the USA.

When people who have never tried a non-dairy beverage before are served both rice milk and soymilk, they tend to prefer the rice milk–because it is sweeter and it's not soy.

In 1992 the amount of rice milk (rice beverage, including amazake) sold in the USA and Canada was 14-15% of the amount of soymilk sold by volume (gallons). The percentage has increased by an estimated 4-5 percentage points since then. The overall market for both soy- and rice drinks in 1992 was about 9.5 million gallons–a slight decrease from 1991. For the first 6 months of 1993, volume is up about 27% over the same period in 1992, and the total market is projected to be about 12.1 million gallons in 1993.

Looking at the individual soymilk manufacturers, Eden's soymilk production is experiencing strong growth. In the natural foods market, Ron thinks that Westbrae is ahead of Vitasoy. If you include the Oriental market, Vitasoy may be ahead of Westbrae. Vestro (which owns Westbrae) is a publicly owned corporation, so their financial data is available to the public. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2150. AGP–Ag Processing Inc a cooperative. 1993. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 20 p. 28 cm.
• ***Summary:*** Net sales for 1993 (year ended Aug. 31) were $1,218.614 million, up 8.2% from $1,126.667 million in 1992. Earnings before income taxes: $44.659 million, up 3.3% from the $43.236 million in 1992. Contains a 10-year summary of consolidated operating and financial statistics.

On the inside front cover is a historical summary of the most important events each fiscal year from 1983 to 1993. In 1993 Omaha corporate headquarters staff moved into their new building at 12700 West Dodge Road in Omaha; it has 85,000 square feet and is located on more than 14 acres in Omaha. A color photo shows the building. Another color photo shows a truck tanker with the Soyasign and "Soyoil: America's #1 vegetable oil" on the side and back.

AGP also acquired a vegetable oil refinery in Sherman, Texas (formerly owned by Kraft) and a grain terminal in Atchison, Texas–"which will provide better access to barge transportation and improve arbitrage." The refinery acquisition enabled "AGP to shift a substantial portion of refined vegetable oil production from St. Joseph to the new facility and to Denison, Texas."

AGP now has five primary businesses, each of which was profitable in 1993: (1) Soy processing continues as AGP's core business; it includes the milling of soybean flour [Soy Flour Division], and AGP trucking. Reduced shipments of soybean meal to the former Soviet Union has a negative impact. (2) Refined oils [Vegetable Oil Division], with three vegetable oil refineries at St. Joseph, Missouri, and at Denison and Sherman, Texas. (3) "Grain. The primary activities are grain elevator operations and grain merchandising, which include marketing agreements with local cooperatives. Exports and profits from them are growing." (4) "Feed. Comprised primarily of Supersweet feeds in the United States and Masterfeeds in Canada," including "Agri Center operations in the United States and

poultry operations in Canada." In 1937, Supersweet Feeds started making feed in Redwood, Minnesota. Today the company has 18 manufacturing plants. Masterfeeds started more than 65 years ago in Canada. (5) "Pet Foods [Division]. This business area manufactures and markets pet foods through private labels (AGP specialists develop the formulas), co-packing arrangements (the customer develops the formulas), and our own branded products."

"AGP is a young company. The first five years were dedicated to survival and to competing against the market influences of large, private grain and processing firms in the soybean and soybean meal markets. We believe that producers [farmers] must be represented by their cooperative in market-making areas in order to maximize their returns [profits]. AGP is dedicated to this goal."

The horrendous 1993 floods shut down rail shipments for a long time. The AGP transportation "fleet now includes 1,625 rail cars, 86 semi-tractors [semitrailers], and 101 trailers of all sizes.

In October 1992 "the Chicago Board of Trade [Illinois] changed the soybean meal contract from a low protein contract to a high protein contract." This was an historical development and "a learning experience because historical soybean meal basis levels became obsolete and new contracts moved toward actual delivery levels that have evolved over the last decade." The required some internal accounting changes, which will benefit AGP.

"Export sales: The Ag Products Division has continued to increase direct sales of feed ingredients into foreign countries. During the past year 250,000 tons of soybean meal were exported to more than 14 countries." However, "export sales have not regained the level that existed before the breakup of the Soviet Union."

Soybean hulls are now "pelleted in Sergeant Bluff and Eagle Grove, Iowa. They are marketed domestically and for export."

Page 16, titled "AGP businesses." Shows the location of every AGP business, organized by business type (such as Soybean processing, Vegetable oil refining, Feed manufacturing, Grain elevators, etc.). Address: Omaha, Nebraska.

2151. Chirrey, Shawn. 1993. The Zavitz legacy. In: Crop Science: A Green Legacy, A Green Future. 1993. Guelph, Ontario, Canada: University of Guelph. 23 p. Oct. See p. 4. Illust. 28 cm.

• ***Summary:*** This publication, in magazine form, is a commemorative issue marking the 25th anniversary of the opening of the Crop Science Building and the Elora Research Station (located about 10 miles northwest of Guelph). Contains a brief biography of Charles Zavitz. Across the top one-third of the page, a black-and-white photo (courtesy of University of Guelph Archives) shows Charles Zavitz standing at the right and holding a clipboard on which he is writing. He is looking to the left at two men who are bundling sheaves of crops. In 1924 he "was on his way to becoming one of the great pioneers of Canadian agriculture, and the standards he was setting created a legacy that would firmly establish the University of Guelph's Department of Field Husbandry–and later, the Department of Crop Science–as one of the world's leading centres of crop research and innovation." Address: Guelph, Ontario, Canada.

2152. DeClercq, D.R.; Daun, J.K.; Tipples, K.H. 1993. Quality of Canadian soybean–1993. *Canadian Grain Commission, Crop Bulletin* No. 210. 9 p. Undated. [1 ref. Eng]

• ***Summary:*** Contents: Introduction. Weather and production review. Quality data. Methods: Samples, oil content, protein content, fatty acid composition, iodine value. Acknowledgements.

Figures show: (1) Map of Southern Ontario showing counties from which 1993 soybean survey samples were received. (2) Annual mean oil and protein content of Canadian soybean–1983-1993, Grades No. 1 and No. 2 Canada combined (oil averages 20.5%; meal 41.9%).

Tables show: (1) Production statistics for soybeans in Canada, 1983-1993 (seeded area {ha}, production {tonnes}, yield {tonns/ha}). (2) Quality data for soybean harvest surveys No. 1 and No. 2 Canada grades: 1983-1993 (oil content, protein content {%}). (3) Quality data for 1993 Ontario soybean crop by grade (Nos. 1-3). (4) Oil and protein content of 1993 Ontario soybeans by county and grade. (4) Oil and protein content of 1993 Ontario soybeans by county; No. 1 and No. 2 Canada grades combined. (5) Oil and protein content of 1993 Ontario soybeans by variety; No. 1 and No. 2 Canada grades combined. (6) Fatty acid composition for 1993 Ontario soybeans by variety; No. 1 and No. 2 Canada grades combined. (7) Soybean varieties registered in Canada: Oilseed type. Natto type (3 NattoKing and 1 Nattosan varieties). Tofu type (Harovinton, KG 91, and TK 89). Address: 1. Chemist; 2. Research scientist; 3. Director. All: Grain Research Lab., Canadian Grain Commission, 1404-303 Main Street, Winnipeg, Manitoba R3C 3G8, Canada.

2153. *Ontario Export Soybeans (OSGMB).*1993. Michael Loh appointed coordinator of export development. 7(1):3. Nov.

• ***Summary:*** "Canada's soybean industry has set a goal of doubling exports to the Asia / Pacific region from $25-30 million annually to $60 million by the year 2000. A three year marketing plan has been developed by the Canadian Soybean Export Promotion Committee. In August, Michael Low was contracted to work on a one quarter time basis as the export development co-ordinator. Michael is on secondment from OMAF, where he is a Market

Development Officer. Michael has over fifteen years of experience in the Asia / Pacific region, including a five-year posting in Tokyo.

"Michael's appointment reflects a new approach in federal / provincial cooperation to combine resources through partnerships in pursuit of export opportunities by industry." Address: Chatham, Ontario, Canada.

2154. Kashama, Johnny. 1993. Re: Projet Miso in Kigali, Rwanda. Questions answered on Soyfoods Center questionnaire and returned to SC on 21 December 1993. 3 p. Handwritten, with signature. [Eng]
• ***Summary:*** The following is based on a interview with Mr. François Munyankindi of Projet Miso (B.P. 2018, Kigali, Rwanda). Projet Miso (Project Miso), was founded on 1 Oct. 1990 to manufacture miso and to contribute to the improvement of the diet of the people of Rwanda. It was founded by Mrs. Suzanne Dionne of the *Fonds de Contrepartie Rwanda-Canada*, which is the owner. It is a cooperative venture between Canada and the government of Rwanda. The company began to ferment red miso in 1992 and to sell it in April 1993; it now makes red miso (340 kg/week), tamari (14 liters/week), and shoyu (it is still in the fermentation and has not yet started to be sold). Miso is the best-selling product of the three, with sales of 102,000 Rwandese francs per week (1 U.S. dollar = 145 francs). They learned the process by studying *The Book of Miso* and *Miso Production* by Shurtleff and Aoyagi. The company employs 11 people: 1 manager, 6 production workers, and 4 office workers and others. The company has 290 square meters of production space and 27 square meters of office space.

Mr. Munyankindi thinks [and he is correct!] that this is the first company in Africa to make and sell miso, tamari, or shoyu. The miso is accepted by the local people. "As you know, miso is a medicinal food and it is recommended by many physicians." Address: c/o Tofu–Rwanda, P.O. Box 1906, Kigali, Rwanda. Phone: (250) 76730.

2155. *Agri-Book Magazine (Exeter, ONT, Canada).*1993. Beans in Canada. 20(2):1-20. Dec.
• ***Summary:*** This entire special issue is about soybeans in Canada, with emphasis on soybean production. The magazine is printed with soy ink. Articles include: Making production profitable. The key to success in soybeans (ad for Pursuit herbicide by Cyanamid). Time savings are considerable [with no till]. Machinery management: Handling high residue. Soybean board activities–An active year: 1993 Ontario soybean marketing agreement, export market development, Japanese soybean mission visits Ontario, Japanese soybeans for food use, Minimum Compensatory rates gone in 1994, board fees reduced to $0.90 per tonne effective 1 Sept. 1993, Canada's centennial symposium, soybean research and variety development. Soybean planters and drill reviewed. Be prepared for control of different weeds.

A table (p. 12) shows the sources of Japan's soybeans used for food in 1993: USA 922,000 tonnes, China 200,000 tonnes, domestic Japanese 170,000 tonnes, Canada 40,000 tonnes.

2156. Bria, Rosemarie Dorothy. 1993. Not dogs anyone? Meatless market goes mainstream. *E: The Environmental Magazine* 4:48. Dec. *
• ***Summary:*** Includes example of meatless product by Yves Veggie Cuisine.

2157. Ontario Soybean Growers' Marketing Board. 1993. Annual report. Box 1199, Chatham, ONT N7M 5L8, Canada. 27 p. Dec. 28 cm.
• ***Summary:*** This is a report for the year 1993. Contents: Mission statement. Chairman's message (Ron MacDougall). Secretary manager's message (Fred Brandenburg, Dec. 1993). OSGMB summary of major activities in 1992. Auditor's report and balance sheet. 1993 soybean & research funding (incl. breeding of soybeans for tofu and natto). Ontario soybeans–supply and demand, 1990-1993. Soybeans: Area, production and farm value, by county, 1992, with provincial totals [including county and district totals], 1986-1992. Ontario marketings, 1990-92. Ontario soybeans: Production, crushings, imports, exports. 1992 crop year marketings by county. Ontario soybean production history, 1942-1993. Ontario soybean exports by destination in metric tons. Soybean meal: Canadian imports and exports. Soybean oil: Canadian imports and exports. Quality of the 1992 soybean crop by county (in terms of mean oil content and mean protein content). Cash prices for Ontario soybeans (1990-1994). Ontario basis values (cents over futures). Weekly adjusted producer basis. Soybean supply and demand, 1990-1994: USA, world. OSGMB appointments for 1993 (officers and committees). 1993 district committee members of soybean board. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2158. *SoyaCow Newsletter (Ottawa, Canada).*1993. Russian Soybean Association launches soyfoods initiative. 2(4):1. Oct/Dec.
• ***Summary:*** In December, Krasnodar, a city in southern Russia, hosted a warm reception for the first Soya Cow ever to penetrate the former Soviet Union. Krasnodar is the center of a major agricultural "breadbasket" for Russia and soybeans are a leading local crop–which has traditionally been grown mostly for animal feed and oil extraction.

The Russian Soybean Association, ASSOY, had arranged for a SoyaCow demonstration, attended by local staff, VIPs, and the media. "The line-ups for samples of fresh soymilk and tofu proved that an entire new food category could be embraced spontaneously by one of the

world's major cultures." A photo shows Frank Daller demonstrating SoyaCow to Alexander Podobedov, director of ASSOY.

Note: Talk with Frank Daller of The SoyaCow Centre. 1994. Aug. 22. Mr. Podobedov (pronounced po-DOE-buh-doff) can be contacted at ASSOY, Ul. Mirra 28, 350063 Krasnodar, Russia. Phone: (7) 8612-525614; Fax (7) 8612-540081.

Krasnodar is in southern Russia at about 45º N latitude (about the same latitude St. Paul, Minnesota), just east of the Black Sea. It is the capital of the Krasnodar Krai, a Territory of the Russian S.F.S.R.

2159. **Product Name:** Soymilk.
**Manufacturer's Name:** Deli France Refreshment Services.
**Manufacturer's Address:** 79 Blue Spruce St., Brampton, ON L6R 1C3, Canada. Phone: (905) 799-0197.
**Date of Introduction:** 1993.
**New Product–Documentation:** Letter (fax) from Jimmy Chong, followed by a phone call. 1993. Nov. 8. He and Michelle Cheng (both of whom are natives of Singapore) currently make soymilk which they sell to catering services.

2160. Harcan Kingsoya Co. Ltd. 1993. Veg-A-King (Brochure). Ontario, Canada. 4 p.
• ***Summary:*** This is a portfolio-style leaflet with one insert describing Veg-A-King soy sauce. "Harcan Kingsoya Co. Ltd. is a Chinese/Canadian joint venture company set up to bring you authentic soyfoods and exotic sauces. Our Chinese partner is a leading food manufacturer and exporter in Heilongjiang Province, China." The company has established a manufacturing plant in Scarborough, Ontario, Canada. The brand name is Veg-A-King.

"Veg-A-King soy sauce is our flagship product. We use a traditional recipe which has a long history in China. Brewed naturally from premium soybeans, wheat and bran, it contains no artificial colours or added flavourings."

The company also makes an impressive line of 17 meatlike soyfoods products such as Vege-Beef, Vege-Chicken, and Vege-Shrimp. Pressed tofu is the basic ingredient of these foods. "Through further processing it can be shredded, formed, steamed, deep-fried or smoked to make different delicious foods" for vegetarians. Premium quality Canadian soybeans are used in manufacturing soymilk, tofu, and dried bean curd.

Two photos show foods being made in the factory. Address: 33 Casebridge Court, Units 5&6, Scarborough, ONT M1B 3J5, Canada. Phone: (416) 283-8328.

2161. **Product Name:** [MagiSoy (Soy Cheese)].
**Foreign Name:** MagiSoy.
**Manufacturer's Name:** Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.).
**Manufacturer's Address:** 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.
**Date of Introduction:** 1993.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Helen Wan, sales manager. 1995. May 26. This soy cheese product was launched in 1993. They make it in house and it melts.

2162. Levenstein, Harvey A. 1993. Paradox of plenty: A social history of eating in modern America. New York, NY: Oxford University Press. ix + 337 p., [8] p. of plates. Illust. (8 p. of plates). Index. 25 cm. [1473* endnotes]
• ***Summary:*** Contents: Prologue: Depression paradoxes. 1. Depression dieting and the vitamin gold rush (The New Nutrition, Victor Lindlahr, Gayelord Hauser, the willingness to eat for health more than for pleasure, Alfred W. McCann, Prof. Elmer McCollum and acidosis). 2. The great regression: The new woman goes home. 3. From Burgoo to Howard Johnson's: Eating out in Depression America. 4. One-third of a nation ill nourished? 5. Oh what a healthy war: Nutrition for national defense [World War II].

6. Food shortages for the people of plenty. 7. The golden age of food processing: Miracle Whip *über Alles*. 8. The best-fed people the world has ever seen? (Insta-Burger-King chain of early 1950s, Ray Kroc visits San Bernardino, the McDonald brothers, Clementine Paddleford). 9. Cracks in the façade: 1958-1965 (kitchen appliances do not reduce time women spend on food preparation, growing suspicion of the food industries, food additives, refined and processed foods, Gayelord Hauser). 10. The politics of hunger.

11. Nutritional terrorism (DDT and pesticides, Rachael Carson and *Silent Spring*, USDA, mercury in fish from the Great Lakes, Jerome Irving Rodale {ex-auditor for the IRS "was quite unlike most of the others in the huckster-filled health food business." Circulation of his *Organic Gardening and Farming* magazine soared from 60,000 in 1958 to 650,000 in 1970}. "Soon the doors were open to the usual horde of health food advocates and fad diet promoters impatiently waiting for the moments when they could again hold center stage." Gayelord Hauser, his women and his Five Wonder Foods, Adelle Davis, Organic foods, natural foods, health food stores, the government had sided with the medical establishment to keep the public from turning to vitamins–rather than to doctors–to solve health problems, the FDA and Food Faddism, vitamin advocates, Ralph Nader, agribusiness, cholesterol awareness, the AMA's council on foods, National Heart Association, Linus Pauling bankrolled by Hoffmann-La Riche, the largest wholesaler of vitamin C, in 1971 Michael Jacobson helped found the Center for Science in the Public Interest, middle class was rapidly losing faith in the food industry and government).

12. The politics of food (The New Left vs. Ralph Nader, radicals, *Ramparts* magazine, Francis Moore Lappe, vegetarianism, Berkeley radical Alice Waters opens Chez

Panisse, aphorism *Man ist was er isst* {Man is what he eats, by Ludwig Feuerbach, 1804-1872, German philosopher}, avoidance of meat and white foods, natural foods, Zen macrobiotic diet, Georges Ohsawa, Yin and Yang, Warren Belasco, brown rice, soy sauce, granola, Fred Rohe, Charles Reich, *Mother Earth News*, *Berkeley Barb*, "back to Nature," organic foods, the women's movement, LSD, Theodore Roszak, Frederick Stare sets up American Council for Health and Nutrition. Jean Mayer, reviling white sugar, John Yudkin, America's puritanical streak, Robert Choate destroys sugar and sugar-laden breakfast cereals, the public grows to despise sugar).

13. Natural foods and negative nutrition (You are what you eat {1969}, *Fortune magazine* predicts convenience will win out over natural foods. Delaney Amendment, cholesterol and heat disease, loss of faith in the core of America's postwar national credo: the ideal of the balanced meal and faith in the Basic Four, Senator McGovern and his committee's special report *Dietary Goals for the United States* {1977-1978}, which called for a complete about-face in government nutrition policy. "All previous government efforts had centered on getting people to eat more of what was thought to be good for them. *Dietary Goals* emphasized eating less of what was thought to be bad for them"–what Levenstein calls "Negative Nutrition." A great outcry came from the beef, dairy, and egg producers).

14. Darling, where did you put the cardamom? (The rise of gourmet, high ethnic, and upscale cuisines, French food, Julia Child, Craig Claiborne, snobbery, ethnic food boom, Oriental foods). 15. Fast food and quick bucks (Pizza, McDonald's, Kentucky Fried Chicken, franchises). 16. Paradoxes of plenty. Abbreviations used in frequently cited periodicals.

Born in 1938, Levenstein's first book was titled *Revolution at the Table: The Transformation of the American Diet.* This is a carefully researched, generally well written and very interesting cultural history of food and eating in the USA from 1930 to 1993–and of America's ongoing food wars. However by trying to take a fair and balanced centrist position, and by trying to prevent value judgments from creeping in (e.g., a healthy, balanced diet is better than an unhealthy one), Levenstein no doubt disappoints, and perhaps even infuriates, all sides. His sources on natural and organic foods and vegetarianism are scant and often very negative. Address: Prof. of History, McMaster Univ., Univ. of Hamilton, Ontario, Canada.

2163. Lock, Margaret M. 1993. Encounters with aging: Mythologies of menopause in Japan and North America. Berkeley, California: University of California Press. xliv + 439 p. Illust. Index. 24 cm. [552* ref]

• ***Summary:*** This is an extremely interesting, carefully researched, original book. However, soy is not mentioned. Contents: List of illustrations. Acknowledgments. Prologue: Scientific discourse and aging women. Part 1: Japan: Maturity and *kônenki.* 1. The turn of life–Unstable meanings. 2. Probabilities and *kônenki.* 3. Resignation, resistance, satisfaction–Narratives of maturity. 4. The pathology of modernity. 5. Faltering discipline and the ailing family. 6. Illusion of indolence–Ideology and partial truths. 7. Odd women out. 8. Controlled selves and tempered bodies. 9. Peering behind the platitudes–Rituals of resistance. 10. The doctoring of *kônenki.* 10. "Invisible messengers." 11. The making of menopause. 12. Against nature–Menopause as herald of decay. "An act of freedom." Epilogue: The politics of aging. Flashes of immortality. Notes. Bibliography.

Concerning hot flashes and night sweats (p. 29-30): Dr. Mori Ichirô, who works in Kyushu, has spent the greater part of his career doing research on *kônenki.* He thinks that neither its definition not its symptoms coincide with the current Western concept of menopause. Few Japanese accept the idea that *kônenki* is a state that demands medical care–such as hormone replacement therapy. Rather, it is a natural part of the aging process. Herbs can be effective against a wide range of *kônenki* symptoms (p. 296-97).

Concerning osteoporosis in postmenopausal Japanese women: Although the research is limited, there are strong indications that the incidence of osteoporosis among Japanese (and Chinese) women is less than half that of women living in North America–despite the fact that the bone density of East Asian women is less than that of Caucasian women (p. 295).

The life expectancy of Japanese women is the longest in the world. Japanese medicine is oriented toward prevention and primary care.

Some of the early articles advocating estrogen replacement therapy were written by Robert Wilson and his wife as early as 1963. Their research was funded by Wyeth Ayerst, the pharmaceutical company that makes Premarin and has the largest investment in production and sales of estrogen replacement therapy. Advertisements by Ayerst in medical journals of the time urged doctors to "Keep her on Premarin" and used the slogan "When a woman outlives her ovaries..." To keep women free of "senile decay," Wilson advocated not only that declining estrogen be replaced, but also that another crucial ovarian hormone, progesterone, whose principal function was to prepare the lining of the uterus for a fertilized egg, should also be replaced (p. 348-49). This view of menopause as a deficiency disease is increasingly criticized by modern women, who often also consider it demeaning of women and based on propaganda from pharmaceutical companies.

"The Women's Health Network suggests less expensive, safer, and 'more natural' forms of prevention against chronic disease, such as dietary changes, dispensing with cigarettes and excessive alcohol, and environmental improvements..." Dietary changes have significantly

reduced the rate of heart disease among men. “Moreover, a diet high in soybeans has recently been linked not only to a reduced incidence of hot flashes but also to lower incidence of breast cancer among premenopausal women *(Lancet,* 1991, p. 1197)” (p. 354-55).

Not all “women with bone fractures have osteoporosis and not all women with osteoporosis have fractures–facts that are often confused. Moreover, there is no simple relation between bone mineral density and incidence of osteoporosis” (p. 355). Address: Medical anthropologist, McGill Univ., Montreal, Canada.

2164. MacDonald, June Fessenden. ed. 1993. Agricultural biotechnology: A public conversation about risk. *NABC Report (National Agricultural Biotechnology Council, Ithaca, New York).* No. 5. [8] + 135 p. (Proceedings of the NABC 5th annual meeting, held at Purdue University, Lafayette, Indiana, in 1993).
• ***Summary:*** New members include: International Service for the Acquisition of Agri-Biotech Applications, North Carolina State Univ., Oregon State Univ., Univ. of Guelph (Ontario, Canada), Univ. of Saskatchewan (Canada). Address: Deputy Director, NABC, Ithaca, New York 14853-1801.

2165. Ontario Oil & Protein Seed Crop Committee. 1993. Ontario soybean variety trials (Leaflet). Ontario, Canada. 9 panels. 22 x 10 cm.
• ***Summary:*** Rates soybean varieties and gives detailed agronomic data for four different heat unit areas: 2500-2800 heat units, 2700-2900 heat units, 2900-3300 heat units, 3300-3500 heat units (the furthest south; average yield: 3.02 tonnes/hectare). Address: Ontario, Canada.

2166. Ontario Soybean Growers’ Marketing Board. 1993. Canadian soybeans. Ontario, Canada. 8 p. Undated. 28 cm. [Eng; jap]
• ***Summary:*** This brochure is composed of glossy color full-page pages interspersed with half-wide pages of text. The message is that Ontario soybeans are of world-class quality. Contents: Canada: With Canadian international class soybeans we grow quality. Canada: With Canadian graded soybeans, we not only promise quality, we guarantee it. The two center-fold pages and one additional half-wide page of text are in Japanese. Ontario: The Ontario farmer is at the heart of our success. Ontario: Our goal is to take quality one step further.

Full-page color photos show: A soybean plant with leaves and pods edged in gold from the setting sun. Young soybean plants just emerging and breaking ground. A field of soybeans stretching right up to the camera. A combine harvesting mature soybean plants in the evening. Soybeans being dumped into a hopper from the back of a truck. A Japanese man standing near the back of a truck with as sample of soybeans. Address: Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2167. Wilson, Elaine. comp. 1993. Stanstead County vital statistics, Jan. 1876 to Dec. 1890. Stanstead Co., Quebec, Canada: Stanstead Historical Society. 28 cm.
Address: Stanstead Historical Society, 535 Dufferin St., Stanstead, PQ Canada J0B 3E0. Phone: (819) 876-7322.

2168. **Product Name:** Veg-A-King Soya Sauce.
**Manufacturer’s Name:** Harcan Kingsoya Co. Ltd. (Importer-Bottler). Made in China.
**Manufacturer’s Address:** 33 Casebridge Court, Units 5&6, Scarborough, ONT M1B 3J5, Canada. Phone: (416) 283-8328.
**Date of Introduction:** 1993?
**Ingredients:** Water, soya beans, wheat, salt, sugar, sodium benzoate.
**Wt/Vol., Packaging, Price:** 17 fl. oz bottle, and 2 litre or 4 litre plastic jugs.
**How Stored:** Shelf stable.
**New Product–Documentation:** Leaflet (in English and Chinese) describing product, with color photos of jugs and label, obtained in Ontario, Canada. 1994. Oct. “Harcan Kingsoya Co. Ltd. is a Chinese/Canadian joint venture company set up to bring you authentic soyfoods and exotic sauces. Our Chinese partner is a leading food manufacturer and exporter in Heilongjiang Province, China... Veg-A-King soy sauce is our flagship product. We use a traditional recipe which has a long history in China. Brewed naturally from premium soybeans, wheat and bran, it contains no artificial colours or added flavourings.”

Talk with Mark O’Neill of Chatham, Ontario, Canada. 1994. Dec. 5. Harcan does no fermentation in Canada. They import a condensed soy sauce (which is almost in solid form) from China, dilute it with water, bottle and sell it.

Talk with Duff MacKinnon of the Ontario Ministry of Agriculture and Food in Guelph. 1995. March 6. Harcan exports soy sauce to Europe.

2169. Northrup King Seed Co. 1993? Soybeans in Canada: Beyond 100 years (Color videotape). Chatham, Ontario, Canada: Northrup King. 38 min. Undated.
• ***Summary:*** Shows highlights of the 1993 centennial celebration of soybeans in Canada, with summaries of the main speakers and speeches. Contains extensive coverage of the Northrop King soybean breeding program at London, Ontario, Canada. Address: Chatham, Ontario, Canada.

2170. *SoyaScan Notes.*1994. Keywords used with more than 1,000 documents in the SoyaScan database, as of 1 January 1994 (Overview). Jan. 1. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1. USA 24,636. 2. Commercial soy products 6,565. 3. Japan 5,948. 4. Tofu 5,122. 5. Soymilk 3,884. 6. Illinois 3,642. 7. Soy sauce 3,387. 8. California 3,129. 9. 2171. Rojo, Oscar. 1994. Canadian firm supplies soybean process to Russia. *Toronto Star (Ontario, Canada).* Jan. 10. p. B3.
• ***Summary:*** Last month the first pilot SoyaCow system was installed in the Russian city of Krasnodar. Eventually, a technology transfer agreement will allow SoyaCow systems to be produced under license in a former Russian military plant. “Consulting work performed by Dr. F. Warren of the Canadian Executive Service Organization is credited with helping ProSoya break into the Russian market.”

2172. Rusnell, Charles. 1994. Local firm milks Russian deal: Company to ship 100 machines to produce soymilk. *Ottawa Citizen (Ontario, Canada).* Jan. 13. p. D6.
• ***Summary:*** ProSoya Inc., and Ottawa (Canada) firm has signed a major deal to provide a Russian official, Alexander Podobedov of ASSOY (the Russian Soybean Processing Association), with 100 of its SoyaCow soymilk machines. The six-year deal will earn the young company about $1 million during the first year alone. A photo Frank Daller of SoyaCow and Alexander Podobedov standing by a SoyaCow system.

2173. Agriculture Canada, Oilseeds Division, International Markets Bureau, Markets and Industry Services Branch. 1994. Oilseed sector profile. Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. Jan. 28 cm. Spiral bound. [3 ref]

• ***Summary:*** Contents: Foreword. 1. Introduction. 2. The seed production subsector: Canola, soybeans, flaxseed, sunflower, mustard, safflower, composition.

3. The processing subsector: Background, crushing plants, industry statistics, methods of processing, oilseed crushings, vegetable oils, vegetable oilmeals, economic value of the industry. 4. The marketing subsector: Oilseeds marketing, hedging, processed oilseed products marketing.

5. Organizations: Canola, soybeans, flaxseed, crushers. 6. The environment: Domestic, international.

Appendix A: Role of the federal government in the Canadian oilseeds industry: Research, regulation, marketing. Appendix B. Oilseed industry directory: Industry association, oilseed processing companies, oilseed sector trading companies, research / education institutions, government, others.

Soybeans (p. 3): “Soybeans were introduced into Canada in 1893; however they did not become a commercial oilseed crop until the late 1920’s. In that year [sic, about March 1930], the first soybean crushing plant [Milton Oil Refineries, Ltd.] was built in Milton, Ontario. The introduction of modern crushing mills occurred in the late 1930s. Increased demand for vegetable oil and protein meal during the early 1940’s firmly established the crop and by 1950, soybeans had become a major cash crop in Ontario. Strong promotional efforts by the crushing industry assisted in continued expansion of the crop. During the 1980s, soybeans were introduced into Québec, the Maritimes and Manitoba as a source of livestock feed... In Québec, whole soybeans have become a viable alternative feed source. In other regions, whole soybeans are only a minor ingredient for livestock.”

The soybean growers, like their canola counterparts, have shown a high degree of cohesion and organizational ability. In 1949, the Ontario Soybean Growers’ Marketing Board was founded. The Board represents 25,000 producers and negotiates the pricing arrangements for Ontario soybeans. Its functions are discussed in more detail further in this report. The handling, crushing, and exporting of soybeans and soybean products is handled by private companies.

“Canadian soybean production has increased sharply from the late 1970’s when up to 60 percent of Canadian soybean requirements had to be imported. In 1987, domestic production reached a level capable of supplying most internal demands for crushing (Table 3). Although some soybeans are still being imported from the U.S., Canada exports a larger volume of high quality white hilum soybeans for food utilization in Asian and European markets.

Domestic crush of these larger crops has made Canada self-sufficient in soyoil production; however, soymeal is still in a deficit position. About 600,000 tonnes representing

close to 50 percent of domestic soymeal utilization requirements needs to be imported yearly.

"Up to 1991, the soybean crushing industry was operating below capacity." In that year, Victory Soya Mills in Toronto was closed. "The result is that the crushing capacity now meets the production of soybeans for crushing. Therefore, without an increase in crushing capacity, Canada will remain a net importer of oilmeals. Nevertheless, increasing the crush is economically questionable until a viable market outlet is found to absorb the additional soyoil produced. The 1992 elimination of the U.S. crude soyoil tariff (18%) could ease the situation. The two companies crushing soybeans in Canada are corporately linked to large multinational corporations, with major U.S. operations. Therefore, without tariff, the unrestricted movement of soyoil between the two countries is a possibility."

"Economic value of the industry (p. 12): The oilseed crushing industry makes a large and positive contribution to the Canadian economy. It is a processing industry and as such it provides enhanced strength to the economy through value-added contributions and the financial multiplier effect. In 1992 (table 16) the direct economic benefits were $1,810 million, and the contribution to the Canadian balance of payments was $599 million in total import replacement and $322 million in export earnings for a total contribution of $921 million.

Tables show: (3) Canadian supply and disposition of soybeans, soyoil and soymeal, 1988-1993. (5) Oilseed crushing facilities in Canada. Owners and their soybean crushing plants are: ADM Agri-Industries Ltd. (Windsor, Ontario): 1,250 tonnes capacity per 24 hours. CanAmera Foods (Hamilton, Ontario): 1270 tonnes capacity per 24 hours.

(7) Oilseed crushings in Canada: The soybean crush was #2 largest in Canada after canola and ahead of sunflower seed. The soybean crush was 908,200 tonnes in 1988, then 916,000 tonnes in 1989, then 1,083,500 tonnes in 1990, then 943,600 tonnes in 1991, and 995,200 tonnes in 1992.

(8) Vegetable oil production in Canada. Soybean oil is #2, far behind canola oil and far ahead of sunflower oil. During these 5 years, soybean oil production ranged from a low of 159,000 tonnes in 1988 to a high of 194,800 tonnes in 1990.

(9) Vegetable oil trade. During these 5 years, soybean oil imports to Canada were very small, ranging from a low of 4,000 tonnes in 1989 to a high of 16,000 tonnes in 1990. Soybean oil exports from Canada were even smaller, ranging from a low of 1,000 tonnes in 1989 to a high of 5,300 tonnes in 1991. Both soybean crushers also have their own soy oil refineries. The capacity of the ADM Agri-Industries Ltd. refinery (Windsor, Ontario) is 159,000 tonnes per year, whereas that of CanAmera Foods (Toronto) is 147,000 tonnes per year.

(13) Vegetable oilmeal production: Soybean meal is #2, behind canola meal but far ahead of sunflower meal. During these 5 years, soybean meal production ranged from a low of 698,300 tonnes in 1988 to a high of 835,800 tonnes in 1990.

(14) Vegetable oilmeal trade. During these 5 years, soybean oil imports to Canada were large, and vastly larger than any other oilmeal, ranging from a low of 565,400 tonnes in 1990 to a high of 692,100 tonnes in 1988. Soybean meal exports from Canada were very small, ranging from a low of 200 tonnes in 1989 to a high of 33,100 tonnes in 1992. By contrast, large amounts of canola meal (about half of the total amount produced each year) were exported.

(18) Soymeal imports by province. The top 3 in 1988 were: Ontario 326,026 tonnes. Manitoba 169,687 tonnes.

(19) Soybean exports by major markets: The top 8 in 1992 were: USA 69,135 tonnes. Portugal 62,515 tonnes. Netherlands 27,349 tonnes. Former USSR 20,752 tonnes. Hong Kong 19,376 tonnes. Singapore 17,268 tonnes. Japan 11,306 tonnes. Malaysia 10,687 tonnes. Quebec 137,365 tonnes. Total 1992 245,668 tonnes.

(24) EC-12 production of major oilseeds, 1989-193. In 1992-93 the leading oilseeds produced in the European Community were: Rapeseed 6,217,000 tonnes. Sunflowerseed 3,940,000 tonnes. Soybeans 1,294,000 tonnes. Cottonseed 606 tonnes. Linseed 316 tonnes. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

2174. Agriculture Canada, Oilseeds Division, International Markets Bureau, Markets and Industry Services Branch. 1994. Oilseed sector profile: Organizations (Document part). Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. See p. 18-19. Jan. [3 ref]

• ***Summary:*** "Soybeans: The producer marketing organization for soybeans is the Ontario Soybean rowers' Marketing Board (OSGMB). Its objective is 'to enhance the marketing of Ontario soybeans.' The Board's powers include licensing [soybean] producers, dealers and grain merchandisers and brokers; establishing license fees and negotiating with dealers and handlers charges for handling, cleaning and drying. The OSGMB as the power to purchase and sell soybeans but has not yet exercised this right. Minimum prices are not negotiable with buyers. Processors, crushers or brokers have agreed instead to pay to the producer the U.S. soybean price adjusting for quality, transport, handling, insurance and monetary exchange. The OSGMB negotiates the factors involved in these activities. All trading for the domestic, export and seed markets is done via private companies at current prices based on the

price establishment methodology agreed to with the OSGMB.

"The OSGMB provides several important services. On behalf of the producer, the Board gathers and disseminates market and price information. It administers the Advance Payment Program of Agriculture and Agri-Food Canada for producers meeting the Program's requirements. The OSGMB maintains marketing records from which it compiles an average price to the producers by crop year. It gathers the information from which federal and provincial stabilization payments are determined. The OSGMB promotes the use of soybeans and soy products domestically and in key markets abroad. Through the Board, producer funds are channeled into research for improved soybean varieties or for new uses, such as roasted beans for animal rations. Finally, the OSGMB is an active lobbyist of the federal and provincial government on a variety of issues of concern to the industry."

"Crushers: The Canadian Oilseed Processors Association is a non-profit industry association which represents all of the oilseed processing [crushing] companies in Canada. The association was formed in 1992 by the amalgamation of the Canola Crushers of Western Canada [founded in about 1979] and the Ontario Oilseed Industry Association [founded in about 1989]. The Association's members include: ADM Agri-Industries Ltd., CanAmera Foods, Canbra Foods Ltd. and Northern Lite Canola Ltd."

A list of eight of the Association's main objectives is given. Address: 930 Carling Ave., Ottawa, ONT K1A 0C5, Canada. Phone: (613) 995-8324.

2175. Gervais, Marc; Theriault, Sylvana; Bernard, Eric. 1994. Oilseed sector profile. Ottawa, Ontario, Canada. [iv] + 23 + 1 + 12 p. Jan. 28 cm. Spiral bound.

• ***Summary:*** Contents (each accompanied by tables and charts; each section covers the years 1991-1994): Imports of soya beans for sowing (almost all come from the USA, followed by Chile and Japan). Imports of soya beans for oil extraction (almost all come from the USA). Imports of soya beans, nes [meaning unclear] (almost all come from USA, followed by Taiwan, China, and Japan).

Imports of soya-bean oil crude, whether or not degummed (almost all comes from the USA, followed by France). Imports of soya-bean oil and its fractions, refined but not chemically modified (almost all comes from the USA, followed by Singapore). Imports of veg fats & oils & fractions hydrogenated, inter or re-esterified, refined or not (almost all comes from the USA followed by UK and Netherlands). Imports of animal or veg fats & oils...

Imports of soya bean flour and meals. Imports of soya sauce (main suppliers are: USA, China, Japan, Hong Kong, Taiwan, Philippines, South Korea). Imports of protein concentrates and textured protein substances (almost all comes from USA). Imports of Soya-bean oil-cake and other solid residues, whether or not ground or pellet (almost all comes from USA). Imports of bran, sharps and other residues of leguminous plants, pelleted or not (almost all comes from USA).

Exports of soya beans for sowing (most goes to USA, followed by France, Germany and Austria). Exports of soya beans, for oil extraction (most goes to Netherlands, followed by France, Portugal and Spain). Exports of soya beans, nes (most goes to USA, followed by Hong Kong and Singapore). Exports of soya bean flour and meals (almost all goes to USA). Exports of soya-bean oil crude, whether or not degummed (almost all goes to the USA). Exports of soya-bean oil and its fractions, refined but not chemically modified (almost all goes to Pakistan, followed by USA). Exports of veg fats & oils & fractions hydrogenated, inter or re-esterified, refined or not (almost all goes to the USA). Imports of animal or veg fats & oils... (almost all goes to USA).

Exports of soya sauce (main buyers are UK, Japan, United States, Finland, Cuba).

Exports of protein concentrates and textured protein substances (almost all goes to USA). Exports of Soya-bean oil-cake and other solid residues, whether or not ground or pellet (almost all goes to USA). Exports of bran, sharps and other residues of leguminous plants, pelleted or not (almost all goes to USA). Address: Trade Evaluation and Analysis Division, International Markets Bureau, Markets and Industry Services Branch, Agriculture Canada, Ottawa, Ontario, Canada.

2176. Shurtleff, William; Aoyagi, Akiko. comps. 1994. Soyfoods industry and market–Bibliography and sourcebook, 1985 to 1993. Lafayette, California: Soyfoods Center. 361 p. Subject/geographical index. Author/company index. Language index. Printed 11 Jan. 1994. Published Jan. 1995. 28 cm. [985 ref]

• ***Summary:*** This is the second of the two most comprehensive books ever published on the soyfoods industry and market worldwide.

In May 1982 the first study of the burgeoning soyfoods industry in the Western world was compiled by Shurtleff and Aoyagi, and published by Soyfoods Center. In April 1985 the fifth edition of that book, titled *Soyfoods Industry and Market: Directory and Databook* (220 pages), was published. It contained statistics through 1984, the market size and growth rate for each soyfood type, rankings of leading soyfoods manufacturers of each soyfood type and the amount each produced, analyses, trends, and projections. This book is published to update the 1985 market study.

In the decade since 1984 the soyfoods market has continued to grow at a very healthy rate, with some soyfood types (such as soymilk) growing at a truly astonishing

sustained rate–in both the USA and western Europe–as the statistics in this book show so vividly. In 1975 only 75 new commercial soyfood products were introduced in the USA, yet that number skyrocketed to 217 in 1979, reaching an amazing 422 new products in 1987.

During the decade from 1984 to 1994, Soyfoods Center has invested most of its time and resources in the production of SoyaScan, the world's largest computerized database on soyfoods, which contains more than 44,500 records as of Jan. 1994. This database also includes a wealth of carefully researched statistics and analyses of the soyfoods market; those from the start of 1985 to the end of 1993 are contained in this book. Its scope includes all known information on this subject, worldwide. Its focus, however, is statistics, analyses, and trends concerning the soyfoods industry and market in the United States and Europe.

In May 1990 Soyfoods Center conducted an in-depth study of the tofu market in Europe (137 pages), and in July 1990 of the soymilk market in Europe (261 pages). All original interviews and published records from both of these market studies, plus a summary of each study, are included in the present book.

The SoyaScan database is composed of individual records. One record might be an original interview with the head of the largest soymilk company in Europe, on the size and growth of the soymilk market in Europe, and new trends in that market, conducted by William Shurtleff of Soyfoods Center. Another might be a published article or an unpublished document concerning the growth of the market for soy yogurts or soy sauce in America.

This book documents the growth of each product category in every country worldwide. The book contains three extensive and easy-to-use indexes: A subject/geographical index, an author/company index, and a language index. These allow you to find the exact information you need on the soyfoods industry and market quickly and easily. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2177. Lewis, David. 1994. Bean curd banner flies high over Tofutown. *Rocky Mountain News (Denver, Colorado).* Feb. 1. p. 33A, 38A. Business section.
• ***Summary:*** White Wave produces 2½ tons of tofu every working hour of every day. That's 50,000 pounds of tofu a day, 250,000 pounds a week, and 13 million pounds a year. White Wave sells its tofu and tofu spin-offs–Meatless Tofu Steaks, Dairyless Soy Strawberry Yogurt–in 50 states, Puerto Rico, Mexico, and Canada. Demos vows this is only the beginning. "I'm in this because this is a 100-year project. And I'm not going to be around to see the end of it." A large photo shows Ken Vickerstaff, White Wave's sales and marketing president, and Steve Demos, company president. *Boulder Daily Camera* food writer John Lehndorff coined the term Tofutown USA to describe Boulder. Demos thought up the White Wave logo while meditating in Santa Barbara in 1976. "I learned how to make tofu at a 76-day (meditation) intensive. Demos says that 15% of the people in Boulder, Colorado, consume tofu compared with a national average of 2-3%.

White Wave sales have risen 20% to 35% a year for the last 5 years, with 1993 revenues being about $5 million. White Wave plans to create brand identity through its new merchandising format–Vegetarian Cuisine Centers. Piloted in three Whole Foods Markets in California, they increased White Wave sales 730% during their first 3 months in existence. Demos' present goal is "brand building." He considers that to be the strength and fortune of the company. "It's the concept of right livelihood. Can you come up with a career choice you and everyone who touches you benefits from? In the end you enjoy it and the world is better off with it than without it. Wealth without guilt. That's an achievable goal."

Note: This is the earliest document seen (March 2005) in which Steve Demos uses the term "right livelihood."

Haru Yamamoto's Denver To-fu Company also makes tofu–a ton of it per day. Address: Rocky Mountain news staff writer.

2178. *Agri-Book Magazine (Exeter, ONT, Canada).*1994. Beans in Canada. 20(5):1-40. Feb.
• ***Summary:*** This entire special issue is about soybeans in Canada, with emphasis on soybean production. The magazine is printed with soy ink. Articles include: Inoculant report. Northrop King on the move–for you. Soybeans, weeds, and management. Energy and efficiency (No till requires less diesel fuel [but much more herbicides]). Soybean board report: New [industrial] uses for soybeans, soybeans in space, the oils and fats balance *(trans* fatty acids). Long on life, short on emissions (Soydiesel), Quality control (ISO 9002–an international set of standards covering all industries, dedicated to total quality management). Plant breeding: Looking back and ahead. First the market (Pioneer Hi-Bred's Specialty Plant Products Division). Bins for beans (on-farm storage). Far East Market can double (selling soybeans for food uses in East Asia). Trials a think of the past (no-till). There's profit in the coming soybean shortage. Don't let cyst nematodes manage you.

2179. *Agri-Book Magazine (Exeter, ONT, Canada).*1994. Far East market can double. 20(5):29. Feb.
• ***Summary:*** Canada is selling more and more soybeans for food uses to East Asia. Thailand is the only country in the region that is self-sufficient in soybean production. Japan (population 123 million) imports more than 1 million tonnes per year, Taiwan imports 250,000 tonnes, Indonesia 150,000 tonnes, Korea 120,000 tonnes, and Malaysia 100,000

tonnes. Singapore and Hong Kong import all the soybeans they use.

In 1993 Ontario produced a record 1.7 million tonnes. Only 500,000 tonnes of this (29.4%) was exported, and only a fraction of that was suitable for making soyfoods such as tofu, natto, soymilk, Taiwanese fermented tofu *(foo yee)*, etc. A large color photo shows ladies in Taiwan packing fermented tofu in jars.

Ontario has captured 56% of the Hong Kong market, and about 14% of the Malaysian market. But the Asia market is becoming more competitive because exporters from the USA are beginning to offer soybeans in bags as well as bulk shipments. Michael Loh, the OSGMB coordinator for export development, thinks Canada can achieve its goal of doubling soybean exports by the year 2000.

2180. Badani, Bernard. 1994. Edible soybean mission report, Indonesia, Taiwan, Korea, February 1994. Ottawa, Ontario, Canada: Agriculture and Agri-Food Canada. 23 p. 28 cm. Spiral bound.

• ***Summary:*** Contents: Foreword: Mission objective, countries visited, main goals, conclusion. Acknowledgments. Names of the 8 mission members. Visit to Indonesia (Jakarta): Background, visits (Nestle soymilk plant in Surabaya, BULOG), conclusions, market potential (short, medium, and long term). Visit to Taiwan (Taipei, Taichung, Tainan, Kaohsiung): Background (the pro-American soybean lobby), visits (Taiwan Tofu Manufacturers Assoc., Tet Union Corp., Great Wall Enterprises, Herng Yih), conclusions, market potential (short and medium term). Visit to Korea (Seoul): Background, visits (Hyosung Corp., AFMC, Korean and Seoul Tofu Manufacturing Co-operatives, conclusions, market potential (short and medium term). List of contacts by country (photocopies of business cards). Note: Mr. Badanai works for this federal organization in Ottawa.

This mission, whose coordinator was Michael Loh, took place between Feb. 25 and March 10, 1994; it was organized by OSGMB with assistance from the Canadian Embassies in Jakarta and Seoul, and the Canadian Trade Office in Taipei. The overall objective of the mission was to open these 3 markets to the sale of Special Quality White Hilum (SQWH) soybeans from Canada for use by their soy food industries.

Indonesia imports about 700,000 tonnes of soybeans each year, mostly grade #1 from the USA, to supplement its local production of about 1.3 million tonnes. About 250,000 tonnes of the imports are used to make soyfoods such as tempeh (which accounts for about 80% of the total), tofu, taucho (Indonesian miso), and soybean milk. The majority of their domestically grown soybeans are also used to make soyfoods. All Indonesian soybean imports are handled by BULOG, a government agency which determines yearly requirements and allocates the resulting imports to various companies under a complex price structure formula apparently designed to maintain the competitiveness and full utilization of the domestic crop whose internal prices are very high by international standards. Sarpindo is the largest Indonesian soybean crusher. Nestle operates a soymilk plant in Surabaya that makes 12,000 tonnes/year and is completing a second one of 20,000 tonnes capacity in Jakarta. Much of Nestle's production, especially for the new Jakarta plant, is oriented toward the export market, with the Philippines as their top priority.

Taiwan grows only 12,000 tonnes of soybeans domestically, but they import 2,400,000 tonnes per year. Their main suppliers are the USA (1,938,000 tonnes, 80.8% of the total), China, 297,000 tonnes), and Argentina (6,000 tonnes). Imports are handled mostly by a small number of major crushers, which then select a portion of the #2 soybeans imported, bag them, and sell them to Taiwanese soyfood manufacturers. About 8% of the total imports (200,000 tonnes) are handled in this way. Tofu is by far the most important soyfood in Taiwan, with consumption of 49.79 kg/capita/year. Most tofu is made by very small companies. The main problem facing Canadian exporters is the almost total control that the pro-American soybean lobby has shown so far in Taiwan. This lobby includes the main local crushers/importers of U.S. soybeans (which have a strong interest in maintaining the present import and distribution systems that make local tofu manufacturers dependant on them), and the American Soybean Association (ASA) office (with a staff of 15) in Taipei. Tet (Ttet) Union Corp. in Tainan is the largest crusher in Taiwan. Fwusow (Fwu Sow) is a large edible oil company. Taiwan's largest tofu manufacturer is Herng Yih Food Industrial Co. of Kaohsiung. The 13 year old company has two plants, 14 minutes drive apart.

Korea imports between 1 and 1.1 million tonnes of soybeans a year to supplement domestic production of about 200,000 tonnes. Approximately 200,000 tonnes of the total imports and 20,000 tonnes of domestically grown soybeans are used to make soyfoods, mostly tofu. All soybeans destined for this purpose are purchased by AFMC, the Agricultural and Fisheries Marketing Corporation, a state-owned corporation and government monopoly under the Ministry of Agriculture. that resells soybeans to food processors according to their needs, charging a very high markup over the import purchase price. This markup, in turn, allows AFMC to subsidize purchases of domestic soybeans which it buys at prices close to 5 times the international price but which it resells to tofu manufacturers at the same price as the imported soybeans. It is expected that AFMC will loose its importing monopoly on food grade soybeans by 1997 due to the GATT agreement. An immediate market potential for Canadian soybeans seems to exist for sprouting soybeans, of which Korea purchases

about 6,000 tonnes a year. Address: Grains and Oilseeds Div., International Markets Bureau, Agriculture and Agri-Food Canada, Ottawa.

2181. Pioneer Hi-Bred International, Inc. 1994. The soy innovator: The latest in soybean technology from the leader in soybeans (Ad). *Soybean Digest.* Mid-Feb. p. 17-18.
• ***Summary:*** A 1993 market survey of more than 6,100 soybean growers, selected at random, shows that Pioneer is the leading brand of U.S. soybeans. They are planted on 19% of all U.S. and Canadian bagged soybean seed acres. This is nearly twice the share of the next closest soybean, and the fourth year in a row that Pioneer soybeans have been the leading brand.

When Pioneer began its soybean breeding program about 20 years ago, about 75% of all U.S. soybean growers planted publicly developed varieties. By 1983 the market share of publicly developed varieties had dropped to 32%, and by 1993 to only 18.7%. Thus 81.3% of soybean growers are now using privately developed, bagged soybeans. “Many public universities have moved away from variety development toward basic research and the creation of new genetic sources.” “Pioneer invests more than $7 million annually in soybean variety research, breeding, and biotechnology.” Address: Des Moines, Iowa.

2182. Sinclair, Jim. 1994. The new National Soybean Research Laboratory (Interview). *SoyaScan Notes.* March 31. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Interest in such a laboratory began about ten years ago when a group of soybean growers from the Midwest went to China to start negotiating to get germplasm for the National Germplasm Collection at Illinois. Several of them visited the International Rice Research Institute (IRRI) in the Philippines and got very enthusiastic about IRRI’s work. Upon returning to the USA, they suggested that there should be an international soybean research institute in the United States. This has become a grass-roots project, with farmers taking the initiative.

To make a long story short, the USDA gave them $5 million to develop a center if they could get matching funds. The University of Illinois had an old 3-story Veterinary Medicine building (across the street and just south of the greenhouse complex) that had been abandoned for 3 years–since the university had built a new veterinary medicine campus. Built in 1955, it was very well built and unusually attractive–with oak frames, solid-core doors, black stone window sills, brass railings, etc.; the estimated value was $5.25 million. The building contains beautiful seminar rooms, a nice auditorium, a conference room–but it can’t be used for university classes. It is separate from the state but part of the university. So the University of Illinois College of Agriculture agreed to contribute the building which could count as the matching funds. Over the past 3 years, the building has been remodeled in two phases. The new facility was dedicated in Sept. 1993, even though the renovation was not completely finished. Presently the building is named the “Environmental and Agricultural Sciences Building.” When all is done, NSRL will occupy the entire building–3 full floors. On the first floor is the “Administrative Corner” where the director’s office, the INTSOY administrative office, and the USDA administrative office are now located. Jim hopes to integrate all of these programs into NSRL. The scientists who occupy the building are USDA soybean scientists, Illinois state scientists. For INTSOY, there will be two offices for research personnel and a lab for diagnostics. INTSOY will keep its research space in the newly remodeled food processing building.

Jim is interim director on a half-time basis. He is slowly trying to integrate the program though he does not have a big budget to run the lab. He has limited funds to operate his office and his salary comes through the department of plant pathology. One of his main jobs is to find funding, and one promising source is the soybean checkoff funds. Yesterday he met Larry Johnson, head of the utilization lab at Iowa State University. Larry has a nice new facility and equipment, but his problem (like Jim’s) is finding money to run it. He hopes to work closely with Larry and to seek regional funding for interdisciplinary research programs. He will be approaching the United Soybean Board (USB) and ASA with proposals to help fund programs. A great deal of work needs to be done.

NSRL is trying not to compete with any other organizations. It is not taking over any of the work done by the former Northern Regional Research Lab (now named NCAUR) in Peoria, Illinois, and in fact hopes to collaborate with NRRL scientists. In the past, quite a bit of soybean research has been duplicated by the various agricultural experiment stations. But now that the federal government is cutting back on funding for agriculture, there are new opportunities for more cost-effective regional research. Under NAFTA (the North American Free Trade Agreement between the USA, Canada, and Mexico), all of the federal funding for oilseeds in each country will be phased out over a 3-year period to create an even playing field of competition among the 3 nations. Likewise, Canada will have to stop its large subsidies for canola. In the past $70 to $74 million has been used to support U.S. soybean oil; this support will be discontinued. In the fiscal 1995 U.S. Farm Bill, soybean growers would like to shift that money to establishing four regional soybean production research labs. Their mandate would be both production and utilization. It is crucial that production and utilization work hand in hand–especially as the “value added” concept becomes more important. The North Central Soybean Research Program would be located at Jim’s lab in Illinois. Another would be in Georgia and the remaining two would be decided

politically. These new organizations would not take soybean research away from existing agricultural experiment stations.

Jim hopes that INTSOY (which move part of its operations into the NSRL building in Dec. 1993) will become the international arm of the NSRL. There is newly-remodeled space on the second floor where NSRL Jim hopes to develop a database for all information related to soybeans. Jim has been trying to find an organization that would help fund the startup costs for such a database. The most promising lead looks like USDA's CSRS (Cooperative State Research Service) which produces the CRIS (Current Research Information System) database. The soybean entomology database developed by SIRIC and the Kogans and used to publish the award-winning two-volume book titled *World Bibliography of Soybean Entomology* is now at NSRL. The documents are in all new file cabinets and there is an adjacent room for a computer programmer and some assistants if necessary. One of his projects is to get this up and operating. Carol Boast of the University of Illinois agricultural library (who has done a bibliography on sweet potatoes and the early USDA agricultural experiment station literature) is helping him look for funds.

NSRL has a periodical titled NSRL Bulletin. The first issue was published in Jan. 1994.

One important local organization is the University of Illinois Foundation. They might purchases a special collection as part of the University of Illinois library system. Then the CSRS people might provide some funds for the ongoing operation of a database–which is expensive. Address: Acting Director, National Soybean Research Lab. (NSRL), 170 NSRL, 1101 W. Peabody Dr., Urbana, Illinois 61801. Phone: 217-244-1706.

2183. **Product Name:** Gelato Fresco (Soymilk Ice Cream) [Chocolate, Hazelnut, Vanilla].
**Manufacturer's Name:** Gelato Fresco.
**Manufacturer's Address:** 60 Tycos Drive, Toronto, ONT M6B 1V9, Canada. Phone: 416-785-5415.
**Date of Introduction:** 1994. March.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with Frank Daller of ProSoya Inc., Canada. 1995. June 6. This product was launched in Canada in early 1994, and in the USA at the Natural Products Expo at Anaheim in March 1995. In the USA it is named "Ge*la*to" Because the trademark "Gelato Fresco" is already taken. The product is made using ProSoya soymilk plus very high quality all-natural ingredients in small batch freezers.

Talk with Hart Melvin, product manager for Gelato Fresco. 1995. June 7. Their non-dairy Gelato Fresco was introduced in Canada about 2 years ago. Their first customer was the Ontario Federation of Food Co-ops. The idea started when Hart was approached by some people in Indonesia, who were interested in his Sorbase non-dairy frozen dessert. They wanted to market this to Chinese, who are highly lactose intolerant. His Sorbase products have a consistency like that of ice cream. They are made from fruit, sugar, and vegetable stabilizer; no water or protein is added. Then he began to think that, as great as the fruits are, people still like chocolate, vanilla, coffee, and other popular ice cream flavors. So he tried using Vitasoy, Edensoy, and Westsoy as the base for a non-dairy ice cream. Then he met ProSoya, who offered good-tasting bulk soymilk made locally at a good price. In Canada he has worked with the Ontario Federation of Food Co-ops and Maximum Nutrition (two health foods distributors) in testing a honey-sweetened product for the health food community. He started with the health food market, but now he has developed a high overrun chocolate soymilk ice cream product that is sweetened with white sugar for mainstream Canadian. He has given it the top chefs in town, to food critics, and to product developers from major chains; they can't tell that its not a dairy ice cream. When you make a product with honey for the health food market, the price goes up and the acceptability to most consumers drops. So he plans to focus on the Canadian mainstream consumer, by developing a private-label product for a Canadian supermarket chain. Their soy ice cream product was launched in America at the Natural Products Expo at Anaheim in March, 1995. It is distributed in the USA by Fearn Natural Foods. Div. of Modern Products, Inc. in Milwaukee, Wisconsin. They have distribution channels in America. Concerning future plans: His company makes a Tartufo, which is a ball of ice cream with another flavor inside. Their best-selling product in that category is a raspberry-chocolate Tartufo. They plan to make a non-dairy product in the same flavors. It will be pareve and kosher, and the calories will be a little lower. A chocolate ice cream usually has a bit more calories because the chocolate has a little fat in it and the formula usually uses a little more sugar to balance the bitterness of cocoa.

2184. Osho, Sidi M. 1994. Methods for the dissemination of food processing technologies: The soybean example in Nigeria. In: M. Bokanga, A.J.A. Essers, N. Poulter, H. Rosling, O. Tewe, eds. 1994. Proceedings of the International Workshop on Cassava Safety. Wageningen, Netherlands: International Society for Horticultural Science. 416 p. See p. 385-91. Held 1-4 March 1994 at Ibadan, Nigeria. [8 ref]
• ***Summary:*** Contents: Abstract. Introduction. Soybean utilization model: Nutritional value of soybean, documentation of the status of soybean utilization in Nigeria, dissemination of soybean processing technologies. Conclusion.

Protein deficiency is still a major problem in Nigeria and in Africa, especially among low-income groups, Cassava, which is the staple food for millions of people in

Africa, could be fortified with soybean to relieve malnutrition.

Since 1987 IITA (International Institute of Tropical Agriculture) and four Nigerian institutions have been working on a soybean utilization project with funding from International Development Research Centre (IDRC), Canada. The four Nigerian institutions are: Institute of Agricultural Research & Training (IAR&T), the University of Nigeria, Nsukka (UNN), the National Agricultural Extension Research and Liaison Services (NAERLS), and the National Cereals Research Institute, Badeggi (NCRI).

In. Jan. 1987 only 2 companies were processing soybeans in Nigeria; this number had increased to 19 by Jan. 1990 and to 33 by Jan. 1993.

Also: *Acta Horticulturae* No. 375, International Society of Horticultural Science, Wageningen, the Netherlands. Address: Grain Legumes Improvement Program, IITA, PMB 55320, Ibadan, Nigeria.

2185. *SoyaCow Newsletter (Ottawa, Canada).*1994. Top Russian government kitchens make soyfoods. 3(1):1. Jan/March.

• ***Summary:*** "In March, six SoyaCows were delivered to Moscow, where most were promptly installed in the kitchens of key government buildings. The sites included: The Russian Council of Ministers (White House), Ministry of Finance, Ministry of Economics, Ministry of Agriculture, and the State Bank.

"At the initiative of Alexander Podobedov, director of the Russian Soybean Association, 'ASSOY,' these pilot operations are building a broad political awareness and will launch the first soyfoods program throughout Russia. In addition to flavoured beverages, the SC-20 systems are providing for soy yogurt, tofu, and baked goods using the 'okara' fibre. Hundreds of top government people have sampled the various products, made with homegrown soybeans, with generally positive results."

2186. *SoyaCow Newsletter (Ottawa, Canada).*1994. Child Haven establishes SoyaCow Centre in India. 3(1):2. Jan/March.

• ***Summary:*** "The SoyaCow Centre has now been established in Ghaziabad, about 30 minutes drive from Delhi, to serve the growing population of SoyaCows in India. The Centre's main objective is to help women in self-employment by producing and selling soymilk and its products at affordable prices.

The Centre promotes a table-top SoyaCow SC-20 machine that makes high-quality soymilk on demand at the cottage industry level, producing 13-14 liters every 30 minutes (using 1.75 kg of soybeans costing about 10 rupees per kg) at a cost of Rs. 2-3 per litre. The SoyaCows, which will be made in India under a technology transfer agreement with Child Haven, include accessories for making tofu from the soymilk.

2187. Vitasoy International Holdings Ltd. 1994. New issue of 127,200,000 shares of $0.25 each at $2.28 per share: Prospectus. Hong Kong: Vitasoy International Holdings Ltd. 94 + 94 p. March 15. 28 cm. [Eng; Chi]

• ***Summary:*** This prospectus announces the first public sale of Vitasoy stock. Half the prospectus is written in English and the other half in Chinese. The sponsor and manager of this initial public stock offering is Wardley Corporate Finance Limited. Underwriters: Wardley Corporate Finance Limited, and Schroders Asia Ltd. The symbol "$" refers to Hong Kong dollars unless otherwise indicated; 7.8 Hong Kong dollars = 1 U.S. dollar, and the exchange rate is fixed.

Contents: Summary. Expected timetable. Definitions. Preliminary. Conditions of the new issue. Share capital. Indebtedness. Risk factor. Directors and corporate information. Parties involved in the new issue. Information relating to the Group: Introduction, corporate structure, history and development (see separate record), strategy, brands, market share and competition, marketing and sales, operations, tofu, Guang Ming Farm, Gardner Merchant, financial information, future plans and prospects, directors, management and staff, trademark valuation, profit and dividend forecasts, proceeds of the New Issue and working capital, adjusted net tangible assets and net assets. Appendixes: 1. Accountants' report. 2. Profit forecasts. 3. Trademark valuation. 4. Property valuation. 5. Statutory and general information. Prospectuses and application forms. Procedure for application.

Financial summary (in million Hong Kong dollars): Turnover (sales) has grown from 795 in 1991 to 912 in 1992 to 996 in 1993. Profit before taxation has grown from 43.8 in 1991 to 88.6 in 1992 to 108.8 in 1993. The company has 5 executive directors and 4 non-executive directors. All of the directors have British, Australian, U.S., or Canadian nationality. Three of the 5 executive directors are children of the founder, K.S. Lo: (1) Mr. Winston Lo Yau Lai, age 52, of Hong Kong (British nationality). Frank graduated from the University of Illinois with a BS degree in Food Science, then earned his MSc degree in Food Science from Cornell University in New York; (2) Mr. Frank Lo Yau Ki, age 54, of Hong Kong (British nationality). Frank attended Queensland Agricultural College where he obtained a diploma in dairy manufacturing before joining the group in 1965; (3) Ms. Yvonne Lo Mo-Ling, age 45, of San Francisco (California; USA nationality). Yvonne is president of the Group's operations in the USA and has been responsible for them since 1980. She received a BA degree from Oberlin College in Ohio and took undergraduate studies in Urban and Regional Planning at the University of Toronto in Canada.

Brands: Vitasoy soybean milk is the Group's principal product. Sales (in million Hong Kong dollars) were $337.4 in 1991 (42.5% of total sales), $397.0 in 1992 (43.5% of total), and $411.6 in 1993 (413% of total sales). Sales of tofu and other food products were $32.9 (US$4.21 million) in 1991, $50.2 (US$6.44) in 1992 and $50.7 (US$6.5) in 1993.

In terms of turnover (sales) by geographical area, Hong Kong is by far the leading area with 78.9% of total worldwide turnover ($995 million) in 1993, followed by North America (12.0%), Macau (2.4%), Singapore (2.2%), PRC (1.6%), Australia/New Zealand (1.6%), and others (1.1%).

Senior management includes: Mr. Jerry Maynard, age 43, who is president of Nasoya. He joined the group in 1988 and became president of Nasoya in Sept. 1993. Mr. Michael Ho, age 38, is president of Azumaya. He joined the Group in 1982 and became president of Azumaya in June 1993.

Trademark valuation: An independent valuer has valued them at HK$260 million.

Assets: The main trade marks are Vitasoy, Vita, Balanz, Azumaya, and Nasoya. Tangible: $781 million. Net assets: $1,051 million.

Subsidiaries: Value of issued and paid up share capital: Vitasoy (U.S.A.) Inc. US$12.0 million. Nasoya Foods Inc. US$6.346 million (incorporated 13 July 1990). Azumaya Inc. US$6.5 million (incorporated 1 July 1969).

Properties: The main property, located at No. 1 Kin Wong St., Tuen Muen, New Territories, has a capital value of HK$140 million on 28 Feb. 1994. This is a 17-story industrial building, completed in 1986, on a site of 33,250 square feet (3.089 square miles). It has a total gross floor area of approximately 311,815 square feet, including 38 lorry parking spaces and 22 private parking spaces. The property is held from the Government under New Grant No. 2606 for a term extending to 2047. The current ground rent is $600 per annum. The Azumaya rental property comprises 37,172 square feet of interior floor space on 2 acres of land. Monthly rental is about $20,000. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

2188. Vitasoy International Holdings Ltd. 1994. History and development (Document part). In: New issue of 127,200,000 shares of $0.25 each at $2.28 per share: Prospectus. 1994. Hong Kong: Vitasoy. 94 + 94 p. See p. 14-15. March 15. 28 cm. [Eng; Chi]

• ***Summary:*** The Company, originally named Hong Kong Soya Bean Products Company Ltd. was founded in March 1940 by four men, Mr. (later Dr.) Lo Kwee Seong, Mr. Shiu Wai-Ming, Mr. Chan Nam-Cheong, and Mr. Kwan Yim-Chor. The Company's first product, named Vitamilk, was first sold in Hong Kong just prior to the outbreak of World War II. Note: Production began on 9 March 1940. Vitamilk was fortified with calcium, cod-liver oil, and vitamins, and sold in small milk bottles. Production of Vitamilk ceased during the War, but after the War the Company relaunched Vitamilk, which was then produced at and sold from, small premises in Causeway Bay. 1950–The Company moved to new premises in Aberdeen to keep up with growing sales; it now had increased production capacity and facilities for research and development. At the same time the Company became the franchisee for Green Spot, an orange flavoured soft drink. Green Spot proved highly popular in Hong Kong and provided the company with the opportunity to gain important experience in pasteurization and sterilization techniques. 1953–This new expertise led to the Company's development of a sterilized version of Vitamilk, which had a longer shelf life. At the same time the product was renamed Vitasoy in English and repackaged in narrow-necked soft drink bottles, which replaced the traditional milk bottles. Note: In 1953 the company first began to work with UNICEF to popularize the use of soy beverages in developing countries. 1957–The Pepsi-Cola franchise replaced the Green Spot franchise.

1960–The image of Vitasoy as a nutritious quality product received a boost when UNICEF became aware of the attractions of a high protein, vitamin enriched soybean milk for use in developing countries. 1961–An additional soymilk production plant was opened in Kwun Tong to keep up with rapid increases in sales of Vitasoy. 1962–The introduction of a malt Vitasoy helped lead to further increases in sales. From 1955 to 1970 sales of Vitasoy grew from approximately 12 million bottles to approximately 60 million bottles per annum.

1970s–The Company continued to expand and develop. 1975–A major development was the adoption of a new Tetra Pak packaging process, which brought many benefits. "In addition to enhancing the quality of the product, the new light and disposable packaging meant that Vitasoy could be sold in the non-returnable soft drinks market which significantly reduced both the delivery costs of the product and the costs associated with collecting returned bottles. The new packaging also offered greater scope for innovative design which assisted in marketing the Company's products. To coincide with this technical innovation, in the mid-1970s the Company repositioned Vitasoy in the market by promoting it as a soft drink as well as a milk substitute. The remainder of the 1970s saw the Company's product base expand away from Vitasoy and malt Vitasoy.

1976–A range of fruit juice drinks was introduced under the vita brand name. These were also packaged in Tetra Pak cartons and initial flavors included orange, lime, mango, and guava. 1976–The Company decided to relinquish the Pepsi-Cola franchise in favor of producing its own range of carbonated drinks, again under the Vita brand name. The carbonated products, which included cola,

orange, lemon lime, and cream soda, were initially sold in returnable bottles and subsequently also in the form of fountain syrups. Both Vita Juice drinks and Vita carbonated drinks won immediate consumer acceptance upon their introduction. 1977–Exports to Australia began. 1978–Vita Juice drinks now have over 30% of the Hong Kong fruit juice drinks market. 1978–The Company moved its Aberdeen production facilities to Heung Yip Road in Aberdeen. 1978–The Company launched a line of traditional teas, the first of which was chrysanthemum, which were sold under the Vita brand and packaged in Tetra Pak cartons.

1979–The Company began a further significant diversification of its business by entering into an agreement with Guang Ming Farm [at Shenzhen, just inside China]. Under the initial agreement, which was for a term of 5 years, and subsequent revisions to this agreement, the Company obtained the rights to market and sell most of the farm's fresh milk output in Hong Kong and Macau. Today the farm produces approximately 55% of all fresh milk sold in Hong Kong.

The late 1970s and early 1980s were characterized by the Company's push into overseas export markets. Each of these export markets took time to develop, both in terms of developing consumer awareness of the Vitasoy and Vita products and particularly in identifying the most suitable and effective distribution channels. 1979–Exports to Papua New Guinea and to Canada began. 1979 Jan. 15–Vitasoy (U.S.A.) Inc. is incorporated.

1980–Exports to the United States began. 1982–In the United States, the Company established its own distribution operations. 1982–Exports to Singapore began. 1985–The Company acquired the operations of its Singapore distributor to gain greater control over and more efficient distribution of its products. 1987–Due to growth of operations, the Company opened a new head office and principal manufacturing facility in Tuen Mun. 1989–The Company acquired a 12% equity stake in its contract packer in Papua New Guinea to gain greater control over and more efficient distribution of its products.

1990 Sept. 24–The Company name is changed to Vitasoy International Holdings Ltd. from Hong Kong Soya Bean Products Co. Ltd. 1990–The Group made the first of two significant diversifications from its traditional business by entering into a joint venture with Gardner Merchant to provide large-scale contract catering services in Hong Kong. Gardner Merchant, headquartered in the United Kingdom, is one of the leading contract catering firms in the UK; the Group has a 40% interest in the joint venture.

1990 Aug.–In its second diversification the Group entered into the manufacture and distribution of tofu in the United States through the purchase of Nasoya, based in Leominster, Massachusetts on the east coast of the United States. 1993 May–The Group acquired Azumaya, a large tofu manufacturer based in San Francisco, California, with a distribution network covering the west coast and mid west of the United States. These acquisitions have not only made the group a [sic, the] leading manufacturer and distributor of tofu in the United States but have also provided the Group with an extensive distribution network throughout the United States and Canada for its other products. 1992–Distilled water was launched under the Vita brand.

1994 Feb.–The Group opened a new production facility on a site at Guang Ming Farm at Shenzhen in the PRC [China] to replace the group's plant in Aberdeen. The Shenzhen plant, which has been built and will be operated pursuant to a joint venture with Guang Ming Farm, is currently operating at partial capacity and is expected to be fully operational by the middle of 1994. The Group's old production and packaging facility at Aberdeen is currently being leased by the Group to provide production capacity unti the Shenzhen plant becomes fully operational. At that time the Group will cease to lease the facility at Aberdeen and all beverage production will then be at Tuen Mun and Shenzhen. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

2189. **Product Name:** Yves' Original Bagel Dog, or Chili Bagel Dog.
**Manufacturer's Name:** Yves Veggie Cuisine.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver V6A 2A8, B.C., Canada. Phone: 604-251-1345.
**Date of Introduction:** 1994. March.
**Ingredients:** Bagel Dog: Veggie Wiener: Water, soy protein isolate, wheat gluten, tofu (water, organic soy beans, magnesium chloride), wheat starch, sea salt, ground mustard, guar gum, natural liquid hickory smoke, beet powder, paprika, brown rice syrup solids, wheat germ, spices. Bagel: Whole wheat flour, unbleached white flour, water, vinegar, yeast, malt, sea salt.
**Wt/Vol., Packaging, Price:** 4.4 oz (125 gm).
**How Stored:** Frozen.
**New Product–Documentation:** Leaflet (8½ by 11 inch, color) from Natural Products Expo West (Anaheim, California). 1994. March 10-13. "Two great ideas. A great new meal. Introducing Yves' Original Bagel Dog. Yves' famous fat-free Veggie Dog, hand-wrapped in a whole-wheat bagel and baked to perfection." Front side shows a color photo of 3 bagel dogs. Back side gives ingredients and nutritional information.

2190. Graves, Cheri. 1994. Update on Cedar Lake-MGM Foods in Cedar Lake, Michigan (Interview). *SoyaScan Notes.* April 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Vesper C. Sias is no longer with this company but he is still alive. The company is now owned by Mr. Alejo Pizzaro, who was formerly with Loma Linda Foods.

He bought the company in 1989 or 1990. Mr. Pizzaro now works at Cedar Lake's marketing offices at 12155 Magnolia Ave., Suite 3E, Riverside, California 92503. Phone: (909) 352-3554. In 1993 MGM Brands (of Scarborough, Ontario, Canada) and Cedar Lake joined forces; their products are very similar except that MGM made frozen vegetable protein foods in Canada and Cedar Lake made similar canned foods in Michigan. The MGM plant was moved to Cedar Lake, where all food production no takes place. Address: P.O. Box 65, Cedar Lake, Michigan 48812. Phone: (517) 427-5143.

2191. *Ontario Soybean Growers' Marketing Board Newsletter.*1994. Profiles: Fred Brandenburg, Tino Breuer, and co-workers. April. p. 7.
• ***Summary:*** A photo shows Fred Brandenburg, who is the Secretary-Manager of OSGMB. He is only the fourth secretary in the organization's 45 year history, following Ken Standing, Otis McGregor, and Doug White. He knows as well as anybody that soybeans in Ontario are still a good-news story. "Acreage is trending upward, and the 18,000 producers who harvested 64 million bushels last fall will inject a record $500 million into the Ontario economy." Breuer is OSGMB market analyst. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2192. Davis, Bob. 1994. Future plans (Interview). *SoyaScan Notes.* May 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Bob finds his present work, developing new products for Sharon's Finest of California, to be a lot of fun. One of his goals is to help in developing a fast foods restaurant system, working with someone else (such as Richard Rose) who would take care of the business aspects. Bob would like to work on the steering committee, and do the product development and concept work. The nucleus of three alternative food organizations that he is working with in Vancouver, BC, Canada, is very strong. Sunrise Markets makes the best firm tofu he has tasted anywhere, and the company has a lot of "firepower." Then they have Yves, plus the plant that he set up with the alternative cheese program; they plan to start making Sharon's Finest cream cheese alternatives in about 2 weeks. So he has a complete line of soyfoods including meat- and dairy alternatives. He would like to organize these companies so they become suppliers to a turnkey fast food operation. Address: 3812 E. Goldfinch Lane, Clinton, Washington 98236. Phone: 206-341-1259.

2193. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1994. Serial/periodical. Chatham, Ontario, Canada: Ontario Soybean Growers' Marketing Board. Began with Vol. 7, No. 2. May 1994. Renamed Canadian Soybean Bulletin with Vol. 13, No. 1 (June 1999).
• ***Summary:*** Continues *Ontario Export Soybeans.* This bi-annual newsletter was formerly 2 pages, green on yellow; it is now 4 pages, dark green and brown on tan.

Letter (fax) from Kim Cooper, marketing specialist at OSGMB. 1995. May 25. "Seeking to be more Canadian in our approach, we changed to *Canadian Export Soybeans* in May of 1994, and this year I will be publishing three newsletters. At present, I have a mailing list of approximately 600, and am continually updating this list."

Starting in Jan. 1996 (Vol. 1, No. 1) a *Technical Bulletin* (printed in red and black ink on beige paper; 1 page, front and back) was inserted in many issues of *Canadian Soybean Exports.* It contained technical articles with titles such as: "Evaluation of soybeans for tofu processing." Address: Chatham, Ontario, Canada.

2194. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1994. Export market development. 7(2):1. May.
• ***Summary:*** "Ontario's soybean exporters are reaching into new markets in the Asia / Pacific region in an effort to expand sales for food use. Three Ontario companies raveled with representatives of the Ontario Soybean Growers' Marketing Board and Agriculture Canada to Indonesia, Taiwan and Korea, February 27-March 8, 1994.

"Ontario companies have been exporting food quality soybeans to Japan, Hong Kong, Malaysia and Singapore for almost 20 years. Soybean exporters are optimistic about prospects of doing business in the region since the economies of these new markets are booming and showing a willingness to lower trade barriers and thereby improve our access to their markets."

A photo shows OSGMB's Second Vice Chairman Tom Lassaline making a presentation to Canada's ambassador to Indonesia Mr. Larry Dickenson.

Lubricants and Additives from Biomass: Proceedings of an Alternative Energy Conference. St. Joseph, Michigan: ASAE. viii + 191 p. See p. 166-74. Held 16-17 June 1994 at Kansas City, Missouri. [12 ref]
• ***Summary:*** Contents: Abstract. Keywords. Introduction. Review of literature. Purpose and objectives. Methodology. Results. Discussion. Conclusions. Recommendations.

"The optimum blend of biodiesel and diesel fuel, based on the trade-off of PM [particulate matter] decrease and NOx increase was a 20/80 biodiesel / diesel fuel blend. NOx emissions can be reduced by retarding timing while subsequently maintaining emission reductions..." Address: 1, 4-5. Agricultural Engineering Dep., Univ. of Missouri, Columbia, MO 65211; 2. President, Fosseen Manufacturing and Development, Radcliff, Iowa; 3. Heavy Duty Engine Testing, ORTECH International, Toronto, ONT, Canada L5K 1B3.

2197. *SoyaCow Newsletter (Ottawa, Canada).*1994. Agriculture Canada to develop protein isolates from soymilk. 3(2):2. April/June.
• ***Summary:*** The research will be headed by Dr. C.Y. Ma, a leading protein chemist at Agriculture Canada. The soymilk will be made from whole soybeans using ProSoya's patented process of air-less cold grinding.

2198. *SoyaCow Newsletter (Ottawa, Canada).*1994. A Soyafood Alliance getting ready to go global with government support. 3(2):2. April/June.
• ***Summary:*** Agriculture Canada has decided to support a team of companies on a matching grant basis to develop value-added products and global markets based on milk from the SoyaCow. The companies include ProSoya, Gelato Fresco (an ice cream company), and two well-known dairies.

2199. Stumborg, Mark; Wong, Al; Hogan, Ed. 1994. Hydroprocessed vegetable oils for diesel fuel improvement. In: Bruce E. Dale, ed. 1994. Liquid Fuels, Lubricants and Additives from Biomass: Proceedings of an Alternative Energy Conference. St. Joseph, Michigan: ASAE. viii + 191 p. See p. 157-65. Held 16-17 June 1994 at Kansas City, Missouri. [17 ref]
• ***Summary:*** Contents: Summary. Introduction. Vegetable oil sources (rapeseed, prairie canola). Canadian hydroprocessing technology. Hydroprocessed product evaluation. Economics of hydroprocessing. Future developments. Conclusions.

In Canada, hydroprocessing has four advantages over esterification. Table 1 shows area (in 1,000 ha) of oilseed production in Canada from 1985-1992 for rapeseed / canola (avg. 2788), flaxseed (607), soybeans (454), and sunflower (55). Address: 1. Agriculture Canada; 2. Arbokem Inc.; 3. Natural Resources Canada.

2200. Eridania Béghin-Say (Montedison Group). 1994. Annual report 1993. 54, avenue Hoche, BP 47108, 75360 Paris Cedex 08, France. 67 p. 30 cm. [Eng]
• ***Summary:*** Renato Pico is the company's chairman. The company's turnover (in million French francs) increased from 49,741.4 in 1992 to 50,907.4 in 1993. Operating income increased from 3,618.4 in 1992 to 4,039.8 in 1993. Net income from continuing operations increased from 1,287.0 in 1992 to 1,531.0 in 1993.

The company's core business is sugar and derivatives. It is active in the starch and derivatives sector through Cerestar. It is a leader in the crushing and refining business through Cereol in Europe (which holds a market share of nearly 23%), through Central Soya (number 3 in North America in this sector), with CanAmera in Canada (50% owned), and number 1 in the world for refined lecithins and concentrated proteins. In 1993, the group's 32 plants crushed some 9.4 million tons of oilseed to produce 6.8 million tons of soybean meal and 2.2 million tons of crude oil, including 1.8 million tons of refined oils. Crushing and refining contributed 28.1% of the company's total turnover and 12.4% of the total operating income.

The company is active in animal feed through Provimi in Europe; in 1993 the company's total production of animal feed totalled approximately 2.2 million tons. The company is active in consumer products (mostly refined oils and derivatives) through Medeol, Lesieur in France, Koipe in Spain, Carapelli in Italy, and Ducros in France, Italy, Spain, and Portugal. In 1993, Eridania Béghin-Say marketed 100 million liters of olive oil and 225 million liters of seed oil under its own brands, mainly for consumer and catering markets. Address: Paris, France.

2201. Yves Veggie Cuisine. 1994. The meatless alternative: Tasty, wholesome, and convenient (Ad). *Vegetarian Gourmet (Montrose, Pennsylvania)* No. 10. Summer. Inside rear cover.
• ***Summary:*** The full-page color ad features Yves Veggie Wieners and Yves Burger Burgers. The two products are shown on a plate, ready to serve, and the attractive package for each product is displayed. "Try our complete line of products: Burger burgers, Veggie wieners, Tofu wieners, Chili dogs, Deli slices, Garden vegetable patties, Garden patties with mushrooms and fine herbs, Veggie Pepperoni. The perfect complement to today's active lifestyle." Address: Vancouver, BC V6A 2A8, Canada.

2202. Dovgan, Alexander; Dovgan, Tamara. 1994. Re: Interest in making tofu and tempeh in Russia. Letters to William Shurtleff at Soyfoods Center, Aug. 18-22. 3 p. Handwritten. [Eng]
• ***Summary:*** Alexander and his family (wife Tamara and daughter Sasha) are Russian Canadians who came to

Canada almost 5 years ago. "First of all, thank you for your books and we learnt a lot with them and they helped us to survive with a very small amount of money! We plan to return to the Soviet Union and we have a dream to start our own tofu-tempeh business, as it would help so many to regain their health and save animals, the environment, etc. We were very unhealthy as we had very poor nutrition in Moscow partly because of total ignorance as the grains and legumes were widely available but nobody knew anything about sprouting, combining, etc.

"We always make our own tofu, and now we are trying to make tempeh and to bake okara breads using whey, etc."

Tamara is a professional pianist, who works in the Opera Theater and in the Yamaha School of Music. Alexander is a photographer. They are both lucky to have jobs now.

Bill Shurtleff of Soyfoods Suggests suggests that they talk with Jon Cloud, which they do, and meet Alexander Podobedov. He sends them photocopies of articles about the SoyaCow in Russia.

Letter No. 2. Alexander is concerned that soyabeans are not available in Russia "as they were used only to make chocolate and oil." They have saved some money in Canada but they have no place to live in Moscow since their family moved to the USA. "That's why we're thinking about starting in St. Petersbourg, as its cheaper and its one of the most beautiful cities... Sasha makes Russian tofu at home (it's hard and cheeselike with herbs) as Russians wouldn't eat traditional plain tofu. But all our Russian and Canadian friends like it, so we'd be happy to be pioneers in that field in our native land."

Letter No. 3. Sasha plans to go to Moscow soon to find out everything about soybeans. Their 6-month-old son, Daniel, likes tofu very much. Address: 2350 Dundas West #2813, Toronto, ON M6P 4B1, Canada. Phone: (416) 534 8896.

2203. **Product Name:** Firm Tofu.
**Manufacturer's Name:** Atlantic Soy Products.
**Manufacturer's Address:** 311 Lancaster St., Saint John West, NB E2L 1J8, Canada. Phone: 506-693-6432.
**Date of Introduction:** 1994. August.
**New Product–Documentation:** Talk with Peter Olive, owner, who phones from Canada. 1994. Aug. 28. He started making tofu in Aug. 1994. He makes only firm tofu.

Note: This is the earliest known commercial soy product made in New Brunswick, Canada.

2204. *Ontario Soybean Growers' Marketing Board Newsletter.*1994. Korean soybean curd manufacturers visit. Aug. p. 3.
• ***Summary:*** "Eleven representatives of the Korean Soybean Curd Manufacturers Federation toured southern Ontario in late May to get a first-hand look at the soybean industry. The group included the chairman of the federation, Mr. Chang Ye-Kyu and representatives of regional associations."

"Korea imports over 1,000,000 tonnes [metric tons] of soybeans annually, mostly from the United States. Approximately 130,000 tonnes or 5,000,000 bushels are used to manufacture tofu. All imports are handled through a government agency which has made a practice of buying crush quality soybeans and re-cleaning for sale to soyfoods manufacturers. Soyfood manufacturers would like to be able to buy higher quality soybeans but they have not been available in the Korean marketplace.

A large photo shows four Koreans comparing samples of #1 grade white hilum soybeans and #2 crush quality soybeans during their tour of the Sarnia grain terminal. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2205. Buzzell, R.I.; Jessop, D.B.; Buttery, B.R. 1994. Evaluation of soybean varieties for tofu processing. Agriculture & Agri-Food Canada Research Centre, Harrow, Ontario N0R 1G0, Canada. 15 p. Sept. 8. Unpublished manuscript.
• ***Summary:*** For the updated, published, and condensed version of this report see Ma et al. 1996. Address: Harrow, Ontario, Canada.

2206. Webber, John. 1994. Soybean gets new president: Larry Horn will move to Quincy from his job as a senior vice president of a Canadian company that processes oilseed. *Herald-Whig (Quincy, Illinois).* Sept. 8. p. 1A.
• ***Summary:*** Larry Horn, a Mississippi native and graduate of Mississippi State University, has been "senior vice president of CanAmera Foods, which crushes soybeans and canola seed, and processes the oil and meal. The firm is a joint venture involving Central Soya, Saskatchewan Wheat Pool and Manitoba Pool Elevators." Horn helped organize the Ontario Oilseed Association, and is a former chairman of the Canadian Oilseed Processors Association. He is also a director of the U.S. Canola Association.

Horn will become president of Quincy Soybean on Oct. 1, succeeding Mike Foster, according to Thomas McKenna, president and CEO of Moorman Manufacturing Co. Foster was named president of Moorman's feed business on July 1.

"MoorMan's, Quincy Soybean, and Quincy Design and Manufacturing Inc. are the three core firms under the Moorman Manufacturing Co. corporate umbrella. The arrangement is the result of a corporate restructuring program that began several years ago.

"Quincy Soybean employs about 340 at its storage and crushing facility on Gardner Expressway."

Talk with Mike Foster, former president of Quincy Soybean Co. 2005. Sept. 17. Of the 3 divisions of Moorman Manufacturing Co. listed above, MoorMan's refers to a relatively new name for the feed company, and Quincy

Design and Manufacturing Inc. refers to a sheet metal design and fabrication plant, which made equipment, especially feeders for livestock. It was a very small division; when Moorman's total sales were around $1 billion, the sheet metal business was only $5-10 million. At some time after 1994 Moorman sold that division. Moorman Manufacturing Co. had these 3 divisions before it purchased Quincy Agri Sales, which is now Seedwest, a division of ADM Edible Bean Specialties.

When Mike returned to Moorman Mfg. Co. from Quincy Soybean in 1994, the feed division and the holding company were one and the same. People often referred to both as "Moorman's" for short. Shortly after returning, Mike was involved in establishing the holding company, still named Moorman Manufacturing Co., and separating it from the feed division, which was named MoorMan's, Inc. Address: H-W staff writer.

2207. *SoyaCow Newsletter (Ottawa, Canada).*1994. Plenty's El Salvador Project feeding soya to 500 kids. 3(3):1-2. July/Sept.
• ***Summary:*** With the financial help of the members of the Bell's Corners United Church near Ottawa, together with Plenty Canada and the Canadian International Development Agency (CIDA), a SoyaCow project has been established in El Salvador in the poor municipality of Mejicanos. Two SoyaCow SC20 systems are in operation providing soymilk and soy ice cream to over 500 local kindergarten children. The left-over okara is used as an ingredient in making tortillas. A photo shows children enjoying soymilk at school in Mejicanos.

2208. *SoyaCow Newsletter (Ottawa, Canada).*1994. Russian ASSOY director tours Canadian food processors. 3(3):1-2. July/Sept.
• ***Summary:*** "Mr. A. Podobedov, General Director of the Russian Soybean Association, visited Canada in early September to tour a variety of soyfood and dairy processors. His objective was to gain insights into the production of tofu, ice cream, and dairy-type beverages made from soymilk. The tour was a complement to his visit to ProSoya Inc., the company building the industrial-scale SoyaCow SC2000 systems for installation in Russia.

Mr. Podobedov visited: La Soyarie in Hull, Quebec (which makes tofu and meat alternatives; President: Mr. Koichi Watanabe); scientists Dr. C.Y. Ma and Dr. W. Modler of Agriculture Canada (they are developing isolates and concentrates from soymilk); the Neilson Dairy facility in Ottawa; and Gelato Fresco (which is making soy ice cream and has signed a distribution deal with Modern Products, of Milwaukee, Wisconsin).

2209. *SoyaCow Newsletter (Ottawa, Canada).*1994. First SC-100 plant installation completed. 3(3):2. July/Sept.
• ***Summary:*** "The installation of the first SC-100 plant has now been completed at ProSoya's Canotek road facility. The plant has been built to modern dairy standards complete with tiled floor, CIP system, culinary steam supply, and purified water supply. The plant presently can produce 500 L/H of high quality non-beany soymilk. The refrigerated storage capacity is 20,000 litres.

"The Canotek plant will also be used as a pilot facility to implement technology improvements and perform product development on an on-going basis."

2210. Soyatech, Inc. 1994. Soya Bluebook '94. Bar Harbor, Maine: Soyatech. 272 p. Sept. Comprehensive index. Advertiser index. 28 cm.
• ***Summary:*** This is the first issue of the Bluebook to have fold-out dividers with tabs at the start of each section–a useful addition. On the cover is a large tan / yellow color soybean, with hilum showing clearly, against a blue background.

The large and excellent section titled "Soya statistics" (p. 212-40) has the following contents. All are tables unless indicated by (G) for graphs: Soybean production–Area planted / harvested and yield. U.S. soybean planting and harvesting dates. U.S. soybean acreage, yield and production. U.S. soybean planted acreage by state (1970-1993). U.S. soybean harvested acreage by state. U.S. soybean yield by state. U.S. soybean production by state. Argentine soybean area, yield and production by province. Brazilian soybean area, yield and production by state. Canadian soybean production. Canadian soybean production and utilization. World soybean production by major countries and all others (G). Share of world soybean production by major countries and all others (G). Total world soybean production (G). 1990/91 world soybean production, forecast of market share (G). World soybean production.

Soybeans and soybean products–Supply and disposition: U.S. soybeans: Supply, disposition, acreage / yield and price. U.S. soybean meal and oil: Supply and disposition. Soybean usage in the U.S.: Crush and exports, 1925-1993 (G). U.S. soybean exports as a percent of total usage, 1925-1993 (G). Argentina soybeans & products: Supply and disposition, 1975-1995. Brazilian soybeans & products: Supply and disposition, 1975-1995.

U.S. soybean prices, crop value, farm marketing: Prices of U.S. soybeans: No. 1 yellow, by month, 1950-1994. Prices of U.S. soybeans: Received by farmers, by month, 1950-1994. U.S. soybean price support operations, 1945-1993. U.S. soybean crop value, total and major producing states, 1925-1993. U.S. farm marketings of soybean: Percent of open market sales by month, 1983-1993.

Soybean processing and products: Value of U.S. soybean products and crush margin (per bushel), 1950-1993. U.S. soybean meal: Prices paid by farmers, by month

and average, 1950-1994. U.S. soybean meal: Average wholesale price, by month and average, 1950-1994. U.S. soybean meal: Beginning stocks, production, exports and domestic disappearance, by month, 1987-1994. Prices of U.S. soybean oil, crude, Decatur (Illinois), by month, 1950-1994. U.S. oilseed cake and meals: Supply, disposition & price, 1985-1993 (soybean, cottonseed, linseed, peanut, sunflower). World major protein meals: Supply & utilization, 1989-1994 (soybean, cottonseed, rapeseed, sunflowerseed, fish, peanut, copra, palm kernel). World major oilseeds: Supply & utilization (production, exports, imports, crush, ending stocks), 1989-1994 (soybean, cottonseed, peanut, sunflowerseed, rapeseed, copra, palm kernel). World major vegetable and marine oils: Supply & utilization (production, exports, imports, crush, ending stocks), 1989-1994 (soybean, palm, sunflowerseed, rapeseed, cottonseed, peanut, copra, coconut, olive, fish, palm kernel). U.S. soybean oil utilization, various food vs. nonfood, 1960-1993. U.S. soybean oil: Supply, disposition & price, 1960-1993. U.S. edible fats and oils, supply and disappearance, 1986-1993.

Exports and imports: U.S. soybean exports by month. Brazilian exports of soybeans and products to major countries. U.S. soybean exports by port and country of destination. U.S. exports: Soybeans by country of destination. U.S. exports: Soybean oilseed cake and meal by country of destination. U.S. exports: Soybean oil by country of destination. U.S. exports: Soybean, cottonseed and sunflowerseed oils by country of destination. Soybean and product exports by major countries (soybean equivalent; U.S., Brazil, Argentina), 1970-1993 (G). Share of world soybean and product exports (U.S., Brazil, Argentina), 1970-1993 (G).

The section title “Soya glossary: Terms commonly associated with soybeans products and processing” states (p. 243): “Soy protein concentrate: Produced from defatted flakes or flour by a process which immobilizes the protein and removes soluble sugars, minerals, etc. Concentrate has a protein content of 70%.” Note: This is the last issue of the authoritative *Bluebook* that defines a soy protein concentrate as containing 70% protein. Subsequent definitions require only 65% protein. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207/288-4969.

2211. Thompson, Keith; Brown, Edward. 1994. Breeding soybeans for use in making tofu at Jacob Hartz Seed Co. Part I (Interview). *SoyaScan Notes.* Oct. 11-12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In late 1987 Keith Thompson visited Soyfoods Center and he and William Shurtleff worked together to design a system that Jacob Hartz Seed Co. could use to more effectively breed soybeans for food uses. The purpose of this interview is to find out if that system was implemented, and if so how, and how it is working.

Hartz has hired Dr. Keshun Liu, a PhD in food science. His job is basically trying to interface between soybean breeders, Keith, and the soyfoods industry.

There are three main problems in breeding soybeans for use in making tofu. The first and biggest problem is that most tofu makers never seem to be willing to pay a premium price for their soybeans–unless the soybeans are organically grown, in which case tofu makers will pay huge premiums. The big market for tofu beans is in Japan. Hartz sells about 40,000 bags/year (each 50 lb) to tofu makers in the USA; one tofu maker in Hawaii buys about half of these. From these companies, Hartz is able to get a premium of about $2.50 per bushel over the CBOT (Chicago Board of Trade) price. Until tofu makers are willing to pay a premium for soybeans that give tofu with better yield and quality, they must be willing to accept varieties that are already developed. Tofu beans are pretty much a commodity, since there are a lot of large-seeded, clear hilum beans grown in the Midwest that perform pretty well for tofu. Natto makers are willing to pay a good premium for their soybeans because natto beans are inherently lower yielding and have many special characteristics that are difficult to breed and select for. Because Hartz has limited storage, they breed in the areas where they can get the best premiums. Hartz hedges 100% of its soybean transactions. So it tends to charge a fixed dollar amount (its margin) over the CBOT price.

In growing out new varieties, Hartz contracts with farmers to grow the beans, then buys back 100% of these beans at a pre-determined price, bags them in a Hartz bag, and sells them to soyfoods makers. It does not prefer that farmers sell its beans to soyfoods makers, though farmers have the right to do this. Hartz’s 428-acre breeding farm is used solely to produce breeder and foundation seed stock–the first 2 generations. The Plant Variety Protection Act of 1972 gives plant breeders some rights over the products they produce in their breeding programs, and prohibits farmers from selling protected seed to other farmers–like a seed company. But farmers can save their own seed and plant it in the future–which means he doesn’t have to buy seed from a seed company for a long time. Hartz doesn’t like that and he thinks there is a movement to mitigate that. For example, farmer-saved wheat seed was so extensive that Pioneer Hi-Bred withdrew from the market. All Hartz’s varieties are plant variety protected.

When Keith entered this business in 1978 there were 8-9 soybean varieties in 3 different maturity groups in the entire southern USA (13 states) that the farmer could choose from; now he has about 150-200 varieties to choose from. Breeders have incrementally increased yield, disease resistance, targeted soil type adaptability, etc.

Soybean farmers generally look carefully at and plant the latest, best yielding varieties since they expect to get better yield, disease resistance, etc.–and save money. Why do soyfoods manufacturers not think the same way. Why would they not be willing to pay more for a new bean that will give them a 10% higher yield? Keith does not know. He thinks these manufacturers get a variety that works well and don't want to change their process. He often cannot even get them to test a new variety; its too much trouble (not surprising). Another problems is that some tofu manufacturers like one variety very much, and others don't like it at all. But the three missing links in this process are (1) research in the breeder's lab to show how the new soybean variety behaves in making tofu (yield, taste, composition, price per pound of tofu, etc.) and (2) comparing the performance of this variety with varieties used by major tofu manufacturers; (3) compiling the results of this research as information that can be easily understood by any soyfoods maker. Breeders now do this for soybean farmers but not for soyfoods makers. Is the tofu market too small for a breeder to make this investment? Not if you include East Asia, Southeast Asia, the USA, and Europe. For many years Singapore and Hong Kong have imported mostly Canadian beans with a pretty low margin. Japan has a tradition of buying IOM beans out of the Midwest, but IOM is no longer a meaningful term because we change varieties so fast. It used to be a large-seeded, clear-hilum mix of several varieties but now it can be almost anything. A portion of the users of Japan's 500,000 metric tons to make tofu is willing to pay a premium for variety soybeans. Hartz exports about 3,000 tons/year to Japanese tofu makers, but they still don't have a good variety. Continued. Address: 1. Food and Export Manager; 2. PhD, Soybean Breeder. Both: Jacob Hartz Seed Co., P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

2212. Thompson, Keith; Brown, Edward. 1994. Breeding soybeans for use in making tofu at Jacob Hartz Seed Co. Part II (Interview). *SoyaScan Notes.* Oct. 11-12. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The second problem is that the science of breeding soybeans for tofu is not well understood. We still don't understand the basic theory as to what constitutes a good soybean for making tofu–a good tofu bean. What are the main compositional factors that affect tofu yield, flavor, and consistency (hardness or softness). It is not clear what characteristics breeders should select for when breeding tofu beans–except for the bean's physical appearance. Keith has a very close Japanese contact who is doing excellent work at a lab in a university in Japan, trying to understand what causes one soybean to be better than another for making tofu. He has made a lot more progress than Hartz has, and his work is quite confidential. Hartz has tried to get permission from the Japanese for Dr. Keshun Liu to visit that lab, but they won't even talk about it. Keith's talks about this university researcher with Takashi Matsumoto in large trading company, but he doesn't recall the name of the tofu researcher at the university. The trading company is funding the research and is very forward looking.

The third problem is that the Japanese who buy soybeans that will eventually be used for making tofu have a number of strong preconceptions about the way these soybeans should look–regardless of the amount and quantity of tofu that can be made from them. They want a soybean with very large seed size (less than 2,000 seeds/lb), a clear hilum, and dull-luster–that looks like it a typical soybean grown in Japan. If the soybean doesn't look like that, they don't care how good the tofu yield or flavor are. The Japanese seem to prefer what are called "Vinton-type" soybean varieties for making tofu. These include Vinton [a Midwest variety introduced in 1978 by breeder Walt Fehr and Iowa State University] and Harovinton (from Harrow, Ontario, Canada). These are large-seeded clear hilum beans [perhaps traditionally called vegetable-type soybeans]. "Vinton-type" soybeans now sell (cleaned and in bulk) for only about $0.80 to $1.75 over the Chicago Board of Trade (CBOT) price. That is not enough of a premium to attract Hartz. Hartz has developed on soybean that seems to have excellent characteristics for making tofu. But the Japanese don't want this soybean because it doesn't look like what they are used to. It is oblong and not as uniform as usual.

Eddie Brown hasn't given up on tofu beans; he is doing a lot of work and making a lot of crosses. Hartz has 40 acres of a variety it will be harvesting in the next 2-3 weeks and releasing next year that was selected primarily based on seed size, but also protein content. This line is quite large seeded, with 1,400 seeds/lb. Yet agronomically, it is a second or third class variety, so Hartz must charge more for it to counterbalance its lower yield. It is difficult to grow large-seeded soybeans in the south since it is generally true for soybeans that the further you go north and the earlier the maturity group, the larger the seed size and the more the percentage of clear hilum varieties. Some of this is genetic and some environmental. Varieties north of Boothill, Missouri are usually indeterminate, whereas those to the south are determinate. Determinate plants grow to a certain height and then start blooming; indeterminate varieties start blooming when the plants are very small and bloom until they reach normal plant height.

Keith thinks that true Vinton is not grown much any more. The new Vinton-types, developed by Midwest breeders, look like a Vinton but the yield is much better for the farmer. These Vinton-types sell for about $0.80 to $1.75 over the CBOT price.

One reason the Japanese may be demanding Vinton-type soybeans having a certain appearance is so that they can blend our $8/bushel beans with their domestic beans

[Nihon Daizu], which are much more expensive, then sell the blend as if they were all Japanese-grown soybeans.

Japanese are limiting themselves greatly by demanding large-seeded soybeans. Eddie has only 10-15 breeding lines available to him in large-seeded soybeans compared with 2,000 to 3,000 lines of regular-sized soybeans. Breeders in the Midwest have a much larger germplasm base to work with on large-seeded clear-hilum varieties.

Hartz would like to have more of its soybeans grown organically because they could get a huge premium for those soybeans–no doubt about it. Hartz is already producing some organic natto beans, primarily with one big rice grower who is OCIA certified. His main crop is rice, and he has his own rice mill, rice bagging, and rice marketing system. Most rotations in the South are based on either rice or cotton. It is very difficult to find organic acreage in the South unless you find a rice farmer who is philosophically committed to organic farming [like Carl Garrich of the Lone Pine in Arkansas]. Even if Hartz offers farmers a premium of $4/bushel over the CBOT price they are not interested. It doesn't work well with a rice rotation.

Once a soybean seed company makes the commitment to breed soybeans for tofu, it must develop at least a small bench-top tofu-making system in order to quantify and compare different varieties. You need a program and a systematic way of making tofu and measuring the results. You must be able to prove that one soybean is significantly better than other for making tofu–in terms of yield, or flavor, or fat content, or genistein level, whatever. This becomes the basis of marketing the soybean to tofu makers. Address: 1. Food and Export Manager; 2. PhD, Soybean Breeder. Both: Jacob Hartz Seed Co., P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

2213. AGP–Ag Processing Inc a cooperative. 1994. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 20 p. 28 cm.

• ***Summary:*** Net sales for 1994 (year ended Aug. 31) were $1,377.370 million, up 13.0% from $1,218.614 million in 1993. Earnings before income taxes: $42.727 million, down 4.4% from the $44.659 million in 1993. On the inside front cover is a brief essay about the "150th anniversary of the Co-operative Movement 1844-1894." AGP is owned by 380,000 farmers and 351 local cooperatives. "Today 700 million people around the world share the cooperative form of business. In the U.S., 120 million people are members of over 47,000 cooperatives."

This year AGP's board of directors "declared a patronage payment of $35,786,000. Additionally the board declared a revolvement of stockholders' equity of $14,280,000, bringing AGP current into the 1989 equity balances."

"The combined capacity of our seven [soybean] processing plants ranks AGP fourth in the U.S. in terms of soybean processing capacity." The plants purchase the equivalent of 250,000 acres of soybeans each month for processing. Each day, AGP merchandisers sell 8,000 tons of soybean meal to cooperatives and other companies for the manufacture of feeds."

"In August 1994 AGP purchased all of Maple Leaf Foods Inc.'s Western Canadian deed plants" in Alberta, Canada.

In Nov. 1994, AGP and ADM formed a new company named Consolidated Nutrition, L.C., owned 50-50 by AGP and ADM. It consists of the combined assets of AGP, L.P. and Master Mix Feeds (which was founded in 1935 by Central Soya Inc.) "In July 1994, ADM purchased most of Central Soya's feed and nutrition operations, including Master Mix Feeds."

A color map (p. 18), with 9 symbols, shows all of AGP's business locations in the United States, Canada, and the Caribbean. Another color map (p. 20) show where all of AGP's shareholders are located. Color portrait photos show (1) Knobbe and Lindsay. (2) The towering desolventizer-toaster at the Mason City, Iowa, plant. (3) Aerial view of the St. Joseph, Missouri, plant. (4) The towering 1.7 million bushel capacity grain storage terminal at Lincoln, Nebraska, now leased by AGP. (5) A barge leaving AGP Grain's 4.2 million bushel grain terminal at Duluth, Minnesota. (6) A man holding a small pink pig. (7) The Farmers Cooperative Elevator Co. at Everly, Iowa. (8) Each of the nine members of the board of directors. Address: Omaha, Nebraska. Phone: (402) 496-7809.

2214. Goh, Francis. 1994. Soybean in Singapore and its utilisation for the production of tofu and soymilk. Paper presented at Incoming Soybean Technical Mission. 7 p. 18 Oct. 1994 at Harrow Research Station, Harrow Ontario, Canada.

• ***Summary:*** Singapore (population 3 million, of which 78% are Chinese and 14% Malay) imports 33,360 tonnes (metric tons) per year of soybeans for local consumption and re-export. About 51% of these soybeans are imported from Canada. There are 45 small and medium sized tofu factories in Singapore (which together use 600-700 kg/day of soybeans) and 2 large factories (which together use 2 tonnes of soybeans and each have an are of 1,500 square meters of more). Unicurd is the biggest. Four tofu companies have a history of 70 years in Singapore. No family wants to marry its daughter to a tofu maker because the work requires such long hours, often all night.

Mr. Goh and his wife bought an existing company in 1981. Theirs was the first company in Singapore to bring automatic machinery from Japan to produce soymilk and pack tofu in containers. In Singapore, tofu used to be considered a poor-man's food; if it was served more than

once every two weeks, family members might complain. But Unicurd repositioned tofu as a "nutritional food." The company markets its products mostly to the Japanese community of 20,000 people in Singapore.

There are 6 traditional soymilk makers in Singapore; the people like a product with a "strong beany flavor." Address: Managing Director, Unicurd Food Co. Pte Ltd., Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

2215. Ontario Soybean Growers' Marketing Board. 1994. Ontario soybeans. P.O. Box 1199, Chatham, Ontario N7M 5L8, Canada. 7 p. Oct. Unpublished typescript.
• ***Summary:*** This is a compilation of 7 transparencies containing current statistics. 1. History. 2. Ontario soybeans: Production and disposition. Shows the number of tonnes produced, crushed, imported, and exported from 1944 to 1994. Production increase dramatically from 1,200,000 tonnes in 1989 to 2,100,000 tonnes in 1994. In 1989 about 95% of the soybeans produced were crushed, but in 1994 only about 55% were crushed. Exports rose more than 3-fold between 1989 and 1994, while imports decreased.

3. Ontario soybean exports: 1993–by destination. Of the 407,061 tonnes exported, 55.7% went to Europe, 24.4% went to Europe, 5.9% went to Japan, 5.7% to Hong Kong, 3.2% to Singapore, 2.5% to Malaysia, and the rest to Other.

4. Ontario's soybean industry consists of 20,000 soybean growers, 300 dealers, 2 crushers, 28 roasters/extruders, and many soyfoods manufacturers.

5. Soybean pricing. OSGMB has no price setting powers. A major U.S. port, Toledo, Ohio, is used as a price reference point for Ontario soybeans. 6. OSGMB Mission Statement. 7. Role of OSGMB. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2216. Or, Gary. 1994. Our personal experiences with utilizing Ontario soybeans for Vitasoy production. Paper presented at Incoming Soybean Technical Mission. 12 p. 18 Oct. 1994 at Harrow Research Station, Harrow Ontario, Canada. [Eng]
• ***Summary:*** Contents: Company profile. Soymilk production. Our experience with Ontario soybean. Varieties to help Vitasoy International in future expansion.

The company was founded in 1940 by Mr. Guan, Mr. Chen, and Mr. Chu. In March 1994 Vitasoy shares were first listed on the Hong Kong Stock Exchange. Today Vitasoy exports to more than 20 countries via distributors in North America, Macao (Portuguese Macau, near Canton), Singapore, and China (PRC). The company's mission is to produce and promote high-quality, nutritious and wholesome products which can be purchased anywhere, at any time, at a price that everyone can afford."

The company makes two kinds of soymilk: Regular and organic. For regular soymilk, which contains 2% protein and 1% fat, Grade No. 1 Ontario soybeans are the first choice; more than 120 containers (mostly 20 tons each) were received from Jan. to Sept. 1994. No shipment was rejected. The current packaging is 45 kg gunny sacks [Note: Gunny, a term first used in 1711, is derived from the Hindi term *gani*. It is a coarse heavy fabric, usually of jute or hemp, used especially for bagging]. The soybeans are first ground into flour. A mild beany flavor is desired. For organic soymilk, which contains 3.5% protein, U.S. soybeans with OGBA [Organic Growers and Buyers Association] certification are used. The whole beans are ground to a slurry, and are not first ground into a flour. The fat content is 3.0% for regular and 1% for lite. Beany flavor is removed.

Vitasoy would like to buy high-protein, organically grown Ontario soybeans–ideally OGBA certified–but they are not readily available. Vitasoy is planning a franchising program. Address: Technical Research and Quality Assurance Manager, Vitasoy International Holdings Ltd., No. 1, Kin Wong Street, Tuen Mun, N.T., Hong Kong. Phone: 466 0333.

2217. Shurtleff, William. 1994. Report on soybean and soyfoods research trip to Ontario, Canada: 17-19 October. Soyfoods Center, P.O. Box 234, Lafayette, CA 94549 USA. 21 p. Unpublished manuscript.
• ***Summary:*** Contents: 3-page program titled "Incoming Soybean Technical Mission." Oct. 17. Talk with Fred Brandenburg, executive director of OSGMB about food-grade Ontario soybeans exported to Asia. Canada is working to increase its sale of food-grade soybeans to Asia. Even though these soybeans are more expensive, they are of better quality and thus preferred. They are also very clean, since soyfoods makers want soybeans with little or no foreign matter. Most are not sold identity preserved, but they are large seeded, white hilum beans. Fred speaks of "crusher beans" and "food beans."

Oct. 18. Visit to Harrow Research Station, run by the Canadian federal government. (1) Talk by Michael Loh: Canada has 72% of the Singapore soybean market, 52% of the Hong Kong market, and 14% of the Malaysia market for soybeans imported for all purposes. Ontario's goal is to double exports by the year 2000. Their strategy is selling value-added products to niche markets. Food-grade soybeans now being developed in Japan include Enrei, Toyo Suzu, Toyo Masari, Otsura, and Kita Musume. (2) Talk by William Shurtleff on "Breeding Soybeans for Food Uses." (3) Presentation by Doug Jessop of the Food Processing Lab. at Harrow. He has been making and studying tofu there since 1983, and on a regular basis since 1984. He shows us his process, using lab equipment that cost about $15,000 not including the Instron system that measures texture. (4) Talk with transparencies by Dr. Dick Buzzell on breeding soybeans to make tofu. Harovinton gives the best tofu yield

of all the varieties developed in Canada. A soyfoods maker can either contract with farmers in advance to have soybeans grown for them, or buy the soybeans from traders after they are harvested. To take optimum advantage of a soybean for making tofu, you must know the protein content then add the appropriate amount of water. The more protein in the bean, the more water you must add to get the highest yield. Identity preservation (IP) costs more. The yields will be lower and you must contract for it in advance; a problem is how to deliver the beans year-round to the end user. (4) Talk by Dr. Ma of Central Food and Animal Research. His specialty is vegetable protein. He is collaborating with ProSoya to make soy protein isolates from soymilk since Russia wants to make its own isolates. The soybeans with the highest protein content (on a dry weight basis) are BARC-6 53.4%, Harovinton 45.5%, Enrei 45.0%. One Japanese mutant soybean has none of the three types of lipoxygenase. Lines that lack A-4 protein give firmer tofu. In isolines, everything is the same except for one trait.

Oct. 19. (1) Visit to OSGMB with Fred Brandenburg to hear presentation, see facilities and collect documents. It takes more solar energy to lay down oil in a soybean than protein. Thus after a hot, dry summer, Canadian soybeans contain more oil. Soybeans in hot, tropical countries near the equator also generally contain more oil. In 1985 Canada became a net exporter of soybeans. The cost of producing soybeans in Canada is about the same as in the USA, but the U.S. often ships full vessels of soybeans and is near oceans, whereas Ontario often ships containers (20 or 40 tons), either out the St. Lawrence Seaway or down the Mississippi River. Some agrochemicals that are legal in America are not legal in Canada. All agrochemicals must be licensed, as must some farmers. Mr. Goh says that Chinese believe white hilum soybeans contain more protein than other soybeans. (2) Visit to Canadian Grain Commission to learn how Canada inspects and exports soybeans. The closest that a full seagoing vessel can get to Ontario is Montreal (Quebec)–the last deep-water port up the St. Lawrence Seaway. In Canada, dockage (both big and tiny foreign matter) is removed from soybeans before foreign material is calculated. This makes Canadian soybean much cleaner than those from the USA. Address: Lafayette, California. Phone: 510-283-2991.

2218. Shurtleff, William. 1994. Breeding and marketing soybeans for food uses: A blueprint for changing our seed company's basic mission. Paper presented at A Symposium on Breeding Soybeans (for an Incoming Soybean Technical Mission). 9 p. 18 Oct. 1994 at Harrow Research Station, Harrow, Ontario, Canada. [1 ref]

• ***Summary:*** Contents: Introduction. Why our seed company must change. Why soybean breeders breed for farmers. Why soybean breeders have been slow to breed for food uses. The three categories of soyfoods products–from a breeder's viewpoint: Value added products, commodity + good theory + premium price, commodity + weak theory + no premium price. The size of the soyfoods market. Repositioning our company and taking advantage of our location in Canada. The theory behind our long-range plan: Information, specifications, research and development leading to scientific theory, and education. How we plan to implement and apply this theory: Hire a food scientist, develop a computerized database and a bibliographic database, buy a computer graphics program and a color printer, open new channels of communication with many soyfoods manufacturers, develop an ongoing an ongoing relationship with one large commercial soyfoods manufacturer, develop questions, hypotheses, correlations, and theories. Appendix 1. Questions concerning the theory linking soybean characteristics with soyfoods properties. Appendix 2. Soybeans for soyfoods: Computer data entry screen. Appendix 3. What is the size of the market for soybeans for food use? Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 510-283-2991.

2219. **Product Name:** Veggie Pepperoni (Meatless). Renamed Veggie Pizza Pepperoni by Oct. 1997.
**Manufacturer's Name:** Yves Veggie Cuisine.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver, BC, V6A 2A8, Canada. Phone: 604-251-1345.
**Date of Introduction:** 1994. October.
**Ingredients:** Incl. soy protein isolate, wheat protein, tofu, and soy fiber.
**Wt/Vol., Packaging, Price:** 155 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Spot in Soyafoods (ASA, Europe). 1995. Spring. p. 5. "Veggie Pepperoni–winner of Sial d'Or." This product won a Sial d'Or prize in the delicatessen category at the Oct. 1994 Sial exhibition in Paris. The product was also selected as winner of the Canadian Grand Prix Best New Product Award in the Diet and Biological Foods category. The product is high in protein and low in fat.

Spot in Vegetarian Journal. 1997. Nov/Dec. p. 15. "Veggie Pepperoni. Yves Veggie Cuisine has introduced Veggie Pizza Pepperoni, a fat-free vegetarian pepperoni topping for pizzas." The company is now located at Delta (Vancouver), B.C., Canada V3M 6R9. Phone: 604-525-1345.

2220. Cloud, Jon. 1994. Re: Work with organic farming in Canada. Letters to William Shurtleff at Soyfoods Center, Nov. 14 and Dec. 27–in reply to inquiry. 2 p. and 1 p. Typed, with signature on letterhead.

• ***Summary:*** To the best of John's knowledge, the first soybeans grown organically in Canada (after 1960) were produced in 1974 in Wainfleet, Ontario, under contract with John. They started growing organically because John was

willing to "issue them contracts guaranteeing floor prices and ready sales." "Through extensive field work with these and other growers, the quality and field yield of organic soybeans have steadily increased." John now works in a cooperative arrangement with W.G. Thompson & Sons Ltd. in Blenhein, Ontario, Canada. This arrangement "allows us to secure soybeans at harvest, clean them, and store them in facilities that maintain that quality. I'm still training farmers in organic methods."

"I'm no longer at Soy City Foods. I sold my interest there on 1 Jan. 1994 and now I am gratefully involved in taking the industry to its next level of expansion with W.G. Thompson & Sons.

"I began working with Thompson in May 1994. We have a partnership where they are responsible for marketing the complete line of organic commodities. My responsibility is the operational grower/production side of the business. I train farmers in growing techniques so that the organic acreage can be greatly expanded.

"Presently we have about 295 growers on our mailing list. Approximately 50% of these growers produce organic soybeans, and about 40-50 of them produce them in any one year. However many of these growers have limited soybean sales due to their dairy operations and/or position in the 7-year crop rotation. In Ontario there are over 1,500 farmers growing crops organically but mostly on mixed farms [with non-organic crops]. Probably no more than 60-70 of these grow soybeans organically. Due to crop rotations, the acreage in organic soybeans fluctuates dramatically from year to year; anywhere from 1,000 to 2,500 acres of organic soybeans would be under production in any given year. This means that the bulk of their commodities are going for beef and dairy operations. About one fourth of the 1,500 are cash croppers. The number of farmers has not changed appreciably in the past four years but the size of the farms has. The smaller farms have opted for market garden operations while the larger farms are more efficient at cash cropping–things like soybeans, wheat, and spelt.

"At present we market a full line of organic commodities including soybeans which we ship globally. Other organic crops include spelt, soft white winter wheat, hard red spring wheat, rye, buckwheat, barley, corn, and sunflowers. When you take into consideration that soybeans constitute only one of the commodities in the rotation, you can see that the tonnage is greatly expanded by handling all of the commodities. It is our hope that we will be able to move quickly 4,000 to 5,000 acres of soybeans. The vast majority of our current soybeans are high protein for tofu or soymilk.

"Ontario sells few organic soybeans to East Asia because the bulk of our production has historically been shipped to Europe. That has changed this year with Japan receiving its first shipments. Other Pacific Rim countries started receiving minimal amounts of organic soybeans in 1992 and 1993.

"Although I was forced to leave the Ontario Oil Protein Seed Crop Committee because of excessive work load, I still sit as an ad hoc member of that committee in a technical assistance capacity to the plant breeders in designing higher quality soybeans. My two latest projects focus on soluble protein increases and elimination of trypsin inhibitors in soybeans."

John encloses a leaflet titled "Training in organic production techniques: Workshop schedule for the winter of 1994-1995." There are two 4-day workshops each month, one in Blenheim and one in Toronto, Ontario. Each workshop costs $25.

Update: 1995 May 17. Acreage of organic soybeans in Ontario is up about 300% over last year and acreage for all organically grown crops in Ontario is up about 100%. John contracts 75% or more of the organic acreage in Ontario. One crop that is rapidly expanding is spelt. It has a better flavor and protein content than typical wheat, and it lacks one of the glutens to which some people are allergic.

Update: 1999 March 20. Talk with an associate of W.G. Thompson. Jon Cloud now has a very bad reputation with at least one manager at W.G. Thompson. According to this manager, Cloud misrepresented his relationship with the company and did some unscrupulous things, then disappeared leaving some unpaid debts. Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

2221. Gupta, Raj; Daller, Frank. 1994. Update on ProSoya Inc. and the SoyaCow Centre (Interview). *SoyaScan Notes.* Nov. 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya Inc. (named ProSoya Foods International until late 1993) is the company that developed and owns SoyaCow, which is a machine that makes soymilk. The name SoyaCow was intended originally for smaller machines for developing countries, but now it is used also for the larger, more expensive systems.

In 1985 ProSoya had no manufacturing capability, so Raj talked with APV about developing equipment for ProSoya. APV did some research and development work for ProSoya but no money changed hands. ProSoya was considering giving APV a license to manufacture the machine, but APV found eventually that there are not many companies in the soyfoods market that are big enough to afford APV equipment, and most who could afford a large system might buy it from STS, which APV acquired in 1986. STS also looked at making the SoyaCow, but decided that the market was too small. APV has never owned ProSoya, and ProSoya never licensed any technology or equipment to APV.

The hard part was finding the right people. Once ProSoya found the right people, they chipped in some money, got some bank financing, and some small money from some shareholders. Only 15% of the company is owned by outsiders. So ProSoya is a corporation with about 8 shareholders, of which 4 are principal shareholders; the rest are relatives, accountants, etc. Raj still has the controlling interest. Frank Daller has raised all the outside capital within the last 1-2 years but most of it came in early in 1994. This has allowed ProSoya to construct a building where they do final manual assembly of SoyaCows, to publish a newsletter, and to market its SoyaCow very effectively. Most of the new funds have been used to build this assembly building, which does not have an assembly line and does not manufacture any of the SoyaCow's component 200 parts; they are custom fabricated by various other companies. ProSoya has 15-30 SoyaCows made at a time–built to order; each takes only 2-3 hours to assemble, and they inventory only a few at a time. In the building there is also a pilot plant, where potential customers can see how the SoyaCow works and taste the finished product.

ProSoya has not gone to any large companies for capital, and has not had to made any compromises as to its goals. In fact, they have been very selective about bringing in capital, desiring only investors who share Raj and Frank's views and goals. Frank invested money, and they have brought in outside money from only one other significant source, which is their West Coast licensee. This is a new entity in Vancouver, British Columbia, named Pacific ProSoya, which has acquired the license to produce soymilk in bulk, using ProSoya technology, for the western part of Canada and the northwest USA. The milk, made in a plant which ProSoya is building for them, will be sold to food processors. It is sort of joint venture and licensing deal. ProSoya holds equity in their company and they hold equity on ProSoya. The relationship began about 2 months ago, though they have been discussing this for the last 9 months.

Another new development is that ProSoya in Ottawa is starting to make bulk soymilk for food processors. They will be serving cow's milk dairies which will be test marketing Pure-Pak cartons of soymilk, as well as an ice cream company and a yogurt company and a Tetra Pack filler.

ProSoya is aggressively looking for a company to manufacture their SoyaCow assembly-line style in East Asia (especially in China, Taiwan, or Korea) for about half the price they can make it for in Canada. They see a large potential market in China and throughout the less developed countries if they can reduce the price to end users.

How much does a SoyaCow cost? The SC-20, the smallest machine which makes 20 liters of soymilk per batch, is extremely compact, uses a patented airless cold-grind process to produce a very good-tasting soymilk, and retails for US$7,000. The SC-100, which can produces 100 liters per batch and can make up to 400 to 500 liters/hour, retails for a minimum of US$175,000, not including the boiler, chiller, and clean-in-place system. They are about to introduce a continuous-process machine.

People learn about the SoyaCow mostly through word of mouth and from the *SoyaCow Newsletter,* which is written mostly by Raj and Frank. It goes out to several hundred people.

The Russians have translated Mark Messina's book, *The Simple Soybean and Your Health* into Russian. They want to print 10,000 copies. Address: The SoyaCow Centre, 9 Veery Lane, Ottawa, ONT, K1J 7W7, Canada. Phone: 613-745-9115.

2222. Mercado, Sam. 1994. Re: The Plenty Canada soy program in El Salvador. Letter to Mr. Frank Daller, ProSoya Foods International Inc., 5350 Canatek Road, Ottawa, ONT K1J 9C9 Canada, Nov. 25. 4 p. Typed, with signature on letterhead.

• ***Summary:*** The SoyaCow project is part of Plenty Canada's Integrated Rural Development Program (CIDEP) in El Salvador. An evaluation made by CIDA in March 1994 showed the following achievements: 1. A small soya production has been established in the municipality of Mejicanos. It is equipped with two SoyaCows, each producing more than 130 liters of soymilk a day. More than 500 children in three kindergarten schools receive soymilk and soy ice cream as part of the breakfast program. The okara (solids) is used as a raw material in making tortillas; in the future the okara will also be used in making *pupusas,* a very popular staple food in El Salvador.

2. One person in El Salvador was trained in the operation and maintenance of the SoyaCow. This person trains other Salvadorian trainees. 3. This project has created five permanent and several other part-time jobs in the poor neighborhood of the municipality of Mejicanos. It has also provided the local staff of CIDEP and the child care center hands-on experience in organizing and operating a small enterprise.

Demonstrations and extension visits, though on a very limited scale, helped make local people aware of the benefits of soyfoods. CIDEP received several requests from women's groups and individuals to help them with training in processing and to set up related small income-generating activities. Address: Central America Program Officer, Plenty Canada, Lanark, ONT Canada K0G 1KO. Phone: (613) 278-2215.

2223. Voldeng, Harvey D. 1994. Dr. Sven Holmberg and breeding short-season soybeans (Interview). *SoyaScan Notes.* Nov. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Dr. Voldeng said in March 1993: "When you look into Dr. Holmberg's work, it was remarkable. He was a very, very good soybean breeder. Nobody in Europe, even up until now, has conducted breeding programs on the scale and with the number of crosses that he did." He got big results on a small budget, with funding coming mostly from a small private seed company and perhaps some from the Swedish government.

Dr. Holmberg's program at Fiskeby was closed down after his death in Nov. 1981 and some of the work was taken up by a young lad in southern Sweden. Dr. Voldeng has quite a bit of correspondence, pedigree lists, and other documents on file from Dr. Holmberg, and he will look there for details and to see if Holmberg's soybeans were tested in other northern European countries, especially Norway, Finland, Denmark, Ireland, or Iceland. [Note: Ireland is located the furthest south of these countries, on about the same latitude as northern Germany, and south of the southern tip of Sweden].

The soybean breeder before Dr. Voldeng was Dr. Lorne Donovan, who was the successor to Dr. Dimmock. In the mid- or early 1960s, Holmberg worked his way over on a cattle ship from Norway one year (he obviously was paying his own way), and spent some time with Dr. Donovan in Canada. Dr. Voldeng met Dr. Holmberg once, in about 1978-1980, when he was still some fairly active. "He went out to the field with me. He had fairly severe arthritis, so he had to walk with a cane. His sister lived with him, and we all drove out to the field. We walked around the plots. He had a very good program, though it was not that large. In Eastern European countries, such as Poland, they had programs and 100 times more financial support than he had, but they made practically no crosses. Holmberg made hundreds of crosses, and that was not easy in the climate and latitude of Fiskeby. He was a remarkably good soybean breeder, there is no question about that." Dr. Voldeng does not know what his academic training was. He heard that before World War II, the Swedish government could see that a problem was coming, that they could be blockaded for vegetable oils. So they paid for his trip to Hokkaido, Japan, and the Kurile Islands to collect soybeans. "He told me, 'When I got to those places I could see birch trees and it looked just like Sweden. So I knew that if I found soybeans there, they could be adapted to Sweden.' He was right, but it took a lot of work to adapt them. He knew exactly what he was looking for.

Dr. Voldeng thinks that. Dr. Holmberg's program is no longer active. "It was more a labor of love that his father had started and he continued. Eventually they were purchased by one of the big plant breeding companies in Scandinavia–probably Hilleshög (which focused on breeding hybrid sugar beets), when Dr. Sven Holmberg was in his later years; he supervised the transfer. Hilleshög was later sold to Volvo, and then to Syngenta AB–so it seems unlikely that any archives or photos survive. He made little or no money from his soybean work though he has contributed immensely to short-season soybeans worldwide.

Note: A letter from the Fiskeby Board AB in June 1994 states that Dr. Holmberg's Institute, which used to be in Fiskeby, Norrköping, Sweden, no longer exists. Address: Agriculture Canada, Central Experimental Farm (CEF), Building #110, Ottawa, ONT K1A 0C6, Canada. Phone: 613-995-3700 x 7653.

2224. Archer Daniels Midland Co. 1994. First quarter report to shareholders, and a report on the 71st Annual Shareholders Meeting. Box 1470, Decatur, IL 62525. 16 p. 20 x 9 cm.

• ***Summary:*** Comments by president James R. Randall. ADM is a growth company that continues to grow in three basic ways. First, by continuing to expand the basic businesses: crushing, refining, milling, etc. Second, to grow vertically and upgrade basic products into higher margin items. Central Soya's feed division was purchased along with a worldwide network of premix plants to give ADM excellent distribution of its amino acids and vitamins for animal feeds. By the end of 1995, ADM will be producing all three of the vitamins known as antioxidants. "Our soy protein businesses also continue to grow. Our European concentrate plant is now at full capacity and is being expanded. Our U.S. isolate and concentrate business is well ahead of previous years." Pillsbury's sales of ADM's vegeburgers are "up nearly 900 percent over a year ago. Our third growth area is to grow internationally. There are 94 million new people added to the face of the globe annually and feeding people is our business." These people are being added in "Asia, Africa, Central and South America, places where we have little or no presence, and we need to be there. In the past year we have formed partnerships and have plants in Turkey, Greece, Bulgaria, Hungary, and Czechoslovakia in Eastern Europe. ADM is forming new alliances in Asia.

Comments by Michael Andreas, vice chairman of the board and executive vice president. There is no free trade in today's world. "Twenty years ago soybean farmers in the U.S. couldn't agree on a program for soybeans because the cost to produce them varied so widely from north to south. So they opted for so-called free trade with a low loan rate as a safety net. It all sounded pretty good. Over the last 15 years, however, I observed the following. Ten million acres of soybeans disappeared from the U.S., while areas in Argentina and Brazil increased 14 million acres where land was cheaper and subsidized credits were available. An additional 18.7 million oilseed acres were planted in Canada and Europe, again with heavy subsidies. Twenty-two soybean factories [crushing plants] were closed in our country, while fifty sprung up in South America and Europe. Our share of the world market in soybean products

was cut in half. In fact, over 20,000 soybean farmers left the business, and 50,000 jobs were lost at home. And you know we still have the same program today.

"Let's look at Japan. They are truly the masters of managed trade. After the war, Japan put an extremely high tariff on imported vegetable oil but none on raw materials like soybeans and canola, so they could create jobs at home. Factories sprung up in the '50s and '60s like wildfire when they set their systems in place. Canada responded by growing more and more oilseeds and subsidizing exports with cheap freight to the ports. Canada became a colony again. They got no factories, no jobs. Why not?

"Japan had all the factories because they could pay a premium for raw materials (in this case subsidized raw materials), run their factories, and charge the consumers double the market for their products. Taxes on the profits were collected by the government and used to help subsidize automobile exports. Sound complicated? As I said, this was managed trade, and it worked like a charm.

"And don't think for a minute that China hasn't learned from these tricks of the trade. They're putting the same systems in place as fast as they can."

Comments by Dwayne O. Andreas, chairman of the board and chief executive. He discusses the many accomplishments of the Clinton administration, including opening up trade with China. "The second thing he did that is absolutely super for agriculture and ADM is that he got NAFTA through the Congress over the opposition of his labor constituency, one of the greatest achievements for trade of this century. Our exports to Mexico have tripled just since NAFTA, and they are going to triple again." Address: Decatur, Illinois.

2225. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1994. What's new in exports? 7(3):4. Nov.

• ***Summary:*** "The Canadian 1993 crop year saw major export soybean increases in many areas..." A pie chart shows 1993 Canadian exports by destination region and country. In descending order of tonnage, they are: Western Europe 226,733 metric tons (tonnes), USA 99,401, Japan 24,185, Hong Kong 23,286, Singapore 12,930, Malaysia 10,362.

2226. IITA. 1994. Annual report 1993. Ibadan, Nigeria: International Institute of Tropical Agriculture (IITA). 65 p. 28 cm.

• ***Summary:*** Contents: Director General's report. Research perspectives. Resource and crop management. Crop improvement. Plant health management. International cooperation. For the record.

IITA experienced funding cutbacks in 1993 and in 3 of the last 5 years, but in 1993 still had core funding of US$20.8 million and additional Special Project Funding of US$13,267,000, totaling $34,086,000. IITA is actively involved in environmental work, trying to achieve agroecological sustainability, using integrated pest management and other techniques. A color map (p. 9) shows agroecological zones of humid and subhumid tropical Africa. The four main zones are: Arid and semi-arid lands, mid-altitude savanna and woodlands, moist savanna (good for soybeans and other legumes), and humid forest.

In West Africa, for all crops, population-driven agricultural systems occupy 66.5% of the land area, while market-driven systems occupy the other 33.5%. Three countries–Nigeria (40%), Côte d'Ivoire (28%), and Ghana (12%)–together account for 80% of the area in West Africa where the systems are market driven. Kudzu *(Pueraria)* is being tested extensively with good results in fallow systems for sustainable farming. Earthworm cast production is highest under kudzu live mulch.

The section on "Crop Improvement Highlights 1993" (p. 21-24) discusses: Seed of IITA soybean varieties were available in the commercial sector, sold by Pioneer Hi-Bred and UAC in their catalogs. The effectiveness of promiscuous nodulation of soybean in farmers' fields was confirmed in 1993. Soybean in Nigeria: As crop's commercial success grows, researchers address linked problems. Ghana and Malawi are promoting soybean production. From 1987 to 1993 the soybean utilization project has been funded by the International Development Research Centre (IDRC) of Canada and the Japan International Cooperation Agency (JICA). In Feb. 1991, the project identified 21 companies in Nigeria which used soybean as an ingredients in their products or projects. By 1993 that number had jumped to 50. "In July 1993, IITA held a workshop of small-scale and industrial soybean processors, which brought together the whole spectrum of producers from the cottage-industry to large-scale levels, as well as soybean growers." Production and marketing information gathered by the IDRC project was reviewed. Producers and processors exchanged views on development of soy-based food products and the associated equipment and machinery for their manufacture." Today the demand for soybeans in Nigeria exceeds the supply.

In 1992 only 4.3% of IITA's core budget went to cowpeas and soybeans, decreasing to 3.1% in 1993. Page 50 shows the 33 main IITA donors in 1993. Those giving more than US$1 million are: USAID ($9,727,000), World Bank ($4,200,000), Japan ($3,584,000), Canada ($1,448,000), and Netherlands ($1,400,000).

During 1993/94 IITA improved soybean germplasm was released in Ghana, Nigeria, and Zaire. Address: PMB 5320, Oyo Road, Ibadan, Nigeria.

2227. **Product Name:** Veggie Back Bacon.
**Manufacturer's Name:** Yves Veggie Cuisine.

**Manufacturer's Address:** 1138 East Georgia Street, Vancouver V6A 2A8, B.C., Canada. Phone: 604-251-1345.
**Date of Introduction:** 1994. November.
**How Stored:** Frozen.
**New Product–Documentation:** Spot in Vegetarian Journal. 1994. Nov/Dec. p. 9. This delicious, vegan, fat-free product will soon be appearing in natural food stores. Use in veggie BLT or club sandwiches.

2228. Carlsen, Clifford. 1994. Tofu maker sprouts new sales strategy for offshoot. *San Francisco Business Times.* Dec. 15.
• ***Summary:*** Vitasoy USA of Brisbane, California, now owns Azumaya and Nasoya, each a major tofu manufacturer. The company has tofu sales that are now expanding at a rate of nearly 10% a year in supermarkets, natural food stores, and ethnic grocery stores. The company has extremely strong distribution to all three markets, according to Jan Remak, Vitasoy's director of marketing. Remak predicts total sales of $28 million in the fiscal year ending March 1995; tofu will account for about one-third of this, or about $9.3 million. Vitasoy's latest strategy is to try to gain dominance in ethnic groceries by taking advantage of the Vitasoy brand name, which is as well known by Asian-Americans as Coca-Cola or Levi Strauss are in the mass market. Vitasoy tofu is produced and packaged at the Azumaya plant in San Francisco, which has a capacity of 3.5 tons a day. Vitasoy is already distributing Vitasoy Tofu to Asian grocers in San Francisco, but it plans to eventually distribute that brand to each of the six major Asian-American markets in North America: San Francisco, Los Angeles, Vancouver [British Columbia], New York, Toronto [Ontario], and Houston [Texas]. Address: California.

2229. Cloud, Jon. 1994. Re: Changes at Soy City Foods in Toronto. Letter to William Shurtleff at Soyfoods Center, Dec. 27–in reply to inquiry. 2 p.
• ***Summary:*** "I'm no longer at Soy City Foods. I sold my interest there on 1 Jan. 1994. It is now a corporate structure, which apportions division of labor. I have no idea who is the person in charge there, but I know they are out of the commodity business. Tofu production has been reduced to one half of the production levels when I was running the company. Wholesale and retail sales in the U.S. have been curtailed. From my perspective it seems to be dying, or certainly shrinking. I am gratefully involved in taking the industry to its next level of expansion with W.G. Thompson." Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

2230. Ontario Soybean Growers' Marketing Board. 1994. Annual report. Box 1199, Chatham, ONT N7M 5L8, Canada. 27 p. Dec. 28 cm.
• ***Summary:*** This is a report for the year 1994. Contents: Mission statement. Chairman's message (Ron MacDougall). Secretary manager's message (Fred Brandenburg, Dec. 1994). OSGMB summary of major activities in 1994. Auditor's report and balance sheet. 1994 soybean & research funding. Ontario soybeans–supply and demand, 1991-1995. Soybeans: Area, production and farm value, by county, 1993, with provincial totals [including county and district totals], 1987-1993. Ontario marketings, 1991-93. Ontario soybeans: Production, crushings, imports, exports, 1980-1994. 1993 crop year marketings by county. Ontario soybean production history, 1942-1994. Ontario soybean exports by destination in metric tons, 1990-1994. Soybean meal: Canadian imports and exports, 1981-1993. Soybean oil: Canadian imports and exports, 1981-1993. Quality of the 1993 soybean crop by county (in terms of mean oil content and mean protein content). Cash prices for Ontario soybeans (1991-1995). Ontario soybeans basis values (cents over futures; adjusted producer basis, and raw unadjusted basis). Soybean supply and demand, 1991-1995: USA, world. OSGMB appointments for 1994 (officers and committees). 1994 district committee members of soybean board.

Ontario soybean exports have risen from 199,636 tonnes in 1990/91 to 487,395 tonnes in 1993/94. They are increasing at a compounded rate of 35% a year for a 2.4-fold increase in 3 years. Address: Chatham, ONT, Canada. Phone: 519-352-7730.

2231. **Product Name:** Soya-Cow Soymilk (Bulk).
**Manufacturer's Name:** ProSoya International.
**Manufacturer's Address:** The SoyaCow Centre, 9 Veery Lane, Ottawa, ONT, K1J 7W7, Canada. Phone: 613-745-9115.
**Date of Introduction:** 1994. December.
**New Product–Documentation:** Talk with Raj Gupta and Frank Daller of ProSoya in Ottawa, Ontario, Canada. 1995. Nov. 21. Another new development is that ProSoya in Ottawa is starting to make bulk soymilk for food processors. They will be serving cow's milk dairies which will be test marketing Pure-Pak cartons of soymilk.

Talk with Frank Daller of ProSoya. 1995. March 7. This products was first sold commercially in bulk in Dec. 1994. It was sold to an ice cream company.

2232. *SoyaCow Newsletter (Ottawa, Canada).*1994. New license for West Coast plant. 3(4):1. Oct/Dec.
• ***Summary:*** "A Western Canadian group has formed Pacific ProSoya Foods Inc. to act as a licensed producer of soymilk using the SoyaCow process." In March, 1995, a SoyaCow SC2000 (which can produce 2,000+ liters/hour in a continuous process) is slated for installation at Pacific ProSoya's facility in Langley, British Columbia, Canada.

This plant will ship bulk soymilk to British Columbia, Alberta, Oregon, and Washington.

Note: Three SC2000 systems have been ordered and will be installed in (1) British Columbia, (2) Russia, and (3) at the ProSoya test plant in Ottawa.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. The SC-2000 was ProSoya's first continuous-process soymilk cooker. Development started in early 1993. Raj designed it and ProSoya and George debugged it and got it to work; it didn't work when it was first installed in the British Columbia plant.

2233. *SoyaCow Newsletter (Ottawa, Canada).*1994. New SC100 system successfully tested. 3(4):1-2. Oct/Dec.
• ***Summary:*** "In November, the new Ottawa facility of ProSoya Inc. successfully tested the latest generation of the SoyaCow SC100." It produces 500 liters/hour of soymilk and can be upgraded to the continuous process SC2000. A photo shows the SoyaCow SC100 Plant at ProSoya's facility in Ottawa.

2234. *SoyaCow Newsletter (Ottawa, Canada).*1994. Gelato Fresco receives first bulk soymilk shipment. 3(4):2. Oct/Dec.
• ***Summary:*** In late December Gelato Fresco, a maker of premium dairy and of soymilk ice cream in Toronto, was the first to receive a 1,000-liter test shipment of the bulk soymilk produced by the new SoyaCow plant in Ottawa. For the last year Gelato Fresco has used (and over-used) its own SoyaCow SC20 which could produce only 20 liters/hour. Gelato Fresco has successfully test marketed a premium line of soymilk-based frozen desserts. Orders are also coming in from a distributor in Wisconsin.

2235. *SoyaCow Newsletter (Ottawa, Canada).*1994. Russian program orders more SC-20s. 3(4):2. Oct/Dec.
• ***Summary:*** The Russian Soybean Association (ASSOY) has ordered 20 more tabletop SoyaCow SC20 systems to add to the ten similar systems they have already acquired during the past year. "ASSOY's soyfood program, which is based exclusively on the SoyaCow technology, is developing with unusual speed. Soymilk derived yogurt, tofu, mayonnaise, drinks, and ice cream as well as baked goods made using 'okara' soy-fibre, are all made in pilot or cottage industry production."

2236. **Product Name:** Soymilk (Chocolate-Peanut Butter).
**Manufacturer's Name:** Sweet Carrot Café.
**Manufacturer's Address:** 702 14th St. East, Saskatoon, SK, S7N 0P7 Canada.
**Date of Introduction:** 1994.
**Wt/Vol., Packaging, Price:** Bottle.
**New Product–Documentation:** Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. April 21. George introduced this, his last flavor of bottled soymilk, sometime in 1994. The Chocolate-Peanut Butter was a "power drink" that–along with the Soy Nog–people loved. Both flavors especially popular with cyclists. George used to keep a refrigerator at a cycle shop stocked with product. These guys would come back from their bicycle trips to the cycle shop and down a liter of soymilk.

2237. Grogan, Bryanna Clark. 1994. The (almost) no-fat cookbook: Everyday vegetarian recipes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 cm. [10 ref]
• ***Summary:*** This low-fat vegan cookbook contains a wealth of soy-related recipes, including 27 recipes that call for tofu. Address: Denman Island, east of Vancouver, British Columbia, Canada.

2238. Kritchevsky, David; Carroll, Kenneth K. eds. 1994. Nutrition and disease update: Heart disease. Champaign, Illinois: AOCS Press (American Oil Chemists' Society). vii + 279 p. No index. 26 cm.
• ***Summary:*** Contents: 1. Omega-3 fatty acids and heart disease. 2. Sodium and hypertension. 3. Dietary fiber and cardiovascular disease. 4. Lipids and cardiovascular disease.

This report, originally prepared in 1991 by the Life Sciences Research Office (LSRO) of the Federation of American Societies for Experimental Biology (FASEB) for the Food and Drug Administration, has been updated and reviews the most recent literature in this area. Address: 1. Wistar Inst., Philadelphia, Pennsylvania; 2. Univ. of Western Ontario, London, ONT, Canada.

2239. Ontario Oil & Protein Seed Crop Committee. 1994. Ontario soybean variety trials (Leaflet). Ontario, Canada. 9 panels. 22 x 10 cm.
• ***Summary:*** Rates soybean varieties and gives detailed agronomic data for four different heat unit areas: 2500-2800 heat units, 2700-2900 heat units, 2900-3300 heat units, 3300-3500 heat units (the furthest south; average yield: 3.26 tonnes/hectare). Address: Ontario, Canada.

2240. *Ontario Soybean Growers' Marketing Board Newsletter.*1994. Soybean feeding on the farm. 12 p. Supplement 1993/94.
• ***Summary:*** Contents: Introduction (raw soybeans, importance of proper and optimal heating, under-heated soybeans, over-heated soybeans). Common methods of heat processing: Roasting "moldy or musty" grain, extrusion, micronization, microwaving. Dairy and beef cattle: Whole roasted soybeans for dairy, roasted soybeans for beef. Poultry: Laying hens, Kunitz-free soybeans [trypsin inhibitor], broilers and turkeys, poultry meat, fat and carcass

characteristics. Swine: Seasonal effects, Kunitz-free soybeans for feeding swine, high protein soybeans for feeding swine.

A table shows: Ontario heat processors: Extruders, retailers, roasters, custom roasters. Equipment. Premix suppliers. Others. Maritimes. Quebec heat processors: Extruders, micronization, roasters.

Illustrations show the various types of animals fed soybeans. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2241. Ontario Soybean Growers' Marketing Board. 1994. New uses for soybeans (Leaflet). Ontario, Canada. 2 p. Undated. 28 cm.
• ***Summary:*** Contents: Soy diesel. Premium building materials (such as Environ). Industrial solvents. Anti-chronic disease agent (isoflavones and protease inhibitors from tofu, miso, and tempeh). Road dust suppressants. Asphalt and concrete release agents. Lubricants and hydraulic fluids. Biodegradable plastic utensils. Soy oil based inks. Soy textile fibres (can be used for erosion control on landscape projects, for peat pots, fishing nets, and "soy silk" in clothing). Soy adhesives (for plywood products and composites). Address: Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2242. Asahi Food Processing Co. 1994? Soybean materials and tofu quality: Soybean use at Asahi. Gyoda-shi, Saitama-ken, Japan. 13 p. 28 cm. Undated. [Eng]
• ***Summary:*** This very interesting report was produced by the Tofu Research Team in the company's Foods Laboratory. It shows how a top Japanese tofu manufacturer evaluates soybeans and processes for making tofu. Each year Asahi uses 4,900 tonnes (metric tons) of soybeans, of which 3,000 tonnes (61.2%) are IOM from the USA and 1,900 tonnes (38.8%) are grown in Japan. Contents: Flow sheet for making soymilk and tofu.

Chemical composition and viscosity of soymilk and hardness of tofu, made using 26 different soybean varieties and 3 coagulants–GDL, calcium sulfate, and magnesium chloride. The main soybeans are Enrei, Toyosuzu, Suzuyutaka, Nanbushirome, Tachinagaha, Yamabe daizu (+ or -), IOM, Vinton, Beeson, Kunitz, Zane, Forrest, 9 experimental Canadian soybeans bred at Harrow [Ontario], Best One (Harrovinton [Harovinton]), plus soybeans from Nepal, Celebes, and Chiang Mai.

Chemical composition of 26 soybean varieties and subunit composition of their protein (11S, 7S, etc.). Composition of other soybeans tested: Vinton organic, Tachiyutaka, Tamahomare, Fukuyutaka, Murayutaka, Raisen, Nakasennari, etc. Variables affecting tofu breakage, and tofu compression. Graph showing effect of A-4 subunit on viscosity change of soymilk after addition of magnesium chloride. Graph showing viscosity curves after addition of magnesium chloride coagulant (0.2%) to soymilk derived from 8 different soybean varieties (Note: Enrei gives the lowest viscosity and Vinton the highest). Dendrogram of cluster analysis on principal component score for Japanese soybean cultivars (Best suited for tofu are Enrei, Toyosuzu, Fukuyutaka, Shirosennari). Note: *Webster's Dictionary* defines dendrogram (a term first used in about 1953) as "a branching diagram representing a hierarchy of categories based on degree of similarity or number of shared characteristics esp. in biological taxonomy."

Three dimension chart of factor loading. Chart (2 pages) of variables affecting tofu quality: Vertical columns: Deliciousness (Color, taste, flavor, texture), nutrition, sanitation, cost. Horizontal columns: Points/characteristics, soybeans, extraction of soymilk, coagulation operation to make tofu, viewpoints (notes), Enrei, IOM. Address: 2-17-8 Mochida, Gyoda-shi, Saitama-ken, Japan.

2243. **Product Name:** Tofu, Soymilk, Dried Tofu Curds, and Veggie Burgers.
**Manufacturer's Name:** Harcan Kingsoya Co. Ltd.
**Manufacturer's Address:** 33 Casebridge Court, Units 5&6, Scarborough, ONT M1B 3J5, Canada. Phone: (416) 283-8328.
**Date of Introduction:** 1994?
**New Product–Documentation:** Talk with Duff MacKinnon of the Ontario Ministry of Agriculture and Food in Guelph. 1995. March 6. Harcan makes tofu, soymilk, dried tofu curds, and veggie burgers. They have a very small plant. One partner, from mainland China, speaks excellent English. The other two partners are Canadian.

2244. Davis, Bob. 1995. New developments at Sharon's Finest and with his work (Interview). *SoyaScan Notes.* Jan. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Richard Rose's flagship line of soy-based cheese alternatives from Sharon's Finest (Santa Rosa, California) has been off the market for the last 3 months. This happened because Richard changed manufacturers, from Savoldi Cheese Co. in Pennsylvania, to Whitehall in Wisconsin. (Note: Savoldi was located near the Galaxy Cheese Co. plant in New Castle, Pennsylvania.) Richard's cash flow is now zero. Bob feels the products from the new manufacturer are not as good as those they were meant to replace. Hemparella is made in Vancouver, BC.

Bob is now off he payroll and looking for work. He must stay in his present location, where his two children attend a Waldorf school. He would like to earn $65,000 per year, as he has been for the past two years; for the 5-6 years before that he was earning $55,000 per year.

Talk with Richard Rose. 1995. Feb. 22. A big dairy milk co-operative bought the company that was making and packing cheese alternatives for Sharon's Finest. They didn't want to continue making these cheese alternatives, and they

didn't give Richard any advance notice that they were stopping production of his products, so he had to scramble to find a new manufacturer. Now all is back to normal.

VeganRella did not sell as well as expected. It is still on the market but the product taught Richard that people don't really care if cheese alternatives contain casein. Address: 3812 E. Goldfinch Lane, Clinton, Washington 98236. Phone: 206-341-1259.

2245. **Product Name:** Fungle's Veggie Franks n' Beans (Fat Free); Veggie & Bean Burritos; Spaghetti & Veggie Balls.
**Manufacturer's Name:** Fungle's Fun Foods.
**Manufacturer's Address:** 16830 Ventura Blvd., Suite 326, Encino, CA 91436. Phone: 1-800-386-4537. 310-374-6893.
**Date of Introduction:** 1995. January.
**Wt/Vol., Packaging, Price:** 8 oz plastic tub.
**How Stored:** Frozen.
**New Product–Documentation:** Spot in Record Review (Abbotsford, Wisconsin). 1995, Jan. 25. Spot in Vegetarian Times. 1995. March. p. 14. "Frozen, fast and fun." The company makes 3 frozen vegetarian entrees in the line "Fungle's All Natural Meals for Kids.": Veggie Franks 'n Beans (which have soy franks, made by Yves), Veggie & Bean Burritos (contain soy cheese and soy oil), and Spaghetti & Veggieballs (contained soy veggie balls; it came as a sheet from Yves and they turned it into a ball). A color photo shows each package.

Talk with the company. 1995. July 31. They have just shut down production. A lot of vegetarians enjoy their products, but they don't have enough sales to survive. They don't know what they will do next.

2246. Wildwood Natural Foods. 1995. Price list–January 9, 1995. Fairfax, California. 5 p.
• ***Summary:*** Wildwood's own product lines include: Sandwiches (7 products, incl. burritos and sushi), salads (17), tofu and tofu products (13), soymilk (2), hot dogs (1), tempeh (4).

Wildwood also distributes products made by other companies: Red Wood Foods (16 products), Mrs. Wiggles Rocket Juice (12), Grainaissance (17; amazake, pudding, and mochi), Sonoma Salsa (7), Yves Veggie Cuisine (9), Lightlife Foods (13), Turtle Island Foods (1), NuTofu soy cheese (3), Señor Felix's (8), Heart & Soul (5, Trim Slices), Natures Babies (10, baby foods). Address: 135 Bolinas Rd., Fairfax, California 94930. Phone: (415) 459-3919.

2247. Ham, P. Marc. 1995. The work of Semences Prograin Inc. (Micronisation Canada Inc.) in Quebec (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This company was established in 1980 and is now a leader in Canada in the field of value added soy products. About two-thirds of their business is making full-fat micronized soybeans for use in animal feeds (mainly dairy cows, plus hogs and poultry), and one-third is in breeding and growing soybean seed (they presently grow about 2,000 acres year for use as soybean seed). They now have two micronizing plants which produce the Micro Flake, the Micro Milled product and the Micro Elite (made from higher protein soybeans, with high bypass). Mark believes that a micronized product makes better feed than that produced on a low cost extrusion cooker. Extrusion may be better for monogastric animals than it is for dairy. They have a research and development program for new soybean varieties. They also contract with a winter nursery in Chile for reproduction during the winter. They buy about 55,000 tonnes/year of soybeans for processing into animal feed and for exporting to the Pacific Rim. They are one of the largest companies in Quebec that buy soybeans and keep them in Quebec. The big trading houses buy soybeans then export them mostly to Rotterdam, Netherlands, to the European crush market. Prograin keeps its Maple Glen varieties identity preserved. They screen soybeans to sort them into 3 sizes. The big beans (18/64 inch and over) are sold to Japan for use as green vegetable soybeans, the medium sized beans (500 tonnes/year) are used in the Chinatown in Quebec to make tofu and soymilk, and the small soybeans are used by 3 companies for making soy sprouts in Quebec. They have a natto program as well. Address: Semences Prograin Inc. (Micronisation Canada Inc.), 145 Bas Riviere Nord, St-Cesaire, Quebec, J0L 1T0, Canada. Phone: (514) 469-5744.

2248. Goodale, Ralph. 1995. Re: Opening of the ProSoya bulk soya milk processing plant in Gloucester, Ontario, Canada. Letter to Mr. Frank Daller, President of ProSoya Inc., 5350 Canotek Road, Unit 7, Gloucester, Ontario K1J 9C9, Canada, Feb. 24. 1 p.
• ***Summary:*** "It was a pleasure to meet you and participate in the opening of the ProSoya bulk soya milk processing plant in Gloucester on January 12, 1995.

"I would like to congratulate your company for being part of the dynamic strategic alliance of companies which will, beginning with this plant, turn Canadian soya beans into beverages and foods for the domestic and export markets."

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. George was present at the commissioning of this plant in Gloucester (pronounced GLOS-tur, a suburb of Ottawa, Ontario, located south southeast of Ottawa) and he met Ralph Goodale. This is the one and only ProSoya R&D facility and bulk soymilk plant in Ontario. It contained a new SC-100–better than the first SC-100 prototype developed for ProSoya by APV-Crepaco; the prototype finally wound up in Russia. APV-Crepaco built this machine to sell, using

ProSoya technology. The SC-100 uses a batch process; it is basically just a big SC-20. Address: Minister of Agriculture, Ottawa.

2249. Montanaro, Pamela. 1995. Revolutionary developments with soymilk in Cuba. Part I (Interview). *SoyaScan Notes.* Feb. 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Cuba now has at least 15 factories in operation that make a soy yogurt drink for children. The goal is to have 37 factories in operation by the end of 1995. Leaders of the project believe these 37 factories will be sufficient to provide at least 2 liters per week of soy yogurt drink to all Cuban children ages 7 to 14. Given that the population of Cuba is about 11 million and 23% of the population is under the age of 15, there are roughly 1.1 million kids eligible to receive free soymilk. So Cuba plans to be producing about 2.2 million liters of soymilk a week by the end of 1995. Amazing!

Pam coordinates the Freedom to Travel Campaign for Global Exchange (based in San Francisco). They had decided to do a trip to Cuba during the first week in October, 1994, where the itinerary was focused on projects related to sustainable development–such as organic agriculture, alternative energy, alternative medicine, the bicycle revolution, etc. The trip would also be a "Travel Challenge," since the U.S. government presently prohibits most Americans from traveling to Cuba, and from investing in or spending U.S. dollars in Cuba. In 1962 the U.S. imposed an export embargo against Cuba, severely damaging the economy. This unilateral embargo, which is still in effect, prohibits even the export of food or medicine from the USA to Cuba. Stiffer trade sanctions enacted by the U.S. in 1992 made things even worse. The only other country that has consistently voted with the USA at the United Nations in favor of this embargo is Israel–and Israel is now operating the largest citrus plantation in the world in Cuba, and also benefitting greatly from investments in Cuban textiles, etc. for export. The "Travel Challenge" is designed to expose U.S. anti-Cuba policies and invite public debate in the USA about their usefulness. The Soy Cubano! project is part of a larger campaign to get food and medicine exempted from the U.S. trade embargo against Cuba. Pam recently met with the staff of Senator Paul Simon (Democrat from Illinois) who is about to introduce a bill that would exempt food and medicine from all U.S. embargoes.

While on this trip in Oct. 1994, Pam met and had a long talk with Dr. Alberto Ortega-Jhones, who is head of Cuba's new soyfoods research project (Address: *Instituto de Investigaciones para la Industria Alimenticia,* Carreterra al Guatal, Km. 3½, La Lisa, Havana, Cuba. Phone: 29-9110). Dr. Ortega is a Cuban-born national in his late 40s or early 50s; Pam found him to be "so moving, kind of like a saint in my eyes, very sweet and modest." One of the vice-directors at the Cuban Food Research Institute in Havana, he was involved for several decades in dairy food research. He was an expert in the subject, studied all over the world, and speaks very good English. He said that since the "Special Period" of austerity started in 1989, production of cow's milk has been cut to about 20% of what it used to be. To provide an alternative protein drink, the Cuban Ministry of Agriculture made soyfoods a priority, and started to seriously divert resources into the soy yogurt drink project. By May 1994 Dr. Ortega's project developed soymilk technology and a recipe that was efficient to produce and that Cuban children liked. Dr. Ortega said he believed that "soy protein is the protein of the future" and he feels the Cuban soymilk project and its technology could serve as a model for Third World countries.

Cuba has about 100 factories across the country that produce dairy products. Dr. Ortega was one of the leaders involved in setting up these plants and in launching the program that has provided one liter of cow's milk per day on the ration to every Cuban child between the ages of 7 and 14. This milk went to families, not to schools, so that family members could share the milk if desired. People 65 and over also got a liter a day.

From Dr. Ortega, Pam learned that Cuba was developing a number of facilities to manufacture a soymilk yogurt drink. Each facility was located inside a former cow's milk dairy, and was based on converting former dairy equipment to soymilk production. Cow's milk is being phased out. By Oct. 1994 three soy factories were already operating in Holguin, Santiago and Pinar del Rio. Pam visited the latter factory. While in Cuba, she also tasted a soy-based hard cheese and a cream cheese.

The refrigerated soy yogurt drink is packed in liter bottles, and sent to the neighborhood grocery shop *(bodega).* Cuba is on a ration system and the soy protein drink is available on the ration, so people go to their neighborhood bodega, present their ration card, and pick up their rations, including the soy yogurt drink. This drink is very thick–more like kefir or a milk shake than milk. It apparently has a low pH, which extends its shelf life–and most people in Cuba now have a refrigerator. After finishing the soymilk, a family returns the bottle to the bodega for recycling.

Cuba presently imports most of the soybeans used to make its soy yogurt drink from Canada and Brazil. Pam learned from Chuck Haren of Plenty Foundation that, at one point in its history, Cuba had developed a soybean variety that was especially well suited for tropical climates at that latitude. Plenty used to grow this variety in Dominica. By Oct. 1994 agricultural co-ops in Cuba were starting to grow soybeans under contract for the soy yogurt drink factories.

When Pam returned to the USA from Cuba she decided to try to help the Cuban soymilk project. So in October

1994 she established a new company named Soy Cubano! Company–the Cuba Soyfood Company, which would try to raise $50,000 to help fund another soymilk plant in Cuba by selling "honorary shares" to Americans interested in investing in the health of Cuban children. For a description of the company and its shares see Global Exchange 1994. As of Feb. 1995 Soy Cubano! had raised several thousand dollars. They have not yet sent the money to Cuba, since they are hoping that the Cuban government will allow it to be considered a direct business investment–thus creating the opportunity for a test case to challenge the U.S. embargo. If that does not materialize, the money will be used to make a direct cash donation–which is also "trading with the enemy."

One "Honorary Share" in Soy Cubano costs $5. Anyone who is interested in "investing" can contact the Food and Medicine Campaign at Global Exchange in San Francisco. Remember, however, that doing this involves a big risk because the penalty, if the U.S. government should choose to arrest anyone for "trading with the enemy," is up to 10 years in prison and a $250,000 fine. Pam says of Soy Cubano! "It's been kind of a magical project. It has so many dimensions to it and so many fine people are involved.

When Pam returned to Cuba in November 1994, eleven soymilk factories were in operation; she goes to Cuba roughly 5-6 times a year. Dr. Heshan Ragab, M.D., is working with Pam on this project. Pam has read Mark Messina's book, *The Simple Soybean and Your Health.* She found it "incredibly enlightening," and has purchased several copies of it since and given them to key people, including Dr. Ortega. Continued. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

2250. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. New margarine colour freedom. Feb. p. 1.
• ***Summary:*** On 21 Dec. 1994 Canada's Ministry of Agriculture, Food and Rural Affairs modified the 1949 Oleo Margarine Act by announcing that "effective January 1, Ontario manufacturers will no longer face restrictions on margarine colouring beyond the national food safety standards. In addition, restrictions surrounding the oil content of margarine will be removed, enabling Ontario manufacturers to produce a wider range of margarine products." Note: Prior to this time margarine in Ontario had to be colored either near white or a shocking very bright yellow.

The Ministry's decision came just before the implementation on 1 Jan. 1995 of a GATT provision allowing margarine imports into Canada for the first time in history. Soybean growers will benefit from the decision since approximately half of the oil from Canada's soybean crop is used in the production of margarine. "The decision is particularly crucial considering Ontario's increased soybean production in recent years." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2251. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. 1994 Annual Meeting highlights. Feb. p. 3.
• ***Summary:*** More than 300 soybean growers, industry and government representatives, and suppliers attended the Dec. 1994 Annual Meeting of the Ontario Soybean Growers' Marketing Board. Bernard Leung (photo shown) of Harcan Kingsoya spoke on soyfood opportunities. Garth Baxter of Maple Leaf Foods expressed his belief that the miso market holds the best potential for expansion of Canada's food soybean exports to Asia. New markets with good potential include Taiwan, South Korea, Indonesia, and the Philippines.

"Frank Daller of ProSoya reported that his company is setting up soymilk production facilities in several locations across Canada. Their strategy is to sell bulk soymilk to dairies for processing and packaging."

The Board reported a financial operating surplus of $311,225 for the year ending 31 August 1994, and a reduction in Board fees from 90 cents per tonne to 80 cents for the 1994 crop. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2252. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Margarine TRQ. Feb. p. 4.
• ***Summary:*** Under GATT, the Canadian federal government has agreed to allow 4,500 tonnes of foreign margarine (200 tractor-trailer loads) to enter Canada tariff free during 1995. This initial amount, which represents 3% of Canada's total margarine consumption, is referred to as the Tariff Rate Quota (TRQ). The TRQ is expected to rise significantly over the next 10 years, eventually reaching 100%. However, further WTO/NAFTA negotiations will determine the actual rate at which the border will open to foreign margarine. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2253. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Japanese miso mission visits Ontario. Feb. p. 4.
• ***Summary:*** Five Japanese miso manufacturers, who collectively purchase 180,000 tonnes/year of soybeans for their miso requirements, visited Ontario to see for themselves the excellent quality and appearance of Ontario soybeans. These 5 men represent over 1,600 miso manufacturers in Japan. They also met with OMAFRA Minister Elmer Buchanan. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2254. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Transportation study overhaul. Feb. p. 5.

• ***Summary:*** Under the Western Grain Transportation Act (WGTA), Canada's federal government pays $560 million each year to Canadian railroads to subsidize the movement of grains and oilseeds out of the prairie provinces. Major changes in the Act have been announced. "Transport Canada has indicated that it will stop paying the WGTA subsidy and Agriculture and Agri-Food Canada doesn't have any extra funds available in its budget to continue the subsidy. Proposals for change include phasing the program out over several years and an immediate buyout."

OSGMB is continuing to press the federal government to eliminate minimum compensatory rail rates on canola products moving east of Thunder Bay. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2255. MacKinnon, Duff. 1995. Restrictions on mixing soy and dairy products in Ontario province, Canada (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Under Canada's Edible Oil Act, the blending of most soy and dairy products is not legal, although certain specific products, such as coffee whitener and edible oil topping (whip topping) that were on the market when the law was written were grandfathered and kept legal. Duff would guess that this Act was passed in the 1950s or 1960s.

If illegal imported products are noticed on the shelves of Canadian food stores, any person may complain to the Canadian Ministry of Agriculture. Inspectors will investigate the case. Address: Ontario Ministry of Agriculture and Food, GAC RR#5, P.O. Box 1030, Guelph, ON N1H 6N1, Canada. Phone: 519-767-3166.

2256. Hume, Christopher. 1995. Forgotten Toronto and a lost future: Architectural monument's days numbered and few people seem to care [Victory Soya Mills]. *Toronto Star (Ontario, Canada).* March 29. p. F1. Entertainment section.
• ***Summary:*** A demolition permit was issued two weeks ago for "Victory Soya Mills and word is the east-end lakeside monument has no more than two or three months of earthly existence left." The city has refused to designate the complex as a historical site. The owners, CanAmera Foods and Central Soya of Canada plan to raze the site; until that is done, it is for them a "bottomless pit of property taxes and round-the-clock security." The cost of demolition, with a ball and chain, is estimated at $3 million.

A large photo taken from ground level shows the stately row of concrete silos. Address: Star's Architectural Critic.

2257. Cloud, Jon. 1995. Relationship with ProSoya Inc. in Ontario, Canada (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John has known the people at ProSoya for years. ProSoya has a staff of 3, and they are not producing any products yet. They were operating off government grants initially–probably both provincial and federal (Ag Canada) grants. The government apparently saw the possibility of creating jobs, setting up a franchise, and perhaps exporting the technology or products. John shipped them at least 3 large samples of organically grown soybeans on a skid in Sept. 1994. They had no records of the shipment, and only one person vaguely remembered it. They called John in the fall and asked him to set aside a considerable tonnage of organically grown soybeans–of which they have taken none because they are not in production. John wonders how long the company can survive.

Update, 1995 May 17. ProSoya may have a contract with Neilson Dairy, a large Canadian ice cream manufacturer. ProSoya may make soymilk for them to use in making a non-dairy soy ice cream. This could pull ProSoya's fat out of the fire. Note: Neilson launched this soy ice cream in Nov. 1996. Address: Cloud Mountain Inc., 342 Indian Rd. Cres., Toronto, ONT M6P 2H1 Canada. Phone: (416) 762-0940.

2258. Carroll, Kenneth K.; Kurowska, Elzbieta M. 1995. Soy consumption and cholesterol reduction: Review of animal and human studies. *J. of Nutrition* 125(3S):594S-597S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [25 ref]
• ***Summary:*** Contents: Introduction. Factors responsible for cholesterolemic properties of dietary proteins. Mechanism of action of dietary proteins and amino acids. Address: Centre for Human Nutrition, Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, N6A 5C1, Canada.

2259. Furuhata, Hideki. 1995. Japanese soyfoods markets. Paper presented at a conference titled "Producing Soybeans for the Soyfoods Market." 9 p. Held 2 March 1995 at Ames, Iowa.
• ***Summary:*** This paper consists of nine very interesting statistical tables, one on each page. Table 1 shows the supply and demand for soybeans in Japan from 1984 to 1992 (in tonne = metric tons). The supply of Japanese-grown soybeans decreased from 126,000 tonnes in 1984 to a low of 73,000 tonnes in 1992, and imports increased from 4,401,000 tonnes in 1984 to 4,725,000 tonnes in 1992. The demand for soybeans from crushers has stayed about steady, ranging from a low of 3,428,000 tonnes in 1991 to a high of 3,928,000 tonnes in 1985. Demand for food uses has increased from 786,000 tonnes in 1984 to a high of 927,000 tonnes in 1992 (up 18%). Demand for use as feed has increased from 55,000 tonnes in 1984 to 95,000 tonnes in 1992.

Table 2 shows soybean utilization in Japan by type of food product from 1987 to 1994: Use of soybeans for tofu and aburage stayed about steady at 498,000 tonnes, by far

the largest food use. Use for miso decreased slightly from 180,000 tonnes in 1987 to 170,000 tonnes in 1994. Use for natto grew strongly from 97,000 tons in 1987 to 110,000 tonnes in 1994. Use for kori-tofu (dried-frozen tofu) grew slightly from 29,000 tonnes in 1987 to 30,000 tonnes in 1994. Use for soy sauce grew strongly from 5,350 tonnes in 1987 to a record 25,300 tonnes in 1992, dropping slightly to 23,000 tonnes in 1994. Use for soymilk decreased slightly from 4,000 tonnes in 1987 to 3,100 tonnes in 9994. Total use of soybeans for food in Japan grew slowly from 875,350 tonnes in 1987 to 930,000 tonnes in 1994 (up 6%).

Table 3 shows Japanese population and per capita consumption of soyfoods from 1982 to 1992. Population grew from 103,720,000 to 124,452,000 during this period, while per capita consumption grew from 6.8 to 7.4 kg/capita (up 8.8%).

Table 4 shows per family expenditures and consumption per year on tofu, natto, miso, and soy sauce from 1982 to 1992. For example, expenditures on tofu increased from 2,535 yen in 1982 to 7,992 yen in 1992, while consumption fell from 87.98 cakes to 79.26 cakes. Thus in 1992 the average Japanese family consumed 1 cake of tofu every 4.6 days.

Table 6 shows imports of soybeans for food from the USA, Canada, and China from 1982 to 1992. Imports from the USA are subdivided into IOM, Beeson, and other identified varieties. In 1992 about 88.7% of food-grade soybeans imported to Japan from the USA were IOM. Moreover, of all these soybeans imported for food use in 1992, about 76.6% came from the USA, 21.5% from China, and 1.85% from Canada.

Table 6 shows the amount spent per capita by people of different 5-year age-groups on four soyfood products. The average person in the age 60-64 year group spent ¥2,976 on tofu, ¥1,539 on miso, ¥1,490 on soy sauce, and ¥1,098 on natto. The average person in the age 30-34 year group spent ¥1,581 on tofu, ¥603 on miso, ¥508 on soy sauce, and ¥708 on natto.

Table 7 shows the source of soybean used to make four soyfood products in 1984, 1990, and 1992. In 1992, of the 498,000 tonnes of soybeans used in tofu and aburage in Japan, 74.8% of the soybeans were IOM from the USA, 6.0% were Beeson (USA), 8.0% were other U.S. varieties, 3.0% were from China, and 8.0% were grown in Japan. Of the 30,000 tonnes use to make dried-frozen tofu, 86.7% were IOM and the rest were from China. Of the 108,000 tonnes used to make natto, 55.5% were from the USA and Canada, 39.8% were from China, and 4.6% were grown in Japan. Of the 176,000 tonnes of soybeans used to make miso, 88.0% were from China, 5.7% were white-hilum beans from the USA, and 6.25% were grown in Japan.

Table 8 shows that production of soybeans in Japan from 1982 to 1994 has decreased sharply. In 1982 some 262,300 tonnes were produced on 147,000 ha with a yield of 1,782 kg/ha. In 1994 some 98,800 tonnes were produced on 26,500 ha with a yield of 1,620 kg/ha.

Table 9 is two charts showing the distribution system for (1) Imported soybeans from suppliers to end users, and (2) Domestic soybeans from farmer to end users. Farmers sell to the Zenno Nokyo or a collector. Address: Mitsui & Co. Phone: 515-294-0160.

2260. Hayes, Keri. 1995. Feeding their own: Cubans turn to soy as an alternative protein source. *Bluebook Update (Bar Harbor, Maine)* 2(1):1, 3-4. Jan/March.

• ***Summary:*** Pam Montanaro of Global Exchange (San Francisco, California) explains how Cubans–led by Alberto Ortega Jhones–have turned to soy and developed a host of delicious products, especially soymilk yogurt drink (in five flavors), which are now being produced in factories that formerly made dairy products. These factories are also manufacturing hard cheese from soymilk, soymilk cream cheese, and soymilk ice cream.

Some of the soybeans used to make these soyfoods are now being grown in Cuba; however most are imported from Canada and Brazil.

The USA, which has a trade embargo against Cuba, also holds embargoes against Iraq, North Korea, Libya, Serbia, and Montenegro. However the "Cuban embargo is the only one, at this time, that denies the right to trade for food and medicine." A photo shows two men at work in one of the dairy factories that has been converted to include a soyfoods processing section.

2261. Ontario Soybean Growers' Marketing Board. 1995. Technical soybean mission: Japan, Hong Kong, Malaysia, Singapore. March 10-26, 1995. Chatham, Ontario, Canada. 23 p. 28 cm. [Eng]

• ***Summary:*** Contents: Participating members: Dr. Karen Lapsley, Mr. Ron McDougall, Mr. Michael Loh, Mr. Doug Jessop (food technologist and tofu expert, Harrow Research Station), Mr. Kim Cooper (marketing specialist, OSGMB). Note: This is the first Canadian soybean mission in which a food technologist (Doug Jessop) participated. Background. Mission objectives. Acknowledgements. Mission details–Japan: Canadian embassy.

Japan Miso-Co-op Industrial Association: Japan imports about 250,000 tonnes {metric tons} of soybeans from China each year, and about 150,000 tonnes of that amount is for the miso market. The remaining miso soybeans come from Canada, USA, and Japan. The best soybean for making miso comes from the Hokkaido area of Japan. It is a large, white hilum type, perhaps Toyomasuri. Generally the larger the soybean the better for making miso. Japanese miso makers need two types of soybeans from Canada: (1) Normal SQWH (Special Quality White Hilum); average values for color, taste and texture are acceptable though higher values would be preferable; (2) High

Premium Soybeans; they would consider paying a premium for better color, taste, and texture.

Azuma Natto Foods Co. Ltd.: This natto company uses 7,000 tonnes/year of soybeans making them the third largest natto maker in Japan. They use 65% USA, 25% Japanese, and 15% Canadian soybeans. There are four sizes of natto: Small natto < 5.5 mm accounts for 72% of the natto market in Japan; Large natto, 5.5 to 6.2, account for 18%. Extra large natto > 8.5 mm account for 18%. Split seed natto account for 10%. Factors in assessing the suitability of soybeans for natto are: Fat content should be less than 19%. Total sugars–Group 1 contains sucrose, fructose, and glucose, group 2 contains raffinose and stachyose. Calcium affects the hardness or softness of natto. The ideal range is 180-250 mg/100 gm. Sanwa Company–Tofu manufacturer.

Wed., March 15–Japan Tofu Association: There are over 20,000 tofu makers in Japan, and 53 of these are members of this association, with half of the 53 being in the Tokyo area. Only 185 tofu manufacturers in Japan have 30 or more employees. Tofu makers consider there are two types of organic soybeans: true organic and semi-organic. The association imports about 2,000 tonnes of each type from the USA; they are OCIA certified.

Home Foods Company Ltd. uses 4,000 metric tons of soybeans a year, mostly a blend of 70% Chinese white hilum and 30% U.S. white hilum. The soys from the USA are I.O.M. soybeans, especially the "High Super" variety. For the more premium market they use a blend of 50% Japanese soys and 50% Harovinton soybeans. They have also just started blending 50% Chinese and 50% Canadian white hilum soybeans. The two most important criteria for their soybeans are high protein and high total sugars. Sugar levels of Chinese soybeans (24-25%) are higher than those of Canadian soybeans (23-24%).

Thursday, March 16–Takeya Miso Co.: Ikuo Fujimori, President. Takeya has two plants employing 100 production workers and using 5,000 to 6,000 tonnes of soybeans yearly. 70-80% of their products are sold in supermarkets. For years they have been using the U.S. soybean variety Kanrich.

Nagano Chushin Agricultural Experiment Station: They have been breeding soybeans since 1957 and in that time have developed and released 17 varieties, the most famous being Enrei. The staff of 34 includes 5 soybean breeders. Dr. Nobuo Takahashi has been breeding soybeans for over 18 years. Japan has domestic soybean area of 370,500 acres (150,000 ha); it is decreasing, so imports are increasing.

Nagano Miso Industrial United Co-operatives: This group consists of 8 local co-ops made up of 160 miso manufacturers, who pay a fee to this group based on sales. There was a detailed discussion of the types of sugars in soybeans necessary for good miso.

Friday March 17–National Food Research Institute. Tsukuba is developing into a science research park, now containing over 200 different research institutes. NFRI, originally founded in 1934 as the Rice Institute, moved to Tsukuba from Tokyo in 1973. Thirty years ago, all tofu in Japan was made with Japanese soybeans. Dr. Toshiro Nagai spoke about natto: In 1992 the natto needs of Japan were met by soybeans from China (45%), USA (38%), Canada (17%), and Japanese domestic (8%). Natto consumption has increased by about 10% for each of the last few years. Dr. Sayuki Nikkuni spoke about miso: In 1992 the miso needs of Japan were met by soybeans from China (87%), USA (6%), Japan (6%), and Canada (1%). Dr. Kaoro Koyama spoke about tofu: In 1992 the soybeans for tofu totaled 490,000 tonnes and came from USA (390,000 tonnes; 80%), Canada (50,000; 10%), Japan (20,000; 4.1%), China (20,000; 4.1%), and South America (10,000; 2.0%).

Asahi Food Processing Co. Ltd. This plant, which has 350 employees and operates 365 days/year, was established in 1972 and produces tofu, fried tofu, natto, noodles, and juices. They use 15 tonnes of soybeans daily or 4,900 tonnes/year, of which 38.8% are grown in Japan and the remaining 61.2% are IOM from the USA. Each day they make 120,000 cakes of tofu, 100,000 pieces of fried tofu, and 20,000 packages of natto. Most of the soybeans they use in production are dehulled. They use about 500 tonnes/year of OCIA certified soybeans from the USA and some semi-organic soybeans from Japan. The prices they pay per kg of soybeans are: IOM 30-40 yen; Vinton, identity preserved varieties, and Harrovinton [Harovinton] 100 yen; organic 120-140 yen; Enrei (Japanese) 400 yen.

Saturday, March 18–Hong Kong. Canadian High Commission. Canada Packers (Hong Kong) Ltd.

Monday, March 20. Shenzhen Economic Zone: This area of 30 square km, just outside the Hong Kong border, contains 1 million people or 60% of the provincial population, all of whom require a special permit to work in the area. This economic zone is booming, basically due to spiralling costs in Hong Kong, where many businesses and factories are closing and moving to this area, where land and labor costs are much lower.

Shenzhen Vitasoy (Guang Dong) Foods & Beverage Co. This plant, which is only one year old, produces a major share of the soymilk for Hong Kong. They are able to import soybeans at a low tariff rate because they ship the majority of their finished products back into Hong Kong. The plant uses Canadian SQWH (Special Quality White Hilum) soybeans, but has problems with uneven seed size. They presently receive the soybeans in 45 kg jute bags, but would prefer strong 45 kg poly-lined paper bags. A small percentage of dairy milk is mixed with the soymilk, which is thought to improve its texture and taste.

Tuesday, March 21. Dah Chong Hong, Ltd. This was the first company to import Canadian soybeans for food use in the early 1970s. Dah Chong pointed out that Ontario soybeans were experiencing increasing competition from

Quebec soybeans, especially in the past two years. The Quebec soybeans are 5-10% less expensive, due to lower basis levels, lower freight costs, and being more aggressive in a new market. Their quality is similar to Ontario, though the seed coat color is somewhat darker. There are about 50 tofu makers in Hong Kong, 10 larger size and 40 smaller size, although there is not a large difference is size. Consumers believe that packaged tofu is not as fresh as that purchased fresh daily from local markets.

Amoy Food Ltd. (Dr. Alain Butler; This plant makes soy sauce and other sauces used in cooking. They use only Canadian soybeans, the Maple Glen variety from Quebec). Wed., March 22. The group visited Hung Tao Soya Bean Products Pty., a traditional Hong Kong tofu and soybean sprout plant in the New Territories.

Thursday, March 23–Malaysia. Canadian High Commission. Yeo Hiap Seng (Malaysia) Berhad (Contains excellent details on the company). Chop Lee Kit Heng Sdn. Bhd. (A soybean trader selling to end users in Malaysia).

Friday, March 24–Singapore. Canadian High Commission. Yeo Hiap Seng Ltd. (Singapore). Meeting with nine tofu manufacturers in Singapore. (The name of each company is given. There are 40 tofu makers in Singapore, and the majority now use Canadian soybeans. Tofu growth in the last 5 years has been very rapid and competition is fierce). Asia Corporation Pte. Ltd. (This company accounts for about 70% of the soybeans imported into Singapore and Malaysia. They first brought Canadian soybeans into the area in 1978). Canadec Private Ltd. Sing Yeap Trading Pte. Ltd.

Saturday, March 25–Unicurd Food Company Pte. Ltd. (Mr. Goh gave a tour of his facility and discussed his plans for a new plant in late 1995). Yam Thye & Co. (Warehouse).

Encore Ltd.: Sylvia B. Hollenstein, managing director. This company, based in Switzerland, uses Swiss technology to produce soy yogurts, chocolates, and noodles in Switzerland from Chinese soybeans–mostly for the taste. The products are shipped from Switzerland to the company's 3 retail stores in East Asia; they plan to expand to 10 retail stores by the end of 1995.

Appendixes A through J, issued as a separate document, contain extensive and detailed information and some published documents related to the technical mission. Address: P.O. Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2262. Rao, A.V.; Sung, M.K. 1995. Saponins as anticarcinogens. *J. of Nutrition* 125(3S):717S-724S. March. Supplement. First International Symposium on the Role of Soy in Preventing and Treating Chronic Disease. [53 ref]
• ***Summary:*** Contents: Introduction. Present knowledge: Direct cytotoxic and growth inhibitory effects against tumor cells, immune-modulatory effects, saponin binding to bile acids, normalization of epithelial cell proliferation, knowledge on soybean saponins.

Soybeans are one of the most important sources of dietary saponins. They are the main source of protein in many vegetarian diets. The authors found that soybean saponins at the concentration of 150-600 ppm had a dose-dependent growth inhibitory effect on human carcinoma cells. The viability of those cancerous cells was also significantly reduced. Soybean saponins did not increase cell membrane permeability. Recent research suggests that, in addition to anticarcinogenic properties, saponins also possess cholesterol-lowering, and immune-stimulatory properties. However they also have a bitter taste, and they can lower nutrient availability and decrease enzyme activity, contributing to a growth-retarding effect in animals. Address: Dep. of Nutritional Sciences, Univ. of Toronto, Toronto, ONT, Canada.

2263. Robinson, P.H.; Fredden, A.H.; Chalupa, W.; et al. 1995. Ruminally protected lysine and methionine for lactating dairy cows fed a diet designed to meet requirements for microbial and postruminal protein. *J. of Dairy Science* 78(3):582-94. March. [22 ref]
• ***Summary:*** Soybean meal and corn gluten meal were used in the diets of dairy cows at Trura, Nova Scotia, and Fredericton, Nova Scotia. Address: 1. Atlantic Ruminant Research Group, Fredericton Research Centre, P.O. Box 20280, Fredericton, New Brunswick E3B 4Z7, Canada; 2. Nova Scotia Agricultural College, Truro, NS B2N 5E3.

2264. Gupta, Rajendra P. 1995. Automatic food processor. *U.S. Patent* 5,408,922. April 25. 6 p. Application filed 7 June 1993. 3 drawings. [1 ref]
Address: 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada. Phone: 613-745-9115 or 613-744-4401.

2265. Buzzell, Dick. 1995. What's new in soybean breeding [in Ontario]. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 8(1):2. April.
• ***Summary:*** "The goal of soybean variety development at the Harrow Research Centre is to produce varieties with improved quality for processing into soyfoods. At the same time, improvements are made in disease and pest resistance, soybean yield, and other traits required by soybean growers."

Soybeans with a higher protein content will have to be more expensive. "We are also selecting for differences in protein composition, since this may affect the making of different kinds of tofu. Also, some consumers may prefer the natural flavour of soybeans, whereas others may prefer a more bland flavour, so both kinds are being selected." Address: PhD, Soybean Breeder, Harrow Research Centre, Harrow, ONT, Canada.

2266. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1995. Technical mission to the Far East. 8(1):3. April.
• ***Summary:*** Five members from the Canadian soybean industry visited Japan, Hong Kong, Malaysia, and Singapore from March 10-25, 1995. Members included Dr. Karen Lapsley (Chairperson of the Centre for Food & Animal Research, Ottawa, Ontario), Mr. Doug Jessop (Food Technologist from the Harrow Research Station, Harrow, Ontario), and Mr. Ron MacDougall, Mr. Michael Loh, and Mr. Kim Cooper (OSGMB, Chatham, Ontario).

2267. Fujimori, Ikuo. 1995. Canadian soybeans for miso manufacturing in Japan. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 8(1):1. April.
• ***Summary:*** "I have been using Canadian soybeans constantly since 1975, which I first tested soybeans from Ontario. I chose the variety 'Harwood' because of its large size, white hilum, and high sugar content... These first soybeans were bagged shipments in containers, and now we receive the soybeans in bulk containers.

"In 1978 I visited soybean growing areas in Ontario. I found a new variety "Harcor" to be one of the better varieties for miso making... The majority of the Ontario soybeans purchased are SQWH (Special Quality White Hilum), namely mixed varieties of white hilum soybeans. At the same time we have bought some 'IP' (Identity Preserved) varieties in limited quantities."

"In the 1980s, I joined with four soybean missions to Canada, sponsored by the governments of Canada and Ontario, and also by the Ontario Soybean Growers' Marketing Board (OSGMB). I gained much information and knowledge about Ontario soybeans. I was impressed by the co-operative system between the OSGMB, the governments of Canada and Ontario, the soybean producers and the industry personnel involved. I was also impressed by the work of keeping quality standards by the Canadian Grain Commission, and by the study of developing new soybean varieties for food use at the Harrow Research Station. Using Canadian soybeans, I found the quality rather stable compared to Chinese soybeans. That is a big advantage for miso manufacturing."

In December 1994 the Japanese Miso Manufacturers Association visited Ontario. As of 1995 "the quality of Chinese soybeans seems unstable and their ability to supply is fluctuating. Therefore many miso makers are now thinking of using Canadian and American white hilum soybeans instead of Chinese soybeans."

A photo shows Mr. Fujimori, Fred Brandenburg of OSGMB, and Elmer Buchanan (Ontario Minister of Agriculture).

Note: This bi-annual newsletter was formerly titled *Ontario Export Soybeans.* Formerly 2 pages, green on yellow, it is now 4 pages, dark green and brown on tan. Address: President, Takeya Miso Co., Nagano, Japan.

2268. Hedges, Brad. 1995. Lipoxygenase in soybean seed. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 8(1):3. April.
• ***Summary:*** "Soybean seed contains three distinct proteins called lipoxygenases. The unsaturated fatty acids, linoleic and linolenic acid, are broken down by the lipoxygenase enzymes. The compounds produced by lipoxygenase activity have an undesirable bitter taste and a grassy flavour. One of the compounds is hexanal, which is the same chemical one smells when grass is cut. To improve the taste and flavour of soya products, lipoxygenases are inactivated by cooking or extraction, using chemical solvents.

"Lipoxygenases can also be removed from the soybean seed genetically. Varieties have been developed that lack lipoxygenase-2, the most active lipoxygenase enzyme. Varieties that lack two, or all three enzymes are under development at the Agriculture and Agri-Food Canada Research Centre at Harrow, Ontario. Lipoxygenase null varieties are preferred by processors, because the resulting soya products have better flavour and smell. However, it should be noted that, in some regions of the world, consumers prefer beany flavours." Address: Soybean Research Manager, Pioneer Hi-Bred Production Ltd., Chatham, Ontario.

2269. Lowe, James M. 1995. Testing at the Canadian Grain Commission. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 8(1):2-3. April.
• ***Summary:*** "Canada has long been recognized internationally as a producer and supplier of high quality grains... For over 25 years the Canadian Grain Commission (CGC) has monitored shipments of Canadian grains, including soybeans, for a variety of compounds that might pose a risk to the health of animal and human populations." Today the CGC tests for over 70 pesticide residues, 10 mycotoxins (including aflatoxins), and "heavy metals."

A photo shows members of the Japanese Miso Manufacturers Association examining grain samples at the CGC office in Chatham, Ontario. Address: Regional Manager, Canadian Grain Commission, Chatham, Ontario, Canada.

2270. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Profiles: The Ontario Grain and Feed Association (OFGA), and its executive vice president Dave Buttenham. April. p. 7.
• ***Summary:*** Describes the activities of OFGA, which is a voluntary, self-funded organization representing about 400 elevator locations across the province. The "industry is more confident that ever of the health of its long-term relationship with the province's soybean producers."

"Under the terms of the Ontario Farm Products Marketing Act, OFGA representatives meet each year with representatives of the OSGMB and the crushing industry to negotiate maximum handling charges, drying fees, and a pricing formula that currently requires buyers to pay at least as much for Ontario soybeans as the beans would be valued in export markets. As well, the elevators which are licensed by the OSGMB to buy soybeans, deduct the soybean check-off [checkoff], and send it to the board, and help deliver the soybean advance payment program." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2271. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. New export association [Canadian Soybean Export Association]. April. p. 3.
• ***Summary:*** A few years ago the OSGMB called together Canadian soybean exporters so see whether it might be possible for them to work together as a group, with the Board, since all shared a common goal. A committee was formed and it adopted the name of the "Canadian Soybean Export Promotion Committee." It has since evolved and adopted a new name, the "Canadian Soybean Export Association." The goal is to promote the export of Canadian soybeans and soya products into world markets. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2272. Perlmutter, Johanna F. 1995. Book review: *Encounters with Aging: Mythologies of Menopause in Japan and North America,* by Margaret Lock (1993). *J. of the American Medical Assoc.* 273(17):1394. May 3. [1 ref]
• ***Summary:*** In this pioneering and now famous study, the author interviewed more than 1,000 Japanese women on the subject of menopause (in Japanese, in Japan) over a period of 20 years. The interviews were designed to establish what symptoms these women had experienced after menopause, and how they thought about it. She explains that Japanese women find menopause less traumatic than American women. She compared her findings with the results of a study of 2,000 Canadian women. The Japanese diet, rich in soyfoods, was identified as a major reason because of the natural phytoestrogens found in soyfoods.

*Webster's Dictionary* defines menopause, a term first used in 1872, as "the period of natural cessation of menstruation occurring usually between the ages of 45 and 50." The author acknowledges several problems with terminology in this study. First, there is no term for menopause in Japanese; therefore a term that is thought to be similar was used. Second, in English the terms "menopause" and "mid-life crisis" are not clearly separated. From the responses quoted in this book, the term used may be closer in meaning to "mid-life crisis" than to "menopause."

Acknowledged cultural problems also exist: Japanese women are polite and want to please. They may give the answer they think the interviewer wants to hear. Because they tend to be shy, they may be embarrassed by the questions being asked and thus may not be completely truthful in their responses. Address: M.D., MPH, Beth Israel Hospital, Boston, Massachusetts.

2273. Shimizu, Teruo. 1995. Recent developments at Miyako Oriental Foods (Interview). *SoyaScan Notes.* May 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Miyako's miso business is growing rapidly. They can no longer keep up with demand. This summer Miyako plans to triple its production volume. They hope to buy another plant nearby and make miso in both their current plant and at the new location. Note: As of Feb. 1994 Miyako reported that it was making 2.2 million lb/year of miso.

In 1982 Miyako started importing freeze dried miso and spray dried miso from its parent company in Japan. But the high cost of Japanese imports resulting from the steady decrease in the value of the U.S. dollar has led Miyako to develop its own freeze-dried product in California. They are working with Mercer Processing Inc. in Palo Alto, which does the freeze drying. Later, they plan to use this freeze-dried miso to formulate other products, such as instant miso soups.

In addition, they plan to develop a spray-dried miso (which is lower quality and less expensive, and contains maltodextrins).

Miyako has started getting my enquiries for products from companies in Canada and Mexico because of NAFTA. Address: Vice President, Miyako Oriental Foods Inc., 4287 Puente Ave., Baldwin Park, California 91706. Phone: 818-962-9633.

2274. Yee, Clarence. 1995. Re: Invention of low-cost, fully-automated yuba processing equipment. Letter (fax) to William Shurtleff at Soyfoods Center, May 15. 1 p.
• ***Summary:*** Clarence has designed and successfully built a production size automatic yuba processing unit for Sunrise Markets Inc. in Vancouver, BC, Canada. The yuba forming tray surface is 4 feet by 8 feet. One unit can make about 5 lb/hour of yuba. The production capacity rises as the humidity of the room decreases (the ideal is 30%), as a fan is used to draw steam off the table, and as the temperature of the room rises (the ideal is 100ºF). The unit is very reliable and easy to operate. The cost to make this unit is about $4,500, which is less expensive than the same size manual processing unit made in Taiwan. The sales price has not yet been determined. An unskilled worker could easily look after 40 units; a conveyor lifts off the yuba sheets, so he only has to clean the equipment.

Sunrise now has two of these yuba units, and they started to make fresh yuba about 4 months ago. The product has a shelf life of about 10 days. Clarence worked for Ken

Lee's yuba company in California about 10 years ago. Later he helped Peter Joe set up the soyfoods equipment at Sunrise Market in Vancouver. He is now retired. Address: 4027 Charleswood Dr., N.W., Calgary, ALB T2L 2E1. Phone: (403) 282-5767.

2275. Feldman, Nick. 1995. New developments at Nutrisoya (Interview). *SoyaScan Notes.* May 16. Conducted by William Shurtleff of Soyfoods Center. [Eng]

• ***Summary:*** Giles Goulet is no longer president of Nutrisoya. In Oct. 1993, he sold his shares to Nick Feldman and one other person, then he (Giles) left the company in Aug/Sept. 1994. Nick is the new president. As soon as Mr. Goulet was out of the company, it started doing very well, and it is still doing well. Mr. Goulet had big ideas but they were not feasible. He did not know the market and was not skilled at marketing.

Nutrisoya got its company name from a brand name owned by Victor Food Products, Ltd. in Scarborough, Ontario. "We had our lawyers take care of that." But Nutrisoya did not buy the company Victor Food Products.

Nutrisoya built its own soymilk plant using components from various sources, including many pieces made by Alfa-Laval. "If you have the right engineers who know something about making good-tasting soymilk, with a few modifications, we have been able to make a soymilk with no beany flavor."

Nutrisoya has never had a Tetra-Brik machine in house; they have their soymilk products packaged in Tetra-Brik cartons by a very large co-packer in Canada. Nutrisoya's competition in soymilk comes largely from Edensoy and from Pacific Foods "which now has a 3rd generation Tetra Pak machine, with the re-cap capability, though supposedly they have not yet perfected the technology." Nutrisoya is the biggest soymilk manufacturer in Canada, with little competition in soymilk from other Canadian companies.

Soymilk products: They no longer make Chocoya; even though it is a great product, it was marketed incorrectly, more like a dairy milk. Since the word "Soya" did not appear on the front panel, consumers often thought it was a dairy milk and so they were not willing to pay a little more for it. It was sold on the shelf in Quebec next to a dairy milk named Chocayo, which retailed for $0.30 less per 3-pack. He plans to introduce it again some time. Nutrisoya still makes their Natura (pronounced nah-TUR-uh) line of soymilks in strawberry, vanilla, and original flavors, in aseptic Tetra Brik cartons. Nick has a brand new soymilk product named Nutrisoy that he is ready to launch in 1 liter Tetra Brik cartons. "We've been working on it for quite a while. I just have to press a button and it will be out in 2½-3 weeks. It has the exact same ingredients as Edensoy, except it is lower in fat, and has a more neutral taste and a better nutritional profile. The Nutrisoy line, which will start with vanilla and original flavors, will probably end up replacing the Natura line." Nick would ideally like to package the new line in re-cap Tetra Brik cartons like Pacific does, but that package is not available to him. "I'm a little bit scared to invest a lot of money in a product and its packaging that is going to be competing against other products that have more advanced packaging," the re-cap pack. So Nick hasn't decided when, or even if, he will "press the button." The big question is this: What percentage of consumers, who are less cost conscious, are willing to pay about 20% more at retail for the re-cap pack. Bill suggests that Nick contact Tetra Pak and ask to see their market research on this question. Most of Tetra Pak's film for all of North American is made at a plant in Aurora, Ontario (near Toronto). A plant in Denton, Texas, specializes in the new re-cap packaging. The Natura soymilk line is made more for the supermarkets in Quebec, which sell 10-15% of the total volume. In British Columbia a lot of soymilk is sold in supermarkets. Nick feels his new-formula Nutrisoy soymilk will give him a big advantage over Edensoy. Eden has to pay a 5% duty on soymilk shipped into Canada, plus large transport costs. So a Canadian distributor receives Edensoy at $19 a case, versus only $13 a case (32% less) for Nutrisoy. Nick is concerned that Edensoy is coming out in a re-cap package.

Tofu: Nutrisoya is the largest tofu manufacturer in Eastern Canada, but Sunrise is the largest tofu maker in all of Canada. They now makes 3 types of tofu, all curded with magnesium chloride and extra firm in texture: Natural, Fine Herbs *(Fines Herbes)* and Pimento & Onion *(Piment-Oignon).* The two flavored products were introduced in about 1990. They do not make an almond tofu. They package all their tofu products with a $120,000 Multivac vacuum packaging machine that they own. He likes vacuum packing; Nutrisoya sells a lot of their tofu to supermarkets, and this packaging seems to give a longer shelf life and a neater package. He also plans to buy a water-pack machine.

Nutrisoya makes most of its money from its tofu products; the competition in the soymilk market from Eden Foods and Pacific Foods (who Nick believes is dumping product in Canada) leads to low profit margins. Plans for new tofu products: Nick would like to introduce soft tofu curded with calcium sulfate. Most Caucasian Canadians now buy tofu curded with magnesium chloride (nigari); it is now a $1.4 million market. Note: Most of the tofu sold in the USA is curded with calcium sulfate because it is a good source of calcium, and is less expensive and much easier to make. Address: President, Nutrisoya Inc., 4050 Pinard, St.-Hyacinthe, QUE, J2S 8K4, Canada. Phone: 514-796-4261.

2276. Nicholls, Walter. 1995. Foraging: Burgers without the beef. *Washington Post.* May 17.

• ***Summary:*** There are two basic kinds burger alternatives: Those designed to taste like beef and those which are simply a vegetarian patty. True vegetarians often prefer the latter. The author found that alternative burgers are grilled

or sautéed in a nonstick skillet with lots of good stuff piled on top. He did a taste test, and rated the many brands into three categories: Exceptional: Boca Burgers (Chef Max's Favorite, Fresh Garlic, Original), Morningstar Farms (Garden Vege Patties, Grillers; [made by Worthington Foods]), Wholesome and Hearty Foods (Gardenburger, GardenMexi).

Acceptable: Amy's (Organic California Veggie Burger), Green Giant (Harvest Burgers), Ken & Roberts (Veggie Burger), Morningstar Farms (Better 'n Burgers), Natural Touch (Garden Grain Pattie), Yves Veggie Cuisine (Burger Burgers).

Forgettable: Lightlife (American Grill, Light Burgers), Mudpie (Veggie Burgers), Soy Boy (Courage Burger, and Veggie Sizzler), Woodstock Whole Earth Foods (The Better Burger), Yves Veggie Cuisine (Vegetable Patties). Photos show packages of the three Exceptional brands. Address: Washington, DC.

2277. Cooper, Kim. 1995. Re: Canadian exports for food uses. Letter (fax) to William Shurtleff at Soyfoods Center, May 25. 1 p.

• ***Summary:*** "For the 1993 crop, Ontario exported approximately 500,000 tonnes, and my guess would be about 50% would be for food use. For shipments to East Asia, I would say the vast majority, perhaps 90% plus, would be for food use." Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2278. Wan, Helen. 1995. Brief history of Les Aliments Tarasoy Ltée in Brossard, Quebec (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** This company was founded in Dec. 1986 by her brothers, who are Chinese-Canadians and who own shares–but it is not just a family business since other people also own shares. Her brother, Billy Chin, is the president and one of the main founders. Helen has been employed by the company since the beginning as sales manager; she was born in Canada, and educated in English-speaking schools, though she also speaks French. The name of the company, Tarasoy, is derived from the name of a person they know, to which they added the word "soy." The company's first products were introduced in the spring of 1987. These included: SoftShakes (a soya drink in chocolate and vanilla flavors, and in single serving sizes), Regular Tofu *(Tofu Nature),* Herb Tofu *(Tofu Fines Herbes),* and Tofu with Dehydrated Vegetables *(Tofu au Legumes).* Their tofu products are all sold in 450 gm vacuum packs. The vacuum packaging gives a longer shelf life. Regular (plain) tofu is now the company's number 2 best-selling product.

In 1988 they introduced *Soyolait,* a 1-liter soya drink that is presently the company's best-selling product and also the best-selling fresh soymilk in Quebec. It is sold fresh in Pure-Pak cartons, and has a remarkable 21-day shelf life at 3ºC. The product is made and packaged entirely at their plant. It is sweetened with barley malt extract and sold only in Quebec, and mostly at natural food stores. It is consumed by Caucasian-Canadians rather than by Chinese-Canadians (who prefer a sugar-sweetened product). Soyolait is less expensive than Edensoy, since the packaging is less expensive. Many other Chinese companies in Canada make fresh sugar-sweetened soya drinks, sold in plastic bottles. At about the time Soyolait was launched, SoftShakes was discontinued; It had limited appeal as a single portion novelty drink, whereas Soyolait came in a larger carton and was more versatile, since it could be used for cooking, baking, etc.

In 1993 the company launched *MagiSoy,* a soy cheese, that they make in-house; it melts.

In Nov. 1994 they introduced *Rizoleil,* a rice drink–which is the company's only product not made from soy. Helen does not know whether the rice drink is made with the traditional koji fermentation process or with enzymes. It is sold fresh, packaged in 1-liter Pure-Pak cartons, with a remarkable 20-day shelf life.

One of the major focuses of the company is selling fresh products. This requires that they distribute all their own products. They have excellent quality control. Most of their products are sold in natural- and health food stores, and very little in Oriental food stores. The company has about 20 employees (both Chinese- and Caucasian-Canadians), but they keep a low profile. They have very good people in their research and development department, which is why they have interesting fresh products with a log shelf life.

They are always developing new products which they plan to introduce within the next 6 months, but information on these is confidential until the products are launched. Helen does not have a brochure about the company or its products. Several years ago a French-language article about the company was published. Address: Sales Manager, Les Aliments Tarasoy Ltée (Tarasoy Foods Ltd.), 3455 Local D rue Isabelle, Brossard, QUE J4Y 2R2, Canada. Phone: 514-659-6586.

2279. *Bluebook Update (Bar Harbor, Maine).*1995. ProSoya forms Soyfood Alliance: Canadian dairies and soymilk supplier agree to work together. 2(2):1, 4. April/June.

• ***Summary:*** This agreement, now known as the "Soyfood Alliance," was signed by ProSoya, Inc. of Ottawa, Canada, and three Canadian dairy processors–Neilson Dairy, Fieldfresh Farms, and Gelato Fresco. It is seen as the first step in an effort, assisted by the Canadian government, to bring high quality, fresh soymilk products to the North American market. Emphasis is on the word "fresh."

To take advantage of equipment already available in the dairies, fresh soymilk is being pasteurized in traditional "gable-top" dairy cartons rather than Tetra Brik cartons. This can save the processor 30-50% in packaging costs. It is hoped that the product will retail for just slightly more than cow's milk.

Currently Neilson and Fieldfresh are producing flavored organic soymilk, while Gelato Fresco is making soy-based frozen desserts.

A photo shows members of the Soyfood Alliance: Tom Reynolds, Alliance Coordinator; Peter Warmels, General Manager of Fieldfresh; Ralph Goodale, Canadian Minister of Agriculture; Melvin Hart, President of Gelato Fresco; Walter Parsons, Sr., Vice President of Neilson Dairy; Frank Daller, President of ProSoya Inc.

Talk with Raj Gupta of ProSoya. 1995. June 6. These companies are now developing and test marketing products containing ProSoya soymilk. Raj expects commercial products to be available by August or September 1995.

2280. Packaged Facts. 1995. The meat and dairy alternatives market (Continued–Document part II). New York, NY: Packaged Facts. xii+ 162 + 42 + 6 p. May. 28 cm.

• ***Summary:*** Contents: Continued from p. vi. Part III: The Marketers. Competitive situation–meat alternatives (Worthington pioneers Seventh-day Adventist vegetarian market, Miles Laboratories acquires Worthington–places Morningstar Farms in mass market, tofu drives natural foods market, soy frank marketers exploit tofu opportunities, tempeh–another meat alternative ingredient gains interest, wheat-based alternative seitan expands presence, Worthington places tofu patties in natural foods stores–changes hands again, Wholesome and Hearty develops foodservice distribution, meatless burger market heats up, pattie competition fierce in natural foods arena, ADM/Pillsbury alliance brings soy burgers to mass market, Worthington fights back, category differentiates in the early 1990s, soy attacked by soy-free burger companies, meat alternative marketers cut the fat, low-fat sausages and franks, tightly targeted vegetarian fun foods and snacks, mass-market companies introduce ground meat analogs, natural product companies follow suit, Wholesome and Hearty seeks retail growth, others seek lucrative foodservice market), competitive situation–milk substitutes (early market limited to ethnic community, Edensoy a big hit–Vitasoy responds, new lines introduced, competition–domestic manufacturing and larger containers bring down soy beverage prices, flavors and packaging distinguish early products, Westbrae introduces first low-fat soymilk, fortification has become key selling point, Eden's fortified product suits strict vegetarians, new package sizes expand market, re-closable–easy to pour, rice beverages–line extensions grab shelf space, Wholesome and Hearty's almond beverage, 100% organic products, a fresh–new market–some products shift to dairy case, mass-market interest), competitive situation–cheese alternatives (Seventh-day Adventists start category, first natural foods cheese alternative not dairy-free, handful of marketers compete on price in natural foods arena, new products parallel dairy-based mass market, a move toward lower fat and fat-free, seeking the most melt-able cheese, Sharon's finest finds innovative ingredients, marketers target vegan market), competitive situation–non-dairy desserts (Toffutti dominates, dairy-free puddings–one major player, non-dairy yogurt has yet to catch on), competitive situation–prepared meals (flavored tofu and seitan expanded into meals, Legume is early innovator, cheese alternatives in prepared meals, other companies dive into prepared meals, action has been in natural foods, supermarket products have not succeeded), competitive profiles (The Archer Daniels Midland Co.–Grand Metropolitan PLC–Pillsbury division partnership, Amy's Kitchen Inc., A&A Amazing Foods Inc., Boca Burger Co.–Sun Foods, Eden Foods Inc., Fairmont Foods of Minnesota Inc., Fantastic Foods Inc., The Hain Food Group Inc., Imagine Foods Inc., Lightlife Foods Inc., Sharon's Finest, Tofutti Brands Inc., Vestro Natural Foods Inc., Vitasoy–USA Inc., White Wave Inc., Wholesome and Hearty Foods Inc., Worthington Foods Inc., Yves Veggie Cuisine Inc.), marketing trends (updated packaging, burger market segmenting into natural and mass market, Worthington–a master at working both markets, hamburger look-alikes crossing back into natural foods, veggie patties crossing into mass market, nostalgia–creating brand loyalty, marketers expanding into other categories, moving into the frozen breakfast section, retail displays, pushing into new distribution channels), new product trends (new–improved packaging, light and healthy, product names emphasize healthy, fat-reversal–mass-market burger-substitutes gaining fat, ground meat alternatives, new flavors and varieties–many gourmet and upscale, ethnic–especially Mexican and Southwestern, convenience, technology produces better mimics, mixing soy with grains and other ingredients, mainstreaming health foods, natural ingredients preferred–organic even better, selected new product introductions–meat and dairy alternatives–1994-March 1995–chart), advertising expenditures (most advertising not measured, specialty magazines are preferred medium, radio is another alternative, little consumer advertising, Worthington outspends competition, ADM-Pillsbury spends millions to launch Harvest Burger in 1994, Edens Foods targets mass market, Fantastic Foods' first major spending), advertising positioning (good health is overlying theme, and fat is prime concern, vegetables are a solution to a bad diet, milk substitutes advertised to lactose-intolerant market, highlighting a sense of the familiar, foods children love, traditional burger images used to woo mass market, vegetarian appeal used for meatless patties, organic is

important feature in natural foods, examples of consumer advertising), consumer advertising (consumer promotions not heavily used, money-off coupons from several companies, new lines offer more generous rebates, recipes and books educate consumers, in-store promotions–the White Wave Center, marketers join forces in advertorial, sponsoring sports events–a healthy fit, 25 years of earth day, non-profit tie-ins, Turtle Island's recycling program, other types of promotions, examples of consumer promotions), trade advertising and promotions (three key trade publications, trade ads also used as consumer ads, trade ads scheduled to run in convention issues, trade ads announce growing business, editorial promotions, reaching retailers, example of trade ads). Continued.

2281. Packaged Facts. 1995. Retail sales of meat alternatives: 1989-1994 (in million dollars) (Document part). In: Packaged Facts. 1995. The Meat and Dairy Alternatives Market. New York, NY: Packaged Facts. 162 + 42 + 6 p. See p. 17, 19, 51-52. May. 28 cm.
• ***Summary:*** A graph (p. 17) shows that sales of meat alternatives (in million dollars) rose from $69.8 in 1989 to $85.7 in 1991 to $115.5 in 1993 and $131.6 in 1994. The average annual sales growth for this period was 13.6% In the past two years, however, sales of meat alternatives have increased by 15.2 and 18.0%.

Concerning the accuracy of these figures, page 19 notes that sales in these markets are difficult to quantify because a large share of retail dollar volume moves through natural foods stores, where sales are mostly untracked, and because various information sources define meat and dairy alternatives products differently. Therefore these "estimates are based on information provided by Soyatech, Inc., the Soyfoods Center, Information Resources, Inc., the natural foods trade, and various manufacturers."

A table (p. 51) shows the market shares of major manufacturers of meat alternatives sold through supermarkets (NOT including natural food stores) in 1993 and 1994. The 1994 market shares were as follows: Worthington Foods 64.5% (Morningstar Farms brand 63.8% and Natural Touch brand 0.7%). ADM/Pillsbury 21.8% (up from only 8.0% in 1993). Wholesome & Hearty Foods (Garden products) 7.9%. Yves Veggie Cuisine 2.1%. Sun Foods (Boca Burger) 1.4%. Other 2.3%. Source: Information Resources, Inc.; Packaged Facts.

A second table (p. 52) shows estimated market shares of major manufacturers of meat alternatives sold through natural food stores in 1994: Worthington Foods 30.4% (Natural Touch, Loma Linda, Worthington brands). White Wave 9.8%. Lightlife Foods 6.5%. Yves Veggie Cuisine 5.8%. Wholesome & Hearty Foods (Garden products) 4.8%. Fantastic Foods (Nature's Burger) 3.9%. Sun Foods (Boca Burger) 3.0%. Other 35.8%. Source: Packaged Facts.

Wholesome & Hearty Foods (Portland, Oregon): In March 1985 this company introduced the Gardenburger, a non-soy vegetarian patty into natural foods restaurants and college cafeterias. Foodservice remains Wholesome & Hearty's core business and accounts for about 70% of the company's sales. Today, over 22,000 foodservice outlets offer the company's various meatless patties (p. 59). In 1992 Wholesome & Hearty began an aggressive drive to introduce its Garden products line into retail stores–both natural foods and mass market.

2282. Melvin, Hart. 1995. Why it is difficult to launch a soy ice cream in Canada (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** First, the entire frozen dessert industry in Canada has been exclusively the domain of the big dairies. The dairies were subsets of the Marketing Board–which creates a totally different market environment than in the USA. Canada has a relatively small population (10.7% of the U.S. population; 28.1 million vs. 260.7 million in the USA) and it is spread over a land area that is slightly larger than that of the USA (including Alaska). So a company needs to have a significant product line to pay the costs of distribution and to pay the large "listing fees" required to get onto supermarket shelves. It has only been in the last 10 years that any small companies have even attempted to developed frozen dessert products. It is difficult to start a company in Canada making soy ice creams because the market is so small and dispersed. You can't start a company in Canada with your initial target market in the USA. Now Canadian supermarkets are trying to establish individual identities, and one of the ways they do that is by bringing in specialty products, either as is or under their own brand and label. Both his soy and dairy products are in most of the major supermarkets in Canada under their own label–simply because his company is offering unique products not made by the big guys, and these products make the supermarket more competitive with the boutique.

The second reason has to do with Canadian bilingual labeling laws. If you have a half liter or pint carton or tub, you have very little surface area, so you can't get overly descriptive. If you want to make claims (such as "cholesterol free") then you must do fat analysis, and that has to be presented in both French and English. So you quickly run out of space on the label. So a small company has generic nutritional information on the body of the package, with flavor-specific information on the lid only. This saves printing costs. So the bilingual label restricts a company's ability to make claims, and it hurts small companies more than big ones. The smaller the package size, the bigger the problem. His soy ice creams make a "cholesterol free" claim and print the fat analysis in two languages.

One new development in Canada (within the last 10 years) is the public awareness of lactose intolerance; this makes it easier to market non-dairy ice creams. Address: Product Manager, Gelato Fresco, 60 Tycos Drive, Toronto, ONT M6B 1V9, Canada. Phone: 416-785-5415.

2283. Reuters. 1995. Rotting beans make sweeter feet. *Toronto Star (Ontario, Canada).* June 20. p. A16.
• ***Summary:*** A Japanese biotechnology firm named Capital Corp. (president Tsutomu Harada) has launched a product (Niowan 201) using natto bacteria to remedy acute foot odor. Natto, sticky fermented soybeans, are widely eaten with rice for breakfast in the northern half of Japan.

The company, based in Osaka, "combines dormant natto bacteria with sawdust and rice bran into thin packs worn under the feet. The other ingredients preserve the bacteria until they are activated by the heat and humidity of the feet, neutralizing the bad smell."

2284. Lewis, David L. 1995. Henry Ford and the magic beanstalk. *Michigan History.* May/June. p. 10-16.
• ***Summary:*** Much of this interesting presentation is taken from a paper by the same title presented by the author on 6 Dec. 1991 to the Ontario Soybean Growers' Marketing Board. This, in turn, is based the author's original and very authoritative book, *The Public Image of Henry Ford* (1976, see p. 282-85). On the first page, the author writes in a sidebar: "Henry Ford is most remembered for the Model T, mass production, and the five-dollar day, which doubled his workers' pay. But he should equally be remembered for his extensive soybean experimentation and research into plastics–his last great achievement and the work that delighted him most."

Contains 8 good photos related to Ford's work with soybeans. The caption accompanying the famous photo of Ford taking an axe to the back of a black car reads: "Henry Ford takes an axe–only a blur in this photo–to the dent-resistant plastic trunk lid of his personal 1940 Ford. Keeping his axe in the trunk of his car, the magnate routinely swung on the lid to impress guests. He hit it one too many times when showing off before Walter P. Chrysler and caused a fracture in the lid similar to the splintering of a piece of green wood. Unfazed, Ford praised the ability of the lid to absorb as much impact as it had." Address: Prof. of Business History, Univ. of Michigan, Ann Arbor, MI 48109-1234. Phone: 313-764-9540.

2285. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. ProSoya forges alliance with dairy processors. June. p. 6.
• ***Summary:*** ProSoya recently formed a "Soyfood Alliance" with three Canadian dairy processors: Neilson Dairy, Fieldfresh Farms, and Gelato Fresco. A photo shows Raj Gupta of ProSoya with the smaller version of his original "SoyaCow." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2286. Webster, Donovan. 1995. Green days: How I became a vegetarian for one trying month and changed my life and health forever. *Men's Health.* June. p. 116-20.
• ***Summary:*** The author struggled through a vegetarian diet for one month, losing 9 pounds and the roll of fat around his belly. He ate quite a few meat alternatives. When it was over he felt like he was "on the horns of a dilemma. Vegetarianism had, obviously, been good for me–and it hadn't been that difficult. Yet I also knew that, long term, the carnivorous pleasures of meat-based life would drag me back into the darkness of their cave. So I struck myself a bargain. For two months out of every year, one in the spring and one in the fall, I would be a vegetarian. The rest of the year I'd eat meat when I wanted to, but I'd still endeavor not to do it all the time."

A sidebar by Greg Gutfeld titled "The Meatless Market" begins: "Time was, a vegetarian had to make do with sprouts, tofu, and voting for McGovern. But new to the supermarket shelves are numerous meatless items mimicking our favorite animal-derived pleasures–even things like hot dogs, hamburgers, bacon and deli meat." The following products were tasted and are evaluated as "Hey, not bad": Worthington Chik Stiks, Worthington Stripples, Garden Gourmet Vege-Nuggets, Boca Burger (the best liked), Worthington Stakelets, Lightlife Fat-Free Meatless Smart Dogs, Garden Mexi Patties.

The rest were "No, thanks, we'll pass": Worthington Meatless Salami, Natural Touch Lentil Rice Loaf, Yves Veggie Tofu Wieners, Yves Veggie Pepperoni, Lightlife Italian Lean Links, Lightlife Organic Three Grain Tempeh, Bearitos Vegetarian Chili.

2287. Montanaro, Pamela. 1995. New developments with soybeans and soyfoods in Cuba (Interview). *SoyaScan Notes.* July 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pam Montanaro, Coordinator of the Cuba Campaign Department of Global Exchange (GX), returned from the sixth Freedom to Travel Challenge trip to Cuba June 23-30, where a general contract was signed between the *Instituto de Investigaciones Fundamental en Agricultura Tropical (INIFAT)* and another GX-sponsored project, the Soy Cubano Company (SCC).

The SCC will fund a small project in soybean production, helping the Cubans to become more self sufficient in soybeans while challenging the U.S. embargo against Cuba. The project will start small, with a 13.4 hectare (one *cabellería* plot) in Havana province, this August. Two to three varieties of soybeans will be grown to produce enough seed to plant 20 *cabellerías* next year, 19 *cabellerías* worth will be sold to the soyfood factories for

soyfood production; one *cabellería* will be reserved for planting the following year.

Also on this trip Pam met a very fine and interesting man named Dick Strohl who is an American soybean farmer and businessman from Minnesota; he is now negotiating with the Ministry of Agriculture and *INIFAT* to grow soybeans in Cuba.

The SCC also delivered a computer and modem to Ing. Alvaro Garcia, director of the *Instituto de Investigaciones para la Industria Alimenticia* (IIIA; Food Research Institute) which is developing varieties of soyfoods for domestic consumption.

Frank Daller of ProSoya Inc. (based in Ontario, Canada) will be traveling to Cuba on July 30 for one week to explore investment opportunities in the field of soyfoods–especially soymilk. Frank is the new director of the Canadian branch of the U.S.-based Association for Free Trade with Cuba (AFTC); it was started by Global Exchange in the spring of 1994, immediately after the U.S. lifted the embargo against Vietnam to get the progressive business community interested in working to end the embargo and in investing in worthwhile projects in Cuba such as soyfoods, alternative energy and medicine, and organic agriculture.

In June, at an international exposition, Pam was introduced to a new soy product developed in Cuba–a Chorizo (spicy meat sausage) extended with soy protein, as is or in a pastry blanket, sort of like a corn dog. The Food Research Institute was also exhibiting the other soy products it has developed, including some meat alternatives.

Pam also had a brief meeting with Ing. Elisa Panadés, a women who is a vice director of the Food Research Institute (like Alberto is); she stands in for Dr. Alvero Garcia when he is away. She was very interested in the information on genistein in soybeans compiled by Soyfoods Center. Her main interest is medicinal properties of food.

Another interesting man Pam met was Dr. Gilberto Fleites (pronounced hil-BAER-toe FLAY-tees), M.D., a cancer surgeon at the Instituto Nacional de Oncologia y Radiobiologia (office phone: +53 7-325977; he lives in Miramar, Havana). He has gotten permission from John Robbins to translate *Diet for a New America* into Spanish. He speaks good English and is also showing John Robbins' videotapes on Cuban television. Pam's group gave him a small grant to start working on a half-hour video in Cuba, with a Cuban videographer, on vegetarianism. On Pam's trip to Cuba in June were three young people who had been raised as vegetarians. Dr. Fleites interviewed the vegetarian youth on film, saying: "Most Cubans have been forced into a primarily vegetarian diet by the U.S. blockade and the loss of their primary trading partners. It is important for Cuban parents to see these healthy vegetarian children on film, because they are very worried that you cannot raise a healthy child without meat and dairy products."

On the July trip Pam also met with some very interesting people who are working on projects in solar energy, wholistic medicine, chiropractic, and Chinese medicine. Dr. Marcos Diaz Mastellari has founded the Center for Holistic Medicine and the International Federation of Holistic Medicine (Ave. 25 No. 15805 entre 158 y 160, Havana, Cuba. Phone: +53 7-336356. Fax: 332420).

Update. 195. Oct. 30. Pam has been in touch with Oxfam Canada; their representative Minor Sinclair has gotten involved in some soy projects in eastern Cuba and wants to work more with Global Exchange. Dick Strohl has some good ideas. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

2288. Strohl, Dick. 1995. Trying to grow soybeans in Cuba (Interview). *SoyaScan Notes.* July 27. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In 1991 the Ministry of Sugar in Cuba planted about 15,000 acres of soybeans in Cuba. The result was a total failure. Dick thinks the reason they did this was after the Soviet Union broke up and Cuba no longer received much money from the Soviet Union to keep their sugar business going, they decided they needed another export to earn money. Sugar is the most important crop in Cuba, and an essential part of the economy and culture. They produce excellent quality sugar with excellent yields at very competitive prices. They think that sugar has a future, but Dick feels that it has no future. Cuba is not making any money growing sugar now. Other countries like Brazil can grow sugar less expensively than Cuba and high fructose corn syrup is eroding sugar's market world-wide.

Cuba presently imports $50 million of soybeans a year, mostly from Argentina, with some from Canada. The Government of Cuba and the Central Bank (which are essentially the same). They must pay for these soybeans in hard currency (U.S. dollars), which they get from tourists. Dick is working in Cuba to grow soybeans, primarily to make money but also because he greatly enjoys working in Cuba. There is a strong local demand for soybeans. He is not trying to train Cubans how to grow soybeans. "If they catch on, that's fine; if they don't, they don't." He plans to get a long-term lease on land in Cuba. "It's the best land I've ever seen in my life." Two or three years ago, the Cubans tried to grow large acreages of soybeans when they realized they would need them if production of soyfoods was to increase dramatically. Unfortunately the whole farming project failed and Cubans don't like to talk about it. The person who knows the details is a U.S. soybean farmer and agronomist named Dick Stroh, with whom Pam talked during her visit in June and who she found to be a fascinating, really good guy. He has been there working

with INIFAT (Institute for the Fundamental Investigation of Tropical Agriculture, "Alejandro de Humboldt," Calle Ira Esq 2, Santiago de las Vegas, Ciudad de Habana, Cuba. Fax: 536-83-2392) during the last year, and he thinks Cuba should be growing large amounts of soybeans. Pam thinks he got into Cuba through a company in Jamaica that wants to set up a soybean crushing facility. He thinks he can help Pam and Cuba get used planters and harvesters into Cuba on a cargo ship or on the Caravan. Address: 2648 Inglewood Ave. South, Minneapolis, Minnesota 55416. Phone: 612-929-7649.

2289. **Product Name:** BBQ Tofu, Curry Tofu, Seitan Nugget, Satay Seitan.
**Manufacturer's Name:** Smart Choice Foods (Totally Vegetarian):
**Manufacturer's Address:** 117-119 Ave. B South, Saskatoon, Saskatchewan, S7M 1M2 Canada Phone: (306) 242-3070.
**Date of Introduction:** 1995. July.
**Ingredients:** Soybeans; Wheat gluten.
**How Stored:** Refrigerated.
**New Product–Documentation:** Leaflet (glossy, color, 3-fold front and back) and price list. 1996? Smart Choice Foods. This company was founded by Yen Fung. She was raised in rural Saskatchewan and completed her education at the University of Saskatchewan. "Her interest in the Canadian food industry began with the purchase of Mom's Bulk Foods in 1985. By 1988 it had moved to a mall location and more emphasis was placed on health food supplements. Later the same year she expanded her growing company by opening the Genesis Family Restaurant cited by the *Globe and Mail* as the best Chinese and health food restaurant in Saskatoon. 1995 marked both the opening of Smart Choice Foods and the acquisition of the catering firm Deli Fresh Foods. All of these businesses fill a market niche and continue to expand based on Yen Fung's underlying principle 'healthy, quality food for people who don't have time to cook.'"

2290. Vitasoy International Holdings Ltd. 1995. Annual report 1994-95. New Territories, Hong Kong. 92 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1995, group turnover (sales) was HK$1,252 million, up 9% over the previous year. Operating profit was $138.9, up 12%. Earnings per share were 24.0 cents, down 12%. Dividends for the year were 9.6 cents. The price of one share is now about $HK2.69.

The Group has secured local government approval to establish a wholly foreign owned enterprise in Songjiang Industrial Zone of Shanghai and will soon begin construction of a production facility there, investing about HL$228 million in it. About 90% of its output will be sold in Eastern China.

The founder and guiding force for more than 50 years, Dr. K.S. Lo, passed away in May of 1994. "The success of the Group is a reflection of the strong Confucian morals which Dr. Lo worked so hard to instill." In Hong Kong, Vitasoy soymilk saw a slight decrease in sales.

In North America, Traditional Vitasoy soymilk [marketed to Chinese Americans] benefited from ethnic brand loyalty together with the continued migration from Hong Kong and Taiwan to North America and especially Vancouver, BC, Canada. This helped improve overall sales in the North America market with 11% increase over the previous year. Natural Vitasoy soymilk experienced a slight drop in sales in the U.S. market but made strong gains in Canada. The launch of Vitasoy Chocolate Soymilk played a role in lifting the market share of soymilk in the Chinatown districts from 50.4% to 52.5%. The Group plans to introduce a new family-sized fresh soymilk. Tofu sales in North America recorded growth of 13.6% with the strongest push coming from the East Coast ethnic markets. To help make consumers more aware of the many benefits of tofu, the Group has sponsored the highly acclaimed "Yan Can Cook" program. In addition an 8-minute instructional video titled "Cooking with Tofu" has also been produced. The huge multi-billion dollar pasta market, of which Oriental pasta is one of the fastest growing segments, will be a key focal point for us over the next fiscal year.

Employees: 1,582 at the end of March 1995, up 13.8% Over the previous year.

Use of the $270.2 million for the initial public stock offering: (1) $228 million to develop a wholly foreign-owned production facilities in Shanghai, PRC (China); (2) $40 million for the development of this factory's distribution network in PRC and Hong Kong; (3) $60 to install a distilled water production facility at its existing facility at Guang Ming Farm, Shenzhen.

Color photos show: Winston Lo, Executive Chairman and Managing Director. Three natural Vitasoy soymilk products, Azumaya Asian products, 3 water-packed tubs of Vitasoy Chinese-label tofu, and Nasoya brands (silken and soft tofu), 3 bottled dressings, and Nayonaise. Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

2291. Bruning, Fred. 1995. Ode to soy: The culture of a bean and its followers. *Newsday (Long Island, New York).* Aug. 9. Part 2. p. 4. Wednesday.
• ***Summary:*** On the cover of this cover story appears: "Soy, you wanna be a star? As headlines proclaim its cholesterol-lowering benefits, the once-lowly soybean finds its place in the spotlight." Note: This article was syndicated; on 16 Aug. 1995 it appeared in the Times Colonist (Victoria, BC, Canada). Address: Staff writer.

2292. *Toronto Star (Ontario, Canada).*1995. Metro shrinks [as Victory Soya Mills is demolished] (Photo with caption). Aug. 18. p. E1.
• ***Summary:*** In the background is a partly demolished silo, still standing. In the foreground is a wrecking machine. The caption reads: "Joe Carreiro, left, directs demolition work yesterday at Victory Soya Mills on Queens Quay. Levelling of the mill, built in 1944, is further evidence of Metro [Toronto's] shrinking tax base."

2293. Cunningham, Dusty. 1995. Recent developments at Pacific ProSoya in Vancouver, Canada (Interview). *SoyaScan Notes.* Aug. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** On Aug. 14 the company made its first successful batch of soymilk. They are presently selling only bulk soymilk. Since a spray drying operation is located nearby, they would like to offer spray-dried soymilk as well. They are selling bulk soymilk to three different companies in British Columbia which are each developing different non-dairy products: One is developing soy ice creams, the second soy yogurts, and the third soy puddings.

She just had a visitor to the plant from a big distributing company in France. He was comparing their soymilk with French brands. Address: Vice-President Marketing, Pacific ProSoya Foods Inc., 312-19262 60th Ave., Surrey (Vancouver), BC V3S 8E5, Canada. Phone: 604-532-8030.

2294. MacLeod, J.A.; Gupta, Umesh C. 1995. Effect of selenium seed treatment on selenium concentrations in soybeans. *Canadian J. of Soil Science* 75(3):287-291. Aug. [21 ref. Eng; fre]
• ***Summary:*** This research was conducted on Prince Edward Island (PEI), Canada. An application of 10 gm of selenium (Se) per hectare as seed treatment raised soybean selenium concentrations to more than 0.5 mg/ha. Soybeans with this level of selenium, when included in rations at 200 kg/tonne with other low selenium ingredients, produces rations exceeding 0.1 mg/kg of selenium, which is the minimum level required to prevent selenium deficiency in livestock.

Seed treatment with 100 gm/ha of selenium produced soybean selenium concentrations greater than 10 mg/ka of selenium. Even higher soybean selenium concentrations were obtained from equivalent selenium rates when applied as foliar spray.

In summary treatment of soybean seed with selenium has the potential for improving the selenium status of rations that would be formulated with ingredients originating from areas deficient in selenium. Address: Research Branch, Research Centre, Agriculture and Agri-Food Canada, Charlottetown, Prince Edward Island, C1A 7MB, Canada.

2295. *Soya Bluebook Plus.*1995-1997. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook. A directory and information book for the soybean processing and production industries. One of the most valuable sources of worldwide information on soybeans. The first issue (shipped Sept. 1995) is titled "Soya Bluebook Plus: the annual directory of the world oilseed industry." Crops featured on the front cover are "soya, corn, cottonseed, palm, canola, rapeseed, and sunflower." Contents (most sections are marked with a fold-out tab): Organizations and government agencies: White pages, yellow pages. Oilseed product processors and marketers. Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, advertiser index.

Concerning the year: The edition published in mid-1994 was titled '94 Soya Bluebook. The edition published in mid-1995 was titled '95-96 Soya Bluebook. The edition published in Sept. 1996 (the 50th edition) was titled '97 Soya Bluebook. The change was made to give the company extra time (16 months) to market the latest edition before the next year arrived. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

2296. National Biodiesel Board. 1995. Biodiesel demonstrations. Jefferson City, Missouri. 7 p. Unpublished typescript. Sept. 28.
• ***Summary:*** For each project / demonstration this table gives the state, city (or, in Canada, province and city), organization, contact person, number and type of vehicle, miles, start date and month, blend (% biodiesel; most are 20%), sponsor (most are NBB / USB): City / county highway fleets (18 projects), commercial truck fleets (8), farm vehicles (21), marine (10), mass transit (88), military (2), mining / confined spaces (4), miscellaneous (9), school bus (6), stationary engines (5), utilities (6). Address: Jefferson City, Missouri.

2297. Jenkins, Suzi. 1995. The politics of soyfoods in San Bartolo, Guatemala (Interview). *SoyaScan Notes.* Oct. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Alimentos San Bartolo now employs 6 people, 3 or 4 of whom have worked there for 15 years. The plant operates two days a week, Monday and Wednesday. About 65-75% of the products are sold to expatriates, and the remainder are sold to native Guatemalans. The approximate percentage of sales by product are as follows: Tofu 40%, soy ice cream 30%, tempeh 10%, soymilk 10%, soy flour atole (10%; pronounced ah-TOL), and whole soybeans 5%. Yet the soy flour atole probably earns the company more profit than any other product. It is made by roasting whole soybeans, then grinding them, and mixing about 3 parts of

this roasted soy flour with 1 part of cornmeal. The product is sold as a dry mix in a plastic bag, and is served by adding several tablespoons to a cup of hot water, like traditional atole. It is expensive, costing about 2½ times as much as an equal weight of white wheat flour. People are willing to pay the price because they have learned that it is an excellent source of protein, and it tastes good. It is consumed by both infants and adults.

In about 1989 or 1990 the situation at the soy dairy in San Bartolo changed dramatically. Plenty Canada came in, took the keys to the building, and installed a new committee as the "board of directors in charge of the company. Then Plenty Canada pulled out and has never returned. Since that time the Dairy has received no outside funding. Local politics became a big part of the daily operations of the business, and there is now an ongoing political struggle. The leadership did not like the former employees and they continue to discriminate against them. Only one member of the workforce is on the committee. Elena and Agostine Xoquic are in pain. For example, Agostine is made to haul 50-100 lb of tofu and ice water on a long route that goes as far away as Guatemala City, changing buses many times, while the much younger and stronger new manager sits with his feet up on the table. The Dairy does not have its own vehicle.

Plenty USA has no control over the new committee. In addition, most of the people living in San Bartolo are jealous of the 6 people who work in the Soy Dairy, so for a number of years they have been boycotting the Dairy and its products. Suzi is inevitably associated with the old regime, even though she is very close to many people in the community. She has visited at least once a year, usually paying her own way, to check in and see how things are going. When she has worked there in recent years, it has usually been as a volunteer. This was one cause of the divorce process she is now in. She lived in Panajachel, an expatriate community about 15 minutes away by car; her daughter went to school there. She has no plans to go back there as a worker, though she would dearly love to if she could find a way to support herself.

She sees the next steps for the Dairy as trying to get the Guatemalan government to support use of the atole in the village school lunch program, and starting a restaurant in San Bartolo. She believes this basic concept or model could be duplicated and succeed elsewhere in Third World countries. She has had offers to go elsewhere in Guatemala, at good pay, to help start soy dairies. Address: 3967 South 900 E., Apt. 13, Salt Lake City, UT 84124. Phone: 801-268-2717.

2298. Albertson, Ellen. 1995. Super soy: The newest miracle food. *Self.* Oct. p. 148-151, 204. [1 ref]
• ***Summary:*** The subtitle continues: "Okay. One more time. Scientists are telling us they've found the nutritional Holy Grail, a simple food that prevents heart disease and cancer. Do we believe them? Yes!"

"Soy may be so effective that it actually crosses the line from nutritional to medicinal."

This article begins with a summary of the meta-analysis by Dr. James Anderson published in the *New England Journal of Medicine* (3 Aug. 1995). It reported soy in the diet can significantly lower high cholesterol." It also notes that: (1) "Genistein, a powerful natural chemical unique to soy," may stop the growth of cancer cells. (2) The natural estrogens in soybeans may "help alleviate postmenopausal symptoms." In Japan, where soy is typically eaten daily, there is no word for "hot flashes."

Photos and definitions of various soyfood products are given: Tempeh, soy flour, tofu, textured vegetable protein, soy milk. A section titled "15 delicious ways to add soy to your diet," gives serving suggestions for these and other soyfoods at breakfast, lunch, snack, and dinner.

A full-page table on p. 204 rates the best (B) and worst (W) of the following, with nutritional information, taste, texture, and comments: Hot dogs: B–Yves Veggie Cuisine Tofu Wieners. 2299. Barnard, Neal. 1995. Hormone replacement increases cancer risk. *Good Medicine (PCRM, Washington, DC)* 4(3):14-15. Fall. [10 ref]
• ***Summary:*** "The *New England Journal of Medicine* of June 15, 1995 [p. 1589-93], reported that hormone replacement therapy increases the risk of breast cancer. This was not news to most doctors. But many have continued to prescribe hormones because they feel that the benefits to the heart and bones outweigh the cancer risk. In the doctor's mind, it is a case of 'choosing your disease.' Will it be heart disease and osteoporosis from too little estrogen, or breast cancer from too much?" But there are other approaches.

"Horse hormones: The most popular estrogen product is Premarin from Wyeth-Ayerst Laboratories. Although doctors sometimes describe it as 'natural' for women, it is actually a horse estrogen. On farms in North Dakota and

Canada, 75,000 mares are impregnated and then confined from the fourth month through the end of their eleven-month pregnancy so their urine can be gathered in a collection harness. After they give birth, the mares are reimpregnated. Their foals usually end up as horse meat, and the urine estrogens are packed into pills. The trade name 'Premarin' is simply a condensation of the words 'pregnant mares' urine'–hardly a natural substance for human beings to swallow. While Premarin contains estradiol and estrone, two types of estrogen which are made in humans, it also contains an enormous amount of *equilin,* a horse estrogen that never occurs at all in humans.

"Estrogen supplements can have serious side effects... Women taking estrogen supplements have 30 to 80% more breast cancer risk than other women.

"Why are so many doctors prescribing them? Most of the push relates to osteoporosis and heart disease... About a quarter of white women over sixty have compression fractures of their vertebrae, and many develop hip fractures due to gradual loss of bone." But estrogens rarely arrest bone loss; at best, they simply slow it. Other approaches can be much more effective. Remer & Manz (1994) reported that eliminating animal protein from the diet can cut urinary calcium losses in half. Many other studies show that populations following plant-based diets have enviably low rates of hip fracture. Cutting salt, caffeine, and tobacco smoke intake can further reduce calcium losses. According to J.R. Lee (1990) a different hormone, progesterone, appears to increase bone density. "It is derived from yams or soybeans, has no side effects, and is sold without a prescription as a transdermal cream."

"Of course, it is not just estrogen pills that increase cancer risk. Estrogen production within a woman's body is increased by high-fat diets and overweight. The result is a higher risk of cancer. The National Cancer Institute reports that cutting fat to 20% of calories will reduce a woman's estrogen levels by 17%, which is a good first step in cancer prevention."

"There is no Japanese word for hot flashes: It has long been known that menopause is much easier for Asian women than it is for most Westerners. Hot flashes are reported by only about 10% of Japanese women at menopause." Bones also tend to be stronger in Asia. "Broken hips and spinal fractures are much less common. The most likely explanation is this: Throughout their lives, Western women consume much more meat and about four times as much fat as do women on traditional Asian rice-based diets, and only one-quarter to one-half the fiber. The result is a chronic elevation of estrogen levels. At menopause, the ovaries' production of estrogen comes to a halt, causing a violent drop in estrogen levels. Asian women have lower levels of estrogen both before and after menopause, and the drop appears to be less dramatic. The resulting symptoms are much milder or even non-existent. Those who enter menopause on a low-fat vegetarian diet often breeze right through it." Address: M.D.

2300. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Soy crush expands. Oct. p. 4.
• ***Summary:*** There are only two soybean crushers in Canada, CanAmera Foods (in Hamilton, Ontario) and ADM Agri-Industries (in Windsor, Ontario). Both are investing millions of dollars to expand and upgrade their facilities. It is predicted that soybean crushing capacity in Canada will increase by 25%, to approximately 50 million bushels/year, when these improvements are finished in 1996. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2301. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Advice for when you store or sell your soys. Oct. p. 5.
• ***Summary:*** Gives six recommendations "To make sure you receive proper payment for the soys you deliver or ship." Note that the word "soys" is starting to be used again to refer to soybeans. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2302. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Profiles: Dennis Jackson, owner of Jackson Seed Service Ltd. at Dresden, Ontario, Canada. Oct. p. 7.
• ***Summary:*** Over the past 15 years a small but steadily growing proportion of Ontario's soybean crop has been going to small processors who use roasting, extruding, or micronizing to make "full-fat soy feeds." Ontario now has three such companies: Cold Springs Farm at Thamesford, Underwood Farms at Wingham, and Jackson Seed Service at Dresden. "The high-energy soymeal is good news for livestock producers and soybean growers alike," says Jackson. It is most widely used to feed hogs/swine, where it translates into faster growth rates and more economic meat output per square foot of barn space. Jackson's "partial-fat soymeal" typically contains 9% oil and 44% protein, and sells at a premium of $15 per tonne over typical 48% protein soymeal. Jackson also sells full-fat soymeal, but at a premium of about $100 a tonne over 48% soymeal, since the processor loses his potential income from selling the oil. It has gained a good market on dairy farms where it is fed as a small portion of the total diet.

To date, Jackson has been selling his crude, partially degummed soybean oil through brokers to feed manufacturers, who add it to high-energy chicken and horse rations. But he is looking for value-added markets ranging from specialty vegetable-oil products to new hydraulic oils, industrial lubricants, and for use as an additive for on-farm tank-mixing with chemical sprays. A photo shows Dennis Jackson. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2303. Melina, Vesanto; Davis, Brenda; Harrison, Victoria. 1995. Becoming vegetarian: A complete guide to adopting a healthy vegetarian diet. Summertown, Tennessee: The Book Publishing Co. x + 262 p. Foreword by Suzanne Havala. Index. 26 cm. [20 ref]

• ***Summary:*** An excellent vegetarian and vegan sourcebook and cookbook by three registered dietitians. Contents: Acknowledgements. Foreword. Introduction. 1. What is a vegetarian? 2. The evidence is in. 3. Without meat–exploding the myths. 4. Without dairy products. 5. Veganism: More food for thought. 6. Fats and oils: A balancing act. 7. Fiber: The gift from plants. 8. The vegetarian food guide: Putting it all together. 9. Vegetarian nutrition in the growing years. 10. Vegetarian diplomacy. 11. From market to meals. 12. Recipes: Simple treasures. Appendixes: 1. Glossary. 2. Nutrition recommendations.

This book contains a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, miso, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus wheat gluten, seitan, rice milk, sea vegetables, adzuki beans (p. 66, 162), quinoa, amaranth, macrobiotics, phytochemicals, plant estrogens found in tofu and other soy products (p. 75; they may contribute to positive calcium balance and have a protective effect on the bone health of Chinese and Japanese women), dietary fiber.

Talk with Vesanto Melina. 1996. July 22. This book was originally published in Canada in May 1994 by Macmillan Canada in Toronto. A revised U.S. edition was published in Nov. 1995 by The Book Publishing Co. in Summertown, Tennessee. Address: Canada.

2304. **Product Name:** Bulk Soymilk.
**Manufacturer's Name:** Pacific ProSoya Foods Inc.
**Manufacturer's Address:** 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1995. November.
**New Product–Documentation:** Talk with Raj Gupta and Frank Daller of ProSoya in Ottawa, Ontario, Canada. 1995. Nov. 21. Their West Coast licensee, a new entity in Vancouver, British Columbia, named Pacific ProSoya Foods Inc., has acquired the license to produce soymilk in bulk, using ProSoya technology, for the western part of Canada and the northwest USA. The milk, made in a plant which ProSoya is building for them, will be sold to food processors. It is sort of a joint venture and licensing deal.

Talk with and letter (fax) Dusty Cunningham, Vice-President Marketing, Pacific ProSoya Foods Inc. 1995. July 5. The company expects to start making soymilk next week.

Talk with Dusty Cunningham. 1995. Aug. 23. Pacific ProSoya made its first successful batch of bulk soymilk on Aug. 14.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. May 10. The plant in British Columbia (BC) was unable to produce quality bulk soymilk until the latter part of 1995. The soymilk Dusty talks about making on Aug. 14 was never sold. Pacific ProSoya Foods sent samples to dairies and various yogurt companies (Jersey Farms) and ice cream companies (Mario Gelato in BC) in Western Canada, but they weren't getting anywhere. These companies started looking at this soymilk as just a commodity, and not a unique product, and they kept asking for lower prices. By this time, Dairyworld and Sunrise were starting to finalize an agreement–as a result of an information leak from IPC to Peter Joe of Sunrise. Small amounts (about ten 55-gallon barrels/drums) of soymilk made in BC were first sold to Ted Nordquist of TAN Industries in about Nov. 1995. The first bulk shipment went to Ted in Jan. 1996. Then very small amounts of bulk soymilk was sold to Jersey Farms. Ted and Jersey Farms were the only two companies that bought this bulk soymilk. But this was not what ProSoya's plan called for. They were talking with Tom Reynolds and cow's milk dairies in eastern Canada. Tom and Frank were working with Neilson Dairy and Fieldfresh Farms. When IPC entered the scene in 1994, ProSoya was just starting to task with these people, but they had a whole business plan which Lorne Broten bought into. They were going to have packaged product with Neilson and Fieldfresh, and they were going to give us samples of this packaged product, which we, in turn, were supposed to introduce to Dairyworld–the big dairy on the West Coast. "When they saw the Neilson package, they were expected to fall all over us, and we would be selling them soymilk at the same price that Frank would be selling to the dairies in eastern Canada." But the plan didn't work out that way. First, ProSoya never got a firm deal in the east. Gelato Fresco got their own SoyaCow SC-20, and used it to make the first soymilk that ended up in their soy ice cream; later they bought some bulk soymilk (about 1,000 liters at a time) from the ProSoya plant in Ottawa, which also sent samples of soymilk to Neilson and Fieldfresh for testing–but they never marketed a commercial product. The only company that ever marketed a product–soy ice cream–using soymilk from the Ottawa plant was Gelato Fresco.

2305. Vitasoy International Holdings Ltd. 1995. Interim report 1995. New Territories, Hong Kong. 14 panels. Nov. 29. 21 cm. [Eng; Chi]

• ***Summary:*** For the six months ended 30 Sept. 1995, sales (turnover) were HK$750.2 million, up 14.4% over the same period last year. Operating profit was $77,370, up 9.5%. Earnings per share rose to 13.3 cents, up 8.1%. In Hong Kong, which contributed 70% of the group turnover, sales were up 14%, but sales of soymilk products in this market are stagnant.

In North America, the company's second biggest market, sales showed a 9% increase, to be in excess of HK$128 million. Sales of pasta and tofu were particularly strong. "This market benefits from the strong brand recognition among Hong Kong immigrants, an example being the strong sales increase of Traditional Vitasoy Soyamilk in Canada."

In China, the Shenzhen facility is now fully operational and this contributed to a robust sales increase of 63%. The Shenzhen has already started to make a small contribution to Group profits in its second year of operation.

See also article in the *South China Morning Post* (Hong Kong) of Nov. 30 (Business section, p. 2). Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

2306. Bourelly, Thomas. 1995. Plans to start a soymilk plant in Haiti (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Thomas is a native of Haiti who speaks fluent English and has been educated in the USA. He has undergraduate degrees in chemistry and biochemistry (from Illinois Institute of Technology), and an MBA. He has run several food companies in the USA. Now he is planning to return to Haiti where he will start a soymilk factory. He has already purchased the land.

Update. 1996. April 3. Thomas calls. He is still as interested as ever in this project, but cannot figure out how to get soymilk with a long shelf life that is not refrigerated and not too expensive.

Update. 1996. August 13. Thomas calls. He is getting ready to order a SoyaCow 400 liter/hour system from ProSoya in Canada. Two problems remain: (1) A type of packaging that is low in cost. Shurtleff recommends he ask ProSoya to solve this problem. (2) A source of flavors. His product is designed to replace Carnation Evaporated Milk, which has a caramelized taste. Haitians prefer vanilla, chocolate, and strawberry flavors. Shurtleff recommends that he use caramel made in Haiti. Address: 15262 Southwest 157th Terrace, Miami, Florida 33187. Phone: 305-233-6691.

2307. Strohl, Dick. 1995. Update on soybeans in Cuba (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dick will go to Cuba in 2 weeks and stay until January. Tom Miller, an attorney in Oakland, California, who is working to break the American blockade of Cuba, is helping Dick in his negotiations with the Cuban government. Frank Daller of ProSoya in Canada has spent quite a lot of time in Cuba. He has established a Canadian company (which Dick can work for legally as a consultant) and is looking for investors. Fidel Castro's chief of staff has written several letters showing his interest in soybean production in Cuba; he would welcome Canadian financial involvement. Dick is now working to secure a simpler contract than he previously envisioned. He would be happy to begin by renting 100 ha of land for his first crop of soybeans. He would like to start supplying information on many aspects of soybeans free of charge to Alvaro Garcio. Address: 2648 Inglewood Ave. South, Minneapolis, Minnesota 55416. Phone: 612-929-7649.

2308. Weaver, Eric. 1995. Update on EarthTrade and growing soybeans organically in Nicaragua (Interview). *SoyaScan Notes.* Dec. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nicaragua is the only country in Latin America where EarthTrade presently grows soybeans organically; the first crop was planted in June and harvested in December 1994. The variety grew and matured well, but there were many problems with the harvest. The crop was harvested wet with a combine that did not have a soybean implement, so many of the beans were cracked, crushed, or ground, creating a powder that then adhered to the surface of the whole soybeans. Thus, they were stained with soy powder, which led to a poor appearance. So EarthTrade ended up selling the entire crop for organic feed, even though they had several Japanese customers who were are interested in buying them for food use. The typical yields on nonorganic soybeans grown by other farmers in Nicaragua are about 3,800 to 4,000 pounds per manzana; EarthTrade's yields were 2,800 to 3,200 pounds per manzana on about 900 to 1,000 manzanas. Note: A manzana is larger than an acre; according to FAO figures, in Nicaragua, Guatemala, and Costa Rica, 1 manzana = 1.75 acres or about 0.7 hectares.

The second crop is being harvested right now. He will know the results by mid-January. In Central America, if you have 100 problems, you try to solve 50 of them the first year, 25 more the next year, etc. This year they hope to have solved the harvesting problems, and they are operating on a longer-term (2-3 years) perspective to work with their customers to choose specific varieties.

In the long term, Eric believes that organic soybeans will be one of EarthTrade's bigger crops. The company's leading crop now is organic sesame seeds, followed by organic flours (mostly wheat and corn, but also some barley and rye). Sales of all are growing rapidly. There is more profit in flours since they are processed, value-added products. About 60-70% of EarthTrade's crops are grown in Third World countries; some are also grown in the USA and Canada. Address: Secretary-Treasurer, EarthTrade, 1814 Franklin St., Suite 710-E, Oakland, California 94612. Phone: 510-987-7222.

2309. **Product Name:** Real Roasted Soys [Plain, Salted, BBQ, Salt and Garlic, and Chocolate Coated].
**Manufacturer's Name:** Dyshar Farms Ltd.

**Manufacturer's Address:** R.R. #3, Woodstock, ONT N4S 7V7, Canada. Phone: 519-537-2199.
**Date of Introduction:** 1995. December.
**How Stored:** Shelf stable.
**New Product–Documentation:** Ontario Soybean Growers' Marketing Board (OSGMB). 1997. *Canadian Soyfoods Directory.* Chatham, Ontario, Canada: OSGMB. 27 p. See p. 16. Founded and owned by Sharon Hart and Diane Marcou.

*Ontario Soybean Growers' Marketing Board Newsletter.* 1999. April. p. 7. "Profiles: Real Roasted Soys." Sharon Hart and Diane Marcou are the founders and owners of Dyshar Farms, which makes Real Roasted Soys. They have found that soy snacks make sense; people like them when they try them. Dyshar Farms' 4-point recipe for success has worked for them since 1996, and the company is in its fourth year of operation. Today, Dyshar Farms sells eight flavors: Plain, salted, BBQ, salt and garlic, sour cream and onion, honey coated, maple syrup coated, and chocolate coated.

Talk with Sharon Hart. 1999. April 20. Their roasted soys are oil roasted [deep-fried] with non-hydrogenated soybean oil. They have developed an innovative process of treating the soybeans before and after frying that makes their oil content about the same as it is before frying [about 16-20% of weight]. This is not a patented process and they are a cottage industry. Their products were first introduced shortly before Christmas of 1995 in the five flavors shown above.

2310. EarthTrade Inc. 1995. EarthTrade, Inc. announces 3rd quarter sales. Innovative business shows 147% increase in revenues (News release). 1814 Franklin St., Suite 710-E, Oakland, California 94612. 6 p. Dec.
• ***Summary:*** "EarthTrade has become a leader in the conversion to organic farming in Latin America by working in a close partnership with small farmers and farm cooperatives. Together they are showing that sustainable agriculture makes economic as well as environmental sense, marketing their goods throughout the U.S., Canada, and Europe."

"The company's cumulative revenues for the 9-month period through September 1995 were $2,232,246, compared to sales in the same period in 1994 of just over $903,000 and $1.36 million in total revenues for 1994." Michael Davis is the company's CEO and President. EarthTrade, which works with 2,500 small farmers and farm cooperatives in Central America, Mexico, Canada, and the United States, has offices in New York City, Oakland (California), and San Salvador. It is a member of OCIA (Organic Crop Improvement Association). Address: Oakland, California. Phone: 510-987-7222.

2311. *Ontario Soybean Growers' Marketing Board Newsletter.*1995. Profiles: W.G. Thompson & Sons Ltd., white hilum soybeans and Ontario's railroad system. Dec. p. 7.
• ***Summary:*** John O'Brien, Manager of W.G. Thompson & Sons Ltd., predicts that premiums for white hilum soybeans will virtually disappear within five years. Instead, more soybean growers will be locking in premiums by growing special varieties that companies such as Thompsons will contract and ship for specific Asian customers. "Thompsons, a $300 million a year family-owned business with 300 employees, has already earned a name is special quality crops. From its 14 Ontario elevators, the company works with farmers on 75,000 to 100,000 acres of contract crops each year, with over half that acreage going to soybeans."

White hilum soybeans have become just another commodity in Ontario, says Wes Thompson Jr. The future lies in going the next step, in sitting down with customers and finding out exactly what they want in a soybean, and then producing and shipping those soybeans for them as part of a long-term relationship. Thompsons is already contracting specific varieties for exclusive delivery to individual Pacific Rim makers of tofu, miso, and natto. At Pain Court, the company is also installing a high-tech sorting line that will enable it to sort for shape and color, and to completely eliminate foreign material. At the same time, Thompsons isn't getting out of the huge and profitable crush market. To prove that, it is playing a leading role in the campaign to save Ontario's rural rail network. Thompson's Hyland Seeds Division sold 14 private and 8 SeCan (public) varieties in 1995; it expects to sell 24 private and only 4 SeCan varieties in 1996. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2312. Beversdorf, W.D.; Buzzell, R.I.; Ablett, G.R.; Voldeng, H.D. 1995. Soybean. In: A.E. Slinkard and Douglas R. Knott, eds. Harvest of Gold: The History of Field Crop Breeding in Canada. Saskatoon, Saskatchewan: University Extension Press, Univ. of Saskatchewan. ix + 367 p. See p. 153-66. Chapt. 13. [14 ref]
• ***Summary:*** An outstanding history of soybean breeding and production in Canada. Contents: Introduction. Evolution of the soybean crop in Canada. Early breeding efforts. The emergence of soybean as a significant Canadian crop (1940-70). The modern soybean breeding era [1970 on]. Current breeding objectives and methods.

Before 1930, soybeans were "grown primarily for annual forage production when traditional forage crops failed to survive Ontario winters." The appearance of two short-lived soybean crushing facilities in southwestern Ontario [at Milton in about 1930 and Chatham by April 1933] aided the transition of soybeans from a fodder crop to a grain legume crop.

"Evolution of Canada's soybean crop since 1949 reflects the expertise of soybean producers, dramatic

improvement in production technology, improved and earlier maturing cultivars, improved domestic processing capacity and significant export market development."

"Soybean in Canada was born in the vision of C.A. Zavitz, arguably a man 50 years ahead of his time. Zavitz, who was head of the Field Crop Department of the Ontario Agricultural College (OAC) meticulously evaluated and selected soybean introductions for both fodder and grain production for 30 years (Zavitz 1927)."

"In 1893, Zavitz planted the first Canadian soybean crop, probably as a replacement for a field pea that failed to establish that year." Over the years, "Zavitz and two of his colleagues W.J. Squirrel and A.E. Whiteside, evaluated about 100 soybean introductions from the Orient [East Asia] via the United States and Japan for forage and grain production (Zavitz 1927)."

Early soybean breeding in Canada (before 1920) primarily involved the meticulous separation and selection of pure lines from heterogeneous seed introductions. "For example, Zavitz selected and evaluated 34 lines from nearly 10,000 plants from the Habaro cultivar obtained from the" USDA in 1909 (Zavitz 1927).

In 1923 A.E. Matthews and F.W. Dimmock of the Central Experimental Farm (CEF [part of the Dominion Experimental Farms]) conducted a soybean trial at the Harrow Research Station (HRS). "Dimmock continued soybean testing at Harrow until 1929, when Casper Owen took over (Ward 1978)."

The pioneering work of Zavitz (OAC), Dimmock (CEF) and Owen (HRS) to identify and develop soybean varieties adapted to southern Canada created "a base of soybean germplasm and technical knowledge that would support evolution of the soybean crop during and after" World War II.

During and after the war, the main soybean breeders in Canada were C.W. Owen at HRS and F. Dimmock at CEF. Varieties released after 1940 were mainly the result of pollinations among earlier selections from plant introduction and of pedigree selection procedures (Bernard et al. 1988).

The rapid growth in Canadian soybean production in mid-1940s can be attributed to: A large growth in the demand for oil and protein during the war, the appearance of Victory Mills Ltd. in Toronto, improved varieties, promotion and extension efforts by Ivan M. Roberts (of the Field Husbandry Dept. of OAC in 1948 but agronomist for Victory Mills by 1953), and improved inoculant produced by the Microbiology Dept. of OAC. From the 1940s until the late 1970s nearly all of Canada's soybeans were produced in five southwestern Ontario counties: Elgin, Essex (incl. Pelee Island in the middle of Lake Erie; a southernmost point in Canada), Kent, Lambton, and Middlesex (see map near front of book).

Key soybean varieties of the period 1940-1970 are shown in Table 3. One key variety was Harosoy, released by HRS in 1951. Other key soybean breeders were Baldur Stefansson (from 1952) at the University of Manitoba that lead to Portage and Altona. G.E. Jones (from 1953) at OAC that led to Vansoy. John Giesbrecht (from 1959) at Morden (southern Manitoba) that led to Morsoy. A.A. Hildebrand was a pathologist who pioneered early research on phytophthora root rot; he worked with Owen to establish a program of disease resistance breeding at Harrow.

The 1960s: In 1961 Dimmock retired from CEF and was replaced by Lorne Donovan as an adjunct to his corn breeding program. In 1963 Owen retired from HRS and was replaced by R.I. Buzzell. Very early maturing introductions cane from Sven Holmberg of Sweden. "Holmberg's material proved to be significant germplasm for Canadian soybeans. He derived it from crosses involving Manchurian and northern Japanese germplasm selected under the cool short-season environments (58º30'N) of Fiskeby, Sweden (Tanner 1973)."

Harosoy 63 dominated Canadian soybean production by the late 1960s. During this decade "two Ontario counties (Essex and Kent) produced nearly two-thirds of the Canadian soybean crop.

In 1974 H. Voldeng took over the soybean breeding program at CEF. In 1976 W. Beversdorf joined the University of Guelph with split responsibilities in soybean and field bean breeding and genetics. In 1982 G. Ablett initiated a soybean breeding program at the Ridgetown College of Agricultural Technology (RCAT). In 1976 CEF released Maple Arrow, a milestone cultivar, with parentage that included a Holmberg line. Maple Arrow, which was well adapted to the short-season areas of Ontario, combined with the higher prices of the early 1970s, sparked a soybean expansion northward and eastward.

The last two sections of this chapter are the longest and most detailed.

Figures show: (1) Graph of soybean production in Canada, 1945-1991. (2) Average yield of soybeans in Canada, 1938-1992.

Tables: (1) Early soybean selections and evaluation (OAC No. 211, Mandarin, Habaro No. 20405, Early Yellow). For each is given: Average height (inches), green fodder production (tons / acre). Yield of grain (lbs / acre). Source: Zavitz 1927.

(2) Early Canadian soybean cultivars (OAC 211 {released 1923}, A.K. (Harrow) {1933}, Mandarin (Ottawa) {1934}, Kabott {1937}, Pagoda {1939}, Goldsoy {1938}). For each is given: Source (pedigree, e.g., Habaro). Institution (e.g., OAC). Year licensed or released (1923-1939). (3) Canadian soybean cultivars of 1940-1970 (Harman {released 1943}, Capital {1944}, Manchu (Montreal) {1944}, Harly {1951}, Harosoy {1951}, Acme {1953}, Comet {1953}, Hardome {1953}, Crest {1957},

Merit {1959}, Portage {1964}, Altona {1966}, Harwood {1970}, Vansoy {1970}). For each is given: Pedigree, institution, year.

(3A) Public and private breeding of soybeans, Canada and USA, 1973-1992. The impact of privately funded soybean breeding programs has increased steadily since 1973, when the first privately bred variety was registered in Canada. This "private" variety was bred by N.R. Bradner in the USA and introduced to Canada by St. Clair Grain and Feed (a division of Maple Leaf Mills Ltd.). In 1973 in Canada there were 170 acres of privately bred soybean seed compared with 14,181 acres developed by publicly funded breeders. In 1982 the figures were 6,066 and 27,354 respectively. In 1987 the figures were 28,148 and 29,960 respectively. And in 1992 the figures were 43,004 acres private and 26,727 acres public. In this 20-year period, 120 private soybean varieties and 51 public varieties were registered. 27% of the private varieties and 81% of the public varieties came from U.S. breeding programs.

(4) Typical breeding cycle in the University of Guelph breeding program. Columns: Year and season, activity, location. The typical cycle is about 8 years. (5) Canadian soybean breeding programs (1991): Columns: Organization (public sector and private sector). Breeder (6 + 5 = 11 breeders in both sectors). Address: 1. Ciba Seeds, Greensboro, North Carolina; 2. Agriculture and Agri-Food Canada Research Station, Harrow, Ontario; 3. Ridgetown College of Agricultural Technology, Ridgetown, Ontario; 4. Agriculture and Agri-Food Canada Research Station, Ottawa, Ontario.

2313. Grogan, Bryanna Clark. 1995. The (almost) no-fat holiday cookbook: Festive vegetarian recipes. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 cm. [26 ref]
• ***Summary:*** This low-fat vegan cookbook, containing a wealth of soy-related recipes, features 18 menus for celebrating holidays from around the world. Address: Denman Island, east of Vancouver, British Columbia, Canada.

2314. Slinkard, A.E.; Knott, Douglas R. 1995. Harvest of gold: The history of field crop breeding in Canada. Saskatoon, Saskatchewan: University Extension Press, Univ. of Saskatchewan. ix + 367 p. Illust. 23 cm. *
• ***Summary:*** Chapter 13 is titled "Soybean," by W.D Beversdorf, R.I. Buzzell, G.R. Ablett, and H.D. Voldeng (p. 153-66). It is an outstanding history of soybean breeding in Canada.

2320. Garcia Uriarte, Alvaro; Ortega, Alberto. 1996. Recent history of soyfoods in Cuba. Part IV (Interview). *SoyaScan Notes.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Again and again during 1994 the Food Industry Research Institute (FIRI) team went to dairy processing plants in Cuba. It was a marathon effort. By the end of 1994 a remarkable 14 new soy dairies making soy yogurt had been installed in the wings of existing dairy plants throughout Cuba. This mammoth effort was possible through the cooperation of the Ministry of Food Industry

(MINAL) and local enterprises and governments. The NT equipment was built mostly by the Enterprise in Charge of Equipment Building and Installation. Most of the plants had a capacity of either 2,000 or 4,000 liters/hour; the smallest was 1,200 liters/hour. During 1994 the 14 plants churned out a total of 11 million liters of soy yogurt–4 million liters from the one plant in Havana using the two large Alfa-Laval centrifuges, and 7 million liters from the 13 other plants using the new technology. By late 1994 about 400,000 kids ages 7-13 living in the provincial capitals nationwide were receiving 1 liter of soy yogurt a week. Alvaro and his coworkers at FIRI were so convinced of the superiority of their technology that in Nov. 1994 they eliminated the Alfa-Laval plant, replacing it the next month with two new NT production lines.

During 1995 eight more plants were installed, bringing the total to 22. These plants produced 33 million liters of soy yogurt (containing 3.0 to 3.2% protein), which reached about 500,000 kids. Though there are presently about 1,200,000 kids in Cuba, most of those not living in the capitals have access to milk from the nearby cows. Alvaro showed us a chart listing the location of each plant, the date it began operation, and its capacity. As of mid-January 1996 four new plants are under construction, and 5 more are on the drawing boards, ready to go. One of the plants under construction in Havana will make only spreadable soy cream cheese *(queso crema),* a new product developed at FIRI.

Three basic types of yogurt were made in Cuba's many soy dairies: 50% of the total was set soy yogurt sold in bulk containers, which reduced packaging costs. Local people would bring their own containers in which to take home their portion of the yogurt. Another 25% was set soy yogurt in one liter glass jars–which were, of course, recycled after use. The last 25% was stirred soy yogurt, sold in one liter plastic bags as a drink having the consistency of a milk shake.

The plan for 1996 is to produce 76 million liters of soy yogurt–more than double the total for 1995!

In September 1994, soymilk started to be used (together with dairy milk) in Cuban ice cream, made at the dairy plant at Pinar del Rio. In 1995 some 12 million liters of soymilk were used in Cuba's ice cream, accounting for 50% of the total milk used–the other half being cow's milk. However no soymilk is used in the most famous Cuban brand of ice cream, Copelia. This is made with only fresh milk and cream, using a traditional dairy formula and technology.

In January 1995 a cultured/fermented spreadable soy cream cheese was first made commercially in Cuba at the dairy plant in the province of Villa Clara. Resembling Cuba's traditional *queso crema* but containing no animal products, it is used as a spread on bread or crackers, in salad dressings, served as a dessert topped with marmalade or jam, or mixed with canned meat to make a pâté.

Soybeans were first cultivated in Cuba in 1904, and the climate and soil have always been good for growing them. Yet although Cuban scientists have done extensive research on soybean production over the last few decades and developed new soybean varieties that yield well under Cuban conditions, almost no soybeans are grown in Cuba today, in part because of the historical emphasis on sugar. Therefore Cuba has to import all of the 10,000 tonnes per year of soybeans used to make soymilk and soy yogurt, using precious foreign exchange. In the past, Cuba has also imported roughly 300,000 tonnes of soybeans (as whole beans or soybean meal) for animal feed. The food-grade soybeans come mostly from Canada and Brazil. Canada's white-hilum soybeans are considered the best for soy yogurt. For 45 days during 1995 no soybeans were imported into Cuba due to the lack of hard currency (U.S. dollars). The Soy Cubano! program of Global Exchange in San Francisco is working to help Cuba become more self-sufficient in soybeans. For Cuba to become self-sufficient at 1989 levels of consumption for the 11 million inhabitants, the country would have to grow about 500,000 tonnes of soybeans.

The development of new soyfoods products does not stop here. The FIRI team has two big projects on tap for 1996. The first is to expand commercial production of spreadable soy cream cheese, which will be made at existing dairy plants in 10 provinces throughout Cuba *(Santiago de Cuba, Holguín, Bayamo, Las Tunas, Camagüey, Ciego de Avila, Sancti Spiritus, Villa Clara, Matanzas, and Pinar del Rio)* and to finish the spreadable soy cream cheese factory in Havana with 10 tonnes/day capacity. At each plant they hope to make 500 to 1,000 kg/day, and a total of 5,000 tonnes in 1996; this will require an additional 10 million liters of soymilk. The second project is to make two types of powdered soymilk. Type 1, which is spray dried, contains 85% soymilk and 15% dairy milk, plus cocoa, sugar, salt, and vitamin A. Type 2, which is roller dried, resembles a traditional Nestlé product called *Harina Lacteada.* The ingredients are similar to type 1 except that rice is substituted for cocoa. Cuban researchers are very interested in learning more about Japanese *amazaké* (a traditional non-alcoholic fermented rice beverage made from koji), about the various new enzyme-hydrolyzed rice beverages made in America, and about ways to mix soymilk with ricemilk. Cuba plans to make a total of 2,000 tonnes of powdered soymilk in 1996. They are also working on development of spreadable soybean pâtés with different flavors, among them ham, and *chorizo* (a paprika spiced Spanish-style pork sausage).

To summarize: In 1995 Cuba used 7,000 tonnes of soybeans to make 47 million liters of soymilk; 1 kg of soybeans yields about 7 kg of soymilk. Of this soymilk, 33 million liters were used for soy yogurt, 12 million liters for soy ice cream, and 2 million liters for spreadable soy cream

cheese. In 1996 Cuba plans to use 76 million liters for soy yogurt, 14 million liters for soy ice cream, and 10 million liters for spreadable soy cream cheese. Total: 100 million liters, or roughly twice as much. Continued. Address: 1. Ing., Director; 2. Vicedirector. Both: Food Research Inst. *(Instituto de Investigaciones para la Industria Alimenticia)*, Carretera Guatao Km 3½, La Lis 19200, Havana City, Cuba. Phone: 21-6986 or 21-6742.

2321. Chan, Chi-Keung; Lee, Stella; Le, Naomi. 1996. Vitasoy recalls 30 million drink cartons. *South China Morning Post (Hong Kong).* Jan. 10. p. 1 (Wednesday, ed. 2).
• ***Summary:*** "Soft drinks maker Vitasoy yesterday announced it is to recall an estimated 30 million drink cartons from Hong Kong and the rest of the world because of continuing production problems. The company, acting on more complaints about sour-tasting soya milk, is to also suspend production at its Tuen Mun plant. Managing director Winston Lo Yau-lai, who last week announced suspension of the company's Shenzhen carton production lines, last night would not rule out industrial sabotage.

"Retailers are being asked to stop sales of all cartons of Vitasoy drinks including soya milk, lemon tea and juices in 250-millilitre, 375 ml and one-litre packs. Customers and retailers would be offered refunds... The company estimated that recalling the 15 million packs in circulation in Hong Kong and Macau would take 12 days. But it could not say how long it would take to recall a further 15 million packs from more than 10 countries, including Canada, Australia, and the United States.

"Yesterday's announcement followed three more complaints from consumers concerning sour soya milk produced at the firm's Tuen Mun plant... The group decided to recall eight million drinks manufactured in Shenzhen last Thursday after a barrage of complaints. A day later, it also recalled 42,000 cartons produced in Tuen Mun... The company promised none of the 1,000 workers at the plant would be affected. The recall does not affect the company's bottled products including soya milk, iced teas, distilled water and Vita fresh milk. But paper products represent 'a significant proportion' of turnover.

"The firm admitted that the latest recall would have a 'material adverse effect' on profits. Vitasoy International shares will also be suspended from stock market trading from this morning. The news came just as its share price was recovering from the sharp fall caused by last week's announcement of the problems with Hong Kong and Shenzhen production. After falling more than eight per cent since Friday, the price yesterday rose five per cent to $3.125.

"Mr. Lo rejected claims the announcement had been provoked by Health Department pressure." Preliminary results of Health Department tests showed that of the 240 samples tested, only "four had been found to have abnormal acidity."

"'While bacteria were found in these four samples, they were not of pathogenic (disease-causing) nature,' a spokesman said. 'Further tests will be conducted to confirm the exact identity of the bacteria.'"

2322. Daller, Frank. 1996. Interest in and activities related to soyfoods in Cuba (Interview). *SoyaScan Notes.* Jan. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Frank has traveled to Cuba 3 times (paying his own way) to do soy-related work. He was there first in Aug. 1995 and is very impressed with the resourcefulness and sincerity of the Cuban people. He likes the people he has met very much and is trying to help–not trying to sell them equipment or steal their soymilk processing secrets. He plans to buy a SoyaCow with his own funds and donate it to some place in Cuba–probably Dr. Gilberto Fleites at a cancer hospital. He wonders why the Cubans have focused on making soy yogurt rather than soymilk. If they use a hot-blanch process, perhaps because they have a high proportion of suspended solids (rather than dissolved solids), which might settle out in soymilk. In a 4-star hotel in Cuba where he was staying, he was served a sweetened yogurt for breakfast in a cafeteria line. The attendant told him it was soy yogurt, but he is not certain that it was since he could not tell the difference. Through his contact with the Canadian ambassador in Cuba, Frank was able to meet with Jesú Montane (pronounced HAY-su MON-tan-ay), who is a personal secretary of Fidel Castro and who is deeply interested in work with soyfoods in Cuba. Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

2323. Lowe, Sherry; McCarvel, Bonnie. 1996. The difference between state soybean associations and state checkoff boards (also called research and promotion councils) (Interview). *SoyaScan Notes.* Jan. 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sherry: The Minnesota Soybean Growers Association is a membership organization supported by membership dues. It is the legislative arm of the soybean industry. The members lobby legislators, and work for representation at the state and national levels. USB might refer to the Minnesota association as "our Minnesota state office."

The Minnesota Soybean Research and Promotion Council gets its funding from the soybean checkoff program. The Council, which is made up of 14 farmers who are elected, cannot lobby. At the beginning of each fiscal year they go over a list of projects and decide where they want to invest and administer the checkoff funds in programs that are designed to promote, educate, inform, improve marketing of soybeans, do research, etc. The

checkoff dollars come from each state; the state gets half of these dollars and the United Soybean Board (USB) also gets half. The USB has a master plan which shows where and how they will invest their soybean checkoff dollars in the areas of domestic marketing, international marketing, research, consumer education, and producer communications.

In Minnesota and in a majority of the 26 states that have a qualified state soybean board, the Growers Association and the Board are located in the same building to save money. Mailings sometimes go out from "Minnesota Soybean." By law, the administrative costs of the Councils most be kept at 5% of total income. Therefore the growers associations act as contractors for the Council, to carry out their projects, and pay overhead on the building.

Bonnie: Every farmer in the USA who grows soybeans, even in California for example, must contribute to the checkoff, even though there is no state organization. About 26 states have associations. Canada also keeps in touch thorough a state board (OSGMB in Ontario). The Qualified State Soybean Boards (QSSBs) are commonly called "checkoff boards." These checkoff boards are spending more money promoting soyfoods, not because the national checkoff law requires this, but because the states had more funds to work with and suddenly a lot of interesting new research information was available about the health benefits of soybeans. These new funds could be used rather easily to develop a domestic program and build a new image for soybeans. The previous image was that soybeans are used for livestock feed. "We wanted to go beyond that and show some of the health benefits for people, using the new research information." The state boards have continued to work with the livestock industry and they have promoted food uses of soybeans in a careful way that has led to no problems from the livestock industry."

The state can spend its 50% of the checkoff funds in any way it wants on research and promotion related to soybeans or soyfoods, domestically or internationally, as long as it does not lobby or do membership activities–those latter two functions are left to the state growers associations. A state could put all of its money, for example, into international market development or into research on industrial uses of soybeans, or increasing soybean yields. Most states spend more money on domestic programs than on international ones, but most also some things internationally–often jointly with other state boards. Missouri is investing funds in China (aquaculture and livestock production), Hungary, and Japan. "The USB has approved various projects, say ten, which are prioritized. Then they said to the states, "If any state wants to fund any of these, let us know by a certain date.' Missouri said, 'We'll help pay for no. 1, 3 and 5.' Other boards might join with Missouri on large projects. If states picked up 6 of the ten projects, USB might then have enough money to fund the remaining unfunded projects. One of USB's projects was nationwide nutrition seminars led by Mark Messina, PhD. The Minnesota board funded four of these nutrition seminars in Minnesota and several other states. Bonnie attended the seminar in Minnesota and was very pleased with the results. Most states get involved in some projects suggested by USB.

There is also considerable regional cooperation, planning, and sharing of information. For example, after a regional meeting of state soybean boards, Missouri might take the lead in developing and funding a video on soya for clinical dietitians, then make that video available to other state boards for a small fee. Address: Communications Specialist, Minnesota Soybean Growers Assoc.; 2. Executive Director, Minnesota Soybean Research & Promotion Council. Both: 360 Pierce Ave., Suite 110, North Mankato, MN 56003. Phone: (507) 388-1635.

2324. Erlich, Reese. 1996. Cuba's upturn: Sweet but partial. *Christian Science Monitor.* Jan. 24.
• ***Summary:*** After six years of crisis, the Cuban economy has bottomed out (1993) and started to recover in 1995. Yet the country still faces major shortages of food and basic consumer goods. Electrical blackouts occur several times a week in Havana. Cuba's gross domestic product (GDP) dropped 34.3% from 1989 to 1993. Sugar remains the country's largest source of foreign exchange.

"In 1989, with the Soviet empire's collapse, Cuba lost a major source of subsidies and the source of 85% of its foreign trade. The ongoing U.S. economic embargo forces the island to purchase goods at higher prices from other nations..."

A sidebar, titled "Let them eat soy–If they want to," is about Frank Daller, president of Daller & Co. of Ottawa, Canada. His mission is to promote the production of soybeans, and an appetite for soy products as an inexpensive source of protein. He recently signed a letter of intent with Cuba's Ministry of Agriculture to grow soybeans, sell harvesting and processing equipment, and eventually develop soy products for the Cuban market. He hopes to introduce soy-based ice cream, drinks, and cooking oil.

Since the 1989 collapse of the Communist east bloc and the advent of the "special period," Cuba has been emphasizing soy. But soybean imports are costing Cuba about $50 million a year in scarce foreign exchange. "Cubans identify soy products with the hardships of the special period. 'Most people think the meat [extended] with soy tastes awful,' says housewife Hilda Cercero. 'Once times get better, I don't think people will eat it,' she says."

2325. **Product Name:** Jersey Farm Soya Yogurt (100% Non-Dairy) [Honey-Vanilla].
**Manufacturer's Name:** Alamar Farms, Ltd.

**Manufacturer's Address:** Delta, BC, Canada. Phone: (604) 946-5311.
**Date of Introduction:** 1996. January.
**Ingredients:** Filtered water, certified organically grown soy beans, honey, concentrated soy protein, vanilla extract, live bacterial cultures.
**Wt/Vol., Packaging, Price:** 450 gm.
**How Stored:** Refrigerated.
**Nutrition:** Per 175 ml.: Energy 166 calories, 697 kj, protein 10 gm, fat 2.8 gm, carbohydrate 26 gm, cholesterol 0 mg, sodium 11 mg, potassium 430 mg.
**New Product–Documentation:** Talk with Dusty Cunningham of Pacific ProSoya Foods, Inc. 1996. Feb. 5. This product is made using her company's soymilk. It was launched in Jan. 1996.

Ann Behling. 1996. *Soybean Digest.* Mid-Feb. p. 56. "New technology makes soy foods tastier: Canadian firm makes concentrate for ice cream, milk, and yogurt." About Pacific ProSoya Foods and Jersey Farm Soya Yogurt.

Color photocopy of Labels sent by Dusty Cunningham. 1996. March 12. The circular label on the lid is 3¼ inches in diameter. Red, yellow, blue, and green on purple. Illustrations show a cow's head and a flower. The label around the carton, 11 by 4 inches, is the same colors. It contains French and Chinese text as well as English. "No lactose. No cholesterol. 100% natural. No preservatives. Low in saturated fat. Excellent source of protein. Great for infants and children. Contains live Acidophilus and Bifidus cultures."

2326. *Canadian Architect.*1996. Post-industrial aggregate: The elephantine concrete silos of Victory Soya Mills are being demolished after 50 years of faithful industrial service. 41(1):38. Jan. *
Address: Canada.

2327. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada).*1996. Serial/periodical. Chatham, Ontario, Canada: Ontario Soybean Growers' Marketing Board. Vol. 1, No. 1. Jan. 1996.
• ***Summary:*** Starting in Jan. 1996 (Vol. 1, No. 1) this *Technical Bulletin* (printed in red and black ink on beige paper; 1 page, front and back) was inserted in many issues of *Canadian Soybean Exports.* It had the subtitle: "The Export Newsletter Technical Bulletin by the Ontario Soybean Growers' Marketing Board." It contained technical articles with titles such as: "Evaluation of soybeans for tofu processing." Address: Chatham, Ontario, Canada.

2328. Doidge, Brian. 1996. Canadian soybean export prospects for 1996. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 9(1):3-4. Jan.
• ***Summary:*** "The recent formation of the Canadian Soybean Export Association (CSEA), serves to focus attention on this rapidly growing sector of the Canadian soybean industry." The 1994/95 crop set a new record with soybean exports of 524,254 tonnes (19.26 million bushels). Another strong year is projected for 1995/06.

Note: The CSEA is an association of major Canadian soybean exporters; the association does not itself export. One of its major objectives is to lobby the Canadian government for funding and promotional support.

Talk with Michael Loh of Canada. 1996. Jan. 24. Members of CSEA include W.G. Thompson, Maple Leaf Foods, Cargill, etc. Nutrisoya, Inc. will also be a member.

A half-page table (p. 3) shows Ontario soybean supply and demand for 4 years from 1992/93 to 1995/96. Under soybean supply, statistics show: Acres harvested, beginning stocks, production, imports, and total supply. Under soybean supply are: Crush, export, seed, other domestic use, and total use. Plus ending stocks and average price per bushel.

A full-page table (p. 4) lists Ontario soybean exports for 4 years from 1991/92 to 1994/95. Ontario's top four export customers in Asia in 1994/95 were: Japan (25,988 tonnes), Hong Kong (23,311), Singapore (22,502), and Malaysia (16,231). Others are Indonesia, North Korea, Philippines, and Taiwan. The top 4 customers in Western Europe in 1994/95 were: Netherlands 73,654 tonnes, Spain 61,134, France 51,119, Belgium 15,428. In Eastern Europe, Poland bough 10,000+ tonnes in 1993/94 and 1994/95 and Uzbekistan bought 7,117 tonnes in 1993/94. Total exports have grown steadily from 238,809 tonnes in 1991/92 to 495,772 tonnes in 1994/95. Address: Education and Business Manager, Ridgetown College of Agricultural Technology.

2329. *Health Naturally (Ontario).*1996. The tempeh of the times. Dec. 1995 / Jan. 1996. p. 44.
• ***Summary:*** "Terrific tempeh is made right here in Canada by Noble Bean, a small family-run business in the Ottawa Valley. Noble Bean uses only organically grown soybeans in its plain tempeh, combined with other organic grains (such as quinoa, rice, barley and millet) in its blended tempeh."

"Look in the freezer section for Noble Bean tempeh, available in health food stores in central and eastern Canada (Noble Bean, phone/fax 613/278-2305).

A photo shows the packages and labels of six different Noble Bean tempeh products.

2330. Lai, Benny. 1996. Dah Chong Hong–A pioneer in using Ontario soybeans. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 9(1):2. Jan.
• ***Summary:*** In the mid-1970s Mr. Lai was working in the Food and Edible Oil Dept. of Dah Chong Hong's head office in Hong Kong. He and co-workers imported 800 bags of Ontario special quality white hilum soybeans into Hong Kong for testing. They distributed the soybeans to more

than 30 manufacturers of soybean curds, tofu, soy milk, soy sauce, and other soy products. "The quality was considered not very terrific by most end-users, in terms of 'yield' when manufacturing the soy products, but was acceptable." To further explore development of this imported product, Mr. Lai and Mr. Chi-bun Leung flew to Canada, where they were warmly welcomed and treated Dah Chong Hong's as pioneers. "Since that time Dah Chong Hong has imported Ontario soybeans for the Hong Kong market continuously every month now for more than 20 years. The overall quality of Ontario soybeans has improved over the years, and the quantity has been growing from only one or two containers per month in the mid-1970s, to hundreds of containers per month presently."

In 1984 Dah Chong Hong (Canada) Ltd., a wholly owned subsidiary of the head office in Hong Kong, was established in Vancouver, British Columbia, Canada. "One of our goals is to export more Canadian soybeans to many countries in Asia." The address in BC is: 4211 No. 3 Road, Richmond, BC V6X 2C3. Phone: 604-273-8222. Fax: 604-273-9222. Address: President, Dah Chong Hong (Canada) Ltd., 4211 No. 3 Road, Richmond, BC V6X 2C3, Canada. Phone: 604-273-8222.

2331. Lowe, Jim. 1996. 1995 Canadian soybean quality. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 9(1):1-2. Jan.
• ***Summary:*** A table gives quality data for soybean shipments from Canada during the two crop years 1995/96 and 1994/95 for Canadian grades no. 1 and 2. The oil content and protein content (mean, minimum, and maximum–on a moisture-free basis) are shown. The mean figures are as follows for 1995/95: Canadian no. 1: Oil 20.0%, protein 43.4%. Canadian no. 2: Oil 20.5%, protein 42.7%.

A one-paragraph analysis of the following basic quality factors is also given: Test weight, moisture content, colour, size uniformity, damage and splits, foreign material. Address: Regional Manager, Canadian Grain Commission, Chatham, Ontario, Canada.

2332. Lukin, Anne. 1996. Tempeh temptations: Festive vegetarian dishes for the holidays. *Ontario's Common Ground Magazine (Canada)* Winter 1995/96. p. 16, 18-19.
• ***Summary:*** An introduction to tempeh, with five recipes. Tempeh makers in Ontario include Noble Bean and Soy City (Lorraine Guardino). A photo shows six tempeh products (packages and labels) made by Noble Bean.

2333. Luzzi, Bruce. 1996. Soybean germplasm with modified fatty acid profiles. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 1(1):1-2. Jan.
• ***Summary:*** The quality and use of soybean oil is dependent on the relative proportions of the five basic fatty acids in the oil: saturated (palmitic and stearic), monounsaturated (oleic), and polyunsaturated (linoleic and linolenic). Soybean oil high in polyunsaturated fatty acids, especially linolenic acid, is undesirable to processors these fatty acids reduce oil stability and increase the rate of oxidative rancidity. Hydrogenation has traditionally been used to reduce the level of polyunsaturated fats and increase oil stability. Palmitic acid has been associated with increasing blood cholesterol levels and the risk of coronary heart disease. Replacing palmitic acid with stearic acid in the fatty acid profile of soybean oil may provide the structure necessary for the production of solid fats without adversely affecting human health.

In 1984 the University of Guelph and the Ridgetown College of Agricultural Technology initiated a program to develop soybean genotypes with altered fatty acid profiles. "Treating soybean seeds with a chemical mutagen (EMS) produced genotypes with reduced levels of palmitic or linolenic acids and elevated levels of stearic or oleic acids. Some of these lines were remutated or hybridized to create genotypes with desirable levels of two or more fatty acids."

Table 2 shows the fatty acid profiles in various soybean genotypes, 5 derived from chemical mutation, 3 derived from hybridization, together with the typical fatty acid profile of a soybean. Address: Univ. of Guelph, Guelph, Ontario, Canada.

2334. Ma, C.Y.; Buzzell, R.I.; Jessop, D.B.; Buttery, B.R. 1996. Evaluation of soybeans for tofu processing. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 1(1):1-2. Jan.
• ***Summary:*** Contents: Introduction. Tofu yields and texture. Flow properties of soymilk. 11S / 7S globulin ratio. Correlation among soymilk and tofu variables. Conclusions.

In this study, eight Ontario, five USA, and two Japanese soybean cultivars covering a wide range of protein content were evaluated for their tofu processing properties, using glucono delta lactone as a coagulant. Table 1, titled "Characteristics of soymilk and tofu prepared from 15 soybean varieties," lists the following varieties (in descending order of soymilk protein; a water to dry matter ratio of 7 was used in making soymilk and tofu): BARC-6, AC Proteus, Proto, Harovinton, Raiden, Enrei, HP202, Secord, TK-89, Kanrich, RCAT Calico, Maple Arrow, RCAT Angora, Grande. This table contains the following vertical columns: Soybean protein (highest was BARC-6 at 53.4% on moisture-free basis), soymilk protein (highest was 6.1% from AC Proteus), soymilk yield (highest was 5.7 kg/kg from Maple Arrow), tofu yield (highest was 4.6 kg/kg from Harovinton and Raiden), tofu firmness (highest was 0.42 N/mm from Enrei), tofu rigidity (highest was 1680 G', Pa from Maple Arrow), soymilk viscosity (highest was 7.73

from BARC-6), and soymilk 11S/7S (highest was 5.44 from Secord; It has been reported that soybeans with a high 11S/7S ratio will produce firmer tofu).

Conclusion: "Results show that Canadian tofu varieties such as Harovinton have excellent tofu processing properties (yields, textures, etc.) comparable to or exceeding those of Enrei, a Japanese tofu variety." Address: 1. Centre for Food & Animal Research, Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada; 2-4. Harrow Research Centre, Agriculture & Agri-Food Canada, Harrow, Ontario.

**Manufacturer's Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
**Date of Introduction:** 1996. January.
**Ingredients:** Water, whole organic soybeans*, brown rice syrup, raw cane crystals, tricalcium phosphate, natural vanilla flavor, sea salt, carrageenan, xanthan gum, vitamin A palmitate, vitamin D-3, riboflavin (vitamin B-2). * = Grown and processed in accordance with the California Organic Foods Act of 1990.
**Wt/Vol., Packaging, Price:** Quart or half gallon Pure-Pak Carton. Half gallon retails for $3.59 (Berkeley, California 2/96).
**How Stored:** Refrigerated.
**Nutrition:** Per 1 cup (237 ml): Calories 80, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 85 mg (4%), total carbohydrate 11 gm (dietary fiber 0 gm, sugars 9 gm), protein 4 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Talk with Steve Demos (who phoned), CEO of White Wave. 1995. Nov. 22. This innovative new product will be launched in a very big way, nationwide, on January 8, 1996. The soymilk will be packaged in Pure-Pak cartons, like most milk, and sold refrigerated. The use-by date will be 35 days from the date of manufacture but it actually lasts 120 days. The milk will be made at a plant that is not owned by White Wave, but Steve hopes that White Wave will be making the product within 2 years and that it will be shipped in condensed form to 8 regional dairies, which will pack and distribute it.

The regular price (with no discounts) will be about $1.79 a quart. The product will compete based on the fact that (1) Consumers prefer this package to aseptic Tetra Brik packaging, and (2) Consumers prefer the flavor of this product to that of all other non-dairy beverages tested–including Rice Dream. The tests were run 3 times. The product is being marketed for use with breakfast cereal. Steve wants customers to first taste the product on the end of a spoon with cereal. It will not initially compete on price. It will be targeted initially to the natural foods market, primarily as a dairyless soy beverage. In addition it is organic, contains only 1% fat, is calcium fortified, etc. Steve's goal is to capture 10% of the market. Lactaid now has sales of $120 million a year. The market for lactose-free beverages is growing at a very fast rate.

News release from Holden McClure in Boulder, Colorado. 1996. Jan. 10. "Don't forget to drink your Silk. Vegetarian Cuisine company launches refrigerated soy beverage." The dateline is Tofu Town, USA. White Wave, Inc., one of the fastest growing vegetarian cuisine companies in the U.S., "announced today that it is entering the beverage market with the launch of Silk, a lactose-free, low-fat, refrigerated soy beverage to be sold in the dairy case. Packaged in a traditional milk carton, Silk is delicious and 100% dairyless. Beginning in February, Silk will be available in natural food stores across the country." In many blind taste tests, Silk was consistently preferred to the soy and rice beverages that consumers indicated they currently used. Silk will be sold in quart and half gallon cartons at a suggested retail price of $1.99–$2.49 and $3.99–$4.79 respectively. "Ken Vickerstaff, White Wave's VP of Sales and Marketing, believes positioning silk as a refrigerated soy beverage in a milk carton will be the key to success as White Wave enters this $100 million market. 'We're the first company to offer a nationally distributed soy beverage that isn't mispositioned. To date the category has been mispositioned, offering product in a square dry box at room-temperature. That is just foreign to how we eat." Silk is fortified with calcium plus vitamins A, B-2, and D, is low in fat (1% by weight), is made from organically grown soybeans, meets the American Heart Association guidelines and features the Heart Check seal. The motto: "White Wave Silk. Pour it on."

Letter from then talk with Dusty Cunningham of Pacific ProSoya Foods. 1996. Feb. 8. Her company makes the soymilk for Silk at their plant in British Columbia, then

ships it to the packer. It is not made at the ProSoya plant in Ontario. Talk with Mark Brawerman. 1996 Feb. 10. Pacific ProSoya now ships numerous tanker trucks of soymilk each week to a UHT [Ultra High Temperature] packer in the Bay Area. This is probably the soymilk used to make Silk. Note: Talk with George Conquergood of IPC. 1999. May 10. Starting in Jan. 1996, the soy base for this soymilk was made by Pacific ProSoya in British Columbia, Canada, then was sent in tanker loads to Ted Nordquist of TAN Industries for formulation at Avoset dairy [the Morningstar plant] in Gustine, California. Note: Laura Tewnion and Ann Shaw, who were in the lab at Gustine, helped Ted with the formulation. The Gustine plant had a UHT pilot plant. George has photos of the first tanker sent to Ted, with Lorne Broten and Dusty Cunningham standing by the tanker. Soy base or Soymilk processed by UHT has a longer shelf life than that processed by HTST [High Temperature Short Time]. UHT is also held for a shorter time at the higher temperature.

Talk with Jonathan Gordon. 1996. Feb. 21. Silk is being sold in two sizes, quarts and half gallons, with only one basic flavor for each size. The product is selling extremely well.

Talk with Steve Demos (who phoned). 1996. Feb. 23. The product was released on Jan. 15. in 226 A-level natural food stores nationwide and is selling very well, at the rate of 1,000 cases/week. Steve traveled 30,000 miles in 60 days to get Silk off the ground. White Wave will host the Silk Soirée dance at the Natural Products Expo at Anaheim in March.

Product (half gallon and quart) with Label purchased from Berkeley Natural Grocery Co. 1996. Feb. 28. Price of half gallon: $3.59. Expensive! Deep blue, light blue, white, red, and light brown. Front and back panels: Illustration of a stream of soymilk splashing onto a bowl of breakfast cereal topped with strawberries. “Dairyless Soy Beverage. Vitamin A, B-2, D * calcium enriched. Lactose free. Cholesterol free. Low in fat.” The American Heart Association logo shows a white check on a red heart: “This product meets American Heart Association dietary guidelines for healthy people over age 2 when used as part of a balanced diet.” A circular logo shows North and South America: “Made from Organic Soybeans.” “Low 1% fat.” Side panel: Cartoon motif. “Good morning. As you pour Silk over your morning cereal, ponder this. If cows ran the world, Silk would be our national beverage. Soy protein would probably look pretty hip. Good health would be in. Cholesterol would be out. In the Land of Silk and Honey, hunger is a thing of the past and stress is replaced with deep breathing. White Wave has labored steadily since 1977 to offer the world a taste of that calm. Many have said we should take our enthusiasm for good living and bottle it. We have. White Wave Silk. Pour it on. White Wave’s mission is to creatively integrate healthy, natural, vegetarian foods into the American diet.” Second side panel: “Not to be used as an infant formula.” It is “made from organic soybeans that are raised without herbicides, pesticides, or chemical additives.”

Talk with Richard Rose of Sharon’s Finest. 1996. March 5. White Wave’s Silk is being packaged at Avoset, a company in Gustine (south of Modesto), central California. Richard has heard that Silk has not been selling very well so far. “If it fails, it could put White Wave on the ropes.”

Back to back leaflet (5¼ x 7½ inches) on glossy card stock from Natural Foods Expo at Anaheim. 1996. March 15. Side 1 (color): “Get Fresh–White Wave Silk.” Side 2 (black-and-white): “New Silk. For cereal. Deliciously friendly to open, pour and store.”

Update: 1996. May 6. It costs about $4,000 to ship a tanker of soymilk from Vancouver (BC, Canada) to the Midwest.

Product with Label purchased at Open Sesame (natural food store) in Lafayette, California. 1998. Dec. 23. Plain quart of “Silk–Dairyless Soy Beverage” retails for $2.49. A quotation on one side titled “Something worth hanging onto” states: “Wish not so much to live long as to live well”–Benjamin Franklin.

“Silk–Soymilk is cool”–Oval shaped sticker on envelope sent by White Wave. 1999. Jan. 25. 2 inches long by 1¼ inches high. White on blue.

Talk with Denis Bolger of New York City. 2003. June 8. On sale at Pathmark supermarkets in New York City: Silk refrigerated for $0.99/quart in Vanilla, SoyaLatte, and Plain. Dec. 12-18. On sale at Pathmark: two ½ gallon cartons of Silk (Vanilla, Plain, or Chocolate) for $5.

2337. Cheney, Peter 1996. Toronto landmark comes tumbling down–at last: Final blast spells end of stubborn grain silo [Victory Soya Mills]. *Toronto Star (Ontario, Canada).* Feb. 12. p. A3.

• ***Summary:*** Discusses the demolition of the Victory Soya Mills’ buildings and silos. “After 52 years and two attempts to demolish it, Victory Soya Mills is no more.” Minneapolis explosives ace Eric Kelly toppled the Toronto landmark yesterday at 8 a.m.–as hundreds of curious onlookers watched. Built in 1944, during World War II, as a state-of-the art crushing plant; it had operated until 1991. However: “By the late 1980s, changes in the grain and transportation industries had made the plant outdated, with a dwindling work force.” In 1992 its owners had decided to demolish the huge structure, consisting of tall concrete silos (for storing grain) and the even taller head building, but there was a drawn-out political battle with “history buffs who wanted to save it.” The city council issued a demolition permit last year, but it has been a tough structure to dismantle.

Three large photos show the 20-storey head building: (1) As it begins to topple, like a giant monolith, all in one piece. (2) As it is half way down, at a 45 degree angle to the

ground. (3) As it crashes to earth, disappearing into a cloud of dust and rubble. Address: Staff Reporter.

2338. Lo, Francis. 1996. K.S. Lo died on 5 May 1995. Vitasoy went public several months earlier (Interview). *SoyaScan Notes.* Feb. 19. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Francis is the grandson of K.S. Lo (one of Mr. Lo's 18 grandchildren) and the son of Frank Lo. As a young man Frank studied cheese-making in Australia at the Queensland Agricultural College. Frank is currently in charge of new developments in China. Francis is presently a third year student at the University of Guelph in Canada, studying agricultural business. He would like to get some business experience before he goes to work for Vitasoy; he does not want to use the company as a training ground. Vitasoy shares were first sold to the public in about February or March 1995. Francis has a copy of the booklet that was published at that time. Address: Univ. of Guelph, Guelph, ONT Canada.

2339. Daller, Frank. 1996. Re: Present status of the SoyaCow. Letter to William Shurtleff at Soyfoods Center, Feb. 29–in reply to inquiry. 1 p. Typed, with signature on letterhead.
• ***Summary:*** ProSoya Inc. does "sell the small SoyaCow SC-20 but not to users in North America. This is because the system is not currently built to ASME standards and because America is lawsuit crazy. The SC-20 system is primarily for cottage industries and humanitarian applications in developing countries although it is also used as a pilot or lab-type system in North America. We can make a North American model with UL approval etc. but it would almost double the cost of the system. Because of this, we are primarily interested in the lower cost version.

"We are currently awaiting delivery of an Indian manufactured model of the SC-20 which will be available at a lower price even than the Canadian-made ones. We expect this system will be available for about US$5,000... It should be available in 60-90 days." Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

2340. Behling, Ann. 1996. New technology makes soy foods tastier: Canadian firm makes concentrate for ice cream, milk, and yogurt. *Soybean Digest.* Mid-Feb. p. 56.
• ***Summary:*** About Pacific ProSoya Foods and Jersey Farm Soya Yogurt. Photos show: A label for Jersey Farm Soya Yogurt. The soymilk equipment inside Pacific ProSoya's plant at Surrey, British Columbia.

2341. *Bluebook Update (Bar Harbor, Maine).*1996. ProSoya finds new opportunities in Cuba. 3(1):3. Jan/March.
• ***Summary:*** Frank Daller of Canada has made three trips to Cuba and is planning a fourth this February, when he plans to return to Cuba with the head of a major Canadian agricultural equipment company to discuss possibilities of a joint venture company that would compliment the Soy Cubano program, as well as a separate initiative for the production of Canadian agricultural equipment in Cuba.

On another venture, Mr. Daller is working with Dr. Gilberto Fleites, a cancer surgeon from Havana, and a local entrepreneur to install a small SoyaCow SC20 in the first natural food/vegetarian restaurant in Havana. Dr. Fleites is working to build local awareness of the anti-cancer properties of soyfoods.

2342. Messina, Mark; Messina, Virginia. 1996. SoyFacts No. 11: Soyfoods & women's health (Leaflet). Lebanon, Indiana: Indiana Soybean Development Council. 2 p. Front and back. 28 cm. [21 ref]
• ***Summary:*** Contents: Introduction. Breast cancer. Menopause. Osteoporosis. Heart disease. Soy and fertility. Soyfoods in the diets of women.

"Menopause: The decrease in estrogen production that signals menopause can produce a variety of symptoms. These include difficulty in regulating body temperature that manifests as night sweats and hot flashes. However the severity of menopause symptoms varies throughout the world. For example, Asian women are typically one-third as likely as American women to report symptoms. Although, to some extent, this may reflect cultural differences regarding willingness to discuss these symptoms, there appears to be an actual difference in the severity and incidence of symptoms (Lock 1994). Soy consumption has been proposed as one explanation for these differences. The estrogenic activity of soybean isoflavones may help to offset the effects of reduced estrogen production by the ovaries. Even though soy isoflavones exhibit very weak activity (1/1,000 to 1/100,000 the potency of endogenous estrogen), in women consuming soyfoods, blood levels of isoflavones can be 1,000 times higher than endogenously produced estrogen levels (Xu et al. 1995). Most important, in a recent Australian study, researchers found that women who consumed 45 grams of soy flour per day experienced a 40 percent decrease in menopause symptoms (Murkies et al. 1995). Several studies examining the effects of soy on menopause symptoms are under way."

Note 1. One version of this leaflet was developed for consumers and another for dietitians. The project was funded by the Indiana Soybean Development Council.

Note 2. The issue of goitrogens / goitrogenic substances in soybeans and soyfoods is not discussed in any of these 11 leaflets. Address: 1. PhD; 2. MPH, RD. Both: Nutrition Matters, 1543 Lincoln St., Port Townsend, Washington 98368. Phone: 360-379-9544.

2343. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Profiles: Paul Fox–"Beanuts are a tastier and healthier snack than peanuts." Feb. p. 7.
• ***Summary:*** Harrow-based entrepreneur, former soybean grower, and former supervisor at Allied Chemical, Paul Fox thinks soybeans make a near perfect snackfood. By next year he plans to introduce Beanuts, a type of soynuts, into Ontario food stores. He's been working on this idea since the late 1970s, but now he has assembled a team of marketing and production experts and is ready to go.

"Construction is ready to begin on a processing plant in Harrow to serve the markets in southern Ontario and nearby states. Construction of a $1 million plant is slated for North Bay this summer, with its output aimed at grocery and variety stores across Canada. Within the next 18 months, Fox expects the Beanut project to employ over 50 hourly workers, putting out the 40 gram packs at the rate of 25 million units a year at North Bay, and 40 million units a year in Harrow. Within five years, Fox expects the two plants to make soybean purchases of up to 500,000 bushels a year..." Fox plans to start making Beanuts from Ontario-grown Harovinton variety soybeans, which have a clear hilum and large size–for which he expects to pay a premium price. "We're aiming for a peanut look," he says.

The soybeans will be oil roasted in sunflower oil using a cooking system that Fox has spent a decade developing. By using his secret recipe and process, he is confident that Beanuts will be "superior to any of the products that are already on the American market." Fox plans to start with 3 flavors–salted, salt, and vinegar, and Cajun style. Most will be sold in 40 gram packs and retail for about 79 cents. His team is also developing chocolate coated Beanuts to be sold in foil packets. Fox has test-marketed Beanuts in southwest Ontario throughout the past year. One potential niche market is consumers who suffer from allergies to nuts.

The promotional campaign for Beanuts "will focus on lower saturated fat levels relative to peanuts, as well as the significant health benefits [from phytochemicals] that researchers are finding with soybeans, which are getting more and more media coverage."

Fox believes that the potential is unlimited. "Can you imagine when the big candy makers switch away from peanuts and start using soybeans in their chocolate bars."

Note: Paul Fox can be reached at Fox Food Incorporated, 1238 Gore Rd., Harrow, Ontario N0R 1G0, Canada. Phone and fax: 519-738-2178.

Talk with Janet Nauto of Ontario Soybean Growers Marketing Board (OSGMB). 1999. Jan. 12. This company had a product in test-market briefly, and in Nov. 1996 members of OSGMB took it to the Royal Winter Fair in Toronto and tried to help promote it. But even by Nov. 1996 he was basically out of business. He was a very big talker, got some promises of government funding, hired a marketing company that drew up a million-dollar marketing plan–but he had no money. OSGMB still has some of his gum-ball vending machines. but Mr. Fox never built a plant for making soynuts. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2344. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Soybean board executive Susan Iler presents an award of honour to Dr. Dick Buzzell (Photo caption). Feb. p. 3.
• ***Summary:*** This photo shows both people standing and shaking hands. Buzzell, wearing a bear and a patterned sweater, recently retired as soybean breeder at the Harrow Research Centre. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2345. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Roundup-Ready soybeans clear hurdle. Feb. p. 4.
• ***Summary:*** "Monsanto's Roundup-tolerant soybeans recently received approval from Agriculture & Agri-Food Canada for 'unconfined release into the environment, including feed use.' This means that Roundup-Ready varieties will be treated like any other soybean variety when it comes to testing in Ontario's soybean variety registration trials.

"Roundup-Ready soybean varieties will be available to Ontario growers following their registration in Canada. Their registration testing will occur in tandem with the seed multiplication process.

"Roundup-Ready soybeans still require approval for food safety prior to their sale for food use." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2346. Rayes, Kamal. 1996. Designing and developing the CIDA soy program in Sri Lanka. New developments with Plenty Canada (Interview). *SoyaScan Notes.* March 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Kamal designed and developed the CIDA soy program in Sri Lanka. In 1983 he was sent to Sri Lanka to look at an industrial soy project and possible work with soyfoods at the grass-roots level. He designed the project with two parts: (1) An industrial part, that never took off, because be thinks CIDA never understood what he was talking about, and (2) A grass-roots part, which did well. His grass-roots soyfoods project in Sri Lanka was the world's first. At the time INTSOY had a pilot plant in Gannoruwa with a food specialist. There was little or no soy industry in Sri Lanka at the time. Kamal designed a small soy plant ($3-4 million) but he got the richest man in Sri Lanka interested in getting involved. "He told me in about 1983 or 1984: 'If you build this plant and you give me four per years (2 people for 2 years) to show us how to manage it, I am willing to pay you back everything you put in and at the same time I will reserve (free of charge) 49% of the

equity of the plant for the farmers growing and delivering the soya beans.' He was owner of the Mercantile Bank in Colombo. The whole beautiful idea ever happened; it was too difficult for CIDA bureaucrats to understand. This would have been a first in the history of development." For details, call Mr. Jeyabalan in Toronto at 416-498-1394. He knows Ellen Jayawardene. He brought in Muttiah Jeyabalan to manage the Plenty Canada program. Kamal was later shifted to CIDA's program in Indonesia, but he was kept informed of developments in Sri Lanka. Then he took early retirement from CIDA. After a few years Plenty Canada started to fall apart. He thinks Larry McDermott was fired or left and there is a new board of directors. "Now they are almost folded. I think they are about to close shop." They were doing little by 1992. Kamal is a native of Egypt and is now age 64. He came to Canada 31 years ago; before that he was involved with international development at the United States. Now he is thinking of doing something with soymilk, soy yogurt, and soy ice cream in Ontario. He wonders whether the ProSoya technology in Ontario is superior to the one that INTSOY is promoting. Address: 296 Sherwood Dr., Ottawa, ONT K1Y 3W6, Canada. Phone: 613-728-2792.

2347. Canadian Soybean Export Association. 1996. New Canadian Soybean Association forms (News release). c/o Ontario Soybean Growers' Marketing Board, P.O. Box 1199, 180 Riverview Dr., Chatham, ON N7M 5L8, Canada. 1 p. March 19.
• ***Summary:*** "The Canadian Soybean Export Association [CSEA], held their inaugural meeting today [March 19, 1996] in Wallaceburg, Ontario. The meeting was hosted by Hazzard's Farm Service Limited, of Wallaceburg. The elected executives from this new association include Garth Baxter, Maple Leaf Foods International, as Chairperson; Sue Robert, W.G. Thompson & Sons Limited, as Vice-Chairperson; Ron MacDougall, Ontario Soybean Growers' Marketing Board, as Executive Member; and Kim Cooper, Ontario Soybean Growers' Marketing Board, as Secretary-Treasurer.

CSEA "is a voluntary association of members of the Canadian soybean industry, working as a team, to promote the exports of Canadian soybeans and soya products into world markets." CSEA's objectives "are to encourage all members to work in a co-operative spirit to promote exports of Canadian soybeans, and to facilitate export promotion activities that support the CSEA mission statement.

"Soybeans are the second most important oilseed crop in Canada, next to canola. Soybean production in Canada has increased substantially from 600,000 tonnes in 1981, to 2,279,000 tonnes in 1995, which translates to a 280% increase in the last 14 years.

"The majority of Canada's soybeans are crushed to produce soybean oil for food and industrial uses, and soybean meal, which is mainly used as a protein supplement for livestock feeds. In recent years, the two Ontario soybean crushers have processed approximately 1,000,000 tonnes of soybeans annually. An additional 500,000 tonnes are destined for export markets, and of this amount, over 1,000,000 tonnes are exported for soya food processing, mainly in South East Asia. The Canadian Soybean Export Association is targeting this food market usage for continued expansion for Canadian soybeans and soya products.

"For more information on the soybean industry in Canada, or about the Canadian Soybean Export Association, please contact Mr. Kim Cooper, Ontario Soybean Growers' Marketing Board in Chatham, at (519) 352-7730." Address: Chatham, Ontario, Canada. Phone: 519-352-7730.

2348. Yoshihara, Yasuo. 1996. Update on Shin-Mei-Do Miso Co. (Interview). *SoyaScan Notes.* March 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Yasuo speaks with a slight Japanese accent. Shin-Mei-Do Miso Co. is active and growing. They make brown rice miso and barley miso, each sold in 450 gm and 4.5 kg plastic tubs. Lulu does the bookkeeping. The demand for their miso on the west coast of Canada is increasing so they stopped distributing to Eastern Canada. Within the last week a person from eastern Canada called him about starting a miso factory in eastern Canada, and he had a similar enquiry last year. He may be interested in teaching potential miso makers as an apprentice for pay–depending on the conditions. Shin-Mei-Do sells all of its miso to natural foods wholesalers. Amano in Vancouver makes most of the miso sold in Oriental food stores in British Columbia. Moreover, a huge amount of miso (many tons) is imported from Japan. Westbrae packages imported Japanese miso and has nothing to do with Amano–as far as Yasuo knows. Yasuo doubts that Amano ever made miso for Westbrae. Yasuo has never made miso to be sold under another brand. Shin-Mei-Do is basically still a very small operation. Yasuo does not want to become a big company where the miso is made largely by machines. Address: Shin-Mei-Do Miso Co., 5 Wren Road, Denman Island, BC, Canada V0R 1T0. Phone: 604-335-0253.

2349. **Product Name:** Just Like Ground! (Fat Free–Meatless) [Original, Italian].
**Manufacturer's Name:** Yves Fine Foods. A subsidiary of Yves Veggie Cuisine, Inc.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver, BC, V6A 2A8, Canada. Phone: 604-251-1345.
**Date of Introduction:** 1996. March.
**Ingredients:** Water, textured soy protein, textured wheat protein, matural flavor, soy sauce, malt extract, rice starch, wheat germ, oat bran, salt, tomato paste, onion powder, yeast extract, evaporate cane juice, garlic powder,

carrageenan, vitamin B-1 (thiamin hydrochloride), vitamin B-2 (riboflavin), vitamin B-3 (niacinamide), vitamin B-6 (pyridoxine hydrochloride), vitamin B-12 (cyanocobalamin), calcium pantothenate, vitamin D-3, reduced iron, zinc oxide.
**Wt/Vol., Packaging, Price:** 12 oz (340 gm). Retails for $2.99 (1997/04, Lafayette, California).
**How Stored:** Refrigerated or frozen.
**New Product–Documentation:** Ad (full-page, color) in Natural Foods Merchandiser. 1997. March. p. 99. "Introducing Just Like Ground! Our new premium meatless ground round." "Use *Just Like Ground!* in recipes calling for ground meat–pasta sauces, Shepherd's pie, lasagna, Sloppy Joe's, and much more. Made from 100% vegetable sources, *Just Like Ground!* is ready to use and available in two delicious flavors, Original and Italian."

This ad also appeared in Vegetarian Times. 1997. May. Inside rear cover.

Product with Label purchased at Safeway (Lafayette, California). 1997. April 27. Red, yellow, and black on white. "Fat free. Contains no meat." Soyfoods Center taste test. 1997. May 1. Has a rather strong smell and taste of dog food–which comes from textured soy flour.

2350. Montanaro, Pamela. 1996. Attending the First National Soybean Workshop in Cuba (Interview). *SoyaScan Notes.* April 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Pam Montanaro, Coordinator of the Cuba Campaign Department of Global Exchange, just returned from 2 weeks in Cuba. She led an alternative medicine group during the first week. While there, she attended the First National Soybean Workshop *(Primer Taller Nacional Soya),* 2-day meeting held on 11-12 April 1996 at the Food Research Institute outside Havana. It was attended by about 200 Cubans, and many important Cubans were there, including Jesu Montané Oropesa, a top advisor to Fidel Castro, and Vilma Espín, head of the Federation of Cuban Women *(Federation de Mujeres Cubanos, FMC).* One of the founders of the Cuban revolution in the 1950s, she is married to Raul Castro (Fidel's brother), is a chemist or biochemist, speaks good English, and has been involved with popularizing soybeans and soyfoods in Cuba for many years. In the early 1960s Vilma organized a Cuban group named "Friends of the Soybean."

The afternoon sessions on the first day were divided into two parts: Soybean production, and soybean utilization. The first was open to everyone, the second was restricted to speakers only, because of Cuba's proprietary soymilk and soy yogurt technology. Dr. Gilberto Fleites, a top Cuban cancer surgeon who is also a vegetarian, gave a presentation to both sessions on soy, diet and health, with an excellent slide show that he has developed; he answered many questions and received many requests for talk to other organizations.

The conference was attended by representatives from both agriculture and food processing from every Cuban province. The food representatives brought samples of their best soy yogurt and soy cream cheese. At the conference there was a contest to see which organization had the best soy yogurt. Las Tunas won, with a special award going to a factory in Havana. In all, the conference was very up-beat. Video- and audio tapes were made of most of the sessions, and the proceedings are expected to be available in Spanish. Pam has a Spanish language conference agenda.

At the conference, Pam learned that two other foreign groups are apparently involved with growing soybeans in Cuba. Vilma Espín's women's group (FMC) has a project very similar to Global Exchange's funded by Oxfam Canada and now underway in the easternmost province of Cuba, Santiago de Cuba (near Guantanamo Bay, the U.S. naval base). The project is getting its seeds from INIFAT, but there seems to be poor communication between INIFAT and this project, to the extent that Pam wondered if a rivalry might have developed between them. Oxfam Canada first began work in Cuba in Jan. 1995 and Pam helped to interest them in work with soy. Canadians Minor Sinclair and Sheila Katz are now involved with this soy project. A second Cuban group is also working on this project, the National Association for Small-Scale Agriculture *(Association Nacional de Agricultura Pequena, ANAP).* They just had their first harvest and got a good yield of about 2 tons of seed per acre. Minor (who now lives in Havana with his wife, Martha Thomson) in writing up a report on the project for Pam. Pam's combine has not yet arrived in Cuba.

An Italian NGO (non-governmental organization), which is part of the European Union, is said to be trying to do another soy project, and has offered to invest $1 million in the project.

During 1996, nationwide, Cuba hopes to grow between 6,700 ha and 8,040 ha of soybeans (500 to 600 caberillas; 1 caberilla = 13.4 ha). If all goes well, this area would provide them with about 15,000 metric tons of soybeans–enough for all their food needs but only about 10% of their total needs including vegetable oil and livestock feed.

Only two foreigners attended the soy conference–Pam and a man from Mexico. Pam heard that Cuba has signed a contract to export its soymilk manufacturing technology to an organization in Semaya, Mexico. This would be Cuba's first known export of such technology. Last year Cubans did a lot of traveling throughout Latin America looking for customers.

Tito Nuñez's vegetarian restaurant in the Botanical Garden, next to a Japanese garden, is just lovely and becoming very popular. The food is organically grown and presented in a beautiful way. Address: Coordinator of Soy Cubano! Company, Food and Medicine Campaign, c/o

Global Exchange, 2017 Mission St. #303C, San Francisco, California 94110. Phone: 415-255-7296 or 415-558-8682.

2351. Mehra, Vinod K. 1996. Re: History of Maple Leaf Mills and ADM Agri-Industries Ltd. Letter to William Shurtleff at Soyfoods Center, April 16–in reply to inquiry. 2 p. Typed, with signature on letterhead.
• ***Summary:*** During World War II, in about 1942-43 [sic], a company named Toronto Elevators began crushing flaxseed, primarily for the linseed meal. [Note: Toronto Elevators. Ltd. began crushing soybeans in Toronto in 1938]. At the end of the war [in 1944 in Toronto], Victory Mills built a solvent extraction plant for soybeans, then in 1951 Maple Leaf Mills also built a soybean crushing plant; that year Maple Leaf first began crushing soybeans. ADM acquired Maple Leaf Monarch in July 1985 [on about July 19].

Note: Mr. Mehra's letterhead reads "ADM Agri-Industries Ltd." The company name printed on the envelope is the same. Maple Leaf Monarch is not mentioned in either place. But in the 1994-95 Soya Bluebook Plus (p. 94) the company's entry reads: "A.D.M. Agri-Industries Ltd. Affiliate of Archer Daniels Midland Company d/b/a Maple Leaf Monarch."

Note: A review (in May 1996) of Windsor newspaper articles shows that Maple Leaf Monarch opened in Windsor (Ontario, Canada) at 5550 Maplewood in July 1979. This Windsor plant replaced an aging Maple Leaf Mills crushing plant on the Toronto waterfront. The latter plant may have been the original Toronto Elevators Ltd. Address: ADM Agri-Industries Ltd., P.O. Box 7128, 5550 Maplewood Drive, Windsor, ONT Canada N9C 4G9. Phone: 519-972-8100.

2352. Roller, Ron. 1996. Update on the soymilk industry and market in the USA (Interview). *SoyaScan Notes.* April 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In October 1993 Ron estimated (based on a lot of reliable information he had collected) that the size of the soymilk market in the USA and Canada was 9.8 million gallons, up from 8.1 million gallons in 1992. Now he would estimate (without a lot of reliable facts) that this market is about 15 million gallons. Since Dr. James Anderson's article appeared in the *New England Journal of Medicine* on 3 August 1995, and especially during the last 6 months, the soymilk market has expanded rapidly, almost exponentially. Many new consumers have started to drink soymilk, largely for its health benefits. Because of this significant expansion in the customer base, more soymilk is being sold in supermarkets. Ron estimates that about 15% of Edensoy is sold in supermarkets. Address: President, American Soy Products, 1474 N. Woodland Dr., Saline, Michigan 48176. Phone: 313-429-2310.

2353. Couch, Evelyn. 1996. Beanuts best of both worlds. *Farm & Country (Toronto, ONT, Canada).* April 23.
• ***Summary:*** Paul Fox of Harrow, a former soybean grower and supervisor at Allied Chemical in Amherstburg, has developed Beanuts, a snack food made from soybeans for those allergic to peanuts. He is now constructing a processing plant in Harrow. Presently he is buying the Harovinton variety (a large-seeded bean with a clear hilum) through the Wheatley elevator. After ten years of experimenting he has perfected a recipe (which is secret) that uses sunflower oil–which is low in saturated fats and has a good health image. His three flavors are salted, salt and vinegar, and cajun. In the next 3-5 months he hopes to have chocolate-covered Beanuts, Beanut butter [soynut butter made from Beanuts], and Beanut brittle on the market. A photo shows Fox, who projects that by the year 2000 some 500,000 bushels of soybeans will be turned into Beanuts. Note: His products are apparently not yet on the market.

2354. *Bluebook Update (Bar Harbor, Maine).*1996. Daller resigns from ProSoya. 3(2):3. April/June.
• ***Summary:*** "Frank Daller, president of ProSoya Inc. in Ontario, Canada, is resigning to develop a non-profit corporation dedicated to distributing soyfood technology to developing countries and humanitarian applications." Mr. Daller will continue as a partner and director of ProSoya; Raj Gupta. ProSoya's founder, will assume the role of president.

2355. **Product Name:** Real Roasted Soys [Sour Cream and Onion, and Maple Syrup Coated].
**Manufacturer's Name:** Dyshar Farms Ltd.
**Manufacturer's Address:** R.R. #3, Woodstock, ONT N4S 7V7, Canada. Phone: 519-537-2199.
**Date of Introduction:** 1996. April.
**How Stored:** Shelf stable.
**New Product–Documentation:** Talk with Sharon Hart. 1999. April 20. These two flavors were introduced in April 1996.

2356. Hulse, Joseph H. 1996. Soybeans: Bio diversity and nutritional quality. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 1-13.
• ***Summary:*** Contents: Introduction. Origins and dissemination. Processed foods from soybeans: Oriental soy foods, commercial soy products. Nutritional quality: Soybean lipids, proteins. Soybeans and chronic diseases: Cholesterol and cardiovascular diseases. Antinutrients in

soybean products: Oligosaccharides, trypsin inhibitors, phytic acid, saponins, isoflavones, soybeans and anticarcinogenesis. Future for soybeans in human nutrition: Nutrition and chronic diseases, economic and ecological.

Tables: 1. Oriental soy products (nutritional composition). 2. Commercial soy products (nutritional composition). 3. Amino acid patterns (required by a child age 12 years, adult, in defatted soy flour, in isolated soy protein). Address: Siemens–Hulse International Development Associates, Inc., 1628 Featherstone Drive., Ottawa K1H 6P2, Canada.

Address: 1. Centre for Food & Animal Research; 2-4. Harrow Research Centre. All: Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada.

2358. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Soybeans on the Internet. April. p. 4-5.
• ***Summary:*** A recent search for the word "soybeans" on the Webcrawler search engine found 250 different Web sites. Most of these are based in the USA, but some are in Canada. The best site for soybean growers is StratSoy, which was set up using funding from the United Soybean Board. The Homepage contains 6 choices: About StratSoy. What's new? Organizations. Resources. Research Database. Q&A–Ask an expert.

Other sites (whose Web addresses are given) include: Soya Bluebook Plus On Line, Chicago Board of Trade, Soyfoods Directory, Environment Canada, ACEIS, Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA), Farmers Online, Ridgetown College, University of Guelph, and Ontario Agriculture Homepage. A recipe for tofu (obtained from the Internet) is given. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2359. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Michigan and Ontario growers have much in common. April. p. 5.
• ***Summary:*** Discusses the increasing cooperation between soybean organizations from Michigan and Ontario because of common basic concerns related to soybean production and marketing. The main organizations in Michigan are the Michigan Soybean Promotion Committee (MSPC) and the Michigan Soybean Association (MSA). There are 10,000 soybean growers in Michigan and twice that many in Ontario. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2360. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Profiles: CanAmera. April. p. 7.
• ***Summary:*** CanAmera is Canada's largest oilseed processor, with five crushing plants and five refineries strategically located across Canada. Most Canadians eat CanAmera products (such as margarine or vegetable oils) at every meal. "Canadians don't see the name CanAmera. Instead, they see the brand names of a long list of industry leading products, which are actually made and packaged at CanAmera plants... For Ontario's soybean growers, however, CanAmera is a big name. The Hamilton plant processes 45% of Canada's soybean crush... A major expansion project that is under construction will boost soybean capacity by nearly 25% in the first stage with a further 25% increase in 1997." Ontario's only other large-scale crushing plant is the ADM facility at Windsor. The two facilities are expected to crush 1.6 to 1.7 million tonnes (59 to 62 million bushels) of Ontario's forecasted 1.9 million tonne harvests in upcoming years.

A photo shows Murray Davis, Senior Vice President of Trading and Marketing. "Davis would like to see Ontario soybean growers shift more of their focus towards the domestic crush market instead of exports." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2361. Osho, S.M. 1996. Fortification and enrichment of African diets using soybeans. In: Alex Buchanan, ed. 1996. Proceedings of the Second International Soybean Processing and Utilization Conference: 8-13 January 1996, Bangkok, Thailand. Bangkok, Thailand: Printed by Funny Publishing Limited Partnership. Distributed by The Institute of Food Research and Product Development, Kasetsart University. xviii + 556 p. See p. 314-21. [15 ref]
• ***Summary:*** Contents: Abstract. Introduction. Materials and methods: Research was conducted to incorporate soybeans, on a household scale, into traditional root and tuber crops (e.g., cassava), cereals (e.g., maize, sorghum, millet, rice), developed appropriate processing techniques for making tofu and soy tempe [tempeh] based products, used an extruder to develop commercial products containing soy, disseminated the technologies developed to rural households and small-scale companies.

Results and discussion: A good example of how soybean has improved nutritional values is by fortification of cassava and gari, quality and acceptability of local soft cheese *(warankashi*, made by coagulating cow's milk with an aqueous extract from the leaves of the sodom apple *(Calotropis procera))*, and soybean curd (tofu), tempe is a nutritious Oriental food.

Tables: (1) Nutrient composition of local gari and fortified soybean gari. Four columns. (a) Nutrients. (b)

Control gari. (c) 75% cassava + 25% soybean milk residue [okara]. (d) 75% cassava + 25% whole soybean paste.

(2) Sensory evaluation of soygari compared with local gari. Gari fortified with okara (overall acceptability 6.7) was almost as well accepted as traditional gari (6.8).

(3) Chemical composition of local cheese (warankashi) and soybean curd (tofu).

(4) Sensory evaluation scores for warankashi (overall acceptability 6.4) and tofu (5.0).

(5) Chemical composition of tempe-fortified maize based weaning foods (dry weight basis).

"Conclusion: Through aid from the International Development Research Centre (IDRC) Canada, the International Institute of Tropical Agriculture (IITA) is collaborating with national programs in Nigeria and recently Ghana, Cote d'Ivoire and Benin to develop household and small-scale processing techniques for soybean. The project is also planning to extend coverage to other African countries. The future of soybeans looks bright in Africa." Address: International Inst. of Tropical Agriculture, Oyo Rd., PMB 5320, Ibadan, Nigeria.

2362. **Product Name:** Silk (Soymilk Sold Refrigerated in Quart Pure-Pak / Gable Top Cartons) [Chocolate].
**Manufacturer's Name:** White Wave, Inc. (Product Developer-Distributor). Made in Canada and California.
**Manufacturer's Address:** 6123 E. Arapahoe Rd., Boulder, CO 80303. Phone: 303-443-3470.
**Date of Introduction:** 1996. April.
**Ingredients:** May 2000: Filtered water, organic whole soybeans*, organic raw cane crystals*, cocoa (Dutch process), calcium carbonate, natural vanilla flavor, sea salt, carrageenan, vitamin A palmitate, vitamin D-2, vitamin D-3, riboflavin (vitamin B-2), vitamin B-12. * = Grown and processed in accordance with the California Organic Foods Act of 1990.
**Wt/Vol., Packaging, Price:** Quart Pure-Pak Carton.
**How Stored:** Refrigerated.
**Nutrition:** Per 1 cup (240 ml): Calories 120, calories from fat 20, total fat 2.5 gm (4% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 95 mg (4%), total carbohydrate 18 gm (dietary fiber 0 gm, sugars 14 gm), protein 5 gm. Vitamin A 10%, calcium 30%, vitamin D 30%, vitamin B-12 50%, vitamin C 0%, iron 2%, riboflavin 30%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Carton with Label sent by James Terman of White Wave. 2000. May 11. 2.75 by 2.75 by 8¼ inches. Tetra Rex package. "Organic–Third party certified. Calcium enriched. Low 1% fat & vitamin enriched." Talk with James Terman of White Wave. 2001. May 29. Silk chocolate in quarts was introduced in April 1996.

2363. Riddle, Kitty. 1996. Re: Maple Leaf Monarch and the soybean industry in Windsor and Essex County, Ontario, Canada. Letter to William Shurtleff at Soyfoods Center, May 2–in reply to inquiry. 2 p. Typed, with signature. [2 ref]
• ***Summary:*** Kitty photocopied 16 articles on soybeans and Maple Leaf Monarch from the Windsor (Daily) Star from 20 Jan. 1948 to 23 Sept. 1986. These articles indicate that: (1) Maple Leaf Monarch opened in Windsor (Ontario, Canada) at 5550 Maplewood in July 1979; (2) This Windsor plant replaced 'an aging Maple Leaf Mills crushing plant on the Toronto waterfront'; and (3) Maple Leaf Mills became active in oilseed processing in 1941.

"I did not locate any references to Toronto Elevator or Maple Leaf Mills in our holdings of Windsor City Directories beginning in 1891. There was a Maple Leaf Milling Co. on Montreuil Avenue beginning in 1929 to 1958 and on Crawford Avenue from 1959 to 1966 but they were agents of flour and cake mixes." Address: Literature & History Div., Windsor Public Library, 850 Ouellette Ave., Windson ONT N9A 4MB, Canada. Phone: (519) 255-6770.

2364. *SoyaScan Notes.*1996. Who is making Westbrae's soymilk (Overview). May 3. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Until recently, Westbrae's soymilk (not including its Malteds) was being made by several different companies in different parts of the USA: (1) Most of it was made by Pacific Foods of Oregon, in Tualatin, Oregon. (2) Some of it was made by Nutricia at the old Loma Linda Foods plant in Mt. Vernon, Ohio. (3) Not long after that plant was taken over by Carnation / Nestle, Westbrae's production was shifted to Bill Bolduc in Ohio. In mid-1993 he purchased a small soymilk plant at which he made plain, unpasteurized/unsterilized soymilk, then sent it northward to Parmalat Foods (5252 Clay Ave., Wyoming, Michigan 49548. Phone: 616-538-3822). Parmalat is a huge and very significant Italian food company that is the biggest user of Tetra Pak Aseptic packaging in the world. Parmalat packaged the soymilk for Westbrae. As of May 1996, none of the above 3 companies make soymilk for Westbrae any longer.

Then in mid-1995 Bolduc was forced to declare bankruptcy, and apparently the relationship between Westbrae and Pacific Foods was not satisfactory for Westbrae. So Westbrae approached Raj Gupta at ProSoya Inc. in Ontario, Canada. In late April 1996 ProSoya started to make Westbrae's soymilk, apparently using their full capacity of 1-2 tankers a week, which is about 45,000 pounds or 20,000 liters a week. The product is probably shipped to Farmland Dairies, a packer in New Jersey, where it is packed in Westbrae's new 2-liter Combibloc cartons. ProSoya in Ottawa is also obligated to do quite a bit of R&D work for the Canadian government. It is not clear why or what kind of compensation they receive for this.

The rest of Westbrae's soymilk is made by Northern Milk Products (related to SunRich) in Alexandria, Minnesota. Several tankers a week are shipped to Parmalat in Michigan.

ProSoya would like to set up a soymilk plant with Westbrae (probably in the USA) on a joint venture basis.

2365. Gupta, Raj. 1996. Update on ProSoya Inc., International ProSoya Corporation (IPC), and Pacific ProSoya Inc. (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are three closely related companies that use the word "ProSoya" in their name. They all exist to develop partnerships with companies which may be interested in exploiting patented soymilk technologies. (1) ProSoya Inc., which was the original company, designs, develops, and manufactures soymilk equipment. Raj owns 55% of the shares in this company, Lorne Broten owns 10-12%, and the remainder is owned by others. (2) IPC (International ProSoya Inc.) is a company that licenses soymilk equipment and technology. ProSoya Inc. has licensed to Lorne Broten and IPC the rights to license (not sell) SoyaCow soymilk technology, through joint ventures, in North America. IPC sells equipment only outside of North America where it has no patent protection. Raj owns about 5% of the stock in IPC, and Lorne holds the controlling interest. (3) Pacific ProSoya Inc. makes soymilk in British Columbia. Raj and Lorne are good friends and on good terms with one another. Address: 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

2366. Sheehan, Daniel M. 1996. More about phytoestrogens and isoflavones from soybeans (Interview). *SoyaScan Notes.* May 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Sheehan heard from a colleague in Canada that the soy protein isolates used in infant formulas in Canada have most of the phytoestrogens removed. The source of that information was Mr. Marshall Marcus of Protein Technologies International.

People use terms such as phytoestrogens or isoflavones differently depending on their background and orientation. For example, people interested mostly in biological activity tend to use the term "phytoestrogens," whereas those interested mostly in chemical structure tend to use the term "isoflavones." Additional terms include "flavonoids" (pronounced FLAY-vuh-noids, which refers to a large class of chemicals), and "isoflavonoids" (which are isomers of the flavonoids). "Genistein" and "daidzein" are what chemists call "trivial names." Real chemists provide the actual name of the chemical structure. Note: The first isoflavone found in tempeh was 6,7,4'-trihydroxyisoflavone.

Not all isoflavones are phytoestrogens; only some have biological activity as estrogens, and most of them are inactive. Genistin is just a conjugated genistein. The conjugated forms such as genistin and daidzin are not biologically active, as such; the glucoside linkage must be cleaved by intestinal bacteria before they become biologically active. Biologists usually use the term "prohormones" to refer chemical substances such as daidzin or genistin; they are precursors of hormones that require metabolic action before they become active. So when we eat a soyfood such as tofu, the biologically inactive prohormones are converted to active hormones in our digestive system. On the other hand, equol has estrogenic activity, but it is a metabolite of genistein. Of the three major conjugated forms in soybeans, daidzin, genistin, and equal, all of the digested forms have biological activity. Address: Dep. of Health and Human Services, Food and Drug Administration, National Center for Toxicological Research, Div. of Reproductive and Developmental Toxicology, Jefferson, Arkansas 72079-9502, and Dep. of Biochemistry, Univ. of Arkansas for Medical Sciences, Little Rock, AR 72205. Phone: 501-543-7561.

2367. Kuhn, Mary Ellen. 1996. Soy in the spotlight: Disease-fighting benefits may change the image of the once-lowly bean. *Food Processing (Chicago).* May. p. 52-53, 55, 58.
• ***Summary:*** This is a cover story; on the cover is written: "Unlocking the secrets of soy," with four large color photos. The article begins: "What a difference a couple of decades make." Twenty or 30 years ago, most foodservice operators and consumers used soy with hesitation, sometimes scornful comments. "Today, however, the once-maligned soy protein has a much better image, thanks to a fast-mounting stack of research data suggesting it may help prevent and treat high blood cholesterol, cancer, osteoporosis, and symptoms of menopause." And this good news has begun to reach health and nutrition professionals. With better products on the market, "soyfoods marketers may soon be dealing with a new generation of mainstream consumers who–far from spurning soy-based products–actively seek them out.

"Much of the current soy research is focused on isoflavones, a unique class of phytoestrogens or plant hormones found primarily in soy protein." The main soy isoflavone is genistein. Now soyfoods manufacturers are starting to take isoflavone content into consideration when they formulate, label, and promote their products. The isoflavone content of unprocessed soybeans can vary considerably among varieties, years, and place of harvest. Heat treatment does not appear to significantly reduce isoflavone content, but an alcohol wash (used with most soy protein concentrates and isolated soy proteins) removes most isoflavones in the product. The well-known Supro

brand of isolated soy proteins are not subject to an alcohol wash, which helps preserve their isoflavone content.

Rick McKelvey, president of the Soyfoods Association of America, has attended the American Dietetic Association show for the past two years. Last year, most of the questions he heard were: "What is this soy stuff that I'm hearing about?" This year's questions concerned the level of isoflavones in specific products. "This shows how far we've come in the bast year," he observes.

ADM, which could easily extract isoflavones from soybeans and sell them has decided not to do so. Jerry Weigel, PhD, who is ADM's vice president of corporate nutrition and regulatory affairs thinks it is probably not legal to sell isoflavones because they do not have GRAS (Generally Recognized as Safe) status or food additive status. Few soyfoods marketers are presently publicizing the isoflavone or genistein content of their products or making specific health or disease-prevention claims.

William Helferich, PhD, an associate professor at Michigan State University's Department of Food Science and Human Nutrition, has been studying dietary phytoestrogens in laboratory animals for 3 years. He has found that "genistein can stimulate estrogen-responsive breast cancer-cell growth in cultured cells and in animals implanted with these cells. He believes that women at risk for estrogen-dependent forms of breast cancer should not consume high levels of phytoestrogens." Most researchers are concerned about consumers taking isoflavone supplements or pills. Yet such products are now on the market and they acknowledge that some consumers will be attracted to them, instead of simply increasing the level of soyfoods in their diet, eating a healthful, balanced diet, and living and healthy lifestyle. Photos show: A jar of Morningstar Farms Roasted Soy Butter (soynut butter) which will be introduced this spring. Jan Remak, president of marketing for Vitasoy U.S.A.

One sidebar, titled "Probing the soy/health connection," discusses the research of Dr. James Anderson and Mark Messina, PhD. "Scientists theorize that phytoestrogens in soy might help compensate for the loss of hormonal estrogen women experience at menopause."

Another sidebar, "Boom times for the bean," notes that starting soon after the research study by Dr. James Anderson was published in August 1995, many soyfoods companies experienced a substantial increase in sales. Peter Golbitz notes that "After years of steady 10% to 15% annual growth, soyfood sales have soared by about 30% in the past year... Many marketers of meat and dairy analogs are reporting sales increases of more than 100%." A 1995 study by the Soyfoods Association of America found that 75% of Americans have heard of tofu, 55% of soymilk, and 50% of soy burgers. Golbitz adds that in Australia, where soymilk based on soy protein isolates is widely available, per capita soymilk consumption is at least three times what it is in the USA. Vitasoy has adopted a niche-market approach to selling its soymilk; it adjusts the amount beany taste according to the taste preferences of each market. Address: Senior Editor.

2368. Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease: September 15-18, 1996. Brussels Conference Center, Brussels–Belgium. 1996. American Soybean Assoc., Rue du Commerce 20-22 Box 4, 1010 Brussels, Belgium. 23 p. 30 cm.
• ***Summary:*** The cover of this attractive booklet has dark green ink on natural beige paper, with a square photo of soybeans in the middle. Contents: Invitation from the chairperson. The Second International Symposium On the Role of Soy in Preventing and Treating Chronic Disease: agenda. Satellite Symposium: agenda. Important deadlines and addresses. Instructions for abstracts. General information. Introducing Belgium and Brussels. Registration. Hotel accommodation. Social program. Symposium registration form. Hotel accommodation form. Social program form.

This symposium is being organized by Mark Messina, PhD (Chairman, USA), Roger Leysen, PhD (Secretary, Belgium), and Koen Descheemaeker, PhD (Scientific coordinator, Belgium). The international scientific advisory board consists of 12 members: Herman Adlercreutz, M.D. (Finland); Guiseppe D'Amico, M.D. (Italy); Stephen Barnes, PhD (USA); John Erdman, PhD (USA); Bernard Guy-Grand, M.D. (France); Takemichi Kanazawa, M.D. (Japan); Jean-Michel Lecerf, M.D. (France); Erik Muls, M.D. (Belgium); Marcel Roberfroid, PhD (Belgium); Risto Santti, M.D. (Finland); Cesare Sirtori, M.D. (Italy); Kurt Widhalm, M.D. (Austria).

Tentative agenda: Sunday, Sept. 15. Welcome and opening remarks. Overview of diet and cancer. Biotechnology of the soybean. Monday, Sept. 16. Soy and kidney function. Soy and bone health. Soy and heart disease: Hypocholesterolemic effects of soy (basic, mechanisms). Tuesday, Sept. 17. Soy and heart disease: Effects of independent cholesterol reduction. Soy and cancer: Animal studies, soybean anticarcinogens / anticancer mechanisms. Wednesday, Sept. 18. Soy and cancer: Human studies. Hormonal effects of soy.

Satellite symposium: A special satellite symposium will be held on Thursday, September 19, at the Sheraton Hotel, Place Rogier, Brussels; it will focus on two areas. The morning session on "Current understanding of soy and infant health" has been organized to better understand the effects of soy protein formula in infants and soyfoods in infants and young children–with particular emphasis on soybean isoflavones. The afternoon session on "Soybean isoflavones: measurement, levels in foods, and pharmacokinetics," will focus on isoflavone absorption and

metabolism, and methodology for quantifying isoflavones in food and biological matrices.

The cost of both symposia, including lunches but hotel accommodations, for a non-student paid before Aug. 1 is about $439.

Sponsors contributing more than $15,000: Alpro natural soyfoods, American Soybean Association, Protein Technologies International, Nebraska Soybean Board, Sojaxa (The French Association for Soyfoods Promotion–Active members: Alpro, Nutrition et Soja, Sojasun, Sojinal), U.S. Foreign Agricultural Service, United Soybean Board, Ohio Soybean Board, Central Soya, ADM, Wyeth Nutrition International, Indiana Soybean Development Council.

Other sponsors: Illinois Soybean Association and Illinois Soybean Program Operating Board, American Institute for Cancer Research, Monsanto Company, Ontario Soybean Growers' Marketing Board, Soyfoods Association of America, Minnesota Soybean Research and Promotion Council, Iowa Soybean Promotion Board, Michigan Soybean Promotion Committee, Indiana Soybean Development Council, Morinaga Nutritional Foods, Inc., and Functional Foods for Health Program. Address: Brussels, Belgium.

2369. Unicurd Food Co. (Pte.) Ltd. 1996. Removal notice (Postcard). Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. 4 p. [Chi; Eng]

• ***Summary:*** This 3½ by 6-inch 4-panel card, printed black and red on white, announces that Unicurd Food Co. will move its operations (offices and plant) to 18, Senoko South Road, Singapore 758089. Phone: (65) 759 2855. Fax: (65) 759-5411. A photo on the front of the card shows the front of the 2-story building. A map inside shows the new location. The old address was: Ang Mo Kio Industrial Park #3, Block 6020 No. 156, Singapore 2056.

Note: According to *Ontario Soybean Growers' Marketing Board Newsletter* (June 1996, p. 3). Unicurd now has the largest tofu plant in Singapore. The guest of honor at the grand opening was Noble Villenueve, Ontario Minister of Agriculture, Food & Rural Affairs. Address: Blk. 6020 Ang Mo Kio Industrial Park 3, #01-154/156/158/160, Singapore 2056. Phone: 482-5454.

2370. Eden Foods, Inc. 1996. Eden Foods protests USDA's proposed organic standards (News release). 701 Tecumseh Road, Clinton, MI 49236. 1 p. June 4. Accompanied by 4-page letter to Hon. Daniel Glickman.

• ***Summary:*** "Clinton, Michigan–Eden Foods has informed U.S. Secretary of Agriculture Dan Glickman of its objection to the fact that, as now proposed, the national standards for organically grown food under the Organic Foods Production Act of 1990 would bar Eden Foods, or any other company, from informing the public that it upholds higher standards for certified organic food than those proposed by the USDA. For over 25 years Eden Foods has worked closely with 180 family farms in developing standards for growing and processing organically grown food; for independents third-party inspection and certification; and for audit trail record keeping. The natural food consumer has come to expect this high level of protection and authenticity for organically grown food. These standards and practices are consistent with those in place in Europe, Canada, South America, Asia, Australia, Mexico, and India. These standards currently in force further the development of sustainable agriculture by providing incentive for improvement. The federally proposed organic standards remove incentive to improve and make federally mandated minimum standards the maximum by outlawing any communication in the U.S.A. about higher standards. Mr. Michael Potter, Chairman of Eden Foods, states, 'As proposed, the federal organic standards set back the organic food movement thirty years. They allow the use of food additives and processing aids heretofore never allowed. At the same time they make it illegal to communicate about our, or anyone else's, higher standards. The proposed federal standards would severely undermine this country's sustainable agriculture movement, and be the laughing stock of the international organic farming community.'"

Note: In the summer of 1970, Bill Bolduc of Eden Foods established Eden's first contact with an organic food grower–Bill Vreeland of Ypsilanti, Michigan, who grew organic wheat and soybeans. The two Bills drew up a contract and Bolduc soon made Eden's first direct purchase of organically grown wheat, which the company milled and sold. Soon Bolduc also purchased organically grown soybeans, corn, and rye from Vreeland. These crops, organically grown in Michigan, are shown in the Eden Foods Wholesale Pricelist of 26 July 1971, so they must have been grown during 1970. Address: Clinton, Michigan.

2371. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. 1996 Soybean Board research funding. June. p. 2.

• ***Summary:*** Total funding for 1996 will be $275,000. Soybean breeding is the primary focus of the research, however there are small projects on "Evaluation of Ontario soybean nutraceutical levels" ($5,000) and "Effect of soy protein on human protein metabolism" ($5,000). The research will be conducted by twelve organizations in Canada, with the largest amounts of money going to the University of Guelph and Ridgetown College. The public breeders at Harrow, Ridgetown, Guelph, and Ottawa are part of a coordinated team that addresses the needs of growers in Ontario's vastly different heat unit and soil zones. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2372. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Crushers want U.S. system. June. p. 3.
• ***Summary:*** "When an Ontario farmer sells soybeans, the price paid is based on the assumption that the soybeans are Grade #2, with 2% foreign material, at 14% moisture. If the load that they deliver contains any dockage, the full weight of the dockage is deducted from the load.

"However, according to the samples tested by the Canadian Grain Commission, the majority of the soybeans sold by Ontario farmers would make Grade #1, and have a moisture content below 13%.

"Are Ontario farmers being paid a #2 Grade price for a #1 Grade product? Would farmers be better off, if Ontario's system of buying soybeans moved closer to the U.S. system, which is based on Grade #1 at 13% moisture, with an allowance of 1% foreign material and dockage? Those questions are facing the Ontario Soybean Growers' Marketing Board as they grapple with a request from the processors to change the pricing basis for soybeans in Ontario.

"The current system was established in the days when Ontario was a net importer of soybeans. Back then, most of the soybeans that were processed in Ontario came from the U.S., and U.S. exports are based on a Grade #2 at 14% moisture. Ontario has been self-sufficient in soybeans since 1985, and prices are now based on their value in export markets."

"The bottom-line question for the Board is: Can we find a way to change the soybean pricing basis to meet the needs of our customers, without taking money out of the farmer's pocket?" Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2373. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Profiles: Maple Leaf Foods, and Maple Leaf Foods International. June. p. 7.
• ***Summary:*** Maple Leaf Foods (MLF) in a 60-year-old, $3 billion-a-year company, perhaps best known to consumers for its Maple Leaf processed meats. However MLF is also a "key buyer of Ontario soybeans, as well as a leading exporter of food-quality soybeans to East Asia, a market that the company pioneered in 1973.

"Maple Leaf Foods is currently evaluating the possibility of manufacturing soybean based products, with an eye toward one day exporting such products to Asia."

In April 1995 the company was acquired and came under aggressive new management. The new chairman is Wallace McCain, who is promising shareholders 5% per year growth in sales, and 11.5% returns on net assets.

"Maple Leaf Foods International is the corporation's international marketing arm, and is Canada's largest food exporter. It does $300 million a year in sales to Japan alone, largely through a network of over 100 partnerships with suppliers, manufacturers and distributors. Ted Bilyea, president of MLFI, says one of the keys to reaching Maple Leaf's export goal will be to make sure Ontario farmers can earn a healthy profit growing food-quality soybeans."

Bilyea adds: "We have always treated soybeans as food, not grain. It's a very important distinction."

"Garth Baxter, trading manager for MLFI's soybean team (whose photo is shown) says, 'In the future, premiums will have less to do with compensation for lower yield, and more to do with the food quality of the variety. We are moving toward a true quality premium.' It's good news for growers, Baxter says."

"Baxter says identity preserved soybeans already make up about 35% of their soybean exports in terms of volume."

"While Bilyea expects Maple Leaf to one day ship processed soyfoods to the Pacific Rim, he says the company also views food-quality soybeans as a value-added export."

"'We have invested very heavily in soybean breeding in the last few years,' Bilyea says. 'These varieties are in the system now, and they're going to be there for growers for years to come.'" Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2374. National Biodiesel Board. 1996. Board of directors and related documents. Jefferson City, Missouri. 15 p. Unpublished typescript. July 3.
• ***Summary:*** (1) The states represented are: Indiana, Iowa checkoff, Iowa association, Illinois checkoff, Missouri, Nebraska, Ohio, South Dakota, Michigan, Minnesota, SC/TN [South Carolina and Tennessee, combined as one], Wisconsin. For each state is given: One farmer representative and one staff rep. Staff (incl. Kenlon Johannes, executive director, and Jeffrey Horvath, Program director) and the executive committee are listed at the end.

(2) NSDB associate members: Cargill, TRT (Twin Rivers Technology), OSGMB (Ontario Soybean Growers' Marketing Board [Canada]), FPRF (Fats & Proteins Research Foundation, Inc.), NOPA / AGP (John Campbell), AEP (Ag Environmental Products, Doug Pickering), NOPEC.

(3) USB and the American Soybean Association staff. (4) Cooperators. (5) Potential members and other QSSB's.

(6) Consultants (7) Sub-contractors. (8) Agricultural and related organizations.

(9) Observers and advisors (government). (10) Observers and advisors (industry). (11) Observers and advisors (information & research services). Address: Jefferson City, Missouri.

2375. Kobold, Christy. 1996. How to get statistics on exports from and imports to the USA using PIERS (Port Import Export Reporting Service) (Interview). *SoyaScan Notes.* July 17. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** PIERS is a computerized database with detailed records on all import and export transactions through U.S. ports. It is produced by *The Journal of Commerce*, which started in San Francisco in 1827. The PIERS division started in 1972-73. They have 125 reporters at all U.S. ports (including Alaska, Hawaii, and Puerto Rico) who enter information into their database information from bills of lading and vessel manifests. Import data is now 100% electronic. Reports are produced on a weekly, monthly, or quarterly basis by port, by destination, product type, etc. There are five formats/media: Printed report (hard copy), tape, diskette, CD-ROM, and on-line access. One report costs $450. The 3 big ports on the west coast of the USA are Oakland and Long Beach (California), and Vancouver (BC, Canada); few imports come into San Francisco any more. The information available from PIERS is found in the following import and export data fields: Product description (as shown on bill of lading or manifest). PIERS product code. Harmonized Tariff Code and Description (assigned by PIERS, not copied from ship documents). Overseas country name. U.S. port name. Overseas port name. Container size, container quantity, TEU count and cubic feet. Steamship line and vessel name. Manifest number. Cargo quantity and unit of measure. Cargo weight. Voyage number. Shipment value. Payment type. Shipment direction. Bank name. Address: 425 California St., Suite 2450, San Francisco, CA 94104. Phone: 1-800-824-7537.

2376. Harrigan, Brian. 1996. Update on ProSoya in Russia. Current prices of equipment (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Russia has been ProSoya's single best source of income. To date ProSoya has sold 60-70 SC-20s, and one SC-100. By the end of August, ProSoya will also have sold eight SC-2000s (which produce 2,000 liters/hour of soymilk). Most of the latter large soymilk machines are being sold to a former dairy factory in Korenovsk, located about 35 miles northeast of Krasnodar in southern Russia, just northeast of the Black Sea. It was purchased by ASSOY–the Russian Soybean Association (Alexander Podobedov, director), which shut down the dairy operations completely and converted the plant to 100% soymilk production. Most of this soymilk is spray dried (powdered), and sold for half the price of dairy milk. ASSOY has conducted a very ingenious marketing effort on behalf of soymilk in southern Russia and is winning many converts.

The current prices (in U.S. dollars) of ProSoya's three basic types of soymilk equipment are as follows: SC-20–$6,900 (now made in India); SC-100–$65,000 to 100,000; lower prince models do not include boiler or chiller; SC-2000–$200,000 to $300,000. Address: Executive Vice President, ProSoya Inc., 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

2377. Harrigan, Brian. 1996. Actini, Actimonde, and the Agrolactor (Interview). *SoyaScan Notes.* July 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Actini is an active French company (located in eastern France on the southern shore of Lake Geneva) that makes the Agrolactor. The company president is Jean de Stoutz. ProSoya is now working closely with Jean de Voisin of Actimonde (the soy division of Actini), who has had a a great deal of experience for many years in Africa and Asia. He is a UHT and packaging specialist, who now lives in southern France and works as a consultant. Actini has sold about 100 of these machines, mostly in Third World countries, especially in Africa (to former French colonies). One puts dry soybeans (without soaking) into the machine and out comes formulated soymilk. The yield of soymilk is relatively low, with mostly suspended (rather than dissolved) solids since the soybeans are not soaked. The machine is very compact and can make about 200 liters/hour of soymilk using a continuous process. The base model (all you need to make soymilk) costs about $80,000 to $90,000. The yield from 1 kg of dry soybeans is 5½ to 6 liters of soymilk containing 7% dissolved solids. ProSoya's equivalent machine gets 7½ liters of soymilk, if you rewash the okara. Address: Executive Vice President, ProSoya Inc., 5350 Canotek Road, #7, Gloucester, Ottawa, ONT, K1J 9C9, Canada. Phone: 613-745-9115.

2378. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1996. Canadian Soybean Export Association. 9(2):2-3. July.
• ***Summary:*** "The Canadian Soybean Export Association (CSEA), held their inaugural meeting on March 19, 1996." This article is basically the same as the news release issued by CSEA on March 19. A photo shows CSEA executives Kim Cooper, Sue Robert, Garth Baxter, and Ron MacDougall.

2379. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1996. 1996 Canadian planting intentions. 9(2):1. July.
• ***Summary:*** Statistics Canada released their 1996 planting intentions report on June 28, based on surveys taken in late June. Soybean planting intentions for all of Canada are 2,192,800 ha, up 8% from last year. Of this, 10.4% (229,800 ha) will be planted in Quebec province, up 16% from last year. The remaining 89.6% (1,950,000 ha) will be planted in Ontario province, up 7% from last year.

2380. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada).*1996. Soybean seed coat discolouration. 1(2):2. July.

• ***Summary:*** Cool summers can cause the seed coat of certain soybean varieties to discolor, giving the seed a "dirty" appearance. Temperatures below 15ºC during seed development affect the expression of darker pigments in the seed coat. The greater the accumulated temperature below 15ºC, the darker the seed coat. Soybean seed coat color is influenced, in part, by the gene controlling soybean hair color. Soybeans with tawny hair color and yellow hilums tend to discolor in cool environments, while those with grey hair and yellow hilums discolor less. A graph shows this relationship.

2381. Cober, E.R.; Frégau-Reid, J.A.; Voldeng, H.D. 1996. Genotype and environment effects on natto quality traits. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 1(2):1-2. July.
• ***Summary:*** "Production of small-seeded natto soybean has increased in eastern Canada during the past decade. This study was conducted to evaluate natto cultivars and experimental lines for some quality characteristics... Two data sets, seven lines grown at five locations in Ontario and Quebec in 1989 and 1990, and fifteen lines grown at the same five locations in 1993 and 1994.

Table 1 contains 8 columns which show quality characteristics important in natto production, based on the means of data set 2: (1) Soybeans lines. The two named varieties are Canatto and Nattosan. Experimental varieties are EX-01 to EX-13. (2) Mean small-seed fraction is the mass of seed which passes through a 5.5 mm (#14) round-hole sieve compared to the mass of the complete sample. Values range from 630 gm/kg for Canatto to 990 gm/kg (i.e., more small seeds) for 5 experimental lines. (3) Percent hard seed is the percentage of seed which failed to imbibe water after soaking for 16 hours. Values range from 28.5 for Canatto to 0.0 for 10 experimental lines. (4) Water uptake is the mass of water absorbed, following soaking for 16 hours, compared to the mass of dry seed. Values range from 1,440 gm/kg for Canatto to 1,270 for EX-11. (5) Seed oil content. Values range from 145 gm/kg for Nattosan to 194 gm/kg for EX-02 and EX-03. (6) Seed sugar content. Values range from 98 gm/kg for Nattosan and two experimental varieties to 109 for three experimental varieties. (7) The aspect ratio is the ratio of minimum to maximum diameter. (7A) The hilum orientation is with the hilum up, in a plane parallel to the hilum. Values range from 0.74 for EX-13 to 0.82 for EX-04. (7B) The side orientation is with the hilum to the side, in a plane perpendicular to the hilum-up orientation and parallel to the long axis of the hilum. Values range from 0.86 for EX-08 to 0.93 for EX-04.

"Several natto quality characteristics have been improved. Natto lines have been developed that have a high fraction of small seeds with a very low level of seeds with impermeable seed coats. An increase in the level of seed sugar should be a future breeding objective." Address: Eastern Cereal and Oilseed Research Centre, Agriculture & Agri-Food Canada, Ottawa, Ontario, Canada K1A 0C6.

2382. Vitasoy International Holdings Ltd. 1996. Annual report 1995/96. New Territories, Hong Kong. 104 p. July. 30 cm. [Eng; Chi]
• ***Summary:*** For the fiscal year ended 31 March 1996, group turnover (sales) was HK$1,301 million, up 4% over the previous year. Of these sales, 70% came from Hong Kong, 19.6% from North America, and 10.5% from the rest of the world. Operating profit was down dramatically due to a big recall crisis which cost HK$79.9 million. Earnings per share were 6.0 cents, down 75%. Dividends for the year were 9.6 cents, the same as the previous year.

Chairman's statement: A crisis contained: Because of the "sour-taste" crisis, the Group decided to suspend temporarily operations at its plants in Hong Kong and China and to recall all Tetra Pak products from the markets in Hong Kong and Macau. These actions were in line with our policy of always putting our consumers' interests first" (p. 6).

"In North America, the Group continued the trend set in the first half and turnover grew by 10% for the year. The overall consumption of tofu has significantly increased due to newly published medical evidence–and public awareness–of the health benefits of soya protein and its effect on cholesterol reduction" (p. 7).

In the section on "Markets" (p. 8) is more detail on the North American market, where "the Group achieved sales of HK$25 million, representing an increase of 10% over the previous year. Despite unexpected sales shortfalls in beverage, the net operating profit of the Group in North America jumped 14%.

"Tofu products were the largest contributor, accounting for 40% of turnover. Tofu also realized the healthiest growth of over 17%. This was followed by beverages which made up about 39% of the region's total sales. Owing to order backlogs, sales were hardest hit in the Canadian traditional markets, resulting in reduced sales of almost 25%. The Hong Kong recall had little impact on the North American Vitasoy soyamilk sales in terms of consumer confidence.

"Secondary line products made up 11% of the region's turnover, representing a 16% increase. The dressings line comprised about 5% of total revenues, representing a 12% growth, while two new product lines under the Newmenu brand, Tofu Mate seasoning and Meat Analog, contributed an additional few percent to sales." Address: No. 1, Kin Wong Street, Tuen Mun, New Territories, Hong Kong. Phone: 466 0333.

2383. Gupta, Rajendra P.; Wood, Grant W. 1996. Energy efficient centrifugal grinder. *U.S. Patent* 5,544,821. Aug. 13. 8 p. Application filed 22 June 1995. 5 drawings. [1 ref]

Address: 1. 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada; 2. 836 Vinette Crescent, Orleans, ONT, K1E 1W9, Canada. Phone: 613-745-9115 or 613-744-4401.

2384. Hizer, Cynthia. 1996. The versatile vegetarian: Veggie hot dogs hit home run in taste league. *Atlanta Constitution (Georgia).* Aug. 29. p. H14. Food section.
• ***Summary:*** In March, the Vegetarian Society of Georgia held a "Feel Good Festival" with a series of tastings. Hot dogs were tasted "as is"–without adding ketchup, mustard, relish, or bun. Here are the winners, in descending order of preference (i.e., with the favorites listed first): 1. Yves Veggie Cuisine vegetarian frank. This wiener was also designated best veggie dog by *Self* magazine and the *San Francisco Chronicle* last year. 2. Yves Veggie Cuisine tofu frank. 3. Natural Touch vegetarian frank. 4. Light Life Wonder Dog. 5. Soy Boy Not Dogs. 6. Light Life Smart Dog (fat free). 7. Light Life Tofu Pups ("This has been the leader in sales for years and, in fact, was the first vegetarian hot dog to be served at Candlestick Park"). 8. Wholesome and Hearty Garden Dog (Made with wheat gluten, no soy). Address: Georgia.

2385. Gooderham, Melinda J.; Adlercreutz, H.; Ojala, S.T.; Wähälä, K.; Holub, B. 1996. A soy protein isolate rich in genistein and daidzein and its effects on plasma isoflavone concentrations, platelet aggregation, blood lipids and fatty acid composition of plasma phospholipid in normal men. *J. of Nutrition* 126(8):2000-06. Aug. [35 ref]
• ***Summary:*** The effects of consuming a soy protein isolate beverage (60 gm/day for 28 days) vs. a casein supplement was evaluated in 20 males. A dramatic rise in blood plasma isoflavone concentrations was observed in the soy protein group, the levels reaching 907 ± 245 nmol/liter for genistein (a 110-fold increase) and 498 ± 102 nmol/liter for daidzein (a 150-fold increase). These concentrations are higher than previously reported for the blood plasma of Japanese subjects consuming a traditional diet (276 and 107, respectively). It appears that this level of supplementation is not sufficient to counter heart disease risk factors such as high plasma cholesterol and platelet aggregation. Address: 1-2&5. Dep. of Human Biology and Nutritional Sciences, Univ. of Guelph, Guelph, Ontario, Canada N1G 2W1; 3. Dep. of Clinical Chemistry, Univ. of Helsinki, Meilahti Hospital, FIN-00290, Helsinki, Finland; 3. Dep. of Chem., FIN-00014, Univ. of Helsinki, Finland.

2386. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Profile: Harcan Kingsoya Co. Ltd. Aug. p. 7.
• ***Summary:*** Harcan Kingsoya began operations Canada in 1991, in Scarborough. The company was formed by Bernard Leung, Michael Cheung, and a Chinese soyfoods manufacturer in the People's Republic of China. The company's first and main product is soya sauce. They also produce tofu, soymilk, and "dried soybean curd." In the future they also plan to produce "veggie-food" products such as burgers, sausage, and ham. Harcan products are marketed under the Veg-A-King and VAK brand names. The company's market was originally Europe, but now they are shipping to local supermarket chains and wholesalers in Ontario. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2387. *Ontario Soybean Growers' Marketing Board Newsletter.*1996. Soybean Board on the Web. Aug. p. 3.
• ***Summary:*** "Thanks to the Ontario Federation of Agriculture (OFA), the Soybean Board [Ontario Soybean Growers' Marketing Board] has a homepage on the Internet. The OFA received a grant to provide free homepages for up to 30 agricultural organizations for one year..." Included in the page are Board contact names/addresses and links to soy information sites. Visit the homepage at http://www. tdg.ca/ ontag/soybean/. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2388. Daller, Frank. 1996. Re: New developments at ProSoya Inc. Letter to William Shurtleff at Soyfoods Center, Sept. 16. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Several months ago Frank resigned his position as president of ProSoya Inc. "During almost four years with the company, I had the pleasure of helping our team grow from a purely R&D operation, into a systems developer and manufacturer with over $3 Million in sales this year. Of particular personal satisfaction, was the introduction of the cottage industry size `SoyaCow' to humanitarian applications in developing countries, and the technology transfers to India and Russia which are providing for locally produced models at lower prices." Address: ProSoya Inc., 5350 Canotek Road, #7, Gloucester, ONT K1J 9C9, Canada. Phone: 613-745-9115.

2389. Skiff, James. 1996. Negotiations with ProSoya of Canada (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is working for a man named Howard Weiner (pronounced WEE-ner), who owns a company named Shared Ventures, which is a venture capital company that invests in food processing operations. Howard is now especially interested in soymilk and related products. Howard, whose family made their money originally (many years ago) by developing the dried egg business, is skilled at putting together new companies and joint ventures. Jim (often with Howard) has been negotiating all summer with ProSoya of Vancouver, BC, Canada, in the hope of starting a soymilk company in Minnesota using ProSoya technology. Jim and Howard (who flew to Vancouver twice) were hoping to get exclusive rights to use the ProSoya

technology in the USA, to establish an initial plant in Marshall, Minnesota, and then to develop regional plants round the USA. About 3 weeks ago Jim and Howard pulled out of the negotiations, very frustrated.

When Jim first talked with Lorne Broten in Vancouver, they discussed that ProSoya's contribution might be valued at $500,000 or a little more. They next time Jim talked with him, ProSoya's contribution was being valued at roughly $1 million. Then Jim and Howard went to Vancouver; they met Lorne, then were soon negotiating with Jerry Duncan of ProSoya; he is a newcomer to the company who is trying to put together business deals for ProSoya. He was apparently formerly in dairy sales and marketing for a company such as DairyFresh or some other company in that part of Canada; he is said to own part of ProSoya.

ProSoya has taken the position that they will not sell or license their equipment; they are only willing to participate as an equal partner in joint ventures. They offer to provide the soymilk equipment and know-how; the partner must provide the land, capital, personnel, and any additional equipment (as for packaging tofu). At the time Jim withdrew from the negotiations, he calculated that his side was expected to contribute about $3.5 million. The catch is that ProSoya retained the right to take back the equipment and withdraw from the joint venture at any time. Jim was frustrated at not being able to talk with Raj Gupta; he was told that Raj Gupta is no longer involved in the joint-ventures company but he has signed agreements whereby they control the company and equipment, and now he receives a royalty on the equipment he invented. The proposed joint venture would have paid a royalty to Gupta based on the production volume of the plant.

Jim has seen ProSoya's equipment operating in Vancouver several times and he thinks that he can improve a little on the equipment and a lot on the product. See comments on White Wave's Silk in a separate interview. In Vancouver, Jim tasted ProSoya's soymilk, yogurt, and tofu. He was very impressed with each of these products. The soymilk products made by ProSoya in Vancouver were very bland, with almost no beany taste. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

2390. Skiff, James. 1996. Questions about White Wave's Silk soymilk (Interview). *SoyaScan Notes.* Sept. 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jim is aware that Silk is made by ProSoya in Vancouver, BC, Canada, but then it is further processed and packaged somewhere in California. Jim is quite sure that additional ingredients are added in California, for two reasons. (1) He has read the ingredients listing on the label and it contains ingredients that he has been told by the manufacturer are not in the product when it leaves Vancouver. (2) He has tasted the product both here and in Vancouver. The taste is quite different. In addition, the product's taste within the USA is not consistent; each batch tastes different–sometimes quite different. Jim thinks that sweeteners, and perhaps other types of soymilk, are added in California. The product in California is much sweeter and (up until last week) more beany than it is in Vancouver. The Vancouver soymilk was very bland, with almost no beany taste. That was not true with the Silk sold in America. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

2391. Archer Daniels Midland Co. 1996. Annual report. P.O. Box 1470, Decatur, IL 62525. 44 p. Sept.
• ***Summary:*** Net sales and other operating income for 1996 (year ended June 30) were $13,314 million, up 5.1% from 1995. Net earnings for 1996 were $695.9 million, down 12.6% from 1995. Shareholders' equity (net worth) is $6,145 million, up 5.0% from 1995. Net earnings per common share: $1.27, down 9.3% from 1995. Number of shareholders: 35,431.

On the cover of the report is color illustration of a stylized family farm. ADM now has a Web site at http://www.admworld.com. The American farmer is the most efficient and most productive in the world. "One American farmers feeds 212 people... In 1996, the U.S. will export $65 billion worth of agricultural products, approximately 10% of which are exported by ADM and its affiliates, helping to generate over $100 billion in economic activity and about one million jobs. The productivity of the farmer can help ensure world peace... Thanks to the 1996 farm bill, U.S. farmers will be able to respond to market conditions instead of government orders" (p. 4-5).

Soy protein is a fast growing are for ADM. Currently ADM is building plants in Decatur, Illinois, and Europoort, Netherlands, to make improved soy protein isolates. "Isoflavones are another exciting area. Isoflavones are trace components in plants (particularly soybeans) that are believed to have positive health effects. This is a promising new area, so this research group is seeing its share of exciting developments. Programs are in place to purify these components for future production" (p. 6).

"Natural-source vitamin E: ADM produces this antioxidant from soybeans and other oilseeds. Research shows that natural-source vitamin E is 36% more potent than synthetic vitamin E" (p. 6).

"ADM value-added products from soybeans: (1) Derived from soy protein: Concentrates, isolates, isoflavones, TVP*, flour/grits, soy milk, Harvest Burgers*, Harvest Burgers for Recipes*, NutriBev*; (2) Derived from soybean oil: Vitamin E, lecithin, distilled monoglycerides, mono- and diglycerides, sterols." * = Registered trademark (p. 7). Note: Each of these products is discussed in detail on pages 13-14.

"Isoflavones: Soybeans contain isoflavones, powerful phytochemicals that appear to be able to block the multiple processes that lead to cancer, heart disease, and other chronic degenerative diseases" (p. 12).

"Value-added products from soybeans:... Vegetarians have long been using soy as a protein source, but in light of the mounting evidence that soy foods have significant health benefits, Americans from all walks of life are trying to incorporate soy into their diets... Every day, ADM plants worldwide process over 2.6 million bushels of oilseeds, and with value-added soy products gaining in popularity in a number of industries, these products will continue to be in demand" (p. 13).

These soy products include: (1) "Distilled monoglycerides, derived from soybeans or other oilseeds, are used primarily as emulsifiers or as starch complexing agents in a variety of food applications. ADM monoglycerides are often used in baked goods, confections, extruded products and margarines to bring about or enhance desired characteristics" (p. 13).

(2) "Isoflavones: A relatively new area of interest is isoflavones (part of a group of substances called phytochemicals). The two predominant isoflavones found in soybeans are genistein and daidzein. Researchers at ADM and around the world are conducting studies that strongly suggest that isoflavones have significant health benefits. ADM is scaling up research and processing for the future production of this product" (p. 13).

(3) Lecithin: "Interest in lecithin has escalated worldwide due to recent research investigating its health benefits. Lecithin is most recently being touted as a nutraceutical, since the linoleic acid in lecithin is believed to possess health benefits. Expansions have been completed in both the Windsor (Ontario, Canada) and Europoort (Holland) facilities. Improvements are scheduled for the Hamburg, Germany plant and construction is progressing on the new deoiled lecithin plant in Decatur, Illinois. As the leading producer of lecithin, ADM is positioned to meet the world's growing demand."

(4) Natural-source vitamin E: "An antioxidant, vitamin E is reported to help protect cells from free radical damage, the type of damage that can lead to an array of degenerative diseases. A study in the *Lancet* [a prestigious British medical journal]... concluded that a dime's worth of natural-source vitamin E could reduce heart attacks by 75% when taken daily by those with bad hearts. The *New England Journal of Medicine* reported that postmenopausal women who ate a moderate amount of foods rich in vitamin E cut their chance of heart disease by almost two thirds." In order to keep up with the rising demand, ADM is increasing its natural-source vitamin E plant capacity by fifty percent. ADM is one of the world's largest producers of natural-source vitamin E and also processes products that are good sources of vitamin E, including corn, canola, soy, sunflower, and peanut oils... By 1997, we will have the capacity to supply 300 million people with the current recommended daily allowance of vitamin E."

(5) "Soy protein: One of ADM's most important and versatile value-added products is soy protein. With increasing evidence of health evidence associated with soy foods, an increasing demand for soy protein products seems likely. To meet this rising demand, ADM is expanding its soy concentrate and isolate plants in Decatur, Illinois, and Europoort, Holland... Soy protein is finding success abroad in the consumer marketplace. In Canada, soy frozen desserts are being sold at Safeway grocery stores under the Lucerne Dairy label. In the U.K., a new soy milk plant is under construction to met demand for a good tasting nutritious non-dairy beverage [probably made from isolated soy protein]. In Europe, VegeMince, VegeBites and VegeSteaks are being introduced by Haldane Foods, an ADM subsidiary. German consumers will be introduced to Frosta Medallions, soy protein and vegetable frozen patties available in four varieties." A large color photo shows a package of Green Giant Harvest Burgers for Recipes (p. 15).

"ADM European Overview: ADM owns the three largest tidewater oilseed plants in the world. They are located in Erith [on the River Thames just east of London], England; Rotterdam, Holland; and Hamburg, Germany."

Page 37 discusses "Antitrust investigation and related litigation." Address: Decatur, Illinois.

2392. Nutrisoya Inc. 1996. Classified ad: Bulk soymilk. *Bluebook Update (Bar Harbor, Maine)* 3(3):7. July/Sept.
• ***Summary:*** "Nutrisoya Inc. is Canada's leading soymilk and tofu manufacturer." In January 1996 the company launched its new line of aseptic packaged soymilk, "Nutrisoy Premium Lite." Recently they have upgraded their production facility and can now supply up to 3,000 liters/hour of organic soymilk. Contact Nick Feldman. Address: 4050 Pinard, St.-Hyacinthe, QUE J2S 8K4, Canada. Phone: 514-796-4261.

2393. James, Valerie. 1996. The implications of feeding soy: Facts about the "New Zealand situation". *Parrot (Parrot Society of New Zealand)* 2(4):34-40. Oct.
• ***Summary:*** A very detailed report on what happened to exotic parrots fed a formula containing soy and how the Jameses researched the causes of death. Contents: Editor's note. 1. Preliminary enquiries. 2. Suspect soy. 3. The case to be answered. 4. Presentation of evidence–How safe is soy. 5. In summing up. 6. My own verdict. 7. Footnote.

"1. Preliminary enquiries: In the lengthening days of early summer of '92 our dream of keeping and raising exotic and native birds, one which we had enjoyed for several years, became a nightmare when the chicks I raised on a commercial food began to sicken and die (although the

chicks I raised on my own formulation thrived). The symptoms were varied and unusual, but we did not suspect the food for several months because it was promoted as scientifically developed.

"The autopsies of our birds and those of others whose birds had been fed the same food, indicated an immune system breakdown with the resultant multiple organ failure and a lethal multiplication of the birds' own normally benign bacteria. Survivors often had poor muscle control, poor or unusual feathering or matured prematurely. Some were also aggressive or displayed inappropriate sexual behaviour.

"Because we were advised that the symptoms of haemorrhaging, vomiting, respiratory problems, liver disease, and immune suppression were likely to be caused by food contamination by either a rodent poison (warfarin type) or a fungal toxin (such as zearalenone) food samples were sent, by us and others, to several laboratories for analysis. The two New Zealand laboratories reported that, although in amounts varying greatly between samples, every food sample appeared to contain rat poison. We were all shocked!! But we were relieved to have an answer and so we put the manufacturer in touch with the New Zealand analytical chemists expecting that the remaining stocks would be withdrawn."

"Further analysis led to a report that the suspect food contained a structure which was almost identical to coumarin, upon which most modern rodent baits are based. Coumarin, although once allowed in small amounts, as an aromatic flavour enhancer in human foods, was long ago banned by the US Federal Food and Drug Administration when it was shown to be cumulatively toxic when fed to animals, causing them to die. In 1944 coumarin was synthesised into Warfarin, the first of the rodent poisons to cause death by reducing the body's ability to produce Vitamin K and consequently inducing fatal haemorrhaging. This lethal effect of coumarin was first discovered in the 1930s when the haemorrhagic death of many Canadian cattle being fed spoiled sweet clover silage was attributed to the naturally occurring coumarin in the food." Address: Whangarei Heads, New Zealand.

2394. Straus, Karen Cope. 1996. Let the eating begin: Readers from across the country and Canada tell us their picks for gold and silver in the olympics of vegetarian restaurants. *Vegetarian Times.* Oct. p. 62-72. [1 ref]
• ***Summary:*** On the first page are listed the "Winners by region," the top two vegetarian restaurants in each of 5 regions: West, Midwest, South, East, and North (Canada). On page 64 are listed favorite vegetarian restaurants in 21 states and Canada. The states with the most listings are California (17), New York (8), Pennsylvania (6), and Canada (5). Favorite recipes from various restaurants are given, including: Layered tofu supreme (Kung Food, San Diego). Jamaican-style curried tofu and mixed vegetables (Woodstock Vital Foods, Woodstock, New York). Tofu rancheros (Seva Restaurant, Ann Arbor, Michigan). Address: Food editor.

2395. Hill, Allan R. 1996. New continuous protein or tofu process and equipment developed in Canada (Interview). *SoyaScan Notes.* Nov. 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Highland Equipment Co. and Agri-Food Canada have a joint venture which has developed a process and equipment for making protein or tofu using a continuous process. Allan is the project coordinator. The basic steps in the process are as follows: Make liquid soymilk with a high protein content. Denature the soymilk protein by adding natural chemicals (not through heating) to precipitate the protein. Pasteurize using a high-temperature short time (HTST) heating process to lower the bacterial count with the required range. Run into a holding tube, so that it goes from a flow pattern into a laminar flow. Run into a coagulation tube system, where acid is injected into the flow after the product goes into a manifold; this changes it from a laminar to another type of flow, allowing the coagulant to mix in uniformly and completely. Run into a conveyance system and then into either of two packaging systems: (1) Pump bulk soymilk curds are through a standard augur hopper into 30 lb (5 gallon) plastic pails for food processing companies; (2) Run into an in-line static mixer to homogenize the product, then pump through an extrusion device (a stainless steel box) which forms it into cakes for retail sale. The process can make either regular or silken tofu.

The federal government of Canada holds the patents on the process and equipment, and the patent numbers are presently confidential. His company is part of the "Team Canada" group going to Seoul (Korea), Manila (Philippines), and Bangkok (Thailand) this coming January. He plans to talk with heads of soybean companies in Asia about licensing this process and technology. He thinks the equipment would be too expensive to ship overseas–even in 40-foot containers. It would be less expensive to have the equipment manufactured in the country of the licensee.

This process was largely developed at the Harrow Research Center in Ontario by Doug Jessop. It was developed originally for making continuous-process ricotta cheese.

The smallest commercial plant they sell will produce 2.6 million kg/year, working 8 hours/day and 5 days/week. This works out to be 1,250 kg/hour. They also have plants that make 2,500, 5,000, and 10,000 kg/hour. They will be able to deliver plants in the second quarter of 1977. They have built and tested one lab-scale plant that makes 250 liters/hour. Doug Jessop says that the finished product is definitely tofu.

Update: Talk with Margaret Vokes, Director-International. 1998. Jan. 5. Allan R. Hill is no longer with the company, whose name is now Highland Equipment Limited, 136 The East Mall, Toronto, Ontario M8Z 5V5, Canada. Phone: 416-236-9610. Fax: 9611. They have made and sold one system for ricotta cheese and are in negotiations with two tofu manufacturers. Address: JV Project Coordinator, Highland Equipment Co. Ltd., 645 Woodbine Ave., Toronto, ONT M4E 2J3 Canada. Phone: 416-698-0806.

2396. *ASA Today (St. Louis, Missouri).*1996. European response to genetically modified soybeans: Special update to ASA members. 3(1):3-4. Oct/Nov.
• ***Summary:*** Background: Discusses the acceptance of Roundup Ready soybeans, the "first commercially available variety of GMO soybeans," which have been approved for importation and processing by government regulatory agencies in the United States, Europe, Canada, Mexico, Argentina, and Japan. "Last spring regulatory approval was granted by the European Union allowing the importation and processing of Roundup Ready soybeans into food and feed."

"Present situation: Greenpeace and other activist groups have mounted strident opposition to the introduction of GMO soybeans into Europe."

2397. **Product Name:** Neilson's Soy Delight (Refrigerated in Gable-Top Carton).
**Manufacturer's Name:** Neilson Dairy. Div. of Weston Food Group.
**Manufacturer's Address:** Halton Hills, ONT, Canada. Phone: (905) 702-7200.
**Date of Introduction:** 1996. November.
**How Stored:** Refrigerated.
**New Product–Documentation:** Ontario Soybean Growers' Marketing Board Newsletter. 1997. Feb. p. 2. "Soy Delight soymilk." Neilson's Soy Delight is "the first fresh soymilk to be available in grocery stores." It comes in two flavors: Original and Vanilla. With its trilingual labeling (English, French, and Chinese) it is "targeted at the Asian-Canadian market, but it's a high-quality product that everyone will enjoy." One litre milk-style (gable-top) cartons are "currently being sold at Zehrs, Loblaws, Fortinos and Mr. Grocer supermarkets throughout Ontario."

Talk with Ian Walker. 1997. May 26. Neilson Dairy, a big Canadian dairy company, has a fresh soymilk on the market, sold in a gable-top carton like milk. They introduced it in about Nov. 1996. This is a new trend in Canada. Note: This soymilk is made by Nutrisoya, Inc. in Quebec and packaged near Quebec City.

2398. **Product Name:** ProSoya SoNice (Soymilk in Tetra Brik aseptic cartons) [Natural, Original, Vanilla, Chocolate].
**Manufacturer's Name:** Pacific ProSoya Foods Inc.
**Manufacturer's Address:** 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1996. November.
**Wt/Vol., Packaging, Price:** 1 liter and 250 ml aseptic carton.
**How Stored:** Shelf stable; refrigerate after opening.
**New Product–Documentation:** Talk with Raj Gupta of ProSoya in Ottawa, Ontario, Canada. 1996. Dec. 16. This product was introduced in November 1995 (1996?) in three flavors: Natural (nothing added), original, and vanilla. A fourth flavor, chocolate, is now in test market. The product is presently sold only in Canada. The soymilk is made in two of ProSoya's plants–in British Columbia and in Ottawa, Ontario. The place where it is packaged is confidential. Note: It may be packaged at a Beatrice Foods plant near Toronto.

Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-October, 1997, in aseptic cartons (1 liter, and 250 ml x 3), in 6 flavors (vanilla, chocolate, natural {soybeans and water only}, original {sweetened, and balanced, with a balance of sodium and carbohydrate}, strawberry, and cappuccino); expected retail price is $1.99/liter.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in the late fall of 1996. It is now available in 1 liter and 250 ml UHT cartons. A new flavor (chocolate) has been introduced, and two new flavors (strawberry and cappuccino) will be available very soon.

2399. Clarke (Shearer), Maya. 1996. Re: Work with soyfoods for Plenty Canada in Sri Lanka and the Caribbean. Letter (fax) to William Shurtleff at Soyfoods Center, Dec. 1. 2 p.
• ***Summary:*** Her company is working with another company to develop a product that contains green vegetable soybeans. She is interested in starting a branch of the Soyfoods Center in Ontario. Maya worked for Plenty Canada for many years. She was part of the first team that went to Sri Lanka to conduct a feasibility study for CIDA; her title was Nutrition Consultant. Then she was field director at St. Lucia from 1985 until 1992. During that time (her name was Maya Shearer) she corresponded with Soyfoods Center. She also worked in Dominica, St. Vincent, Barbados, Haiti, Jamaica, and Guatemala on soyfoods projects. Her particular area of expertise is recipe development.

Plenty Canada's Caribbean projects were turned over to local management in 1992 and she returned to Canada; she

no longer works for Canada. She worked as a community worker and taught cooking workshops until last year when she and three other women started Sun & Sky Foods. She still acts as a resource person and teaches classes at the University of Western Ontario on tofu, beans, legumes, and vegetarian nutrition. She also works as a food consultant. Sun & Sky Foods produces a line of bean soup mixes an cornbreads which they currently sell throughout the province of Ontario. Address: Sun & Sky Foods, 859 Dundas St. E., London, ONT N5W 2Z8. Phone: 519-432-6916.

2400. *SoyaScan Notes.*1996. Chronology of major soy-related events and trends during 1996. Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 15–Silk, America's first soymilk sold refrigerated in a typical milk carton (gable-top, Pure-Pak) is introduced by White Wave of Boulder, Colorado. It is made in Canada, formulated in California, then shipped to White Wave in tanker trucks.

Sept.–Monsanto's Roundup Ready transgenic (genetically engineered) soybeans are harvested from an estimated 1.2 million acres of U.S. farmland. They begin to enter into the food supply–unlabeled. There is a great outcry in Europe (especially in England and Germany) by consumers over loss of freedom of choice concerning food–but hardly a peep from the USA.

1996 Sept. 15-18–The Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, is held in Brussels, Belgium, and organized by Mark Messina, PhD.

1996 Oct. 30–Odwalla, a fresh juice manufacturer and distributor, is informed that their unpasteurized apple juice may be contaminated with an especially virulent strain of *E. coli* strain O157:H7 (pronounced Oh-157-H7). Odwalla immediately initiated a recall, but one baby died and 66 people in 3 states got sick. Three years earlier, in January 1993, a similar but more severe outbreak had occurred at Jack-in-the-Box in Seattle, Washington; 4 children died (from kidney failure) and 700 people became ill–from eating undercooked hamburgers. These two incidents may have major implications for the soyfoods industry–since unpasteurized tofu is a prime target for *E. coli* contamination. The first big consequence was seen when Kroger, a major supermarket chain in the Midwest, announced in late 1996, that it would no longer sell unpasteurized tofu.

There is growing interest in the health benefits of the phytochemicals in soybeans–especially genistein. Four areas of potential benefits have been identified, and they are in a "horse race" as scientists investigate more deeply: 1. Relief of risk of cardiovascular disease, especially heart disease. 2. Relief of menopausal symptoms. 3. Improvement of bone health and relief of risk of osteoporosis. 4. Relief of cancer risk of some sites–especially prostate cancer. But most media have tended to hype these health benefits, far beyond what the science justifies.

During the past year or two, Soyfoods Center has been receiving a growing number of calls from people who ask "How can I get more soy into my diet?" Never before have we heard people ask a question like this. These people have heard about the many health benefits of consuming soyfoods regularly but they don't know what foods would suit their tastes and diet.

This year, for the first time, the state soybean associations and boards take the lead (passing the Soyfoods Association of America) in promoting soyfoods in America. The leading states are Illinois, Indiana, Michigan, Minnesota, and Missouri.

This year (1996), the Chemopreventive Branch of the National Cancer Institute concluded that genistein (the primary isoflavone in soybeans) was one of four plant compounds with superior anticancer activity.

2401. *Bluebook Update (Bar Harbor, Maine).*1996. ProSoya receives new patent. 3(4):3. Oct/Dec.
• ***Summary:*** On 13 Aug. 1996 ProSoya Inc. of Ottawa, Ontario, Canada, was awarded a U.S. patent for their Energy Efficient Centrifugal Grinder. Invented by Raj P. Gupta and Grant W. Woods, it grinds solids or solids in liquids in multiple stages. For more information phone: 613-745-9115.

2402. Hayes, Keri. 1996. Biotech oilseeds yield first harvest. *Bluebook Update (Bar Harbor, Maine)* 3(4):1-2. Oct/Dec.
• ***Summary:*** An uncritical, unquestioning presentation of this most controversial subject. This spring U.S. farmers planted an estimated 1.2 million acres of Monsanto Company's Roundup Ready soybeans; 500,000 acres of Monsanto's Roundup Ready canola were planted in Canada. Dr. Molly Kiline, director of food industry relations at Monsanto, says its a simple weed control system.

2403. Boocock, David G.B.; Konar, S.K.; Mao, V.; Sidi, H. 1996. Fast phase-one oil-rich processes for the preparation of vegetable oil methyl esters. *Biomass and Bioenergy* 11(1):43-50. [123 ref]
• ***Summary:*** Describes a new process for rapid production of methyl esters using the addition of a cosolvent such as tetrahydrofuran (THF). There are now 25-30 plants making methyl esters (biodiesel) worldwide. Address: Dep. of Chemical Engineering and Applied Chemistry, Univ. of Toronto, 200 College St., Toronto, Ontario, Canada M5S 1A4.

2404. Main, Jan. 1996. The lactose-free family cookbook. Canada: Macmillan Canada. *

• ***Summary:*** This book combines information on lactose intolerance, dietary calcium, and a collection of recipes, including many dishes based on soyfoods. Address: Professional home economist, Scarborough, Ontario, Canada.

2405. *Oils & Fats International.*1996. Vegoil implants tested: Canada. 12(2):4.
• ***Summary:*** On Feb. 7, three Ontario women became the first in Canada to receive breast implants containing soy oil. The implants are made by Lipomatrix of Switzerland.

2406. Pioneer Hi-Bred International, Inc. 1996. Inventing and building seed crop genetic improvements: Research and product development. Des Moines, Iowa. 28 p. 28 cm.
• ***Summary:*** Includes: A message from Jim Miller, Vice President and Director, Oilseeds and Field Crop Research (p. 8). Soybean research (p. 9). World map of Pioneer research locations (p. 22-23). Soybean locations by region (p. 28): There are 13 in North America, 3 in South America (Venado Tuerto, Argentina; Santiago, Chile; San Jose, Costa Rica), and 2 in Europe (Parndorf, Austria; Parma, Italy). The Spanish-speaking North American soybean locations are: Salinas, Puerto Rico; Puerto Vallarta, Mexico. Those in the USA are: Kekaha, Kauai, Hawaii; Hamel, Illinois; LaSalle, Illinois; St. Joseph, Illinois; Cedar Falls, Iowa; Johnston, Iowa; Moorhead, Minnesota; Redwood Falls, Minnesota; Greenville, Mississippi; Napoleon, Ohio; Chatham, Ontario, Canada. Address: 11153 Aurora Ave., Des Moines, Iowa 50322-9969. Phone: 1-800-338-5878.

2407. Soya World Inc. 1996. So Good–Dairy free beverage: 5 easy to make, nutritious recipes. Product information guide (Leaflet). Vancouver, British Columbia, Canada. 12 panels. Front and back. 16 cm.
• ***Summary:*** This attractive full-color leaflet is folded into 16 panels. Contents: The story of So Good. Five recipes and color photos. The So Good family of soy beverages. Tips for using So Good. The ingredients in So Good: Filtered water, soy protein, vegetable oil, maltodextrin, rice extract, fructose, cane sugar, mineral salts (calcium phosphate, potassium phosphate), food acid (potassium citrate), flavours.

Why choose so good? (Nine reasons, incl. contains up to 9.3 gm of protein per 250 ml serving). Nutritional information for each of the five flavors: Original, Fat Free, Absolutely Vanilla, Utterly Chocolate, and Seriously Strawberry.

Note: This products are made by Soya World Inc. under license from the Sanitarium Health Food Company, New South Wales, Australia. Address: P.O. Box 3018, Vancouver, BC V6B 3X5, Canada. Phone: (604) 420-3240.

2408. Clarke, Maya. 1997. Re: Resume and summary of soyfoods work for Plenty Canada in Sri Lanka and the Caribbean. Letter (fax) to William Shurtleff at Soyfoods Center, Jan. 5. 10 p.
• ***Summary:*** The first 2 pages are a cover letter. The next 5 pages are an application for the International Soyfoods Center. The last 3 pages are a summary of Maya's work with soyfoods from 1984. In 1984 she was a team member in Sri Lanka, conducting a feasibility study, funded by CIDA (Canadian International Development Agency); at that time her name was Maya Shearer. From 1985 to 1993 she was in St. Lucia, West Indies, as field director of the Plenty Canada Integrated Soyfoods Program; here, at the Soy Center in Castries, she did her most extensive and creative work with soyfoods. She helped St. Lucians to start 10 small soyfoods businesses, including Union Hilltop Soyfoods (still in operation) and Natural Cafe. "The program in St. Lucia (population 150,000) was the most successful of Plenty's programs in the Caribbean... About 10 acres of soybeans were grown annually and all were used on the island for the production and human consumption of soyfoods."

In 1987 she was in Solola, Guatemala. In 1988 in Jamaica. From 1985 to 1990 in Dominica, she worked with Carib indigenous peoples to develop an appropriate soyfoods program. She also worked at the Soy Training Center in Roseau, Dominica, with Chuck Haren, Norman and Sarah Ayerst, and local Dominican counterparts. Although there was no formal soyfoods program on Barbados or St. Vincent, she conducted some training with women's and other community groups on these islands; their regional requests were serviced by the Soy Center in St. Lucia. In 1988 and 1989 in Haiti she met with people interested in establishing a soyfoods program. Address: Sun & Sky Foods, 859 Dundas St., London, Ontario N5W 2Z8. Phone: 1-888-441-6680.

2409. Clarke, Maya. 1997. Summary No. 2 of soyfoods work for Plenty Canada in Sri Lanka and the Caribbean (Interview). *SoyaScan Interviews on File.* Jan. 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Answers the following questions: Why did Plenty Canada discontinue its work with soyfoods in the Caribbean? Why is Plenty Canada in Ontario so much smaller now than 10 years ago? What is the former director, Larry McDermott doing now? Which of Plenty's Caribbean soyfoods programs have been the most successful? What does Maya think are the keys to a successful program. Address: Sun & Sky Foods, 859 Dundas St., London, Ontario N5W 2Z8. Phone: 1-888-441-6680.

2410. Thompson, Keith. 1997. History of breeding soybeans for use in making natto at Jacob Hartz Seed Co.

(Interview). *SoyaScan Notes.* Jan. 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Hartz got involved with natto and with food soybeans in 1975 when Yaichiro Mogi, founder and president of Asahi Shokuhin, a major Japanese natto manufacturer, contacted Continental Grain in Vancouver, BC, Canada. Bud Currie (phone: 604-684-7292) of Continental was there at the time and he knows the whole story in detail. Continental Grain then contacted Jacob Hartz Seed Co. in 1975 on behalf of Mr. Mogi. It was probably not until about 1979 or 1980 that Hartz's program to breed natto soybeans began to yield some results. The first natto soybean they bred successfully was their H-24. The small seeded soybeans they had before that shattered so badly (the seeds popped out of the pods before harvest) that after farmers grew it once, they refused to grow it again. Now Hartz has 6 natto varieties. Hartz was one of the first American seed companies to breed soybeans for food use. Hartz is still dealing with Mr. Mogi, as they did more than 20 years ago. He is buying more soybeans direct than anyone else in the business, because he does not go through all the multiple steps of purchasing (importer, then wholesaler) as is typical in Japan. In the early 1980s Hartz added a second customer for natto beans, as they started working with Mitsubishi. Today Mitsubishi and Continental sell natto soybeans bred by Hartz to other natto makers in Japan.

At a rather early date, Mr. Mogi decided that what made a soybean variety good for use in natto could be determined by scientific research. So, long ago, he established a research lab, and they started comparing soybean varieties, looking at several other characteristics (especially the chemical composition) in addition to seed size and hilum color. He communicated is research findings to Hartz, and they started screening based on the criteria that he desired. They started with small seed size and light hilum color, then tried to add more characteristics (such as high sucrose content) into the mix. Of course, Hartz would also like to get a high yield, but they have never been able to get good natto beans that yield well. So they end up sacrificing yield to get the other desired characteristics. "We think we've got the best natto breeding program in the world–by a long shot." Keith doesn't know of any other private company breeding natto soybeans and only a few universities (in Nebraska, Virginia, Minnesota, and South Dakota) are "tinkering around with natto beans." One major problem is that you must start with a very small germplasm pool–typically a southern pool because it is small seed size to begin with. There are some Midwestern and some Canadian natto varieties, yet at least 75% of all natto soybeans exported to Japan are grown in the South–by Hartz, James Dunn, and 2-3 others. Hartz is the largest supplier. Historically, Mr. Mogi has said that a particular soybean variety is good for making natto, many other natto makers start buying that variety. Once a natto manufacturer finds a variety he likes, he would prefer not to change it. Hartz has developed a natto variety that yields better, but Mr. Mogi has refused to accept it, so it probably will die. Hartz's competition (Asgrow, Pioneer, Northrup-King, smaller companies, etc.) are constantly trying to get better yield. The name of the game is to keep the desired natto characteristics but to constantly improve the yield.

Hartz sells two types of soybeans–food and commercial: 50% of its soybeans are sold to food manufactures and the remaining 50% (commercial) is sold to Southern farmers for planting and eventual use as oil and meal. The amount of soybeans sold for food use will continue to increase, but its percentage of the total will drop, because Hartz plans to rapidly expand its production of Monsanto's Roundup Ready soybeans, which are very profitable.

When Keith started in the soybean seed business in 1978, there were less than 10 soybean varieties in the southern United States–in 3 maturity groups. All of these were public varieties, bred at southern universities. Keith came to work for Hartz in 1983. Hartz introduced its first proprietary (private) commercial varieties (for planting by farmers) in 1984. The farmer is interested *only* in yield. Hartz is now looking to South America as an important new market. Address: Food and Export Manager, Hartz Seed, P.O. Box 946, Stuttgart, Arkansas 72160. Phone: 800-932-7333.

2411. **Product Name:** Sensational Soy (Soymilk) [Original, or Vanilla].
**Manufacturer's Name:** Beatrice.
**Manufacturer's Address:** 295 The West Mall, Suite 600, Toronto, ONT, M9C 4Z4 Canada. Phone: (416) 626-5500.
**Date of Introduction:** 1997. January.
**How Stored:** Refrigerated.
**New Product–Documentation:** Ontario Soybean Growers' Marketing Board (OSGMB). 1997. *Canadian Soyfoods Directory.* Chatham, Ontario, Canada: OSGMB. 27 p. See p. 15. Contact Greg Wild or Surendra Patel.

Talk with George Conquergood of International ProSoya Corporation (IPC). 1999. April 21. This soymilk was introduced in Jan. 1997 in a blue ½-gallon Pure-Pak carton. It was made for Beatrice by a small Chinese-Canadian soyfoods company named Pak Fok Food Products Inc., in Scarborough, Ontario. Owned by Simon Kwan, they make soymilk, tofu, and tofu products. Beatrice formulated, flavored, and packaged the soymilk at their plant at #6 Shastaberry Lane, Brampton, Ontario, and distributed and sold it across Canada in the dairy case of supermarkets. It was a Chinese-style soymilk with a fairly strong beany flavor. Beatrice started to package aseptic soymilk for IPC in 1996. The informally agreed to also package fresh soymilk in a gable-top carton for IPC–but they kept stalling.

Jerry Duncan failed to get a written agreement and a non-compete clause from Beatrice. This stalling forced IPC to have their fresh soymilk packaged by Farmland Dairies in New Jersey. Soon after IPC's fresh soymilk was launched, Beatrice came out with a competing product.

2412. Goh, Francis N.K. 1997. Unicurd Food Company Pte. Ltd. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada)* 11(2):1-2. July.
• ***Summary:*** Contains a good description and history of this tofu manufacturing company. A rather dark photo shows Mr. Francis Goh holding some of his company's tofu products. Address: Director and Founder.

2413. **Product Name:** ProSoya SoNice: Fresh Soy Beverage (in 1 Quart ESL Gable-Top Cartons) [Natural, Chocolate, Vanilla Lite].
**Manufacturer's Name:** ProSoya Foods Inc.
**Manufacturer's Address:** Surrey (Vancouver), BC, V3S BE7 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1997. January.
**Wt/Vol., Packaging, Price:** 1.89 liter ESL gable-top carton. Retails for $2.99.
**How Stored:** Refrigerated, 85 day shelf life.
**New Product–Documentation:** Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-October, 1997, in quarts and half gallons. Refrigerated (45 day shelf life); expected retail price is $0.99/cup.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in Canada in Jan. 1997. It is available in 1 liter and 2 liter gable-top ESL cartons.

Talk with Steve Demos, president of White Wave. 1998. Aug. 10. He heard about 10-14 days ago that the SoNice brand, both aseptic and gable top, is no longer being shipped to market. The company's first comment was "Packaging problems," and then it was "money problems."

2414. Carter, Thomas E., Jr. 1997. Public variety release summary: Table 1. Raleigh, North Carolina. 7 p. Unpublished manuscript. 35 cm. [43 ref]
• ***Summary:*** This table is titled "Pedigree and related information for North American varieties released during 1992 and Feb. 1997." For each variety the following information is given: Variety name. Maturity group. Year released. Pedigree. Prior designation. Developer. PI No. Reg. Lic. Reference. Note: The letters "AC" before a variety name stand for Agriculture Canada.

The varieties are: 9063, AC Albatros, AC Brant, AC Colibri, AC Cormoran, AC Harmony, AC Hercule, AC Pinson, AC Proteus, Accomac, Achiever, Agassiz, Alpha (1996), Alpha (1992), Athow, Benning, Bronson, Cache, Calhoun, Carver, CF461, CF492, Charleston, Chesapeake, Ciaric, Cisne, Colfax, Conrad 94, Council, Danatto, Defiance, Delsoy 5500, Dillon, Doles, Faribault, Fillmore, Flint, Freeborn, General, Glacier, Graham, Granite, Haskell, Hendricks, Holladay, Holt, IA1005, IA1006, IA2007R, IA2008R, IA2011, IA2012, IA2013, IA2016, IA2017, IA2018, IA2019, IA2020, IA2021, IA2022, IA2023, IA2024, IA2025, IA2027, IA2028, IA2029, IA2030, IA2032, IA2033, IA2034, IA2035, IA2036, IA3001, IA3002, IA3003, IA3004, IA3005, IA3006, IA3007, IA3008, IA4001 (Note: IA varieties are from Iowa), Iroquois, K5292, Kenwood 94, KS3494, KS4694, KS4895, Lambert, Lancaster, LN90-4524, Lyon, Macon, Magellan, Marcus 95, Maverick, Maxcy, Mercury, Micron, Mustang, Nemaha, ODell, Ohio FG1, Ohio FG2, Pace, Parker, Pearl, Piatt, Probst, Saline, Sandusky, Saturn, Stressland, Thorne, TNS, Toyopro, Traill, Vernal, Vertex, Wicomico, Yale. Address: Research Geneticist / Assoc. Prof., USDA-ARS, North Carolina State Univ., Raleigh, NC.

2415. Messina, Mark. 1997. Summary of findings: Heart disease. *Soy Connection (The) (Jefferson City, Missouri)* 5(1):3. Winter. Special edition: Highlights of the *Second International Symposium on the Role of Soy in Preventing and Treating Chronic Disease.* [4 ref]
• ***Summary:*** One obstacle to greater use of soy protein to lower blood cholesterol is the failure of scientists to understand the mechanism which causes this lowering–although there is no shortage of hypotheses. Dr. Cesare Sirtori, of the University of Milan, Italy, (a veteran researcher in this field and one of the keynote speakers) presented data showing that cholesterol reduction is due to enhanced LDL cholesterol degradation stimulated by peptides formed from the hydrolysis of the 7S globulin (a soy protein) by the liver. Dr. Shigeru Yamamoto and colleagues from the University of the Ryukyus in Japan, suggest it is the undigested peptides from soybean protein that lower cholesterol.

However, work by Ms. Mary Anthony and colleagues, from Bowman Gray Medical School in North Carolina, suggest that isoflavones, not protein, are the key. "Dr. Sirtori indicated that much of his clinical work demonstrating cholesterol reduction involved the feeding of soy products that contained minimal amounts of isoflavones, although his assertion met with some surprise."

"Elegant work presented by Dr. William Wong from the USDA's Agricultural Research Service (ARS) suggests that soy lowers cholesterol by enhancing cholesterol excretion through bile acid production, specifically via the chenodeoxycholic pathway.

"One of the most exciting findings of the symposium was the observation that soy increases HDL cholesterol. Relatively few dietary approaches have been shown to raise

HDL cholesterol. Three human studies, by Susan Potter and colleagues from the University of Illinois [USA], Dr. Elzbieta Kurowska and colleagues from the University of Western Ontario [Canada], and Drs. Karin Nilausen and Hans Minertz from the University of Copenhagen [Denmark], indicated that HDL increases in response to soy consumption. In some individuals the results are quite dramatic with HDL increasing as much as 50 percent, although typical increases are more in the range of 5-10 percent. It appears that the lower the initial starting HDL cholesterol level, the greater the response to soy. The combined effect of a decreased LDL and an increased HDL strongly support the use of soy for reducing heart disease risk." Address: PhD, Symposium Chairperson, Port Townsend, Washington.

2416. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Roundup Ready soys for '97. Feb. p. 2.
• ***Summary:*** One variety of Roundup-Ready soybeans is being offered in Canada by each of the following four companies: First Line, Pioneer Hi-Bred, and Cargill, and Novartis. A table shows the company name, variety name, CHU zone (2800-3400) and relative yield. "All these four transgenics are dark-hilum varieties. The first varieties of their type in Ontario, they yield slightly lower (3.1% to 5,8% lower) than their non-Roundup Ready competitors." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2417. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Soy Delight soymilk. Feb. p. 2.
• ***Summary:*** Neilson's Soy Delight is "the first fresh soymilk to be available in grocery stores." It comes in two flavors: Original and Vanilla. With its trilingual labeling (English, French, and Chinese) it is "targeted at the Asian-Canadian market, but it's a high-quality product that everyone will enjoy." One litre milk-style (gable-top) cartons are "currently being sold at Zehrs, Loblaws, Fortinos and Mr. Grocer supermarkets throughout Ontario." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2418. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Profile: Susan Iler. Feb. p. 7.
• ***Summary:*** "Iler (rhymes with "fire") joined the OSGMB's staff in 1992, after working two years with Dr. Wally Beversdorf at the University of Guelph's Department of Crop Science.

"She completed her Master of Science degree at Guelph part-time that year. Her training in crop biotechnology and weed science has come in handy, as well as her experiences from growing up on her family's cash crop farm in south Essex County.

"Over the past five years, the Soybean Board's research budget has increased from $146,500 to $272,500."

"The support for breeding and agronomic research continues, but an increasing number of projects are being added, including projects relying on biotechnologies. At Ottawa, as an example, OSGMB funds are directed toward finding biotech sources of white mould resistance. At Harrow, funds are directed toward the use of biotech techniques to select soybean varieties that are resistant to soybean cyst nematodes. Similar work at AAFC-Harrow and London [Ontario] targets *Phytophthora* root rot.

"Another recent addition, is a project being conducted at the Guelph Ag and Food Lab, looking at the levels of 'nutraceuticals' in soybeans. Compounds such as proteins, isoflavones and linoleic acid add value to soybeans. They have been linked to lower rates of both heart disease and several forms of cancer, as well as many other health benefits.

"One OSGMB-funded project at the University of Western Ontario's School of Medicine is examining how soy protein lowers bad forms of blood cholesterol.

"Iler's newest role is Vice Chair of Ontario Agri-Food Technologies, a non-profit organization incorporated on January 6, 1997 to ensure that Ontario becomes an international centre for agricultural biotechnology research and development."

Ontario has 22,000 soybean growers. A portrait photo shows Iler, with the caption: "Prioritization is key." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2419. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Licensed soybean dealers as of February 5, 1997. Feb. p. 6.
• ***Summary:*** Contains a list of 201 licensed Canadian soybean dealers, including the cities in which they are located. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2420. Walker, Ian. 1997. Research on soyfoods in Canada (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Ian and a colleague have been trying to visit every soyfoods manufacturer in Canada. At each location, they conduct an interview (which is confidential; Ian's colleague takes notes in shorthand; they do not use a tape recorder) and collect samples of products and their labels. Ian's office is now loaded with Canadian soyfoods products. All of this is being done under a contract, and will result in a directory of and a report on the Canadian soyfoods industry.

Update: 1997 July 11. The Canadian Soyfoods Directory is now nearing completion and will be launched in September. The plan is to print 1,000 copies, which will be sent to all organizations listed in the directory. The directory will not appear on the website http://www.soybean.on.ca. Address: College d'Alfred–Formation/

soya, C.P. 580, 31 St. Paul, Alfred, ON K0B 1A0, Canada. Phone: 613-679-2218 X-309.

2421. International ProSoya Corp. 1997. ProSoya SoNice: Manufacturer of superior soy food products (Portfolio / Presentation folder). Surrey (Vancouver), BC, Canada. Seven inserts. 30 cm.
• ***Summary:*** The full-color cover of this "presentation folder" shows a large white plate with a black rim on a natural beige tablecloth. In the center of the plate, in green and black letters, is written "ProSoya SoNice." Around the bottom and right side in smaller white letters is written "Manufacturer of superior soy food products." Four sprigs of parsley are scattered around the edge of the plate. In the upper right corner is a stem glass of soymilk, seen from the top.

Contains the following inserts: (1) Two ProSoya SoNice color brochures. One is for fresh soymilk products packaged in gable-top cartons, the other for shelf-stable products in aseptic packages. The front of each is similar, showing many different soymilk products in color packages. On the back of each are details about the products. The fresh soymilk is sold on four different flavors (natural, original, vanilla and chocolate), each quart or half-gallon gable-top cartons. The shelf-stable is sold in six different flavors (natural, original, vanilla, chocolate, strawberry, and cappuccino) in 1 litre aseptic cartons. (2) Sample recipes from five different color tear-off recipe pads: Banana pancakes. Potato soup with peppers. Lemon tahini dressing. So Nice fruit shakes. Dijon scalloped potatoes. (3) Color shelf dangler; on a 4-inch plastic square, SoNice is featured in a fresh gable-top carton. It is connected to a peel-off self-adhesive strip with a thin plastic strip. A "fridge sticker" with similar graphics, but larger, has a peel-off self-adhesive back and sticks onto a refrigerated case. (4) Two identical coupons: Save 35 cents on the purchase of any flavour of 1 liter So Nice soymilk. (4) Color leaflet from ProSoya Foods Incorporated titled "ProSoya SoNice: A natural choice!. Three panels, one side only. One panel contains product information, another recipes. Toll free number: (888) 2-SO-NICE. (5) George Conquergood's business from Pacific ProSoya Foods Inc. The oval SoyaCow logo appears in the upper right hand corner. (6) Letter to William Shurtleff at Soyfoods Center.

Talk with George Conquergood. 1999. May 29. This "presentation folder" was created either in late 1996 or early 1997; His best guess is March 1997. It was part of the SoNice presentations to potential buyers or investors. All agents and brokers had a supply of presentation folders and inserts. There was also one main insert on the health benefits of soy, and many more specific health-related inserts–to help salesmen explain "how good soy was for you." IPC had a huge library of information on the health benefits of soy that was printed on So-Nice letterheads, including excerpts from the writings of Mark Messina, Earl Mindell, etc. Dusty compiled much of this information together. Some of the inserts were developed in 1996 (the shelf-dangler was developed first), some in 1997, and some in 1998 (the recipe cards, in about 1998). ProSoya Foods Inc. was the company under which the various products were marketed. It had formerly been named Pacific ProSoya Foods Incorporated. Address: 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.

2422. **Product Name:** Frozen Tofu (Soymilk Ice Cream) [Vanilla, Chocolate, Maple Walnut, Burgundy Cherry, Mocha Fudge, Amaretto], and Tartofu (Ball of Soymilk Chocolate-Hazelnut Ice Cream Covered with Cocoa Powder with a Sabayon Center).
**Manufacturer's Name:** Ital Gelati (Crème Glacée Ital Gelati Inc.).
**Manufacturer's Address:** 8390 Le Creusot., St-Léonard, QUE H1P 2A6, Canada. Phone: 514-322-0111.
**Date of Introduction:** 1997. March.
**How Stored:** Frozen.
**New Product–Documentation:** Portfolio with four inserts (each 4 inches wide but different heights on glossy paper) sent by Bob and Pattie Gerner from Fancy Food Convention in San Francisco. 1997. March. Ital Gelati has been in operation since 1983, when Domenic Arcuri acquired the secret of gelato production from Italy, where his parents were born. One insert, titled "Frozen Tofu," states: "Finally an ice cream without the guilt! Non-dairy, low fat and naturally flavoured with real fruit, Ital Gelati's new tofu ice cream creates a whole new category of frozen treat. Available Kosher Pareve, in 7.7 liter tubs (1.5 US gallons) and 1 liter containers." The six flavors are listed.

Another insert, titled "Tartofu," shows a photograph of a chocolate ball with a white center. This product was "Inspired by the classic of Tortufo" (an Italian word for a ball of ice cream with another flavor inside). "Tartofu is a light delight (less than 10% fat), frozen tofu 'ice cream' sabayon center, enrobed in rich chocolate-hazelnut and covered with cocoa powder." It is Kosher Pareve and dairy free. The company logo is a round photo of the Mona Lisa with the words "La Bella Italiana" around it on a black background.

2423. Jones, Peter J.H.; MacDougall, D.E.; Ntanios, F.; Vanstone, C.A. 1997. Dietary phytosterols as cholesterol-lowering agents in humans. *Canadian J. of Physiology and Pharmacology* 75(3):217-27. March. [40 ref]
Address: School of Dietetics and Human Nutrition, McGill Univ., Montréal, QC H9X 3V9, Canada.

2424. **Product Name:** 2 Garden Vegetable Patties (Fat Free).

**Manufacturer's Name:** Yves Fine Foods, Inc. A subsidiary of Yves Veggie Cuisine, Inc.
**Manufacturer's Address:** 1138 East Georgia Street, Vancouver, BC, V6A 2A8, Canada. Phone: 604-251-1345.
**Date of Introduction:** 1997. March.
**Ingredients:** Water, vegetables (onions, carrots, peas, corn, green beans, red pepper, squash, water chestnuts), organic brown rice, organic rye, textured soy protein, tomato paste, mustard, brown rice syrup solids, yeast extract, wheat gluten, soy protein isolate, sesame seeds, pea fibre, onion powder, garlic powder, paprika, carrageenan, gum arabic, salt, spices, natural flavor, citric acid.
**Wt/Vol., Packaging, Price:** 6.0 oz (170 gm). Retails for $2.19 (1997/04, Lafayette, California).
**How Stored:** Refrigerated or frozen.
**New Product–Documentation:** Product with Label purchased at Safeway (Lafayette, California). 1997. April 27. Red, yellow, and black on white. "Fat free. No preservatives." A color photo on the front panel shows one pattie atop other vegetables on a plate. The side panel states: "100% vegetable protein. Cholesterol-free. Great taste (kids love them). Products are pre-cooked."

Product with new Label purchased at Safeway (Lafayette, California). 1998. Feb. 8. Product name: Garden Vegetable Patties. Grayish-green, red, and black on white. A different color photo on the front panel shows a bun covering the lower right corner of one patty, with a cherry tomato and lettuce in the upper right. "All natural. Fat free. Cholesterol free. 100% vegetable protein. Preservative free. Contains no meat." 2 patties weigh 6 oz (170 gm). Price: $2.19. Ingredients: Water, vegetables (onions, carrots, peas, corn, green beans, red peppers), textured soy protein, rye flakes, wheat gluten, brown rice, tomato paste, dijon mustard, vegetable gum, yeast extract, pea fiber, evaporated can juice, onion powder, salt, carrageenan, paprika, spices, garlic powder, citric acid.

2425. Vance, Sherry. 1997. The collection of early American seed catalogs at the Liberty H. Bailey Hortorium at Cornell University (Interview). *SoyaScan Notes*. April 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sherry is the expert on the seed catalog collection in the Bailey Hortorium. The Hortorium is located in the Mann Library but is not officially affiliated with it–though there is much cooperation. The collection has never been catalogued, nor has an archival collection record ever been created. Thus, no complete written record exists of what companies and seedsmen are in the collection, or what years there are. However Miss Bailey's cards from 1932 on are a partial listing. L.H. Bailey came to Cornell in 1888 and started collecting at about that time. He collected some catalogs from before that date, but most of his old catalog collection is from the 1890s and early 20th century. The collection is stored in file boxes, alphabetically by whichever name was more prominent, the owner name or the company name. So it is just a matter of finding the company in the alphabet, pulling out the box, and seeing what years are owned for that company. Dr. Bailey also acquired a large number of botanic garden seed lists from outside the United States. Both the nursery or seed catalogs and botanic garden lists (usually filed by country) are stored in these boxes.

For many years, Dr. Bailey's daughter, Ethel Zoe Bailey, maintained this collection–in addition to several other things she did within the department. She was the curator for the specimens, the librarian, and the editor for most of his books. By 1932 Dr. Bailey had been able to convince nurserymen and botanic garden people to send him, on a regular basis, year after year, copies of their catalogs, seed lists, and inventories. Starting in 1932, as each arrived, Miss Bailey started to keep an index card system of each plant that was offered, and a code as to what firms offered it. In addition, she was the librarian, the curator of the herbarium (taking care of the specimens), editor of her father's books and his traveling companion, etc. She was a truly selfless person, and had no interest in taking credit for all she accomplished, and did not even want to have her picture taken. One of the few things she was very proud of was the fact that in 1912 she became the first woman in Ithaca to receive a driver's license (known then as a "chauffeur's license").

Miss Bailey officially retired in 1957, but for the next 26 years she came to the Hortorium each weekday and worked as a volunteer to maintain the system she had started until about 3 months before she died in July 1983–at age 93. Sherry knew Miss Bailey for almost 4 years and found her to be an extremely interesting and dedicated woman. "It is amazing the amount of indexing and recording work that Miss Bailey did by hand–before the age of computers." Using Miss Bailey's system, one can easily determine when (after 1931) each major nursery, seed catalog, or botanic garden first offered the soybean and how often. Likewise, looking at the card for one species, one can easily tell the relative popularity of that plant, depending on how many firms were listed on the card. She did not include any catalogs or lists published before 1932. The purpose of this index (including Miss Bailey's complex system of various colored dots and checks after each entry) was to find out which plants were being offered in which catalogs and seed lists and how often.

Miss Bailey created a second index system which gives the full name and address of each organization (seed company or botanic garden) that appears in the first index system. This second index system consists of three sets of cards in files: (1) The cards for active U.S. and Canadian organizations (as of 1983). (2) The cards for inactive U.S. and Canadian organizations (as of 1983; called "the dead file"). (3) The cards for foreign organizations. Most of these

cards were handwritten by Miss Bailey–and some are hard to read, especially those written when she was in her later years. Sherry is planning to enter the contents of these cards (starting with the foreign ones) into a computerized database, so she can more easily search and disseminate this valuable information. [Note: This database was completed on 1 Oct. 1997.] Each of the catalogs and seed lists that appear in the index is still owned by the Bailey Hortorium. Dr. L.H. Bailey used this information in his research and writings until his death in 1954. Sherry will look for the soybean in this index system.

The international seed list exchange worked like this. Once a year botanic gardens published a list (usually in the form of a saddle-stitched catalog, from 6 to 40 pages in length) of what seeds they had and were willing to trade. The scientific (Latin) name of each plant was given, often together with its common name in one or more languages (such as English and French). Such a seed list was often called an *Index Seminum.* Plants were arranged by families and each plant was numbered sequentially. In each seed list was a sort of "order form" usually titled *Desiderata* ("things you desire"). Any researcher whose organization participated in the system could order one packet each of up to ten different seed species.

Sherry's sense is that the National Agricultural Library (NAL) in Beltsville, Maryland, has the largest collection of seed catalogs in America; contact Judith Ho, the librarian there. NAL's collection is more along agricultural lines whereas Bailey was collecting more catalogs on vegetable garden and flower seeds. She would estimate that NAL owns about 180,000 catalogs compared to about 131,000 at Cornell. Sherry was not aware of the collection at the Smithsonian Institution. Address: Research Aide, L.H. Bailey Hortorium, 462 Mann Library, Cornell Univ., Ithaca, New York 14853-4301. Phone: 607-255-7981. Fax: 607-255-7979.

2426. McDermott, Ron. 1997. Thoughts on the use and labeling of genetically engineered soybeans in Worthington's food products (Interview). *SoyaScan Notes.* April 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Worthington Foods is still working to establish a policy on this subject. The company had to start dealing with this issue in a big way in July 1996, before the U.S. soybean harvest, when British Retailer's Association (BRA) sent a letter to all of their suppliers, including Worthington, alerting all food manufacturers that genetically modified (GM) Roundup Ready soybeans would become part of the U.S. soybean crop in the fall of 1996, and asking them to please contact their suppliers immediately to request only non genetically modified soybeans. The issue for the BRA was not the safety of the soybeans but the consumer's freedom of choice and labeling. Therefore the BRA wanted to avoid having to sell GM soybeans. The UK is Worthington's largest export market, so the company must take the concerns of British consumers very seriously. Ron understands that concerns over GM foods in Germany are even greater than in the UK.

The BRA sent out a second letter to suppliers in about Sept. 1996, before the U.S. soybean harvest, which basically said that they had come to realize that segregation of non-GM foods was not possible at this time.

The first major problem for Worthington is that they buy most of their soybeans in the form of defatted soybean meal–not whole soybeans. Currently it would almost impossible to find a soybean crusher willing to segregate non-GM soybeans. However in thinking through this with Ron, Shurtleff realizes that within the next year or two, some of the small soybean crushers will probably start to crush non-GM soybeans is order to create a new niche market and a competitive advantage over the big crushers. Worthington would then have a good source–if it wanted one.

A second issue is labeling. Worthington has three different labels for many of its best-selling products. One for the USA market, one for Canada (which must be bilingual, in English and French), and one for the UK–since each has different labeling requirements.

A third issue is the U.S. natural foods market–which has shown that it will probably not sell GM food products. Worthington makes its okara patties from whole soybeans and sometimes buys organic soybeans. No one knows whether or not GMO products will be able to obtain kosher certification.

Note: What are the big issues? They probably have little to do with science. At present there are no benefits to consumers from GM soybeans, and consumers feel a fair amount of uncertainty about genetically engineered foods. If there were some big benefits (such as higher levels of genistein), the decision might be more difficult for consumers. The real issue is freedom of choice. Since 1906 the U.S. Pure Food and Drug Act has required that all ingredients in food products appear on the label so that consumers can decide what to eat. It is unlikely that such a basic, long-standing principle will be changed.

Ron believes that consumers will eventually decide this question. But as a scientist, he has been trying to follow this debate, and listen to both sides. It is unfortunate, he thinks, that the very first application of genetic engineering to soybeans is related to soybean production (weed management through Roundup herbicide) rather than, say, improved nutrition. How many consumers are interested in consuming Roundup Ready soybeans? Ron has heard that Roundup is better for the environment than most other herbicides, and that much less is required to do the job. It could take pesticide application from tons per acre to grams per acre. People who are really concerned about the

environment will probably buy organically grown foods. At Anaheim this year, one group speaking out against GMO foods was named "Mothers for Natural Law." Their position is "don't fool with Mother Nature." Ron thinks that Monsanto has done a poor job at educating the public–perhaps because most of the benefits accrue to farmers; they seem to think that this whole issue will soon go away.

To date, Worthington has not had a great deal of consumer concern in the form of letters or phone calls about GM soybeans. In the USA it seems to be more of an activist issue than a consumer issue. Ron has heard that Tivall is having a terrible time on this question, because a large percentage of their products is sold in the UK and continental Europe. Ron does not know whether or not a GMO product can be certified kosher.

Most of the Natural Touch products are NOT from whole soybeans; only the okara pattie is. Address: Vice President Research & Technology, Worthington Foods, 900 Proprietors Rd., Worthington, Ohio 43085-3194. Phone: 614-885-9511.

2427. *Might (Canada).*1997. Tracking Dead fans through the world without Jerry: Things to do in Telluride when Jerry's Dead. No. 15. March/April. Music section.
• ***Summary:*** This article is written for fans of the rock group Grateful Dead, whose famous and beloved guitar player Jerry Garcia died on 9 Aug. 1995. "Things to do in a parking lot, any parking lot... Eat tempeh burgers... Eat veggie burritos."

2428. Noble Bean. 1997. Tempeh–Noble Bean (Leaflet). McDonalds Corners, Ontario, Canada. 2 p. Front and back. 28 cm.
• ***Summary:*** The top three-fourths of the front of this black-on-tan leaflet shows six tempeh products (packages and labels) made by Noble Bean. On the bottom quarter is a brief description (left column in French, right in English) of tempeh. On the back is a very brief description (in French and English) of Noble Bean and its history since 1979, an illustration of the countryside production facility (in a trailer), and a recipe for tempeh teriyaki. Address: RR#1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: 613-278-0173.

2429. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Cuts to agricultural programs must stop. April. p. 1.
• ***Summary:*** "Soybean growers from across Ontario are calling on the Ontario government to stop further cuts to agricultural programs delivered by the Ontario Ministry of Agriculture, Food and Rural Affairs (OMAFRA)." A graph compares the Government of Ontario and OMAFRA expenditure (in $ millions) from 1985 to 1995: The government of Ontario's expenditures grew by approximately 67% from $30,000 million [$30 billion] in 1985 to a peak of $52,000 million 1994, then started to drop in 1995. OMAFRA's grew by about 40% from 300 million 1985 to a peak of $430 million in 1990, then had fallen by 47% by 1996 to below the level for 1985 at $250 million. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2430. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. OMAFRA cost recovery. April. p. 4.
• ***Summary:*** "As of April 1, OMAFRA is charging fees for a wide range of its information products, including publications, videos, software, courses, soil maps, and drainage documents. Crop variety trial brochures and OMAFRA fact sheets will remain free of charge.

"Through cost recovery in the 1997/98 fiscal year, OMAFRA hopes to funnel $1 million back into its budget." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2431. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Food labelling & biotechnology. April. p. 5.
• ***Summary:*** "As the products of biotechnology enter Canada's food marketplace, some consumer and special interest groups have called for mandatory labelling of biotech products or the processed foods that have these as ingredients (i.e. 'novel foods')."

The Canadian government has decided: "Unless these foods are significantly different in their composition or nutritional quality or they contain potential allergens, labelling would not be required. Voluntary labelling would be accepted."

Mandatory labelling of all products of biotechnology would be very expensive for Canada's food processors. "Even if very detailed label information is given, a label of, for example, 'may contain soybeans with a glyphosphate-resistance gene', would not provide consumers with useful information."

The needs of consumers who are opposed to biotechnology "could be met through negative labelling (i.e. 'This product is non-transgenic'). This would parallel other niche-market products..." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2432. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Biotech & transgenics. April. p. 6.
• ***Summary:*** Dr. Peggy Lemaux of the University of California at Berkeley explained that "transgenic plants are plants that contain DNA (genetic code) from a different organism (plant, animal or microbe), but the amount of 'foreign' DNA is minute. For example, if a transgenic plants' genetic code is visualized as a stack of 1,700 books (the height of a 20-storey building), the 'foreign' DNA that it contains could be considered equal to just ½ page in the stack (1.7 million pages).

"By contrast, classical breeding methods, where one plant is crossed with another, results in changes to one-half of the books in the stack." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2433. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Soy and osteoporosis. April. p. 6.
• ***Summary:*** Describes a new cookbook called *Bone Vivant* put out by the Osteoporosis Society of Canada: "Although many such cookbooks focus on dairy foods, this book features alternative calcium sources. Because soybeans are a source of calcium, one quarter of *Bone Vivant* recipes include soyfoods. Whole soybeans, tofu and soy flour can all be part of a bone-building diet." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2434. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Soyfoods center opens. April. p. 6.
• ***Summary:*** "For people interested in information on soyfoods, there is now a *Soyfoods Center* in London, Ontario," directed by Maya Clarke. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2435. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Roundup Ready soys. April. p. 2.
• ***Summary:*** "The following chart is a corrected version of the one printed in our February 1997 newsletter. Please note the corrected yield for the Novartis variety and the corrected CHU zone for the Pioneer variety." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2436. Walker, Ian. 1997. Soymilk and soybean crushing in Canada (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** It is quite the fashion now for big dairy companies (such as Neilson) to be selling soymilk under their own private labels. It is widely available in Canadian supermarkets–much more so than in U.S. supermarkets.

There are only two major soybean crushers left in Canada: ADM Agri-Industries Ltd. (Windsor, Ontario) and CanAmera Foods. But there are also about 4 "micro-crushers" who make "cold pressed" [mechanically pressed] soybean oil, and low-fat meal (which they sell to ADM). Address: College d'Alfred–Formation/soya, C.P. 580, 31 St. Paul, Alfred, ON K0B 1A0, Canada. Phone: 613-679-2218 X-309.

2437. Osho, Sidi M. 1997. Curriculum vitae. Ibadan, Nigeria. 10 p. Unpublished typescript.
• ***Summary:*** Contents: Research goals. Educational background. Experience and interest. Scholarships, fellowships, distinctions and awards. Work experience. Membership of professional societies. Conferences attended and papers presented (64 conferences and papers from Dec. 1983 to Jan. 1996. Note: The conference papers which were published are cited again in the "publications" section). Publications (42–from MSc thesis in 1982, to 1996; roughly have of these are conference papers). Professional accomplishments. Names and addresses of referees.

Educational background: Associate Degree in Agriculture, Delta College, University Center, Michigan (April 1977 to April 1979). BSc in Food Science, Michigan State Univ., College of Agriculture (April 1979 to June 1981). MSc in Food Processing and Technology, Ohio State Univ., College of Agriculture (Dec. 1981 to Sept. 1982; Thesis on processing plantain chips). PhD in Food Processing and Technology, University of Ibadan, Nigeria (Sept. 1983 to Jan. 1993; Thesis on processing and preservation of plantain).

Scholarships, fellowships, distinctions and awards: (1) Fellowship award on post-harvest plantain research, Ford Foundation and West African Regional Corporation on Plantain (WARCOP; 1985-1987). (2) INTSOY–University of Illinois, Urbana-Champaign. Training course award on soybean processing and utilization. (3) ASA–American Soybean Association award of recognition for carrying out activities to increase the use of soybeans and soybean products (1989). (4) International Development Research Centre (IDRC, Ottawa, Ontario, Canada) award for Best Research Scientist–For execution of research goals on the 25th anniversary of IDRC (See IDRC for Jan. 1995). (5) TOYP award 1996 (Top Outstanding Young Persons of the World), Junior Chamber International, USA. (6) Chairman of the Continuing Committee on the Third International Soybean Processing and Utilization Conference (ISPUC III), Japan, January 1996. Note: The first two such conferences were held in China and Thailand. Address: Food Technologist and Coordinator, Soybean Utilization Project, International Inst. of Tropical Agriculture (IITA), Oyo Road, PMB 5320, Ibadan, Nigeria. Phone: 234-2-241-3993.

2438. Kikkoman Corporation. 1997. Annual report 1996. 339 Noda, Noda-shi, Chiba 278, Japan. 24 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1997. Contents: Financial highlights. Profile. A message from the president: The year in review, an emphasis on growth, principal management issues, looking ahead. Overseas operations–A world brand: The Americas, Europe, Asia and Oceania. Financial section. Corporate history. Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

During fiscal 1996, ended 31 December 1996, consolidated net sales worldwide rose 1.3% over the previous fiscal year to 206.0 billion yen, down from a peak of 211.7 billion yen in 1992. Net income surged 63.8% to a

record 7.3 billion yen, up from 4.4 billion yen in 1995. In 1993 net income was 4.7 billion, in 1992 it was 4.9 billion, and in 1991 it was 6.2 billion–very volatile.

Overseas sales jumped 21.8% in 1996 to 54.4 billion yen, and accounted for 26.4% of consolidated net sales, up 4.4 percentage points from fiscal 1995. "Although the declining value of the yen helped boost overseas sales, this impressive result mainly reflects the excellent performance of the company's subsidiaries in the United States." In Japan, difficult conditions resulted in a 4.4% decrease in sales.

During the past year: Kikkoman increased efforts to boost sales of its premium-quality *Marudaizu* Soy Sauce (made from whole soybeans rather than defatted soybean meal). July 1996–Kikkoman starts construction of its first soy sauce manufacturing plant in Europe, located in the city of Hoogezand-Sappemeer, in the northern Netherlands. Aug. 1996–Relocated its Tokyo Head Office to Nishi-Shinbashi in central Tokyo, in a move to expand the role of this office–and introduced E-mail. Feb. 1997 began constructing its second U.S. soy sauce manufacturing plant in Folsom, California, on a 52-acre site; the ground-breaking ceremony took place in March 1997. Feb. 1997–Launched a new *Yakiniku no Tare* (Steak Dipping Sauce) in *Akadare* (Red Label) and *Kurodare* (Black Label) flavors.

"The Americas." Kikkoman's new plant in Folsom, California, is scheduled to come on stream in autumn 1998 with an initial production capacity of 10,000 kiloliters per year (about 2.64 million gallons per year). The plant will be operated by Kikkoman Foods, Inc., the company's wholly-owned Wisconsin-based subsidiary, and approximately 25 local employees will be hired. The plant will supply Kikkoman *Koikuchi Shoyu* (regular soy sauce) to customers in the western United States and Canada. Kikkoman's first shoyu plant outside Japan began operation in Wisconsin in 1973. Kikkoman has increased the production capacity of that plant 10-fold to meet expanding demand. [Note: Since the initial capacity was about 10,000 kiloliters/year, the current capacity must be about 100,000 kiloliters/year or 26.4 million gallons/year.] Over the years, Kikkoman has captured approximately 50% of the market for soy sauce and soy sauce-related seasonings in the USA. A bar chart shows the relative production volume growth at the Wisconsin plant. It has increased 2.4 fold since 1986. In addition to its plant in Wisconsin, Kikkoman has four subsidiaries in the USA: (1) Kikkoman International Inc. (San Francisco, California), which markets a broad range of Japanese and Asian foodstuffs, primarily soy sauce, teriyaki sauce, noodle sauce, and tempura sauce. (2) JFC International Inc. (San Francisco), North America's largest importer and distributor of Japanese and other Asian foodstuffs. (3) Japan Food (Hawaii), Inc., which wholesales soy sauce plus other Japanese and Asian foodstuffs in Hawaii. (4) Japan Food Canada Inc., which wholesales soy sauce plus other Japanese and Asian foodstuffs in Canada.

In Europe, Kikkoman's plant in the Netherlands is expected to start deliveries of soy sauce in Oct. 1997. It has an initial production capacity of approximately 4,000 kiloliters per year. "Kikkoman currently supplies the European market with soy sauce produced at its Singapore plant. When operations commence at the Dutch plant, this volume will be available to meet the burgeoning demand for soy sauce in Asia and Oceania."

In Asia and Oceania: Kikkoman has two production plants, in Singapore (est. 1983) and Tainan, Taiwan (President Kikkoman Inc., which makes a sweet soy sauce developed for local tastes; it was established in Feb. 1990 as a joint venture company). "Marketing activities in Asia are performed by Kikkoman Trading (S) Pte. Ltd. of Singapore, and JFC Hong Kong Limited, while in the competitive markets of Australia and New Zealand, Kikkoman Australia Pty. Limited is enhancing the Kikkoman name. The latest addition to Kikkoman's Asian marketing network is Shanghai Kikkoman Trading Co. Ltd., which was established in December 1995" [in China]. Address: Noda, Japan.

2439. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Soybean acreage up 15% in 1997. June. p. 1.
• ***Summary:*** "For the first time in history, farmers across Ontario will plant over 2,000,000 acres to soybeans. Statistics Canada's April 30 planting intentions report projected a 14.6% increase in soybean plantings to 2,200,000 acres–a new record. Quebec's soybean acreage is expected to increase by 9.7% to a record 252,000 acres." A graph of Canadian soybean acres shows figures for total Canada, Ontario, and Quebec from 1981 to 1997. The first Quebec figure is for 1988. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2440. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Roundup Ready update. June. p. 3.
• ***Summary:*** "Roundup Ready soybeans are the first transgenic soybeans to be produced in Canada, and with them comes a new approach to seed marketing." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2441. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Retirement best wishes. June. p. 4.
• ***Summary:*** "Michael Loh retired from the Market Development Branch of the Ontario Ministry of Agriculture, Food and Rural Affairs in March. In a note to the Board, Michael wrote, 'During my 27 year career with the Ontario civil service, export development was a personally most fulfilling experience.'

"He has already signed on as part-time coordinator of Export Market Development for the Ontario Flue-Cured Tobacco Growers' Marketing Board and will also serve as an Export Counsellor for the Business Development Bank of Canada." A photo shows Michael Loh with OSGMB chairman Tom Lassaline. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2442. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. New Soybean Board website. June. p. 4.
• ***Summary:*** "The Ontario Soybean Growers' Marketing Board is currently in the process of establishing a new, full-scale internet website at the following address: http://www.soybean.on.ca" Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2443. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Project S.O.Y. winners announced. June. p. 5.
• ***Summary:*** "The winners of the first Project S.O.Y. contest were announced on April 17th. Jennifer Lo and Nicole Lepkowski, food science students at the University of Guelph won first prize ($2,500) for their fruit-based soy custard dessert, *Fantasia.* Second place was captured by engineering students, Cori Cowan, Jody Lewis, Jennifer Kinoshita, and Karen Conrad, with their puffed soy-based product, *Soy Good Snax.* Yaling Fan and Lawrence Wang, students in agricultural business and economics, won third place with their strategy to market Ontario soymilk products to young Canadians.

"Project S.O.Y. (Soybean Opportunities for Youth) is sponsored by First Line Seeds and the University of Guelph." A photo shows Peter Hannan tasting a sample of "Fantasia" soy custard, while Lennifer Lo and Nicole Lepkowski look on. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2444. Rella Good Cheese Co. 1997. Healthy alternatives from the land of Rella (Leaflet). Santa Rosa, California. 1 p. Front and back.
• ***Summary:*** On the front of this attractive glossy leaflet are nine products marketed by the Rella Good Cheese Co. (formerly Sharon's Finest); behind them are colorful circles of every color in the rainbow. The products are: TofuRella and TofuRella Slices (Mozzarella, or Cheddar), HempRella, Zero-FatRella, AlmondRella, VeganRella, ParmaRella, and Hempeh Burger. At the bottom of the front are given the company's phone number (707-576-7050), email address (yourfriends@rella.com), and website (http://www.rella.com).

The back is titled "Rella product information for consumers." It contains ordering information, the ingredients in five of the products, advantages of the products, and a full column titled "About Rella Good Cheese Co."

"Advantages: Since 1980 we have been the leading innovator in delicious and natural cheese alternatives. Now *Enriched* will be nutritionally equal to cheese, but with less fat and sodium, and no cholesterol... Full ingredient disclosure and product information. Questions about our products? Call our toll-free Answer Line: 1-800-NJOY NOW."

"Rella Good Cheese Co., was known as *Sharon's Finest* from 1986 to 1997. We changed the name to reflect our commitment to making the best unique cheeses in the world. In 1980 Richard and Sharon Rose started *Brightsong Tofu,* an innovative tofu products company located in Petaluma, California." [Note: Brightsong Tofu was started in June 1978 by Joel Brightbill and Bob Heartsong in Redwood Valley, California. In June 1980 Dik and Sharon Rose bought the company, and in 1982 they moved it to Petaluma, California].

"Soon after we wrote our Environmental Mission Statement, including our self-imposed 'Green Tax' policy. From that tax we give at least 5% of profits to various groups working to protect the world's Rainforests, including *Rainforest Action Network, Sierra Club of Western Canada, Cultural Survival,* and *EarthSave Foundation.*

*Sharon's Finest* has also donated over $84,000 worth of food to Second Harvest Food Bank, and will donate money to groups working to legalize the commercial use of drug-free Hemp.

We believe it is important to use our business as a tool for social and environmental good. And thanks to concerned customers like you we have been able to achieve that goal!"

This information supersedes all others printed prior to 18 June 1997." Address: P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2445. **Product Name:** So Good (Soymilk Based on Soy Protein Isolates) [Fresh, or Aseptic].
**Manufacturer's Name:** SoyaWorld Inc.
**Manufacturer's Address:** 4074 Lozells Ave., Burnaby (suburb of Vancouver), BC, Canada. Phone: 604-420-3240.
**Date of Introduction:** 1997. June.
**New Product–Documentation:** Talk with Peter Joe of Sunrise. 1999. May 26. So Good is created under a licensing agreement with Sanitarium Foods in Australia. It was first test marketed in mid-1997 (with the name SoyaWorld Inc. on the package), then in Jan. 1998 the product was officially launched with a big TV advertising campaign. It is sold in both fresh and UHT packaging, but 90% of the sales come from the fresh product. It is targeted at mainstream Canadian consumers and sold mostly in supermarkets.

Note: This is the earliest record seen (Feb. 2010) concerning SoyaWorld, Inc.

2446. Buzzell, R.I.; Poysa, V. 1997. Two food quality soybean cultivars released by GPCRC. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 3(2):1. July.
• ***Summary:*** GPCRC is the Greenhouse and Processing Crops Research Centre (formerly Harrow Research Station). "These two cultivars, AC Onrei and OX756, have been introduced to complement Harovinton expand the export of Ontario soybeans into the premium Asian soyfood market. Harovinton, a tofu-type soybean cultivar developed at Harrow, has established Canadian soyfood soybeans as a premium quality product in Asia, where it is called 'Orient Pearl.'

"AC Onrei is a selection from the cross Vinton X Enrei. Enrei is a premium quality Japanese tofu cultivar which lacks the a4 protein sub-unit of the 11S glycinin (gy4/gy4). Enrei's superior tofu quality, especially the ability to make premium tofu using the 'nigari' (magnesium chloride) coagulant, is due to the lack of this a4 protein sub-unit. Vinton is Gy4/Gy4 and has the a4 protein sub-unit."

"OX756 was developed from the backcross of L2 X Harovinton. L2 is a backcross derived lx2/lx2 line of Century which lacks the L2 lipoxygenase isoenzyme... Harovinton is Lx2/Lx2 and has the L2 lipoxygenase isoenzyme."

"OX756 is a low lipoxygenase (lx2/lx2), yellow hilum cultivar similar in yield but earlier maturing than Harovinton, the recurrent parent. The lack of the lx2 lipoxygenase enzyme should reduce the 'beany' flavours in tofu, soymilk, and other soyfood products made with OX756, thus promoting wider acceptance of soybeans as food ingredients. It was released to W.G. Thompson and Sons, Ltd."

A table shows agronomic performance and seed quality for these two new food varieties compared with Harovinton during 8-9 years. For each variety are given: Yield, plant height, lodging score, days to maturity, weight of 100 seeds, protein %, and oil %. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

2447. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1997. The soybean program at GPCRC. 11(2):1-2. July.
• ***Summary:*** "Soybean research began in 1923 at the Greenhouse and Processing Crops Research Centre (GPCRC, formerly Harrow Research Station), with a variety testing program. Twenty years later in 1943 the soybean breeding program was established to develop adapted varieties for southern Ontario. One of the major variety releases from the program was Harosoy in 1951. By 1959 Harosoy represented 75% of the acreage planted to soybeans in Ontario and it was the most commonly grown variety in the United States."

"The GPCRC is comprised of three experimental farms representing the various soil types of Essex County."

Molecular biology is being used to assist in the development of disease resistant soybeans. Genes conferring specific resistance to specific races of Phytophthora root rot are being isolated."

A photo shows some of the leading soybean personnel with Agriculture and Agrifood Canada research centre at Harrow, Ontario... Dr. Lorna Woodrow, Dr. John Mullin, Dr. Vanio Poysa, and Mr. Doug Jessop. Standing is Mr. Kim Cooper, Ontario Soybean Growers'."

2448. Jessop, D.B. 1997. The food processing lab at GPCRC at Harrow. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 3(2):1. July.
• ***Summary:*** "The food processing lab at the GPCRC [Greenhouse and Processing Crops Research Centre] has, for the past several years, evaluated soybean varieties for their soymilk, tofu and miso making properties. The Grainspec whole grain infrared analyser is capable of evaluating raw soybeans for moisture, oil, protein, total sugar, colour and more recently sucrose and stachyose [an oligosaccharide that causes flatulence]. The raw beans are also analysed for water uptake in both the tofu and miso process." Address: AAFC, GPCRC, Harrow, Ontario, Canada.

2449. Kurowska, Elzbieta Maria. 1997. Soy and reduced risk of cardiovascular disease. *Soy Connection (The) (Chesterfield, Missouri–United Soybean Board)* 5(3):1, 4. Summer. [8 ref]
Address: Research Assoc., Centre for Human Nutrition, Dep. of Biochemistry, Univ. of Western Ontario, London, Ontario, Canada.

2450. *Soyafoods (ASA, Europe).*1997. New equipment from ProSoya. 8(2):6. Summer.
• ***Summary:*** Two large black-and white photos show the new equipment: (1) Continuous hydration tank (ST2000; consists of three tanks, one atop the other). (2) Low-cost desludging centrifuges (EC2000; the twin stage self-desludging centrifuges are located side-by-side). For details contact: ProSoya, Inc., 2-5310 Canotek Road, Ottawa, Ontario, Canada K1J 9N5. Phone: +1 (0)613 745-9115.

2451. Woodrow, L.; Buzzell, R.I. 1997. Sugars in food processing soybeans. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 3(2):2. July.
• ***Summary:*** "The soybean program at the Greenhouse and Processing Crops Research Centre [formerly Harrow Research Station] focuses on the development of lines with characteristics suited to the domestic and export food processing markets. Seed characteristics such as hilum and seed coat colour; storage protein content and profile;

enzyme profile; oil content and fatty acid composition; total carbohydrate content; and free sugar composition are important determinants of the food processing performance of soybeans into products such as soymilk, tofu, and miso."

"As soybeans mature, free sugars are synthesized and form part of the storage reserves of the seed. When the seed germinates, these sugars represent the first energy available to the young seedling... Glucose and sucrose are present in most fruits and vegetables, raffinose and stachyose are found in some plant families including legumes. These sugars are synthesized in a pathway that leads from the monosaccharide glucose to sucrose (disaccharide), raffinose (trisaccharide) and finally the tetrasaccharide, stachyose. In the mature soybean sucrose and stachyose are present at levels ranging from 3.0-8.0% by weight dry matter depending on the variety or line. Raffinose and glucose are intermediates in the synthesis and are present at much lower levels in the mature seed."

A graph shows the glucose, sucrose, raffinose, and stachyose contents of 40 soybean varieties and lines, plotted to show their relationships with the total free sugar content. The data illustrates that among lines increasing total free sugar content is correlated with an increase in sucrose. Sucrose is the most abundant sugar in mature soybeans, followed by stachyose, then raffinose. Glucose and fructose are present in only trace amounts. Address: AAFC, GPCRC, Harrow, Ontario, Canada.

2452. Nordquist, Ted. 1997. Re: Establishing TAN Industries, Inc. in California and update on work with soyfoods. Letter to William Shurtleff at Soyfoods Center, Aug. 4. 2 p. Preceded by an interview on July 14.
• ***Summary:*** "I incorporated TAN Industries, Inc. in California [in about mid-1991, shortly after Ted's mother died in Feb. 1991. Ted had also incorporated a TAN AB is Sweden]. I commuted from Örsundsbro, Sweden, to California (lots of frequent flyer miles) from 1992 until August of 1994, when my family joined me in Sonoma, California. In January of 1995, TAN Industries started packaging and selling soy beverage in extended shelf-life refrigerated packaging. We believe we are now the largest packager and seller of a formulated refrigerated extended shelf-life (12 weeks) soy beverage in the United States.

"TAN Industries, Inc. specializes in vegetable-based dairy-like products such as beverages, yogurts, ice creams and, as you may know, puddings as required. TAN has its own process, comprised of specially designed equipment to process whole soybeans into high quality, good tasting and nutritious vegetable-based dairy-like products at competitive prices. Usually economy of scale dictates a minimum production order of approximately 12,000 gallons on each processing occasion. TAN seeks to enter into contractual agreements to provide product to companies where distribution and marketing are already in place.

"TAN will develop specific products for customers or TAN will develop a product and present the product wholesale, FOB factory, to a prospective company capable of taking the product to market.

"In 1996, TAN has entered a contractual agreement with a producer of rice-based beverage. This enables TAN to offer both Rice beverages and related products, as well as Soy."

"After many years, I have learned some ways to keep out of debt, realizing that being low on money will not help the cause and that I must move slowly enough to keep the money flowing in at least as fast as it flows out. So there is some dampened enthusiasm for moving ahead too quickly in exchange for what looks to me to be a solid, sensible path to long term business and growth.

"Much of this success I owe to Henry Glasser, my partner and long time friend of my father's best friend. I sit in this office and consult with his wisdom, content to see TAN Industries, Inc. continue in the black toward goals we both share."

Note: TAN Industries is listed in the *1997 Soya Bluebook Plus* (published Sept. 1996) on pages 185 (manufacturer of soymilk) and 285 (equipment supplier and consulting).

Ted Nordquist now lives in California. His company, TAN Industries, Inc., operates out of the office of Henry Glasser, an attorney in San Francisco. He was involved in the development and formulation of Silk, a fresh soymilk product launched by White Wave in Jan. 1996. He was having this product made by ProSoya in British Columbia, Canada, but now it is apparently being made somewhere else–perhaps in Los Angeles. His main goal now is to develop a soymilk product that will compete with Lactaid. Address: TAN Industries, Inc., 351 California St., Suite 1330, San Francisco, California 94104; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-398-8007.

2453. Brandenburg, Fred. 1997. Genetically engineered soybeans in Canada (Interview). *SoyaScan Notes.* Aug. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** If users of food-grade soybeans want soybeans that are guaranteed to be free of GMO (genetically modified organisms), they can talk with individual Canadian soybean exporters (like W.G. Thompson & Sons Ltd. in Blenheim, Ontario). Thompson can then contract with farmers in advance, and have the beans shipped from the farm to Thompson.

Shurtleff argues that this will raise the price of soybeans considerably, and that it would be more cost effective to try to set aside geographical areas where all farmers in that area agreed to grow non-GMO soybeans, which could then flow from local elevators through the conventional distribution channels. Shurtleff also argues that Canada is in a unique position to take market share

away from the USA by aggressively promoting guaranteed non-GMO soybeans, without in any way suggesting that there is anything wrong with GMO soybeans. Address: Secretary/Manager, Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

2454. Newshour with Jim Lehrer. 1997. Osteoporosis, calcium, and the U.S. diet. Television broadcast. PBS. Aug. 14.
• ***Summary:*** Americans and Canadians need more calcium in their diets to guard against the bone disease osteoporosis, according to a report released yesterday by the Institute of Medicine (an affiliate of the National Academy of Sciences) in Washington, DC. The study recommended increasing the daily dose of calcium for adults to 1,000–1,300 mg, depending on age. That is an increase from the current 800–1,200 mg which had been recommended by the National Academy of Sciences. Many women and teens still get less than 600 mg/day.

"Calcium can be consumed in dairy products and foods such as broccoli and tofu." Note: Experts agree that getting enough calcium is essential to building strong bones. Other good sources are calcium-fortified soymilk and calcium-fortified orange juice. Another key to keeping calcium levels high is retention–smoking, coffee, and intense physical exercise all deplete calcium stores–as does excess protein consumption.

2455. *SoyaScan Notes.*1997. Update on ProSoya (Overview). Sept. 23. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The following is based on a talk with a person who just returned from the Natural Products Expo in Baltimore, Maryland, and wishes to remain anonymous. ProSoya now has an office in the United States, run by Fred Webster. It is: International ProSoya Corp., 106 Sunset Dr., New Hope, Pennsylvania 18938. Phone: 215-862-5715.

ProSoya from British Columbia, Canada, has a booth at the show. A fellow named Jerry Duncan at that booth was unusually rude and nasty to two potential customers who tried to approach him. First he said that ProSoya sold only a soymilk system (equipment), not the soymilk itself. When this American businessman said he was interested in buying soymilk, not a system, Mr. Duncan said that he would sell soymilk only if the final product was sold under the ProSoya brand, and the co-packing was taken care of by the American person.

2456. Webster, Fred. 1997. International ProSoya Corp. launches SoNice soymilk and yogurt in the USA (Interview). *SoyaScan Notes.* Sept. 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Fred is the first U.S. employee of International ProSoya Corp., which is in the process of launching three products: (1) SoNice soymilk, in aseptic cartons (1 liter, and 250 ml x 3), in 6 flavors (vanilla, chocolate, natural {soybeans and water}, original {with added sweetener}, strawberry, and cappuccino); expected retail price is $1.99/liter. (2) SoNice fresh soy beverage in gable-top cartons, in 2 sizes (quart and half gallon); expected retail is $1.99 and $2.99 respectively. (3) SoNice soy yogurt, in 5 flavors (vanilla, strawberry, raspberry, black cherry, and fieldberry), refrigerated (45 day shelf life) in a 6 oz cup; expected retail price is $0.99/cup.

These products were first introduced to the U.S. market in late September 1997 at the Natural Products Expo in Baltimore, Maryland–where they were preferred to all competing products for their good flavor. They are all made in British Columbia, Canada, but packaged in New Jersey. He will start shipping to U.S. distributors next week. The two types of soymilk should be available in food stores in mid-October and the soy yogurt in mid-November. In March 1997, International ProSoya Corp. opened a sales office in Toronto, Ontario, Canada. Address: International ProSoya Corp., 106 Sunset Drive., New Hope, Pennsylvania 18938. Phone: 212-862-5715.

2457. Canadian Soybean Export Association. 1997. Food soybean–Conference & tradeshow: September 10 & 11 1998, Westin Hotel, London, Ontario, Canada (Leaflet). Ontario, Canada. 6 panels.
• ***Summary:*** The full conference program and itinerary, which goes from Tuesday, Sept. 8 to Friday Sept. 11, is given in outline form.

2458. Ontario Soybean Growers' Marketing Board (OSGMB). 1997. Overview of the Canadian soyfoods market. Chatham, Ontario, Canada: OSGMB. 44 p. 28 cm.
• ***Summary:*** This excellent, complete, and accurate market study was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The field research was conducted between Jan. 15 and Aug. 31, 1997. The first study of the Canadian soyfoods market was published in March 1990 (vi + 40 pages).

Contents: Acknowledgments. Summary. Introduction. Research procedures: Methodology, limitations (of the 100 companies in this study, over 75% were visited, interviews were conducted in person, and product samples were collected). The Canadian soyfoods market: History, structure of the Canadian soyfood industry, market highlights by region (The Maritimes, Quebec, Ontario, the Prairies {Manitoba, Saskatchewan, and Alberta}, British Columbia), factors influencing the soyfoods market (A closer look at Canadian demographic trends, a closer look at

Canadian immigration trends, a closer look at vegetarianism and family food expenditure trends, research on soyfoods and their health benefits, the American influence). Supply and demand of soybeans for use in soyfoods: Soybean production in Ontario, imports and exports of soybeans, imports and exports of soy products, the soybean crushing industry in Ontario, consumption of whole soybeans by soyfood processors. Opportunities in the Canadian soyfoods market. Soyfood processors and their needs. Market opportunities for food-grade soybeans. Summary comments. Bibliography.

Tables show: (1) Major soyfood companies established in the province of Quebec (p. 13). (2) Major soyfood companies established in the province of Ontario (p. 16). (3) Major soyfood companies established in the province of British Columbia (p. 19).

(4) Percentage of change in units and sales (p. 21). (5) Percentage distribution of population–Canada (p. 22). (6) Percentage distribution of age groups–Canada (p. 22; In the 15-24 age group, 19% did not eat meat in 1992, down from 23% in 1986).

(7) Percentage of population who do not eat meat & share of budget spent on meat, Canada 1986 and 1992 (p. 28). (8) Canadian soybean: Supply and disposition (September–August crop year)–in metric tonnes (p. 31). (9) Canadian soybean exports by country of destination (p. 32. In 1997-98 some 325,000 tonnes went to the European Union, 145,000 to the USA, 85,000 to Japan, 40,000 to Hong Kong, 75,000 to other Asia, and 15,000 to other places).

(10) Imports and exports–All countries, dollar values (p. 33. The leading imports are soybean meal $202.7 million, crude soybean oil $16.75 million, and whole soybeans for oil extraction $12.59 million. The leading exports are protein concentrates and textured protein substances $9.1 million, soybean meal 6.5 million, and brans, sharps and other residues $4.3 million).

(11) Soybean crushing facilities in Canada (p. 34. All are located in Ontario province; ADM Agri-Industries Ltd., Windsor. Capacity: 3,600 tonnes/day of raw soybeans. CanAmera Foods, Hamilton, 3,000. Helin Oil Packers, Whitby, 250. Started crushing in 1997. Cold Springs Farm Ltd., Thamesford, 100. Started 1995. Sunfield Oil Seeds, Wingham, 100. Started 1994. Dennis Jackson Seeds Services Ltd., Dresden, 40. Started 1994. Tri County Protein Corporation, Iroquois, 100. Not in operation yet).

(12) Estimated quantities of soybean utilized by soyfood processors–1996–metric tonnes (p. 35. Total volume of whole soybeans consumed: 9,650 tonnes, of which 4,780 are for soymilk, 4,775 are for tofu, and 95 are for other soyfood products). Total volume of whole soybeans consumed by province (by soyfood processors): British Columbia 3,825 tonnes, Ontario 3,050 (excluding crushing plants), the Maritimes and Quebec 2,535, and the Prairies 240.

(13) Major foreign companies in the Canadian soyfood market (p. 37. Soy cheese: Soyco Foods, Sharon's Finest, Cemac Foods Corp. {Nu-Tofu}. Frozen desserts: Tofutti Brand, Inc. Tempeh: Turtle Island Foods Inc. Tetra Pak packaged soymilk: Westbrae Natural Foods, Cenat, Pacific Select, Vitasoy USA Inc., Eden Food Inc. Tofu: Mori-Nu, Vitasoy USA Inc. Prepared dishes: Amy's, Sharon's Finest. Meat analogs: Fantastic Food Inc. MGM Brands, Northern Soy, Soy Boy, Turtle Island Foods Inc. Salad dressing: Nasoya Foods. Soy sauce: Eden Foods Inc., Kikkoman Foods Inc.).

The Prairie Provinces (Manitoba, Saskatchewan, and Alberta) contained about 16.6% of Canada's population (4.5 million persons) in 1995. "The province of Alberta [Capital = Edmonton] is different from the other two Prairie provinces, due mainly to its larger population base, its growing Oriental population and its proximity to Vancouver. Calgary [a large city in Alberta province] and Edmonton have their own Chinatowns, including small Oriental-owned tofu and soymilk production facilities." Note: According to the Canadian Soyfoods Directory (1997, p. 14), there are 7 soyfoods companies in Alberta province, 2 in Manitoba, and none in Saskatchewan. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

2459. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Profile: ADM. Sept. p. 15.

• ***Summary:*** In 1997 ADM was successful in acquiring up to 45% interest in United Grain Growers (UGG), Canada's largest farm co-op. Martin Andreas, Senior Vice President at ADM's headquarters in Decatur, Illinois, says that ADM plans further investments in Canada. The company already has 10 flour mills there, in addition to its soybean and canola business, and now its association with UGG.

Ontario soybean growers are most familiar with ADM through its Windsor elevator and crush complex, and through its elevators in the southwest, including elevators at Essex and Maidstone. While the company does not disclose its crush volumes, industry watchers estimate that ADM is processing approximately 25 million bushels of oilseeds a year at its recently expanded and modernized plant in Windsor, Ontario.

"Windsor's two extraction plants can crush either soybeans or canola, and it makes little difference in terms of plant operation whether the soybeans are grown in Ontario or the U.S."

"ADM is more closely allied to farmers and elevators than its competitors. Andreas agrees. 'In the U.S. alone, we need 9.5 million bushels of grains and oilseeds a day to meet our processing and export requirements,' he explains.

'We must be closely allied with the people who are the producers of our raw materials.'"

"ADM's recent investment in Saskatchewan-based UGG reflects its policy around the world. ADM has agreements in place in the U.S. with the 175,000-member Growmark co-op, as well as with Countrymark and Riceland. It also has a one-third interest in the peanut co-op, Golden Peanut."

"Internationally, ADM has a 50 percent equity position in Europe's A.C. Toepfer, which with 2.5 million members, is the largest farm cooperative in the world." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2460. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Arbitration award imposes radical changes. Sept. p. 1, 11-14.
• ***Summary:*** In December 1996, ADM Agri-Industries and CanAmera Foods (Canada's two largest soybean crushers) announced that, for all soybeans they purchase for delivery after 1 Sept. 1997, they would implement a 13% moisture standard, with an allowance of 1% for dockage and foreign material. The previous moisture standard had been 14%. Thus after Sept. 1 soybeans that contain more than 13% moisture when delivered, will be assessed a percent discount–based on the price of the soybeans at the time of sale. This discount is intended to cover drying charges, invisible loss, and moisture shrink. Tables show: Sample calculations (p. 12). The percentage discount for different moisture rates (p. 13). Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2461. **Product Name:** Soy Nut Snacks [Honey Dijon, BBQ, Sea Salt, Yoghurt & Green Onion, Unsalted].
**Manufacturer's Name:** Skeet & Ike's.
**Manufacturer's Address:** #216–2323 Quebec St., Vancouver, BC V5T 3A3, Canada. Phone: 604-879-9100.
**Date of Introduction:** 1997. September.
**Ingredients:** Incl. dry roasted soybeans.
**Wt/Vol., Packaging, Price:** 1.7 oz (50 gm) or 9 oz (255 gm) bags, or 20 lb bulk. Suggested retail price: $0.85 for 1.7 oz or $3.10 for 9 oz.
**How Stored:** Shelf stable.
**New Product–Documentation:** Leaflet (8½ by 11 inch, color, glossy, front and back) from Natural Products Expo West (Anaheim, California). 2000. March. "New. Soy nut snacks." "Dry roasted, certified organically grown soy beans. Certified not genetically altered soy beans. All natural seasonings–nothing artificial. A tasty way to enjoy the benefits of soy. Attractive wood stand is free with your order. Who says snack food has to be junk food?" A color photo shows the package for all 5 flavors with the Label (front panel). Web-site www.skeetike.com. Ike is a dog.

Talk with Ian Walker, half owner of Skeet & Ike's. 2000. April 14. This company was established in May 1996 as a peanut butter manufacturer. They started roasting soybeans to make soynuts in Sept. 1997, introducing all 5 flavors they still make. They started selling their soy nuts in the USA in Sept. 1998, first in the Pacific Northwest. They discontinued peanut butter and all tree nut products because a growing number of people are deathly allergic to them. The company now has 10-12 employees. Ian has heard that some people who are deathly allergic to peanuts are actually deathly allergic to the sprays used on peanuts in the fields rather than to the peanuts themselves. He has also heard that a very small number of people are deathly allergic to dairy products and to soybeans. Ian would estimate that there are 10 soynut makers in Canada, including Hockley Valley in Ontario. One U.S. maker is Nature's Select in Grand Rapids, Michigan; Peter Assaly is president.

2462. Rahardjo, Grace. 1997. Making tempeh in Canada (Interview). *SoyaScan Notes.* Oct. 6. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Grace, who was born in Indonesia, has been making tempeh at her home in Canada for the last 5 years (i.e. since about 1992). She sells it to her friends and church members, but not in stores. Her emphasis is on quality: it has a whiter mycelium and is more juicy than commercial tempeh. She comes from central Java, about 200 km from Yogyakarta. She will soon be visiting Java and would like to meet Dr. Sastroamijoyo. Address: 1442 West 33rd Ave., Vancouver, BC V6M 1A5, Canada. Phone: 604-264-0181.

2463. Golbitz, Peter. 1997. Re: N. Chapman Associates, Inc. to become the Soyfoods Association of America's new management team. Letter to members of the Soyfoods Association of America, Oct. 24. 1 p.
• ***Summary:*** This letter is written on the new Association letterhead: The address of N. Chapman Associates is 1723 U. Street, N.W., Washington, DC 20009. Phone: 202-986-5600. "Nancy Chapman, R.D., M.P.H. and Becky Stephens, M.S. of Chapman Associates, Inc. assumed responsibility for the daily activities of the association on October 10. We are delighted to move our headquarters to their offices in the heart of Washington, DC." Nancy Chapman has worked with the Board and the American Soybean Association for over eight years. Lists three areas in which Chapman Associates proposes to help member companies.

Talk with Peter Golbitz. 1997. Oct. 31. This choice was made in late September at the Board meeting in Baltimore, Maryland. Chapman Associates is a small organization that is deeply interested in the Soyfoods Association and well suited to manage it. They have been given a 6-month contract with the main goal being to increase membership–especially among large companies. The name of the organization will probably be changed back to Soyfoods Association of North America to attract potential members

in Canada and Mexico. Address: Soyatech, P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

2464. Broten, Lorne H.A. 1997. New developments at International ProSoya Corp. (Interview). *SoyaScan Notes.* Oct. 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The company name has been changed. A new company, International ProSoya Corporation (IPC), was incorporated in the fall of 1996. An agreement was reached for IPC to purchase all the shares of ProSoya, Inc. (PSI), which will become a wholly owned subsidiary of IPC; the deal has not yet been finalized. Pacific ProSoya Foods, Inc. (the food manufacturing company in British Columbia) has been merged into IPC. Sales of small-scale soymilk equipment and equipment sales to the former Soviet Union countries will generally be handled by PSI, but those who wish to buy large systems must talk directly with Lorne and buy the system from IPC. A company or person in the USA can buy a small soymilk system (200 liters/hour or less) from PSI, but they cannot buy a large soymilk system because IPC is developing their own company in the USA based on their patented soymilk technology–and they do not want competition form their own soymilk systems.

International ProSoya Europe (a subsidiary of IPC, created in Jan. 1997 and began operation in June 1997) is now constructing a soymilk plant in the United Kingdom (in Livingston, Scotland) as part of a joint venture. Dusty Cunningham, who is a director of IPC, is there helping to get the project started–but she is not the person in charge. The factory is expected to begin making soy products in early 1998–an aseptic soymilk, a soy yogurt, soy ice creams, and other food products based on the company's soymilk. There are a number of shareholders in the new joint venture, one of whom is named McCorkle; the joint venture is not with an existing European soy company.

In the future, IPC plans to focus on joint ventures internationally (using IPC soymilk technology), and to place much more emphasis on making and selling foods based on soymilk than on selling equipment. Lorne thinks that two more joint ventures will be finalized in 1998; the details are confidential at present. Part of the capital for all this expansion comes from joint venture partners and PIC raises part of it themselves; they are planning to do an initial public offering (IPO) in 1998 as well–open to the public.

IPC has been so busy lately that Lorne is not sure whether they will continue the newsletter or not; they will discuss it at a board meeting soon.

Ted Nordquist is currently involved with a soymilk plant in Los Angeles, California. He has been buying soymilk from IPC. Lorne has heard that Ted is coming out with his own brand of soymilk. In France, Sojinal has been bought out; Lorne thinks that Sojinal makes a better soymilk product than Alpro. Address: President and CEO, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC V3S 8E5, Canada. Phone: 604-532-8030.

2465. Hardy, Ralph W.F.; Segelken, Jane Baker; Voionmaa, Monica. 1997. Resource managements in challenged environments. *NABC Report (National Agricultural Biotechnology Council, Ithaca, New York)* No. 9. 168 p.
• ***Summary:*** More than 100 people attended this ninth annual meeting, hosted 1-3 June 1997 by NABC member institution University of Saskatchewan–the first NABC meeting in Canada. Twenty-one papers were presented, both pro and con. Address: 1. President; 2. Executive Coordinator. Both: NABC, Boyce Thompson Inst., Tower Road, Ithaca, New York 14853.

2466. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Profiles: Helin Oil Packers, Phil Iocavedes, and Jim Papadopoulos. Oct. p. 7.
• ***Summary:*** Helin Oil is a new oilseed crushing company, located on Hopkins Street in Whitby, Ontario, just east of Toronto–the site of a former Ralston Purina feed mill. By mid-winter Helin plans to buy 2 million bushels a year of Ontario soybeans, which it will convert into "high-quality partial-fat soymeal for dairy farmers in Ontario and nearby states," and a variety of soybean oil products to be sold in Canada and overseas.

Phil Iocavedes (whose photo is shown) "will manage the plant, reporting to Jim Papadopoulous, director of operations for Helin Oil and one of the principals in Empire Foods Ltd., the Markham wholesale food and paper company that three years ago decided the time was ripe to build a vegetable oil business in the province. Both Helin Oil and Empire Foods are now owned by Helin Industries Ltd., which will be traded publicly starting in mid-October on the Alberta Stock Exchange.

"Ontario's oilseed crushing industry may be dominated by international giants CanAmera Foods and Archer Daniels Midlands, which crush nearly 60 million bushels of soybeans a year at their Hamilton and Windsor locations, with a value in round terms of $500 million."

"Papadopoulos was born in Greece and moved to Canada at the age of 17 years."

"The company is considering becoming Canada's first marketer of mechanically pressed crude oil

"With a staff of 35, the Whitby plant will be running its four expellers and six extruders 24 hours a day, seven days a week to crush 200 to 240 tonnes of cold-press oil per day." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2467. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Notice of annual meeting: Thursday, December 4 & Friday, December 5, 1997 at Best Western Wheels Inn, Chatham, Ontario. Oct. p. 1-4.

• ***Summary:*** All soybean growers are invited to attend OSGMB's annual meeting. An alternative "delicious soyfoods lunch" is scheduled for Thursday. Speakers will include: (1) Murray McLaughlin, Ontario Agri-Food Technologies: "Agricultural biotechnology." (2) Leo Guilbeault, Essex County Farmer: "A grower's experience with Roundup-Ready soybeans." (3) Charles Goubau, College D'Alfred of the University of Guelph: "Canadian soyfoods study and directory." (4) Peter Hannam, First Line Seeds: "Capitalizing on food-quality soybean opportunities." (5) Stephen Barnes, University of Alabama at Birmingham: "The health benefits of soybeans."

There are many prizes for those who pre-register. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2468. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. International biosafety protocol. Oct. p. 6.
• ***Summary:*** "In 1992 Canada was one of several countries to sign into the United Nations' Convention on Biological Diversity. Since then, Canada has been actively involved in negotiating the details of this agreement.

"The intent of the Convention is to manage the trans-boundary movement of 'living modified organisms' in order to protect world biodiversity. Living modified organisms or 'LMO's' are described as all plants, animals, seeds, embryos, and microbes that have been modified using the process of 'biotechnology'...

"The intent of the agreement seems harmless, but if it is ratified, it will drastically impede global agricultural trade, especially trade with smaller, developing countries. The new protocol would require that all transboundary shipments of LMO's be preceded by 'advanced informed agreements' and formal approvals from importing countries. The proposed 'biosafety protocol' has a zero-tolerance for trans-boundary movement of LMO's. In other words, unless exporters can guarantee that their shipments are 100% free of living modified organisms, they will be required to provide prior notice and seek formal approval before shipping. This will require an enormous amount of administration and paperwork, as well as the establishment of another formal international appeals process." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2469. **Product Name:** SoNice Soy Yogurt [Vanilla, Strawberry, Raspberry, Black Cherry, and Fieldberry].
**Foreign Name:** SoNice Yogourt de Soja (Vanille, Fraise, Framboise, Cerise Noire, Baies des Champs).
**Manufacturer's Name:** ProSoya Foods Incorporated.
**Manufacturer's Address:** 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1997. October.
**Ingredients:** Vanilla: Vanilla: Filtered water, certified organic soybeans, cane sugar, glucose, natural flavor, modified corn starch, pectin, locust bean gum, lemon juice concentrate, active bacterial culture.
**Wt/Vol., Packaging, Price:** 175 gm (6 oz.) plastic yogurt cup. Retails for $0.99.
**How Stored:** Refrigerated, 45 day shelf life.
**New Product–Documentation:** Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-November, 1997, in 5 flavors (vanilla, strawberry, raspberry, black cherry, and fieldberry), refrigerated (45 day shelf life) in a 6 oz cup; expected retail price is $0.99/cup.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product is just now being launched in Canada.

Talk with George Conquergood of IPC. 1999. May 10. This product was introduced in the fall of 1997 at the Natural Products Expo in Baltimore, Maryland. It went on the market right away, and was most widely available in western Canada. But some product was available in eastern Canada. Since it was a refrigerated product with a short shelf, it disappeared rapidly from the shelves and was probably totally out of stock by the summer of 1998. SoNice Yogurt never peaked. The best yogurt they ever made was the first. But the company president did like its consistency; it tended to be somewhat loose, almost like a drinkable yogurt. "Then they started messing around with it on the fly–much to my disgust. They kept on changing the formula. Our quality control person, who was also our R&D person, started experimenting with starches and stuff–which totally ruined the product. The last yogurt we produced–I was absolutely livid that we shipped it. It was gross." IPC could have kept selling yogurt because they had complete control over both the manufacturing and the packaging in the western Canada plant. But when they withdrew the other products from sale in July 1998, they withdrew the yogurt as well. George was delighted since I felt that yogurt shouldn't have been on the market in the first place–it would eventually have given the company a bad name.

Packages with Labels (plastic yogurt cups in five flavors) sent by George Conquergood. 1999. May. Each cup has a colorful design. The background color is that of the fruit flavor, and a bold illustration of that fruit appears on the front panel. "Cholesterol and lactose free. With active Acidophilus and Bifidus cultures. Stirred." UPC indicia and Kosher symbol on each package.

2470. Ritchason, Shelly. 1997. Farmland's original mission rolls into the 21st century: Meeting producer-owner needs still tops the cooperative's list. *Farmland System News (Kansas City, Missouri)* 65(10):8-9. Oct.
• ***Summary:*** Farmland Industries was founded in 1929 as the Union Oil Company (Cooperative) when six farmer-

owned cooperatives joined forces to buy and distribute petroleum products. The founder, Howard Cowden, wanted to increase producers' bargaining and purchasing power in a rapidly-growing petroleum market. The first slogan was "Our profits are your dividends." An old black-and-white photo shows the original location with large petroleum tanks. A color photo shows Farmland's headquarters, with its sky, cloud, and land logo, below which is written "Proud to be farmer owned." "Today, Farmland Industries Inc. is owned by more than 1,400 farmer-cooperative associations which, in turn are owned by about half a million farmers and ranchers across the United States, Canada, and Mexico, and 13,000 pork and beef producers who own the North American co-op directly."

2471. *GMF–Genetically Modified Foods Market Intelligence (Genetic ID, Fairfield, Iowa).*1997. Growing non-GMO niche stirs debate. No. 14. Nov. 4. p. 1.

2472. Ontario Soybean Growers' Marketing Board (OSGMB). ed. and comp. 1997. Canadian soyfoods directory. Chatham, Ontario, Canada: OSGMB. 27 p. 28 cm. • ***Summary:*** This excellent, complete, and accurate directory was compiled by the Collège d'Alfred of the University of Guelph, under contract with the Ontario Soybean Growers' Marketing Board (OSGMB). The project leaders were Suzanne Lavoie, Charles Goubau, and Ian Walker. The first Canadian soyfoods directory was published in April 1994 (22 pages).

Contents: Foreword–Ontario Soybean Growers' Marketing Board (OSGMB). Acknowledgements from researchers. Table of contents. Soyfood product descriptions: Green vegetable soybeans–Edamamé, meat analogs, miso, natto, okara, soy cheese, soy flour, soy frozen desserts, soy grits, soy isolate fibre, soy lecithin, soy oil, soy protein concentrate, soy protein isolate, soy pudding, soy sauce, soy sprouts, soy yogurt, soymilk (soy drink and soy beverage), soynuts, tempeh, textured soy flour–TSF, texturized soy protein, tofu, whole dry soybeans, yuba. Soyfoods for your health: Heart disease, cancer, osteoporosis, other conditions. Composition and nutrient value of soyfoods. Soyfood companies by product. Soyfoods companies by province: Alberta (7), British Columbia (21), Manitoba (2), Nova Scotia (2), Ontario (54), Quebec (20). Soyfood companies (105 companies that make or market wholesale soyfoods)–complete listings (address, phone and fax numbers, contact person, products). Soyfoods distributors–complete listings (13). Soybean distributors–complete listings (28). Research information sources–complete listings (24). Soyfoods information sources (23). Canadian soyfoods directory questionnaire.

Spot in *Ontario Soybean Growers' Marketing Board Newsletter.* 1997. Dec. p. 5. The Canadian Soyfoods Directory was launched in November after a two-month delay. "The project was undertaken following numerous information requests from consumers, processors and health professionals." Funded by the Board of OSGMB, it has been mailed to all Registered Dietitians across Canada, and it will soon be available on the Board's website. Address: OSGMB, 180 Riverview Dr., P.O. Box 1199, Chatham, ON N7M 5L8, Canada. Phone: 519-352-7730.

2473. **Product Name:** SoNice Yule Nog (Eggless Soymilk EggNog–Refrigerated).
**Manufacturer's Name:** ProSoya Foods Incorporated.
**Manufacturer's Address:** 312–19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1997. November.
**Ingredients:** Soymilk (fairly rich), cane sugar, carrageenan, nutmeg, artificial flavor.
**Wt/Vol., Packaging, Price:** 1 liter refrigerated gable-top carton.
**How Stored:** Refrigerated.
**New Product–Documentation:** Color sell sheet (leaflet) sent by George Conquergood of IPC. 1999. April 21. At the top is written "So Nice" in large green letters. Below that in nutmeg-colored script: "Yule Nog–Just in time for the holidays." At the bottom is a "wood block" style bowl and ladle. In the background is a wreath of holly on a beige background.

Talk with George Conquergood of IPC. 1999. May 28. This product was introduced in Nov. 1997 for the holiday season. It was sold refrigerated, packed in a gable-top carton at Farmland Dairies in New Jersey. It was on the market until January 1998; only two production runs were ever done. Most customers loved the product and wanted IPC to continue making it all year long. George invented this product and first made it in March 1993 at his Sweet Carrot Café–Health Bar & Deli is Saskatoon, Saskatchewan, Canada. Note: The ingredients in typical eggnog are: eggs beaten with sugar, milk or cream, and often alcoholic liquor. SoNice Yule Nog contained no eggs or alcohol, but it did contain sugar.

2474. **Product Name:** ProSoya SoNice: Soy Beverage (Fresh in 1 Quart ESL Gable-Top Cartons for USA) [Natural, Chocolate, Vanilla Lite].
**Manufacturer's Name:** SoNice Soy Corporation. Subsidiary of International ProSoya Corp.
**Manufacturer's Address:** P.O. Box 93009, Langley (Vancouver), BC, V3A 8H2 Canada. Phone: (604) 532-8030.
**Date of Introduction:** 1997. November.
**Ingredients:** Natural: Filtered water, certified organic soybeans. Chocolate: Filtered water, certified organic soybeans, cane sugar, cocoa, modified corn starch, tricalcium phosphate, sea salt, carrageenan, vitamin A

palmitate, vitamin D-3, vitamin B-12, riboflavin, zinc gluconate.
**Wt/Vol., Packaging, Price:** 1 quart ESL gable-top carton. Retails for $1.99.
**How Stored:** Refrigerated, 85 day shelf life.
**Nutrition:** Chocolate: Per 1 cup (240 ml): Calories 130, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 150 mg (6%), total carbohydrate 18 gm (dietary fiber 0 gm [0%], sugars 15 gm), protein 6 gm (12%). Vitamin A 10%, calcium 25%, vitamin D 20%, vitamin B-12 20%, vitamin C 0%, iron 8%, riboflavin 20%, zinc 10%. Percent daily values are based on a 2,000 calorie diet.

Natural: Per 1 cup (240 ml): Calories 70, calories from fat 30, total fat 3.5 gm (5% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 5 mg (0%), total carbohydrate 3 gm (dietary fiber 0 gm [0%], sugars 1 gm), protein 7 gm (14%). Vitamin A 0%, calcium 6%, vitamin C 0%, iron 4%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Talk with Fred Webster, head of International ProSoya Corp. office in New Hope, Pennsylvania. 1997. Sept. 31. This product, made in British Columbia, Canada, and packaged in New Jersey, will be introduced to the U.S. market in mid-October, 1997, in quarts and half gallons. Refrigerated (45 day shelf life); expected retail price is $0.99/cup.

Talk with Lorne Broten, President and CEO, International ProSoya Corp. 1997. Oct. 29. This product was launched in Canada in Jan. 1997. It is available in 1 liter and 2 liter gable-top ESL cartons.

Talk with Steve Demos, president of White Wave. 1998. Aug. 10. He heard about 10-14 days ago that the SoNice brand, both aseptic and gable top, is no longer being shipped to market. The company's first comment was "Packaging problems," and then it was "money problems." Quart cartons for Natural and Chocolate sent by George Conquergood of IPC. 1999. April. The Chocolate front panel reads: "Fortified with vitamins A, B2, B12 & D and calcium. Cholesterol and lactose free... Made with certified whole organic soybeans. 1.4% fat."

Talk with George Conquergood. 1999. June 2. The quarts for the U.S. market were introduced in Oct. 1997 at the Natural Products Expo in Baltimore, Maryland, and shipped in November. They were targeted at the mainstream consumer, and so were sweetened with liquid white sugar; the aseptic products, targeted at the natural foods consumer, were sweetened with agave. Fortification terminology was allowed on the U.S. products but not on many Canadian products. U.S. and Canadian packages had different nutritional labeling because: (1) U.S. products must bear the heading "Nutrition Facts." (2) The rules for rounding off nutrient values are different in the two countries. (3) The serving size is 1 cup (240 ml) in the U.S. vs. 250 ml in Canada. (4) The U.S. prefers quarts while Canada uses the metric system–like almost all other countries worldwide. These differences created a packaging nightmare for IPC. Fred Webster was and employee of IPC and the company's master broker for the USA, with focus on the East Coast. IPC set up the West Coast complete separately from Fred.

2475. Tibbott, Seth. 1997. Current state of the North American tempeh [and tofu] market. In: Sudarmadji, Suparmo and Raharjo, eds. 1997. Reinventing the Hidden Miracle of Tempe: Proceedings, International Tempe Symposium, July 13-15 1997, Bali, Indonesia. Jakarta, Indonesia: Indonesian Tempe Foundation. xi + 280 p. See p. 28-35. 26 cm. [7 ref]
• ***Summary:*** Contents: Abstract. History of the North American tempeh market. Current US tempeh market–May 1997: Basic statistics, who is the typical tempeh consumer?, where is tempeh sold?, how is tempeh packaged?, how is tempeh used by the consumer in North America?, what is the future of tempeh in North America?, factors that affect future growth of tempeh (health benefits of soy and label claims, consumer education, development of the food service and industrial market, development of Indonesian cuisine and restaurants in America).

In 1984 some 53 companies in the US made approximately 34,000 pounds/week of tempeh. At that time tempeh was the fastest growing soy product in the US, growing by about 28% a year.

As of May 1997 there are ten tempeh manufacturers in the USA; seven of these produce more than 1,000 lb/week of tempeh, and only one produces less than 200 lb/week. All ten US companies make an estimated 55,580 lb/week of tempeh, and these 7 largest companies make about 95% of the total. Canada has only 3 tempeh makers and they produce a total of about 1,100 lb/week. In Mexico, there are only a few tempeh makers, mostly in tourist areas. All of the 7 largest US and the 3 largest Canadian tempeh manufacturers are owned and operated by Caucasians. Caucasians also consume an estimated 95% of the tempeh made in the USA. In North America, tempeh is marketed in a variety of forms and flavors, of which soy tempeh is the most popular, followed by tempeh burgers and soy & grain tempehs. All of the existing tofu shops in the USA and Canada trace their roots to The Farm, a spiritual community in Summertown, Tennessee.

By contrast, tofu is much more popular in North America than tempeh. More than 70 manufacturers produce over 1.5 million lb/week. Three of the four largest manufacturers are owned and operated by Asian Americans. Whereas 75% of all Americans know what tofu is, only 14% know what tempeh is.

Although tempeh sales grew very rapidly during the 5-year period from 1980 to 1984, they were stagnant during the next five years, from 1985 to 1989. This was caused in large part by competition from more sophisticated meatless

burgers, such as the Gardenburger, launched in March 1985 by Wholesome & Hearty Foods of Portland, Oregon. Also microwavable and ready-to-eat foods became more popular. The period of stagnant sales led to a great consolidation within the industry. By 1990 there was renewed interest in tempeh, which paralleled the new interest in the health benefits of soy, and the rise new "meat alternatives" category. Today, tempeh sales are growing at 10-20% a year. And most Americans still like tempeh very much when they taste it. All US tempeh makers agree that education is the crucial need.

In 1984 about 20% of US tempeh was sold vacuum packed, compared with 70% today. Main advantage of vacuum packing: Longer shelf life. Main disadvantage: Imparts a somewhat bitter taste to the tempeh. A 1992 survey of 400 tempeh users by Turtle Island showed that the number one use was in stir-fried recipes, usually with rice and vegetables.

Tables show: (1) Tempeh market statistics (USA): Average retail price per 8 oz cake of soy tempeh: $1.81. Percentage of tempeh sold refrigerated: 80% (the rest is sold frozen). Total retail dollars spent on tempeh: In 1983 = $4.96 million. In 1996 = $13.15 million. Spent (retail) on tofu in 1996 = $116 million. Spent (retail) on soymilk 1996 = $100 million. Market share of the four largest tempeh makers in 1983: 63%, In 1997: 84%. (2) Number of brands of different types of tempeh on the US market in May 1997: Tempeh burgers 14, soy tempeh 9, multi-grain (mostly 3 or 5 grains) 6, bulk soy tempeh 5, soy & brown rice tempeh 4, sea veggie tempeh 3, wild rice tempeh 2, soy millet tempeh 2, sloppy Joe tempeh 2, other 8.

Talk with Seth Tibbott of Turtle Island. 1999. Dec. 6. The existing tempeh companies with the strongest ties to The Farm in Tennessee are (1) Lightlife Foods (Michael Cohen; see Sept. 1991 interview) and (2) Turtle Island (Seth; in 1977 he learned how to make tempeh at The Farm in Tennessee). Those with weaker ties are (3) Wildwood Natural Foods (Jeremiah Ridenour; he lived at The Farm for a while, has a lot of Farm history, and one of his kids was born on The Farm), (4) White Wave (In about 1980 Alexander Lyon was hitchhiking through Boulder, Colorado, and had no money. He taught Steve Demos how to make starter culture for something like $20 and a good meal), and (5) Surata Soyfoods (Benjamin Hills learned how to make tempeh from his former wife, who learned it from The Farm in Tennessee).

Turtle Island now makes tempeh for: Lean Green Foods (Hawaii; Benjamin Hills), Wildwood Natural Foods, and Quong Hop. It starts out when you're at a trade show and "people saddle up to you" and say "Uh, we're not sure exactly which way we're going with our tempeh, but do you any extra plant capacity? It's just a thought." Then "If you give any kind of encouragement to them, the next week they're begging you on their hands and knees, they'll pay anything to have you make it for them. It's such a hassle and they have to devote plant space to it. Tofu is now growing so much faster than tempeh, they just keep tempeh to fill out their product line." Seth expects that White Wave and Surata will come to him next, begging him to make tempeh for them. Address: Turtle Island Foods, Inc., P.O. Box 176, Hood River, Oregon 97031.

2476. Suzanne, Lavoie. 1997. Update on the *Canadian Soyfoods Directory* (Interview). *SoyaScan Notes.* Dec. 15. Conducted by William Shurtleff of Soyfoods Center. [1 ref]
• ***Summary:*** Approximately 3,500 copies of this directory were sent to Registered Dietitians (members of the Dietitians Association of Canada) across Canada and the response has been remarkable; the phones at the Ontario Soybean Growers' Marketing Board have been ringing all day recently. The total cost of the project, including the company visits, printing the directory, etc. was $69,000. It cost an additional $6,000 (roughly) for them to do the mailing (in house), including postage and envelopes, to the dietitians, plus almost 2,000 to Canadian companies, associations, etc. Most of the rest were given to OSGMB.

Suzanne has the date that each of the companies listed in the directory started making soyfoods. She may include that date in the next edition.

She also has information on which companies are soyfoods manufacturers and which are not–but rather buy their soyfoods from manufacturers then market or distribute the product under their own brand. Some companies that were marketer/distributors felt very strongly that did not want readers of the directory to know they were not manufacturers.

The information in this directory is also available on a CD-ROM using the database software named Access.

Suzanne hopes that her group's next project will be to put this directory on the World Wide Web.

Update: Talk with Suzanne. 1998. Feb. 17. They are now trying to put the directory on the Internet. OSGMB is very happy with the response; so far they have received more than 500 additional requests for the directory. It now looks as is if Suzanne's group will publish a new, updated directory every three years. Whenever she travels in Canada nowadays, she is very interested to visit stores and look for new soy products. Address: College d'Alfred–Formation/ soya, CBTS–Client Based Training, C.P. 580, 31 St. Paul, Alfred, Ontario K0B 1A0, Canada. Phone: 613-679-2432.

2477. Gupta, Rajendra P. 1997. Continuous soaking system. *U.S. Patent* 5,699,726. Dec. 23. 4 p. Application filed 17 June 1996. 2 drawings. [1 ref]
Address: 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada. Phone: 613-745-9115 or 613-744-4401.

2478. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1997. Canadian Soyfoods Directory released. 11(3):2. Dec.
• ***Summary:*** "Following numerous requests from consumers, processors and health professionals, the Ontario Soybean Growers' undertook this extensive project." For more information visit www.soybean.on.ca, or fax the OSG at 519352-8983.

2479. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1997. CBOT to drop bushel. 11(3):2. Dec.
• ***Summary:*** "From the beginning of 1998, prices for soybean, corn and wheat futures at the Chicago Board of Trade (CBOT) will be quoted in dollars per contract rather than in dollars per bushel, changing a practice that has been in existence for more than 100 years. Each CBOT contract for soybeans, corn and wheat is presently 5,000 bushels and the size of the contract will not be changed. CBOT members voted overwhelmingly last July to approve the proposal."

2480. *Canadian Export Soybeans (OSGMB, Chatham, Ontario, Canada).*1997. Mission to Europe. 11(3):1-2. Dec.
• ***Summary:*** Tom Lassaline and Kim Cooper traveled throughout Europe in Oct. 1997. "Their visit to Norway, Germany, the Netherlands Belgium, and Switzerland was mainly in response to requests from Canadian embassies in these countries. Overseas customers had made requests to embassy officials, asking for clarification and information on the Canadian soybean situation this year, especially as it relates to genetically modified (GMO) soybeans.

"The introduction of GMO soybeans into Europe in 1997 caused quite a stir. Environmental groups, such as Greenpeace, hold a very high credibility rating with many European consumers," but it varies by country. In Germany, for example, "Greenpeace has a 70% credibility rating, compared with 30% for the [soybean] industry." "Many companies in Europe are in a very awkward position. They generally are in favour of biotechnology, as long as it is safe for food and the environment." Consumers tend to support environmental groups, which are mostly opposed to this new technology.

2481. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada).*1997. Japan technical mission–September, 1997. 3(3):1-2. Dec.
• ***Summary:*** Tofu: Before the team of three professionals (representing industry, university, and government) left Canada, a series of questions concerning the different techniques and methods used in making tofu in Japan were submitted to the Science and Technology Section of the Canadian Embassy in Tokyo. These were sent to as many tofu manufacturers and researchers as possible in the hope of arriving at a consensus of opinion on the best way to make tofu. This Bulletin discusses times and temperatures for soaking the soybeans, water uptake, desired characteristics of the soymilk used to make tofu (percent solids, protein, fat, and sugar content, nitrogen, pH, and color), coagulants, times and temperatures in the coagulation process.

A sidebar titled "The GMO question" (p. 2) states: "If a common concern was established at all points of contact on the mission, it was the one concerning transgenics or Genetically Modified Organisms (GMO). The Japanese concern over this issue is one of the greatest to face the food production industry." According to Dr. Yukio Kawamura, a major reason for this aversion arises from the fact that "because Japan was the only nation to suffer from an atomic bomb, the people fear the effects of mutation from non-natural sources... Even though several departments of the Japanese government have OK'd the use of GMO in the food supply, there is a strong resistance to them... Mr. Ozawa, President of Fujishoji [Fuji Shoji], said that being able to label products as GMO-free will be as popular as those products who currently advertise that only organically grown beans are used in their manufacture. Wherever the team visited, this was the foremost topic of conversation. The Japanese are currently seeking a written documentation to accompany shipments stating that they are GMO free. Even though acceptance may be forthcoming in the future, this is a unique opportunity to protect and possibly increase market share in Japan."

2482. Duffey, Patrick. 1997. The power of cooperation: Members and rural communities benefit from AGP operations. *Rural Cooperatives.* Nov/Dec. p. 22-25.
• ***Summary:*** AGP, a cooperative based in Omaha, Nebraska, "is helping to boost the overall economy in the rural Midwest. AGP has become a classic example of the power of cooperation, with sales that topped $2.9 billion for fiscal 1997 and net earnings (before taxes) of $40.4 million. That's up from total sales of $896 million and net earnings of $4 million in its first year of operation [1983]. During its 14-year history, AGP has returned nearly $240 million in cash patronage to its members." In Oct. 1996 [sic, 1997] AGP's new soybean crushing plant in Emmetsburg, Iowa, began operations, and now consumes 60,000 bushels of soybeans a day, the equivalent of 1,500 acres of soybeans daily. It has just completed a soy oil refinery in Eagle Grove, Iowa, and is in the design phase of a new soybean processing plant in Hastings, Nebraska. "Today, its membership includes 302 local and 12 regional cooperatives representing 300,000 farmers from 16 states and Canada. 'Partners in food production,' is AGP's motto." AGP also exports grain and soybean meal to 20 foreign nations. Address: Information Specialist, USDA Rural Development.

2483. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Marketing news–Mission to Hong Kong and China. Dec. p. 5.
• ***Summary:*** Three Canadians visited these two areas in Sept. 1997 and have submitted a full report. The greatest potential for Canadian soybeans in this huge market is currently in southern China, where crushers near the China-Hong Kong border have learned of the superior quality of Canadian soybeans from their buyers in Hong Kong and are eager to try them. "The difficulties that they are now facing with their current soybean supply, from the soybean production regions of northern China, are a lack of consistent supply and questionable quality. The September mission focused mainly on the Guangzhou, Shanghai, Beijing and northern Heilongjiang areas of China." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2484. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Ontario soybean crush continues to increase. Dec. p. 5.
• ***Summary:*** The soybean crush has increased from 1,040,000 tonnes in crop year 1992/93 (Sept. 1 to Aug. 31) to 1,451,700 tonnes in 1996/97. Source: Canadian Oilseed Processors' Association. The biggest annual percentage increases were in 1996/97 (15.9%) and 1995/96 (11.6%). "The two large crushers in Ontario, ADM and CanAmera, have recently increased their crush capacity and oil/meal production. Ontario's four other crushers, Cold Spring Farms, Dennis Jackson Seeds, Helin Oil Packers, and Sunfield Oilseeds, also continue to expand." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2485. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Profiles: La Cooperative de Pointe-aux-Roches–also known as Stoney Point Co-op. Dec. p. 10.
• ***Summary:*** This co-op, established almost 50 years ago–in 1948, has seven elevator locations and handles about 7 million bushels of oilseeds and grains a year; of this roughly 40% is soybeans. The majority of these go to the ADM crush plant in Windsor, "but sales of food-grade export soybeans are climbing rapidly and account for about one third of all sales, both in bags through a half-dozen Canadian exporters and in bulk via CP Rail to the Farmers Grain Dealers Inc. terminal at Mobile, Alabama.

"Today, the Co-op has 940 members and annual sales of $56 million." A photo shows Chuck Desmarais, the Co-op's manager. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2486. *Ontario Soybean Growers' Marketing Board Newsletter.*1997. Focus on China. Dec. p. 11-12.
• ***Summary:*** Contains many separate, interesting facts on the following subjects: The People's Republic of China. Heilongjiang (HJ) province. Agricultural practice in Heilongjiang province.

In 1996 HJ province produced 4.13 million tonnes of soybeans, accounting for about 40% of China's total soybean production. The average yield is 28 bu/acre (1.9 tonnes/ha). Production is expanding due to high world prices and production incentives. "There have been some difficulties bringing North American soybean varieties into China for research purposes, as a result of concern over GMO (genetically modified organism) soybeans.

"The average farmer is required to sell 20% of his crop at a fixed price to the government, while the remaining 80% is available for the farmer to sell in the free market at the going price. Farmers do not like selling to the government because the price is lower. Low prices are responsible for more farmers choosing to move into the cities or seek an alternative job, asking others to run their farms for them." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2487. **Product Name:** Real Roasted Soys [Honey Coated, Organic Salted, Organic Unsalted, and Organic Salt and Garlic].
**Manufacturer's Name:** Dyshar Farms Ltd.
**Manufacturer's Address:** R.R. #3, Woodstock, ONT N4S 7V7, Canada. Phone: 519-537-2199.
**Date of Introduction:** 1997.
**Ingredients:** Organic soybeans, salt and/or garlic.
**Wt/Vol., Packaging, Price:** 100 gm, 1 kg, or 15 kg plastic bags.
**How Stored:** Shelf stable.
**New Product–Documentation:** Talk with Sharon Hart, co-founder and co-owner of Dyshar Farms. 1999. April 20. In 1997 they introduced honey coated plus organic Roasted Soys in three flavors.

2490. Elovson, Rune. 1997. Algot Holmberg & Söner AB [Algot Holmberg & Sons Inc.]. In: Gösta Olsson, ed. 1997. *Den svenska växtförädlingens historia. Jordbruksväxternas utveckling sedan 1880-talet.* Stockholm: Kungl. Skogs- och lantbruksakad 320 p. See p. 81-84. Illust. 25 cm. [5 ref. Swe]
• ***Summary:*** This history of plant breeding in Sweden contains a chapter about the work of Sven Holmberg and his

father, Algot Holmberg, founder of the company Algot Holmberg & Söner AB.

The seed company Algot Holmberg and Sons at Fiskeby in Norrköping was by far one of Sweden's oldest in its category, and its roots go back as far as 1822 when Per Holmberg established a small country store in Norrköping. Eventually, it was taken over by his son P.J.A. Holmberg. However, it was his grandson Algot Holmberg from which the company got its name who upon his return from studies abroad gave the company its modern direction. From 1891, the company specialized entirely on producing and selling seeds and, in the beginning, the preservation and cultivation of local varieties and stocks from Östergötland and other parts of central Sweden, especially forage roots and leguminous plants. Eventually, the cultivation of potatoes and oil- and protein- yielding plants such as mustard, flax seed, sweet 'lupine' and above all soybeans was incorporated. Fairly soon the breeding of grains was also added.

After the death of Algot Holmberg in 1927 his work was continued by his sons Pehr A. and Sven A. Holmberg and the company's name was changed to Algot Holmberg and Sons Inc. Pehr A. Holmberg was the head of the company while Sven A. Holmberg was responsible for the breeding business.

In 1925 a close cooperation was initiated with the Danish breeding company Pajbjergfonden which would continue to exist for more than 40 years (Seed, 1965). The purpose of the breeding business at Fiskeby was primarily to produce varieties that were satisfactory to central Sweden's demands for gestation and cultivation dependability. The varieties from Pajbjergfonden would then render the business access also to varieties that suited the breeding demands of southern Sweden. The cooperation also meant that crossings performed at Holmberg's or Pajbjergfonden became the subject of choice at both of these breeding stations. At that time, the breeding expert at Pajbjergfonden, Henrik Bogh, periodically stayed at Fiskeby for this purpose.

During a period of time Professor Heribert-Nilsson was linked to the breeding business at Algot Holmberg and Sons, primarily for working with rye.
