The demand for increased rationalization and to meet the mounting costs of breeding resulted in the sale of Algot Holmberg and Sons Seed and Breeding Company, including all the breeding material to W. Weibull and Company in 1966 (Weibullsholm, 1970). The buildings with the warehouses at Fiskeby outside of Norrköping, well known to all railroad travelers between Malmö and Stockholm, were sold to Fiskeby Bruk. The breeding of soybeans, however, continued under the administration of Weibull in the same place in localities rented by Fiskeby Bruk until 1984 at which time the lease expired (the warehouses were to be demolished), and the soybean breeding moved to Landskrona.

Breeding Results: In the beginning the greatest success was achieved in the root category and the first result was the 'Göta Turnip' which has its origin in the 'Östgöta Turnip', already grown in gardens for many years. Among other things it had good resistance against club root of cabbages disease. Thereafter, the focus was more on fodder beets and above all fodder sugar beets which were represented primarily by the varieties Svea Barres and Milka, respectively. The focus was especially aimed at raising the proportion of the total solids in the beets.

Of the leguminous plant Götaklöver is worth mentioning. It is a late common purple clover and one of the first bred clover families that has been released in Sweden (commissioned by the agricultural scientist Gösta Eriksson who during one period worked for the Holmberg company). Furthermore, the intermediate common purple clover Monark and the common white clover Milka from Pajbjergfonden were also introduced.

The work with potatoes resulted in a local varieties for Östergötland, Östergyllend which was commonly liked as potatoes for human consumption ("A few words about Algot Holmbergs Seed Breeding").

In the grain category one can largely depend on the varieties from Pajbjergfonden. The primary varieties were the spring barley varieties Kungs and Kron and the oats varieties Rex. The barley varieties were among other things known for their resistance to nematode. Certain success can be shown regarding Holmberg's wheat breeding which among other things was crossed with Finish material with the intention of developing early varieties with good resilience and resistance against spike germination. The spring wheat varieties 'Algot' was approved and incorporated into the Swedish list of varieties in 1969. It was a very early and on the whole a well balanced spring wheat varieties. But it was soon exceeded in yield by newer varieties and therefore never marketed. By and large the wheat material was taken over by and incorporated into Weibulls.

The breeding of soybeans: Since 1939 the operation at Holmberg's in Norrköping has largely consisted of the soybean breeding, and without doubt this operation has made the name Holmberg known, especially internationally. It was Sven Holmberg who initially got the idea of adapting the soybean to the Swedish climate. After having made several attempts with varieties mainly from Canada and Germany with poor results, in 1939-40 he made a journey for sample collections to northern Japan and Sakhalin in Eastern Siberia. These places have a summer climate similar to that of Sweden, and a long tradition of breeding soybeans. The basics for this type of soybeans which was developed by Sven Holmberg (Holmberg, 1946, 1973) consisted of crossings between early, hardy and low

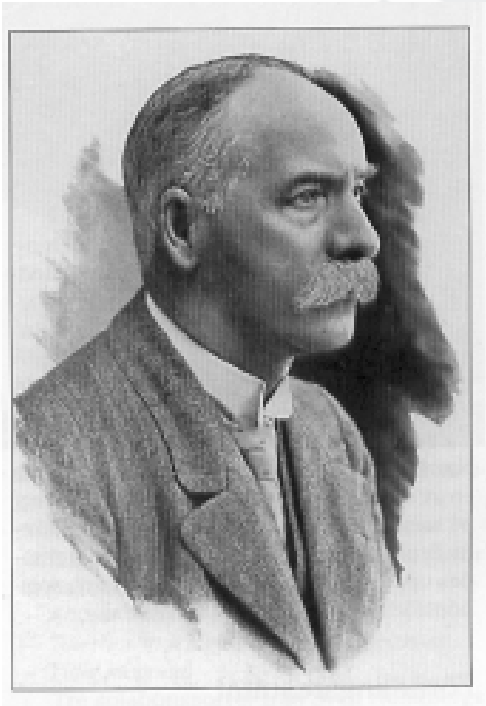
growing varieties from these parts, and more higher growing varieties, mainly from Germany (with its origin from Manchuria).

There are primarily three characteristics that distinguish the soybean varieties from Holmberg's breeding and that are entirely essential to the adaptation to the Swedish climate: (1) Adaptation to long-day-climate. (2) Tolerance against low summer temperatures. (3) Early ripening. Three varieties of soybeans from Sven Holmberg's breeding are or have been incorporated into the Swedish list of varieties, Fiskeby V, Bråvalla and Träff. Fiskeby V is the highest yielding and the tallest. It is also the most well known varieties, viewed internationally. Bråvalla and Träff are short and extremely early varieties. They ripen 8 and 12 days, respectively, earlier than Fiskeby V. / In spite of the breeding success, the soybean never attained common cultivation in Sweden, primarily because its yield was low and uncertain in comparison with other crops. Even if the breeding efforts in this respect seemed to have failed, they have probably, on a global scale, attained great value considering the invested resources. The soybean varieties from Fiskeby are well known among soybean growers all over the world, consisting of a source for early gestation and tolerance against low temperatures in breeding programs, wherever these characteristics were needed.

The soybean breeding has now been discontinued and the breeding material is stored at Nodiska Genbanken (The Nordic Gene Bank).

For his achievements in plant breeding, Sven Holmberg was given several awards, among other things A. W. Bergsten's Award and a silver plaque from the Royal Academy of Forestry and Agriculture.

An illustration (portrait) shows: (1) Algot Holmberg (1856-1927), founder of the seed company.



Photos show: (1) Holmberg's Seed Cleaning Establishment and Warehouse next to the railroad tracks in Norrköping, Sweden.

(2) Sven Holmberg, Doctor of Agricultural Science, holding out a bundle of soybean plants. He made significant contributions as breeder of soybeans through producing extremely early varieties. (3) Three soybean plants, shown with a playing card to indicate their size, against a white background. The short plant to the right is a primitive but early country varieties (Aojiro Gokuwase) of soy from Hokkaido. The tall plants to the left have been chosen from one of the first crossings (St. K7 / 38 x Aojiro Gokuwase) at Fiskeby.

2492. Grace, Eric S. 1997. Biotechnology unzipped: Promises and realities. Washington, DC: Joseph Henry Press. 248 p. Illust. Index. 22 cm. [31 ref]
• ***Summary:*** This is a well-written, fair and balanced treatment of a complex and controversial subject. Chapter 1 contains a good history of the development of biotechnology. Contents: Preface. 1. How biotechnology came about: What is biotechnology?, in the beginning, the voyager and the monk (a striking coincidence–Alfred Russel Wallace and Charles Darwin), colored bodies (fruit flies in the lab), let there be DNA, unraveling the double helix, how does DNA store information?, a copy in every cell, what do genes do?, protein primer (examples of proteins, proteins are us, the amino acids, genes, proteins, and your eyes), the genetic code (nature the expert packer), how genes make proteins, daring nucleotide adventures.

2. Tools in the genetic engineering workshop: Why bacteria?, hijackers and molecule snippers, first catch your DNA, making recombinant DNA, putting new genes into cells, gene expression, cloning plants, animals, and cells, monoclonal antibodies, DNA probes, DNA "fingerprinting", polymerase chain reaction.

3. Biotechnology and the body: new parts for old, it's all in the genes, the beginnings of gene therapy, the human genome project, the continuing story of gene therapy, the human genome project, the continuing story of gene therapy, microbes in medicine, medicines from plants, the interferon story, genes and vaccines, nature's magic bullets, designer drugs, a case study: tryptophan, closing thoughts.

4. Biotechnology on the farm: Milking it for all it's worth, let us spray, developing regulations, great expectations, pests and diseases, a versatile bacterium, weather and soil, farmer-ceuticals?, closing thoughts.

5. Biotechnology and the environment: Microbes clean up, microbes as monitors, finding the right microbes for the job, a quick reading, microbes and mines, golden harvest, a new angle to landscaping, fighting chemicals with chemicals, making new fuels, closing thoughts.

6. Biotechnology in seas and trees: An ocean of opportunity, foul is fair, underwater drugs, a cornucopia of chemicals, research and development, fuels from the sea, farming the seas, diseases and pollutions, frozen fish, the forest and the trees, a harvest of wood, building better trees, forests of the future, closing thoughts.

7. Ethical issues: Making opinions, life, patenting people, problems with patents, profiting from the poor, protecting consumers, health dilemmas, gene therapy revisited, pros and cons of gene therapy, Prometheus revisited.

Postscript. Glossary. Further reading. Internet resources. Photo credits & sources.

Biotechnology is the transplanting of genes from one species into another.

Subjects discussed include: Deaths from tryptophan made in Japan by Showa Denko (p. 88-90). Monsanto Co. (p. 97, 102, 107). IPM (Integrated Pest Management, p. 108, 120-21). Dr. John Fagan (molecular biologist at Maharishi University in Iowa and author of the book: *Genetic engineering: the hazards, Vedic engineering: the solutions.* He is opposed to much of biotechnology). Address: Victoria, British Columbia, Canada.

2493. Grogan, Bryanna Clark. 1997. Twenty minutes to dinner: Quick, low-fat, low-calorie vegetarian meals. Summertown, Tennessee: The Book Publishing Co. 192 p. Index. 21 cm.
• ***Summary:*** This vegan cookbook contains a wealth of soy-related recipes. Also includes soy-free options for recipes with tofu and soymilk. Address: Denman Island, east of Vancouver, British Columbia, Canada.

2494. Hogan, David Gerard. 1997. Selling 'em by the sack: White Castle and the creation of American food. New York,

NY: New York University Press. x + 199 p. See p. 99, 100, 107. *

• ***Summary:*** White Castle, a regional restaurant chain, was founded in 1921 in Wichita, Kansas–at a time when Americans were hesitant to eat ground beef after Upton Sinclair's 1906 novel *The Jungle* had publicized the poor sanitation practices of the meat packing industry. It became the first American hamburger fast food restaurant chain.

In the chapter "White Castle goes to war," the section titled "Victory coffee without the coffee" (p. 98-100) states that coffee was in short supply during World War II only because consumers, in the early summer of 1942, fearing it would be rationed, "fulfilled their own prophecy of scarcity by clearing grocery shelves and hoarding coffee in their cupboards." Rationing was imposed a few months later.

White Castle first considered extending the existing coffee supply by adding "chicory or soy meal." Eventually most wholesale roasters added 6-8% chicory to their mix, which did not alter the flavor much. White Castle soon accepted this "chicoried" coffee at most Castles in the chain.

They also tried a variety of other hot drinks to help make up the coffee shortage, such as Postum (an extract from roasted bran flavored with molasses)–but it was quite expensive.

White Castle also considered and tested, but ultimately rejected, other coffee substitutes such as "Soykee, a soy derivative sold by Battle Creek Food Company; Soyfee from Cubbison Company; and Kofy Sub, another soy-based substitute" [made by Dr. Jackson Foods in Toronto, Ontario, Canada]. The only coffee substitute that White Castle considered seriously was Breakfast Cup, sold by Loma Linda Foods of California in 12-ounce packages; it was made from soy, bran, fig, wheat, and honey, but was eventually considered too expensive.

Since meat was also scarce during the war, White Castle also searched for alternatives to their hamburgers–and even considered meatless alternatives. Battle Creek Foods of Michigan offered the most varieties. Special Foods of Columbus [sic, Worthington] Ohio, made Numete, based on peanuts and corn flour. Many companies made a soy burger, while Loma Linda Foods made Vegelona (from soybeans, tomatoes, onions, and peanuts) and Proteena (from soy, tomato juice and yeast extract). Central Soya Co. made soya flour, which White Castle considered using as a meat extender. But there is no evidence that White Castle ever mixed its hamburger meat with any extender.

2495. Main, Jan. 1997. Bone vivant!: calcium-enhanced recipes and bone-building exercises. Canada: Macmillan Canada. 192 p. + 8 unnumbered pages of plates. Illust. 25 cm. *

• ***Summary:*** This high-calcium diet contains soy recipes to help prevent osteoporosis. Address: Professional home economist, Scarborough, Ontario, Canada.

2496. Loh, Michael. 1998. Current activities (Interview). *SoyaScan Notes.* Jan. 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Michael received an attractive retirement package from the Canadian government. He was on loan from the government to OSGMB, but has retired. Now he is working for a new company named Southwest Soya, which is the marketing arm of Southwest Seed. The latter is a group of three seed companies which have about 10% of the Canadian market: Mergl Seeds, Shanks Seeds, and Von Martels. They do not yet have a program or policy concerning GMO. Southwest Seed is a member of the Canadian Soybean Export Association (CSEA).

2497. Bernard, R.L.; Cremeens, C.R.; Cooper, R.L.; Collins, F.I.; Krober, O.A.; Athow, K.L.; Lavoilette, F.A.; Coble, C.J.; Nelson, R.L. 1998. Evaluation of the USDA soybean germplasm collection: Maturity groups 000 to IV (FC 01.547 to PI 266.807). *USDA Technical Bulletin* No. 1844. iii + 169 p. Jan.

• ***Summary:*** Contents: Introduction. About the tables. List of tables: Maturity groups 000 to 0: Tables (1.0) Identification and origin information for USDA soybean germplasm in maturity groups 000 to 0, FC 01.547 to PI 266,807: PI Number, accession name, country of acquisition, country of origin, year introduced or released, maturity group. (2.0) Descriptive data for USDA soybean germplasm in maturity groups 000 to 0, FC 01.547 to PI 266,807: Entry (variety name, FC number, or PI number), maturity group, stem termination (determinate, indeterminate, semi-determinate), flower color, pubescence (color, form, density), pod color, seedcoat (luster, color {buff, black, black hilum with brown outer ring, brown, gray, green, greenish brown, imperfect black, reddish brown, tan, yellow}), hilum color (same choices as seed color), other traits (seed, leaf, plant). (3.0) Agronomic data for USDA soybean germplasm in maturity groups 000 to 0, FC 01.547 to PI 266,807, grown at St. Paul, Minnesota: Entry, flowering (days after May 31), maturity (days after May 31), lodging (score), height (cm), stem termination score, shattering score, seed (quality score, weight {100 gm/seed}, yield {1000 kg/ha at 13% moisture}). (4.0) Seed composition data for USDA soybean germplasm in maturity groups 000 to 0, FC 01.547 to PI 266,807, grown at St. Paul, Minnesota: Entry, maturity group, seed composition (oil %, protein %), protein composition (methionine as a percentage of total protein), oil composition [fatty acids] (linoleic %, linolenic %).

Maturity groups I and II: The tables are identical in format to those above except that the soybeans were grown at Urbana, Illinois, and there is information on disease reaction to phytophthora rot and pythium rot.

Maturity groups III and IV: The tables are identical in format to those above except that the soybeans were grown at Urbana, Illinois, and there is information on disease reaction to phytophthora rot and pythium rot.

"Introduction: This publication consolidates information contained in U.S. Regional Soybean Laboratory Manuals 223 (July 1965), 230 (September 1966) and 238 (April 1969) on the origin, descriptive characteristics, agronomic performance, seed composition and disease reaction data of soybean *(Glycine max* (L.) Merrill) germplasm accessions FC 01.547 to PI 266.807 in maturity groups 000 through IV. Also included are cultivars, in these same maturity groups, developed at public institutions in the United States and Canada, and released by 1966. The data presented in Tables 3 and 4 are the same as in the original publications except that units on weight and height have been changed to metric and some maturity groups have been changed. In Table 1, some changes have been made for accession name and country of origin based on more recent information. The pedigrees of domestic cultivars are not included but are available in USDA Technical Bulletin 1746. Some origin details for named cultivars and FC accessions were removed but are available in the USDA Soybean Germplasm Collection Inventory, Volume 1, INTSOY Series Number 30. In Table 2, data on stem termination was added, the information on pubescence was expanded and some descriptions have been updated. These data can also be obtained through the Germplasm Resources Information Network (GRIN), Database Management Unit, USDA-ARS, BARC West, Beltsville, Maryland 20705. Evaluation publications for PI numbers higher than PI 266.807 can be obtained from the Curator, USDA Soybean Germplasm Collection, USDA-ARS, 1101 West Peabody Drive, University of Illinois, Urbana, IL 61801."

Named varieties in maturity groups 000 to 0: Acme, Agate, Capital, Comet, Crest, Early White Eyebrow, Flambeau, Goldsoy, Grant, Hardome, Hidatsa, Kabott, Mandarin (Ottawa), Manitoba Brown, Merit, Minsoy, Norchief, Ogemaw, Pagoda, Pando, Poland Yellow, Sioux.

Named varieties in maturity groups I and II: Aksarben, Amsoy, Bansei, Black Eyebrow, Blackhawk, Burwell, Cayuga, Chippewa, Chippewa 64, Earlyana, Elton, Etum, Funman, Giant Green, Goku, Habaro, Hakote, Harly, Harosoy, Harosoy 63, Hawkeye, Hawkeye 63, Henry, Hoosier, Kagon, Kanro, Kanum, Korean, Lindarin, Lindarin 63, Linman 533, Manchu 3, Manchu 606, Manchu [Madison], Manchu Hudson, Manchu Montreal [Montreal Manchu], Manchukota, Manchuria, Mandarin, Mandarin 507, Medium Green, Mendota, Monroe, Mukden, Norsoy, OAC 211, Ontario, Portugal, Renville, Richland, Sac, Seneca, Sousei, Soysota, Tastee, Toku, Tortoise Egg, Waseda, Wea, Wisconsin Black, Yellow Marvel.

Named varieties in maturity groups III and IV: A.K. (Harrow), A.K. [FC 30761], A.K. (Kansas), Adams, Adelphia, Aoda, Bethel, Boone, Chestnut, Chief, Chusei, Clark, Clark 63, Cloud, Columbia, Delmar, Dunfield, Ebony, Emperor, Ford, Fuji, Funk Delicious, Gibson, Granger, Green and Black, Guelph, Harbinsoy, Harman, Higan, Hokkaido, Hongkong, Hurrelbrink, Illington, Illini, Ilsoy, Imperial, Jefferson, Jogun, Kanrich, Kent, Kim, Kingston, Kingwa, Kura, Lincoln, Macoupin, Manchu, Manchu 2204, Manchu [Lafayette], Manchuria 13177, Manchuria 20173 Mandell, Mansoy, Midwest, Mingo, Morse, Norredo, Osaya, Patoka, Patterson, Peking, Pennsoy, Perry, Ross, Sanga, Sato, Scioto, Scott, Shelby, Shingto, Shiro, Sooty, Viking, Virginia, Wabash, Wayne, Wilson, Wilson-Five, Wing Jet (Ohio), Wolverine. Address: 1. Prof. Emeritus, Dep. of Agronomy, Univ. of Illinois, Urbana; 2. USDA-ARS agricultural research technician; 3. Research Geneticist, USDA-ARS, Dep. of Agronomy, Ohio State Univ., Wooster.

2498. Golbitz, Peter. 1998. Tofu & soyfoods cookery: Delicious foods for a healthy life. Summertown, Tennessee: Book Publishing Co. 176 p. Illust. (3 photos). Recipe index. General index. 21 cm.

• ***Summary:*** Contents: Preface and acknowledgments. The history of soyfoods. A closer look at soybeans. Soybeans and health: Introduction, malnutrition, cardiovascular disease, cancer, osteoporosis, menopause, more to come. Using soyfoods: Whole dry soybeans, tofu, soymilk, soy flour, textured soy protein, green vegetable soybeans, tempeh, miso, soy sauce, soy protein concentrate, soy protein isolates, natto, soybean oil, second generation soyfoods, meat alternatives, cheese alternatives, soy yogurt, nondairy frozen desserts, mayonnaise and dressings, instant soups and other dry mixes, margarine, lecithin, soynuts and soynut butter, soy sprouts, okara or soy pulp. Basic recipes. Breakfast. Bread. Salads & dressings. Soups & sandwiches. Main & side dishes. Desserts & drinks. Glossary. U.S. & Canadian soyfoods companies. Sources of information on soyfoods. Nutrients in soyfoods.

Contains 125 of Peter Golbitz's favorite recipes, selected from the works of some of "the world's leading soyfoods chefs." A list of these "leading vegetarian and soyfoods pioneers" (all of whose books have been published by The Book Publishing Co.) appears on the rear cover. Peter (born in 1952) lives with his wife, Sharyn Kingma, and son on a beautiful island the coast of northern Maine. A color photo of the family appears on the rear cover. Twenty years ago (in 1978) Peter was "first introduced to tofu and the wonders of soyfoods." A photo of Peter with his book appears in the Book Publishing Catalog of Jan. 1999. Address: President and Founder, Soyatech, Inc., Bar Harbor, Maine. Phone: 207-288-4969.

2499. Jones, Jacob. 1998. Three archival collections of David Fairchild's papers (Interview). *SoyaScan Notes.* Feb.

4. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** David Fairchild was a remarkable and very influential man. In 1898 he founded the Section of Foreign Seed and Plant Introduction within the U.S. Department of Agriculture in order to centralize introduction activities. A visionary and a leader, he conducted many plant exploration trips and wrote extensively and lucidly, with an excellent historical sense. The biggest repository of his papers is in the Fairchild Tropical Garden in Coral Gables (southwest of southern Miami, just a few miles inland from Biscayne Bay), Florida, where there is a good archivist. Contact: Fairchild Tropical Garden, Research Center, Attn: Bertram Zuckerman (part-time volunteer historian), 11935 Old Cutler Road, Miami, Florida 33156. Phone: (305) 665-2844. Fairchild's papers are stored in five file cabinets, each 4-5 drawers. They have no inventory. About 4 miles away is Fairchild's former home, named The Kampong, in Coconut Grove. It is now a private residence but fully preserved, with a regular staff and a horticulturist. The original plant collections are still growing there. It is part of the National Tropical Botanical Garden Society headquartered in Kauai, Hawaii, and can be visited by special appointment. Talk with Bertram Zuckerman. 1998. Feb. 24. In one thin file is a short letter to Fairchild from Dr. A.A. Horvath, dated 1939. Horvath was a chemist at the Delaware Agricultural Experiment Station in Newark. He wrote that he was sending Fairchild a copy of his book, he had read Fairchild's book, and he was a friend of P.H. Dorsett.

The second biggest Fairchild collection is in Nova Scotia at Alexander Graham Bell's summer home. Fairchild married Bell's daughter. Contact: Aynsley McFarlane, Site Manager, Alexander Graham Bell National Historic Site, P.O. Box 159, Baddeck, Nova Scotia, Canada B0E 1B0. Phone: (902) 295-2069.

The third major repository is in the records of the Bureau of Plant Industry, recently relocated to the National Agricultural Library in Beltsville, Maryland.

Jacob adds: Fairchild started as a plant pathologist, which meant that he also had to study plant physiology. He studied in Europe, then later went to Java. In the late 1800s, the Americans were the leaders in plant pathology, while the Germans were the leaders in plant physiology. Address: Graduate student, Purdue Univ., P.O. Box 132, Lafayette, Indiana. Phone: 765-742-8530.

2500. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes.* Feb. 16. Conducted by William Shurtleff of Soyfoods Center. • ***Summary:*** Richard renamed his company to Rella Good Cheese Co. in about Oct. 1997. Starting in Feb. of 1997, his company began enriching all of its cheese alternatives (except VeganRella) with a vitamin-mineral mix to make them nutritionally equal to dairy cheese. Consumers prefer enriched alternatives; it is not required.

To date, Richard's company has used its self-imposed "Green Tax" to give about $40,000 to environmental groups (EarthSave, Rainforest Action Network, etc.)–in addition to the more than $84,000 donated to the Second Harvest Food Bank. The largest single recipient group was EarthSave, but they are no longer a recipient. Right now the Hemp Industries Association is the major recipient among environmental groups. Remember that half the pesticides in the USA are used on cotton crops.

It is not very difficult to buy hemp seeds in the USA, but all of it is imported. Last year 1 million pounds was imported into the USA. You can order by phone from 1-800-buy-hemp. You can also buy it from bird stores, where it is used as bird feed. In addition, about 500,000 acres of feral / wild hemp (called "ditchweed") grow in the USA each year–mostly in the Midwest, but almost nobody harvests the seeds, since that is illegal. Since 1957 it has been illegal to cultivate hemp in the USA without a license. One group, the Research Inst. of Pharmaceutical Sciences, Univ. of Mississippi, has a license to grow hemp for the DEA (Drug Enforcement Administration) for the 7 patients the government gives 300 joints per month to.

The whole issue of decriminalizing drugs (including marijuana) is now being supported by a number of prominent public figures such as George Schultz (former Republican secretary of State), Milton Friedman (conservative Republican economist), a superior judge in Orange County, and the mayor of Baltimore, Maryland. They want to medicalize addiction. The Netherlands has decriminalized drugs and the results have been good.

So Richard's company imports its hemp seed from Germany; it is certified organic and dehulled. His is the first company to import dehulled seeds. Their flavor is delicious–like sunflower seeds. It is a complete protein and 65% of the protein is edestin–which is very high quality.

Trader Joe's now has its own brand of soy cheese, named Trader Joe's Soy Cheese in Jalapeño Jack flavor. For a while, Trader Joe's kicked TofuRella off their shelves. Then they had a big problem with a shipment of soy cheese from Soya Kaas, so they brought Richard's products back in–sheepishly.

The main ingredient in Richard's soy cheeses is actually spray-dried tofu. In Canada it must be shown as such on the label, but not in the United States. Richard has never been in the factory where his spray-dried tofu is made, but he has asked the owner point blank if they are coagulating it and they say they are. Nor does he have any statement in writing. They probably coagulate a large tank of soymilk with calcium sulfate (not GDL) to make it into thin silken tofu, then they slurry it and run it through a spray drier. At least three companies make tofu powder: Clofine Dairy & Food Products, Inc. (Linwood, New Jersey), SunRich Inc. (Hope, Minnesota), and Prosource, Inc. (Alexandria, Minnesota). Devansoy Farms, Inc. (Carroll,

Iowa; Elmer Schettler, president) makes soymilk powder, but not tofu powder.

In May 1997 Richard incorporated a new company named The Hemp Corporation (THC). There is some fall-out from anti-help people in the industry.

In the near future, he plans to transfer all existing hemp products (HempRella, Hempeh Burger) to THC, which does not yet have any products on the market. Three new hemp products for 1998 will be the HempNut (dehulled hemp seeds), a chocolate, and an aseptic hemp milk (a world's first; tests show there will be no problems with trans fatty acids, which sometimes form at high temperatures). He was on the Jay Leno show 3 times, where they did skits with his foods–the cheese and the chocolate. This was related to the name change to Rella Good Cheese Co. which will license the "Rella" trademark.

Richard also plans to change his environmental policy pretty soon to "All profits go to charity."

Richard is now exporting some of his cheese alternatives to Italy. VeganRella has been made under license in England for several years.

Concerning the cheese alternatives market, in 1996 (according to data from SPINS, which covers most major natural foods distributors except for Tree of Life), Richard's company was the leader in units sold, Soya Kaas No. 1 in dollar sales, and Galaxy was a distant third in the natural foods market (but Galaxy's main market is supermarkets). There are only three major players in this market. Richard does not have the statistics for 1997. Richard expects White Wave to be dropping their soy cheese soon. Originally Richard made White Wave's soy cheese. Then there were problems, it went to litigation; arbitration awarded Richard $45,000 several years ago. Now Soya Kaas makes White Wave's soy cheese.

"The soul of the natural foods industry is being co-opted quickly." One example is Whole Foods Market (WFM). Richard is getting fed-up with the lack of integrity in the industry. WFM recently yanked all the Rellas from all their stores nationwide because sorbic acid (a completely harmless mold retardant/inhibitor) appears on the label. Richard's competitors use sorbic acid (or calcium propionate) as a mold retardant but do not list it on the label. Moreover, WFM carries other products that contain sorbic acid–which they say are "exempted." So WFM punishes the people who are being honest, and at the same time promotes itself as being socially responsible, ethical, members of Social Venture Network, the honest retailer of foods in America. Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2501. Tanaka, Wendy. 1998. The joy of soy: Consumer awareness of health benefits boosts Bay company [Vitasoy]. *San Francisco Examiner.* Feb. 17. p. C-1, C-2.

• ***Summary:*** Vitasoy USA Inc. "has become a powerhouse in the fast-growing soy foods industry." Yvonne Lo, president and CEO, worked as a city planner in Toronto (Ontario, Canada) before investing $10,000 to start the U.S. arm of her father's business in 1979. Company sales have grown at double-digit rates for the past 5 years, reaching an estimated $43 million for fiscal 1997. Today, the company's soy milk is the No. 2 brand in the USA, controlling 25% of the $150 million market (which has been growing at 10% a year since 1990), according to Soyatech Inc. Edensoy is first with 38% of the market.

Soyatech statistics show that U.S. tofu market sales have grown 5% a year for the last 5 years to $125 million a year last year.

The acquisition several years ago of Azumaya and Nasoya, two of America's largest tofu manufacturers, has made Vitasoy America's largest producer of tofu. Now Vitasoy is hoping to further increase its sales of tofu and soymilk with its $13.5 million state-of-the-art plant in Ayer, Massachusetts. Vitasoy can now deliver soymilk to retailers in 7-10 days, compared with 45-60 days during the years prior to fall 1997 when all of its soymilk was imported from Hong Kong. Moreover, the new plant will eventually have be able to produce 50% more soymilk than the company had been able to import. The plant at Ayer will also produce Nasoya brand tofu. "Vitasoy USA already has a tofu factory in China Basin [actually 1575 Burke Ave., San Francisco] to produce the Azumaya brand." Vitasoy now sells its products in mainstream retail markets such as Safeway, Lucky, Andronico's and Walmart. The vice president for produce merchandising at Walmart Superstores says they have had very good success with Vitasoy's tofu.

A color photo shows Yvonne Lo holding packages of Azumaya tofu and Vitasoy Light vanilla soymilk in front of pallets of product stacked 10 feet high at the company's Brisbane warehouse. Address: Examiner staff.

2502. Schweitzer, Peter. 1998. Plenty International (Interview). *SoyaScan Notes.* March 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Plenty International is now the official name of their organization. This is the named under which they are registered with the United Nations, Canadian International Development Agency, and other government organizations. But "it's a mouthful," so they usually call it just "Plenty" for short. In the past, however, Plenty has sometimes used two names at the same time. In about 1982-83, after the original Plenty split up, the U.S. half usually called itself Plenty USA vis a vis Plenty Canada. In early 1998 the Board officially changed the name to Plenty International, and the organization is incorporated under that name with the state of Tennessee. They had to re-do the by-laws.

There is now also a Plenty Spain in Barcelona started by a guy from Argentina who worked with Plenty in the

USA and Lesotho for many years. They do many projects but none of them are soy-related.

Bisi Iderabdullah, the founder and director of the Imani House project and soy program in Liberia, is currently in Brooklyn, New York, trying to raise grant money for her program in Liberia. Plenty recently sent their clinical director to Senegal for medical training. The work is ongoing, run by their local staff people, in Liberia, and Bisi plans to return soon.

Plenty Canada has gone through major changes. They moved their headquarters to an Indian reservation for a while and their whole board of directors was Native Canadian for a while. Peter is trying to find out what is going on; he has heard that some of the original people are now coming back into the organization.

Of Plenty's various soy projects around the world, the one in Guatemala is currently by far the most successful and active. The soy dairy is now on a solid financial footing, managed by Agostine and Elena Xoquic (pronounced cho-KEEK), who have been actively involved since about 1995. Amada del Valle, who worked with Plenty Canada and was close fields with Laurie, is no longer involved. Laurie has worked with both Plenty Canada and Plenty USA. The soy dairy is under the auspices of the *Comité de San Bartolo*, which is the village committee. They have struggled and hung in there during the difficult times, and now things are going much better. Their biggest market is the tourist restaurants in Panajachel and Antigua (Guatemala), but they do have 3-4 outlets in Guatemala City. They now have an outlet right on the village square in Solola, where they sell soy ice cream, tofu, and a soymilk popsicle that is very popular. Suzi and Peter went down to offer assistance in recent years. Plenty bought them a truck so they could start doing deliveries instead of riding buses with their buckets of tofu, and also helped them with some Spanish-language publications. Suzi did many soy demos in restaurants in Panajachel. Chuck Haren has been going there several times a year. Plenty has gotten them grants of roughly $10,000 a year so they could upgrade broken equipment and refrigeration. They have developed some new products, and they are now making tempeh. The ongoing outside help has been essential to their survival, but they have learned how to operate–though they are not that ambitious. Chuck believes they could be much more successful. He feels they have an unlimited market. They earn enough money to pay the staff and put some back into the village. They operate a little nutritional outreach program.

Peter notes that the work with soy has always been very prominent through the history of Plenty's activities worldwide. "It's always been a part of the programs that people seem to like. I see a really healthy future for it."

Plenty had one 3-year period when Chuck was really well funded, with about $50,000 from three public welfare foundations. New programs started in many places, including Liberia. Address: Executive Director, Plenty International, P.O. Box 394, Summertown, Tennesse 38483. Phone: 931-964-4864.

2503. Rose, Richard. 1998. New developments at Rella Good Cheese Co. (Interview). *SoyaScan Notes.* March 27. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In the fall of 1997 Richard fired his national sales manager and his CEO (Janet Crolius, who was with the company two years). Galaxy Cheese Co. almost immediately hired the sales manager, then (according to Richard) they induced him to violate/breach two contracts he signed. Using the money he saved from paying salaries, Richard launched a large ad campaign featuring three ads: (1) A tie-dye ad with the slogan "When we first introduced tofu cheese, people said we must be smokin' something. Well, we are now," for hickory-smoked TofuRella, (2) The white mouse in a tree with the slogan "Experts prefer," and (3) "Not milk?"–See the current issue of Vegetarian Times. Plus the ad agency that put the campaign together took on Richard's company at cost–because they didn't have any clients from the food industry and they wanted to develop a creative campaign that they could use to win potential new clients. The agency designs the ads and Richard places them. The ad blitz started in Sept. 1997 and is costing $10,000 to $15,000 a month. The ads have run in three mainstream supermarket trade magazines *(Supermarket News, Produce Merchandising,* and *Produce Business),* and several natural food magazines *(Natural Food Merchandiser, Natural Health, Natural Health Shopper, Alive Canada, Veggie Life,* and *Healthy Living (New York City)).* Richard's products have been in Safeway–Canada for 11 years; the head buyer likes these products very much. "He thinks he can do a million dollars with our products this year." Most of the Richard's company's growth is coming from supermarkets and chains–A&P, Trader Joe's, Waldbaum's and Wegmans (back east).

Galaxy has introduced a new product named "Tofu Slices" which Richard believes is misnamed, since it appears to contain no tofu. It is made in Canada and contains "liquid soy mix" (and no casein). Address: President, Rella Good Cheese Co., P.O. Box 5020 (616 Davis St.), Santa Rosa, California 95402-5020. Phone: 707-576-7050.

2504. Demos, Steve. 1998. New developments with soymilk at White Wave. Part I (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The Morningstar Group is owned by a Texas-based company named Suiza (pronounced SUI-zuh) which is bigger than Morningstar. Suiza Foods Corp. is one of the very big, modern consolidators of the dairy industry. Dean Foods (which owns Vitamite) and Suiza are head-on competitors in the dairy product area. White Wave's Silk

brand soymilk is packaged in an ESL (extended shelf life) gable top carton at the plant of Morningstar Foods Inc. (formerly Avoset, now owned by Suiza), 299 Fifth Avenue, Gustine, California 95322. Phone: 209-854-6461. Contact: Gary Veuve (pronounced Vev, rhymes with rev), the plant manager. Gustine is located just off Highway 5 between San Jose and Merced in Northern California. This plant focuses on dairy products, packaged in both aseptic and ESL cartons, but it also packages Lactaid, Dole juice, a goat milk, etc. In addition, it packages Trader Joe's soymilk, indirectly via TAN Industries and San Diego Soy Dairy–which Steve believes breaches the contract between White Wave and TAN. Actually Gary Stein at San Diego Soy Dairy apparently has no hand in making the product–he just does the invoicing. The soy base mix is made at Soyfoods of America (owned by Ken Lee, in Duarte, Southern California) using equipment installed by TAN Industries (Ted Nordquist and Wally Rogers). When some other company moved out of Ken Lee's plant, Ted moved his company in. The installation began about a year ago [March 1997] and it became operational about 6 months ago [Sept. 1997]. This mix is then shipped by tanker-truck up to the Avoset-Morningstar plant, where it is processed. Avoset Food Co. is probably the predecessor which sold itself somehow to Morningstar which sold itself to Suiza. Steve is not aware of any relationship between Morningstar and the former nondairy pioneer Presto Food Products, which introduced Mocha-Mix Coffee Creamer in 1950 (Note: This product was later renamed Mocha Mix Non-Dairy Creamer).

Ted Nordquist has not been buying soymilk from International ProSoya Corp. (IPC) in British Columbia, Canada, for the last six months–to the best of Steve's knowledge. The soy base mix currently used to make Steve's Silk is made using TAN's plant at Soyfoods of America. There were numerous problems with the Silk product during the 6 months that TAN was making the transition from IPC to Soyfoods of America. Because of the nature of Steve's contractual relationship with TAN, Steve had no information about what was happening so he was unable to help smooth the transition. He inherited the problems and had to deal with them in a hindsight fashion.

Steve has an exclusive supply contract with TAN for all nondairy beverage in the USA as long as he meets specified minimums of purchase from TAN; he has always exceeded these minimums. Steve now believes it is no longer exclusive because of the new Trader Joe's soymilk. This will probably be grounds for a lawsuit. Steve feels that TAN has used White Wave and Silk as his springboard–while the contract is still in effect. Ted has a good product and he is going to be a competitor, and he has made plenty of money from the sale of Silk.

TAN decided (about 6 months ago) to stop buying soymilk from IPC and not the other way around. TAN made the switch for two reasons–both economic. First, TAN realized it would be more profitable the make the soymilk closer to Gustine, where it was packaged. The transportation cost of shipping soymilk from Vancouver to central California was about $2,000 per tanker-truck, compared with only about $1,500 for shipping from Duarte to Gustine. At least one truck is shipped per week–sometimes two. Second, since TAN now owns the equipment on which the soymilk is made, the profit margin associated with making the concentrate is now TAN's.

Steve has tasted several of the SoNice soymilk products made by IPC. He thought one of them was good tasting and competitively priced. The others he thought were typical soymilk formulations that were relatively weak. They had some off flavors and problems with balance, color, thickness. Steve thinks "there are a couple of fracturings of focus with the way they are approaching the market." They have both an aseptic line and a refrigerated line (in five flavors and two different sizes). The essence of refrigerated soymilk production is the ability to turn it fast enough so that you never have spoilage on the shelf. White Wave has never suffered returns on its refrigerated soymilk (Silk) but it took a lot of hard work to get their minimums up to that critical mass point where the product was turning fast. With soymilk in an ESL carton, the carton, not the soymilk, is the limiting factor. Silk has a use-by 84 days from the date of manufacture, but it will usually last for 100 days.

Steve has found it very difficult to work with the contract set up by Ted Nordquist, so much so that he plans to terminate the relationship. Steve feels this is unfortunate–"its like working with a black box." Steve has no idea how Silk is processed at the Soyfoods Unlimited or at the Avoset plant–or what the costs are. Steve flew with his people to San Francisco, and Ted and his people flew to Boulder–but they were unable to resolve the problems to Steve's satisfaction. "We have a great name, a great package, and a great product–but we have no control over costs." That means that if White Wave proves to the market that refrigerated soymilk is a big category, they will be "beat up" by competitors because of their inability to control costs. Ted basically says: "I will deliver the product to you at the following cost per gallon." Steve would like to continually lower the price of Silk–and he plans to do so soon. It will go under $3.00 per half gallon. Steve suggested that Ted take a royalty for the rest of his life and let White Wave deal with all manufacturing and cost reduction issues. But Ted wants control. Steve thinks he was "burned" in Sweden; he is a very good product developer but not such a skillful businessman. IPC tried to introduce SoNice into the U.S. market with a low price strategy, but White Wave and beat them to it. White Wave has contracts with all of the major chains that they exist in so that their pricing plus their support programs will pretty much negate IPC's attempt to come in at a lower price. If IPC really wanted to do so, they

would have to cut their prices again–which is a hard way to go with a new product.

Which soymilk does Steve like the best, simply in terms of organoleptics (flavor, color, consistency, etc.)? One SKU from Vitasoy is very good, the Silk made by TAN is a little bit better, but Steve feels that the new version of Silk developed by Jonathan Gordon (completely independently from TAN and not yet on the market) is better than either of those two products.

During the last year, White Wave has worked on new formulations with Tetra Pak at their research facility in Chicago, Illinois. The first major tanker-truck production run was last Friday. White Wave is now in full production with this new formulation of Silk. It will be processed at one plant in Utah and one on the East Coast. Many taste tests have shown that this new Silk is superior to the former Silk made and formulated by TAN. Silk will remain a refrigerated product; it will never be sold in aseptic cartons in the USA–that will be a fracture of focus that sends a mixed message. On the new carton will be two quotations: One from Suzuki roshi about "Beginner's Mind," and the other from Yogi Berra ("You can't hit and think at the same time")! Also at the top front of the carton is written: "32 mg isoflavones per serving." Plus, there is an offer for more free information on isoflavones. White Wave is working to start the educational process on isoflavones–and is also using its Web site and toll-free 1-800 number.

The big ad campaign in Los Angeles from Protein Technologies is teaching about isoflavones but the products (Health Source) are not doing well. So the publicity is helping White Wave. "Like a guy on a bicycle, we're drafting. We're going to try to stay in the draft of the ADMs and PTIs and see where it takes us. We don't have that much pride." Continued. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2505. Skiff, James. 1998. Impressions from the Natural Products Expo West at Anaheim this month (Interview). *SoyaScan Notes.* March 30. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jim finds that the soymilk made by Ted Nordquist (White Wave's Silk) is by far the best tasting–much better than SoNice from Canada. Both companies had booths at Anaheim. Jim has always liked Ted's soymilk the best. In fact, he and Howard Weiner were ready to set Ted up in business with a soymilk processing plant, but they could never come to terms. Ted wanted to control everything. Ted did not have a booth at Anaheim.

Dusty Cunningham of International ProSoya Corp. (IPC) was at the show, having come from England. She said that GMO-free soybeans are very big in the UK (where new labeling laws have been passed), and to a somewhat lesser extent throughout the rest of Europe. There was some interest in GMO-free soybeans at Anaheim, but it was still a bit reserved. This may be in part because Monsanto and ADM are working so hard to push things in the other direction.

In the past, most of the soy-related companies have been in the same general area at Anaheim. This year they were spread out over many buildings and on various floors so they were hard to find. Address: Cornbelt Foods, Inc., P.O. Box 218, Marshall, Minnesota 56258. Phone: 507-537-1406.

2506. Hayes, Keri. 1998. Study & directory focus on Canadian soyfoods industry. *Bluebook Update (Bar Harbor, Maine)* 5(1):1, 7. Jan/March.

• ***Summary:*** The Ontario Soybean Growers' Marketing Board (OSGMB) recently released these two important publications: (1) *Overview of the Canadian Soyfoods Market* (Sept. 1997, 44 p.). (2) *Canadian Soyfoods Directory* (Nov. 1997, 27 p.). According to Kim Cooper, Market Coordinator at OSGMB, the idea for the study was prompted by a new interest in soyfoods. Many people are now changing their diets and trying to eat healthier, based in part on the many health benefits of soyfoods.

With the controversy concerning the production of genetically modified (GMO) soybeans, the study suggests that Canadian soybean producers take advantage of the nice market created by the increased demand for non-GMO organic and identity preserved soybeans. It also recommends that soyfoods companies market products made from non-GMO soybeans. Finally, it calls for the formation of an organization (trade association) committed to the promotion of the Canadian soyfoods industry.

2507. Livesey, Bruce. 1998. Great moments in marketing. *Profit: The Magazine for Canadian Entrepreneurs.* Feb/March.

• ***Summary:*** About Yves Potvin, "Agriculture and Food Entrepreneur of the Year for B.C., 1997." The key to his early success was convincing grocers to move his meatless soy-based wieners from the meat department into the produce department. The move led to a doubling in sales and eventually led to his products being carried by major supermarket chains across Canada, fueling 40% annual growth to 1996 sales of $25 million.

2508. Yves Veggie Cuisine, Inc. 1998. U.S. packaging (Portfolio). 1638 Derwent Way, Delta (Vancouver), BC, V3M 6R9, Canada. 14 inserts.

• ***Summary:*** This is a spiral bound collection of the packaging for all 14 of Yves' products that have U.S. labels. Each product is a meat alternative, and each is manufactured and packaged by Yves Fine Foods, Inc., a subsidiary of Yves Veggie Cuisine, Inc., Delta (Vancouver), BC, Canada V3M 6R9. The fat-free products are: Veggie Breakfast Links, Veggie Chili Dogs, Tofu Wieners, Veggie

Wieners, Jumbo Veggie Dogs (Regular, Hot & Spicy), Veggie Ground Round (Original or Italian), Veggie Pizza Pepperoni, Veggie Pepperoni, Canadian Veggie Bacon, Veggie Deli Slices, Garden Vegetable Patties, Veggie Burger Burgers.

On the back of each label is a message from Yves Potvin, president and founder, which begins–"Bonjour! My name is Yves..." His first name is pronounced like the "Eve" in "Christmas Eve." "I founded this company in 1985 with a vision of creating a new generation of food to meet the needs of the health conscious consumer: A consumer who wants to cut down on fat and cholesterol without compromising on quality or taste. Today, I am proud to offer you a full line of healthy, convenient and tasty food made from 100% vegetable sources."

"In this edition, I would like to bring to your attention our new packaging. We have made it easier for you to choose your favorite Yves Veggie Cuisine products. All our wieners are in the purple packages, our burgers are in green, our slices are in blue and our ground round products are in red packages...A brand new look with the same great taste you have come to expect from us. And before I forget, all our products are now certified Kosher." Address: Delta (Vancouver), BC, Canada. Phone: 604-525-1345.

2509. Brown, Susan; Brown, Allan. 1998. The Noble Bean. *Food for Thought: Newsletter of the Ontario Natural Food Co-op (Canada)* No. 17. p. 6. April.
• ***Summary:*** "Noble Bean is owned and operated by Susan and Allan Brown. We manufacture our products out of a 750 sq. ft. production facility on 10 acres of land near Elphin, Ontario, in the Ottawa Valley. We are 22 miles from the town of Perth and 60 miles from Ottawa. Originally we were based in Toronto 18 years ago. Previously, we had spent many years living in the country and after establishing our market in the city, we had an excellent cottage industry that we could carry on from afar."

"Tempeh had been a part of our diet for years and once we learned how to make this amazing food, we started commercial production in 1980. We made our first major purchase of cooking equipment from a 60-year-old gentleman in Port Perry who had been stocking a few Toronto natural food stores with tempeh for a year. He had a stroke and could no longer continue. With a $500 loan, we paid $200 for a large custom-made cooker, a colander, racks and utensils, which we still use today.

"It was slow going at first, turning the industry and the public on to a new protein source. We made about 48 pounds per day, 4 days a week. While we were based in Kensington Market, we serviced the Toronto stores ourselves. Our production rate steadily increased as people became familiar with this new food. In 1985, when we did make the jump out of the city back to the land, we started producing 120 lbs. per day. It was at this time we took on our first distributor and our product got out much further.

"Through all of these times we were fortunate to be able to make a living at home. Children changed our lives immensely. Our two boys were raised with this business and home-schooled for years as they were growing. They are an integral part of the production line whenever they like and have the opportunity to make some serious pocket money.

"As the demand increased so did our production. We now make 200 lbs. per day, 3 days per week. We offer 6 different tempeh products all made from organically grown ingredients."

Contains 3 tempeh recipes: Ginger tamari tempeh. Lemon broil. Tempeh salad–Our summer favorite! A sidebar describes "What is tempeh?" Address: Owners, Noble Bean, RR# 1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: 613-278-0173.

2510. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. New seed technology–Can't save this seed. April. p. 1.
• ***Summary:*** "In the March 28 1998 issue of *New Scientist,* Rob Edwards writes about 'terminator technology,' a genetic engineering technique that can be used to prevent the seeds of agricultural crops from germinating.

"The USDA and a Mississippi seed company, Delta and Pine Land, were recently granted a patent for the technique... The technique is expected to be adopted by all major seed companies within the next five years. Seed companies that market soybean varieties have sought ways to prevent farmers from using farmer-retained seed for many years.

"The new technology relies on a promoter sequence from a gene called Late Embryogenesis Abundant (LEA) that activates the gene it's attached to when a plant's seeds are maturing... At the end of the growing season, the promoter switches on the anti-germination gene. Seeds carrying the gene will grow into healthy plants with normal seed quality, but the seed produced cannot be used to produce another crop. The broad implications of this new seed technology may be profound." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2511. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Belle of the ball. April. p. 4.
• ***Summary:*** "Canola is called the 'Cinderella' crop of Western Canada." The crop that was once called rapeseed has been "transformed from a low quality industrial oil crop with poor livestock feeding value, to a top quality food oil crop with reasonably good feed protein." Canadian plant breeders transformed the crop, giving prairie farmers a desperately needed alternative to wheat.

"Like soybeans, the first canola varieties developed through biotechnology are herbicide-resistant types.

Unfortunately those varieties have not been approved for consumption in the European Union,..."

Because of "disease and insect problems, canola can only be grown once in a four year crop rotation."

"While it is great to see the tremendous investment in research and development going into making canola an even better crop, it's alarming to realize that the work in soybean biotechnology being done in Ontario is very limited." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2512. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Profiles: Ikuo Fujimori, President of Takeya Miso Company Limited in Nagano, Japan. April. p. 7.

• ***Summary:*** In Feb. 1998, at the Nagano Winter Olympics, the Nagano Miso Cooperative Association fed miso soup to over 2,000 athletes and 1 million visitors from all over the world.

"Mr. Fujimori is President of the Takeya Miso Company Limited, located in Nagano, Japan. He is also the Chairman of the Nagano Miso Manufacturers Association and Vice Chairman of the Japan Miso Manufacturers Association. Takeya Miso is a family business with a long and rich heritage. The Fujimori family has been making miso commercially since 1872... Presently Takeya Miso employs over 100 people in two plants, producing over 50 different miso products."

"His company has been purchasing Ontario soybeans for over 23 years." A photo shows Ikuo Fujimori and Tom Lassaline examining some Takeya miso products. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2513. Ralston Purina Company. 1998. Agribrands International, Inc. St. Louis, Missouri. 95 p. April 1. 28 cm.

• ***Summary:*** Ralston Purina Co. has decided to create a new company, Agribrands, by spinning off its international animal feeds and agricultural products operations. The company, whose stock symbol will be AGX, will be traded on the New York Stock Exchange. Shareholders of record of Ralston stock as of 1 April 1998 will receive one share of Agribrands Stock for every ten shares of Ralston stock they own. The spinoff will occur on April 1.

The production and sale of animal feed was the primary business of Ralston when it was established in 1894. Animal feeds and agricultural products continued to be the dominant business until the 1950s. "The development at that time of a new extruded dry dog food by Ralston revolutionized the pet food industry and transformed Ralston into primarily a consumer products company. Since then, the pet food business has continued to grow in importance to Ralston while the relative contribution of the animal feeds and agricultural products business declined. In the 1980's, Ralston's focus became increasingly directed away from the animal feeds and agricultural products business as Ralston acquired Continental Baking Company, the nation's largest wholesale baker, in 1984, and the worldwide Eveready battery business in 1986. The intention of Ralston's management to focus on consumer packaged goods and its stable of leading brands culminated in the sale of its U.S. animal feeds and agricultural products business to a subsidiary of British Petroleum in 1986. British Petroleum did not acquire Ralston's international animal feeds and agricultural products business, which became a non-core business, having limited synergies with Ralston's other international businesses."

"In 1994, Ralston spun-of Ralcorp Holdings, Inc., a subsidiary to which Ralston had contributed its breakfast cereal, baby food, cracker and cookie, coupon redemption and all-seasons resort businesses. In 1995, Ralston sold all of the capital stock of Continental Baking Company. In 1996, Ralston sold its assets associated with its cereal business in the Asia Pacific region (which it had retained in the Ralcorp spin-off), and terminated its European cereal operations. In 1977, Ralston sold its international soy protein technologies business. In line with this focus on its core businesses, Ralston attempted to sell its international animal feeds and agricultural products business to PM Holdings Corporation in 1994, but negotiations broke off as the parties were unable to agree on key terms of the transaction."

Agribrands' principal properties are its animal feed manufacturing facilities and property, which are located in the following countries: Brazil (7 plants), Canada (7), Colombia (6), France (7), Guatemala (1), Hungary (2), Italy (5), Korea (3), Mexico (8), People's Republic of China (4, incl. 3 joint ventures), Peru (3), Philippines (2), Portugal (2), Spain (7), Turkey (2), Venezuela (4, plus a hatchery) (p. 41-43; notes which are leased, joint venture, under construction, or to be divested). Address: Checkerboard Square, St. Louis, Missouri 63164.

2514. Brown, Allan; Brown, Susan. 1998. The origin of Plenty Canada (Interview). *SoyaScan Notes.* May 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In the late summer of 1974, having met and become engaged on the Wisconsin Farm, Allan and Susan hitch-hiked to The Farm in Summertown, Tennessee, where they were married later that year. Allan was the founder and first director of Plenty Canada. Plenty USA had access to money from the Canadian International Development Agency (CIDA) for their carpenters in Guatemala who were rebuilding after the 1976 earthquake there. But before Plenty could get this money, they had to establish a branch or chapter of Plenty USA in Canada. Allan happened to be the person on the other end of the line when someone from Plenty USA phoned from Tennessee. He and Susan were living on a little farm outside of Halifax, so in about March of 1976, as they passed through Halifax on their way to

Lanark, Ontario, Allan incorporated the organization as "The Plenty Relief Society of Canada"; it later came to be known as "Plenty Canada." After doing the required paperwork, Allan and Susan went to Lanark to live on a piece of land with four friends who wanted to help Plenty: Bob Leviton, Ormond Lee, and Larry and Nancy McDermott. There was no "Farm" yet in Lanark and the four friends did not come from the Farm in Tennessee, but they felt akin to it. Starting immediately and for the next two years Allan ran "Plenty Canada" out of his bedroom in Lanark. But he didn't know what to do. So he and Susan would hitchhike 60 miles each way into Ottawa in winter to talk with the Mennonites about what to do and what an NGO (non-governmental organization) is. When the first money came in after about 6-8 months it brought tears to Allan's eyes; it was $50 for an individual donor who had been referred to Allan by The Farm in Tennessee. Allan worked on getting Plenty's credentials and making the organization "respectable." In early 1977 (it was winter) Allan and friends organized a "Plenty Jamboree" (a large benefit for Plenty) in a rented hall at McDonalds Corners (which was 6 miles from the Farm). Not long thereafter, money began to flow from CIDA to Plenty USA's work in Guatemala. In the spring of 1977 the papers for the Canada Farm in Lanark were finalized and signed in Tennessee. The land was in Larry McDermott's name.

In the spring of 1978 Allan stepped down as director of Plenty Canada. Norman Ayerst, Allan's closest and most trusted friend, took the job for the next two years. After that Larry McDermott became the director and continued for many years. In 1984 the Canada Farm disbanded. Larry and Nancy McDermott kept the land (since it was in their name) and continued to live on it.

In the late 1980s, Plenty had a great reputation for delivering good development projects. Adequate salaries were paid to those who put their life into Plenty and the need for additional funds necessitated a shift in focus. More projects were needed to raise more money to pay for an increase in expenses, and Plenty got those projects because of its shining reputation. But soon Plenty became too big for its management to handle. Communication and management skills were lacking, and Plenty's effectiveness was greatly diminished during this time.

Allan and Susan now own ten acres of land near McDonalds corners and what used to be The Farm in Lanark. They run Noble Bean, a tempeh shop. Allan has been making tempeh commercially since mid-1979. A map of the area (in southeastern Ontario province) looks like this: Lanark is 16 miles east of McDonalds Corners, and Noble Bean is about 8 miles west of the Corners, past Elphin. To get to Plenty (on the former Farm) from McDonalds Corners, drive east about 3 miles, then turn north and drive 3 more miles. The nearest main towns are Perth (on Hwy. 7–Trans-Canadian Southern Route) and Lanark. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

2515. Roblin, Lynn. 1998. Asian staple soy good for you. *Toronto Star (Ontario, Canada).* May 20.
• ***Summary:*** Discusses the health benefits of soyfoods, which may be caused by their rich content of isoflavones, soy sterols, and soy protein. Various soyfoods are discussed: Tofu, soy beverages (brands include So Good and ProSoya So Nice), soy cheese, texturized soy protein (TSP, such as So Soya made by Bay Hill Impex Ltd. and TVP Meatfree made by Health Haven: A Vegetarian Place), tempeh, and most soy flours.

2516. Nordquist, Ted. 1998. Sanitarium Foods' So-Good soymilk now being made in Canada by Dairy World (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Sanitarium Foods is Australia's leading soymilk manufacturer. Their flagship soymilk product, based on isolated soy protein, is named So-Good. In a joint venture between Sanitarium Foods and the Canadian company Dairy World, So-Good is now being made in Canada.

So-Good, with sales in Australia of about $70 million a year, has roughly 85% of the Australian soymilk market. Sanitarium Foods' total sales are said to be about $130 million a year. The company is also Australia's leading manufacturer of breakfast cereals, and they been very successfully in using their cereal advertisements and packaging to promote their soymilk. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2517. Dorrell, Kathryn. 1998. Tastes like success–Top ten: Innovative airless cold grind technology enables IPC to produce soy beverages that consumers are drinking up. *Food in Canada.* May. p. 33. [1 ref]
• ***Summary:*** International ProSoya Corp. (IPC), based in Surrey, British Columbia, was founded in 1994 by three business partners from Saskatchewan: Dorothy Cunningham (who is currently helping to run a sister plant in Scotland), Lorne Broten (chairman and CEO), and George Conquergood (vice-president of operations). It was Conquergood who actually spearheaded the idea of commercializing the airless cold grind process developed by Raj Gupta, an Indian PhD, to feed children in Third World countries.

Conquergood first tried out the patented technology in his restaurant in Saskatoon. Noting the enthusiastic response, he decided to develop it into a separate business.

Initially, the company did not intend to make retail products. Rather, they wanted to use their patented process to produce bulk soymilk, that would be sold to food processors. This strategy changed when Jerry Duncan joined the company in 1996; today he is president and Chief Operating Officer (COO).

This year Duncan expects the company to reach sales of $18 million, up four-fold over 1997. In addition to its five flavors soy beverages, in January IPC launched a line of SoNice soy yogurts and on Feb. 1 the company's U.K. joint venture began producing soymilk. A.C. Neilsen upped its North American growth projections for this competitive sector to 60% from about 25% when IPC entered the market.

2518. Monsanto Company. 1998. Achievements: Plant biotechnology 1997. St. Louis, Missouri. 16 p. 28 cm.
• ***Summary:*** In the center of the front cover is a globe–like a flower, with two leaves and a stem below it. The company's new logo, containing the words "Food–Health–Hope" appears below it. On page 1 is the main message: "Our lives depend on plants." A graph (p. 4) shows the commercial acreage planted to Roundup Ready soybeans in three countries for the last few years: (1) USA–1 million acres in 1996, 9 million acres in 1997 (nearly 13% of total soybean acreage), and a projected 25 million acres in 1998. (2) Argentina–250,000 acres in 1996, 3.75 million acres in 1997 (nearly 22% of total soybean acreage), and a projected 10+ million acres in 1998. (3) Canada–600,000 acres in 1997 (less than 1% of total soybean acreage), and a projected 175,000 acres in 1998.

Some 56% of U.S. soybean growers used conservation tillage methods with Roundup Ready soybeans in 1997.

Page 5 states: "Grower results:... In 1997, 330 side-by-side comparisons in the Midwestern United States showed the combination of Roundup Ready soybeans and Roundup herbicide achieved an average yield advantage of 2.2 bushels per acre over traditional herbicide programs on Roundup Ready soybeans. In the same type of comparisons, an average yield advantage of 1.7 bushels per acre was demonstrated in Canadian soybean fields in 1997. In addition to yield improvements, crop quality improved because the harvested crop included fewer weed seeds.

"In the United States, growers reported high levels of satisfaction with Roundup Ready soybeans: 89 percent were more satisfied with the combination of Roundup herbicide and Roundup Ready soybeans than their regular soybeans and traditional herbicide programs, 62 percent said the Roundup Ready system was a better value, and 87 percent said they definitely or probably will plant Roundup Ready soybeans again in 1998."

"Roundup Ready soybeans are compatible with conservation tillage methods that help prevent soil erosion."

On pages 14-15 are Monsanto's answers to the following "Frequently Asked Questions": Should biotechnology crops be labeled? Why has Monsanto been active in the seed industry? (buying up seed companies). How did Roundup Ready cotton perform in the Mississippi Delta in 1997? Will insect-protected crops promote the development of insect resistance? Will Roundup Ready crops promote the development of herbicide-resistant weeds? What is the status of the delayed-ripening tomato? (Flavr Savr developed by Calgene, now a wholly-owned Monsanto subsidiary).

Note: This report was sent with two others and a cover letter on 21 May 1998 by Molly N. Cline, Director, Food Industry Relations (Monsanto). Address: 800 North Lindbergh Blvd., St. Louis, Missouri 63167. Phone: 314.694.1000.

2519. Yves Veggie Cuisine. 1998. Yves Veggie Cuisine: Enjoy breakfast to your heart's content (Ad). *Vegetarian Times.* May. Inside rear cover.
• ***Summary:*** This is a full-page color ad for Yves Veggie Breakfast Links (fat free). "These links taste just like the real thing but they're good for the heart. That's because they have no fat, no cholesterol, and they're made of soy protein." Address: Vancouver, BC V6A 2A8, Canada.

2520. Pearce, Steve. 1998. The early history of Nordisk, Novo, and Novo Nordisk (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Nordisk Insulinlaboratorium was started in 1923 in Copenhagen, Denmark as a manufacturer of insulin. Novo Terapeutisk was started in 1925 in Copenhagen, Denmark by the Pedersen brothers as another manufacturer of insulin. The Pedersen brothers had been working for Nordisk, but in April 1924 they got fired and formed Novo. Both companies began producing a new, revolutionary medical preparation, insulin, that had just been discovered by two Canadian scientists, Charles Best and Frederik Banting, who extracted it from the pancreas and used it to treat diabetes. Novo and Nordisk, which were independent competing companies in Denmark, merged in 1989 Today, Novo Nordisk is the world's largest maker of insulin. But in the USA, Novo Nordisk has a smaller share of the insulin market than Eli Lilly & Co.

Novo first started offering commercial enzymes in 1941; their first enzyme was trypsin. This was a logical progression, since insulin comes from the pancreas, which is also the body's storehouse of digestive enzymes. Address: Novo Nordisk, 77 Perry Chapel Church Rd., Franklinton, North Carolina 27525-0576. Phone: 919-494-3070.

2521. Brown, Allan; Brown, Susan. 1998. Making tempeh and other natural foods at McDonalds Corners, Ontario,

Canada (Interview). *SoyaScan Notes.* June 22-24. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In June 1985, after about 5 years in Toronto, they bought ten acres of land near McDonalds Corners (not far from The Farm in Lanark, Ontario), and moved Noble Bean onto that land. There they started to make tempeh.

Throughout the 1980s, Allan and Susan trained Plenty volunteers at Noble Bean to make tempeh; these volunteers then took that knowledge abroad–mostly to developing countries. Maya Clarke took it to St. Lucia, Peter Dudding to Sri Lanka, a Canadian lady to Lesotho, and Mario and Laura Rimoldi [not Rimaldi] to Barcelona, Spain. Allan and Susan had met the Rimoldis on The Farm in Lanark in 1983; they later started making tofu as well in Barcelona.

Also during the 1980s, the Browns started some new businesses to bring in additional income. First came a natural cookie company named Casey's Cookies–after their firstborn son, Casey. Soon they were selling 40 to 60 dozen organic Casey's Maple Pecan and Honey Walnut cookies into the Ottawa market. In 1990 they sold the cookie company and took a trip/vacation to Mexico in their camper. On the way, they stopped by The Farm in Summertown, Tennessee, where they stayed with their old friends Cynthia and Albert Bates–who had taught them how to make tempeh and tempeh starter in 1974. Now the Bates were "deep into the Mushroom People trip. They were pumpin' the spores into logs out in front of their home with major rock and roll going on in the woods." Again the Bates taught the Browns a new occupation–how to grow shiitake mushrooms. Back home in Ontario, the Browns grew shiitake on about 25 logs outside their home–but mainly for their own consumption, because it was a very labor-intensive process. Soon, however, they were buying and re-selling shiitake–which they do to this day. Later, they started an incense import business named Soul Scents, which soon became the most profitable of all.

The Browns now make 600 lb/week of tempeh, working 3 days each week. It is still a very hands-on process. Allan and Susan are both active in the tempeh-making process (they also share child care), but now they have hired a woman who does much of the physical tempeh work. Most of Larry's time is focused on Soul Scents. Allan has always believed that vacuum packaging lowers the quality of tempeh. Their business has not grown in the last 5 years. He thinks it is because of the influx of meat analogs. Seth Tibbott did a survey before the Bali conference which showed that tempeh production in the USA peaked in 1989 or 1990. But several years ago Allan and Susan started an import business which has sales of $250,000 last year, so they are now in good shape financially. Two other tempeh companies in Canada are Soy City Foods in Toronto (they make mostly tofu; their tempeh is sold mostly in large cakes to foodservice) and Sooke Soyfoods in Vancouver, BC (owner Wayne Fatt gets plenty of competition from Seth Tibbott's Turtle Island Foods in nearby Oregon). Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

2522. Clarke, Maya. 1998. Learning how to make tempeh at Plenty Canada and introducing it to Sri Lanka (Interview). *SoyaScan Interview.* June 25. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Maya learned how to make tempeh at Noble Bean in Toronto during a two-week training program in the summer of 1984. She had been close friends of Norman and Sarah Ayerst, who worked with Plenty in Dominica, and who lived in back of the old Kensington Market in Toronto. Through Norman and Susan, Maya first met Susan and Allan Brown in Toronto, and specifically asked for that training–it was her idea, and that idea may have started a new program. She worked about 8-hours a day and soon was able to do the full production cycle. "Allan and Susan were very good teachers and really wonderful, interesting people." Maya went to Sri Lanka in September 1984; there she made tempeh and taught others how to make it. Maya thinks that she may have been the first person to be trained by Noble Bean to make tempeh in a developing country. Chuck Haren was also trained in about 1984, but probably on The Farm in Tennessee. Address: Sun & Sky Foods, 859 Dundas St., London, Ontario N5W 2Z8. Phone: 1-888-441-6680.

2523. *Biodiesel Report (NBB, Jefferson City, Missouri).*1998. New process cuts time, costs. June. p. 3-4.
• ***Summary:*** Researchers at the University of Toronto (Ontario, Canada) have developed a new process that cuts the time required to make commercial biodiesel-grade methyl esters to about 7 minutes, from 2-4 hours. The key was to add an "inert cosolvent [such as methyl t-butyl ether] to the base-catalyzed methylation of vegetable oils to speed the reaction time." A reactor is no longer required in industrial plants. Therefore, a smaller plant can have the same production capacity. "Esterification can now take place in the pipework and, therefore, the reaction becomes continuous. After the reaction, the cosolvent and the excess methyl alcohol are completely removed and recycled."

2524. Kikkoman Corporation. 1998. Annual report 1997. 339 Noda, Noda-shi, Chiba 278, Japan. 26 p. 28 cm. [Eng]
• ***Summary:*** The information in this English-language annual report is current as of April 1998. Contents: Financial highlights. Profile. A message from the president (Yuzaburo Mogi): The year in review, foundation, growth, and opportunity, serving a global market, toward the new century. A strong global operating presence: The Americas, Europe, Asia and Oceania, Japan. Operational review. Financial review. Financial section: Consolidated balance sheets, etc. Corporate history (chronology from April 1925

to October 1997). Global network (directory of Kikkoman names, addresses, and phone numbers worldwide). Board of directors and officers. Corporate data.

During fiscal 1997, ended 31 December 1997, consolidated net sales worldwide rose 4.0% over the previous fiscal year to 214.3 billion yen, breaking the record of 211.7 billion yen set in 1992. Yet income decreased by 21.6% to 5.711 billion yen.

Overseas sales expanded 10.6% in 1997 to 60.1 billion yen, and accounted for 28.0% of consolidated net sales.

The Americas: "In June 1998, Kikkoman Foods, Inc., the centerpiece of Kikkoman's expansion in North America, will celebrate 25 years of operations. The number of items produced at the plant has risen to more than 100, and the plant's production has expanded more than 10-fold."

"On April 17, 1998, Kikkoman commenced operations at its second U.S. plant, in Folsom, California. Built at a cost of US $46 million, the plant covers an area of approximately 210,000 square meters and has an initial annual production capacity of 10,000 kiloliters of soy sauce. In autumn 1998, the Company will begin delivering soy sauce produced at its second U.S. plant, in Folsom, California."

"Kikkoman's English-language Internet home page, opened in April 1997, receives approximately 100,000 hits a month, mainly from people in the United States. In particular, the recipes listed on the home page have attracted a great deal of interest, with site visitors frequently requesting further recipe information."

Europe: In Oct. 1997 Kikkoman Foods Europe B.V. began operation of its plant in the Netherlands.

Letter from Keiji Yamazaki of Kikkoman, San Francisco. 1998. Aug. 7. Kikkoman's annual reports are published in mid-June each year. Address: Noda, Japan.

2525. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Project S.O.Y. winners. June. p. 1.
• ***Summary:*** "In 1997, First Line Seeds, in partnership with the University of Guelph, created a competition called Project S.O.Y. In this case, S.O.Y. is an acronym for Soybean Opportunities for Youth. Project S.O.Y. challenged entrants to develop new products using soybeans and was open to graduate and undergraduate students at the University of Guelph. This year the contest was expanded to include the Ridgetown, Alfred and Kemptville Campuses of the University."

"For the second year, the first prize winners in the undergraduate category were Jennifer Lo and Nicole Lepowski, Food Science students at the University of Guelph. The paid won $2,500 for their product *Expressoy,* a coffee-like beverage made from 100% roasted soybeans. Second place honors went to *The Joy of Soy,* a decadent non-dairy dessert shake. Madley Soy, a fresh soy pasta, and Soyburst, a soy beverage, tied for third place." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2526. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Canadian International Food Soybean Conference and Tradeshow. June. p. 6.
• ***Summary:*** OSGMB "will bring the world's soybean market to Canada for an 'up close and personal' look at Ontario soybean production." The conference and tradeshow, "to be held Sept. 10 and 11th in London, Ontario, will feature a tradeshow on soybean products, marketing and technology, as well as speakers from around the world.

Tom Lassaline, Chair of OSGMB, says: "'Asia, which has always been our biggest market for food-quality soybeans, is steadily increasing. With all of the growing interest world-wide, I think we could significantly increase the acreage devoted to food-grade soybeans." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2527. *SoyaScan Notes.*1998. What ever happened to Plenty Canada? (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** During the 1980s and early 1990s, Plenty Canada was a thriving, pioneering organization, which had creative projects that introduced soyfoods to and started small soy businesses in number of developing countries. The projects were largely (and generously) funded by CIDA, the Canadian International Development Agency. But by about 1993-94 Plenty Canada had ceased to be effective. This was a real tragedy. In the view of several people who knew and worked with Plenty Canada, there were several reasons for its demise. First, starting in the late 1980s, Plenty got too big too fast. Many of the first serious problems happened with the team in Sri Lanka, where a number of bad decisions were made. Sri Lanka was the biggest project to date, with about $5 million of funding over 5 years. Second, the organization was not managed effectively, and this caused a great deal of dissention. Larry McDermott was not a good administrator and did not know how to delegate authority and work. Some big mistakes were made, including financial and bookkeeping errors discovered during government audits. Second, the Canadian government made large cuts in CIDA's total funding as part of its own fiscal austerity program. There were some major falling outs and Larry ended up alone at Plenty Canada. About 4-5 years ago Plenty Canada's board of directors finally fired him, and he sued the board for unlawful dismissal. These two events effectively killed Plenty Canada. Larry is now the reeve (mayor) of Lanark Highlands, a large new organization formed by the amalgamation of four local townships. He is doing what he does best and what he did at Plenty–writing proposals to the government.

2528. **Product Name:** Soyganic.
**Manufacturer's Name:** Sunrise Markets Inc.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC, V6A 1H5, Canada.
**Date of Introduction:** 1998. June.
**Wt/Vol., Packaging, Price:** Paperboard tub.
**How Stored:** Frozen.
**New Product–Documentation:** Talk with George Conquergood, Vice-president of Operations, International ProSoya Corp., Surrey (Vancouver), BC, Canada. 1999. SoyaWorld presently markets three soymilk products: Sunrise soymilk (a beany-flavored product made and packaged by Sunrise in plastic bottles), Soyganic (a traditional beany-flavored product made by Sunrise with organic soybeans, packaged at Dairyworld in a gable-top carton and sold refrigerated), and So-Good (licensed from Sanitarium Health Food Co. in Australia, formulated and packaged in gable-top by Dairyworld, and based on soy protein isolates). Soyganic and So-Good appeared on the shelves at about the same time in 1997 under the Soyaworld brand. They distribute those three products extensively across western Canada, and sell them in the dairy case.

ProSoya News release. 1999. May 17. *Soyganic* is an organic soy beverage fortified with calcium and other essential nutrients.

Talk with Peter Joe, owner of Sunrise Markets. 1999. May 26. In late 1997 the Canadian government first allowed soymilk to be fortified with calcium and vitamins. This showed a weakening of their many laws designed to protect dairy products. Use of the word "milk" is still not allowed. Soyganic was launched in mid-1998.

2529. Yates, Ronald E. 1998. Shinzaburo Mogi in America: Making shoyu in Denver, Colorado, and Toronto, Canada. Work with and investment in the Oriental Show-You Co. in Columbia City, Indiana. In: Ronald E. Yates. 1998. The Kikkoman Chronicles. New York, San Francisco & Washington, DC: McGraw-Hill. xviii + 206 p. See p. 125-32.
• ***Summary:*** "Somewhere in Denver, Colorado, are the remains of what is most likely the first Japanese-built and managed soy sauce plant in the continental United States." It is fairly certain that Shinzaburo Mogi went to Denver in 1892. He was barely 20 years old and had a bold idea–to produce shoyu in the USA (p. 125). "As the fifth son of the Kashiwa branch of the Mogi family, he did not join the family business in Japan. His older brother, Shichirouemon Mogi, became the first president of the Noda Shoyu Co." (p. 129).

Kenzaburo "Ken" Mogi (not to be confused with Yuzaburo Mogi's younger brother, also named Kenzaburo) traveled to Denver in the early 1980s in search of info about his great-granduncle. "Kenzaburo, the son of Katsumi Mogi, who served as Kikkoman's president from 1980 to 1985, had heard the stories of this little-known member of the Mogi clan for years–some of them from Keizaburo Mogi, who served as president of Kikkoman from 1962 to 1974, when he became chairman of the board. Ken Mogi managed to learn that "Shinzaburo Mogi had indeed managed a soy sauce plant in Denver in 1907. Unfortunately the operation was not successful, Kenzaburo learned after meeting with a man who apparently worked with Shinzaburo Mogi at the plant... But failure in Denver didn't stop Shinzaburo Mogi from pursuing his dream of making soy sauce in North America" (p. 130). After Denver, he apparently helped manage a soy sauce plant in Toronto, Canada. Eventually, he settled in Chicago where he was involved in the trading business–including the importing of Japanese (most likely Kikkoman) shoyu to the United States" (p. 130-31).

Note: As of Nov. 2004 Soyfoods Center is aware of very little evidence indicating that Shinzaburo Mogi ever started a plant making fermented soy sauce in Denver, Colorado, or anywhere in the United States. We believe that Kikkoman has spread this unfounded rumor. On 7 Feb. 2005 Kenzaburo Mogi IV, the first person from Kikkoman who tried to find evidence of these existence of this soy sauce plant in Denver, replied to a letter from William Shurtleff asking whether Ken thought the Denver soy sauce plant was a theory or a fact: "I also think it is unfortunate that the theory is told as a fact." Address: Head, Journalism Department, Univ. of Illinois (Urbana).

2530. Bernard, Richard L. 1998. Soybean breeding and releases in the United States and Canada (Interview). *SoyaScan Notes.* July 14. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Prior to about 1960 the United States and Canada worked closely together on soybean development and breeding. Breeders in both countries drew on the same gene pool. With one or two exceptions, soybean varieties went back and forth across the border. Harosoy is a good example of how this worked. It was developed in Canada in about 1955 by C.W. Owen (Asst., Forage Crops, Dominion Experimental Station, Harrow, Ontario, Canada). Harosoy quickly came to the USA, where it took over much of the soybean acreage in Illinois. American soybean breeders put phytophthora resistance into it, then it want back to Canada where it took over more than 90% of acreage. Dr. Bernard grew up just 10 miles from this border.

Canadian breeders came to meetings in the USA. When the Americans released a soybean variety in the Group I or II area, they sent announcements to all the states and Canada–asking if they wanted to participate in the release. For many years the Canadians have been full participants in varietal tests; they started at about the time that C.W. Owen retired at Harrow. Address: USDA/ARS Soybean

Germplasm Collection, Room 229 EASB, 1101 W. Peabody Drive, Univ. of Illinois, Urbana, IL 61801.

2531. *Globe & Mail (Toronto, ONT, Canada).*1998. Milking healthy sales from the lactose-intolerant. July 15. p. A26. Facts & Arguments. [1 ref]
• ***Summary:*** In Canada, the nationwide retail value of soy and rice beverages (all flavors) at supermarkets and grocery stores has grown from $3.4 million in 1995 to $5.9 million in 1996, up to 9.8 million in 1997–according to a report from A.C. Nielsen. Note: These figures do not include sales in natural- and health foods stores.

New brands of soya drinks come in many flavors; they are free of cholesterol and lactose, and have added calcium. "Studies also suggest that the drinks can also relieve menopausal symptoms, help stave off osteoporosis and breast cancer, and reduce 'bad' cholesterol." A color photo shows the top half of packages of Natural soy beverage (aseptic) and So Nice (fresh, gable-top).

2532. *SoyaScan Notes.*1998. As of 1 Aug. 1998 there are 77 active tofu manufacturers in the USA and 55 in Canada (Overview). Aug. 2. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Firm confirmation was obtained by a mailing and phone calls for each of these companies. Note: This updated list was published in the Ten Speed Press edition of *The Book of Tofu* (Oct. 1998).

2533. Jones, Jacob. 1998. Thoughts on early patenting of plants (Interview). *SoyaScan Notes.* Aug. 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The first act that allowed Americans to patent plants, the Townsend-Purnell Plant Patent Act, was signed on 23 May 1930 by President Herbert Hoover. David Fairchild was a member of the committee that developed this act. Jacob has the minutes of at least one of the meetings of this committee. The Canadians had a similar but previous act, and the American committee got the comments of many Canadians who were affected by the act–such as commercial nurserymen and seedsmen–asking questions such as: How has the Canadian act affected your business? Has the act helped and protected Canadian farmers? Address: Graduate student, Purdue Univ., P.O. Box 132, Lafayette, Indiana. Phone: 765-742-8530.

2534. Fowler, Gerald. 1998. Genetically modified foods conference–Brussels. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):3-4. Aug.
• ***Summary:*** The author attended the most recent conference on Genetically Modified Foods held in Brussels on 23-24 June 1998. The attendees were primarily the senior executives from major players–both public and private, and the majority were from Europe. Emotions ran high at the 19 seminars and several question and answer periods. The four key issues were: Legislation and labeling, consumer trends and attitudes, biotechnology and other scientific issues, and segregation. "Those in favor of genetic modification and those opposed were well represented by both speakers and audience." A new non-GMO market is emerging–as are new opportunities for Canada to supply this market. Address: Manna International Inc., Sault-Ste-Marie, Ontario, Canada.

2535. Fujimori, Ikuo. 1998. Japan's position on genetically enhanced soybeans. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):3. Aug.
• ***Summary:*** Japan needs more time and information to discusses this matter seriously. Some consumers and consumer groups are now very nervous regarding the use of these soybeans. Address: President, Takeya Miso Co. Ltd., Nagano, Japan.

2536. Hernandez, Alejandro. 1998. Soybean research and biotechnology. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):2-3. Aug. Address: Research Manager and Senior Plant Breeder, First Line Seeds, Guelph, Ontario, Canada.

2537. Jessop, Doug. 1998. Update on tofu testing procedures. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):4. Aug.
• ***Summary:*** "As a result of the latest technical mission to Japan in September 1997, the Food Processing Lab at the Greenhouse and Processing Crops Research Centre (GPCRC) has made several changes in its tofu evaluation procedure." These three include temperature and time of soaking, use of the coagulant calcium sulphate dihydrate, and use of an 8 mm penetrometer to measure texture. Address: Food Processing Technologist, Harrow Research Centre, Harrow, Ontario, Canada.

2538. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Soybean processing and the Guelph Food Technology Centre. Aug. p. 4.
• ***Summary:*** "For a crop like soybeans, processing is the 'magic' that converts a hard little bean into a wide variety of high quality, nutritious foods and food ingredients. Whole soybeans can be processed into traditional soyfoods like soymilk or tofu, or they can be separated into their primary components: Protein, oil, lecithin and fibre.

"Consumer interest in foods containing soybeans is on the rise... many Canadian food processors have begun to develop new soyfood products for the marketplace. However, soyfood development is no simple task, so many have contracted the services of the Guelph Food Technology Centre," which is located on the main campus of the University of Guelph. The facilities and benefits are

described. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2539. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Growth of public biotechnology research in Ontario. Aug. p. 10.
• ***Summary:*** "Less than five years ago to was hard to find public researchers who were applying biotechnological methods to meet practical goals of Ontario soybeans. For many years soybeans were too great a challenge when it came to tissue culture, gene transformation [transfer], and fertile plant regeneration.

"Today its a very different story. Gene transfer technology and the use of molecular markers to assist breeders in their traditional crosses are well established. Agriculture & Agri-Food Canada has taken a lead role."

A photo shows transgenic soybean plants, growing in pots in a greenhouse; they contain a gene for high methionine protein. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2540. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Profiles: Greg Devries. Aug. p. 13.
• ***Summary:*** "Greg Devries, a 1990 Ridgetown College graduate, finished his formal education four years later studying Ag Economics at the University of Guelph. Now that he's half way through his first year as an OSGMB director for Kent, however, Devries says he's learning more and learning faster than ever before." A portrait photo shows Greg Devries. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2541. Powell, Douglas. 1998. Genetically engineered soya. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):1-2. Aug.
• ***Summary:*** The article begins: "Genetically-engineered Roundup Ready soybeans must be considered the most successful product of agricultural biotechnology to date–if farmer acceptance is the measure.

"Monsanto estimates that more than 20 million acres of the transgenic soybeans were planted in the U.S. this year, up from 10 million in 1997 and 1 million in 1996. Next year, the number could easily double again to 40 million, out of a total of some 70 million U.S. acres. Similar ratios of genetically engineered soya are being planted in Canada.

"The rapid acceptance of herbicide-resistant Roundup Ready soybeans is linked to cost savings for farmers who can use fewer chemicals to keep weeds out of fields."

"But what if the measure is consumer support?... Around the globe consumers are asking the same questions: Why are you messing with nature? Why don't you label everything? Can you guarantee there won't be any long-term risks? Why are you playing God?

"One way to glimpse the public discussion of agriculture biotechnology is through the many public opinion surveys of biotechnology that has been conducted internationally over the past 20 years." Discusses approaches to and problems with labeling.

"Are there known health risks? Yes, in one instance, an allergen was transferred from one crop to another. Once discovered, the company acted responsibly and halted work at an experimental stage."

"In 1989 there was an outbreak in the U.S. of a new fatal blood disease, eosinophiliamyalgia syndrome (EMS). The outbreak killed at least 27 and sickened another 1,500. The cause was traced to certain batches of the amino acid, L-tryptophan, manufactured in Japan by Showa Denko and widely available in the U.S." Subsequent investigations by U.S. health authorities found that in 1989 the company had begun using a strain of *Bacillus amyloliquefaciens,* which had been genetically engineered to produce larger amounts of L-tryptophan. Address: Asst. Prof., Dep. of Plant Agriculture, Univ. of Guelph, Ontario, Canada.

2542. Rauchman, Steve. 1998. Look who's cookin' now: From chef to CEO–Yves Potvin is healthy, wealthy and wise. *Sales Promotion (Canada)* 2(4):28-32. Aug.
• ***Summary:*** The story of Yves Potvin and his company. Photos on the cover and in the article show Yves. Yves, age 42 (so born in about 1956), is married and has a daughter not yet a year old. At age 19, while studying to be an architect, he decided to switch to the two-year chef's course at the St. Hyacinthe Professional School of Cooking in Quebec.

He worked at a resort in the Laurentian Mountains in southern Quebec, at restaurants in Sherbrooke and later Vancouver, mainly French restaurants, working with French cuisine and nouvelle cuisine. He became an admirer of Paul Bocuse, who did something remarkable when he created *nouvelle cuisine* in the 1960s, and thereby changed French cuisine.

In 1985, at age 28, Yves started his own food manufacturing company, Yves Fine Foods, with $10,000 of his own money and $30,000 raised from family and friends. In 1992 the company was later renamed Yves Veggie Cuisine. His first product was a tofu wiener / hotdog.

2543. Snobelen, Mike. 1998. Example of non-genetically enhanced soybean program from Canada. *Canadian Soybean Technical Bulletin (OSGMB, Chatham, Ontario, Canada)* 4(1):3. Aug.
• ***Summary:*** In 1997, Snobelen Farms responded to requests for non-genetically enhanced soybeans from Europe and shipped two boatloads. Address: Mike Snobelen Farms Ltd., R.R. #1, Ripley, Ontario, Canada.

2544. ProSoya Foods Incorporated. 1998. Manufacturer of superior soyfoods products (Ad). *Soya & Oilseed Bluebook* 1999. p. 102.
• ***Summary:*** This one-third-page black-and-white ad shows 4 small aseptic cartons and four large gable-top cartons of ProSoya SoNice organic soy beverage, plus five cups of ProSoya SoNice Yogurt. The soymilk comes in natural, original, vanilla, chocolate & cappuccino (fresh & UHT packages). The soy yogurt comes in vanilla, strawberry, fieldberry, raspberry, and black cherry. The company's basic listing is on p. 143 of the Bluebook. See also ProSoya Inc. at 5310 Canotek Rd. #2, Ottawa, Ontario K1J 9N5, Canada. Address: 15350 56th Ave., Surrey (Vancouver), British Columbia, Canada V3S 8E7. Phone: (604) 576-8038.

2545. *Soya & Oilseed Bluebook.*1998—. Serial/periodical. Bar Harbor, Maine: Soyatech, Inc. Peter Golbitz, publisher and editor. Frequency: Annual.
• ***Summary:*** Preceded by Soya Bluebook Plus. A directory and information book for the soybean processing and production industries. The first issue (shipped Sept. 1998) is subtitled "The annual directory of the world oilseed industry." On the cover, below a map of the world is printed the date "1999" in large letters, followed by "A Soyatech Publication." Crops featured on the front cover and inside are "soya, corn, cottonseed, canola, rapeseed, sunflowerseed, palm kernel, palm, coconut, and peanut."

Contents (the four main sections are marked with a fold-out tab): Translations of oilseed terminology (English, German, French, Spanish, and Portuguese). Organizations and government agencies: Complete listings by country. Oilseeds and oilseed products: White pages (Index, individual crops), catalog pages, yellow pages (complete company listing by country). Equipment supplies and services. Oilseed statistics. Oilseed reference: Oilseed glossary, standards and specifications, oilseed technical charts and tables. Indexes: Comprehensive index, internet address index, brand name index, advertiser index.

Soy-related terms appearing in the translation section (p. 9-15) are: (1) Oilseeds and products: dairy analogs, lecithin–edible, lecithin industrial, meat analogs, miso, organic soy products, soy distillate, soy fiber, soy flakes–defatted–edible, soy flakes–full fat, soy flour–defatted, soy flour–enzyme active, soy flour–full fat, soy flour–low fat, soy flour–roasted, soy flour–textured, soy grits, soy isoflavones, soy livestock feed, soy oil margarine, soy oil shortening, soy oil–crude, soy oil–edible, soy oil–hydrogenated, soy oil–industrial, soy oil–refined, soy oil-based fuel, soy protein concentrate, soy protein isolate, soy protein–hydrolyzed, soy protein–industrial, soy sauce, soy sterols & tocopherols, soy-based foods–other, soybean fatty acids, soybean hulls, soybean meal, soybean meal–full fat, soybean seed breeder, soybean seed (for planting), soybean soapstock, soybeans–food grade, soybeans genetically modified, soybeans–green vegetable, soybeans–identity preserved, soybeans–non-gmo, soybeans–organic, soybeans, whole dry, soymilk beverages, soymilk powder, soynuts, tempeh, tempeh starter cultures, textured vegetable protein, tofu & tofu products, tofu powder. (2) Equipment & services: Coagulants for tofu, soymilk & tofu processing equipment, sprouting equipment. Address: 318 Main St., P.O. Box 84, Bar Harbor, Maine 04609. Phone: 207-288-4969.

2546. **Product Name:** Tempeh Burger.
**Manufacturer's Name:** Sun Foods Ltd.
**Manufacturer's Address:** 115 McCormack St., Toronto, ON M6N 1X8 Canada. Phone: 416-766-8214.
**Date of Introduction:** 1998. September.
**New Product–Documentation:** Letter (fax) from Jon Kessler of Sunergia Soyfoods. This new product was shown at the Natural Products Expo East at Baltimore, Maryland (Sept. 9-13). The company president is Harry Ha. Fax: 416-766-8309.

2547. Harrigan, Brian. 1998. ProSoya Inc. and International ProSoya Corp. (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ProSoya Inc. and International ProSoya Corp. (IPC) are definitely two separate organizations; each is very different in its activities and philosophy. IPC was not created out of ProSoya, but rather as a separate entity with different owners to license ProSoya's large-scale soymilk technology. This relationship as licensee still exists. IPC does not make equipment or sell equipment worldwide; they make soy products using ProSoya's technology. ProSoya has some ownership in IPC and they have a very small ownership in ProSoya Inc. People do associate these two companies, not realizing that they are totally separate. This confusion (and some things that people from IPC have said and done) has caused ProSoya quite a few problems.

ProSoya does not presently make any soyfood products. The plant on Canotek Road (in Gloucester, near Ottawa), where they used to make some products and have their offices, was originally used solely for R&B, but it expanded so much that it eventually also became a commercial soyfoods production facility. In Oct. 1996 ProSoya sold this plant to IPC and in Jan. 1997 ProSoya moved to separate offices about 500 feet away, on the same road; there they have offices plus a small area at the back for R&D, shipping, and receiving. ProSoya can still take customers and others to see this plant and its operation, but sort of as visitors.

ProSoya is an R&D and technology company. Their equipment is manufactured by other companies (as in India and Russia) for them.

There has been quite a shake-up at IPC recently and things there are rather chaotic. Their soymilk, SoNice was

the number one seller in Canada while it was out. It was made in two plants–in Vancouver (BC) and in Ottawa (Ontario, on Canotek Rd.). It's arrival expanded the market for all soymilks sold in Canada; so while Edensoy and Vitasoy lost market share to SoNice, they actually saw their sales volume increase. But recently IPC has had major problems their soymilk; it is no longer being manufactured, but small amounts are still left in the retail pipeline. The product is good, but it is mostly financial factors that have caused it to disappear from the market. IPC has not really commercialized their soy yogurt yet, except perhaps on a small scale for the Vancouver area–and there they were having problems with the formulation, though not with the taste. For more details, contact George Conquergood, who is the vice-president of operations. He is quite open in telling interested people what is happening. The plant in Scotland is a totally separate venture from IPC; Dusty is still there.

A new brand of soymilk in Canada is SoGood. Based on soy protein isolates, it is the same as that made by Sanitarium Foods in Australia. In Canada, it is made (mixed and packaged) under license from Sanitarium by Sunrise (owned by Peter Joe) in Vancouver. Sunrise and Dairyworld (the biggest dairy in Canada) now have a joint venture named SoyaWorld. Dairyworld distributes SoGood soymilk along with their line of dairy products. SoGood is now doing very well in Canada. When SoNice was on the market, it had a bigger market share than SoGood. But SoGood conducted a national advertising campaign that cost several million dollars, and greatly helped their sales. Brian finds the flavor of SoGood rather artificial and the list of ingredients is very long, so consumers tended to prefer the more natural and better tasting SoNice–until it ceased to be available.

Raj Gupta is now more involved with ProSoya Inc, than ever before. He comes to the office every day. When he started ProSoya he was working for the National Research Council (NRC) and working with ProSoya part-time on the side. Now he works on ProSoya full time; about 3 years ago he gave up his position at NRC. ProSoya was growing so much that the company need his full-time presence, and could afford to pay him what he needed.

Note: Other sources say that IPC recently declared bankruptcy. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2548. Harrigan, Brian. 1998. Update on the work of ASSOY and ProSoya Inc. in Russia and the former Soviet Union (Interview). *SoyaScan Notes.* Oct. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya has a technology transfer agreement with ASSOY (Associatsiia "Assoya"), the Russian Soybean Association, which is their partner. Founded and run by the energetic Alexander Podobedov, ASSOY has made more than 250 of the small SoyaCows, and sold them within the former Soviet Union during the last 1½ to 2 years. In addition, ProSoya has sold about 100 of these small SoyaCows elsewhere. In Russia, most of these SoyaCows are in the shops of small entrepreneurs. They make soyfoods to retail to the general public. In Krasnodar alone, ASSOY has opened 7 shops which are called Soyushka, meaning "Little Soya." They sell only soyfoods–tofu, soymilk, soynuts, soy oil, soya flour, soy power and a variety of foods made from soya–such as soya breads. Outside of Russia, there are SoyaCows in the Ukraine, Moldova, Belarus (quite a few there). ASSOY is now actively running newspaper, radio, and TV ads in various countries of the former Soviet Union, and throughout this region Soyushkas are becoming well known and the people are becoming soya-conscious–largely through the efforts of ASSOY. Brian has the whole story, but in Russian, in marketing documents. On paper the story sounds better than it looks when you actually go there. Some of the plants are idle. Some employees haven't been paid in 6-8 months, so they don't work very hard. ASSOY keeps trying to get the Russian government to help them out. The government keeps saying that they will, and they have even signed decrees saying that the government will help send soyfoods to the prisons, schools, and hospitals–where there are dire shortages of protein. But the government never does what it says.

ASSOY provides spare parts for the soy shops, plus all the marketing, recipes and recipe books, everything. The man behind these remarkable developments is Alexander Podobedov, who is a real entrepreneur. But he has a style that is very rough and tough with people, which sometimes (especially in Russia) helps him and other times (especially with Westerners) limits his effectiveness. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2549. Bynum, William. 1998. Soy Amazing and Better than Milk. Big changes at Hearty Life, Sovex Natural Foods, McKee Foods, and Fuller Life Inc. (Interview). *SoyaScan Notes.* Oct. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** William has been with the company for about 6-7 months. Soy Amazing is a new product, introduced less than 2 years ago; it is actually the original Better Than Milk formula. However there is another product named Soy Amazing, sold only in Canada, which is the same as the present U.S. Better Than Milk; that is because it is illegal to use the name "Better Than Milk" for this product in Canada.

For many years, Sovex Natural Foods has been owned by the McKee Foods Corporation of Collegedale, Tennessee. The Southern Adventist University is also

located in Collegedale. Founded, owned, and run by Jack McKee (a well respected Seventh-day Adventist), McKee Foods makes mostly popular snack foods. Their most popular product line is "Little Debbies," consisting of about 40 different varieties of snack cakes–from Jello Rolls to Honey Buns. For this reason they kept an arms-length relationship with Sovex Natural Foods. Glen Fuller has been with McKee Foods for about 20 years, and has been the vice-president for the past 10-12 years. Glen developed the Better Than Milk formula and line of dry soymilk products about 7 years ago.

On July 3 of this year, Sovex was merged into its parent company, McKee Foods, and made a division of that company; it was no longer a separate subsidiary. Sovex also makes a wide variety of cereals, bran, granola, and the like. The name Sovex ceased to exist; it is now McKee Plant No. 6. Shortly after McKee absorbed Sovex, probably at Glen's urging, McKee decided to spin off and sell him the Hearty Life brand and the Better Than Milk product line–which includes the Soy Amazing products. That transaction was finalized last Friday, October 23. So now Glen is president, CEO, and sole owner of a new company named Fuller Life Inc. The address has changed to 1628 Robert C. Jackson Drive, Maryville, Tennessee 37801. Phone: 423-681-4171. Maryville is about 100 miles from Collegedale, and the site of Glen Fuller's main home; called his "mountain home," the property backs up on the Great Smoky Mountains. Their main product is Hearty Life Better Than Milk–which includes Soy Amazing and many SKUs including five flavors of the soy Better Than Milk, two flavors of the rice Better Than Milk. Most of it comes in canisters or 25 lb bulk bags, but they also have an aseptic UHT liquid soy Better Than Milk (original flavor). William will send some press releases and a sales brochure, with the date that each product was launched.

In 6-8 months Fuller Life plans to introduce a new product name Better Than Milk Plus, which will be an all-organic, enriched and fortified powdered version of the present Better Than Milk.

Follow-up talk with Darlene Foot, Glen's secretary, still at his office in Collegedale. She joined the company about 5 years ago. At that time Glen Fuller was president. John Goodbrad retired in about 1988-89 and died about 3 years ago. Sovex, the yeast product, still exists. Some years ago Sovex Natural Foods sold the rights to Village Market, located near Southern Adventist University, which subcontracts the production with some other company. Address: Consumer Affairs Administrator, Fuller Life Inc., 1628 Robert C. Jackson Dr., Maryville, Tennessee 37801. Phone: 423-681-4171.

2550. Gupta, Rajendra; Chopra, Sudhir. 1998. Airless food processor. In: Conference Proceedings, 1998 Appliance Manufacturer Conference & Expo. See p. 225-33. Held 12-14 Oct. 1998 at Opryland Hotel, Nashville, Tennessee. [11 ref]

• ***Summary:*** Discusses a prototype kitchen top machine for making soymilk. "As part of their Advanced Life Support System studies, NASA recently completed tests on a prototype appliance for processing soybeans into soymilk and its byproduct okara. The patented technology used in the appliance provides for the grinding and processing of any food in an oxygen-free environment, thus preventing the degradation of food by oxidation either in flavor or nutritional value.

"The prototype comprises a patented airless grinder with an in-situ steam injection cooker, a steam generator with temperature controls, and provision for timing controls similar to those provided on an automatic bread-maker. The appliance can be used not only to make soymilk, okara, but also pureed soup. It can also grind and steam vegetables, make milkshakes, produce hot beverages, etc.

"In reference to the prototype appliance they tested, scientists as NASA-Johnson Space Center and University of Houston [Texas] concluded that 'with proper care, the production of soymilk from a prototype machine would comply with the requirements imposed by a closed system'.

"Acknowledgements: The authors would like to express their sincere thanks to Yael Vodovotz and Lisa Bye of NASA-Johnson Space Centre for conducting tests on the prototype. They would also like to thank Andre Ladouceur at ProSoya for his continuing involvement in the building and development of the prototype." Address: ProSoya Inc. [Ottawa, ONT, Canada].

2551. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Food Soybean Conference. Oct. p. 4.

• ***Summary:*** "Canada played host to the 1st Canadian International Food Soybean Conference & Trade Show, held September 10-11 in London, Ontario. Close to 200 people from Canada, North America and around the world gathered to hear the latest in the area of food grade soybeans. The conference was held primarily to bring the food soybean world to Canada and to show first-hand Canada's reputation as a reliable and consistent supplier of high quality soybeans suitable for world soyfood markets."

A photo shows: "Len Stuttman, owner of Sycamore Creek and a user of Canadian soybeans, hands out samples of his roasted soynut butter" at the conference. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2552. *Ontario Soybean Growers' Marketing Board Newsletter.*1998. Profiles: Kim Turnbull. Oct. p. 7.

• ***Summary:*** Kim is a farmer. "Seed and food-grade contracts also let him tap into quality premiums." Now he is getting new experience on OSGMB's marketing committee. A portrait photo shows Kim Turnbull. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2553. ProSoya Inc. 1998. Creating great opportunities in the health food industry: Advanced soymilk technology (Portfolio). Ottawa, Ontario, Canada. 17 inserts. 31 cm.
• ***Summary:*** The 17 documents enclosed in this portfolio (containing many black-and-white photos) include: (1) Cover letter from Brian Harrigan, Executive vice-president. (2) Creating great opportunities in the health food industry: Advanced soymilk technology (4-page brochure). (3) Soymilk systems: VS 30/40, VS 200, VS 700, VS 2000, VS 3000 and VS 4000. (4) Equipment for upgrading. (5) Production chart. Nutritional comparison of soyfoods (four bar charts). (6) ST 2000–Continuous soaking and hydraulic conveying system. (7) ST 2000-OPT–Dry bean conveying system, washing/dewatering augers, an circulating pumps. (8) EC 200–Extractor. (9) EC 1000 & EC 2000–Twin-stage, self-desludging extractors. (10) EC-OPT–Okara conveying system and spare cone. (11) Continuous heaters. (12) Continuous cookers. (13) VF series–Model 200, 3000, and 60000–Vacuum flash deodorizing systems. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2554. ProSoya Inc. 1998. Creating great opportunities in the health food industry: Advanced soymilk technology (Brochure). Ottawa, Ontario, Canada. 4 p. 28 cm.
• ***Summary:*** This 4-page black-and-white brochure (with green and yellow overlays), discusses the company, the technology, the equipment, our customers, business opportunity. "ProSoya technology is currently being used in more than 20 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 250 small, to medium-scale plants are located on five continents around the world. ProSoya has technology transfer agreements with companies in Russia and India for the manufacture of smaller soymilk systems under license."

Photos show: (1) ProSoya's VS 7000 system. (2) ProSoya's VS 200 system. (3) ProSoya's VS 40 system. (4) ProSoya's VS 4000 system. (5) A sliced cake of tofu, a glass of soymilk, and scoop of soy ice cream on a cone. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2555. Zind, Tom. 1998. Soy dairy alternatives: The soy dairy category is hot, with organic soybeans taking center stage in new product introductions. *New Product Sightings.* Nov. p. 8-9. [1 ref]
• ***Summary:*** Soyatech (Bar Harbor, Maine) reports that U.S. soymilk sales reached about $150 million in 1996, and that since 1990 the market has been growing at about 12% a year.

The 17th Annual Market Overview, published by *Natural Foods Merchandiser* magazine, reports that sales of only organic dairy alternatives (a category which is mainly soy-based products, but which also includes rice milks, oat milks, etc.) grew 45.5% from 1996 to 1997. Dollar sales grew to $32 million from 22 million. During the same year, non-dairy yogurts (a category which is mainly soy yogurts) grew to $10.6 million from $5.5 million.

The Ontario Soybean Growers' Marketing Board in Canada predicts that sales of soy beverages in that country will increase by about 68% from 1997 to 1998, to 6.7 million liters in 1998 from 4 million liters in 1997. Although the country's large Asian population has long been the largest consumer of soy beverages, the Board believes that most of the new growth is coming from sales to non-Asians (i.e. Caucasian Canadians).

The marketing manager for Vitasoy USA (based in South San Francisco, California) says sales of their Vitasoy soymilk to supermarkets alone has grown at 15-20% for the last few years.

Why all this interest in soymilk? "Health awareness for one. Science has virtually crowned the soybean as one of the most healthful single plant foods known to man, a versatile product with silver-bullet like qualities" for reducing the risk of heart disease and some cancers, easing menopausal symptoms, sidestepping lactose intolerance, and slowing the onset of osteoporosis. Scientists believe that many of the benefits come from isoflavones–of which soybeans are the only common source.

Photos show: (1) A Pure-Pak quart of White Wave's Silk–Organic Plain Dairyless Soy Beverage. (2) Many packs of SoNice (made by ProSoya Foods of Surrey, British Columbia), in original, chocolate, vanilla, strawberry, and cappuccino flavors. Some are in refrigerated Pure-Pak cartons and other in aseptic cartons. (3) Two aseptic packs of Enriched Vitasoy in original and vanilla flavors. (4) Tofutti Pan Crust Pizza Pizzaz, a pizza product made with soy cheese. Address: Freelance writer living in the Midwest.

• ***Summary:*** Contains soy recipes. Melina Vesanto was born in 1942.

2561. Zavitz, Daniel. 1998. Diary of Daniel Zavitz, of Lobo Township: Written at Guelph, 11th month, 23rd, 1896. *Canadian Quaker History Journal* No. 63. p. 91-96.
• ***Summary:*** Daniel Zavitz was the father of Charles A. Zavitz, Canada's soybean pioneer. The diary begins: "I was born in the township of Bertie, district of Niagara, Upper Canada the 24th of 2nd month 1821. My parents were Jacob and Elizabeth Zavitz, both of Bertie, who cared for me until I was 22 years old, gave me as good school learning as they were able to... Our day schools lasted three months. In the winter months after school hours worked doing chores, often late into the evening and early in the morning until school time. The rest part of the year worked on the farm.

"I had three sisters [Sarah, Margaret, and Emily] and one brother older than I was, the latter died when young, which left me the oldest boy to help father on the farm." "The teacher always boarded around amongst the employees, according to the number of scholars each one sent to school." He married Susan Webster Vail at the Rochester Monthly Meeting (at Oakfield, near Rochester, New York) on the Second of Second month 1847.

A map (p. 91) shows details of the area north of Lake Erie, including London, Lobo township, Coldstream, and the Niagara River. A half-page photo (p. 93) shows the family of which Daniel Zavitz is husband. Left to right: Charles (about age 5), Daniel, Caroline, Samuel, Susan (wife), and Edgar Zavitz.

Talk with James Zavitz. 2004. Jan. 21. Oakfield (located about 35 miles due west of Rochester, and the home of Susan Vail) was a preparative meeting under the care of Rochester Monthly Meeting, which was under the care of Farmington Quarterly Meeting (located about 20-25 miles southeast of Rochester). The half-yearly meeting was part of Genesee Yearly Meeting, which covered the western part of New York and the Niagara Peninsula westward into Ontario, Canada–but not including Toronto. Address: Guelph, Ontario, Canada.

2562. Poysa, Vaino. 1999. Food-grade soybeans in Canada (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dr. Poysa is a public soybean breeder, who was hired in 1996-97 to replace Dr. Richard Buzzell at the Harrow station. Like his predecessor, he specializes in breeding food-grade soybeans.

Canadians use the term "food-grade soybeans" for what Americans call "large-seeded vegetable-type soybeans." The term "food grade" implies both large-seeded and clear hilum. The corresponding term for the rest of the soybeans, which are typically crushed to make soybean oil and meal, is "commodity soybeans." By far the most widely used food-grade soybean in Canada, and by overseas customers of Canadian exporters, is Harovinton. It was developed by the Agriculture Canada Research Station at Harrow (mainly by Dr. Buzzell) and released in 1989 to Maple Leaf Foods. In Canada, the exclusive rights to grow and sell a particular food-grade soybean variety that is publicly developed are sold to one and only one private company.

Virtually all of the soybeans sold by Canadian companies to overseas food manufacturers are food grade and identity preserved (IP). Because they are IP, the Canadian companies can guarantee that they are also not genetically engineered, i.e. GMO-free.

Two newly released food-grade soybeans are AC-756 and AC-Onrei [derived from the Japanese variety Enrei]. The former was released to W.G. Thompson & Sons Ltd. and the latter was released to Maple Leaf Foods at the end of 1997. Neither of these two varieties have been registered. In fact most food-grade soybeans are no longer registered! Why? For basically two reasons: (1) Since they are developed mainly for their food properties, it is not considered important to give details about their agronomic

properties. (2) The private seed breeders are applying pressure to stop registration of food-grade soybeans.

Note: This is the earliest English-language document seen (June 2009) that contains the term "commodity soybeans," which is used in contrast to "food-grade soybeans." Address: Soybean breeder, Agriculture Canada Research Station, Harrow, ON N0R 1G0, Canada.

2563. Nauto, Janet. 1999. New developments with soybeans in Canada (Interview). *SoyaScan Notes.* Jan. 12. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** This year OSGMB will celebrate its 50th anniversary, and in June or July will publish a book titled "Fifty Years of Progress.

In Canada large-seeded food-grade soybeans are typically called either "white hilum" beans or SQWH (special quality white hilum) beans. The term "food-grade" is not used that much. There have been some efforts to separate out white hilum soybeans from the marketing agreement–so that they could be sold at any price. White hilum soybeans are always identity preserved. Most are sold overseas or to soyfoods manufacturers in Canada.

Recently Canada has decided to keep genetically-engineered soybeans segregated or "identity preserved" so that those who do not want them can be assured of not getting them. Address: Ontario Soybean Growers' Marketing Board, Box 1199, 175 Keil Dr., S., Chatham, ONT, N7M 5L8, Canada. Phone: 519-352-7730.

2564. Cooper, Kim. 1999. New developments with soybeans in Canada (Interview). *SoyaScan Notes.* Jan. 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The term "food-grade soybeans" is increasingly widely used by Canadian soybean exporters and their Asian customers to refer to all soybeans developed specifically for food use. Many are large seeded, but some are also small seeded–developed for sprouting (to have high germination) or natto. All have a white hilum. The biggest problem with this term is that all soybeans can be used for human food. About 5-10% of the soybeans exported from Canada are "food-grade."

Most overseas buyers of Canadian food-grade soybeans want them to be GMO-free. In addition, some overseas crushers now also want soybeans that are GMO-free, though they need not be food grade.

The genetically engineered soybeans grown in Canada are generally handled in two different ways. The great majority, which are used by Canada's two major soybean crushers (owned by the American companies ADM and Central Soya) are given no special treatment; they are simply sold by farmers to their local elevator, where they get mixed with other soybeans in "the stream." These two crushers have made it very clear that they do not want these GMO soybeans to be segregated or given any special treatment. However the genetically engineered soybeans purchased by soybean exporters are handled like any other identity preserved (IP) crop, primarily so that buyers in foreign countries who want GMO-free can be guaranteed what they want. For the past ten years, the Canadian soybean trade has been developing its system of IP varieties, especially to serve Japanese customers–who usually like specific varieties. Exporters would contract with farmers to grow these special varieties, then at harvest they would be stored in their own elevator, silo, tank, etc. and shipped with their identity preserved. Organically grown soybeans are handled in a quite similar way. So when GMO soybeans arrived, the export trade decided to handle then just like IP varieties–actually more like organic soybeans than like IP. Setting up such an IP system has that added benefit that if and when, in the future, consumer benefits are genetically engineered into soybeans, their identity will have to be preserved. An increasing percentage of the soybeans grown in Canada are grown under contract–perhaps about 10% at present.

Shurtleff notes: The U.S. soybean distribution system is based on bulk shipments; its ability to handle IP shipments is much less advanced than the Canadian system. For this reason, the U.S. exports of soybeans to Europe have decreased dramatically over the past year. In America, GMO soybeans simply took over the main soybean distribution system; they did so with hardly any discussion and probably based on the assumption that hardly anyone would care. It is the latter assumption that is highly questionable.

Kim: U.S. soybean exporters went to Europe several years ago and told their customers: "We have these genetically modified soybeans and we're going to be shipping them to you starting this fall." The European buyers explained that European consumers are different from American consumers, and may want to think about and discuss this new matter. The American's said, "Sorry, we can't wait. The soybeans are coming." The Europeans felt upset, like the Americans were trying to shove something down their throats.

In Canada, the problem is far from resolved. Consumers in Canada are starting to become aware of this issue, and they are just starting to sound the alarm. But more and more genetically modified products are coming onto store shelves, so Kim believes consumers will gradually develop confidence in them–but not in the next 1-2 years. Kim believes that there is essentially no chance that most consumers will reject genetically modified foods in the long run.

The international conference in Canada last September was attended by about 200 people; there would have been more but for an airline strike in Canada. Peter Golbitz presented an excellent keynote address. His paper and some others are posted on the OSGMB website. Address:

Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2565. ProSoya Inc. 1999. ProSoya VS30/VS40 SoyaCow systems: Operating manual. Ottawa, Ontario, Canada: ProSoya Inc. 28 p. 28 cm.
• ***Summary:*** Contents: 1. Technical description: Grinder/cooker, steam generator (boiler), mechanical filter press, tofu box. 2. Preparations for making soymilk: Bean soaking, checking and preparation of the system. 3. Making soymilk: Grinding and cooking, extracting the soymilk, boiler shutdown. 4. Making tofu. 5. Storage of soymilk and tofu. 6. Cleaning and sanitation of the machine and utensils. 7. Precautions. 8. Do's and don'ts. Packing List. Trouble Shooting Guide. Figures (4 figures).

Talk with Brian Harrigan. 1999. June 16. This booklet was published in Jan. 1999 by ProSoya Inc. Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2566. Thompson, Wes. 1999. Re: Acquisition of Sycamore Creek Co. of Mason, Michigan. Letter to Mr. Arnold of Keebler Co., 5000 Osage, Denver, CO 80221, Jan. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Keebler Co. uses soynuts made by Sycamore Creek in their cookies. Wes Thompson is pleased to formally announce the acquisition of this company. "Irene and Leonard Stuttman have done a remarkable job of developing their products and business over the past 24 years. "Wes has asked Tina Hernandez, from his office, to join the company as Business Manager; she can be reached in Mason.

"As an introduction, we are a 75-year-old family-owned business. Originally in the grain business, we have expanded into farm supply and focused on service-oriented customers. We have developed relationships with processing customers in North America and overseas. Today our business employs 300 and has annual revenues of approximately $350 million. Our head office is in Blenheim, Ontario. Over the years we have been a supplier to Sycamore Creek, and therefore a natural successor."

The letterhead shows a line drawing of a grain processing building on the left, grain elevators in the center, and a train on the right. Below that is written: "Beans. Grains. Seeds. Fertilizers."

Talk with Len and Irene Stuttman. 1999. March 17. This letter was probably written in late January or early February 1999. Address: President, W.G. Thompson & Sons, Limited, 122 George St., Box 250, Blenheim, ONT Canada N0P 1A0. Phone: 519-676-5411.

2567. Gupta, Raj. 1999. Progress in development of natural soy protein isolates and concentrates (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Raj and ProSoya are making good progress in developing soy protein isolates and concentrates made from whole soybeans. All, or almost all, isolates and concentrates are made from defatted soybean meal, which is usually defatted with hexane solvent. Raj first makes the whole soybeans into soymilk, then removes the carbohydrates (fiber and sugars), and finally removes most or all of the fat. It is the last step that is the most difficult, and it is more difficult on a commercial scale than on a laboratory scale. Raj hopes to have the technology ready within 2 years. He will license the technology, rather than make and sell the finished product–although he will also have a demonstration plant that makes products for potential customers to see. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2568. Gupta, Raj. 1999. What happened to International ProSoya Corp. (IPC) and their soymilk product SoNice (Interview). *SoyaScan Notes.* Feb. 4. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** IPC never went bankrupt or even into receivership. Their SoNice soymilk was doing very well but the quality was inconsistent, so they decided to take it off the market and set up their own packaging facility. It has not come back onto the market since some of the money that was promised to the company was not forthcoming. Therefore a product quality problem became a money problem, which is where things stand now. Lorne Broten is still one of the directors and actively involved in looking for a company to buy a license to manufacture the product. Raj is also involved, since he must approve any license. Raj expects SoNice to be back on the market this spring.

Dusty Cunningham has been back in Victoria, BC, for about a month, after living for a while in the Scotland, where she helped set up a plant that is now making and selling SoNice in the UK. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2569. Thompson (W.G.) & Sons Limited. 1999. W.G. Thompson & Sons Limited (Brochure). Blenheim, Ontario, Canada. 4 p. Feb. 18. 28 cm.
• ***Summary:*** This brochure describes the company, its history (this year is its 75th anniversary), and its various operations. Contents: History. Hyland Seeds. Edible beans. Soybeans. Corn and wheat. Grain marketing. Agri-service. Packaged products. Conclusion. Map of facilities in Ontario, Canada.

"History: In 1924, Wesley G. Thompson had the foresight to see that Ontario agriculture would one day play a major role in the Canadian grain trade. With a single grain

elevator and feed mill, and a solid determination to improve marketing and farm services to Ontario farmers, W.G. 'Tommy' Thompson opened the doors to what has become one of the province's most prominent and progressive agri-businesses.

"Today, W.G. Thompson & Sons Limited has modern branch elevators located across southern Ontario that receive, process and ship grain and edible beans. They retail seed, agronomic inputs, and specialize in domestic and export marketing of grain, edible beans and seed... Exceptional service has always been the trademark of the family-owned business. Today, under the direction of Tommy's grandson Wesley, a third generation of Thompsons are proudly maintaining the 'Growing Tradition.'" A photo shows W.G. "Tommy" Thompson.

"Soybeans: W.G. Thompson & Sons Limited is a recognized innovator in the human consumption soybean market. In order to serve the market with this high protein, low cholesterol and easily digestible product, Thompsons have developed modern sizing and cleaning facilities and strict quality control programs. Extensive research programs improved varieties uniquely suited to this demanding market. World wide, customers depend on Hyland Brand soybeans for their consistently high quality standards.

"Thompsons are also very involved in soybeans for the crushing market. With receiving plants strategically located across Ontario's soybean belt, access to the harvest's bounty is an integral part of Thompson's marketing flexibility. The ability to gather large volumes through other commercial elevators further enhances the Company's position as an oilseed trader. Recently, as Ontario has become self-sufficient in this important crop, the opportunity to consistently export top quality crushing beans allows Thompsons the chance to serve our overseas customers." Address: 122 George St., Box 250, Blenheim, ONT Canada N0P 1A0. Phone: 519-676-5411.

2570. Bernard, Richard L. 1999. Historical list of publicly developed North American specialty soybean cultivars to 1989: Large seeded. Urbana, Illinois. 1 p. Feb. Unpublished typescript.

• ***Summary:*** This list excludes introductions and privately developed cultivars. The varieties listed in this table are Kanrich, Kim, Disoy, Magna, Prize, Verde, Kahala, Kaikoo, Kailua, Mokapu Summer, Protana*, Provar*, Emerald, Grande, Vinton, Vinton 81, Merrimax, Harovinton, and Proto*. * Note from Dr. Bernard. 1999. Sept. 9. "I listed Protana, Provar, and Proto with the large-seeded cultivars, but they are not large seeded. Rather they are specialty varieties released for their high protein content. The category of soybeans with special compositional traits will be a growing category in the future."

Details on the following have not been seen before: Year released–Institute–Cultivar–Maturity Group–Parentage. 1969–Purdue [Indiana], USDA–Protana–II–(Mukden x C1069) x (PI65388 x C1079).

1969–Iowa, USDA–Provar–II–Harosoy x Clark.

1986–New Hampshire–Merrimax–0–Prize x A100.

1989–Ontario, Harrow–Harovinton–I–*Hm Rps1-c* from Vinton x Vinton 81. Note: The italicized text refers to "gene symbols." *Hm* = Not sensitive to the herbicide metribuzin. *Rps1-c* refers to Phytophthora resistance, which Vinton 81 has. Thus Harovinton is not sensitive to metribuzin sensitive but it is resistant to Phytophthora.

1989–Minnesota–Proto–0 [(Chippewa 64 x PI261.475) x PI189.880] x [(PI261.475 x Pridesoy II) x Provar]. Address: Prof. of Plant Genetics (Retired), Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

2571. Bernard, Richard L. 1999. Historical list of publicly developed North American specialty soybean cultivars to 1989: Small seeded. Urbana, Illinois. 1 p. Feb. Unpublished typescript.

• ***Summary:*** This list excludes introductions and privately developed cultivars. For each variety is given: Year released, institute, cultivar name, maturity group, parentage. The varieties listed in this table are Nattawa (Released in 1981, Ottawa, Ontario, Canada), Chico (1983, Minnesota), Canatto (1985, Ottawa), Vance (1986, Virginia), IL1 and IL2 (1989, Illinois), SS201 and SS202 (1989, Iowa), Minnatto (1989, Minnesota), Camp (1989, Virginia), Nattosan (1989, Ottawa), TNS (1989, Ottawa). Address: Prof. of Plant Genetics (Retired), Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

2572. Bernard, Richard L. 1999. Specialty soybean cultivars from 1990 to present: Public institutions, U.S. and Canada. Urbana, Illinois. 2 p. Feb. Unpublished typescript.

• ***Summary:*** This list excludes introductions and privately developed cultivars. For each variety is given: Originating organization name and soybean breeder, cultivar name, year released, typical seed size, and parentage. The organizations and named varieties listed in this table are: (1) Agriculture Canada, Ottawa–Cober: AC Pinson, AC Colibri, Micron, AC Colombe (1995-96–small seeded). (2) Virginia Polytechnic and State Univ. (Blacksburg)–Buss: MFS-551 to 591 (1993-97). (3) North Carolina State Univ & USDA–Carter: Pearl (1994g). (4) University of Minnesota–Orf: Black Kato, Toyopro, UM3 (1995-98). (5) North Dakota State Univ.–Helms: Danatto, Norpro (1996-97). (6) Univ. of Nebraska–Graef: Saturn, Mercury, NE2696LS, NE3496SS (1994-96). (7) Ohio State Univ.–S.K. St. Martin & R.J. Fioritto: Ohio FG1, Ohio FG2 (1994). (8) Univ. of Illinois–R. Bernard: KS-2 (1998). (9) Iowa State Univ. and Puerto Rico–Fehr: 45 varieties, all with names such as HP201, IA 1002, or LS201 (1990-98). Fehr is breeding all types of specialty soybeans (see symbols, below).

Symbols: g = general public release; others are exclusive or by license or contract. p = high protein. lx2 = no lipoxygenase-2. lx0 = no lipoxygenase. Address: Prof. of Plant Genetics (Retired), Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

2573. Bernard, Richard L. 1999. Summary of research & breeding programs for food type soybeans. Urbana, Illinois. 3 p. Feb. Unpublished typescript.
• ***Summary:*** This list excludes introductions and privately developed cultivars. Each entry includes: Originating organization and soybean breeder, food uses (mainly natto and tofu), and breeding objectives. For natto, 100 beans should usually weigh less than 10 gm, whereas for tofu, 100 beans should usually weigh more than 20 gm.

(1) Agriculture Canada, Ottawa–E.R. Cober: Natto and tofu. (2) Agriculture Canada, Harrow–V. Poysa: Natto and tofu. (3) Virginia Polytechnic and State Univ. (Blacksburg)–G.R. Buss: Natto and tofu. (4) North Carolina State Univ.–T. Carter: Natto and tofu. (5) South Carolina State Univ.–E. Shipe: Natto. (6) Georgia State Univ.–R. Boerma & R. Mian: Tofu. (7) Univ. of Minnesota–Orf: Natto and tofu. (8) North Dakota State Univ.–T. Helms: Natto, sprouts, and tofu. (9) Ohio State Univ.–S.K. St. Martin & R.J. Fioritto: Tofu. (10) Univ. of Illinois–R. Bernard: Natto and edamame. (11) Iowa State Univ. and Puerto Rico–W.R. Fehr: Natto, tofu & edamame. (12) Missouri–S. Anand & D. Sleper: Natto and tofu. (13) Univ. of Nebraska–G.L. Graef: Natto, sprouts, tofu, green vegetable [edamame]. (14) Washington State Univ., T. Lumpkin: Edamame.

Small-seeded parents: Camp, Chico, Chohakuzan, Jizuka, Kosuzu, Nattosan, Pearl, Pureunkong, Vance.

Large-seeded parents: Benning, Danbaekong, Enrei, Hyuga, Misuzu Daizu, Nakesennari, Saturn, Shiromeyutaka, Suzuyutaka, Tamahikari, Tanbaguro, Totoshirome.

Edamame parents: Disoy, Magna, Prize, Grande, Vinton 81, Verde, Emerald, LS201, LS301, Saturn. Address: Prof. of Plant Genetics (Retired), Dep. of Agronomy, Univ. of Illinois, Urbana, IL 61801.

2574. Housez, Brita. 1999. Tofu mania: Add tofu to your favorite dishes for optimum health. Regina, Saskatchewan, Canada: Centax Books. A Div. of Publishing Solutions, PrintWest Group. 136 p. Illust. Index. 23 cm.
• ***Summary:*** Contents: Introduction. General tips on how to use and cook with tofu. At a glance: How to use tofu in your favorite recipes. Breakfast, brunch, & lunch. Appetizers, dips, spreads & sauces. Soups & salads. Vegetables & side dishes. Meatless main dishes. Fish & meat main dishes. Desserts.

2575. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. OSGMB celebrates 50 years. Feb. p. 1.
• ***Summary:*** "Fifty years ago, soybeans were a new crop in Ontario. Soybean growers decided they needed an organization to represent their interests, and the Ontario Soybean Growers' Marketing Board was born.

"Today, soybeans are the largest acreage crop in Ontario, with expanding domestic and export markets. the OSGMB works on behalf of soybean producers in market development, research, lobbying, negotiating and communications.

"The Soybean Board is planning several special activities in 1999 to commemorate this milestone, including publishing a 50th Anniversary Magazine, launching a new tofu recipe brochure, holding special events at the Annual Meeting,..."

Note: This is the first issue of this newsletter seen that contains color photos or illustrations. A color illustration shows the 50th anniversary logo. A color photo shows the 1998 OSGMB directors, some seated at a table, some standing. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2576. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Biodiesel update. Feb. p. 5.
• ***Summary:*** "The commercialization of biodiesel fuel in Canada continues to be a goal supported by the" OSGMB. Studies have shown that biodiesel: (1) Is biodegradable and non-toxic. (2) Reduces harmful exhaust emissions (CO, particulate matter, polycyclic aromatic hydrocarbons). (3) Increases fuel lubricity. (4) Raises fuel cetane level.

Discusses: Markets, low-level blends, use of biodiesel in mining vehicles, urban transportation, benefits. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2577. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Soy foods seminar. Feb. p. 5.
• ***Summary:*** "The Guelph Food Technology Centre (GFTC) is offering a two-day soy foods seminar that may be of interest to soybean growers. Soy Foods: The Next Generation will focus on the future of soy foods, a comparison of soybeans to other functional foods, developing new soy products, compatible soy food ingredients, and regulations surrounding soy foods." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2578. Soyfoods Association of North America. 1999. Soyfoods Once a Day for Life (Portfolio). Washington, DC. 21 inserts. Feb. 15. 28 cm.
• ***Summary:*** The following eight news releases are from the Soyfoods Association: (1) Soyfoods Association of North America celebrates April as Soyfoods Month (2 p.). (2) Soyfoods sales soar with increased consumer acceptance (2 p.). (3) Soyfoods Association of North America–Industry

insiders (ask the experts, 1 p.). (4) Start young enjoying soy (ideas for kids, 1 p.). (5) 1999 Soyfoods Month sponsors (a half-page profile of 11 companies: Archer Daniels Midland, Galaxy Foods Co., Hain Food Group, Lightlife Foods, Inc., P.J. Lisac & Associates, Inc., SunRich, Inc., Tetra Pak, Vitasoy USA Inc., White Wave, Inc., Worthington Foods, Inc., Yves Veggie Cuisine; 6 p.) (6) Soyfoods Association of North America product list (lists soyfood products of 15 companies, many of whom are sponsors of "April is Soyfoods Month," 11 p.). (7) Soyfoods Association of North America member list (52 companies, 1 p.). (8) Dear member of the press, from Allan Routh, President, SANA (1 p.).

Product brochures from the following companies are also included: (9) Sweet Soybeans–Hearty & Natural Edamame, from SunRich. (10) Vitasoy soymilk, (11) Fresh, ready to heat entrées, from Yves Veggie Cuisine. (12) Go Veggie (dairy alternatives), from Galaxy Foods. (13) Lisanatti–The good health cheese alternative, from P.J. Lisac & Associates (Clackamas, Oregon). (14) Trust the protein authority, from ADM. (15) Fact sheet, from White Wave. (16) Nasoya tofu. (17) Veggie recipes, from Galaxy Foods. (18) Westsoy recipes, from Westbrae Natural. (19) Eating healthy can be soy easy, from Lightlife. (20) The change will do you good, from Morningstar Farms. (21) Sweet beans–Vegetable soybeans, from Sno Pac. Address: 1723 U Street, N.W., Washington, DC 20009. Phone: 202-986-5600.

2579. Stuttman, Len; Stuttman, Irene. 1999. Sale of Sycamore Creek Co. to W.G. Thompson & Sons Limited of Blenheim, Ontario, Canada (Interview). *SoyaScan Notes.* March 4. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.

• ***Summary:*** On 4 Jan. 1999 Len and Irene Stuttman finalized the deal in which they sold their soynut manufacturing, Sycamore Creek Co. (located in Mason, Michigan) to W.G. Thompson & Sons Ltd. of Blenheim (pronounced BLEN-um), Ontario, Canada. The company name is still Sycamore Creek Co. Legally, it was an "asset sale," which means that a price is negotiated for the equipment, supplies, inventory, trade names, and goodwill, rather than for the stock. They had negotiated the deal for almost a year. Thompson is a quality company with a 75 year history; Len worked hard to get them to buy his company. The Stuttmans are very happy with the sale; they have a two-year consultation agreement to stay on and help with the transition.

The story is as follows: About two years ago, there was a small drought in Michigan and some of Len's traditional suppliers of soybeans were unable to supply all of the identity preserved (IP) soybeans that Len needed. He grew concerned as time passed and he began to call the various state soybean associations to ask for backup sources. Sycamore Creek sells soynuts in little packets to most state soybean associations–with their state name on the packet. One of the people he called was Fred Brandenburg of OSGMB in Canada. Fred gave Len the names of various Ontario companies that could supply IP soybeans. One of these was Thompson & Sons. Thompson also sells organically grown food-grade, light-hilum soybeans to East Asian soyfoods manufacturers, but the organic soybeans are generic; they don't keep individual varieties separate. Len contacted Thompson and they supplied him several varieties; Len placed his first order on the summer of 1997. Len found that the Ontario soybeans made better soynuts and soynut butter than those from his traditional U.S. suppliers, and that there were more varieties from Ontario that were suited for his process–and the price was competitive–delivered at Len's plant in Michigan. He found himself ordering more and more soybeans from Ontario. One year ago, Len was getting at least 50% of his soybeans from Ontario; this percentage has steadily increased. Len developed a good working relationship with Mr. McVinty, Thompson's export manager. Thompson has a Food Products Division (headed by Mr. O'Brien), which sells various types of beans–including non-soy beans. Then, in April 1998, he got to meet Wes Thompson, who is president of the company. He explained to Wes that Sycamore Creek was an expanding business that was using large amounts of IP soybeans supplied by Thompson. He showed Wes samples of products made with his beans; Wes loved the candy-coated soynuts. He ate them non-stop as Len was making his pitch for a joint venture, merger, or sale of Sycamore Creek. Len suggested that Thompson start to look more at value added products–such as soynuts–and vertical integration. This approach would give Thompson a greater return on investment. "And I will do everything in my power to make you successful." After this first talk, Thompson people came to Michigan (they flew in using their own plane) and Len and Irene went to Ontario to discuss the matter more. The business is owned by the Thompson family–good solid farm folks–and the grandchildren are very involved in the business. There was no pretentiousness. The "chemistry" was good. West Thompson is a bit of a visionary. The deal with W.G. Thompson & Sons was finalized in a humble storeroom (with cobwebs in the corners) at the Dansville Country Club–a place with excellent food, frequented by local farmers.

The Stuttmans' first pilot plant was in Dansville, which is only 7 miles from Mason, Michigan. He introduced the Thompsons to the farmer who gave them their original space–in a barn–for almost a year; there they did all of their experiments (their research was conducted in an abandoned milk parlor) and began to sell their first commercial soynuts. Then they expanded to a little out-building, an extension of the barn. The original address of the pilot plant

which made their first soynuts (named Solar Soya) was Diehlfields, 905 Jackson, Dansville, Michigan 48819. Irene still has the notebooks with dates and results of all the early work.

By the way–A taste panel of various soyfoods conducted with kids in Sarasota, Florida, found that the kids liked candy-coated soynuts (similar to M&Ms) the best of all soyfood products sampled.

Ontario was smart; they started building the infrastructure for IP soybeans about 18 years ago. Ontario has also invested a great deal of time, money, and effort into breeding non-GMO food-grade soybeans for food uses–sold primarily to Asia.

The new owners, W.G. Thompson & Sons, formed a new corporation named Sycamore Creek Co. INARI, Ltd. continues to exist. All of Sycamore Creek's former employees now work for Thompson. Thompson has sent in a woman, Tina Hernandez, who is the general manager; she is very good at business administration and accounting. She handled the foreign trade department at Thompson. Tom Brown in still in charge of the food processing work; now a marketing manager is needed. If Michigan can supply IP organic soybeans at a competitive prices, then Sycamore Creek is free to buy from Michigan. The contracts with T&G are still in effect. INARI Ltd. has a royalty agreement with W.G. Thompson & Sons for the sale of roasted products, and one with The Soynut Butter Company for sales of soynut butter. The numbers are confidential, but clearly the Stuttmans have a financial interest in the success of these companies and their products.

INARI Ltd. started with about ten shareholders who invested $60,000. Len and Irene are in the process of redeeming all the shares of their minority shareholders so that they will be the sole shareholders. The original shareholders, all of whom were friends and family that shared the Stuttmans' vision, held onto their stocks and each of them made money on their initial investment.

Thompson & Sons has a young soybean breeder who is excellent; they send their soybeans to the provincial government for compositional analysis. But they do not have a food laboratory or a spectrograph–so they have no way to analyze the results of their breeding program in terms of food applications. Thompson is investing a lot of money in moving the Sycamore Creek plant to Stockbridge, Michigan (15-20 miles away, in the same county, closer to Ann Arbor), and tripling its capacity. The deal on the building is scheduled to close on May 19. He would like to buy new oil roasting equipment; Stein is the maker (in Ohio) of a revolutionary new roaster named Thermofin. The big problem is: Who will supervise the construction of the new plant? Len needs a counterpart. Thompson is now in the midst of other big investments–one in Ontario and one in Minnesota.

Len and Irene retain the rights to use the INARI Ltd. name, as in a Third World country–but they cannot compete in North America. Len started this company in the 1970s with his focus on Third World countries. "Soy to the World." He still thinks that soynuts are most cost effective than cereal-soy blends–if you count the cost of fuel, time, etc.

They have both kept virtually all the documents generated by or related to their soynut company from the day it started. Irene will discard those which she considers less important and keep the rest in a scrapbook. Her maiden name was Whittemore, and ancestors on the Whittemore side were well known entrepreneurs in Michigan history, with a place in the Bentley Historical Library at the University of Michigan in Ann Arbor. Her great great grandfather was secretary of state for the state of Michigan, and he started a lumber mill, a bank, and a general store. Her family is also distantly related to Joseph Smith of Mormon and Salt Lake City, Utah, fame. Irene has been the main person running the business in recent years. She would like to donate INARI's records to such a library if they are interested. Address: President and CEO, Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

2580. Stuttman, Len. 1999. What does the word "food-grade soybeans" really mean? (Interview). *SoyaScan Notes*. March 4. Conducted by William Shurtleff of Soyfoods Center. Followed by a fax of June 19.

• ***Summary:*** Len uses the term "food-grade soybeans" a lot. He may have learned it from people in Canada. For making soynuts, he needs special varieties of soybeans that are high in protein, low in fat, have good texture, good taste, and retain their integrity during processing (the seedcoat or hull stays on–does not slough off–during the entire soaking, cooking, and deep-frying process). A soybean with a thin seedcoat usually has poor integrity. Actually, he must try to find a variety in which he can get as many of these qualities or specifications as possible at a competitive price. This is complicated; the only way to test a particular variety is to put it through the process. Moreover, a variety (such as Sapphire) that works well one year may not work so well the next year. Or a variety grown at one latitude that works well may not work so well when grown at a much different latitude. Soybeans grown at northern latitudes generally work better than those grown to the south. Not all of Canada's "food-grade soybeans" work well for Len's particular application. For example, manufacturers of tofu and soymilk want high protein dispersibility in water. Len wants low protein dispersibility, so that protein is not lost during soaking and cooking.

Thus within this broad category of "food-grade soybeans" each food application has somewhat different requirements. Actually, it gets even more complicated.

When most people say “food-grade soybeans” they are usually talking about large-seeded, clear-hilum soybeans–most of which have a Japanese pedigree. Yet makers of natto and soy sprouts want small-seeded soybeans.

Back in the days when public soy varieties predominated, one variety (such as Corsoy) might be around for years and years. But now that most varieties originate from private seed companies, they change more often and they are not generally bred for food use–except in Canada. W.G. Thompson & Sons has a young soybean breeder who is excellent; but they do not have a food laboratory. Address: President and CEO, Sycamore Creek Co., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

2581. Stuttman, Irene; Stuttman, Len. 1999. Re: Sale of Sycamore Creek Co. to W.G. Thompson & Sons Ltd. in Canada. History of INARI, Ltd. Letter to William Shurtleff at Soyfoods Center, March 9–in reply to inquiry. 1 p.
• ***Summary:*** Answers a variety of questions asked by William Shurtleff following a phone conversation. Address: INARI, Ltd., 200 State St., Mason, Michigan 48854. Phone: 517-676-3836.

2582. Gupta, Rajendra P. 1999. Reverse centrifugal filter. *U.S. Patent* 5,882,529. March 16. 5 p. Application filed 12 May 1997. 4 drawings. [1 ref]
• ***Summary:*** Equipment for continuous separation of soymilk (liquid) from okara (solids, sludge). Address: 9 Veery Lane, Ottawa, ONT, K1J 8X4 Canada. Phone: 613-745-9115 or 613-744-4401.

2583. Kessler, Jon. 1999. Re: Unisoya of Canada, and vacuum packaging bulk tofu hot. Letter to William Shurtleff at Soyfoods Center, March 16. 1 p. Typed, with signature.
• ***Summary:*** Note: According to the *Soya & Oilseed Bluebook* (1999, p. 144) Unisoya, Inc. is now an affiliate of Berero Inc. (Tonatur Foods Inc.) and located at 185 Voyer St., St. Isidore Co., Laprairie, Quebec J0L 2A0, Canada. Contact: Jill Renger. Plant manager: Real Beaulieu.

Jon recently met and talked with Gilles Ranger (sales manager) and Bernard Beaulieu were recently in Virginia looking at the BMI (Bean Machines Inc.) centrifuge at Twin Oaks Community Foods (where Jon was manager before starting his own business). Unisoya has an interesting product line (as described on the enclosed business cards). They are presently making about 4,000 lb/day of tofu, 7 days a week, and are planning on expanding their plant. They package their bulk tofu (which is their best seller) in bulk vacuum pouches of 5 lbs per pouch (20 lb per box). Jon was most interested in the fact that they vacuum pack this tofu hot; they do not cool the tofu after it is made before vacuum packing. Then they pasteurize the tofu in its pouch at 205ºF and get a 50 or 60 days shelf life! Jon is considering visiting them this summer.

The enclosed business card, written in both French and English, states that M. Réal and Bernard Beaulieu are the proprietors / owners. The company slogan is: “The true & original.” They sell tofu as follows: (1) In boxes of 225 gm, in natural or fines herbs flavors. (2) In packages of 454 or 300 gm in natural, fines herbs, seaweeds, vegetables, soft, and organic. (3) In vacuum packed boxes of 20 lb. (4) In slices or cubes. They also sell soymilk, and do private labeling.

Update: Talk with Jon Kessler. 2000. Oct. 3. His company, Sunergia, now has all its tofu made by Unisoya in Quebec, Canada, and vacuum packed. Address: Founder and owner, Sunergia Soyfoods, P.O. Box 1186, Charlottesville, Virginia 22902. Phone: 804-970-2798.

2584. Johnson, Eve. 1999. When is a hot dog not a hot dog? The soybean veggie version may be healthier, and it doesn’t have a ‘dark side’ like a classic wiener. Or does it? *Georgia Straight (Vancouver, BC, Canada).* March 11-18. p. 49.
• ***Summary:*** There are now two Yves Kitchen restaurants in Vancouver. Stylish, even chic, they are “the world’s first soy-based fast-food restaurant chain.” Yves on Eleventh, in Vancouver, specializes in veggie hot dogs. But are veggie wieners really healthy? That depends on how you feel about eating foods made from genetically engineered soybeans. Yet served with all the trimmings, “Yves veggie dogs taste just like the happy-times wieners of your childhood.” Moreover they are healthier, with almost no fat, half the sodium, and more protein than meat wieners.

Yves Potvin comes from Sherbrooke, Quebec. At age 28, and already a chef, he started making veggie hot dogs upstairs from a Dave-on-Meat store in Vancouver. Now he employs about 220 people in a brand new corporate headquarters in Delta, a suburb just south of Vancouver. Each week the company makes 125 tonnes soy-based meat alternatives. 30% of that is consumed British Columbia; the rest is exported to the USA or the rest of Canada. Four photos show Yves on Eleventh.

2585. Murrils, Angela. 1999. Tofu can be both tasty and tantalizing: March is the month to celebrate one humble derivative of the soybean, which is exalted at a new Kits eatery. *Georgia Straight (Vancouver, BC, Canada).* March 11-18. p. 49.
• ***Summary:*** April is “Tofu Month” in Canada. At a dinner cohosted by the Pink Pearl Chinese Restaurant and Sunrise Soya Foods, the writer ate course after course of “terrific Chinese food–smoked mushroom roll, Rainbow seafood soup, and, the kicker, a satanic chocolate mousse–all of it based on tofu.” She became a convert. When the Joe family began making tofu 43 years ago, their only market was Chinatown. Lifestream, which used to be at Bernard Street

and West 4th Avenue, was the first non-Asian store to carry it. Now soy products are everywhere.

Now Yves Potvin, the chef from Quebec, has started a restaurant serving meatless food on West Fourth Avenue. The food is great. At the end of April, he plans to open a second restaurant, at Granville and West 11th Avenue.

2586. Brown, Allan. 1999. Brian Stutt of Gilford Marketing in Canada is interested in Buying Noble Bean and taking tempeh to mainstream markets (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Allan and Susan Brown have put a price tag of $300,000 on their company but they do not really want to sell it; they like the work. They sell about $50,000 of tempeh a year and about 40% of that ($20,000) is profit. The company is worth about $100,000 on the books. Instead of selling the company, Allan plans to work as a consultant (at $150/hour) for Brian to teach him about how to make tempeh; in exchange Brian will agree not to compete with Noble Bean in the organic market. Brian now buys Noble Bean tempeh from a distributor for about $3.25/kg; he wants to create a larger tempeh factory to get the price down.

Brian now works with a company named Commensal which is big in fresh entrees (both vegetarian and non-vegetarian); Brian is helping them get into frozen entrees to reach bigger markets. He is also talking with airlines about serving these meals. Cara Foods owns Beaver Foods, which is a huge distributor to supermarkets. Two companies that are big in frozen vegetarian entrees and private-labeled vegetarian products (such as meatless franks made by Yves) are President's Choice and Too Good to Be True–apparently both owned by the same people.

Allan has discovered one trick about making better tempeh; he blows air through the soybeans to reduce their moisture content before dehulling them. This makes it easier to dehull in a mill, and it also improves the quality of the final tempeh–for some reason that Allan does not understand clearly. Address: Co-founder, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

2587. HempNut, Inc. 1999. "The soybean of the next millennium" (Ad). *Vegetarian Times.* March. p. 34.

• ***Summary:*** This one-third page color ad shows a can of HempNut, which is hulled hempseed. Containing 31% protein, HempNut has zero THC, and tastes like sunflower seeds. "Just one taste and you'll never eat whole hempseed again!" For more information contact "Richard Rose, Chief Hemp Nut. (707) 527-8113, or info@TheHempNut.com, or www.TheHempNut.com."

Note: Richard Rose also runs the Rella Good Cheese Company, which makes a variety of cheese alternatives.

Talk with Richard Rose. 1999. March 8. He buys dehulled hempseeds from either Canada or Europe. 1998 was the first year that farmers in Canada were licensed to grow hemp; only 6,000 acres were grown, so prices are still high due to small-scale production. Dehulled hempseeds are not viable (they will not sprout), so they do not need to be sterilized before being imported to the USA. Many entrepreneurs are now selling hempseeds with the hulls on. This is a bad idea for two reasons: (1) The hull is very hard–like eating a walnut or almond with the shell still on. (2) Traces of THC adhere to the hull and enter the bloodstream. Many people who have eaten whole hempseeds or consumed hemp oil risk going to jail or losing their jobs since blood tests showed them to have traces of THC in their blood. Richard has invented a machine that is better than any other for dehulling hempseeds. He has started a separate company, HempNut, Inc., to include all his work with hemp. Address: [Santa Rosa, California]. Phone: (707) 527-8113.

2588. ProSoya Inc. 1999. VS40 operation (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 14 minutes. March.

• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in March 1999, it describes the operation of ProSoya's VS40 SoyaCow, which makes 40 liters of airless cold-grind soymilk per batch. Use of the soymilk to make tofu (using a forming box and cloths that come with the machine) is also described. The video narration begins: "The VS40 SoyaCow system is a small and economical batch processor for producing highly nutritious, non-beany soymilk with excellent soluble protein yield. Easy to operate and maintain, this system uses an airless cold-grinding process developed by ProSoya Incorporated, world leaders in advanced soymilk technology. The grinder-cooker is the heart of the system. Powered by a single-phase one-horsepower motor..."

Talk with Raj Gupta of ProSoya Inc. 1999. May 30. This color video was produced in-house by a man named Seth Gaurav, who is a native of Bombay, India, and who studied cinema at the Moscow Film School in Russia for nine years (1986-95); he won a scholarship from the Russian government. This is the first video Gaurav produced for ProSoya. ProSoya also has a Russian-language version and also videos for its larger soymilk systems. The company's first video was produced in late 1993 or early 1994. Address: Ottawa, Ontario, Canada.

2589. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VI. The peak month (May 1998) and on the way down in 1998 (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** When did SoNice go off the market? The company's peak month in sales was May 1998 and they couldn't fill all their orders. May 12, 1998 was their last day of UHT aseptic (shelf stable) production. That was the last day that Farmland produced any SoNice soymilk in a shelf-stable package for them. Until July 1998 they continued to produce refrigerated product on a scattered basis–off and on, when they could–and when Farmland didn't dump it all down the drain. Then came that disastrous day in July 1998 when Farmland dumped a huge amount of product–and that was the straw that broke the camel's back. That was the last day any type of SoNice soymilk was made. So the company withdrew all SoNice products (soymilk and yogurt) from sale. They sent a notice to the brokers and the trade that they could not support any more sales; they were withdrawing all products from trade until they could reorganize the company. They were still trying to build the plant in Vancouver, and they were trying to find the money and the people to partner with. They had hoped to settle everything down, to sell product from their warehouses–which they did. Since they had five warehouses (four with shelf-stable product and one with refrigerated) across Canada and the United States, SoNice continued to be available in retail stores until the end of 1998. Moreover, the SoNice distributors all had warehouses full of products, and the retail stores had products. The pipeline was nicely filled in May, but by the fall of 1998 it was becoming difficult for consumers to find products, and it pipeline was empty by early 1999.

George believes that some companies are already using equipment (that they built themselves and keep behind closed doors) that infringes upon the ProSoya patent. It is hard to catch such people; you basically have to send in the "patent police" and catch them red-handed. ProSoya allowed many people to go through their soymilk manufacturing plants, and examine their equipment and process. These include Steve Demos, Ted Nordquist, and (in late 1997 or early 1998) Danilo Callewaert (Director, R&D, Alpro, Wevelgem, Belgium) and Guy Huybrechts (Managing director, Vandemoortele, Soyfoods Division, Alpro). Note: In March 1995, Philippe Vandemoortele, head of Alpro, announced that he was leaving Alpro to work on a new idea he had. He took one of Alpro's most experienced researchers with him. His last words: "I shall return." Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2590. Wright, David E. 1999. The farm chemurgic movement and its influence on the modern world, including laying the foundation for current biotechnology research (Interview). *SoyaScan Notes.* April 14. Conducted by William Shurtleff of Soyfoods Center. [25 footnotes]

• ***Summary:*** Discusses: Eugene Gressley, cowboy entrepreneur who buys archival collections for the University of Wyoming and maneuvers to raise money to get a new building to house his collections. David's 1986 visits to and research in these archives which were housed in a Quonset hut outside of Laramie. Francis P. Garvan, chemurgist with great social influence. Buffum, CEO who worked for Garvan. Harry E. Bernard. Billy Hale, who married Herbert Henry Dow's daughter and wrote his first article on chemurgy in 1926 in Henry Ford's *Dearborn Independent.*

Note: Herbert H. Dow (lived 1866-1930) was an American chemist and manufacturer. Born in Belleville, Ontario, Canada, he founded the Dow Chemical Co. in 1897 near Midland, Michigan, and developed and patented over 100 chemical processes. Midland, Michigan, is slightly more than 100 miles northwest of Dearborn, Michigan–home of the Ford Motor Co. When Herbert Dow died in 1930, his son, Willard H. Dow, became head of the company. Willard was active in the National Farm Chemurgic Council during the 1930s and 1940s.

Leo Christensen. Edward J. Muhs–the Chemical Foundation's historian, how power alcohol destroyed the Chemical Foundation the important book *Industrial Fermentations,* by L.A. Underkofler and Richard J. Hickey (1954, New York: Chemical Publishing Co.). How Hale and Garvan laid the foundation of modern biotechnology research by creating a triad between university researchers, business, and government. Address: Asst. Vice President for Research, Michigan State Univ., Room 246 Administration Bldg., East Lansing, Michigan 48824. Phone: 517-355-2180.

2591. Hart, Sharon. 1999. History of Dyshar Farms, makers of Real Roasted Soys in Canada (Interview). *SoyaScan Notes.* April 20. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Sharon owns and runs a soybean dry-roasting facility for animals at Blythe Brae Farms located in Woodstock, Ontario, Canada, on Hwy 401, and closer to London than to Toronto, Ontario. Woodstock is on about the same latitude as Niagara Falls (New York) and Milwaukee (Wisconsin). She farms about 2,225 acres, including 1,000 acres of soybeans. Her husband is a hog farmer. For some years it has been very popular for Ontario farmers to feed their hogs and dairy cattle soybeans that have been dry roasted and sometimes flaked. She uses a dry roasting process (with a flame roaster)–not an extrusion cooker. The soybeans smell wonderful when they come out of the dry roaster, and the animals (and farmers) love them like they would candy. She creates bypass protein for dairy cows by holding the soybeans at a high temperature for 30 minutes. Farmers use roasted flaked soybeans (slightly crushed) for top dressing (where they put the soybeans on top of the

feed) but whole soybeans when they feed TMR (total mixed ration), since the whole soybeans hang onto their hulls better. In 1986 she first heard comments from dairy and hog farmers at her custom roasting facility that they liked to munch on roasted soybeans. Feed dealers put a little dish of roasted soybeans out so that farmers could test the quality of the roasted beans–and munch on them. It was not until nine years later, in 1995, that she and her friend and partner-to-be, Diane, decided to make roasted soys for human consumption. Their first products (five flavors of Real Roasted Soys) were introduced shortly before Christmas of 1995, in Woodstock Market. At that time they did not have a company name yet or any of their own equipment. They used custom-roasted soybeans to test the market. Less than half a year later they introduced two more flavors: Sour Cream and Onion, then Maple Syrup Coated, followed in 1997 by Honey Coated and three flavors of organic. Sharon prefers the generic term "Roasted Soys" or "Roasted Soybeans" to the term "soynuts."

They buy their soybeans cleaned from various seed companies. Their roasted soys are oil roasted [deep-fried], in a facility located about 1½ miles from their dry roaster. They have developed an innovative process of treating the soybeans before and after frying that makes their oil content about the same as it is before frying [5 gm of oil per 30 gm of product = 16-20% oil]. This is not a patented process. They are just a cottage industry. Thus, they get the nice flavor that goes with oil roasting without the calories that usually accompany it. They also use only non-hydrogenated oil (soybean oil) for their frying. They believe it is healthier than hydrogenated oil. Sharon's background is in human nutrition, and her partner, Diane, is a dietitian; they both want a healthy, high-quality product–even though the shelf life of the soys and the oil will not be as long as if they used hydrogenated oil. Their focus is on both good nutrition and good flavor. They also want to use whole beans, since the hulls provide valuable dietary fiber. Sharon is now doing a lot of research on soybean varieties to find those that grow and yield well in Ontario and also make soynuts that have a good appearance, flavor, and texture. This is her first year growing small test plots of different varieties on her farm–right next to her roasting facility. Dyshar Farms has received a lot of help and support from the Soybean Board in Ontario (OSGMB). Their company also does private labeling and roasts soybeans for other companies who want to season their product and sell it under their own label.

Since Sharon roasts only soybeans [no peanuts or other seeds] at her Dyshar Farms, she can guarantee that the plain, salted, and seasoned flavors are absolutely free of any trace of peanuts. However since she sends the three candy-coated flavors to another company to be enrobed, she cannot guarantee that these are 100% peanut free. In their chocolate-coated product they avoid the use of coconut oil in the chocolate; even though it would make the chocolate last longer, it would also raise the saturated fat content.

Their logo, in different colors, forms the center of each of their labels. For example, the honey coated soys have a yellow label, the chocolate have a red label. Dyshar Farms has a new web site: soys.com. Address: R.R. #3, Woodstock, ONT N4S 7V7, Canada. Phone: 519-537-2199.

2592. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part I. 1976 to 1994 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** George was born on 1 Dec. 1946 in Toronto, Ontario, Canada. He went to high school in Toronto but did not graduate, and he never attended college. "I attended the school of hard knocks." He dropped out of high school at age 15 he began to work full-time. At age 17 he went to work for a textile firm until he was age 20. Then he started his own business in the fields of textiles and clothing. In 1967 he married Wendy Lynn Richardson–who was born on 27 Sept. 1948. In 1973 he received knowledge from Guru Maraji (via Guru Charanan) in Toronto, became his disciple, traveled throughout the United States and (in 1973) to the Houston Astrodome [in Texas] with Guru Charanan, and started a vegetarian diet and vegetarian restaurant. In 1977 he was one of the founding partners of Jolly Green Garden, a vegetarian restaurant in Toronto. He called it "Guru Maraji's restaurant" because many of the employees and customers were disciples of Guru Maraji. There he first got involved with soyfoods. He bought tofu and used it to make various products, such as patties, dressings, etc., which were served in the restaurant. George has been involved with soyfoods for more than 20 years, starting in Toronto.

In early 1979 George and his family moved to southern Alberta. He went to work for the Canadian federal government helping a group of native Blackfeet people there. He set up a company named Pe-Kun-nee Garments that manufactured textiles (garments), put 300 women through a training program, and ran it (with the title of General Manager) for about 4 years. George still has the full-beaded outfit and feathers that he got from the Blackfeet people he helped.

In 1984 George and his family moved to Saskatoon, Saskatchewan, where he started a computerized embroidery business. His wife and three children still run this as a family business. Today his company is one of the top software development firms in North America for computerized embroidery. He worked for a company named Jeffrey E. McPherson, headquartered in Nottingham, England, with North American offices in Greensboro, North Carolina and in Canada; George worked for the North Carolina company. They held the worldwide distribution rights for an embroidery machine made by a Japanese company named Barudan (pronounced buh-ROO-dun) who

pioneered the electronic embroidery machine from Japan. The ancient Jacquard looms, which were programmed with punch cards, originated in Switzerland [sic]–which is why we refer to "Swiss embroidery." [Note: The French inventor, Joseph-Marie Jacquard (lived 1752-1834) invented the Jacquard loom at Lyons, France, in 1801 and was awarded a patent and medal by Napoleon in 1804]. The Japanese copied these looms. George was a salesman for their equipment, and he developed a collection of baseball caps because he was one of the first people to sell caps–whether it be importers of blank caps or embroiders of finished caps. George even called himself Captain Capman. He went around and set up embroidery companies to whom he sold his embroidery equipment (from Barudan in Japan) all over western Canada. George was one of the first people to embroider a baseball team insignia direct onto the blank hat–replacing the old crest that was stuck on the hat. It was much classier, and now its the only way they do it.

In 1992 he started another gourmet vegetarian (actually vegan) restaurant, this time named Sweet Carrot Café, located at 702 14th St. East, Saskatoon, Saskatchewan S7N 0P7. Actually, George bought the building for his embroidery business, then opened up a corner of one building on the corner as a lunchroom for his staff. It was an historical building, with three buildings in one. George bought an espresso machine for his lunchroom. Passersby thought it should be a coffee shop. George lined the walls of his lunchroom with his collection of embroidered baseball caps. He soon converted the lunchroom into a coffee bar, which he named it Caps Coffee Bar. A popular men item was Cap-puccino! There was a grand piano in the dining room. It was probably the only vegetarian or vegan restaurant ever to be written up in *Where to Eat in Canada*–two years in a row. In those days most people thought of vegetarian restaurants as places where hippies with beards and long hair sat on picnic benches and ate granola bars. Most people were afraid to eat in such places, so George made his restaurant into a fine dining room. One of the main focuses of George's life since the 1970s has been vegetarianism; his wife is a vegan and teaches tai-chi. In the restaurant George made his own tofu, soymilk, and related products, such as spreads, dressings, etc. In the early days, he made these products in the old fashioned way. The firm nigari tofu was very good tasting but the soymilk had a pronounced beany flavor. He was so busy, and making all these foods was such a chore, that he began looking for other technologies to expand his production. One day in early 1992, at about the time Raj Gupta started publishing his *Soya Cow Newsletter,* a young lady from the United Way in Ottawa came into the restaurant and commented on his organic tofu sandwich. She also tried his soymilk and told him about a soymilk making machine named the Soya Cow, developed by a company named ProSoya in Ontario. George asked for more information and the lady sent him a copy of the newsletter. George immediately phoned Raj Gupta, the inventor of the machine, and was on the next airplane to Ottawa. He ended up buying the only small Soya Cow (SC-20) Raj had. Articles about George, his stylish restaurant, and his new Soya Cow appeared in two early issues of the *Soya Cow Newsletter* (Jan/March and April/June 1993–Vol. 2, Nos. 1 and 2). He used the Soya Cow to make soymilk, which he sold at his restaurant–starting in early 1993. This was the first commercial soymilk ever produced by a Soya Cow. He sold the soymilk in 1 liter glass bottles, with the Soya Cow logo printed directly on the glass on each bottle. He and Frank Daller developed the bottle. So the name of the soymilk was "Soya Cow" and it was sold in seven flavors–including maple, chocolate, vanilla, original, chocolate-peanut butter, and nog (a delicious egg-nog alternative made only at Christmas). Dusty Cunningham and Lorne Broten were both patrons of George's vegetarian restaurant in Saskatoon. A romance soon developed and they were called the "love birds." George was thinking about opening a winery in his restaurant. Since Lorne was an accountant, George started working with him on a business plan for the winery in about 1994. George liked Lorne and hired him as his bookkeeper and accountant for his two businesses–embroidery and vegetarian restaurant.

Soon, within his restaurant (which consisted of three buildings in one), George converted his Caps Coffee Bar into the SoyaCow Health Bar Deli, where he sold at least five soy products, both as part of the menu and for takeout: Soymilk (in six flavors), soy ice cream (many flavors, always changing), soy yogurt (several flavors), tofu, and Soyanaise. He also carried Yves Veggie Cuisine. He used his car to deliver some of the soymilk he made to three local stores; he never delivered his other soy products from the restaurant. He carried the glass bottles in milk crates. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2593. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part II. Starting a soy business and creating many more companies–1994 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: The winery idea never worked out, but the soyfoods part of the restaurant grew until George decided to start a new company making soyfoods. In 1994 he closed the restaurant, moved out all the soya equipment to focus on doing a soy dairy in Saskatoon, and leased the empty restaurant buildings others who wanted to used them for a new and different restaurant. George and Lorne worked together on the business plan for this new soy dairy company which was going to be called Soybé's Non-Dairy. In 1994 George was already advertising his forthcoming

soymilk business and products in the local papers; the products also going to be named Soybé's Non-Dairy, and sold in several flavors. He planned to discontinue his glass bottle and start packaging in gable-top cartons. He found an old dairy in Saskatoon that agreed to sell him their gable-top packer. This would have been the first fresh gable-top soymilk in North America. George had finished his business plan and blueprints, had selected a building, and was getting the building permit–when Lorne learned that Raj Gupta had prototyped an SC-100, which could make 100 liters of soymilk an hour. This changed everything! Lorne now wanted to do a much larger project and buy the rights to the SC-100. George said no, it was too expensive. But to Lorne, money was never a problem. Finally George agreed, so they never built Soybé's. Instead Lorne formed many new "vehicles" for raising the necessary funds to accomplish what *he* wanted to accomplish. His primary interest was in his family's water company in British Columbia (long owned by his family, including his son and brother-in-law), and he saw the opportunity to use the soy business as the catalyst to stir interest in and raise funds for the water company–so that he could bail out of it. Ward Yeager is an investment counselor and broker is Saskatoon. Lorn went to Ward and asked him to raise the money. Ward had no particular interest in soy (though his interest grew as time passed), but he (and a relative of his) wanted to own a chain of coffee franchises–similar to but better than Starbucks Coffee. So he began pushing Lorne to include a coffee business in his plans.

Dusty was not one of the company founders or original shareholders; she was in Europe at the time because her daughter was ill. The original founding partners were George, Lorne Broten, and Ward Yeager. The original corporation created by Lorne was extremely complicated. The original corporation formed for the purpose of raising capital (money) was named Royce Everest Enterprises (REE–as in "Rolls Royce" and "Mount Everest"), the major shareholder equity company which raised capita; it was a shell consisting of three different divisions, with a total of eleven companies. Each of the three founders put up money, but in different amounts and each owned shares. In one of the companies (REE), the shares they received was proportional to the money they invested. REE owned 40% of each of the three divisions; the other 60% was owned by the founders.

The three divisions were (believe it or not) a water business (which Lorne sold to REE; it subsequently lost lots of money), a coffee business, and a soy business. Each of those three divisions was owned 40% by Royce Everest, and contained three companies: A management company, a holding company, and an operating company (which actually made products). In the soy business these three were Pacific ProSoya Management, Soybe's Holdings (owned 60% by Pacific ProSoya Management and 40% by Royce Everest), and Pacific ProSoya Foods Inc. So if you wanted to invest in the company, and you liked the idea of soy, then you had to invest in Royce Everest, because it was the one that was selling shares. But you were also buying into water and coffee–even if you weren't interested in those businesses. Ward could sell anybody anything–and he was good at it.

The three founders owned equal shares of a company named Pacific ProSoya Management, which owned 60% of the soy business; this 60% ownership did not cost them any money originally. The other 40% of the soy business was owned by people who invested money in it.

Back to Dusty: Because of her original involvement in Saskatoon, and because of her association with Lorne in the early days, and because it was basically Dusty's interest that drove Lorne to become involved with George and the work with soy–she was allowed into the company in the early days. Since she didn't want to have anything to do with coffee or water, she didn't want to buy shares in Royce Everest, but she did want to invest in the company. So Lorne formed another company that also owned shares in Soybe's Holdings. Note: Only accountants and lawyers like this kind of stuff. Then each of the three founders, in their generosity, gave to Dusty a small portion of their shares in Pacific ProSoya Management, though in the end she owned fewer shares than they did.

They raised money again and again, going through two full prospectuses, some rights offerings, first under Pacific ProSoya Foods, then to the shareholders under International ProSoya Corporation, then went back with another "rights offering." Then, when they "ran out of companies to raise money under," they started to sell shares in Pacific ProSoya Management (PPM)–which had a lot of special rights (that the normal common shareholders didn't have in terms of other revenue streams) and owned 60% of the main company. These shares had a higher value. First thing was a rights offering to the shareholders who could put in money to keep their percentage constant. George was not in a position to put in as much money as Loren (who received a big salary) and Ward (who had earned big commissions from raising money). So George allowed Dusty to buy the extra shares that he could have purchased–to increase her percentage ownership. Then they sold shares in PSM to other people as well–further diluting their shareholdings. So in the end, Loren and Ward each owned slightly more shares in PPM than George, who owned slightly more shares than Dusty in PPM. Continued. 2594. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part III. Building Pacific ProSoya Inc. and making the base for Silk–1994 to 1996

(Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: George (and Lorne) moved to Vancouver, BC to build a soymilk plant, launch a new soymilk product, and dedicate himself 100% to the soy business; his wife and family stayed in Saskatoon, where they all work in the family business. He is still married, he communicates with his wife and family daily, and they visit one another from time to time.

In Vancouver George and Lorne set up a new soymilk company named Pacific ProSoya Foods. The company had a license to make and sell soymilk, soymilk products, and soymilk equipment in British Columbia and Alberta in Canada, plus Washington, Oregon, and parts of California in the United States. In April 1995 the SC-2000 started to produce soymilk on a trial basis, but it took 8 months to debug the system. Pacific ProSoya's first commercial soymilk was sold in Jan. 1996 to Ted Nordquist of TAN Industries, who used it to make Silk brand soymilk for White Wave in Boulder, Colorado. George started the company, and he and Dusty basically built it up; Lorne, who had been George's accountant, put together the financing.

When IPC started, the company had no plans to make its own soy products. Rather it planned to make soymilk base and supply it to the dairy industry. So selling soy base to Ted Nordquist, their first customer, fell within this general concept. But Ted wasn't buying that much soymilk. George is quite sure IPC never shipped him more than one tanker of soy base (containing about 10% solids) a week; one tanker holds 6,000 gallons. They probably shipped him, on average, 12,000 to 18,000 gallons/month. Ted was formulating product for White Wave's Silk in the 4% solids area. So 1 volume of IPC base would end up as more than 2.5 volumes of Silk, or 37,500 gallons of Silk a month. And that was only several days a month production for IPC's plant. IPC had to do something, so they began spray-drying their organic soymilk in the hope of developing a wholesale market. They shipped large amounts (many container loads), because a broker in the USA led them to believe they could sell plenty. Eventually they did sell small amounts to the USA. One woman buyer ran a health food company that used it in a potato mix. She ordered several 50-lb bags at a time and didn't pay her bills well.

Initially the SC-2000 continuous process Soya Cow didn't work, so George worked with Raj to perfect the technology. This took a long time, and that delay is one thing that took the company so long to get into production.

Actually, International ProSoya Corp. (IPC) was established (incorporated) in 1996. Lorne wanted to negotiate a broader license for Pacific ProSoya Foods that encompassed the whole world. They got rights of first refusal in every country of the world (except the CIS countries of the former Soviet Union), plus an exclusive license for North America. Early in 1996, IPC was formed, licenses were granted, and then (as its first move) IPC bought ProSoya's plant in Ottawa, Ontario (from Raj), and formed a company named IPC Eastern. When IPC launched its first product, it was made in the Ottawa plant (which IPC owned) and packaged by Beatrice.

The company was running into problems in western Canada selling bulk soymilk. They could not convince the big dairy, Dairyworld, to buy milk and package it. But they did get Dairyworld to agree to package and distribute soymilk for them. They even offered Dairyworld a joint venture. Then, shortly after the SIAL trade show in France in early 1996, they developed the brand SoNice and were going to market the product Dairyworld packaged under that brand. Dusty came back from the show with the idea for a brand "Soy-Nice," which after discussions became "SoNice." At about this time an "offering memorandum" went out. When the negotiations with Dairyworld fell through (in early 1996, after IPC was formed) everything changed. Another company, named SoNice Corporation, was formed in 1996.

In Nov. 1996, IPC launched its first product, SoNice. Dusty came up with the product name. Nobody in the firm at that time was aware of the similarity between this name and that of So-Good, a very popular Australian soymilk. George had never heard of the So-Good product, and he thinks that others in IPC also had not. This launch was a momentous event for both the company and the Canadian soymilk market. A.C. Nielsen in Canada attributed the dramatic growth of the Canadian soymilk market to IPC's market entry in 1996 and 1997. Many people who tasted SoNice said it was the best-tasting soymilk on the market. Many chain stores switched brands immediately. To own the patent for the process that makes the world's best tasting soymilk was to own something very valuable–but many of the company's "financial wizards" failed to grasp this. During late 1996 and 1997 the new company grew at breakneck speed. This growth required money. The company's stock was never publicly traded, but it was almost publicly traded.

When IPC packaged SoNice in Canada, they distinguished the Canadian Package from the U.S. package by a little roundel (circular symbol), containing a maple leaf plus "Canadian Technology," on the lower right hand corner of the panel. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2595. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part IV. Starting IPC and mistakes–1997 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** George now feels that his biggest mistake was relinquishing control of the company during its formative

period. He owned 100% of an idea; he wanted to commercialize Raj's process. But he didn't have the funds to build the plant in Vancouver and invest in an SC-1000, let alone an SC-2000. So he brought in Lorne and other people to take care of the financing. Today he owns 7% of the company–which today is worth nothing. There are now 400 shareholders in IPC and Raj Gupta is the largest; he now owns 10% of the company. The company has raise money both by selling shares and by borrowing. One of the biggest lenders, who was supposed to convert to shares, never did, and this became a major problem. They always wanted the company to wait longer before it went public so shares they had the right to convert to would be worth more. The company had the opportunity to go public, it should have done so, but it never did–which is one reason it no longer exists.

The people who were now driving the company were Loren Broten and the board of directors. George was on the board in the early days but he was asked to get off because there was too much management on the board. By late 1997 the board increasingly became very focused on what George calls "non-operational issues," largely "How do we ingratiate ourselves. When do we get the big hit? When do we go public? etc.–Instead of focusing on driving and expanding the business, they were focusing on how to line their pockets." The board took control of the company and started to undermine management. The company was growing very nicely, and Dusty had left in early 1997 to go to Scotland to help organize a joint-venture soymilk company there. She remained on the board (as the token woman on a very male chauvinist board) the entire time. Dusty (who is a very fine and talented lady) and George were the real disturbers on the board–because they were the only ones focused on the business.

The management had made a presentation to the board that the only way the company could control its own destiny was to have its own soymilk manufacturing *and packaging* plant. IPC's initial plan was to work with Dairyworld Foods, which is the big (billion dollar) cow's milk dairy in western Canada; their initial plans and plant were based on having Dairyworld package their soymilk–but no contract was ever signed. At the last minute Dairyworld refused to package the soymilk for IPC–because they were involved in some other negotiations. So IPC found itself with a soymilk manufacturing plant and no way to package it. IPC soon found itself spending too much money transporting its soymilk–shipping it first to a co-packer, then to distribution centers, and finally it to the consumer. Ted Nordquist never packaged soymilk for IPC; he bought soy base from IPC, did his own formulation, then packaged and sold it to White Wave. But IPC's president kept raising the price until Ted finally stopped buying IPC's soymilk. So Silk is no longer made with ProSoya base.

Initially IPC had its soymilk packaged by Beatrice Foods, which is now Parmalat Canada Beatrice, in Toronto. Beatrice is now a Parmalat brand. Parmalat, the biggest dairy in the world, bought Beatrice not long ago for $400 million.

IPC's board of directors finally accepted its management's proposal to build its own manufacturing and packaging plant–now a key to the company becoming really viable. The plan was to shut down the ProSoya plant in Ottawa, Ontario, move it out west to British Columbia, combine the two soymilk extraction plants in new facility, put in five packaging lines (two aseptic and three ESL gable-top refrigerated), plus equipment to make soy yogurt and ice cream–a full soy dairy. They would make all the products for North America at that one plant until it was operating at full capacity–which they projected would only take about three years–and then build a second plant on the east coast of Canada and ultimately a third plant in the south of the United States. So in Nov. 1997 IPC bought (with down payment and mortgage) a 66,000 square foot building in the same town in British Columbia (a 5-minute drive away from their existing plant) that had been used for food processing.

IPC had a very tight agreement with Raj Gupta in terms of soymilk equipment sale. It was never IPC's focus to set up people with the technology to be in competition with IPC, but it was IPC's goal to set up people to be in partnership with IPC.

Jerry Duncan came to IPC from the dairy industry. He did some consulting for IPC as early as 1995 and he became president of the company sometime in early 1997. Loren appointed him president. He is presently no longer with IPC; instead he is involved with a food brokerage company, and he is still a consultant. He was one of the vice-presidents of Dairyworld Foods, and he can be very gruff and hard to deal with–though he is a nice person when you get to know him; his bark is much worse than his bite.

Vesanto Melina, who lives in Langley, BC, quite close to the factory, worked for IPC as a consultant several days a week for a little more than a year before it closed. She looked after consumer relations, did trade shows, developed packets of recipe cards, and recommended SoNice in her books on vegetarian cookery. She and Dusty are good friends. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2596. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part V. Rise and fall during 1998 (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** One of the former directors, Robert Landori-Hoffman, asked for and was given the exclusive responsibility to finalize the funding for that facility. He

indicated to the board that all the funds were in place, it was a "done deal," and they could go ahead and start development. So they began to "load the land" and engineer the plant, get the building permits, order the very expensive equipment (five packaging lines, holding and blending tanks, compressors, boilers, etc.), and pay deposits on that equipment. They were ready to cut the floors open and put in the drainage. Everything looked great. But by late January 1998 the money still hadn't come in. IPC was in the middle of launching its United States operations, and they had listings (reserved shelf space) in 6,000 U.S. stores in the first 3 months of 1998–Safeway, Albertson's, etc. Note: First the head office lists the product, then individual stores can order it. Most of the listings were not by way of cash slotting allowances but by way of "free fills" (fill the shelf once for free with each flavor) which is a very minimal slotting fee.

The company was shipping products like crazy (initially for aseptic cartons much more than gable-top), repeat orders are coming, the volume was skyrocketing, but now there are quality and volume problems with Farmland Dairy, their co-packer in New Jersey. All the base soymilk sold in North America was made in the Ottawa (Ontario) plant, and was shipped by tanker trucks initially to Beatrice Foods in Toronto (Ontario) for formulation and packaging (in Tetra Brik cartons), but was soon shipped down to Farmland in New Jersey where it was formulated and packed in Combibloc packages–because their Tetra Packer did not have a reclosable top–which was considered essential for entering the U.S. market. Farmland needed business; they were only packaging for Westbrae (in 2 liter cartons). Soon Farmland was packaging IPC's refrigerated products as well. The finished product was sent to five distribution centers. The whole system was very inefficient, in part because it is more efficient to ship west than to ship east. For a while, IPC tried to work with Daisy Linda, the old Loma Linda plant in Riverside, California, to have them package refrigerated products, but then Daisy Linda went through a receivership.

The best way would have been to make, formulate, and package the soymilk in one plant on the west coast in Vancouver (British Columbia), and ship it eastward to distribution centers. So everyone in the company began to focus on the director who said that he had come up with the money to build a new plant. It began to look as if he was trying to suck money out of the company, and consult it to death. The rest of the board and management gave him an ultimatum; come up with the money soon or get out.

SoNice was made with organic soybeans and other ingredients and sweetened with agave. It was a pure product with a great taste. When the product was introduced to U.S. chains like Wegmans and Albertson's, SoNice became the best-selling soymilk in their store overnight–because of the quality. They did in-store demos as their main form of advertising. They developed an elaborate kit, including a book about the product, for people doing the demos. Brokers and the heads of top supermarket/grocery stores were ecstatic with the product. But they did not have the money to support the rapid expansion. But very soon it will happen again, and SoyaWorld has the money and horsepower (distribution, contacts, etc.) to make an even bigger splash. Dairyworld Foods has many affiliates and friends in the USA; they will soon make and formulate the base, package, and distribute it. SoyaWorld is just a marketing company.

At the same time, the IPC leadership started from scratch, and tried to find new ways of putting together a partnership to raise the money. They talked to various financial institutions, institutional investors, etc. Mr. Broten had made the company very complex in terms of the many companies that he formed; it was like a shell game. It became too complex for potential investors. Plus, Raj Gupta wanted a large share of the final deal. His greed was part of the pool of greed that destroyed the company. Raj has a contract which guarantees him a minimum large income per year (from royalties, etc.); this made potential investors uneasy.

So as orders kept growing like crazy, IPC was unable to raise the money needed to keep up with growth and rationalize their production and packaging operations. They had already used up all their working capital in capital expenditures–as in the deposits on the new building (plus a big mortgage) and on many different pieces of equipment. With no working capital, became very difficult to operate. By May 1998 IPC hit $1.2 million in sales for the month; but they were able to fill only about 85% of these orders. Then they just ran out of money.

Farmland in New Jersey started to not give IPC packing time, due to financial difficulties. Then came the straw that broke the camel's back. By July 1997 IPC was on ad in Canada with A&P stores with a 2-liter products; IPC had paid $25,000 for a huge ad in the A&P newspaper with 2-liter soymilk on special. IPC was producing only refrigerated at that point; the last UHT product was packaged in May. A&P was looking for 10,000 cases of product for this ad, IPC was trying to fill their requirements, but Farmland (who was being prepaid) was flushing the refrigerated UHT soymilk down the toilet, due to packaging problems. On Farmland's last run, they ruined 13,000 gallons of formulated product–which was all pre-sold. That was the last straw, and the last production run that Farmland ever did for IPC. IPC never sued Farmland, which reimbursed IPC for the lost product. Farmland said it did not have enough holding tanks for processing (since they had their own milk in these tanks); Moreover, their Schmidt processor went down. But IPC lost the $25,000 it had spent on the A&P ad, then got fined another $10,000 by A&P for nondelivery of product.

At that point IPC decided to regroup and focus on getting the money to get the new processing and packaging plant into operation. They began talking with everyone they could find about a partnership–from Nestlé to the Alberta Wheat Pool, to Edensoy, etc. Unfortunately the board of directors did not let the people who knew the business best negotiate with other partners for partnering. The board decided to do the negotiating because they represented the shareholders. At one point the board found a firm that would take the company public by raising $12 million, which would be put into new plant construction and operating expenses, and essentially allow to the company to move full speed ahead, with projected sales for 1998 nearing $20 million, and skyrocketing into 1999. They wanted the IPO to be at $1.20 a share. The directors had just finished raising money at $1.60 a share, and had given their shareholders expectations of a big increase. So they wouldn't accept the deal at $1.20 a share. Consequently, at the end of July 1998, the company had to shut down its two soymilk making plants in Vancouver and Ottawa, and go out of business. It was a sad ending, caused largely by greed. The board of directors is now down to two people–Eldon Heppner and Ward Yeager–but they are the two that caused most of the problem, partly because they did not understand the industry, and partly because of their interference in the operation of the company. They raised most of the company from small investors, and were among those who held the company back from going public.

In 1 March 1999 George resigned because he disagreed with the deal that the board of directors had struck with SoyaWorld, and he did not want his name to be on the document that was sent to the shareholders offering them this sale. He was the last employee of the company. After a deal is finalized, George would like to become head of global business development, working as a consultant for SoyaWorld, with a free reign to set up new ventures in countries around the world, including in the natural foods market in North America. He does not want to be a production manager. Most of his experience is in sales and marketing; that's what he has done most of his life. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2597. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VII (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** By now the two members of the board of directors are on their knees, begging Dairyworld Foods (the huge, billion dollar dairy products and food company in Vancouver, British Columbia–the largest in Canada) to come to their rescue. In about 1997 Dairy Foods World and Peter Joe signed a joint venture agreement, which had been under discussion and negotiation since about 1995 or 1996. As a result of that, Dairyworld Foods created a division named SoyaWorld Foods, which is a 50:50 joint venture between Dairyworld Foods and Sunrise Markets (Peter Joe, in Vancouver, the largest soymilk manufacturer in Canada). SoyaWorld, which is a marketing company for products made by the two other companies, now controls more than 60% of the non-dairy beverage market in the grocery and supermarket trade in Canada–according to A.C. Nielsen statistics. The second largest player is Beatrice (10-13%), followed by Nutrisoy (a UHT soymilk made by Nutrisoya in Quebec), then the imports (Pacific Foods, Rice Dream, Vitasoy, Westsoy, and Edensoy). SoyaWorld presently markets three soymilk products: Sunrise soymilk (a beany-flavored product made and packaged by Sunrise in plastic bottles), Soyganic (a traditional beany-flavored product made by Sunrise with organic soybeans, packaged at Dairyworld in a gable-top carton and sold refrigerated), and So-Good (licensed from Sanitarium Health Food Co. in Australia, formulated and packaged in gable-top by Dairyworld, and based on soy protein isolates). Soyganic and So-Good appeared on the shelves at about the same time in 1997 under the Soyaworld brand. They distribute those three products extensively across western Canada, and sell them in the dairy case. They are busy expanding, buying up dairies, so that they are now a national dairy, from coast to coast, in Canada. They own the shelf space in the dairy case across Canada, and they have tremendous synergies with other dairy companies in the United States. They use the dairy for distribution; SoyaWorld is really just a little marketing group. They don't want to see SoNice on the market because it outsold them 7 to 1–because it was a better product.

Now IPC is in such a mess, with so much debt (about six million Canadian dollars). Of this, about $2.5 million is unsecured to creditors. What could happen that would allow IPC to move forward? (1) A public company could buy the assets of IPC (the equipment, the brand, the goodwill)–not IPC itself; George could get rid of most of the debt with shares in a public company, so the company would not need a great deal of cash. (2) SoyaWorld could buy IPC; since August 1998 they have been trying very hard to do so. They are making a very complicated, long-term offer, with long-term royalties, etc. Both ProSoya (Raj Gupta) and IPC are tied into the deal. The amount of cash that would be put on the table at closing is quite small–not even enough to pay off the secured creditors, let alone the unsecured creditors. George is not happy with this deal, but there is not a lot he can do about it–except to keep on trying to scuttle it–as by talking to Horizon, the organic dairy. George feels very frustrated; he is cooperating with the deal to a degree, but at the same he's looking for a better deal. Yet he thinks the odds are 90% that IPC's assets will be owned by Dairyworld within the next few weeks or months. If it goes

through (the closing date is May 4) George will at least get his back pay–he has not been paid since last August–but he would loose a lot as a shareholder. George does not know whether or not he has a future with SoyaWorld if the deal goes through–but he plans to be in the soy business somewhere. Since George knows more about making IPC's soymilk than any other person in the company, he is one of IPC's most valuable assets–yet SoyaWorld has not offered him a firm employment contract. SoyaWorld hopes to buy out Raj Gupta and his patents, and get him out of the picture. Continued. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2598. Conquergood, George. 1999. History of work with soyfoods and vegetarianism. Part VIII (Interview). *SoyaScan Notes.* April 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In addition, SoyaWorld would instantly take control of the soymilk market in Canada. First they would gain control of the dairy case (which is where the future of soymilk lies), then they would start trying to push out the American-made aseptic soymilks such as Vitasoy. SoyaWorld would also quickly become a major force in the U.S. market by aligning themselves with major dairies to get distribution. George thinks that major American dairies will be putting Canadian-made soymilk in their delivery vehicles, trucking it to supermarkets, and putting it in American dairy cases. In Canada you have Parmalat / Beatrice Foods selling Sensational Soy soymilk from coast to coast. Since Jan. 1997 it has been packaged in 2-liter blue gable-top cartons at the Beatrice plant in Brampton (20 miles / 32 km west of Toronto, Ontario). It has a beany flavor because it is made by Pak Fok Food Products, a small Chinese company [run by Simon Kwan] in Scarborough (a suburb of Toronto), Ontario, that makes tofu and soymilk. There are no other soymilks, besides those sold by SoyaWorld and Beatrice, that have widespread distribution.

By the way, IPC taught Beatrice how to make this soymilk when Beatrice started packaging for IPC in 1996 using 1-liter aseptic, Tetra-Pak cartons. IPC also got a commitment from Beatrice to package gable-top products. When IPC introduced its refrigerated soymilk at the health food show, it got commitments (listings) from major stores to carry IPC's refrigerated soymilk in gable-top cartons. Beatrice was now packaging IPC's aseptic soymilk and IPC kept asking Beatrice when they could start packaging the gable-top soymilk. Beatrice kept stalling, and stalling–month after month after month. Beatrice said there was a problem with their equipment. Finally IPC actually launched its product through Farmland Dairies in New Jersey. IPC pulled all the packaging stock it had from Beatrice and sending it down to Farmland, because the stores were pressuring IPC, asking "Where's the product you promised us?" Then, low and behold, just as IPC starts distributing its gable-top soymilk packaged at Farmland, guess who comes out with a soymilk. Beatrice! IPC's president, Mr. Jerry Duncan, failed to finalize a contract, which contained a non-compete clause, with Beatrice. Nor was such a contract ever signed with Farmland. Duncan had been in the dairy business for more than 20 years, working for various companies. For example, he was very successful developing a novelty ice cream business, which he sold. He was responsible for expanding Dairyworld Foods from simply a dairy company to a food company. And he conducted the initial negotiations for Dairyworld Foods with Peter Joe of Sunrise. When Duncan left Dairyworld Foods after about 5-7 years, Maheb Nathoo took his place in the negotiations with Peter Joe. After Duncan started his own consulting company, IPC hired him as a consultant. So he should have known the importance of such a contract. Thus, it was both greed and lack of basic business skills that brought down IPC.

George is now very interested in functional foods / nutraceuticals. He has developed a soy pudding in this category. He has samples of a similar product, Alpro Soya Dessert, launched in Jan. 1989 in Europe in aseptic cups, four in a pack.

Dusty Cunningham has is now back in British Columbia. She has been hurt financially and still feels very badly about the collapse of IPC. She worked long and hard on the soymilk plant in Scotland.

Lorne Broten has gone back to work on the water company he developed. They use proprietary technology to soften water and to make chlorine from rock salt to avoid handling liquid chlorine.

George has not received any pay since last August. He is still working on the proper disposition of assets, but the main people working on that are the two men who now constitute the board of directors of IPC; they were both major investors. The final deal will involve a payback over a ten-year period. The dairy company involved wants to get control of the market for both dairy and soymilk across most of Canada. IPC had purchased (with down payment and mortgage) a food processing plant in BC. They had loaded the land and invested a lot of money in that plant. When it was clear that the necessary funds would not come through, they had to walk away from that deal, losing $750,000. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2599. Conquergood, George. 1999. Re: International ProSoya Inc. Letter to William Shurtleff at Soyfoods Center, April 21. 1 p. Typed, with signature.

• ***Summary:*** "Dear Bill, It was a pleasure to finally talk to you. Your name has been a household word around my place for many years. My copy of *Tofu & Soymilk*

*Production* is quite dog-eared. I am surprised that Raj never mentioned myself or Dusty and Lorne for that matter, but I was never in this for the glory. Like you I just wanted to make a difference.

"I will send you my historical story under separate cover later. For now I am enclosing some articles you may not have had on IPC, as well as sample packages of the products produced." This large box also included many samples of So-Nice soymilk in various flavors and sizes. Address: 15328 Columbia Ave., White Rock, BC, V4B 1J7 Canada. Phone: 604-541-8633.

2600. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Profiles: Real Roasted Soys. April. p. 7.
• ***Summary:*** Sharon Hart and Diane Marcou are the founders and owners of Dyshar Farms Ltd., which makes Real Roasted Soys. They have found that soy snacks make sense in terms of good taste and nutrition; people like them when they try them. Dyshar Farms' 4-point recipe for success has worked for them since 1996, and the company is in its fourth year of operation. Sharon Hart operates Blythe Brae Farms Ltd. just west of Woodstock, Ontario. The Real Roasted Soys company began almost by accident when [in 1986] Sharon "heard comments from dairy and pork [sic, hog] farmers that they liked to munch on roasted soybeans processed at the elevator. Then in the fall of 1995 she hosted a meeting of a businesswomen's club called Zonta, at which dietitian Diane Marcou was the guest speaker.

"To make the evening more interesting, Hart prepared a meal of roast pork and vegetables accompanied with all the soybean dishes for which she could find recipes, including salmon soy dip, soy salads, and roasted soybeans. Marcou was impressed, talked about the nutritional value of soybeans, and after eating roasted soys, ended the evening saying 'we must do something with these.'" Diane and Sharon formed a new company, Dyshar Farms Ltd.–the name was made by combining their first names. They hired a professional to design their registered logo, developed a web page (http://web.idirect/~soys/ [changed by April 1999 to soys.com]) and product information sheets. Today the company sells eight flavors of soynuts: Plain, salted, BBQ, salt and garlic, sour cream and onion, honey coated, maple syrup coated, and chocolate coated. Their herbal and plain roasted processing location is used exclusively for soybeans to assist people who may have allergies [as to peanuts].

Note: Dyshar Farms is located at R.R. #3, Woodstock, Ontario, N4S 7V7 Canada. Phone or fax: 519-537-2199. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2601. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. New president for ADM. April. p. 3.
• ***Summary:*** Archer Daniels Midland Co. recently elected John McNamara as president. This promotion took place less than two years after John was promoted from ADM's Canadian operations to assume the position of company vice-president responsible for oilseed crushing operations. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2602. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. A look at Brazil and Argentina. April. p. 4.
• ***Summary:*** Brazil and Argentina are currently the world's second and third largest soybean producing countries, respectively. Mr. Kim Cooper, of OSGMB, recently spent 2 weeks with 15 other tour members, studying soybeans in these countries. In Argentina. the top three producing provinces are Buenos Aires, Santa Fe, and Entre Rios. Surprisingly, 5-7 years ago, commercial fertilizers and pesticides were not used in Argentina. There has recently been a tremendous growth of acreage in Roundup Ready soybeans. There is still much potential for the growth of soybean and corn production in Argentina.

The Brazilian government is carefully considering its policies towards transgenic (Roundup Ready) soybeans. They are aware that local farmers want to use this new technology, but they are also aware of the European objections to such soybeans. Brazil is the world's last major soybean producing country that has not approved transgenic soybeans. "This puts Brazil in an enviable position, especially with many European countries." There appear to be no major obstacles to the growth of soybean production in Brazil. "It seems to be only a matter of time and money," both of which appear to be plentiful in Brazil. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2603. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Tofu... Simply delicious. April. p. 5.
• ***Summary:*** The Agricultural Adaptation Council recently approved OSGMB's application for funding of a new tofu recipe brochure. To be titled "Tofu... Simply Delicious," it will feature 8 easy-to-prepare tofu recipes with color photos of each, plus nutritional analyses and tofu preparation tips. It is expected to be completed in June 1999 and will be sent free of charge to the over 650 dietitians who requested tofu recipes for their clients in 1998 and 1999. It will also be made available to anyone who contacts OSGMB requesting information on soyfoods. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2604. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Market opportunity for non-GMO soybeans? April. p. 6.
• ***Summary:*** In Argentina, an estimated 70% of the 1999 soybean acres have been planted to Roundup Ready varieties. In America, the figure is predicted to be 50%, and in Canada 30%.

In the Americans, it seems that genetically engineered crops are a non-issue. "Consumer groups have a reasonably

strong level of trust in the regulatory systems that are in place for the registration of new products. The story in Europe is very different. After the 'Mad Cow' fiasco a few years ago. there is little trust in government regulatory bodies.

"Even though some genetically modified (GM) soybeans and corn have been approved for import and consumption within the European Union, over most of Europe the crops have not been approved for production. A few countries have imposed a two to three year period during which no GM crops will be grown. Consumer concerns have led a few countries to completely ban the imports and production of GM crops until further notice."

"Recently, consumer concerns have led some European food companies to demand that their suppliers provide only non-genetically modified products. It seems likely that the demand for non-GM soybeans in Europe and the market opportunity for Ontario soybeans will be around for some time to come." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2605. Yves Veggie Cuisine. 1999. Yves Veggie Cuisine: Recipe cards. Vancouver, BC, Canada.
• ***Summary:*** This is a full-page color ad for Yves Veggie Breakfast Links (fat free). "These links taste just like the real thing but they're good for the heart. That's because they have no fat, no cholesterol, and they're made of soy protein." Address: Vancouver, BC V6A 2A8, Canada.

2606. Conquergood, George. 1999. How Raj Gupta got into the soymilk business (Interview). *SoyaScan Notes.* May 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Raj is a research scientist and a physicist. He wanted to come up with something to feed hungry and starving people in Third World Countries. His native country is India and hunger has long been a major problem in India; he wanted to do something for his people. He focused on developing a low-cost protein source that was palatable. "He knew that soy was superior food, but people in Indian didn't like the taste." He wanted to develop good-tasting alternatives to cow's milk and paneer (fresh dairy cheese), which were quite expensive in India and came from the Holy Cow. Once he had a good soymilk, he wanted to use it as the base of puddings, yogurts, and other such foods which would be popular in India.

Raj went about this research scientifically, trying to understand what was causing the problem. He found that the oxidation of lipoxygenase enzyme led to off-flavors. To control that, he developed the concept and process of airless cold grinding. An associate of his, Grant Wood, who worked for the research council under him in the same department, is the person who actually designed the original SoyaCow.

Theoretically Raj was working in his home kitchen. But he was a government employee, working for the National Research of Canada, a huge organization in Ottawa. As a professor of physics, he had access to good scientific laboratories–but physics labs rather than food labs. He and Grant Wood did most of this work on their own time. He actually got a Canada Council award for designing the grinder.

Raj filed for two patents on his cold grind airless process. These patents are owned by a U.S. company, Micronics, in partnership with his brother, who is a university professor in the United States.

Note: According to Soyfoods Center records, in March 1985 Raj and his wife, Rashmi, applied for a Canadian patent titled "Process for making soymilk with no beany flavor" (No. 477,902). In 1986, Raj, his wife, and one other Gupta filed an international patent application titled "Food processing in oxygen-free environment" [Soymilk]. In April 1987 they filed for a U.S. equipment patent titled "Equipment for making no-beany flavor soymilk." They assigned the rights to ProSoya Corp. (Maryland Heights, Missouri).

In 1992, when George first met Raj in Ottawa, Raj was using his SoyaCow SC-20 to make both soymilk and tofu. He even had a little tofu forming box that he shipped with each SoyaCow. The box would form one batch of soymilk from the SC-20 into tofu. A filter press pressed the okara. You would coagulate the soymilk to make tofu. Today the SoyaCow SC-20 is being made in both Russia and India.

Frank Daller, who was originally in media in Canada, was an important early figure in ProSoya. Before he met Raj, he was working with a charitable organization in Canada (probably Plenty Canada, or perhaps Child Haven). Frank met Raj shortly before George did, when Raj was busy making his first SC-20s. Plenty had an SC-20 at The Farm in Canada, and today Plenty has several SC-20s in projects operating worldwide. The two main organizations that Raj started working with through a CIDA grant he obtained were Child Haven and Plenty. Frank Daller approached Raj and convinced Raj that he should become the president of the company–the man in charge of daily affairs at the office. He invested a little bit of money; with Raj, if you invest a little bit of money, you can do anything.

In early 1996, Frank Daller left ProSoya and set up his own charitable organization. One advantage of such a corporation is that it is not required to pay any taxes. He got a lot of cash by selling the shares he owned back to ProSoya and IPC. More importantly, he had rights to stock options–which he also sold. Somehow Frank and Loren Broten wound up in some difficulty. Today Frank is the president Daller & Co. Ltd. in Ottawa, Ontario, Canada. He sells soymilk and tofu processing equipment. Address: Vice-president Operations, International ProSoya Corp., 312-

19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2607. Harrigan, Brian. 1999. Update on the work of ProSoya Inc., especially in Russia (Interview). *SoyaScan Notes.* May 11 and June 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya gives 10% of their revenue (not their profit) from the SC-20 to Child Haven, the charitable organization which purchased the very first SC-20 SoyaCow from ProSoya. Child Haven now has a Soya Cow Resource Center in India near New Delhi. The managing director, a scientist, uses the Center to train people, and he goes on the road and shows the various places that have SoyaCows how to use them. SoyaCows are now also be purchased by private companies who make commercial soymilk; they are also assisted by Child Haven scientist.

Actually, the name of the SC-20 has now been changed to VS-40. VS can stand for various things in various languages, such as *Vaca Soya* (in Spanish) or *Vache à Soya*. But the main reason for the name change was that ProSoya wanted to have a number that reflected the capacity of the machine in liters per hours. In the SC-20, the "20" referred to the size of the cooking vessel, which was 20 liters. The machine has always been able to produce about 40 liters/hour of soymilk, using a batch process–a little more 13 liters per batch and three batches per hour.

In Russian *EsKa Vacit* means "SC-20" and *Soya Karova* means "Soya Cow." A program called "Feed the Children," is an American charitable NGO headquartered in Oklahoma City, with branches in about 14 countries. They have bought 200 SoyaCows (the VS-40) recently for Russia and they want to buy 800 more next year. There are now more than 500 SoyaCows in Russia–all over the country. Feed the Children buys these SoyaCows from a Russian company named ASSOY, in Krasnodar, run by Mr. Podobedov; these SoyaCows are made in by ASSOY in Russia under license from ProSoya in Canada–part of a technology transfer agreement signed about 3 years ago. The agreement says that ProSoya will get a small royalty on each system sold. ProSoya declined the offer to own part of the ASSOY business. Feed the Children buys the SoyaCows using money from USDA that was earmarked by Congress as part of the billion dollar U.S. Food Aid Program to Russia. This is the only non-food item in the program. Feed the Children got soybeans from USDA, monetized them by bartering them, then used the money to but SoyaCows from ASSOY in Russia. ProSoya in Canada receives nothing from the deal–except eventually (hopefully) its small royalty each machine sold.

Feed the Children, true to its name, places most of the SoyaCows it buys in social institutions, with the main objective of feeding kids. Brian would estimate the breakdown at 30% monasteries, 20% orphanages, 20% hospitals, 20% schools, and 10% prisons. Monasteries are one of the few social institutions that the Russian people still trust; they have generally remained honest and free of corruption. These monasteries include 50 Russian Orthodox Christian monasteries, which have long run soup kitchens and shelters to serve the hungry and homeless. The main monastery in Moscow, which is the home of the patriarch of the Orthodox Church, has a SoyaCow and now feeds soymilk and tofu (among other things) to more than 600 people a day–plus their own staff of 80 monks and 200 associates. The social institutions typically run their SoyaCows 20 hours/day and sell any excess soymilk to the public consumers. The SoyaCow comes with a cutter mechanism which transforms it into a SoupCow, and enables it to make a thick well-cooked vegetable soup in 20 minutes–starting with water and any mixture of raw vegetables (carrots and potatoes are popular). Okara is often added to these soups–to make them thicker and more nutritious.

This has also created competition. Four different companies are making machines similar to SoyaCows (some are *very* similar, which raises breach of patent issues). One of these competitors is the largest aerospace company in the ex-Soviet Union. They used to build fighter jets; now they make SoyaCow knock-offs.

in Russia, many SoyaCows are owned and operated by small entrepreneurs. They would read an article in a magazine or newspaper, or see the SoyaCow on TV, get the address of ASSOY in Krasnodar, and make contact. With Russia's current food shortages, this is one area rich with opportunities. An estimated 60% of the entrepreneurs bring the SoyaCow into an existing business (especially a food-related business) while the other 40% start a new business based on the SoyaCow. Entrepreneurs are looking for food sources that make them less dependent on food shortages and unreliable distributors.

About 95% of the SoyaCows in Russia make soymilk that is not packaged. Rather, it is sold hot, directly to consumers, either in little plastic cups or the consumers bring their own containers so they can take the soymilk home. Most SoyaCows are operated in the back of small fresh food stores, or in specialized little Soya Shops (Soyushka in Krasnodar). The fresh, hot soymilk is put into a large, clean metal container or drum. Typically two flavors are sold, each in its own large container: Dairylike contains granulated sugar and a little salt; chocolate is dairylike with added cocoa. In Russia, soymilk retails for about $0.12/liter; this is about one-third as much as cow's milk which costs $0.35/liter. Yet cow's milk is not readily available. A lady behind the counter uses a measuring cup to ladle out the hot soymilk (at about 70ºC) out of the pot and into the customer's container.

Through all of this, ProSoya in Ottawa is aiding Russia's transition to a market economy. Brian concludes:

"This is a fantastic program! It's unique, has a bright future, and we love it." The presence of ProSoya as a partner in Canada gives important legitimacy and credibility to ASSOY, assuring organizations like Feed the Children that ASSOY is not a "fly-by-night" outfit. They have "milked that relationship to the fullest–which is fine with us." Indeed ASSOY provides soybeans, training, infrastructure, and marketing aid in addition to SoyaCows. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2608. Thompson, Wes. 1999. Brief history of W.G. Thompson & Sons' work with soybeans, and current thoughts (Interview). *SoyaScan Notes.* May 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Since this year is the Thompson's 75th anniversary, Wes is interested in learning more about the company's history. They have been in the grain business since 1924. They ran an elevator business, and he thinks that, through it, they got involved with soybeans is about the late 1930s or early 1940s. They probably received soybean from farmers and shipped them to a crusher. The first soybean crusher in Ontario province that he is aware of was Victory Soya Mills [which began operation in late 1944]. In the 1950s Thompson's got into the seed business in a "brown bagger" way. In 1972 they started exporting and selling food type soybeans into Asia. And in 1975 they started a research group to breed soybeans; that was when they really got involved with soybeans in a big way. Over the year, the soybean exports and breeding have both grown nicely.

In the future, the company plans to focus more on food processing than on commodities–where the competition is fierce and the margins are small.

For the last few years, Thompson has supplied the European market with contracted non-GMO soybeans. So Wes is very sensitive to the changes in European attitudes to GMO that have taken place over the last few years. Thompson sells the soybeans as "GMO-free" and they get a premium for that, but they do not guarantee that these soybeans are GMO-free. Rather, they guarantee their "due diligence." They contract the production, then march the fields and inspect them.

As for the future of GMO: The first traits benefited the farmer rather than the consumer. Consumers will begin to show more interest and be less critical when new traits benefit them. Another problem in Europe was that industry and government did not take the concerns of consumers seriously. Wes is not afraid of labeling GMO products. "Let it happen. Keeping consumers in the dark is just asking for trouble."

A few days ago ADM came to farmers in the Blenheim area offering an 18 cent per bushel premium to farmers who grow non-genetically-modified soybeans. Their news release on the subject is dated May 5th. That seemed like a very important change of policy for a company as big as ADM. It seems like they believe that this will become a bigger issue before it becomes a smaller issue in North America. They defined what they considered non-GMO to be STS soybeans–which have herbicide resistance but the trait was developed through conventional breeding. Most of the soybeans ADM ships overseas are in the form of meal and other; a relatively small percentage is shipped as whole soybeans.

Wes' company is "a slave to two masters." They started out and continue to be focused on what their Canadian farmer customers want–which tends to be genetically modified. But in order to stay in business, over the last few years they have shifted their focus to food uses and consumers–both in Canada and in Asia. Address: President, W.G. Thompson & Sons, Limited, 122 George St., Box 250, Blenheim, ONT Canada N0P 1A0. Phone: 519-676-5411.

2609. ProSoya Inc. 1999. SoyaWorld Inc. acquires So Nice soy beverage brand: Leading soy beverage company also secures a strategic interest in ProSoya Inc. (News release). ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 2 p. May 17.

• ***Summary:*** "Vancouver-based SoyaWorld Inc., a leading manufacturer and marketer of fresh soy beverages, has acquired the So Nice soy beverage brand and a strategic interest in *ProSoya Inc.* Through this transaction the company has also acquired soymilk extraction plants and equipment in Ottawa and Vancouver. Terms of the acquisition were not disclosed.

"'So Nice is an organic soy beverage for health-conscious customers. SoyaWorld will re-launch the product in Canada and the United States as *So Nice Soyganic,* an organic soy beverage fortified with calcium and other essential nutrients. *So Nice Soyganic* will complement the company's successful flagship product So Good [based on soy protein isolates, licensed from Sanitarium Foods of Australia], the mainstream soy beverage and nutritional alternative to milk.

"'*So Nice Soyganic* is an organic beverage, that will be targeted to health conscious customers through distribution in the health food stores and natural food sections of major grocery stores nationwide," said Maheb Nathoo, general manager and chief executive officer of SoyaWorld Inc. 'The new *So Nice Soyganic* beverage is a natural extension of SoyaWorld's business and a quality addition to our portfolio of dairy-free beverages.'

"SoyaWorld will also assume the ownership of the licensor rights of So Nice brand for soy beverages that are currently marketed in the UK.

"SoyaWorld secures exclusive license to ProSoya soymilk technology: ProSoya Inc., an Ottawa-based soymilk technology company controlled by Dr. Raj Gupta,

develops technology and equipment for production of 'non-beany' soymilk using a patented 'air-less cold grinding' process. The ProSoya technology, which provides the soy base used in the manufacture of *So Nice Soyganic*, will now be licensed exclusively to SoyaWorld Inc. in North America, with rights in certain other countries as well.

"In addition, SoyaWorld Inc. gains access to ProSoya's international patents and advanced technology used to extract soymilk from soybeans. A table top version of the ProSoya soy extraction technology was recently tested by the Johnson Space Centre and was determined to be suitable for use in soymilk production on NASA's first manned mission to Mars.

"Soy beverage industry grows: The soy beverage market is one of the fastest-growing beverage categories in Canada. Dollar volume growth for soy beverages increased 106 percent in 1998 over 1997 with Canadians consuming more than 10 million litres last year.

"SoyaWorld Inc. is jointly owned by Dairyworld Foods of Vancouver, one of Canada's leading dairies, and *Sunrise Soya Foods*, Canada's largest tofu company. Formed in 1996, SoyaWorld is Canada's largest manufacturer and marketer of dairy-free beverages, with production facilities in Vancouver, British Columbia; Brampton, and Ottawa, Ontario.

"Contact information: SoyaWorld Inc. Maheb Nathoo, general manager and chief executive officer. (604) 420-0162.

"ProSoya, Inc. Dr. Raj Gupta, President. (613) 745-9115." Address: 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2610. Conquergood, George. 1999. The two final deals: SoyaWorld and IPC, and SoyaWorld and Raj Gupta (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The main deal (the takeover of IPC by SoyaWorld) was finalized on Friday, May 14, with SoyaWorld buying the assets of IPC. There was never enough money on the table to satisfy all of the secure lenders/creditors, so they (banks, governments, and a debenture holder–the big thorn in the side of the company) got the lion's share or that cash. Their securities were mostly liens on assets–such as food plants, processing equipment, etc. Everybody else has to wait until the next money-payment time, when the first royalties are paid. Raj Gupta (who has spent much of the past year working on these contracts) negotiated a separate deal from IPC to grant a license to SoyaWorld; they have a license that is very good, but not as good as the one IPC had. Raj came out of both deals in very good shape, at least in the short run. His goal of seeing his high-quality soymilk much more widely available should definitely happen. Dairyworld Foods has the option to buy him out, according to a sliding scale formula, whenever they wish. Assuming the product is successful: As Raj's royalties increase it makes more sense for them to buy him out; the sooner they buy him out, the less it costs them. George thinks he will probably be out of the picture in several of years. George got half of the money he was expecting; he was not offered a job by SoyaWorld or by Raj; Raj is willing to pay him commissions on any equipment he might sell as long a George pays all up-front expenses. Raj is very conservative; he wants his money used for R&D rather than to sell and promote his equipment.

SoyaWorld got two complete SC-2000 systems (including boilers, storage tanks, refrigeration equipment, etc.) and an R&D lab–assets worth several million dollars. One plant is in Ottawa and the other in Surrey, near Vancouver. SoyaWorld hopes to have SoNice back on the market by late May or early June. They will probably launch the product in eastern Canada–probably using product made at the Ottawa plant (formerly owned by IPC), which once made all the SoNice products sold throughout North America (and packaged in New Jersey). Note: ProSoya has its offices two buildings away on the same street (Canotek Road).

The two SC-2000 systems together can each produce 2,000 liters/hour of soy base at 10% solids. This becomes about 7,000 liters/hour of formulated product. This will give SoyaWorld a good start toward its first goal of having fresh soymilk in every dairy case where its milk is sold in Canada. The next expansion will be to the United States, and then to the world. The CEO of SoyaWorld is Maheb Nathoo, a native of India, whose background is in the dairy industry with Dairyworld Foods. When SoyaWorld was created he became its first CEO. Peter Joe, the head of Sunrise, is chairman of the board of SoyaWorld. David Coe, who is head of Dairyworld is so busy buying up small dairies all over Canada that he is rarely seen.

Who was at the table during the months of negotiations that led up to this deal? The two remaining members of IPC's board of directors (Eldon Heppner and Ward Yeager), IPC's lawyers, Maheb Nathoo, and the lawyers for Dairyworld and SoyaWorld. Peter Joe, David Coe, and Raj Gupta were all in the background as active players. Raj is the major shareholder in IPC and IPC is the major shareholder in Raj's company–ProSoya.

SoyaWorld is only semi-interested in offering George a position as head of their world soya development and marketing operations–creating new partnerships, joint ventures, etc. This is disappointing to George who feels they have "kept him dangling for 9 months, saying they are going to offer him a job." Dairyworld Foods has a similar position for their dairy operations. David Coe may want his dairy people to try to look after the soy operations; Maheb and Peter Joe seem to be favorably disposed to George filling the position. If George were to work for Raj, he

would, in effect, become part of a planned obsolescence program.

There are three huge dairies in Canada, each about the same size, and worth a little over one billion dollars. They are: Dairyworld Foods in the west, Parmalat Canada (including Beatrice) in Ontario, and Natrel Agri-Pura (a co-op of dairy farmers in the east–Quebec). But Dairyworld Foods is rapidly expanding by buying dairies in Ontario, Quebec, and the Maritimes. They plan to be Canada's first national dairy company; even now they have total coast-to-coast distribution. Another big daily company was Alt, the old Borden's dairy, but it got split up among Agri-Pura and Parmalat. Dairyworld believes that the soy industry in North America has a very bright future. Part of their long-term strategy is to use their dominance in the soy industry to dominate the dairy industry. George believes that, starting about now, the dairy industry will start to lead the soymilk expansion, and push even lower the price of soymilk products. They may even be able to sell soymilk, like dairy milk, as a loss leader or at a much lower markup than other refrigerated dairy items.

George thinks that SoyaWorld will produce both aseptic and fresh (gable-top) soymilk. They have a large number of both Tetra Pak machines and ESL (Extended Shelf Life) machines. Any soymilk they make in western Canada at their Ottawa plant can be packaged nearby at their dairy in Brampton, 20 miles west of Toronto. As far as George knows, the same thing happened to Dusty Cunningham that happened to him. She has not been offered a job by SoyaWorld, but she is still doing consulting in Scotland.

Many companies are realizing that it's a good idea to set up a soy dairy adjacent to a plant with state-of-the art packaging equipment. However it is not a good idea to build the soy dairy in the plant, lest dust and microorganisms from the soybeans be introduced into an environment which must be kept extremely sanitary. Moreover, the machines come with such huge capacity, that they can be used most efficiently if they are packaging a variety of products.

Since George was not one of the people negotiating this deal, he has not seen the final agreements. But he knows the general outcome because so many people have talking and consulting with him to get basic information about the company and because he is still a major player (significant shareholder). He and Raj have been in touch regularly throughout the negotiations. Address: Ex Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2611. Holz, Alan. 1999. How have U.S. exports of soybeans to western Europe changed over the past few years? Have these figures been affected by European concern with genetically engineered (Roundup Ready) soybeans? (Interview). *SoyaScan Notes.* May 18. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Exports of soybeans / soybean meal from the USA to the EC-15 countries (the 15 countries in the European Community) are as follows (in million metric tons) from fiscal year 1994 (FY-94 = Oct. 1993 to Sept. 1994). Source: U.S. Bureau of Census data:

8.07 / 1.42 (FY-92)
6.20 / 0.73 (FY-93)
9.52 / 1.42 (FY-95, the peak for soybeans)
7.55 / 0.90 (FY-96)
8.04 / 1.31 (FY-97)
7.06 / 2.01 (FY-98, ending Sept. 1998). So while exports of soybeans to the EC-15 have been decreasing, exports of soybean meal have been increasing–recently. Crushing margins in Europe's large crushing industry strongly determine where the EC-15 countries import soybeans or soybean meal.

Next we must look at soybean imports by the European Union (EU), which are as follows:

13.11 (FY-93-94)
16.05 (FY-94-95)
14.25 (FY-95-96)
15.31 (FY-96-97)
16.88 (FY-97-98)
15.62 (FY-98-99). So EU soybean imports are generally increasing, but they are down during the last year. And their total imports are down partly because their indigenous production of oilseeds and soybeans is up.

Alan, who has been a USDA oilseed analyst for many years, thinks that the Roundup Ready soybean issue has only a small effect on western European consumption levels. The Europeans, more or less, buy what they need from the cheapest source. So prices probably explain more of the drop in exports than the Roundup Ready issue. Another key factor is indigenous European oilseed production, which has risen from 11.5 million metric tons (MMT) in 1993-94, to an estimated 15.5 million tonnes this year (1998-99 analysis year). The Europeans grow a relatively small amount of soybeans (1.7 MMT) this year and 800,000 tonnes in 1993-94 (mostly in Italy). The biggest oilseed crop in the EC-15 is rapeseed (9.4 MMT) followed by sunflower (3.6 MMT), soybeans, and cottonseed (0.7). Most of the increase in European production is caused by yield, and only a small amount by greater area. Copra and palm kernel which are grown in the tropics and imported to the UK.

Another factor depressing U.S. soybean prices is that over the last 10 years the European Community, China, India, Argentina, Brazil, Canada, and the USA have all taken land out of grain production and started to cultivate oilseeds (including soybeans). This extra worldwide production has led to an increased supply and stocks. U.S.

farmers continue to plant more soybeans since the loan rates favor soybeans over corn.

Concerning Brazilian exports: "Brazil has probably been selling some Roundup Ready soybeans whether they call them 'Roundup Ready' or not. That technology is available all over." Alan has no firm evidence but he says that this is the rumor.

In conclusion: Only a complex interaction of many variables can explain accurately why soybean exports to western Europe are down during the last year. If Roundup Ready is a factor, it is probably a very small one. The huge stocks (unused, unsold soybeans) are the main factor keeping soybean prices low.

Some interests outside the U.S. are concerned that we will become so dependant on a few highly developed strains and varieties that, if something goes wrong, there will be a food security problem. But this is less of an issue now than ever before because the U.S.'s percentage of the world oilseed supplies is now much less than it was in the past. There are many other producers and exporters. So with a more diversified source of supply, the risk is less. However the risk for American soybean farmers is more, because we are becoming increasingly dependant on certain soybean markets–such as China–and on certain varieties, which is the farmer's risk but not the consumer's risk. Address: USDA Foreign Agricultural Service, Oilseeds & Products, Room 5638 South, 14th & Independence, Washington, DC 20250. Phone: 202-720-0143.

2612. Lee, Jenny. 1999. Burnaby-based SoyaWorld tightens grip on market: Patented technology acquired in purchase. *Vancouver Sun (British Columbia, Canada).* May 18. p. D1, D12. Business section.

• ***Summary:*** On Monday, May 17, SoyaWorld, based in Burnaby, British Columbia, tightened its grip on Canada's $25 million a year soy beverage market. From International ProSoya Corp. of Surrey (near Vancouver) the SoNice brand, and soymilk extraction plants in Vancouver and Ottawa.

SoyaWorld also acquired a strategic interest in ProSoya Inc., an Ottawa-based company which developed the technology and equipment for producing a good-tasting soymilk using a patented grinding process. Financial terms were not disclosed.

SoyaWorld is jointly owned by Dairyworld Foods–western Canada's largest food company–and Sunrise Soya Foods, one of Canada's largest tofu manufacturers. Both companies are located in Vancouver.

A photo shows Maheb Nathoo, general manager and CEO of SoyaWorld, as he holds up new packaging for SoNice.

Note 1. Talk with receptionist at Dairyfoods World. Their official name is Agrifoods International Cooperative Ltd. They are a cooperative owned by dairy farmers in Canada. Their address: 6800 Laugheed Hwy., Burnaby, BC, Canada V5A 1W2. Phone: 604-420-6611.

Talk with George Conquergood of IPC. 1999. May 28. The date that SoyaWorld officially finalized its deal with IPC was Monday, May 10. May 17 was the date that SoyaWorld sent out its news release.

2613. Cunningham, Dusty. 1999. The founding of ProSoya UK Ltd., a new soymilk manufacturing company in Livingston, Scotland (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** ProSoya UK LTd. (formerly called ProSoya PLC) is a new soymilk manufacturing company licensed to use the ProSoya process. They are located at No. 2 Kingsthorne Park, Houstoun Industrial Estate, Livingston, Westlothian EH54 5DL United Kingdom (Scotland). Phone: +44 1-506-433-777. David Simpson is managing director, and David Cormack is production manager. Address: Suite 114, No. 10 Paul Kane Place, Victoria, BC, V9A 7J8 Canada. Phone: 250-361-3225.

2614. Gupta, Raj. 1999. Update on ProSoya Inc. Background on Raj Gupta (Interview). *SoyaScan Notes.* May 21. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Raj is very happy with the fact that Vancouver-based SoyaWorld Inc. has acquired the SoNice brand and a strategic interest in ProSoya Inc. Raj has 5-6 U.S. patents on his process and equipment. The first patent was issued in about 1990 and has a life of 18 years, so it will be valid until about 2008.

About 35 SoyaCows (VC-40s) are now in operation in India–most of them in private businesses making tofu (soya *paneer)* rather than soymilk. Three or four of these are in New Delhi.

Raj's formal name is Rajendra Prasad Gupta. He was born on 18 Oct. 1942 in Sahranpur, Uttar Pradesh, India. He received all of his formal education, including his PhD degree in India. He married Rashmi in 1975 and is still married; she is very interested in his work with soy.

Grant Wood is a Canadian mechanical technologist who was Raj's colleague at the National Research Council. Raj had approached many people, but they were unable to build the machine he wanted. He told Grant Wood that he was trying to make a small (SC-20 type) soymilk machine, and that he was doing this for humanitarian purposes and for Child Haven. He asked Grant if he could help. As soon as he heard "humanitarian" he immediately got interested. He volunteered all his time, and a great deal of it, with no offer or promise of any future reward. Raj paid all expenses for materials. He had an excellent workshop in the 2,500 square-foot basement of his home in Ottawa, and there he built the first prototype and assembled the first twenty SoyaCows in a workspace on which he paid no overhead.

As ProSoya became more of a commercial establishment, in recognition of his generous and selfless work, Raj issued Grant about 10% of the company's shares. He still owns those shares, and he will benefit as the value of the company rises. He is not interested in cash now. He and his wife can get $1 million tax free.

It was not until 1994 that ProSoya outgrew the basement workshop and moved into the first commercial building on which the company had to pay rent.

ProSoya Inc. manufactures soymilk equipment and licenses technology. The brand "So Nice" cannot be registered as a trademark, no it can be written as either "SoNice" (pre-1999) or "So Nice" (now). Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2615. Joe, Peter. 1999. Sunrise Soya Foods and the creation of SoyaWorld Inc. in Vancouver, Canada (Interview). *SoyaScan Notes.* May 26. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** First a bit of background: In late 1995 Peter Joe went to Dairyworld and began talking with them about doing a soy yogurt together. Dairyworld is a huge co-operative of dairy farmers in western Canada (not just British Columbia). Gradually the talk turned to soymilk. Dairyworld had powerful packaging and distribution capabilities, while Sunrise had manufacturing and a deep knowledge of the soy business. Dairyworld got more and more interested in soymilk. Initially Peter started talking with a person who is no longer there. As the talks grew more serious, Maheb Nathoo was added to the team that soon drew up a shareholders and joint-venture agreement. Maheb, who is very bright, seemed to have a personal interest in soy. His daughters were into soy. He realized that milk is a commodity, that soymilk is another form of liquid protein, and is part of the milk shelf. Now he has become a convert, and he feels very strongly about the future and potential of soy. Maheb was the person who convinced the board of Dairyworld Foods (which consisted mainly of dairy farmers) that the joint venture with Sunrise was the way to go. These farmers realized that Sunrise was getting more and more space on the dairy shelf (i.e., invading their territory) so, hey, why not get involved with this newcomer. Dairy people also remember what happened with margarine; if they had gotten into the margarine business at an early date, they would have been able to offer it as another product, rather than having to compete with margarine using butter. Finally, the top executives and management people at Dairyworld think beyond the dairy farm and dairy farmer mentality, and they have done a good job over the past 3-4 years in getting the approval of the dairy farmers to go ahead with this joint venture.

At the same time Peter met Sanitarium people at trade shows for a number of years. Sanitarium was trying to sell the product into Canada from Australia in an aseptic package. Finally Peter went to Sanitarium to ask for a license; they were looking to expand internationally, so the timing was good. The final agreement gave Peter exclusive rights to sell So Good in the USA and Canada.

SoyaWorld Inc. was incorporated in Aug. 1996 with Dairyworld Foods and Sunrise each putting in money and owning half the shares. The new Soyaworld board of directors (4 people, two from each company) was formed at that time. Maheb moved from Dairyworld to SoyaWorld in late 1996. In mid-1997 Soyaworld got the license to make So Good from Sanitarium Foods (Australia). Test marketing of So Good began in mid-1997 (with the name Soyaworld Inc. on the package), then in Jan. 1998 the product was officially launched with a big TV advertising campaign. The humorous ad shows a cow confessing that she drinks So Good; it is even endorsed by cows! This may have been the first national mass market TV campaign for soymilk in North America. In late 1997 the Canadian government first allowed soymilk to be fortified with calcium and vitamins. This showed a weakening of their many laws designed to protect dairy products. Use of the word "milk" is still not allowed. Soyganic was launched in mid-1998.

Peter works closely with Dave Coe, who is the CEO and president of Dairyworld Foods and on the board of Soyaworld. He is the one who is responsible for the joint venture with Sunrise and for what is happening with Soyaworld–in a sense. Maheb is now working for Soyaworld as general manager and CEO; he no longer works for Dairyworld.

If a taste panel consisting of typical Canadians was asked to taste So Good and SoNice Vanilla, Peter thinks So Good would win. SoyaWorld plans to target So Good and SoNice to different markets. SoNice in Tetra-Pak cartons still has a very strong following among natural foods customers, but Soyaworld will try to sell SoNice in supermarkets as well as natural food stores in both fresh and UHT cartons. So supermarket consumers will have a choice. So Good is sold in both gable-top (fresh) and aseptic / UHT packages, but about 90% of the sales come from the fresh product. Peter would guess that the same would be true in the USA. Many Asian-Canadians love Soyganic, which has a beany flavor; they have grown accustomed to that taste. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada. Phone: 604-254-8888.

2616. Conquergood, George. 1999. SoyaWorld Inc. (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** SoyaWorld is only a marketing company. They are located at 4074 Lozells Ave. in Burnaby, a suburb of Vancouver on the eastern side of the city. Dairyworld Foods is also located in Burnaby. The city of Vancouver is located

just a few miles north of the Washington state border; to its west is water–the Straight of Georgia. Across the Strait is Vancouver Island. Surrey is a few miles southeast of Vancouver.

SoyaWorld occupies some small offices on the second floor of an old ice cream plant owned by Dairyworld Foods but now no longer operational and used by Dairyworld as a storage facility. About 8 people are employed by SoyaWorld and work in those offices. The president is Maheb Nathoo, and he goes to work there each day. One marketing person, one sales manager, one controller (accountant), etc. also work there. It is now clear to George that he will not be working for SoyaWorld. He had lunch with Maheb yesterday, and they have discussed this matter for months. They may still want to retain George as a consultant some day, or he may end up as their competitor in the soymilk business. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2617. Conquergood, George. 1999. SunRich, IPC, and soymilk (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** SunRich makes all the soymilk sold by Westbrae and George believes they make soymilk for many other companies. They have done so for at least several years. At one point in 1998 Lorne Broten negotiated with Allan Routh, president of SunRich, about buying IPC–or at least coming to their financial aid. Allan was interested in buying the "SoNice" brand–which is more precisely the "ProSoya SoNice" brand since "So Nice" cannot be registered as a trademark by itself. Allan wasn't interested in licensing or buying the ProSoya process; he apparently didn't want to pay Raj Gupta any money. Allan sent some of his soymilk to George; he wanted to know if George could formulate the SoNice product with his soymilk. George did so and was very impressed. In fact, he thinks it tastes very similar to that formerly made by IPC using the ProSoya process–though not quite as good, perhaps because of the formulation.

How would ProSoya find out if SunRich or any other company was using the patented ProSoya process? Raj Gupta says he can do a "footprint" of the product's flavor profile of any soymilk product [perhaps using chromatography] and tell in that way–with only the commercial product for evidence. But George has never seen any proof of this. If Raj is right, he would not have to send any "patent police" into a competitor's plant. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2618. Conquergood, George. 1999. How IPC made soymilk using the ProSoya process (Interview). *SoyaScan Notes.* May 28. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The washed and soaked soybeans are ground with cold water in a sealed chamber using an "airless cold grind" process. This slurry is piped, still in a sealed airless environment, into a cooker, where it is cooked with steam injection. The internal temperature being raised to 120ºC, it is held there for 3 minutes, then "flashed" into a vacuum chamber. Prior to this "flashing" step no air has come in contact with the slurry. The critical point for the lipoxygenase enzyme is when the bean is being broken or ruptured; after that is less critical. The soymilk is then separated from the okara, in a closed, fairly well sealed environment. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2619. Conquergood, George. 1999. The four main soy companies created by accountant Lorne Broten from 1994 to 1997 (Interview). *SoyaScan Notes.* May 29. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** After the many early companies–and shell companies–created by Lorne to raise money, he formed four main soy companies: (1) The first real company, Pacific ProSoya Foods Inc. was created in 1994. (2) International ProSoya Corp. (IPC) was formed in early 1996. (3) IPC Eastern was created a few months later–in about March or April 1996 when IPC purchased ProSoya's Ottawa plant. That became an operating company that operated the Ottawa plant. All of the employees were paid by IPC Eastern. (4) ProSoya Foods Inc. was formed by a name change in 1997; it had formerly been named Pacific ProSoya Foods Inc. That became the operating company for the western plants in British Columbia; it likewise paid those production employees. But any administrative staff, such as George, got paid by IPC. ProSoya Foods Inc. was also the marketing and sales company that sold the soy products. If another company purchased SoNice, they would get an invoice from ProSoya Foods Inc.

George thinks of the formation of these various companies as "shell games." It's a way of shuffling assets, borrowing money, etc. For example, you can borrow as much money as possible under one company name, then go borrow more under another name. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2620. *At Guelph (Ontario, Canada).*1999. Posthumous honorary degree: Charles Zavitz. June 2. p. 9.
• ***Summary:*** In the section titled "Awards and Honors" we read: "As OAC celebrates 125 years of partnerships and achievements in agriculture, dean Rob McLaughlin says

there is no better role model for the future than this eminent figure from the past."

"He introduced soybeans into Canada in 1925 [sic, 1893] and released OAC 211, the first soybean variety registered in Canada."

A photo (courtesy of Univ. of Guelph archives) shows the five young men in the first graduating class from OAC. Charles Zavitz is seated at far right. "On Oct. 1, 1888, he and his classmates received their degrees in a special ceremony at the University of Toronto, where Guelph degrees were conferred until the University of Guelph was established in 1964. Another notable classmate of Zavitz's was George Creelman, centre, who was principal of OAC from 1904 to 1920."

2621. Conquergood, George. 1999. IPC's nightmares packaging SoNice soymilk in Canada and the USA (Interview). *SoyaScan Notes.* June 2. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Nov. 1996, when IPC (International ProSoya Corp.) first launched SoNice (in 1 liter aseptic) in Canada, they were planning to make both a regular and a lite (with water added to reduce calories and fat per serving)–except nobody wanted the regular, they all wanted the lite. So they produced a Vanilla Lite and an Original Lite–but Canadian laws forbade them from call the original "original lite" because of some detail (long forgotten) concerning fat ratio. The chocolate and natural were always the "full formula." In the aseptic 250 ml size, introduced after the 1 liter as an emulation of it, they produced only Chocolate and Vanilla Lite.

Then in Jan. 1997 they followed with a refrigerated (gable-top) line in Canada, which bore a rondel in the lower left corner of the front panel; in a semicircle across the top was written "Canadian Technology" and in the center was a maple leaf. This refrigerated line reflected new formulations, with fortification. But the label didn't mention that it was fortified, except on the ingredient panel–because at that time (in 1997) the regulatory agencies in Canada forbade fortification of soymilk in Canada. Moreover, there are different labeling regulations in the USA and Canada. So IPC must package its soymilk for the American market in a different package, with no French text on half the package, and based on at least four different nutritional labeling rules. (1) The nutritional panel in U.S. products must bear the heading "Nutrition Facts." (2) The rules for rounding off nutrient values are different in the two countries. (3) The serving size is 1 cup (240 ml) in the U.S. vs. 250 ml in Canada. (4) The U.S. prefers quarts while Canada uses the metric system–like almost all other countries worldwide. These differences created a packaging nightmare for IPC.

When IPC originally launched the Canadian refrigerated line it was being packaged by Farmland in New Jersey. They were packaging only Canadian products. But when they launched these products in the USA it was another nightmare, because the packaging on these high-speed machines had to be changed from quarts to liters for the same flavor. So they decided to change the Canadian packaging to all quarts and half gallons–so Farmland didn't have to stop its machines to change packages by flavor. But they still had to change packages by country. The original Canadian refrigerated line in 1 liter gable-top packages was supposed to be packaged at the Beatrice plant in Ontario. You can tell this rare vintage of label because the Kosher symbol is "COR 110" in a circle.

Refrigerated products were first introduced to the U.S. market at the Natural Products Expo (Baltimore, Maryland) in Oct. 1997, and products were first shipped in November or December 1997. Note: On the 1 quart ProSoya SoNice soy beverage for the USA, the manufacturer is given as SoNice Soy Corporation, P.O. Box 93009, Langley (Vancouver), BC, V3A 8H2 Canada. But on the refrigerated 1.89 liter product for Canada the manufacturer is given as ProSoya Foods Inc., Surrey, BC, V3S 8E7. Why? At one point IPC had So Nice Soy Corporation marketing the product. This was a very short-lived print run; it changed as time passed, but its all basically the ever-changing IPC. So we're back to Loren Broten and his shell game. But to make things even more complex (and comical), the original processing plant at 19292 60th Ave. in Surrey is literally on the border between Langley and Surrey. Address: Vice-president Operations, International ProSoya Corp., 312-19292 60th Ave., Surrey (Vancouver), BC, V3S 8E5 Canada. Phone: 604-541-8633.

2622. Harrigan, Brian. 1999. How to buy a soymilk system made by ProSoya Inc. (Interview). *SoyaScan Notes.* June 7. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** All orders for SoyaCows of any size should be directed to ProSoya in Ottawa, Canada. The only ones they may not be able to accept are those for systems with a capacity of greater than 200 liters/hour that will be used in the USA or Canada; they must refer such orders to SoyaWorld in British Columbia. SoyaWorld might be interest in a joint venture but not in competitors.

The SoyaCow VS-40 system, which makes about 40 liters/hour of soymilk, sells for US$5,950, including the grinder-cooker, press, and 8 kilowatt electric boiler, but not including small utensils (such as plastic buckets and ladles) and the packaging equipment. The SoyaCow VS-30 has a propane gas boiler.

The SoyaCow VS-200, which makes about 200 liters/hour of soymilk, costs US$42,500, including an electric boiler. A "stripped down" model is available for $25,000; it includes no skid or boiler.

The soymilk that comes out of these two SoyaCow systems contains 8% soy solids. Since ready-to-drink

soymilk typically contains 5% soy solids, each system will make about 60% more ready-to-drink than its rated output. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2624. Harrigan, Brian. 1999. Re: Prices for VS 30/40 system and VS 200 systems sold in the USA: Quote USA/96A25. Letter (fax) to William Shurtleff at Soyfoods Center, June 25. 3 p.
• ***Summary:*** All orders for SoyaCows of any size should be directed to ProSoya in Ottawa, Canada. A VS-40 system with an 8 kW electric boiler costs US$7,000. A VS-2000 system with a 40 kW electric boiler costs $45,000.

Note from Brian. The prices for these systems are higher when sold to the USA than anywhere else in the world because of the 15% higher insurance premiums ProSoya has to pay and because litigation and other legal pursuits are a national pastime in the USA. The prices for the same systems sold anywhere else in the world are 15% less, i.e., $5,450 for the VS30 and $5,950 for the VS40. If the application is humanitarian, there is a 15% discount. There are also discounts for multiple orders. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2625. Affenito, Sandra G.; Derstetter, J. 1999. Position of the American Dietetic Association and Dieticians of Canada: Women's health and nutrition. *J. of the American Dietetic Assoc.* 99(66):738-51. June. [227 ref]
• ***Summary:*** Contents: Abstract. Introduction. Position statement: Cardiovascular disease, breast cancer, colorectal cancer, gynecological cancers (cervical, endometrial, and ovarian), osteoporosis, menopause and HRT, iron status, AIDS/human immunodeficieny virus (HIV), diversity, determinants of health, health promotion. Conclusion.

"The use of phytoestrogens? in the form of soy supplements for women taking tamoxifen is unclear??"

Mark Messina comments: Infuriating! They cited Petrakis & Phillips, which are the best two human studies to cite because they raise red flags, but they are about soy protein, not about soy supplements. The ADA's position is that all foods fit; there are no good or bad foods. They are generally opposed to the use of supplements/pills (even vitamins C and E), but they make an exception for calcium supplements. Address: PhD, RD, St. Joseph College, West Hartford, Connecticut, USA.

2626. Bulpitt, Christopher J.; Rajkumar, C.; Cameron, J.D. 1999. Vascular compliance as a measure of biological age. *J. of the American Geriatrics Society* 47(6):657-63. June. [64 ref]
• ***Summary:*** "Sir William Osler said, 'A man is as old as his arteries,..." Yet it is compliance in the aorta and the carotid artery that are most closely related to biological age–as opposed to chronological age.

Note: Dr. Osler, born 12 July 1849 in Ontario, Canada, has been called one of the greatest icons of modern medicine. He was one of the four founders Johns Hopkins Hospital in Maryland. Address: 1-2. MD, Section of Geriatric Medicine, Imperial College School of Medicine, Hammersmith Hospital, London, UK.

2627. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada).*1999. 50th anniversary of the Ontario Soybean Growers. 13(1):1. June.
• ***Summary:*** In 1949, when the Ontario Soybean Growers Marketing Board (OSGMB) was established, there were only 6,000 soybean producers in Ontario. They started OSGMB to deal with issues such as moisture discounts, maximum handling charges, grower payment terms, and to try to settle a dispute. These growers were also concerned that the industry's historic boom and bust cycle would lead to its downfall.

In 1948-49 these 6,000 growers produced 49,600 tonnes (metric tons) of soybeans on 94,000 acres, and exported less than 13,000 tonnes. They got a yield of 19 bushels/acre and received an average price of $84.50/tonne (Canadian dollars).

In 1998-99 there were 23,000 soybean producers in Ontario. They produced 2,343,300 tonnes (metric tons) of soybeans on 2,100,000 acres, and exported more than 650,000 tonnes. They got a yield of 41 bushels/acre and received an average price of $283.00/tonne. Thus soybean production in Ontario has increased more than 47-fold since 1948-49!

Note: This newsletter was previously titled *Canadian Export Soybeans.*

2628. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada).*1999. Services of the Canadian Grain Commission–Export soybeans. 13(1):1-3. June.
• ***Summary:*** Contents: Introduction to the CGC. Inspection services: Vessel shipments, truck, rail and container shipments. Special analyses. Oil and protein content. Monitoring services. Entomology services (insects). Verification/audit services. Genetic testing. Weighing services.

Concerning genetic testing: "The Chatham office is in the process of implementing test procedures aimed at the identification and certification of GMO/non-GMO (Roundup Ready) soybean shipments. Initially, testing will involve an ELIZA based method which, after internal evaluation is known to provide reliable detection at levels above 0.3%. In the longer term, the CGC will explore and move to alternative methods that will enhance its abilities in this area."

A photo shows Jim Lowe of the CGC as he shows samples of Canadian soybeans to members of the Japanese Tofu Association.

2629. *Canadian Soybean Bulletin (OSGMB, Chatham, Ontario, Canada).*1999. Canadian soybean exports. 13(1):4. June.
• ***Summary:*** A large table shows statistics on tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1994/95 to 1997/98. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 1997/98 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Norway 159,000, United States 134,706, Japan 62,931, Portugal 58,465, Spain 34,759, Hong Kong 23,210, Belgium 20,687, and Malaysia 20,539.

2630. *Canadian Soybean Bulletin (OSGMB, Chatham, Ontario, Canada).*1999. Serial/periodical. Chatham, Ontario, Canada: Canadian Soybean Growers' Marketing Board. Began with Vol. 13, No. 1 (June 1999).
• ***Summary:*** Continues *Canadian Export Soybeans.* Until June 1999 (Vol. 13, No. 1) this newsletter was published by the Ontario Soybean Growers' Marketing Board. At that time the publisher's name was changed to the Ontario Soybean Growers. Starting in the fall of 2001 the publisher changed to the Canadian Soybean Export Association (at the same address). The subtitle also changed to "The Export Newsletter of the Canadian Soybean Export Association." Address: Chatham, Ontario, Canada.

2631. Golbitz, Peter. 1999. Soybean superstar: Conferences push soy into the spotlight. *Bluebook Update (Bar Harbor, Maine)* 6(2):4-5. April/June.
• ***Summary:*** Contents: Introduction. Darling of the media. Starring role in food technology (IQPC is sponsoring Soyfoods '99 conference on 26-28 April in Chicago, Illinois). On a roll since last fall (in Sept. 1998 the Ontario Soybean Growers sponsored a Food Soybeans Conference & Tradeshow in London, Ontario, Canada; in Oct. the United Soybean Board sponsored a Soyfoods Symposium in Chicago). Chicago: Soy kind of town (Global Soy Forum '99 will be held Aug. 4-7). Soy Goes to Washington, DC (Third International Symposium on the Role of Soy in Preventing and Treating Chronic Disease, will be held from Oct. 31 to Nov. 3). The benefits of stardom.

2632. Hayes, Keri. 1999. Biosafety protocol is put on hold. *Bluebook Update (Bar Harbor, Maine)* 6(2):1, 7. April/June.
• ***Summary:*** Delegates from 174 countries gathered in Cartagena, Colombia, for 10 days of negotiations. Their goal was to establish international rules for handling, trading, and transporting living genetically modified organisms. But on Feb. 24 they suspended their talks. On one side of the debate was the "Miami Group" (USA, Canada, Australia, Argentina, Chile, and Uruguay) and on the other was all other countries, led by the European

Union–which is pushing for labeling of any products that contain GE ingredients.

2633. McLaughlin, Rob. 1999. Charles Ambrose Zavitz. Guelph, Ontario, Canada. 2 p. 28 cm.
• ***Summary:*** Citation honoring Charles Ambrose Zavitz on 11 June 1999 on the recommendation of the Senate of the University of Guelph, for the degree of Doctor of Science honoris causa, to be awarded posthumously. It begins: "Mr. Chancellor: On the recommendation of the Senate of the University of Guelph I have the honour to put forth the name Charles Ambrose Zavitz for the degree of Doctor of Science *honoris causa.* This degree will be awarded posthumously." A biography of Dr. Zavitz follows, including the following: "In 1893, Zavitz introduced soybeans into Canada. For the next 35 years, he evaluated, selected, and developed many lines. On Aug. 26, 1925, he released OAC 211, the first soybean variety registered in Canada. Also during this period, he was evaluating management techniques for soybeans, that is, planting dates, seeding rates, etc.

"Charles Zavitz was an early pioneer in the use of small plots for research, which were termed by detractors as 'little onion beds.' However, the uniformity of the soils in this procedure, his very accurate measurements, the cleanliness of his plots, and his extreme care ultimately proved his critics wrong. In addition, Zavitz was one of the pioneers in adapting to the new science of genetics, subsequent to the re-discovery in 1900 of the basic laws of inheritance by Mendel 35 years before. As early as 1902, Zavitz was engaged in controlled cross-fertilization of superior varieties in an attempt to produce new superior varieties. By 1920, about 50,000 hybrid plants were grown and examined annually.

"Charles Zavitz was made the First Canadian Fellow of the American Society of Agronomy in 1912, he received an honorary Doctor of Science from the University of Toronto in 1916, an honorary Doctor of Laws from the University of Western Ontario in 1935, and was inducted into the Canadian Agricultural Hall of Fame in 1967 [sic, 1974]. It is indeed fitting that, on the 125th anniversary of the Ontario Agricultural College, the University of Guelph chooses to add to these honours by awarding Charles Zavitz a posthumous honorary degree.

"Mr. Chancellor: On behalf of the Senate of the University of Guelph, it is my privilege to call on you now to confer posthumously on Charles Zavitz the degree of Doctor of Science *honoris causa.* The honorary degree will be accepted on behalf of the Zavitz family by James R. Zavitz who is the grandson of Charles Zavitz."

Note 1. Attached to this citation are two excellent color photos of James R. Zavitz, standing outdoors under trees, holding the award honoring his grandfather. Note 2. Talk with James R. Zavitz. 2001. Dec. 6. This citation was written and read by Rob McLaughlin, Dean of the Ontario Agricultural College–even though his name does not appear on the document. Address: PhD, Dean of the OAC, Guelph, Ontario, Canada.

2634. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. 1999 Project SOY winners announced. June. p. 8.
• ***Summary:*** Winner of the Diploma division was Ben Arnold with his Soyf's Up flutterboard [kickboard] made from soy-enhanced polyerethane. A photo shows Ben holding his board.

"Second place was awarded to the creator of Water Lily soy oil soaps. Spreadable butter made with soy oil captured third place.

"The undergraduate / graduate category was won by Valerio Primomo for his Soylight soybean candles. An edible soy protein coating used to protect foods from absorbing too much fat during deep frying, was awarded second prize. *SoyWorks,* a soybean research publication and SoYummy SoyPops, a tofu-based frozen fruit bar, tied for third place honors." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2635. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Biotechnology and soybeans. June. p. 8.
• ***Summary:*** "In the soybean industry, Roundup Ready soybeans have taken the world by storm... Recent news out of many European countries, foremost being the United Kingdom, has catapulted the world of biotech soybeans into the minds of most consumers. However, what is in their minds is basically a non-acceptance towards biotech products, including soybeans.

"This has become a very emotional issue, and these issues are the most difficult to deal with rationally." A long discussion follows. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2636. Ontario Soybean Growers' Marketing Board. 1999. Tofu... Simply delicious (Brochure). Chatham, ONT, Canada. 12 panels. 21 x 10 cm each.
• ***Summary:*** This attractive color brochure features "8 simple and delicious recipes to tempt even the Tofu Timid." With each recipe is a color photo, a nutritional analysis, and a tofu preparation tips. Contents: Introduction. Buying and storing tofu. Choosing the right tofu. Tofu for your health. Tofu nutrition. Recipes: Tofu appetizer trio, Potato dill soup, Tofu & vegetable rice (with 2½ cups chicken broth), Tofu lasagna roll ups, Tofu tacos, Tofu chili, Tofu frosted chocolate cake, Peachy tofu pudding.

This brochure was created in partnership with Agriculture and Agri-Food Canada / Agriculture et Agroalimentaire Canada.

Note 1. A front-page article in the *Ontario Soybean Growers' Marketing Board Newsletter* (Aug. 1999), titled "New tofu brochure makes debut" states that this brochure "was completed in June, and mailed out to over 645 dietitians across Canada who had requested soy information from the Board in the past 18 months. The response has been phenomenal. These dietitians have already requested 30,000 brochures to hand out to their clients. That means that 30,000 more people will get ideas on how to use tofu, and they may come to appreciate this versatile product made from Ontario's number one cash crop." A black-and-white photo shows the cover of the tofu brochure.

Note 2. A second article in the *Ontario Soybean Growers Newsletter* (Oct. 2000, p. 9), titled "Soyfoods corner" states that since this popular recipe brochure was introduced in June 1999, over 85,000 have been distributed across Canada. A recipe for Peachy tofu pudding is given. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: (519) 352-7730.

2637. Ontario Soybean Growers' Marketing Board. 1999. Fifty years of progress: A history of the Ontario soybean industry. 50th anniversary–Ontario Soybean Growers' Marketing Board, 1949-1999. Chatham, Ontario, Canada: OSGMB. 36 p. June. 28 cm.
• ***Summary:*** Editor: Janet Nauta. Contents: Message from the Ontario Minister of Agriculture, Food and Rural Affairs (Noble A. Villenueve). Message from the Minister of Agriculture and Agri-Food Canada (Lyle Vanclief). Chairman's message (Ken Bee). The Ontario Soybean Growers' Marketing Board–Five decades of progress (with highlights of each decade). Farm Products Marketing Commission–Involved since the beginning. Harosoy and more–Harrow Research Centre's role in soybean research. Soybean leaders–Chairmen of the Ontario Soybean Growers' Marketing Board. Research and variety trials in the east–Kemptville College's role. OMAFRA–Promoter of Ontario's "great export." Making the grade–The Ontario Grain Commission, Soybean research–Ridgetown College's contribution. Heading east–Short season soybean research in Ottawa. Ontario Grain and Feed Association–Past, present and future. From 1893 to today–The history of soybeans at the University of Guelph. Once upon a time: An interview with the oldest living Ontario Soybean Growers' Marketing Board director (Gordon Coutts, who became director in 1958). Early promotions–Call for soybeans (Ad from Victory Mills titled "Wanted: 3,000,000 bushels of soybeans"–from the 1945 crop).

Contains many color photos and 20 ads, some full page. Address: 180 Riverside Drive, Box 1199, Chatham, ONT N7M 5L8, Canada. Phone: 519-352-7730.

2638. Radov, Alexander. 1999. Obedy Podobedova [Podobedov's dinner parties]. *Sovremennye Otechestvennye Zapiski (Contemporary National Notes; Russia)* No. 1. p. 23-25. June. [Rus]*
• ***Summary:*** Alexander Vasil'evich Podobedov has pledged to feed Russia in 2-3 years, and to relieve the severe protein shortages; 75% of the population eats mostly bread, potatoes, and pasta. His answer: The soybean. In two years, Podobedov has established a new industry in Russia, feeding about one million people–using SoyaCow technology from ProSoya in Canada.

Note: This article appears in the section of the periodical titled "From the Rib of Adam Smith." Address: Russia.

2639. *Soybean Digest.*1999. Global Soy Forum: A roundup of the world's best soybean research. June. p. 5-7, 10-13, 16-17, 20, 22, 24-25, 28, 30, 32, 34, 36-37, 39-42.
• ***Summary:*** This special issue previews the forthcoming Global Soy Forum '99, to be held in Chicago August 4-7. It summarizes key papers to be presented. Contents: Let's face the challenge (p. 5). A special invitation to *Soybean Digest* readers, by co-chairs Dave Erickson and Long (p. 6). Program (p. 7). Genetic improvement (p. 10-13). Crop & soil management (p. 16-17, 20, 22). Pest management (p. 24-25, 28, 30). Processing and utilization (p. 32, 34, 36-37). Management & marketing (p. 39-42).

A pie chart (p. 5) shows world soybean production in 1997: USA 47%, Brazil 20%, Argentina 11%, China 10%, India 3%, Canada 2%, Paraguay 2%, EU [European Union] 1%, other 4%.

Note: This event is surrounded by an amount of hype usually not found with professional agricultural conferences. On page 6, co-chairs Erickson and Long state: "In August, you have an opportunity to be part of an event that soybean farmers will be talking about for years to come. Global Soy Forum '99–the first worldwide assembly of the soybean industry... this is truly the event of the century for our industry. We're expecting 1,000+ participants, representing more than 45 countries..."

Note: What nonsense! In fact, this is the sixth World Soybean Research Conference. The constitution of the World Soybean Research Conferences states that they will be held "about every five years to consider research progress since the previous conference." The first such conference was held on 3-8 Aug. 1975 at the Ramada Inn in Champaign, Illinois (USA), and sponsored by four U.S. organizations, including the University of Illinois; 622 people from 48 countries attended. The second was held in 1979 at North Carolina State University (USA). The third was held in Aug. 1985 at Iowa State University, Ames, Iowa (USA); 1,050 persons from 66 countries attended. The fourth was held in March 1989 in Buenos Aires, Argentina–for the first time outside the USA. The sixth was held in Feb. 1994 in Chiang Mai, Thailand.

Like most past World Soybean Research Conferences, this one focuses on soybean production, and has relatively little about soybean utilization or soyfoods. One paper in the Utilization section is titled "Is tofu safe to eat?"

2640. Demos, Steve. 1999. New developments at White Wave (Interview). *SoyaScan Notes.* July 7. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Discusses: Soy yogurts and spoonable desserts in different parts of the world. DairyWorld Foods in Vancouver, BC, Canada, and their So Good brand. Sunrise Soya. Hired Fred Webster. Imagine Foods building new offices in Palo Alto. Rice beverages are now almost dead; fired all of its reps. 3-4 companies that are bigger than Dairyworld. Bernard Storup. Suiza and Dean Foods. Mark Retzloff. Paul Repetto. Silk is now #1. Spence was a Nielsen offshoot. He who gets to TV first. No public offering–Strategic partner on board. Address: President, White Wave Inc., 1990 North 57th Court, Boulder, Colorado 80301.

2641. McLennan, Neil. 1999. Re: Upgrading tofu equipment at Clean Bean Tofu in London, England. Letter to William Shurtleff at Soyfoods Center, July 25. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Neil is currently considering buying a ProSoya VS200 system made in Ottawa, Canada. Address: 37e Princelet St., London E1 5LP. Phone: 0171 247 8349.

2642. Bernard, Richard L. 1999. Re: Information on large-seeded soybeans. Letter to William Shurtleff at Soyfoods Center, July 27–in reply to inquiry of Aug. 30. 2 p. Handwritten on letterhead.
• ***Summary:*** He encloses a list of some additional soybean varieties that Shurtleff may wish to consider for inclusion in his "large-seeded" list. He also encloses a report he made at this year's soybean breeder's conference that includes a table for food-type US and Canadian public varieties and their year of release.

He includes key pages from several RSLM [Regional Soybean Laboratory Mimeograph] documents showing when the term "Maturity Group" was first used. "If you consider 'Maturity Group I' and 'Group I Maturity' to be roughly equivalent, then the 1953 report RSLM 168 is the first, since it was the first germplasm report ('Maturity Group' was used for the Uniform Tests much earlier).

Page 2, titled "Additional varieties to consider."

Hahto released in 1918 by USDA. Copy of publication enclosed.

Agate released in 1937 by USDA.

Morse & Cartter 1937.

Tortoise Egg released in 1938 by Illinois AES [Agricultural Experiment Station], listed in Woodruff & Klaas.

Kabott released in 1939 by Ag Canada (new name), Ottawa, in 1949 Bulletin 1520.

Also listed in Bulletin 1520 and in most cases in Morse's 1948 list of "Soybean varietal names used to date" (RSLM 148, 9 p.):

Etum, released by 1941 by USDA, 23 gm per 100 seeds.

Green & Black, released in 1941 by private, Tennessee, 24 gm per 100 seeds.

Hidatsa, released in 1941 by private, North Dakota, 18 gm per 100 seeds.

Jefferson, released in 1941 by private, Tennessee, 33 gm per 100 seeds.

Kanum, released by 1941 by USDA, 19 gm per 100 seeds.

Sac, released in 1941 by Iowa AES, 26 gm per 100 seeds.

Sanga, released in 1945 by private, Illinois, 28 gm per 100 seeds.

Tastee, released by 1941 by USDA, 22 gm per 100 seeds.

Wolverine, released in 1941 by USDA, 26 gm per 100 seeds.

"I've used a secondary source of info, so you'd better check the original publication in each case. Hope this is useful. Dick B." Address: Prof. of Plant Genetics (Retired), Dep. of Crop Sciences, AW-101 Turner Hall, Univ. of Illinois, Urbana, IL 61801-4798.

2643. Kulisek, Larry. 1999. Master promoter: Windsor history–F. Maclure Sclanders. *Windsor Star (Essex County, Ontario, Canada).* July 31. p. I14. Saturday.
• ***Summary:*** Sclanders was born on 26 Sept. 1868 in Glasgow, Scotland. In about 1908 he introduced soy beans to the prairie states of Canada–probably Saskatchewan or Manitoba. Address: Prof., Univ. of Windsor, Windsor, Ontario, Canada.

2644. Urquart, John. 1999. A health food hits big time: Taste makeover moves soy milk into mainstream. *Wall Street Journal.* Aug. 3. B1, B4.
• ***Summary:*** Sales of soymilk in the USA are predicted to top $300 million in 1999, up 38% over 1998, and a rise from only $2 million in 1980–according to Soyatech Inc. of Bar Harbor, Maine. Sales of Silk, the soymilk product that pioneered the new and booming refrigerated category, are expected to double this year, says Steve Demos, president of White Wave. Silk is now distributed through dairies across the U.S. Sales of Vitasoy in the USA rose 34% during the last year, according to Jennifer Corsiglia Keim, the company's marketing manager.

Indeed soymilk is one of the few products that has been able to cross over from natural- and health-food stores into supermarkets. One of the keys to this cross-over is expected

to be the change of packaging and positioning. Traditionally soymilk was sold in "special airtight boxes that require no refrigeration." Now, starting with Silk, it is being sold next to milk in cartons that look like milk cartons. Imagine Foods of Palo Alto is currently introducing a refrigerated version of its Soy Dream brand of soymilk. White Wave plans to hand out several million half-pint samples of Silk during the next 12 months to further stimulate demand. He says he has been making soyfoods for the last 21 years just "waiting for this year."

One reason for the growing interest in soymilk is the growing body of scientific evidence showing that soy has health benefits. Former junk-bond king Michael Milken, who was diagnosed with prostate cancer six years ago, tries to consume 40 grams of soy protein per day–including a soy hot dog and soy shake. Another reason is improvement in the taste of soymilk. Soymilk sales are expected to get another boost if the U.S. Food and Drug Administration allows a health claim saying that soy products reduce cholesterol.

Soymilk is also being promoted in coffee houses. About one year ago Peet's Coffee & Tea (Berkeley, California) introduced Vitasoy as a coffee creamer at its 47 coffeehouse outlets. The consumer response has been "terrific."

In Canada, the soymilk market is also booming; it grew 75% Last year and is expected to grow at about the same pace for the next 4-5 years–according to Maheb Nathoo, CEO of the new SoyaWorld Inc. of Vancouver, British Columbia. SoyaWorld now advertises its soymilk on television. A cow, with its face disguised, confides in an interview on the beverage: "I tried it. I liked it. That's all I can say.

But compared with dairy milk, soymilk still has a minuscule share of the market; cows still supply 99% of the milk market.

The high price of soymilk remains a problem. In some places it can cost twice as much as cow's milk. But prices have dropped to about half their level a decade ago in the USA. In Canada, So Good, made by SoyaWorld Inc. using soy protein isolates, has recently been selling at Loblaw's Ottawa (Ontario) superstore for the same price as cow's milk. Address: Staff Reporter.

2645. Nordquist, Ted. 1999. Soymilk in America–past and future: The soymilk wars are heating up. Part I (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** After SoyaWorld was created in Vancouver (BC, Canada), because ProSoya was developing soymilk in Vancouver, they needed a quick way to get soymilk on the market. So they started negotiating with Ted to see if he could start sending soybase up to Vancouver from California. Then Sanitarium Foods (from Australia) came into the picture and threw a lot of money towards SoyaWorld, encouraging them to purchase a license to make So Good using soy protein isolates. This would also be Sanitarium's entry into the USA and North America. SoyaWorld took this approach and because of Dairyworld Foods' excellent distribution system, So Good has done very well in Canada. Their aim is to work down into the United States; they have been trying to negotiate with Suiza Foods Corp., but Suiza has its own ideas. Ted has heard that Sanitarium is involved in a lawsuit over its So Good soymilk, perhaps with SoyaWorld, because they believe that SoNice is an infraction on the name of their So Good product–SoNice and So Good are too close.

Soy is really getting into the mainstream now. Ted's company has done a lot of market studies in supermarkets and the presence of soymilk is "essentially zero." The big change will take place over the next year as soymilk starts to enter the dairy case of supermarkets. Ted is aware that Horizon has its eyes on this market. SoyaWorld is powerful, but they are up against Dean Foods, Suiza, and others. Wait until November or December of this year to see what is going to happen. Ted may be part of the action or he may get squashed–like the bug under your carpet.

Ted learned a lesson when he was making Silk for White Wave; they came out with a different product, and it didn't seem to matter much to consumers that it wasn't as good, as long as it was approximately as good. Money, labeling, distribution, networking, etc. determine the success of a product. Ted designed Silk with a very low solids content (4% solids) for very specific reasons. The main reason was money–so the product could be sold at a competitive price. But with the FDA health claim anticipated, Imagine Foods now has 7 grams of protein per serving, and White Wave's Silk soymilk has 5-6 grams of protein. You cannot use the health claim if a product contains 6.25 grams of protein per serving, because that is rounded down to 6 grams on the label. So you must have a label that states 7 grams of protein. As the solids content of a soymilk rises, any beany flavor is harder to mask, so the flavor of the soybase becomes more important, and the formulation less important. And the flavor of the soybase becomes even more important with soy yogurt, and even more important with soy ice cream–because both have higher solids content. So, if one were rational and logical, the trend toward higher solids would give Ted an advantage. Ted disagrees strongly with Steve Demos who thinks that the soybase and the formulation are of about equal importance in determining the flavor of the final product. Ted believes that the soybase contributes about 80% of the final flavor and the formulation about 20%. Steve's Silk soymilk is now made by SunRich, in Minnesota. The only other companies that make what Ted considers an acceptable soybase are Pacific Foods of Oregon, and Imagine Foods.

If SunRich were using ProSoya's airless technology and if ProSoya took SunRich to court, Raj Gupta would argue that he patented his oxygen-free process in 1988. Alfa-Laval could go to ProSoya and say that they were selling a plant that made soymilk using an oxygen-free process before that patent was instigated, and they demonstrated that plant at an international conference in 1984. The process was not patented, but it was described in published literature and was well known. To get a patent, Raj Gupta had to prove that there was no prior art; thus Ted believes that the ProSoya patents are not valid. Ted and Raj planned to do a joint venture at one time, but they disagreed on many processing issues. His process is based on the *concept* of an oxygen-free grind, but it is not strictly so. Then he makes claims that you don't have to soak the beans, etc. So there are many things that the patent office has accepted in his patent that Ted believes would not stand closer scrutiny.

Ted has compared his soybase with that made by the ProSoya process; he believes that his is much better. Shurtleff says that he always assumed that the reason Ted used the ProSoya process in Vancouver to make Silk was because it was better than his own. Ted laughs and laughs. The real reason he didn't make the soybase himself was because he had no equipment or plant with which to make it.

Ted started to develop Silk using soymilk made by Pacific Foods of Oregon. Even when he was still in Sweden in the late 1980s, he began to cooperate with them in developing a soy ice cream. Ted bought soybase from all over the world to compare it with the soybase he was developing in Sweden. He ended up using Pacific Foods' aseptically packed soybase (containing only soybeans and water) as a control for his Tofu Line and Swedish Glass ice creams. So when he came to the California in the early 1990s, his goal was to make soy beverages, yogurt, and ice cream. When Ted started doing his work in Gustine, he was using Pacific Foods' soybase. They even had an agreement on the cost of the soybase, the fact that he would be buying it in tankers, etc. The first samples Ted sent to Steve Demos were made with Pacific Foods' soybase. But when the person who finally bought the product made from that soybase turned out to be Steve Demos, then Pacific Foods of Oregon backed off. They didn't want to make soybase for a competitor in the soymilk market. So Ted had to look for a new supplier, and he came into contact with ProSoya in Surrey, near Vancouver. At that time, they were just starting up their soymilk plant and they were really naive; they could make soymilk on a small restaurant scale, but they knew almost nothing about making soymilk on a large commercial scale in a continuous process. It was a nightmare for them at the beginning. Ted did not help them with their process; he just sent them orders, which forced them to get their act together because Ted needed to buy 6,000 gallons (one tanker full) at a time. As ProSoya was learning, Ted was starting to building his own plant, but he couldn't do that until he had money, and his money would have to come from sale of ProSoya soybase to Steve Demos. So Ted went to ProSoya, not because they made better soymilk but because he didn't have the money to do it any other way. Continued. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2646. Nordquist, Ted. 1999. Soymilk in America–past and future: The soymilk wars are heating up. Part II (Interview). *SoyaScan Notes.* Aug. 10. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** If Ted had had a lot of money at the beginning, would he have done things differently? Answer: That's an interesting question. ProSoya went bankrupt in large part because they built the plant first and then went out to sell the product. Ted learned in Sweden that its much better to sell the product first, then build the plant once you have the volume. In Sweden, Ted found a juice company in which to install his machines; in the USA he found Soyfoods of America (owned by Ken Lee) in Duarte, California. Ken Lee is now selling a huge volume of soymilk in half gallon containers. It is produced using the same equipment he uses to make soymilk for tofu, and sells for some ridiculously low price–like $0.89 per half gallon. He distributes it all himself, and also makes a lot of tofu and related products.

Shurtleff says: "Within the next 12 months, I think we are going to see the biggest expansion and changes yet in the soyfoods industry. Companies that sell soymilk but have no fresh product in gable-top cartons will almost surely lose market share." Ted agrees; hang on. Ted adds that finding available extended shelf life (ESL) gable-top packaging equipment in California is impossible today. There are no machines available. Dean Foods has no such packaging equipment west of Colorado; their plants in Kentucky and Florida are both full. Even if they wanted to add a line on the West Coast, it would take about 12 months. Suiza Foods Corp. could add on a new line to their plant in California–and they now know how to make good soymilk because of Ted–whether he likes it or not. Bill notes: "As we shoot the rapids during the next 12 months, I hope your kayak comes out right side up." Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2647. Mair, Amy Tyler. 1999. Appetizing growth: Profile–Yves Potvin. Yves Potvin's meatless cuisine is North America's best-seller. Now he's looking for the recipe for a winning, healthy fast-food restaurant. *Business in Vancouver (Canada).* Aug. 10-16. p. 23.

• ***Summary:*** Yves Potvin, age 43, never uses the word "vegetarian" in his speeches or marketing materials. He is a "semi-vegetarian," who eats little red meat and is looking for healthy food choices. He now runs a business that does an estimated $46 million per year in sales. Earlier this spring he opened fast food restaurants in Kitsilano and South Granville, Vancouver. There he serves only meatless foods, such as tofu hot dogs, soy burgers, meatless lasagna, and baked fries [French fries]. Fourteen years ago, the Quebec native, a chef and amateur cyclist, "was living in Vancouver and dishing up buttery sauces at former French restaurant Le Chef et Sa Femme. Disillusioned with the high-stress low-paying job," he looked for a way to be more independent. "With $10,000 of his own money and $30,000 borrowed from friends and family," Potvin developed a tasty meatless hot dog.

"The next several years were difficult after Potvin sold 40% of his company to finance growth." He later bought back the shares and today owns 100% of the company. The company also took a hit when it spent $600,000 in R&D for a new veggie burger that went nowhere. 1992 was the year of "take-off"–the "year they crossed a major threshold and really began to grow." In 1985, when Yves Fine Food opened, the company saw its first product, a tofu wiener, as a "fusion food and adopted a sun logo to symbolize the marriage of East and West." Last year the company adopted its current logo, which shows a "French chef sporting a red beret and holding a basket brimming with fresh vegetables."

A large photo shows Yves.

2650. ProSoya Inc. 1999. Introduction to ProSoya (Color videotape). 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. 8 minutes. Aug.
• ***Summary:*** This excellent color video (in NTSC video format), is professionally produced and narrated, with nice background music. Introduced in August 1999, it begins: "The soybean is a powerhouse of high-quality protein and other nutrients. Soyfoods have been proven to reduce the risk of cancer, heart disease, and other ailments. These health advantages, coupled with relatively low infrastructure and production costs, make soybean processing a fast-growing industry–and we can help you make this a wonderful business opportunity in the 21st century. Welcome to ProSoya, a world leader in advanced soymilk technology.

"Dr. Raj Gupta, a scientist formerly with the National Research of Canada and McGill University, is the president and founder of ProSoya." He appears and says: "Our objective is to help you produce nutritional* soya foods and beverages that consumers will enjoy because they taste good."

"ProSoya creates innovative and cost-effective processing systems that produce an excellent soymilk base naturally from the raw soybean. The first soymilk systems were small, designed primarily for humanitarian aid, hospitals and small businesses. Today, ProSoya offers the widest range of soymilk production capacities, from modest 30 liters-per-hour batch processors to large, fully automated industrial plants with capacities up to 4,000 liters per hour. The smallest system is a 2-liter prototype that NASA tested for its manned space mission to Mars. ProSoya offers individual production components or complete turnkey plants, and can also assist in the formulation and packaging of soymilk beverages and foods.

"ProSoya's commitment to its customers is demonstrated by its vigorous research and development program. In addition to its own in-house R&D team, ProSoya engineers work closely with researchers in various government laboratories and other industry partners around the world. At the heart of all ProSoya systems is the patented airless cold-grinding process–a truly revolutionary technology invented by Dr. Gupta... The resulting soymilk is free from the beany flavor or chalky mouthfeel. Bill Shurtleff, world-renowned expert on soyfoods and author of over 50 books comments: 'I have no hesitation in saying that ProSoya's airless cold-grind process is one of the best for making soymilk.'

"The soymilk base can be used as is, or to create a whole range of healthy, nutritious, high-quality soyfoods, including beverages, tofu, yogurt, ice cream, soymilk powders, and mayonnaise."

There follows a list of systems designed and sold by ProSoya. "ProSoya delivers reliable equipment and prompt technical support." "Brian Harrigan, an engineer with an

MBA degree, is the executive vice-president and director of marketing. 'At ProSoya we don't just sell equipment. We build relationships. Our pride is in the contribution we can make to the success of our clients.'"

"ProSoya technology is presently being used in more than 30 countries. There are large-scale processing plants in Canada, Russia, and Scotland. Over 500 other small to medium-scale plants are benefitting people on five continents. This is what some of our clients have to say." There follow three glowing testimonials.

"In Canada, the retail sales of soy beverages increased from $12.1 million in 1997 to $25 million in 1998, a growth rate of 106%. Are you ready to take advantage of the booming soyfoods industry? ProSoya, with its market-leading technology, continuing R&D, and highly trained personnel can be your ideal partner in pursuing the opportunities which await us in the new millennium." Address: Ottawa, Ontario, Canada.

2651. Laidlaw, Stuart. 1999. Where the guest of honour is food that caused a revolution: Celebrating an Ontario college with a taste for innovation. *Toronto Star (Ontario, Canada).* Sept. 14.
• ***Summary:*** A special variety of barley and dozens of other innovative crops will be guests of honour at a banquet later this week when the Ontario Agricultural College (OAC) celebrates its 125th anniversary. The banquet (for about 600 students, alumni, professors, and industry representatives) will consist of dishes made from these special crops. The OAC was founded at Guelph after a failed attempt to set up an agricultural college at the University of Toronto. Its researchers have developed more than 100 food crops, including soybeans that can survive Canada's colder climate.

The college's most significant discovery was one of its first–barley OAC 21–developed by Charles Zavitz in 1910 after 20 years of research, using seeds he imported from Russia and Manchuria. It soon became the dominant barley crop in Ontario and set the standard in the beer-brewing industry for the next 50 years. It remained the barley of choice until the 1960s, when improved varieties were bred from it. Address: Business reporter.

2652. Harrigan, Brian. 1999. Re: Overview of utilization ProSoya's equipment abroad. Letter (fax) to William Shurtleff at Soyfoods Center, Sept. 22–in reply to inquiry. 1 p. .
• ***Summary:*** 1. Commercial vs. non-profit: Of the machines ProSoya has sold directly, about 80% were sold to commercial firms and the remaining 20% to non-profit organizations. If we include the machines that have been made and sold by the Russians and Indians under license from ProSoya (over 500 SoyaCows), these can be estimated at 70% commercial and 30% non-profit.

2. Type of product produced: Soymilk beverage production 50%. Tofu production 40%. Other soyfoods 10%.

Use in developing vs. developed countries: In terms of value, about 75% is in developing countries. In terms of number of liters, about 90% is in developing countries.

There are presently about 250 locations or clients using ProSoya's equipment worldwide, with about 175 of these in Russia alone. Address: Executive Vice-President, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2656. Lagnado, Lucette. 1999. Group sows seeds of revolt against genetically altered foods in U.S. *Wall Street Journal*. Oct. 12. p. B1, B4.
• ***Summary:*** Last week at the Blue Mountain Center in upstate New York, 22 participants from 12 countries gathered to plot the first all-out assault on the U.S. biotech food industry. The retreat was organized by a group of American activists who believe the moment is ripe for a U.S. campaign. Benny Haerlin, the international coordinator for Greenpeace in Berlin, Germany, is credited with directing a similar successful campaign in Western Europe. Pat Mooney, a Canadian who runs the Rural Advancement Foundation International, is credited with coining the word "terminator" to describe an experimental gene technology owned by Monsanto that could create sterile seeds.

The U.S. food industry is tense about this issue. Half of the nation's soybean crop contains transplanted genes–as does one-third of the corn crop. Those crops turn up in countless common food products, including the corn syrup for Coca Cola, and McDonald's hamburger buns.

A spokesman for Novartis says that biotech agriculture already has many proven benefits, including a major reduction in pesticide use, in soil erosion, and in water pollution, and a major increase in yield. Address: Staff reporter.

2657. AGP–Ag Processing Inc a cooperative. 1999. Annual report: Partners in food production. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 32 + 19 p. 28 cm.
• ***Summary:*** Net sales for 1999 (year ended Aug. 31) were $2,094.504 million, down 20.0% from $2,615.077 million in 1998. Net earnings before income taxes: $18.167 million, down 68.5% from the $57.526 million in 1998.

"Since its formation in 1983, AGP has been committed to the success of its owners. Today that is 278 local cooperatives and eight regional cooperatives, representing 300,000 farmers from 16 states throughout the United States and Canada" (p. 1).

AGP has expanded into "Soy-based methyl ester products, used primarily in the fuels, solvents, and agricultural chemicals business (as an adjuvant)." This is a growing new value-added market (p. 3).

"AGP's investment in a methyl ester plant at Sergeant Bluff, Iowa came at a time when companies could not use methyl esters because there was not a consistent supply. Now soybean oil in the form of biodiesel (SoyGold) is breaking into the diesel market as a lubricity agent in premium diesel offered by major fuel suppliers" (p. 5).

AGP works "intimately with the American Soybean Association. This year that relationship was able to produce legislation in Congress that allowed 20% biodiesel blends to be designated as alternative fuels country-wide" (p. 13).

"Methylated seed oil (MSO) adjuvants faced a difficult time this year primarily because MSO is not suitable for use with Roundup (c). AGP did, however, gain more MSO distributors this year" (p. 18).

AGP's new soybean processing plant in Hastings, Nebraska, began operating "in June 1999. It is: The first farmer-owned soybean processing plant in Nebraska. The westernmost soybean processing plant in the United States. AGP's ninth soybean processing plant. Once the plant is operating at capacity, an estimated 200+ trucks will be at the Hastings location daily, either inbound with soybeans, corn, or milo and/or outbound with soybean meal, soybean oil, ethanol, and other products such as hulls or distillers' dried grain with solubles."

Color photos show: (1) Leiting and Lindsay. (2) Marketing materials for AGP's "Soybean Value Pricing–Oil Premium Program." (4) The board of directors. (5)

Management staff–including one woman for the first time. Address: Omaha, Nebraska. Phone: (402) 496-7809.

2658. *Modern Woman (Canada).*1999. The Canadian Grand Prix New Products Awards. Oct.
• ***Summary:*** This year Yves Veggie Breakfast Links was a winner. Former winners were Veggie Ground Ground, Veggie Burger Burgers, and Veggie Pepperoni Slices. A photo shows the products in their packages.

2659. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. The GMO issue–Tough choices for producers. Oct. p. 5.
• ***Summary:*** "Last year approximately 5% of the total soybean acreage in Canada were GMO varieties, while this year that number was between 15-20% of total soybean acreage. Next year will be very interesting to see producers' response to the consumer backlash of GMO's."

"When Archer Daniels Midland (ADM) urged, even warned their U.S. suppliers last month to begin segregating GMO soybeans, corn and other grains from conventional crops, it sent shudders through the U.S. farming community."

"This is not an issue of right or wrong, it is an issue of consumer demands, and the consumer is demanding non-GMO products." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2660. *Ontario Soybean Growers' Marketing Board Newsletter.*1999. Profiles: Mike Snobelen, owner of Snobelen Farms, a non-GMO exporter. Oct. p. 7.
• ***Summary:*** "The safest bet for many farmers hoping to profit from the introduction of biotechnology may, ironically, be to plant non-biotech crops.

"The strategy is reaping dividends in Huron and Bruce Counties, where 500 growers this year contracted to deliver non-Roundup Ready soybeans for a 40 cent per bushel premium to Snobelen Farms elevators at Lucknow, Ripley and Dungannon."

"'This is a customer-driven business,' Snobelen says. 'It has nothing to do with whether biotechnology is good or bad. It's whether biotechnology is what the consumers want.'"

"Snobelen started non-biotech sales with two boatloads shipped in 1997 with the help of marketing firm Manna International. Six boatloads from the 1998 crop were shipped to the UK and Belgium, and three vessels are already booked for 1999 crop, with more sales in the works."

"To date, most Snobelen exports have gone to soymilk makers. Now, the company sees that market widening out. There is more interest in using non-biotech soybeans for bread improvers."

A portrait photo shows Mike Snobelen. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2661. Yves Veggie Cuisine. 1999. Prepare for the soy explosion (October 26, 1999): Stock up on Yves products early (Leaflet). Delta, British Columbia, Canada. 1 p. 28 cm.
• ***Summary:*** This one-sided leaflet, is printed with blank ink on pea-green paper, discusses the FDA announcement expected to occur on 26 Feb. 1999. "Soy protein may reduce the risk of heart disease. Eating Yves Veggie Cuisine may reduce the risk of coronary heart disease, the single leading cause of death in America." The slogan on the bottom reads: "Yves takes great taste to heart." Address: 1638 Derwent Way, Delta, BC V3M 6R9 Canada. Phone: (604) 525-1345 or www.yvesveggie.com.

2662. *Nutrition Business Journal (San Diego, California).*1999. SunRich acquired by NASDAQ company [Stake Technology Ltd. of Ontario, Canada]. 4(10/11):22-23. Oct/Nov.
• ***Summary:*** In July 1999 Stake Technology Ltd. (Norval, Ontario, Canada) acquired SunRich Inc. in a stock-for-stock deal. Stake is an environmental company with technical expertise in steam explosion pulping, cleaning of metals, and recycling. In 1998 it had revenues of $14 million. SunRich, a $35 million niche producer, makes various soy products and contracts with 700 growers in the Midwest. Soy products comprise approximately 60% of SunRich's sales, and soymilk contributes approximately 20%, according to Allan Routh, president and CEO. SunRich makes three basic categories of soymilk: a standard [dried] product used as an ingredient in second generation products; several soy beverages; and soymilk with various protein and fat contents.

SunRich was founded [as Minnesota Waxy Corn Growers Export Inc.] in 1978, and changed its name to SunRich in 1994. Some 30-40% of SunRich's revenue's are international, primarily from Japan, reflecting its roots as an exporter. Less than a year ago, SunRich launched its own retail division, Hearty & Natural.

Note: Talk with Allan Routh of SunRich. 2001. Nov. 6. The acquisition was finalized on 1 Sept. 1999.

2663. Elwell, Christian. 1999. Chronology of South River Miso Co. Part III. 1983-1999 (Interview). *SoyaScan Notes.* Dec. 16. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1983 spring–The miso company sends out a very interesting and poetic hand-lettered, dated leaflet and price list. The front panel, with a logo of three waves in a circle, announces the availability of three kinds of miso: Mellow Barley (6 weeks), Mellow Brown Rice (6 weeks), and Mellow Flint Corn (8 weeks). "South River

Farm is the coming together of three families seeking common livelihood." A pie chart shows the company's costs.

1983 summer–The first in-depth story about the miso company, with five good photos, appears in *Soyfoods* magazine. The article states that the company (whose name is incorrectly given as "South River Farm Miso Company") is owned by three families, and the names of the six owners are given. Actually, however, Christian and Gaella were (and have always been) the company's only legal owners.

1983 fall–The community idea fails after one miso season (1982-83). The Wheelers leave first. Anpetu and Hannah leave in the fall of 1983; Anpetu writes a sad poem about falling leaves as they part. It takes the Elwells 10 years to repay the money the other two families had invested.

1983 Sept.–Christian goes to Charlie Kendall, who lives nearby, and asks if he can supply Charlie with rice koji for the amazake he makes. Charlie had been buying all his rice koji, dried and in bulk, from Miyako Oriental Foods in California. Christian offered to match Miyako's price and make the koji from organic rice. Christian was already making rice koji for his red miso and he needed more customers. After making many trial batches and building a koji dryer, Christian begins supplying Charlie with 900 pounds (three 300-lb batches) of koji at a time. Also that second miso season (1983-84) the first apprentice, Sonia Schloeman, works at the miso shop; Christian needs help and Sonia needs a place to stay. He pays her a salary and she stays in the loft above the shop. After Sonia leaves, the Elwells move into the loft above the shop. The second intern was Dan Hornack, who came all the way from Aspen, Colorado. From then on the arrangement was room (in the cabins across the river) and board plus a small stipend in exchange for the apprenticeship. Other apprentices who worked in the shop over the years have included (in chronological order) Rich Sweitzer and Susan Gribbon (later to marry), Michelle Gemme (Montreal, Canada), Don Phillips, Michael Dessen, Tim Langdon, John and Mary Granger, Caroline Wurts, Maggie Smith, Andrew Goodman, Tolly Gibbons (New Zealand), Anne Walsh Sullivan, Bobby (age 18 and white, from South Africa), Sean LePoutre, Maria Low, Kamil Bersky (a medical doctor from the Czech Republic), and Stephen Jannetta. Stephen worked at the shop for two seasons (Oct. 1990 to May 1991, and Sept. 1993 to May 1994), then helped others (Soyalab, and La Fonte della Vita) to start commercial miso production in Italy. His brother, Phil Jannetta, worked for Mitoku in Tokyo. Most apprentices stayed for one full miso season. Gaella cooked for everyone.

1983 Oct. 17–Isaiah, the Elwell's second child is born.

1983 Nov.–The company runs its first ad (1/3 page vertical) in *East West Journal*. The theme: "Wisely given miso gives its own wisdom." An illustration at the bottom shows the miso shop buildings. A logo at the top shows three waves in a circle.

1985–Starting this year, a group of students from the Kushi Institute at Becket, Massachusetts (which is about 1½ hours drive away) comes to visit to miso shop–even though Christian has had no personal connection with the macrobiotic movement for many years. Over the years, the number of groups has increased to 3-4 a year. In the early years, Christian would give a slide show and talk on miso-making. Now they usually come on a weekend and take a tour of the shop when it is not in production, and Christian will share with them what he has learned about miso.

1989-90–The Elwells, with the help of Fred Hubbard, design and begin building a timber-frame home located behind the miso shop–about 12 feet away from it. For the previous 5 years they had lived in the loft above the miso shop. Fred eventually built his own home in Conway, where he now resides as a carpenter and builder.

1991-92–The Elwells stop taking apprentices and start with paid workers. There was a difficult period of transition as Christian began to tire of working in the shop. Workers include Larry Glanz, a former student who worked with Muramoto-sensei and Stephen Jannetta.

1995 Aug.–Christian seriously considers selling his miso company to Barry Evans, owner of American Miso Co. and Great Eastern Sun in North Carolina. He had taken training to become a Waldorf School teacher. But this would require the Elwells to give up their land, and although it was quite isolated, they did not want to leave it.

1995 fall–Yukio Doyama begins to work at the miso company, a happy, hard-working man who enjoys making miso. At the same time, Steve Freiman comes to live above the miso shop and work with Yukio. Christian was now freed up for an extended time from day to day production and packing work; he began taking a more supervisory role and handled most of the office work and shipping. Andy Mathey followed in Steve Freiman's position, working with Yukio.

1996-97–This fiscal year the miso business is computerized. In late 1997 Christian decides not to sell the miso company, and to invest much more energy, time and resources in it–"to make it come alive again" after a period of hibernation. "When we clear up things inwardly, this is reflected by outward things." Quickly, all sorts of good new things begin to happen.

1998 Feb.–The first issue of *River Currents: News from South River Miso Company* is published. This attractive newsletter contains a catalog and order form, plus news about miso and the company.

1997-98 fall and winter–Three young people come to live at South River Farm to cultivate the land–and to work on forming a community. Arthur Lerner comes first, then his partner, Emily Kellert, and soon after, David Fisher. That winter these three also work part time in the miso shop.

Robin Cole, a friend of many years, arrives in early spring of 1998 and creates the position of office manager/ administrative assistant.

June 1998–The Elwells and coworkers finalize a mission statement for the miso company after three months of weekly meetings. It is published in the winter (Dec.) 1998 issue of *River Currents*.

1999 Sept.–The apprenticeship program is reinstated; Maria Rossi is the first to fill the position.

1999 Dec. 16–Christian says that the miso company, about to enter its 21st year or adulthood, is taking on a life of its own. Gaella was never a regular miso maker in the shop. In the early years she was a full-time mother and cooked hundreds of meals for builders and then miso apprentices. Her role has always been one of moral support. This year she does work in the shop two afternoons a week on the packing crew. The many new people are contributing to the growth of the miso company as a "learning organization" (see *Fifth Discipline*, by Peter Senge).

South River Farm is now moving in the direction of being home to self-sustaining farmstead–"as the place in which South River Miso is planted." David Fisher has built a pole barn, gotten draft horses, pays a modest lease, and sells his organic produce. Address: Founder and Owner, South River Miso Co., South River Farm, Conway, Massachusetts 01341. Phone: (413) 369-4057.

2664. Yoshihara, Lulu. 1999. Re: Update on Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyfoods Center, Dec. 17. 1 p. Handwritten, with signature.
• ***Summary:*** Last May, Lulu and Yoshi went to visit their miso mentors at Maruman Miso Company in Iida City, Nagano prefecture, Japan. Their factory was completely rebuilt. They also have a very attractive booklet describing research on the health benefits of miso–all in Japanese. Lulu is now in her third year of studies at the University of Victoria, working towards a degree in Pacific and Asian studies, with a concentration in Japanese. Their eldest son, Hikari, is at the University of California at San Francisco doing a PhD in molecular biology.

Yoshi continues to make miso the way he always has, slow and steady. Gradually Shin-Mei-Do has more Japanese customers seeking out their miso, but the health food stores are their mainstay. The company's new website is Shinmeidomiso.com.

Their friend Jerry Lewycky is "getting into miso in a big way. He should be very successful. Sincerely, Susan Marie (aka Lulu) Yoshihara."

Talk with Yasuo (nickname "Yoshi") Yoshihara. 2000. Jan. 13. Lulu's maiden name is Susan Marie Pritt. Jerry Lewycky (pronounced le-WIK-ee) used to run a wholesale company in Toronto that used to distribute Yasuo's miso. He sold his company, studied miso making with Yasuo for about a week, then started to make miso last summer in Claremont (near Toronto), Ontario. He wants to run a small company that makes miso in the traditional way. Yasuo does not consider Jerry a competitor. Address: Shin-Mei-Do Miso Co., 3906 Wren Rd., Denman Island, BC, Canada, V0R 1T0. Phone: 250-335-0253.

2665. *SoyaScan Notes*.1999. Chronology of major soy-related events and trends during 1999 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** April–Kevin Cross sells Soy Power Co., Inc. in Santa Monica, California, to Nature's Best.

May 10–SoyaWorld Inc. of Burnaby, British Columbia, Canada, purchases the SoNice brand and two soymilk extraction plants from International ProSoya Corp. (IPC). SoyaWorld is jointly owned by Dairyworld Foods (the largest dairy and food company in western Canada) and Sunrise Soya Foods (Canada's largest tofu manufacturer). SoyaWorld plans to (and has the ability to–because of Dairyworld Foods) put fresh and Aseptic soymilk in every supermarket and grocery store in Canada. Then they will move into the USA. This is a very big story!

July 12–Deutsche Bank, one of its strongest advocates of ag biotechnology, issues a report in which it reverses its previous "buy signals" on many of the companies commercializing ag biotech (such as Monsanto and Pioneer Hi-Bred). It now urges caution, and signals the beginning of trouble for the ag biotech industry.

Aug. 18–White Wave (Boulder, Colorado) and Dean Foods (Franklin Park, Illinois) jointly announce that Dean Foods has created an alliance with White Wave by becoming a minority shareholder in White Wave. The two companies will work together to place Silk soymilk into the refrigerated dairy case of supermarkets across America–and try to get there before SoyaWorld of Canada. A very big story for soymilk in the USA.

Sept. 1–Stake Technology Ltd. (Norval, Ontario, Canada) acquires SunRich Inc. (Hope, Minnesota) in a stock-for-stock deal.

Sept.–In this month's issue of *Consumer Reports*, a 6-page article on genetically engineered (transgenic) foods titled "Seeds of Change" recommends that "federal officials should require that all foods containing genetically engineered ingredients be labeled as such, including milk with recombinant bovine growth hormone."

Oct. 1–DuPont (a large chemical company) buys the 80% share of Pioneer Hi-Bred International Inc. that it doesn't already own–a major move into biotechnology.

Oct. 4–The Kellogg Co., maker of breakfast cereals in Battle Creek, Michigan, agrees to buy Worthington Foods for $307 million. Worthington makes vegetarian meat alternatives.

Oct. 7–The *Wall Street Journal* runs a major front-page story on concern about and opposition to genetically engineered foods in the USA and Europe. Runs two more

such stories on Nov. 30 and Dec. 14. Dec.–During the last 6 months of 1999 consumer awareness of and concern about genetically engineered food issues in the United States has increased dramatically. It has moved from a counter-culture to a mainstream concern, and fairly large amounts of money are now flowing into antibiotech organizations. GMO was a widely discussed issue in the breakdown of and mass demonstrations against the World Trade Organization talks in Seattle, Washington.

Oct. 20–The U.S. Food and Drug Administration (FDA) announces its approval of a health claim for soy protein and coronary heart disease. The claim, which goes into effect Oct. 26, can be used on food labels in either of two formats, the first of which is: "25 grams of soy protein a day, as part of a diet low in saturated fat and cholesterol, may reduce the risk of heart disease. A serving of (name of food) supplies ___ grams of soy protein." This promises to have a huge, positive impact on the soyfoods market.

Dec.–General Mills acquires Small Planet Foods (Cascadian, Muir Glen) for $60 million.

Dec.–Kellogg Co. purchases Worthington Foods.

In 1999, for the first time in history, more acres were planted to soybeans in the USA than to any other crop. U.S. soybean acreage exceeded that of corn by 3% and that of wheat by 34%. Worldwide, the acreage planted to soybeans has increased fivefold since 1950.

2666. *SoyaScan Notes.*1999. Major soy-related company acquisitions and mergers worldwide 1990-1999 (Overview). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1990 Jan.–Worthington Foods acquires La Loma Foods of Riverside, California (formerly Loma Linda Foods, owned by the Seventh-day Adventist Church).

1990 (early)–Daniel Gevaert purchases the Lima Andiran site at Andiran (near Mezin) in southern France from Lima Foods–but not the Lima trademark. In June 1990 Daniel and his wife, Valerie, established Danival.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy soymilk) acquires Nasoya Foods of Leominster, Massachusetts.

1990 Dec. 21–The Haldane Foods Group (a subsidiary of British Arkady Ltd., which is in turn owned by ADM) acquires Unisoy Milk 'n' By-Products Ltd. of Cheshire, England.

1991 Jan. 1–The Haldane Foods Group acquires Granose Foods Ltd. of Watford, Hertfordshire, England (formerly owned by the Seventh-day Adventist Church).

1991 Jan. 28–Tetra Pak International acquires Alfa-Laval AB.

1991 April–Huegli Naehrmittel A.G. acquires Soyastern Naturkost GmbH / Dorstener Tofu Produktions GmbH.

1991 Dec.–Specialty Food Ingredients (SFI) Europe BV acquires Solnuts BV (Netherlands) and Solnuts Inc. (Hudson, Iowa).

1992 Oct.–Central Soya Co. acquires the Protein Division of Aarhus Oliefabrik in Denmark.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California, for an estimated $4-$5 million. Vitasoy is now in the tofu business.

1993 June–21st Century Foods acquires Farm Foods from Barricini Foods.

1993–House Foods of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is named House Foods American Corporation.

1993 July–Nutrition et Santé (part of the Sandoz Group) acquires Société Soy of Saint-Chamond, France. The latter company was renamed Nutrition et Soja, and on 15 Oct. 1994 it moved into a new factory at Revel (near Toulouse), France.

1993 (mid)–B & K Holdings of Switzerland acquires Sojinal of Issenheim, France.

1993?–Kineret (pronounced kuh-NAIR-et) Acquisition Group acquires Farm Foods from 21st Century Foods, then in Nov. 1993 the Hain Food Group acquires Kineret plus some assets of Barricini Foods Inc.

1996 April 22–Alpro (Belgium) purchases Sojinal (France).

1995 April 21–Irene and Len Stuttman buy back control of their company, INARI Ltd. (dba. Sycamore Creek) from J. Charles Follett (former CEO) and Peter L. Pairitz (accountant).

1995 April–Quest International, a unit of Unilever, acquires A.E. Staley's Gunther Products Division.

1997 Feb. 3–Monsanto purchases Asgrow Seed Co. from Seminis Inc., a subsidiary of Empresas La Moderna, S.A. (ELM).

1997 Aug. 24–DuPont signs a letter of intent to acquire Protein Technologies International, a wholly-owned subsidiary of Ralston Purina Co.

1997 Oct. 14–The Hain Food Group acquires Westbrae Natural, Inc., makers of soymilk. Westbrae's new name becomes Hain Food Group–Westbrae. 1997 Dec. 3–DuPont finalizes its purchase of Protein Technologies International (PTI–the world's leading manufacturer of soy protein isolates).

1998 Oct. 16–Worthington Foods purchases the Harvest Burger product line from ADM; by agreement, ADM will continue to make the Harvest Burgers at its Illinois plant.

1998 Dec. 31–DE-VAU-GE acquires Bruno Fischer GmbH, which sells bottled soymilk; both companies are located in Germany.

1999 Jan. 4–W.G. Thompson & Sons Ltd. of Blenheim, Ontario, Canada, purchases Sycamore Creek Co., a maker of soynuts and soynut butter (located in Mason, Michigan).

1999 Oct. 4–The Kellogg Co. (famous maker of breakfast cereals, Battle Creek, Michigan) buys Worthington Foods Inc., America's leading maker of meat alternatives.

2667. **Product Name:** Yves Veggie Wieners.
**Manufacturer's Name:** Yves Fine Foods Inc., a subsidiary of Yves Veggie Cuisine.
**Manufacturer's Address:** 1638 Derwent Way, Delta (Vancouver) V3M 6R9, B.C., Canada. Phone: 604-525-1345.
**Date of Introduction:** 1999. December.
**Ingredients:** Water, soy protein isolate, wheat gluten, yeast extract, wheat starch, salt, evaporated cane juice, spices, carrageenan, wheat germ, rice starch, beet root powder, nutritional yeast, natural liquid smoke, paprika. Vitamins and minerals: Vitamin B-1 (thiamine hydrochloride), vitamin B-12 (cyanocobalamin), pantothenic acid (calcium pantothenate), potassium (dipotassium phosphate).
**Wt/Vol., Packaging, Price:** 6 wieners in 9.7 oz (275 gm) package. Retails for $2.39 (1999/12, Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Product with Label purchased at Safeway supermarket in Lafayette, California. 1999. Dec. 5. 5 by 5 inches. Vacuum pack. Purple, black, and red on white. Color photo of a wiener in a bun with a wavy bead of mustard on top, surrounded by trimmings. "Made with soy protein. Soy–With naturally occurring isoflavones. Fat free. No preservatives. Cholesterol free." The back panel states: "For best results, steam over boiling water for 3 minutes." Can also boil, microwave, or barbecue. "Printed on recycled paperboard with vegetable based inks." UPC indicia.

2668. **Product Name:** Yves Deli Slices (Original Style).
**Manufacturer's Name:** Yves Fine Foods Inc., a subsidiary of Yves Veggie Cuisine.
**Manufacturer's Address:** 1638 Derwent Way, Delta (Vancouver) V3M 6R9, B.C., Canada. Phone: 604-525-1345.
**Date of Introduction:** 1999. December.
**Ingredients:** Water, isolated soy protein, wheat gluten, evaporated cane juice, natural flavors, salt, yeast extract, carrageenan, wheat germ, onion powder, rice starch, beet root powder, garlic powder, wheat starch, nutritional yeast, spices. Vitamins and minerals: Vitamin B-1 (thiamine hydrochloride), vitamin B-12 (cyanocobalamin), pantothenic acid (calcium pantothenate), potassium (dipotassium phosphate).
**Wt/Vol., Packaging, Price:** 10 slices in 5.5 oz (155 gm) package. Retails for $2.19 (1999/12, Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Product with Label purchased at Safeway supermarket in Lafayette, California. 1999. Dec. 5. 4.75 by 3.75 inches. Vacuum pack. Light blue, blue, yellow, black, red, and green on white. Color photo of folded deli slices in a sandwich (whole wheat bread with sesame seeds) with trimmings. A box in the center of the label boldly proclaims on a yellow background: "Made with heart healthy soy protein. Diets low in saturated fat and cholesterol that include 25g of soy protein per day may reduce the risk of heart disease. One serving of this product [4 slices = 62 gm] provides 6.25g of soy protein. * Proposed FDA product claim as of October 1, 1999." Also on the front panel: "Soy–With naturally occurring isoflavones. Fat free. No preservatives. Cholesterol free." The back panel states: "Printed on recycled paperboard with vegetable based inks." UPC indicia.

2669. Yves Veggie Cuisine. 1999. Good food. For a change (Portfolio). Delta (Vancouver), B.C., Canada. 28 inserts. 31 cm.
• ***Summary:*** In the center of the cover the company logo, "Yves Veggie Cuisine," shows a Frenchman, wearing a beret, carrying a basket of vegetables. At the top and bottom is a border of alternating purple and light purple stripes. The documents enclosed in this portfolio include: (1) Company backgrounder (3 p. company history). (2) Yves Potvin: President and founder, Yves Veggie Cuisine (1 p. biographical sketch). (3) Awards and achievements (3 p., most recent first). (4) Guide to healthy eating (1 p.). (5) Product information. (6) Product information: Veggie wieners (1 p.). (7) Veggie Wieners (1 p. front and back, color photos of 5 products plus product information). (8) Ad–"You'll be going for breakfast with your customers" (1 p. front and back, Veggie Breakfast Links, color photo and product information). (9) Product information: Veggie slices (1 p.). (10) Veggie Slices (1 p. front and back, color photos of 4 products plus product information). (11) Ad–"Go ahead, ham it up." Veggie ham slices (1 p. front and back with color photo). (12) Ad–"More of a good thing." Veggie Turkey Slices. (13) Product information: Veggie burgers. (14) Ad–"Great taste. More choice" (1 p. front and back. Color photos show 5 types of fat free Veggie Burger Patties). (15) Veggie burgers (1 p. front and back, with color photos). (16) Product information: Veggie ground round, Original or Italian. (17) Veggie ground round (1 p. front and back, with color photos). (18) Product information: Entreés (1 p., 4 types). (19) Perfecto Pasta. Enjoy the benefits of soy! (1 p. color, front and back). (20) Definition of ingredients (2 p). (21) Eight articles, photocopies. Address: 1638 Derwent Way, Delta (Vancouver) V3M 6R9, B.C., Canada. Phone: 604-525-1345.

2670. **Product Name:** Balance Outdoor (All Natural Energy Bar) [Honey Almond].
**Manufacturer's Name:** Balance Bar Co. (Distributor–Made in Canada).

**Manufacturer's Address:** Carpinteria, CA 93013. Phone: 1-800-678-4246.
**Date of Introduction:** 1999.
**Ingredients:** Toasted soy pieces, EnergySmart (mixed fruit juice concentrates and natural grain dextrins)*, organic brown rice syrup, soy protein isolate, almond pieces, whey protein concentrate, calcium caseinate, organic agave nectar, FruiTrim (mixed fruit juice concentrates and natural grain dextrins)*, whey, honey, ground almonds. Contains 2% or less of: Soy cotyledon fiber, natural flavors, rice flour, soy lecithin, canola oil, flax seeds, salt, mixed tocopherols. * = Registered trademarks of Advanced Ingredients, Inc.
**Wt/Vol., Packaging, Price:** 1.76 oz (50 gm) wrapped in foil. Retails for $0.99 at Trader Joe's (2000/04, Lafayette, California).
**How Stored:** Shelf stable.
**Nutrition:** Per 50 gm.: Calories 200, calories from fat 50, total fat 6 gm (9% daily value; saturated fat 1 gm), cholesterol < 5 mg, sodium 140 mg (6%), potassium 250 mg (7%), total carbohydrate 21 gm (dietary fiber 3 gm [12%], sugars 12 gm), protein 15 gm. Vitamin A 0%, vitamin C 0%, calcium 10%, iron 8%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Product with label purchased at Trader Joe's in Lafayette, California. 2000. April 23. This is a baked, uncoated bar. Label text: "15 gm protein. Sustained energy. All natural–nothing artificial. Uncoated, will not melt. Hunger satisfaction and sustained energy. Sweetened without refined sugars. 40-30-30 balanced nutrition. 15 gm of high quality protein. Your complete satisfaction guaranteed." A simplified illustration on the front panel shows a rayed sun rising over mountains, with a river in the foreground. Soyfoods Center Taste Test. Delicious, but much too sweet for our tastes. It is called an Outdoor Bar because it does not have a chocolate coating, which melts.

2671. McEwen, Freeman; Morrison, Douglas; Rennie, Clare; Tanner, Jack. 1999. 125 years of achievements: OAC–A proud tradition, an exciting future, 1874-1999. Guelph, Ontario, Canada: University of Guelph. 132 p. Illust. 22 x 28 cm.
• ***Summary:*** Contents: 1. New beginnings. 2. Administration and co-ordination. 3. Teaching. 4. Research. 5. Extension and service. Within these are 125 achievements, each covered on one page; the page number is the same as the number of the achievement. Thus, achievement no. 56 appears on p. 56. The soybean is the subject of or mentioned in five of these achievements, all within Chapter 4, "Research" (p. 56-109) as follows:

OAC 211 soybean (p. 56): This is the first achievement described under "Research." A photo shows Charles Zavitz (seated at his desk), the pioneer in bringing soybeans to Canada. Zavitz graduated in OAC's the first degree class in 1888 and was hired by the College as an assistant experimentalist in charge of field plots. In 1893, the same year he was put in charge of all field research at OAC, Zavitz obtained five soybean varieties from Dr. C. Georgeson of Kansas State Univ. In 1898, after five years of trial, he reported that Early Yellow was the highest yielder. Over the next few years Zavitz introduced approximately 100 new soybean lines from Asia, and in 1901, through the Experimental Union, soybean seed was sent to farmers for evaluation. Like most plant introductions, these soybean lines were not pure lines, but contained some "off types," so Zavitz made pure-line selections from some of these lines. Initially Zavitz selected OAC 111 from Early Yellow. Then in 1918, he made 34 selections from 10,000 plants of the introduction, Harbaro [sic, Habaro] No. 10405. The progeny of 22 of these lines were tested under uniform conditions. The line that produced the highest yields was placed in regular variety trials in 1921; it beat all other varieties in grain yield and was second in fodder production. Designated OAC 211, it became the first soybean variety registered in Canada–on 26 Aug. 1925. During the years when Zavitz was evaluating soybean varieties, he was also researching soybean management techniques. The first commercial production of soybeans in Ontario took place in 1925 in Essex and Kent counties. By 1932 production in the province was almost 8,000 acres; by 1940 it was 10,000 to 11,000 acres, and by 1997 it had skyrocketed to 2.3 million acres, "the largest of any crop in Ontario. Zavitz would have been proud!"

Early OAC forage varieties (p. 57). About the work of Prof. O.M. McConkey, with a portrait photo. He joined the Field Husbandry Dept. in 1923.

Soybean expansion in Ontario (p. 65): Three men were pioneers in trying to expand soybean production in Ontario. Prof. George Jones, who joined the department in 1952, believed soybean production could be greatly expanded from the 200,000 acres then being grown. Prof. Jack Tanner joined the department in 1963, and Prof. David Hume arrived in 1966. But many problems stymied their efforts. Two events changed the environment for soybean expansion. First, as the corn crop expanded, it paved the way for soybeans (see p. 69). "Second, Dr. Harvey Voldeng, soybean breeder at the Central Experimental Farm in Ottawa, released the varieties Maple Arrow and Maple Glen." "These new varieties provided the final piece of the 'production package' which included varieties with a good yield potential, improved techniques for inoculating seed and improved herbicides for selective control of weeds. Confident that the production package was complete, Prof. Hume and his cohorts moved aggressively to promote it directly to farmers through farm meetings, field demonstrations, and FactSheets and indirectly through extension personnel and industry specialists. In 1997, approximately 2.3 million acres of soybeans were planted

between Windsor and the Ottawa Valley and more land was planted in soybeans than in any other cash crop." A photo shows Prof. Hume discussing soybean varieties and management practices at a growers' meeting.

Zoning for crop variety recommendations (p. 72): Discusses the Crop Heat Unit System and shows two maps where climate zones are delineated by heat units. This heat unit system, used for hybrid corn recommendations since 1964, was now applied to soybean varieties.

Improved soybean varieties (p. 73): From 1980 to 1997 Ontario's soybean acreage increased fourfold. Improved varieties were developed by the OAC Department of Crop Science. Most important, they were higher yielding, but also more resistant to lodging, to *Phytophthora* root rot and to other diseases. Prior to 1983, only 3 soybean varieties had been released from OAC. Since then 44 have been registered. This highly effective soybean breeding program was started by Prof. Wally Beversdorf, then successively led by Profs. Jack Tanner and Bruce Luzzi. The best variety to date has been OAC Bayfield, which out-yielded existing varieties by 15%. In 1998 it was grown on 400,000 acres in Ontario–the biggest soybean acreage for a soybean variety in Ontario. Other important varieties have been OAC Eric and OAC Millennium. In 1997 the soybean crop in Ontario was worth $800 million. A photo shows Wally Beversdorf inspecting soybean plants.

Accommodating to Canada's cold climate (p. 83): In the late 1960s, Prof. J.W. Tanner began to study cold tolerance in soybeans. Prof. D.J. Hume researched the physiological basis for cold tolerance exhibited by some of the soybean varieties–developed by Dr. Harvey Voldeng of Agriculture Canada, Ottawa–which had the Swedish variety Fiskeby V as a parent. The gene for chilling tolerance had come from a soybean variety from Hokkaido, Japan, in the 1940s.

An improved soybean rhizobium: 532C (p. 93): Some Rhizobium strains are more effective that others in fixing atmospheric nitrogen. In the early 1980s Prof. David Hume, Dep. of Crop Science, began to screen for more effective strains of soybean rhizobia. He obtained a number of strains from Dr. Joe Burton of the Nitragin Company in Milwaukee, Wisconsin, and by 1988 found that one strain, 532C, supported better yields (7% higher) and higher protein contents than other strains tested. It was promoted to commercial inoculant companies in North America. By 1990, all the soybean inoculants sold in Canada contained 532C. It is estimated that 532C occupies about 30% of the soybean-growing soils in Ontario and most of Quebec. Address: Univ. of Guelph, Guelph, Ontario, Canada.

2672. Okura Boeki-cho (Ministry of Finance, Division of Trade). 1999. Miso yûshutsu tsûkan jisseki–Heisei 10 nen [Japan miso exports worldwide in 1998]. Tokyo, Japan. 1 p. [1 ref. Jap]

• ***Summary:*** This 1-page table, written in Japanese, gives the exports of miso to various countries, in calendar year 1998, by region. We will list them here in descending order of volume by region–in kilograms. Asia: Taiwan 349,591. Hong Kong 332,325. Korea 232,115. Singapore 120,681. Thailand 100,459. Philippines 44,605. Malaysia 40,129. Indonesia 26,585. China 23,024.

Middle East: United Arab Emirates *(Arabu)* 9,895. Israel 4,887. Kuwait 1,256.

Europe (Western and Eastern): Netherlands 115,703. Germany 102,724. England 74,231. France 45,971 Sweden 40,170. Italy 20,283. Belgium 17,932. Austria 13,370. Spain 6,118. Denmark 4,090. Canary Islands (Spain) 2,000. Russia 1,715. Finland 1,310. Switzerland 450.

North America: United States: 2,297,893. Canada 242,240.

Latin America: Argentina 12,589. Brazil 12,338. Costa Rica 400.

Africa: South Africa 2,678.

Oceania: Australia 164,601. Guam 31,553. New Zealand 27,621. Mariana Islands 6,578 (of which the largest is Guam). Palau Islands 650. Note: This is the earliest document seen (July 2008) concerning soybean products (miso) in Palau; soybeans as such have not yet been reported.

Total exports. 4,531,300 kg. Total amount of miso made in Japan in 1998: 548,750,000 kg. Percent of miso made that is exported: 0.82%. Address: Japan.

2673. Ross, Alexander M.; Crowley, Terry. 1999. The college on the hill: A new history of the Ontario Agricultural College, 1874-1999. Toronto, Oxford, and New York: Dundurn Press. 224 p. Illust. Index. 22 x 28 cm. [150+* ref]

• ***Summary:*** This is an extensively revised and updated version of the 1974 edition. Most of the text has been completely rewritten. The contributions of C.A. Zavitz are well documented (see the Index). "Although a young Charles Zavitz was chiefly responsible for expanding experimental plots, Thomas Shaw took the credit. He also refused to promote Zavitz to head of the experimental department despite a recommendation by Farmers' Institute superintendent F.W. Hodson" (p. 53-54). This showed how politics was controlling matters at OAC. After an 1893 inquiry and scandal, Thomas Shaw was fired.

Young George Creelman became president of OAC in 1904, "full of a reforming zeal bred in the knowledge that the college had languished academically, though not materially," during the previous presidency of his father-in-law, James Mills (p. 74). Several OAC faculty members are worth examining more closely for what they reveal about developments. "Charles Zavitz represented the best in the college's research efforts. Picking up on Gregor Mendel's experiment in plant breeding. Zavitz brought genetics to Guelph through selective breeding techniques related

primarily to cereals. His singular innovation was to miniaturize experimental plots in a manner that allows the breeding program to expand. Zavitz reduced experimental plots to 1/100th of an acre whereas previously a quarter acre to one-fortieth of an acre had been used. Although the undertaking was controversial at the time, the results flowing from this radical departure were sufficient to bring the crop scientist a job offer from the agriculture department in Washington [DC], but he declined. Importing foreign varieties for his extensive program and working with flawless diligence, the quiet Quaker achieved notable successes in producing new crop cereal breeds, but not in tobacco, which had recently taken root in southwestern Ontario and which he refused to touch. With one plant selected from imported Mandscheuri barley as having the most desirable characteristics, Zavitz produced a variety called OAC 21 in 1906." Although this barley had not been selected by Zavitz as a malting type, it was adopted as the standard malting variety by Canada's brewing industry (p. 75).

Methodical and insightful, Zavitz was also generous in conveying results to the province's farmers through extension programs, but by the middle of the decade he was ready to retire. Worn out by his labours, Zavitz became an ornery old professor with a cranky disposition. Sporting a white beard and reportedly looking ten years older than his age, he complained bitterly to the college president about student dancing, smoking and the shabby appearance of the campus with weeds and rubbish everywhere. He left the college at the age of sixty-three in 1927, but only after he had made repeated requests for retirement with a pension. Programs that he had initiated continued to show results in the hands of his less illustrious successors... Zavitz's small plots became recognized across the continent and remained in use until displaced by reduced rod-row plots after World War Two."

During World War One, while OAC president George Creelman was away in New Zealand, advising the government on agricultural policies, Charles Zavitz was acting president. "A Quaker, Zavitz had previously pursued his pacifistic beliefs through the Canadian Peace and Arbitration Society. He opposed military training on campus and employed the argument favoured in Liberal federal government circles at the beginning of World War Two. Canada could do its part, Zavitz maintained, 'by furnishing in the best possible way the necessities of life for the people of Great Britain and other countries.' After allowing no pro-war meeting or parade to be held on campus, Zavitz submitted his resignation." James Duff (Ontario's Minister of Agriculture) did not accept it. In Oct. 1914, a furor erupted in the local media. "George Creelman returned early in 1915 to calm the storm with his usual amicable manner, but [in 1916] when the University of Toronto awarded Zavitz an honorary Doctor of Science degree for achievements in crop science, the citation acknowledged his steadfast Quakerism in referring to him as 'a man of peace'" (p. 87).

In the late 1800s the conflict between science and religion at Guelph arose in large part because of the evolutionary theories of Charles Darwin and Thomas Henry Huxley, both of England. "While unfolding nature's secrets through a scientific program, crop Scientist Charles Zavitz was still able to believe that 'true quality of character, conduct, and influence of all people depends on their spiritual co-operation with God who is the very source of intelligence...'" (p. 99).

Contains a good discussion of genetic engineering/ biotechnology and the development of soybeans and canola. In the 1980s there were roughly 20,000 test plots in any one year. "Whereas only three soybean varieties had been released by Guelph up to that time [1982], forty-four new ones were registered by 1998." In 1985 Wally Beversdorf's group succeeded in releasing the world's first triazine-resistant spring canola variety, OAC Triton, which allowed spraying of the crop with a well-known group of herbicides (p. 181). Starting in the mid-1970s: "Crop science displayed a dynamism not seen since the days of Charles Zavitz early in the century" (p. 183). The crop science soybean program developed a novel system capable of delivering large quantities of hybrid seed without the use of transgenes, restorers, herbicide screening, or strip planting. A U.S. patent was obtained in 1998 hybrid systems for Canola were transferred to the private sector for commercialization. The soybean variety OAC Bayfield, developed over 8 years by a team that included Beversdorf and Tanner, was especially successful. In 1998 this variety was planted on 20% of Ontario's soybean acreage (162,000 acres), according to the Canadian Seed Growers' Association. This was the largest acreage ever occupied by a single soybean variety in Ontario.

In 1990 Rob McLaughlin succeeded Freeman McEwen as dean of OAC. He was seen a quite responsive to corporate interests. A photo (p. 200) shows him with a bag of OAC Millennium soybeans and a seed industry representative. Address: 1. University Prof. Emeritus, 2. Prof. of History. Both: Univ. of Guelph, Ontario, Canada.

2674. Grainger, Bruce. 2000. Re: Leonard Sylvanus Klinck (1877-1969): Canadian soybean and plant breeder, and educator. Letter (fax) to William Shurtleff at Soyfoods Center, Jan. 27. 2 p. Handwritten, with signature on letterhead. [6 ref]

• ***Summary:*** Bruce also sent a file of valuable biographical information about Leonard Klinck. Address: Head, Public Services, Macdonald Campus Library, McGill Univ., Quebec, Canada. Phone: (514) 398-7960.

2675. **Product Name:** Senbei (Rice Crackers) [Soy, Original (Lightly Salted), and Sun Dried Tomato].
**Manufacturer's Name:** Masuya Naturally (Importer). Made in Japan.
**Manufacturer's Address:** 730-999 Canada Place, Vancouver, BC, V6C 3E1. Phone: (604) 844-1913.
**Date of Introduction:** 2000. January.
**Ingredients:** Incl. glutinous rice flour and soy sauce.
**How Stored:** Shelf stable.
**New Product–Documentation:** Card sent by Patricia Smith from Natural Products Expo, Anaheim. 2000. March 27. This postcard advertises Masuya's senbei. On the front is a color illustration of the Buddhist monk Kobo Daishi (St. Kobo) kneeling by a long rectangular hibachi *(naga-hibachi)* and baking rice senbei using the ancient Japanese method. The back notes that Masuya sells three varieties of senbei and gives the company's address, phone, and website. Talk with Brian R. Elliot at Masuya in Canada. 2000. March 31. This product was introduced in North America in Jan. 2000. It is made in Mie prefecture, Japan and packed in 4 oz foil bags for freshness. The company plans to switch from shoyu to tamari so that the product is free of wheat and gluten.

2676. Lewycky, Jerry. 2000. Starting a new miso company in Canada (Interview). *SoyaScan Notes.* Feb. 2. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jerry (whose last name is pronounced luh-WIK-ee) learned how to make miso from Yasuo Yoshihara. He started making miso in April 1999 and now has about 20,000 lb "brewing" in vats, each of which contains about 7,000 lb of raw miso. He has two vats full of 2-year barley miso and one vat full of 2-year brown rice miso. These will be ready for sale in the fall of 2000. He would also like to make a short-term white miso. He has not yet decided the name of his company, but he is considering "Miso Tradition." Jerry also has another miso teacher–Don DeBona. He visited Don several times in North Carolina–after he was no longer employed by American Miso Co.–and Don visited Jerry once in Claremont, Canada; he has been very helpful. Don still lives in his house right beside the miso factory in Rutherfordton, and is now working as a forest ranger for the Forest Service in North Carolina, but he has expressed an interest in making miso again, perhaps with Jerry. Jerry has traveled to Japan several times when he was co-owner of Timbuktu Natural Foods. He sold the company for a good price to a guy who bought it hoping to make a lot of money; he ruined the company. Jerry plans to sell his miso in glass jars. He believes he can take over much of the Canadian miso market now owned by South River Miso Co., because their miso is very expensive in Canada. Address: R.R. #4-2090, Claremont, ON L1Y 1A1, Canada. Phone: 905-649-1988.

2677. Tanner, Jack W. 2000. Soybeans in Ontario, Canada, and Prof. C.A. Zavitz (Interview). *SoyaScan Notes.* Feb. 3 and 22. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Prof. Tanner is very interested in the history of the soybean in Canada. The soybean pioneer in Ontario and Canada was Prof. Zavitz of Ontario Agricultural College (O.A.C.). Zavitz was in the first "degree class" at O.A.C. receiving his degree in 1888 from the Univ, of Toronto. He was the first head of the Dep. of Field Husbandry in 1904–although he was the chief experimentalist for years before that. He was also very active in establishing alfalfa in Ontario province, and one variety of barley (O.A.C. 21), which he selected from a Manchurian introduction. O.A.C. turned out to be the best malting barley Canada ever had until about 20 years ago, and it was grown on 95% of the barley acreage in Ontario.

Prof. Zavitz was a Quaker and a very religious man. As a Quaker, he was actively opposed to war, drinking alcohol, and smoking tobacco. He once fired / sacked a worker for smoking in an experimental area. His anti-war work was famous. Zavitz was also meticulous in keeping records of his field work. Since he started growing soybeans in 1893, he probably published something about his work in the next annual report, or at least by 1895. In the early years of the Ontario Agricultural and Experimental Union (which started in 1886), Zavitz would send packets of seed to hundreds of farmers every year. The farmers would grow the varieties, take notes, send the notes to Zavitz, and he published the results in the Report of the Experimental Union–one copy of which was sent to each of the participating farmers. In the early 1900s, farmers would come to O.A.C. by train excursion and go through Zavitz's plots with him. In June 1904 some 40,000 farmers visited Zavitz' plots.

When Zavitz did selections, he would sometimes plant thousands of lines for testing and evaluation. Each was numbered consecutively. Thus, the O.A.C. 81 soybean just happened to be 81st entry.

Prof. Zavitz died in 1940. No thesis about his life and work has ever been written at O.A.C.

O.A.C. was established in 1874 by the Canadian Ministry of Agriculture; it was "a humungous political football from the day it started–just incredible." All faculty members worked for the Ministry. When students graduated from O.A.C., they received their degrees from the University of Toronto. In 1964 O.A.C. (together with the veterinary college and the Macdonald Institute of Home Economics) formed the nucleus of the new University of Guelph. A centennial history, titled *The College on the Hill,* by Alec Ross, was published in about 1974. Last year, when the college celebrated its 125th anniversary, two books were published. One was an update of the 100 year history of the college, by Alec Ross and Terry Crowley. The other was titled *125 Years of Achievements: OAC–A Proud Tradition,*

*An Exciting Future, 1874-1999* by Jack Tanner, Clare Renne, Douglas Morrison, and Freeman McEwen, about the 125 most important accomplishments of the college. In the latter book, soybeans are mentioned in five of the important accomplishments. Prof. Tanner spent a lot of time in the O.A.C. archives and library researching the book. There are only 3-4 references to soybeans in the book. The soybean is now the most important commercial farm crop in Ontario province, grown on about 2 million acres; it passed corn in terms of acreage several years ago.

Last year Prof. Tanner worked very hard to have the first posthumous honorary degree awarded to Prof. C.A. Zavitz, on the 125th anniversary.

For a description of soybean varieties registered in Canada, contact the Canadian Seed Growers' Association in Ottawa.

In the main office of Department of Plant Agriculture there is a personnel file on Prof. Zavitz, which contains about 100 sheets. Several volumes of Zavitz's diary of field work is also in the Dean's office. The archives of the University of Guelph (McLaughlin Archives) also has extensive information on Zavitz. Sue Bennett is archivist at the OAC archives, which are located at the other end of Guelph in a factory-type building ("the annex") and which are different from the University of Guelph archives. An oil painting of Prof. Zavitz hangs by the front door of the O.A.C. In the Department are quite a few portrait photos of him; Jack has a color photo, and has seen another in the O.A.C. Review–showing Zavitz and other members of the first degree class from O.A.C. Address: Retired Prof., Plant Agriculture Dep., Crop Science Bldg., Univ. of Guelph, Guelph, Ontario N1G 2W1, Canada.

2678. Jessop, Doug; Mullin, John. 2000. How their Canadian miso won a prize in the Japanese miso contest (Interview). *SoyaScan Notes.* Feb. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Canada has been working for many years to develop food-grade soybeans that are especially well suited for making Japanese soyfoods, such as miso. This year Doug and John entered their miso in the Japanese national contest and won two Special Participation awards. Dough explains: They started by making miso using three Canadian soybean varieties: Harovinton (released in 1989), AC Onrei (released in 1997; "AC" stands for Agriculture Canada), and AC 756 (a double lipoxygenase null variety). They made miso from each of these three soybean varieties and sent it for evaluation to the Nagano Research Institute. NRI said that, of these three, the miso made from the AC Onrei variety was the best, so they concentrated on making miso from that soybean for competition. AC Onrei is a very large-seeded, long-season, white hilum, buff colored soybean, one of whose parents is Enrei–a large-seeded Japanese variety. Most of the miso they entered was red miso; some of it was rough (unground) and some was finished/fine (smooth/ground). They entered their miso in two different contests: The All-Japan content and the Nagano contest, and they won an award for each. This was surprising because AC Onrei was not bred as a miso-type soybean; it has a high protein content and was originally developed as a soymilk and tofu bean. For miso soybeans, the Japanese always look for high sucrose–over 7%; AC Onrei has 6.8%. They also look for total free sugars, of which AC Onrei contains about 10.5-11% (about average). Even though about half the sugars are probably bound up in pectins or cellulose and have no effect on the miso flavor, they still like to know the total sugar content.

Entering and winning this contest was a new step forward for the Canadian soybean folks. "It's really something special." Doug has been taking Japanese language lessons. The miso group of which John is the project leader is now starting to log in soybean variables on a database, which has fields for sucrose, total free sugars, color, etc. For miso soybeans (including red miso or long-term soybean miso), the Japanese prefer a yellow color to a whiter color–which the tofu and soymilk makers look for.

John explains that he is a food scientist, not a soybean breeder. We talked about 6 years ago when he was starting to work on miso, and he ordered a search on miso from the SoyaScan database. The breeders are the key to the process; at Harrow they breed mostly food-type or food-grade soybeans rather than commodity-type or oilseed-types–which are bred mostly at Ottawa and Guelph.

John's miso group at Harrow has developed a close working relationship with the Food Research Institute in Nagano; they now work directly with one another. About two years ago, Mr. Fujimori, a miso maker with whom they have developed strong ties over the years, was in Canada on one of his trips. John gave him (for the first time) some homemade miso that his group had produced. He sniffed it and looked at it and said "This isn't too bad." He took it back to Japan, where it was evaluated and the results were sent to John–with Mr. Fujimori's interpretation. The conclusion was: "It's okay but... don't give up your day job." John wrote back asking how his group could improve the miso. That was they key! Mr. Fujimori came to Harrow again with another person, gave John's group a lot of technical information, suggested that he use that information to make more miso–and to enter the miso in the annual Japanese miso contest! Mr. Fujimori provided the koji and John got a microbiologist involved. John's group now made miso from three different soybeans (see above) and the scientists and judges at the FRI in Japan "were quite surprised." They said "This isn't bad." They chose the best one. So John's group made larger batches and sent them to Japan in October 1999 for entry in the annual contest. In November John went to Japan to be present at the contest–although nobody can observe the judging. He learned that

this was the first miso ever entered by foreigners in the Japanese contest. He also learned that the Canadian miso was not being judged with or against the Japanese miso. They were judging it separately in a special category–of which it was the only entry. Both awards for an "E" for effort and for reaching a high standard. "Miso is kind of a religion in Japan and it for an upstart like us to come in might not go down too well. But we found it interesting that they used our presence there for publicity–in a big way." John also discovered that the koji in all miso entries *must* be made from Japanese rice–even though a lot of Thai rice is used in making commercial miso in Japan. "Our real mission there was to raise the profile of Canadian-grown soybeans and to increase exports of Canadian soybeans. We want to breed soybeans that are very well suited for making miso in Japan. We are not interested in making miso to sell to Japan. However there is a good possibility of developing a domestic market for miso in Canada."

John is also deeply involved in trying to understand "stone seeds" or hard-seeded soybeans that do not absorb water well. Part of the problem seems to be related to weather/environmental conditions during the growing season. John hopes to try to understand the problem at the genetic level. "We now have a very heavy experimental stone-seed line."

John enjoys miso at home and he has served miso soup at the research station on several occasions. Last week he had it served at the Rotary Club. In each case, everybody liked it. "Fermented foods add such a variety of textures and flavors that people enjoy." Address: 1. Food Processing Technologist; 2. Food Scientist: Both: Agriculture and Agri-Food Canada, Greenhouse and Processing Crops Research Centre (GPCRC), Highway 18 East, Harrow, ON N0R 1G0, Canada. Phone: 519-738-2251.

2679. Jenkins, David J.A.; Kendall, Cyril W.C.; Vuksan, V. 2000. Viscous fibers, health claims, and strategies to reduce cardiovascular disease risk. *American J. of Clinical Nutrition* 71(2):401-02. Feb. [14 ref]
• ***Summary:*** Regular use of the viscous soluble fiber psyllium leads to an average 7% reduction in LDL cholesterol. Thus, it should be added to the stepwise approach to the dietary therapy of hypercholesterolemia, along with the replacement of meat and dairy products with soy protein and the addition of plant sterols to the diet. Address: 1. Clinical Nutrition and Risk Factor Modification Center, St. Michael's Hospital, 61 Queen Street East., Toronto, Ontario MC5 2T2, Canada.

2680. *Ontario Soybean Growers Newsletter.*2000. New name, new look. Feb. p. 1.
• ***Summary:*** "On December 1, 1999, the Board name was officially changed to Ontario Soybean Growers. A new logo was also adopted (see above). One thing that hasn't changed is our mandate to 'develop and promote a sound industry business environment that will allow Ontario soybean producers the opportunity for viable and profitable ongoing returns.'"

Note 1. The title of this excellent newsletter has also changed. Note 2. The Board was formerly named "Ontario Soybean Growers' Marketing Board." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2681. *Ontario Soybean Growers Newsletter.*2000. Japanese miso awards presented. Feb. p. 3.
• ***Summary:*** "Agriculture and Agri-Food Canada scientists at the Greenhouse and Processing Crops Research Centre (GPCRC) in Harrow recently received two Special Participation Awards for the first foreign entries in miso competitions in Nagano and Tokyo, Japan... Japan requires approximately 160,000 tonnes of soybeans annually to produce miso, some of which comes from Canada.

"The miso production test program at the federal research centre at Harrow began in March 1998 to support the centre's soybean breeding program and to evaluate the suitability of Canadian soybeans for making miso."

"Dr. John Mullin, the miso project leader, said it was a great honour to receive the awards, which recognize the effort and progress that the Canadian researchers have made in making miso. Dr. Mullin traveled to Japan to submit the miso for competition and was on hand to accept the awards.

"The soybean breeding program at the GPCRC is known throughout the world for its research on food-grade soybeans. Harovinton was the first food-grade soybean variety developed in Canada for the Japanese tofu industry, and helped pave the way in establishing Canadian food-grade soybeans as a premium quality product in Asia."

A photo shows Dr. Jonn Mullin and Food Processing Technologist Doug Jessop, each holding a framed plaque (written in Japanese). On a table in front of them are samples of their award-winning miso. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2682. *Ontario Soybean Growers Newsletter.*2000. Soybean planting decision for 2000–GE or not GE? Feb. p. 3.
• ***Summary:*** In the face of much uncertainty, Ontario farmers will soon have to decide whether to plant genetically enhanced (GE) or non-genetically enhanced soybeans next year. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2683. Hays, Constance L. 2000. Selling natural foods to the crowd. *New York Times.* April 9. p. BU2.
• ***Summary:*** The story and history of Irwin D. Simon and the Hain Food Group. He spent his formative years in Glace Bay, Nova Scotia, Canada, in a family that worked hard and wasn't affluent. In 1985, several years out of college, he went to work for Haagen-Dazs, the ice cream brand. In

1990 he joined Slim-Fast, the diet-shake company as a brand manager. In 1992 he left to be his own boss, and bought the Kineret line of Kosher foods, which he took public in 1993. Shortly thereafter he acquired Hain, a line of vegetable oils, condiments, and other products.

In Dec. 1999, the Kellogg Co., bothered by flat cereal sales, purchased Worthington Foods for about $80 million.

2684. *Ontario Soybean Growers Newsletter.*2000. Canadian Soybean Export Association executive [meeting]. April. p. 2.
• ***Summary:*** The Canadian Soybean Export Association (CSEA) held their 5th Annual meeting recently in London [Ontario]. CSEA is a voluntary association of members of the Canadian soybean industry, working as a team to promote exports of Canadian soybeans and soya products into world markets. The members include producers, exporters, dealers, researchers, and federal and provincial government officials.

At their Annual meeting, CSEA members elected a new executive to serve them in the coming year: Paul Hazzard (St. Clair AgriServices Ltd.)–Chairman. Michael Loh (Southwest Soya Int.)–Vice Chairman. Tom Lassaline (OSG)–Executive Member. Kim Cooper–Secretary / Treasurer. A photo shows these four men standing. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

• ***Summary:*** Contains a quick and easy recipe for Tofu tacos. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2686. Potvin, Yves; Mellina, Vesanto. 2000. The good cook book. 2nd ed. British Columbia, Canada: Yves Veggie Cuisine. vi + 116 p. Illust. No index. 19 x 19 cm.
• ***Summary:*** A handsome book promoting the company's products and containing many color photos. "This book is lovingly dedicated to my wife, Sylvia, and my two children, Ariane and Marcus." Contents: Introduction. Breakfast. Appetizers and snacks. Soups & salads. Sandwiches, hot dogs & burgers. Entrées. Beverages. Glossary. Contains many color photos of recipes, and one of Yves Potvin. In the back are tear-out coupons.

Note: The first edition, almost identical to this one, was published in Feb. 2000. Address: 1. Founder & President, Yves Veggie Cuisine, 1638 Derwent Way, Delta, BC V3M 6R9 Canada; 2. Registered Dietitian, British Columbia. Phone: 604-525-1345.

2687. Demos, Steve. 2000. White Wave reflects on growth and Dean Foods investment: Q&A with Steve Demos, CEO of White Wave. *Nutrition Business Journal (San Diego, California)* 5(6):12-13. June.
• ***Summary:*** Products with the White Wave and Silk brand names are now sold in virtually all natural foods stores and over 17,000 mainstream supermarkets in the USA and Canada.

The past 12 months have been the most dynamic period of change and growth in the history of White Wave. In 1999 the Silk beverage line was in less than 1,000 supermarkets, but by May 2000 that number had increased to over 17,500. This increase was not a result of anything Dean Foods (a $4+ billion dairy and specialty foods manufacturer and marketer) did for White Wave. White Wave already had strong momentum before the relationship with Dean Foods began. In 1998 White Wave's distribution was 85% natural foods and 15% supermarkets/grocery stores. In 1999 it was 55% natural and 45% supers. This year the company expects a shift to about 65% supers and 35% natural. For the fiscal year ending 31 March 2000, White Wave's sales were up more than 100% over the previous year, and for the month of March 2000, they were up 400% over the same month one year ago.

White Wave's greatest short-term challenge is to attract, train, and retain personnel who can meet the challenges of the company's growth and, even more important, maintain the company's culture and identity.

Silk's success in supermarkets has attracted several very large corporate competitors. Soymilk products now sold in the refrigerated beverage case include those from Suiza Foods, Hain Foods (Westsoy brand), Imagine Foods, Vitasoy, Best Foods Co., and Pepsico/Galaxy Foods.

White Wave's market share, (according to March data from Spins and April data from IRI) is 20% of the non-dairy beverage sales in natural foods and 78% of refrigerated non-dairy sales in mainstream supermarkets.

FDA approval of a health claim for soy protein has been one factor leading to dramatic growth for White Wave. During the past fiscal year, the company has operated on its previously developed "out-of-sight" growth plan (for very fast growth), which has led to 74% growth in existing markets and 108% growth in sales increase with less than 0.5% out of stock and almost no quality problems.

Concerning industry consolidation, Demos is glad to see natural foods becoming more widely available in America through new channels of distribution. The problem is that large, multinational companies seldom, if ever, are involved in innovative product development of natural or organic foods. When the entrepreneurial element leaves, the passion to innovate is often lost. No one at White Wave is cashed out or retired, and the passion remains.

Looking back: During the 1970s and 1980s, survival was the key to success for soyfoods companies. During the 1989s it was R&D leading to product innovation and better flavor. During the next decade it will be serious financial backing, dependable and far-reaching distribution, establishing consumer brand loyalty, having consistent and

high quality goods and services, and differentiating your company and products from competitors.

2688. *Ontario Soybean Growers Newsletter.*2000. Soyfoods opportunities conference. July. p. 3.
• ***Summary:*** "On April 13th, over 130 delegates attended the 'Soyfoods Opportunities Conference' held in Guelph [Ontario]. The purpose of the conference was to bring together industry stakeholders to explore" new opportunities. "Soyfoods are becoming one of the fastest growing food groups in North America." "Peter Golbitz, one of the leading authorities on the world soyfood market, spoke on current and emerging trends in soyfoods." He noted that only 10% of the world's soybeans are currently being used as soyfoods, and of that amount, 90% are in Asia. Sales of soyfoods in the USA this year is expected to top $2.6 billion–led by growth in soymilk and meat alternatives.

Yves Potvin described his very successful work with soyfoods. "After the conference, many of the delegates gathered to discuss the feasibility of creating a Canadian Soyfoods Association. 40 people from across Canada voiced unanimous support..." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2689. *Ontario Soybean Growers Newsletter.*2000. 2000 Project Soy winners. July. p. 8.
• ***Summary:*** "Judging for the Soybean Opportunities for Youth Contest, better known as Project SOY, took place last month. The annual contest requires students to develop new uses and markets for soybeans. There are two categories, one for undergraduate and graduate students, and one for diploma students." First place and $2,500 in the Undergraduate/graduate category went to three young ladies from the University of Guelph; they created Whole Hearted Bagels, which are loaded with soy protein. Second prize in this category went to "Soy Images," a line of lipstick and lip balms made from 100% soybean oil. There was a tie for third place with the developers of soynut butter cookies and tofu-based crackers.

In the diploma category, first place went to two ladies from Kemptvile College who created Equi-Soy, an equine [horse] shampoo, made with soy oil and enhanced with tea tree and lavender oils. A photo shows the three inventors of the soy-enriched bagels, flanked by Dr. Rob McLaughlin (Dean of Ontario Agricultural College), and Peter Hannam, President of First Line Seeds (a contest sponsor). Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2690. *Ontario Soybean Growers Newsletter.*2000. Pepsi to market soymilk. July. p. 8.
• ***Summary:*** "Coming soon to U.S. theatres: A cold soymilk-and-fruit drink to wash down that hot buttered popcorn. The drink is a product of PepsiCo Inc's Tropicana brand, one of several big food and beverage companies trying to get in on the growing market for soy. Kellogg, Kraft and H.J. Heinz have also recently acquired soyfood companies.

"Known as 'Tropicana Smoothie made with veggie milk', this icy drink is a joint venture with Galaxy Foods in Florida. In addition to some theatres in Florida, the drink is going to be tested in selected restaurants and Kroger supermarkets.

"Galaxy Foods hopes to soon market the Tropicana Smoothie, as well as other soy products, in Canada." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2691. Shurtleff, William; Aoyagi, Akiko. comps. 2000. Miso and soybean chiang–Bibliography and sourcebook, first century B.C. to 2000: Detailed information on 2,619 published documents (extensively annotated bibliography), 343 commercial miso products, 304 original interviews (many full text) and overviews, 372 unpublished archival documents. Lafayette, California: Soyfoods Center. 1026 p. Subject/geographical index. Author/company index. Extensively annotated. Printed July 10. 28 cm. [3198 ref]
• ***Summary:*** Miso, or "fermented soybean paste," is one of East Asia's most important soyfoods. Miso is an all-purpose high-protein seasoning, which has no counterpart among Western food or seasonings. Made from soybeans, rice or barley, and salt, its smooth or chunky texture resembles that of soft peanut butter. It comes in a wide range of warm, earthy colors ranging from light yellows to rusty reds, rich chocolate browns, or loamy blacks. Each miso has its own distinctive flavor and aroma, which for the darker, more traditional varieties is savory, and sometimes almost meaty, while for the lighter-colored types is subtly sweet and delicately refreshing. Miso's range of flavors and colors, textures and aromas, is at least as varied as that of the world's fine wines or cheeses.

Today miso is made by a small number of companies in the United States, Canada, Europe, and (as miso or miso products) is widely available at supermarkets, natural- and health food stores, and Asian stores.

This book contains the first detailed history of each of America's pioneer miso manufacturers.

This is the most comprehensive book ever published about miso and/or soybean chiang. It has been compiled one record at a time, over a period of 25 years, in an attempt to document the history of this subject. Its scope includes all known information about these two seasonings, worldwide, from the first century B.C. to the present. It is also the single most current and useful source of information on this subject available today, since 86% of all references (and most of the current ones) contain a summary/abstract averaging 229 words in length.

This is one of more than 40 bibliographies on soybeans and soyfoods being compiled by William Shurtleff and

Akiko Aoyagi, and published by the Soyfoods Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features: 63 different document types, both published and unpublished, every known publication on the subject in every language–including 2,368 in English, 618 in Japanese, 120 in German, 105 in French, etc. Extensive translations of many of the Japanese and European works. 304 original Soyfood Center interviews and overviews never before published. Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present, worldwide.

The bibliographic references in this book include 2,169 published documents and 372 unpublished archival documents. Each contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given).

This book also includes details on 343 commercial miso products, including the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

Details on how to make best use of this book, a complete subject/geographical index, an author/company index, a language index, and a bibliometric analysis of the composition of the book (by decade, document type, language, leading periodicals or patents, leading countries, states, and related subjects, plus a histogram by year) are also included. Address: Soyfoods Center, P.O. Box 234, Lafayette, California 94549. Phone: 925-283-2991.

2692. Snyder, Kristie. 2000. The soy of living: A Charlottesville company brings healthy, tasty products to a growing number of consumers. *Health Beat (Charlottesville, Virginia).* June/July. p. 10-11.
• ***Summary:*** Jon Kessler and his partner, Janus Raphaelidis started Sunergia Soyfoods in early 1998 in Charlottesville. At the time, both lived at the Twin Oaks Community in Louisa County, Virginia, where they were involved in tofu manufacturing. Their tofu is made by a company in Quebec, Canada.

2693. Wolf, Walter. 2000. Soy-related documents–Business records (Archival collection). Peoria, Illinois.
• ***Summary:*** In July 2000 Dr. Walter Wolf, as he was preparing to retire from the Northern Center for Agricultural Utilization Research in Peoria, Illinois, sent to Soyfoods Center many file folders of soy-related documents that he had collected between about 1968 and the present. Most are in the field of soy protein, and none are confidential / proprietary. Each one is neatly dated, and the documents are in reverse chronological order in each manila file folder.

Dr. Wolf earned his PhD degree at the University of Minnesota, where he studied soy proteins. He began work at NCAUR in 1956; at that time it was named the Northern Regional Research Center. He worked as a chemist in the Meal Products Research Group. He did mostly pure research, rather than applied. At the time there was little interest in food uses of soy protein. One of his main contributions was collecting and publishing statistics on the annual production and price of soy flour, soy protein isolates, soy protein concentrates, and textured soy protein products.

The following files (listed alphabetically) were received by Soyfoods Center. Unless otherwise stated, only one file on each company or subject was received. A thin file contains less than about 20 sheets of paper; a thick one contains more than 20 sheets: ADM (Archer Daniels Midland Co.; 2 thick files 1970-2000). Anderson Clayton (thin, 1971-81). Cargill (thin, 1970-2000). Central Soya (4 thick files, 1959-1999). Dawson Mills (thick, 1974-1983). Edible Soy Products, Inc. (Hudson, Iowa; Maker of Pronuts; thin, 1971-78). EMI Corp. (Des Plaines, Illinois, thin, 1971-74). Erie Casein Co. (thin, 1966-73). Fuji Oil Co. Ltd. and Fuji Purina Protein Ltd. (of Japan, thick, 1972-1993). Farmland Industries and Far-Mar-Co (thin, 1970-1993). Food Ingredients–Dale Johnson (thick, 1964-1998). Garrison Products (extrusion, thin, 1977-78). General Foods (thin, 1974-1981). General Mills (thick, 1965-1976). Gerber Products (thin, 1969). Grain Processing Corp. (1968-1976). Griffith Laboratories (thick, 1968-1986). Gunther Products (purchased by A.E. Staley, thick, 1963-1975). Honeymead Products (Mankato, Minnesota, thin, 1978-1986). Industrial Grain Products (Montreal, Canada, thin, 1973-1975). Kikkoman (thick, 1972-1997). Kraft, Inc. (1965-1984). Lauhoff Grain (1 thin, 1973-86). Loma Linda Foods (thin, 1969-1986). Miles Laboratories (thick, 1970-83). Nabisco (1974-81). Meals for Millions Foundation (1 thin file, 1976). Protein Advisory Group of the United Nations, PAG Guidelines (thin, 1969-1978). Quaker Oats (thin, 1970-97). Joe Rakosky, consultant (1979-83). Ralston Purina Co. (4 files, very thick, 1962-1999). Soy protein products (2 files, thick, 1970-1986). Soy protein production statistics and estimates (two thick files, 1970-1996). Staley (A.E., 1 thick, 1969-1986). Swift & Co. (thin, 1961-1971). Takeda Chemical Industries (thin, 1970-1984). Textured soy proteins (1 thin, 1969-71). Tofu equipment (thin, 1970s). Tokuji Watanabe tofu studies at Peoria, Illinois (thick, 1960-61). United Nations Industrial Development Organization (UNIDO, thick, proceedings of Nov. 1969 meeting at Peoria, Illinois), Unilever (thin, 1974-79). Wenger

Manufacturing Co. (thin, 1975-76). Worthington Foods (thick, 1965-1998). Address: NCAUR, Peoria, Illinois.

2694. Rice, Judy. 2000. Wyoming will be home of new soy milk facility. *Beverage Online.* Aug. 10.
• ***Summary:*** A new soymilk production company named Star Valley Natural Foods has been established. Principals in the joint venture include Jeremy N. Kendall, chairman and CEO of Stake Technology Ltd. Allan Routh, president of SunRich, Inc. And Dennis Anderson, chairman and CEO of Northern Food & Dairy, Inc., which currently produces soy milk at its facilities in Alexandria, Minnesota.

The partners have purchased a 20,000 square foot plant and equipment to make soy milk in Afton, Wyoming; it is scheduled to begin operation in September and will supply the West Coast market.

Located in the Star Valley in the Teton Range of the Rocky Mountains, the plant will use the crystal-clear water from the world's largest cold-water geyser in making its soy milk.

Northern Food & Dairy and SunRich recently formed a joint venture named Nordic Aseptic to purchase a soy milk packaging plant. Stake announced its intention to acquire Northern Food & Dairy.

Note: For more information phone Walt Humbert of Star Valley Natural Foods at 307-886-5212. As of 20 Nov. 2000 the plant had not yet begun operation.

As of 21 Nov. 2002 the phone is 307-885-3060.

2695. *Ontario Soybean Growers Newsletter.*2000. New Canadian soyfoods organization formed. Aug. p. 8.
• ***Summary:*** Soyfoods Canada is the name of the new group, chosen at a meeting in July. They prepared a mission statement and four objectives, which are given in this article. The idea for the new organization dedicated to the promotion of soyfoods arose after the April Soyfoods Conference in Guelph.

Note 1. See separate interview of Aug. 2000 with Kim Cooper of Ontario Soybean Growers.

Note 2. This is the earliest document seen (Jan. 2010) that mentions Soyfoods Canada, the first real trade association for soyfoods in Canada. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2696. Cooper, Kim. 2000. Soyfoods Canada, the new Canadian soyfoods association (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Current members of the new organization are the Canadian Ministry of Agriculture, Ontario Soybean Growers, Natures Milling (Ontario), St. Clair Agri Services Ltd. (a soybean exporter in Ontario), University of Guelph, SoyaWorld Inc. (Vancouver, BC), ADM (Maureen Callahan, from USA), and Galaxy Foods (Ontario).

The group is presently headquartered at the Ontario Soybean Growers' offices in Chatham. Janet Nauta (in charge of communications at OSG), who is serving as executive director, is working on different brochures and cookbooks. The main goal is to raise awareness of soyfoods in Canada. The ultimate question people ask is "What do I do with this stuff?"

The group has already had three meetings with a fourth scheduled for October 25th in Toronto, Ontario.

Note: Because of Canada's archaic food laws, Galaxy Foods can't sell its cheese alternatives in Ontario. The government is considering rescinding this law. One of the focuses is on government relations, and standardizing laws that relate to soyfoods within the various provinces. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2697. Cooper, Kim. 2000. Growing identity preserved (IP) soybeans in Canada (Interview). *SoyaScan Notes.* Aug. 21. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been "IPing" (growing identity preserved soybeans) for about 15 years (i.e., since about 1985). The pioneers in growing IP soybeans were Paul King (age 50-55) and his father (who founded King Grain, and who is now in his 90s) and W.G. Thompson & Sons Limited (Blenheim, Ontario). Kim worked for King Grain for about 9 years. During his travels, Paul saw the need for consistent soybeans. He realized there was no way that Canada could compete with the USA for bulk shipments, so he proposed that Canada start to develop niche markets. He got very interested in soyfoods, because he believed there was a real opportunity for Canada to supply tofu makers with soybeans of consistently high quality year after year. Today Canada has the largest and most sophisticated IP system for soybeans of any country in the world.

When genetically engineered soybeans started to be sold, the Ontario Soybean Growers (OSG) got chastised by the American Soybean Association for growing non-GMO soybeans and for not helping the advancement of GMO soybeans. When the ASA suggested that Canada stop this, they responded that they were simply trying to fill a need in the market.

When customers started asking for non-GMO soybeans, they simply became another of Canada's IP products; the infrastructure was in place. OSG is basically selling a process, which they show to their customers–from seed to grower to elevator. The customers are quite satisfied that they will get the soybeans they want, whether it is 0.1% non-GMO or 1% non-GMO or whatever. For customers in Japan and the UK, non-GMO is very important; for those in Hong Kong, only about 50% want non-GMO. Ontario's IP production and exports have been increasing. This growth is hard to measure because the acreage is grown by individual companies. Kim has been doing some informal surveys,

which show that 30-35% of the larger farmers are growing IP soybeans, which are also a value-added crop. Throughout Ontario province, Kim would estimate that IP acreage accounts for about 20-25% of total soybean acreage, and less than 5% of America's total soybean acreage. So Canada is way ahead of the USA. Address: Marketing Specialist, OSGMB, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2698. Skiff, James. 2000. Seminars on identity preserved (IP) soybeans and non-GE soybeans organized by the American Soybean Association in Tokyo, Japan (Interview). *SoyaScan Notes.* Aug. 25. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** A Japanese law requiring selective labeling of genetically engineered (GE) soybean ingredients was passed in Oct. 1999 but does not take effect until 1 April 2001. Jim Echle, head of the ASA office in Tokyo, is extremely receptive to the needs of his Japanese customers, such as tofu makers.

The first conference on this subject was held in April 1999 in Tokyo; it was Jim Echle's idea. In about Jan. 1999 Echle visited Jim Skiff's non-GE soybean facility in Mattoon, Illinois. He told Skiff that he was thinking about having a seminar on Identity Preserved and non-GE soybeans in Tokyo and asked Skiff if he would be willing to participate; Skiff said he would like to. He did not yet have a date or place, but he had the idea before he visited with Skiff, because he had been approached in Japan by trade associations and manufacturers who were interested in obtaining non-GE soybeans. Skiff then suggested that Echle talk with Dr. Dennis Thompson of the Illinois Crop Improvement Association, who Jim relied on to test for and verify non-GE soybeans. Skiff took Echle to meet Thompson. Echle subsequently scheduled Thompson to be the keynote speaker at the seminar in Tokyo. It was held in April 1999 in the afternoon in a university auditorium near the ASA offices. Several Japanese also spoke. An interpreter was present. The ASA went out of its way to make the subject of the seminar Identity Preserved (IP) soybeans and seed certification rather than non-GE soybeans, since ASA has pushed so hard to try to make GE soybeans acceptable. In fact, Echle told Skiff not to mention non-GE soybeans and not to have any signs that mentioned them. About 150-200 people attended the seminar, which lasted approximately 4 hours.

After the seminar, the attendees went to a larger meeting room down one story in the same building where there was a two-hour informal expo and social hour with snacks. About 7-8 American companies, such as Jim's, had tables or booths. Most were selling specific IP soybean varieties. Only Skiff was focused on non-GE soybeans. Peter Shortridge from Northland Organic had a both next to Skiff's. Sandra, the USDA Officer in Tokyo, gave a little introductory talk, followed by the president of the Japanese Tofu Association. Because of his position with the ASA, Echle had to downplay non-GE soybeans but he also knew genetic engineering was a big issue in Japan. Skiff feels that he has developed a good relationship with Jim Echle.

The second such seminar was held in early June of this year (2000) in Tokyo. Dan Burke of Pacific Grain and Soy was the keynote speaker. Jim was unable to attend because he had to be at a show in Europe; he is not aware of a third seminar. Jim thinks that the Tokyo office of ASA has been the most responsive of all ASA offices worldwide to the needs of its customers for non-GE soybeans. In Europe, ASA has lost many customers. The last ASA director in ASA's Brussels office lasted less than a year.

ASA has done a great disservice to soybean growers by presenting a one-sided and slanted view, and by not keeping them informed of anti-GE sentiments and legislation worldwide. With better information, more American farmers would have started growing IP or non-GE soybeans–and probably profited thereby. The Ontario Soybean Growers in Canada have done a much better job of following a two-track policy. ASA still argues that there are only a few nuts like Greenpeace who oppose GE soybeans for no good reason, and that all rational people believe genetic engineering is a boon to soybean farmers and the inevitable wave of the future. But how about the Japanese and their law requiring labeling of GE ingredients? ASA should have followed a two-track, customer oriented policy. You want non-GE soybeans? Buy 'em from us. You don't care if the soybeans are genetically engineered? Buy 'em from us. Address: US Soy, 2808 Thomason Dr., Mattoon, Illinois 61938. Phone: 217-235-1020.

2699. *Ontario Soybean Growers Newsletter.*2000. WTO and the oilseeds complex–The case for zero-for-zero binding. Aug. p. 9.

• ***Summary:*** "The Canadian oilseed industry, including the Ontario Soybean Growers, is promoting the 'Zero for Zero' trade initiative at the World Trade Organization. The 'Zero for Zero' proposal calls for the elimination of all barriers to market access and all export subsidies."

"Together Asia and the EU account for 70% of the almost 50 million tonnes in oilseed imports." The EU imposes no tariffs on imported seed (and meal), but it does subsidise crops needed to supply its protein deficient feed sector. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2700. *SoyaScan Notes.*2000. Status of the soybean in the USA and worldwide as of Sept. 2000: A few basic facts and statistics (Overview). Sept. 6. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** The soybean is by far the world's most important oilseed or legume: World production in 1998 in

million metric tons was: Soybeans 134.06. Cottonseed 33.52. Rapeseed 31.33. Peanut 26.37. Sunflowerseed 23.50. Total of the top 5 oilseeds: 249.14, with soybeans accounting for more than half of the total (54.0%).

The United States is by far the world's largest producer of soybeans, producing almost as much as all other countries combined! Leading world soybean producing countries in 1998-199 in million metric tons were: United States 75.028 (and 28.6 million acres). Brazil 31.000. Argentina 18.300. China 13.800. India 6.000. Paraguay 3.100. Canada 2.737.

Top four soybean producing states (million bushels) in the USA in 1998: Iowa 501. Illinois 468. Michigan 285. Indiana 235.

Value of the U.S. soybean crop in 1998: $14.6 billion. Of the Indiana soybean crop: $1.25 billion.

How are U.S. soybeans utilized? About 35.6% of the crop is exported as whole soybeans, 60% is crushed to make soy oil (by far the most widely used vegetable oil in America today) and soybean meal (which is fed to livestock, poultry, and aquaculture animals), about 3% is transformed from whole soybeans into various soyfoods such as tofu, soymilk, miso, etc., and the rest is used as seed to plant next year's crop. Of the crushed soybeans, about 9% goes into industrial uses (non-food, non-feed) such as soy ink, soy diesel, etc.

How is soybean oil utilized in the USA? 96.2% is used for food and 3.8% is used for industrial (nonfood) uses. Of the total food uses: Cooking and salad oils 48.7%. Shortening 37.3%. Margarine 12.9%. Other 0.5%. Of the total industrial uses: Fatty acids, soap and feed 56.94%. Resins and plastics 18.14%. Inks 17.03%. Paints and varnishes 6.31%, Biodiesel 1.42%.

A good source of current soybean statistics is the ASA (American Soybean Association) website: www.unitedsoybean. org/soystats2000.

2701. Thompson, Wes. 2000. Sycamore Creek built a new plant for oil roasting soynuts in Michigan (Interview). *SoyaScan Notes.* Sept. 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** W.G. Thompson & Sons owns Sycamore Creek, a pioneer manufacturer of oil-roasted soynuts in Michigan. To keep up with steadily growing demand, the company moved into a much larger building, bought a much larger roaster, and began production at the new site in about Feb. of this year. This tripled the company's capacity–and they have room to double it again by buying another roaster.

The new plant represented a large investment, and during the last year several large competitors have entered the business with large investments of their own, so margins are small and it is taking a longer time than initially projected to recover their investment.

Note: According to article on soybeans in *Better Farming* magazine, by Ken Bennett and Don Stoneman, it was the Hyland Seed division of W.G. Thompson and Sons Ltd. that purchased Sycamore Creek, which processes soybeans grown in Ontario for shipment all over North America. Address: President, W.G. Thompson & Sons, Limited, 122 George St., Box 250, Blenheim, ONT Canada N0P 1A0. Phone: 519-676-5411.

2702. Williamson, Mel. 2000. Early history of Soy Protein Powders and Bars in America Co. (1950-1970) (Interview). *SoyaScan Notes.* Sept. 20. Sept. 22. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** The pioneer in these two categories was Bob Hoffman, who was associated with the York Barbell Co. in York, Pennsylvania and was the U.S. Olympic weight lifting coach for many years. He was a big guy–around 6 feet 5 inches tall, and weighing 250-260 lb. A very aggressive man, and excellent weight lifter, but never a body builder. He lifted 285 lb over his head with one arm–probably in an exhibition. In about 1936 he started publishing a magazine titled *Strength and Health*–which Mel began reading in the 1950s. Hoffman surrounded himself with men who later became hall-of-fame weight lifters and strongmen.

In 1951 he introduced the Hoffman's Hi-Proteen, a powder that contained 42% protein (mostly in the form of soy flour), came in a 4-lb can, and looked like a Wheaties box. One stirred it with milk and it tasted "God-awful," and the aftermath smelled up the gyms.

In 1953 or 1954 Hoffman introduced his first bar, named Hoffman's Hi-Proteen Fudge. It was the first protein bar (or nutrition bar) that Mel had ever seen–at the 1954 Mr. America contest, in which Mel was competing. Hoffman told Mel that it was made with equal parts by volume of powdered [nonfat] milk, high protein powder [soy flour], peanut butter, and honey. It was uncoated and sold via mail order. Mel went home and made some of his own using Hoffman's formula.

As Hoffman was getting established, Joe Weider entered the field in about the early 1940s. Joe and his brother Ben came from Montreal, Quebec, Canada. The Weider's launched a competing magazine titled *Your Physique.* A big "war" began between Hoffman and Wieder. They apparently disliked each other, and they challenged one another to fistfights in their respective magazines–which sold magazines. Hoffman's operation was big, stable, and profitable. Weider often ran into financial difficulties. But Weider had more flare than Hoffman. Weider's first food product was Crash Weight #7–a weight-gain powder that contained mostly sugar and flavor–no soy. The consumer mixed an 8-oz can of the product with a quart of milk, refrigerated it, then drank before the day was over; that gave you 1,800 additional [empty] calories. He sold it with lots of before and after photos. The young men who

consumed it wanted to gain weight, which they would turn into muscle in order to be stronger or to play football, etc.

In the late 1950s or early 1960s the Costa Candy Co. (in New Jersey or Pennsylvania) started making Hoffman's bars. They had enrobers and were able to make different flavors of bars. The quality improved quite a bit.

Another early protein nutrition bar was introduced in the late 1950s and made by in Los Angeles named the Frank Molina Co., which was later sold to Nature's Nectar, then after that to Weider.

Another early nutrition bar was introduced in the early 1960s by Gypsy Books who came from the Fairfield area and later moved south to Los Angeles. It probably contained no soy and was probably made by the Frank Molina Co. in Los Angeles. Address: Owner and Founder, MLO Products Co., Fairfield, California 94533. Phone: 1-888-436-4769.

2703. Rice, Judy. 2000. Making a stake in soymilk. *Beverage Online.* Sept. 21.
• ***Summary:*** Stake Technology Ltd. (Norval, Ontario, Canada) has acquired 100% of the common shares of Northern Food & Dairy Inc. (Alexandria, Minnesota). On 18 Aug. 2000 the shareholders of Stake Technology Ltd. overwhelmingly approved the transaction. Northern produces 65% of the soymilk sold in the USA. The U.S. soy milk market has grown by more than 30% a year in recent years to exceed US$300 million in sales in 1999.

2704. *Nutrition Business Journal (San Diego, California).*2000. GeniSoy markets to an expanding demographic: Soy manufacturer introduces new products, expands distribution and secures non-GMO supplies. 5(7/8):10-11. Annual Industry Overview 2000.
• ***Summary:*** GeniSoy's parent company, MLO Products, was founded 36 years ago [in Nov. 1964] as a sports nutrition company that relied heavily on soy protein. Today its subsidiary, GeniSoy Products Co., launched only three years ago (in March 1997), accounts for about 50% of total sales–of about $40 million, to which GeniSoy contributed $18 million in FY 2000 (ended April 30). More remarkable, GeniSoy's $18 million is double what it was a year ago, and it is expected to double again next year.

MLO had traditionally marketed soy protein drinks aimed at athletes between the ages of 15 and 40. GeniSoy products are targeted to an entirely different market–those (mostly women ages 35 to 69) areas in which soy provides benefits, such as heart disease, menopause symptoms, etc. The idea come to MLO quite by accident about 5½ years ago when they were asked by another company to produce a soy protein bar for a university study on soy and cancer. After GeniSoy was launched, its products were sold mainly through MLO's established distribution channels. But soon they picked up many new distributors.

When the FDA announced its soy-heart health claim in Oct. 1999, soy became a very hot category. Many retailers began to develop a "soy set" in their stores–an area where soy products are grouped together. General Nutrition Centers (GNC), for example, are developing such a set, and GeniSoy's products tend to sell more quickly when they are placed in such a set than when they are placed with other bars.

Many consumers believe that soy products don't taste so god, but when they try GeniSoy bars they quickly change their minds and tell their friends. So bars are a great way to introduce consumer to soy.

In Feb. 1999 GeniSoy introduce their first products guaranteed to be free from genetically engineered organisms (GMOs); these included two shakes and one protein powder in the new UltraSoy line. The company says these were made more for the European than for the American market. Later in 1999 the GeniSoy secured a long-term supply contract for non-GMO isolated soy protein from Protein Technologies International, then announced in October 1999 that its entire product line would be made with non-GMO soy.

Recently MLO Products completed a new plant at its Fairfield headquarters, thus bringing its total office and manufacturing space to 125,000 feet. Its extruded candy production capacity has grown to 20 million bars/month. It plans to bring in-house its formerly contracted soynut roasting facilities with a capacity of 2 million lb/month.

Today GeniSoy has 29 SKUs in the U.S. market, 26 in Canada, and 15 in Australia. Two new products are scheduled for release next year: (1) A kind of a soy chip, between a potato chip and a mini rice cake, that will meet the FDA health claim; (2) A Soy Nutty Bar, made with toasted soy nuts, and tasting like a candy bar.

Note: This is the earliest document seen (Sept. 2000) that gives statistics for larger U.S. nutrition bar companies.

2705. Traynor, Marty. 2000. Health threats loom over GMO debate: Included as a marker, antibiotic resistance bred into crops has disastrous potential. *Natural Foods Merchandiser* 21(9):1, 26, 28. Sept.
• ***Summary:*** Scientists have found that genetically engineered (GE) genes in crops can jump from one species to another. Prof. Hans-Heinrich Kaatz, a zoologist at the Institute of Bee Research, Univ. of Jena, Germany, has found that genes spliced into canola (oilseed rape, so that the crop would resist a specific herbicide) were transferred to bacteria in the guts of bees. Then he removed canola pollen from the legs of bees and fed the pollen to young bees. Upon examining the intestines of the young bees, he found that some carried the gene that resisted the herbicide.

Why are scientists concerned about genes jumping from one species to another? The reason is not obvious. One of the genes used as a marker in genetic engineering is

resistant to antibiotics. That marker can be used in two ways: (1) To identify cells or organisms to which the new trait was transferred, and (2) to prevent theft of GE seeds.

Scientists are concerned about what will happen if that resistance to antibiotics is transferred to humans. Joe Cummins, PhD and professor emeritus of genetics at the University of Western Ontario believes that the spread of antibiotic resistance is the main threat from genetically engineered crops. The biotech industry say that GE involves the transfer of a gene from organism that has the desired trait to another than lacks it. But its not that simple. Biotechnologists have to do more than just insert the desired genes. They have to build a tool or "gene package" to trick the plants into accepting and incorporating the foreign genes. This tool includes a "promoter" which is almost always a gene from the Cauliflower Mosaic Virus; this gene makes the cells defenses less effective. An antibiotic gene is also added to the mix as a marker, which allows biotechnologists to identify that small proportion of cells in which the transfer has been successful. Researchers pour antibiotics into the cells; the ones that do not die are the ones they want. But GMOs face a scary future because these antibiotic-resistant genes could be transferred to pathogens.

A long sidebar discusses the present separate problem of how misuse of antibiotics has spawned a new generation of "superbugs" that are resistant to antibiotic drugs. Nearly 6 million pounds of antibiotics are used in food production each year, both to fight livestock diseases and to promote livestock growth. Resistant bacteria may spread to the people who eat this meat.

Three new books on genetic engineering of food are cited.

2707. *Ontario Soybean Growers Newsletter.*2000. China's water crisis. Oct. p. 12.
• ***Summary:*** China, with 22% of the world's population and only 7% of the world's fresh water supply, is facing serious water shortages. Chinese leaders agree that water shortages could be one of the country's major issues during the next 20 years. Deep wells are now dry and everyone along the major rivers is clamoring for more water. With China's rivers drying up, the country's production of grain and soybeans is expected to drop steadily. Therefore imports will increase. Economics favors use of water in urban rather than rural agricultural areas.

In Nov. 1999 a new Canada-China Bilateral agreement was signed. These changes are expected to take place when China joins the World Trade Organization (WTO). In 1998 China was Canada's 4th largest trading partner, behind the U.S., Japan, and the United Kingdom. The Canadian soybean industry continues to view China as a key market.

Note: In recent years, China has also suffered from severe floods, caused largely by deforestation and overpopulation. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2709. **Product Name:** [Tempeh, and Handmade Tempeh-Seitan Sausages].
**Foreign Name:** Tempeh, Saucisses Artisales Tempeh et Seitan.
**Manufacturer's Name:** Produits Naturels Compagnards.
**Manufacturer's Address:** 3325 Rue Hugh-Greene, Rawdon, PQ J0K 1S0. Phone: 450-834-7391.
**Date of Introduction:** 2000. October.
**Ingredients:** Sausages: Tempeh, seitan, whole-wheat bread crumbs, filtered water, nutritional yeast, extra virgin olive oil, tamari, spices, potato flour, guar gum.
**New Product–Documentation:** Letter (fax) from Brian Morin. 2001. Feb. 22. He started making and selling Tempeh and Tempeh-Seitan Sausages on 1 Aug. 2000.

Form filled out and letter from Brian Morim. Gives his current address, phone, fax, email (morin_brian@hotmail.com) and the ingredients for his sausages in French and English. He expects the labels to be ready by Aug. 2001.

2711. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada).*2000. Canadian soybean exports. 14(2):3. Nov.

• ***Summary:*** A large table shows statistics in tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1996/97 to 1999/2000. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 1999/2000 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Japan 179,708, United States 121,860, Malaysia 99,919, Indonesia 64,426, Denmark 47,444, Germany 43,410, and Netherlands 36,392.

2712. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada).*2000. Incoming Japan soybean mission. 14(2):1. Nov.
• ***Summary:*** Japan imports 5 million tonnes (metric tons) or 184 million bushels soybeans each year. Of that, about 1 million tonnes (20%, or 37 million bushels) are used to make soyfoods such as tofu, miso, natto, soy sauce, etc. Of the 1 million tons, 500,000 tonnes (50%) are for tofu, 160,000 tonnes (16%) are for miso, and 130,000 tonnes for natto.

Exports of Canadian have been increasing rapidly, from 36,000 tonnes in 1995, to 75,000 tonnes in 1998, to 175,000 tonnes in 2000.

In Sept. 2000, the Canadian Soybean Export Association and the Ontario Soybean Growers hosted ten Japanese from the soyfoods industry and showed them the Canadian soybean industry. These Japanese were most appreciative "of our efforts to segregate GMO and non-GMO varieties of soybeans using our Identity-Preserved, or IP program."

2713. Jenkins, D.J.; Kendall, C.W.; Vidgen, E.; et al. 2000. Effect of soy-based breakfast cereal on blood lipids and oxidized low-density lipoprotein. *Metabolism* 49(11):1496-500. Nov. *

2714. Woodrow, Lorna; Poysa, Vaino; Anderson, Dale. 2000. Effects of soy protein composition on soymilk and tofu yield and quality. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada)* 14(2):4. Nov.
• ***Summary:*** For these studies, five large-seeded, food-grade soybean cultivars with acceptable agronomic performance were used. 100 seeds averaged 25 gm in weight and his protein contents, averaging 46% on a dry matter basis (range 44-48.4%). They were used to make silken (kinugoshi) tofu, using two different coagulants: glucono-delta lactone (GDL) or calcium sulfate dihydrate (CS).

There was a significant positive correlation between seed protein content and tofu yield, tofu hardness, and tofu firmness. The 11S and 7S proteins represent 70% of the total protein in the soybean and form the gel when soymilk is coagulated to make tofu. "They are considered to be the key proteins in determining tofu quality." They are extracted then separated by electrophoresis. These cultivars demonstrated a wide range in their content of 11S and 7S proteins. The seed protein profile also changed very significantly from year to year. The 7S content was positively correlated with tofu yield, whereas the 11S content was not. Address: Greenhouse and Processing Crops Research Centre (GPCRC), Highway 18 East, Harrow, ON N0R 1G0, Canada.

2715. *SoyaScan Notes.*2000. Chronology of major soy-related events and trends during 2000 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 8–The Kerry Group (of Wisconsin and Iowa) purchases Solnuts, a pioneer manufacturer of dry-roasted soynuts, in Hudson, Iowa.

Jan.–Kraft Foods Inc. (Illinois) purchases Boca Burger Inc., America's third largest maker of veggie burgers, after Worthington Foods and Gardenburger.

March 6–The Hain Food Group announces that it will acquire the Celestial Seasonings tea company to become the largest natural foods company in the USA.

March 9–The USDA formally approves a rule change allowing soy protein products to completely replace meat products in the Federal School Lunch Program.

March 31–Monsanto, the world's leading agricultural biotech company, merges with Pharmacia & Upjohn (a large pharmaceutical company), and the new company is renamed Pharmacia Corporation.

April–An article by Lon White on tofu and brain aging is published in *J. of the American College of Nutrition.*

June 9–20/20 (ABC) television program, titled "Soy–The untold story," airs on Friday at 10:00 p.m. discusses many of the shortcomings of soyfoods, but in a very fair way.

June 13–Martha Stewart, on her popular nationwide TV program *Living,* has a very positive segment on edamamé.

July 14–Lightlife Foods Inc. (of Turners Falls, Massachusetts) is purchased by ConAgra Inc., a $25 billion food company based in Omaha, Nebraska–for an undisclosed amount. Lightlife's plant, employees, and management team will stay in place. Lightlife is a leading maker of vegetarian meat alternatives, with 150 employees and about $25 million in annual sales.

July–At a joint meeting of ASA and USB, the International Soy Protein Program (ISPP) was born as ASA and the Illinois Soybean Program Operating Board (ISPOB) formalized their joint commitment to "Increase the international consumption of soy protein by humans in new

markets–developing countries–and thereby create new opportunities for disappearance of soybeans and provide higher economic returns to U.S. soybean producers." ISPOB and its Executive Director Lyle Roberts were instrumental in conceiving the program and raising its initial funding. This program was later reamed WISHH.

Sept.–Monsanto's patent on glyphosate expires. Glyphosate is the active ingredient in *Roundup,* the world's best-selling herbicide.

Dec.–Sanitarium Foods of Australia acquires the 47% of SoyaWorld owned by Sunrise Soya Foods (Vancouver, BC, Canada).

Trends: 1. This year, the momentum created by the FDA health claim in Oct. 1999 has propelled the soyfoods industry to new heights. Existing companies are growing rapidly, and many new companies (including some of America's biggest food companies) are entering the market with new products.

2. This year, for the first time, soymilk has become a mainstream American beverage. As of May, White Wave Silk soymilk is sold in 24,000 supermarkets nationwide. Edamamé (green vegetable soybeans) have gone mainstream in California, and are rapidly becoming popular on both coasts of the USA.

3. In the United States and Europe, the tide seems to be flowing increasingly against genetic engineering of foods and food plants. More and more companies in the natural foods industry are labeling their products as "non-GMO" or "GMO-free" or "No GMOs." Monsanto has stopped its efforts to develop genetically engineered soybeans for food use and focused its attention instead on livestock feeds. It now seems likely the genetic engineering of plants has a future, but not in the area of foods–at least in developed countries.

4. Interest in "food-grade soybeans" continues to grow in the USA and has increased substantially this year. Canada began focusing on identity-preserved food-grade soybeans 10-15 years before the USA. U.S. interest began to grow in about 1995 with the introduction of genetically engineered soybeans and with the accelerating interest in food uses of soybeans.

5. While pro-soy articles (mostly about health benefits) continue to increase, so do anti-soy articles and Internet sites. The loudest anti-soy voices are those of Sally Fallon and Mary Enig of the USA (they believe traditional fermented soyfoods–such as miso, shoyu, natto, and tempeh–are good, traditional non-fermented soyfoods–such as tofu, soymilk, and edamamé–are not very good, and modern soy protein products–such as soy protein isolates, concentrates, and textured soy flour–are the worst of all, being highly processed with chemicals such as hexane solvent), Richard and Valerie James of New Zealand, and Lon White of Hawaii. Some of the concerns they raise are legitimate and deserve further research, but the majority (we believe) are not. Nevertheless, many of the health claims made for soy in popular articles are exaggerated or somewhat sensational, and not firmly supported by scientific evidence.

6. As we are about to enter a new century and a new millennium on 1 Jan. 2001, soyfoods appear to have a bright future, worldwide. This past year has seen more activity and interest in, and media coverage of, soyfoods than at any time in the history of the United States.

2716. **Product Name:** Organic Brown Rice Miso, or Organic Barley Miso (Aged 2 Years).
**Manufacturer's Name:** Tradition Miso.
**Manufacturer's Address:** R.R. #4-2090, Claremont, ON L1Y 1A1, Canada. Phone: 905-649-2513.
**Date of Introduction:** 2000. December.
**Ingredients:** Organic soybeans, organic rice or barley, unrefined sundried sea salt [from Brittany, France], deep well water, culture *(Aspergillus oryzae).*
**Wt/Vol., Packaging, Price:** 450 gm glass jar. Retails for Canadian $10/jar (2001/04, Ontario, Canada).
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Jerry Lewycky (whose last name is pronounced luh-WIK-ee), founder and owner. 2001. April 20. Jerry and his wife and co-worker, Suzanne Cardinal, first began selling their two long-term misos in Dec. 2000. Their company name is Tradition Miso and they sell their miso in glass jars. They now have two distributors. Jerry and his wife make two vats of miso a year. Each vat holds 7,000 lb. of miso. They have no plans for a short-term miso. His miso should be refrigerated. The jar has a special continuous-thread lid that breathes to enable gas to escape. He sells his miso only in Eastern Canada at about $10/lb. His biggest competition is Cold Mountain Miso (from southern California) which retails in Ontario for Canadian $7-8 for a 400 gm plastic tub. South River Miso is more expensive than his at Canadian $14-15/lb glass jar, but South River has more varieties of miso, so Jerry's two varieties have displaced only some of South River's. The salt he uses is gray, unrefined, and wet. It comes from Brittany, France. Other misos use partially refined salt.

Labels for Organic Brown Rice Miso and for Organic Barley Miso sent by Jerry Lewycky. 2001. April 27. Brown Rice: Black and reddish brown on yellow. Barley: Black and reddish brown on silver. On each, below the large word "Miso" is printed "aged two years." The logo looks like a monk sitting in meditation.

New Labels brought to Soyinfo Center by Jerry, Suzanne Cardinal, and their two kids, Katrina and Maxim. 2007. Jan. 2. (1) Organic Barley Miso: Black and reddish brown on gray. Aged 3 years. Product with this label first sold April 2006. (2) Organic Brown Rice Miso: Black and reddish brown on light yellow. Product with this label first

sold Sept. 2006. Each is certified organic by OCPRO Canada. The logo is still the black illustration of the monk.

2717. Jenkins, D.J.; Kendall, C.W.; Garsetti, M.; et al. 2000. Effect of soy protein foods on low density lipoprotein oxidation and ex vivo sex hormone receptor activity–A controlled crossover trial. *Metabolism* 49:537-43. *

2718. Davis, Brenda; Melina, Vesanto. 2000. Becoming vegan: The complete guide to adopting a healthy plant-based diet. Summertown, Tennessee: The Book Publishing Co. v + 281 p. Index. 25 cm. [153 ref]
• ***Summary:*** An excellent vegan sourcebook (not a cookbook) by two registered dietitians. Contents: Acknowledgements. From the authors. 1. Vegan roots. 2. Perspectives on vegan health. 3. Plant protein. 4. Big fat lies. 5. The two faces of carbohydrates. 6. Prospecting for minerals. 7. Vitamins for vegan vigor. 8. Phytochemicals. 9. The vegan food guide. 10. Building vegan dynamos. 11. Growing vegans. 12. The prime of life. 13. Overweight. 14. Eating disorders. 15. Underweight. 16. The vegan athlete. 17. Vegan diplomacy.

This book begins with a good history of veganism and contains (throughout the book) a wealth of accurate, positive information about many different types of soyfoods (especially tofu) and related subjects, including tofu, soymilk, tempeh, soy yogurt, soy cheese, soy sauce, tamari, and soy oil (incl. omega-3 fatty acids). Plus Adventist Health Studies, dietary fiber, phytochemicals and sea vegetables. Address: 1. Kelowna, British Columbia; 2. Langley, British Columbia. Both: Canada.

2719. Rose, Robert. ed. 2000. Beans, lentil & tofu gourmet. Toronto, Ontario, Canada: Robert Rose, Inc. 192 p. Illust. Index. 26 cm.
• ***Summary:*** This is an unusual but attractive book, with no real author or publisher. It was written by "The editors of Robert Rose" and published by Robert Rose Inc., with financial support of the government of Canada. Basically, it is a collection of recipes from other cookbooks. Except in the chapter titled "Meatless" (p. 145-62), many recipes contain meat, poultry, fish, or seafood. The section titled "Contributing authors" lists eight authors, with photos and descriptions of their cookbooks, and statements such as "Recipes from this book are found on pages 23, 38, 69, and 180." The book contains 12 full-page color photos of dishes prepared from the recipes.

Contains 13 tofu recipes and one tempeh recipe: Malay vegetable-stuffed fried bean curd with spicy sweet-and-sour sauce. Bak choy noodle and tofu chicken soup. Curry-fried tofu soup with vegetables and udon noodles. Mixed vegetable herb broth with soft tofu. Chickpea tofu stew. Braised stuffed bean curd. Braised roasted pork with tofu and green onions. Steamed shrimp-stuffed tofu with broccoli. Hoisin stir-fried vegetables and tofu over rice noodles. Barbecued tempeh with basil, hyssop and ginger. Chickpea tofu burgers with coriander mayonnaise. Thai dry vegetable curry (with tofu, p. 162). Pea tops with pancetta and tofu. Soy-braised tofu, cabbage and ginger with cellophane noodles (with soya sauce, p. 172-73). Address: 120 Eglington Ave. E., Suite 1000, Toronto, ONT Canada. Phone: (416) 322-6522.

2720. **Product Name:** Sea-fu (Tofu with Sea Vegetables).
**Manufacturer's Name:** Silverking Soyafoods.
**Manufacturer's Address:** 508-C Latimer Street, Nelson, BC, V1L 4T9, Canada. Phone: 250-352-5897.
**Date of Introduction:** 2001. January.
**Ingredients:** Incl. water, soybeans, four types of sea vegetables, coagulant.
**How Stored:** Refrigerated.
**New Product–Documentation:** Talk with Jeff Mock, owner. 2001. May 18. He introduced this product on 22 Jan. 2001. He stirs four types of sea vegetables (hijiki, dulse, arame, and bull kelp) into the hot soymilk before adding the coagulant to make the tofu.

2721. **Product Name:** Nature's Path Organic Optimum Power Breakfast: Flax, Soy, Blueberry.
**Manufacturer's Name:** Nature's Path.
**Manufacturer's Address:** 7453 Progress Way, Delta, BC V4G 1E8 Canada. Phone: 703-799-9660.
**Date of Introduction:** 2001. February.
**Wt/Vol., Packaging, Price:** 14 oz (400 gm) paperboard box.
**How Stored:** Shelf stable.
**New Product–Documentation:** Ad in *Natural Foods Merchandiser* (8½ by 11 inches, color). 2001. Feb. p. 27. "Optimum's the word (for soy)."

2722. *Ontario Soybean Growers Newsletter.*2001. Ontario's Edible Oil Products Act. Feb. p. 5.
• ***Summary:*** "Ontario's Edible Oil Products Act [OEPA] makes it illegal to manufacture or sell in Ontario any product that: (a) combines a non-dairy oil or fat with a dairy product; and (b) is an imitation of, or resembles, a dairy product.

"This Act effectively prohibits the sale of many soy-based dairy analogs that are widely available in other jurisdictions across Canada. For example, people in B.C. [British Columbia] can enjoy soybased cheese, but that cheese is not allowed to be sold in Ontario. These products represent new marketing opportunities for Ontario's soybean growers as many of them are made with soybean oil or protein.

"Last year, a joint federal-provincial working group recommended that "provinces should deregulate products that imitate or resemble dairy products, whether or not they

contain dairy ingredients, and defer to existing federal regulatory processes that address the consumer information and fraud issues." The Province of Ontario consulted with stakeholders on this recommendation, and the Ontario Soybean Growers, as well as the Edible Oil Foods Association of Canada, responded favourably. In light of this recommendation, and the favourable responses received, Ontario should have proceeded to repeal the Edible Oil Products Act.

"Unfortunately, it appears that at this time, the government of Ontario is bending to the will of the dairy producers and will not eliminate this discriminatory Act.

"The OSG has asked Soyfoods Canada, a new soyfoods industry association, to adopt this issue as a top priority, and press the Ontario government to make changes." Address: Chatham, ONT, Canada N7M 5L8.

2723. Gupta, Raj. 2001. Changes in ownership of SoyaWorld, Inc. (Interview). *SoyaScan Notes.* March 17. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Dec. 2000, Saputo, a large American cheese company, acquired Dairyworld Foods (Burnaby, British Columbia, Canada) and thereby also acquired Dairyworld's 50% ownership of SoyaWorld, Inc.

Then in Jan. 2001 Sanitarium Foods of Australia bought Peter Joe's 50% ownership of SoyaWorld. Maheb Nathoo is still the managing director of SoyaWorld, and the company is doing well. Maheb is basically a financial man.

The soymilk company in Scotland, which used ProSoya technology and which Dusty Cunningham helped to start, has declared bankruptcy. Raj is now negotiating with another company to take over the plant and equipment.

Raj has heard that Dean Foods is for sale, and that White Wave's Silk is not yet profitable. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2724. Flaming, Dennis. 2001. Highlights of Soyfoods 2001 [conference in Phoenix, Arizona]. *Soyfoods Canada Newsletter.* March. p. 2.
• ***Summary:*** Contents: Soyfoods–A trend not a fad. Who is buying soyfoods? Success factors and trends. Innovation. Opportunities. This conference, held Jan. 17-19, was a good place to learn about the business challenges, opportunities, and recent trends in the soyfoods sector.

2725. **Product Name:** So Nice Soyganic [Mocha].
**Manufacturer's Name:** SoyaWorld Inc.
**Manufacturer's Address:** Blaine, Washington 98230. Phone: 1-877-414-2078.
**Date of Introduction:** 2001. March.
**Wt/Vol., Packaging, Price:** 1 quart.
**How Stored:** Refrigerated.
**New Product–Documentation:** Leaflet (8½ by 11 inches, color, single sided) from Natural Products Expo West (Anaheim, California). 2001. March 8-11. "So Nice... So delicious. New So Nice Soyganic Mocha. New flavor." A large color photo shows the carton and Label. "Enriched soy milk. Enriched with 14 essential nutrients & low fat. Made with certified organic soybeans. ProSoya Process." Website: www.sonice-soyganic.com.

2726. SoyaWorld Inc. 2001. Corporate profile (Leaflet). Burnaby (suburb of Vancouver), BC, Canada. 1 p. 28 cm. Single sided.
• ***Summary:*** This leaflet, printed on one side using a color printer, describes the company and its four products: So Good, So Nice Soyganic, Sunrise, and Rice Choice. No address or phone number are given. Address: 4074 Lozells Ave., Burnaby (suburb of Vancouver), BC, Canada.

2727. SoyaWorld Inc. 2001. Healthier sales, healthier profits in a heartbeat (Leaflet). Blaine, Washington. 1 p. Front and back. 28 cm.
• ***Summary:*** On the front of this glossy color leaflet are color photos of four So Nice Soyganic soymilk products in three different cartons: 1 quart gable-top, ½-gallon gable-top with screw cap, and 1 quart Tetra Brik Aseptic Slim. Nine benefits of the products are listed, incl. "No refined sugar–Soy Nice Soyganic is subtly sweetened with organic agave syrup naturally extracted from the blue cactus of Mexico." Note: This syrup has a very low glycemic index. On the back, tables show nutritional information, ingredients for each of four flavors (natural, original, vanilla, chocolate), UPC codes and case and pallet ordering information. Website: www.soyaworld.com; www.sonice-soyganic.com. Address: Blaine, Washington 98230. Phone: 1-877-414-2078.

2728. SoyaWorld Inc. 2001. So Nice: Better taste, better flavor, better for you (Leaflet). [British Columbia, Canada]. 1 p. 6 panels. Front and back. 17 x 10 cm.
• ***Summary:*** On the front panel of this glossy color leaflet is a color photo of a carton of So Nice Soyganic Original Soy Milk. Contents: About So Nice Soyganic. A healthy alternative to cow's milk: Soy and its protective compounds. Three recipes. Four flavors and three sizes: quart gable-top, ½-gallon gable-top with screw cap, and 1 quart Tetra Brik Aseptic Slim. Nutrition facts and ingredients. Website: www.soyaworld.com; www.sonice-soyganic.com.

2729. *Soyfoods Canada Newsletter.*2001. Serial/periodical. Chatham, Ontario, Canada: Soyfoods Canada. Vol. 1, No. 1. March 2001—. Editor & Publisher: Janet Nauta. Frequency: Quarterly.
• ***Summary:*** This newsletter is published at the offices of the Ontario Soybean Growers in Chatham. However the

address of the new organization for which it is published (as of July 2001) is: Soyfoods Canada, Box 1927, Blenheim, Ontario N0P 1A0, Canada. Address: Chatham, Ontario, Canada.

2730. *Soyfoods Canada Newsletter.*2001. Founding members of Soyfoods Canada. March. p. 1.
• ***Summary:*** Soyfoods Canada was started just 4 months ago. The eighteen founding member companies are: ADM Protein Specialties, C&M Seeds, Galaxy Foods, Momo's Kitchen, Nutri-Passion Foods Inc., Ontario Soybean Growers, SoyaWorld Inc., Sunrise Soya Foods, Tofutti-Cholac Foods, Art Allen Consulting, Flamaglo Food Consultants Ltd., Meatless Gourmet, Moulin Aux Abenakis Inc., OntarBio, Snobelen Farms Ltd., St. Clair Agri Services Ltd., Superior Tofu Ltd., W.G. Thompson & Sons Ltd.

Note: Membership costs $500 per year. Address: Soyfoods Canada, Box 1927, Blenheim, Ontario N0P 1A0, Canada.

2731. *Newsweek.*2001. Faking it: Home cooking–Periscope. April 2. p. 9.
• ***Summary:*** This half-page picture-story shows the labels of six meat alternative products over a white plate on a blue table mat. A brief evaluation accompanies each product. From top center clockwise: Smart Bacon (made by Lightlife). Wunderdogs (Lightlife). Yves Veggie Salami Deli Slices. Boca Burger. Veat Vegetarian Breast (of Chicken). Nate's Meatballs–Classic Flavor. The highest ratings were given to Nate's meat balls, Wunderdogs, and Smart Bacon.

The text explains that even though Mad Cow Disease has not yet hit the USA, some flesh-eaters are thinking twice about beef. Luckily for these "unwilling vegetarians" the improved texture and flavor of soy products can now sate the appetites of these carnivores. Signed: Periscope's guide to the world of soybeans.

2732. Callahan, Patricia; Kilman, Scott. 2001. Seeds of doubt: Some ingredients are genetically modified, despite labels' claims. Lab test finds altered DNA in SoyO's, Veggie Bacon, belying market pitch. No proven dangers to health. *Wall Street Journal.* April 5. p. A1-A14.
• ***Summary:*** Tests of 20 food products bearing the words "Non-GMO" on their package, commissioned by *The Wall Street Journal*, found some genetically engineered (GE) material in 11 products, and more substantial amounts in another 5 products. The largest amounts of GE soybeans were found in Yves Canadian Veggie Bacon. Yves first placed the new label on its products about a year ago, but the company isn't recalling packages already on the shelves because, according to a spokesman, there are no safety or health issues associated with GE soybeans. However the federal Food, Drug, and Cosmetic Act prohibits placing misleading labels on food products.

The non-GMO label is one of the hottest new trends in food marketing. Industry watchers believe the non-GMO segment is growing about as fast as that of organically grown products, a market worth $7.8 billion that is growing at 8 times the rate of the packaged foods market as a whole.

In late Jan. 2001, a national phone survey conducted by the Pew Charitable Trusts, found that 75% of respondents wanted to know about the presence of GE ingredients in food, and 58% opposed such ingredients. The carton of Silk-brand soymilk, made by White Wave, promises that its contents are "Certified GMO Free Soy." However, says the article, there is no such thing as "certified GMO-free." This long, excellent article discusses each of the many points at which a product can become contaminated with GE soybeans, then points out why no reasonable company should claim that none of its products labeled "Non-GMO" are 100% free. The first thing that is needed is a tolerance level, probably less than 1%.

In a letter to the editor (April 25) responding to this article, Gregory Jaffe (Co-Director, Biotechnology Project, Center for Science in the Public Interest, Washington, DC) notes that the FDA does not "approve" genetically engineered (GE) crops for humans. It does not even require notification before a GE crop is marketed. If a seed company wishes to voluntarily submit safety data on a GE crop, the FDA will review it to see that the food complies with existing laws. "The FDA should approve the safety of every genetically engineered food before it is marketed. Only a mandatory approval process will safeguard our food supply and bolster public confidence in those foods." Address: Staff Reporters, Wall Street Journal.

2733. Brown, Kathryn. 2001. Seeds of concern: Are genetically modified crops an environmental dream come true or a disaster in the making? Scientists are looking for answers. *Scientific American* 284(4):52-57. April. [7 ref]
• ***Summary:*** Contents: Introduction. Fewer poisons in the soil? At what cost to wildlife? Three worries: Innocent creatures will be hurt by insecticides built into GM crops, superweeds will arise, GM crops will suddenly fail because insect pests will suddenly evolve tolerance and weeds will evolve immunity. Seeding superweeds? How to make a genetically modified Bt plant. The latest crop of numbers. Taking refuge. More to explore.

Numbers: The USA produces 68% of the world's total GM crops, followed by Argentina (23%), Canada (7%), China (1%), and other (1%). The most common GM crops in 2000 were soybeans, corn, cotton, and canola. Of the total GM area worldwide, 58% was planted to soybeans, 23% to corn, 12% to cotton, and 6% to canola. Of the total GM area worldwide, 74% was modified for herbicide tolerance, 19% for insect resistance, and 7% for both. Soybeans were grown on 72 million ha worldwide and 36% of this area was planted to GM soybeans. These soybeans

were modified for herbicide tolerance. Most of the corn was modified for insect resistance but some was modified for herbicide tolerance and some for both (gene stacking). In 2000 some 44.2 million ha were planted to GM crops, 75.8% in industrial nations and 24.2% in developing nations. Address: Science writer, Alexandria, Virginia.

2734. *Ontario Soybean Growers Newsletter.*2001. Soyfoods Canada working to promote soy. April. p. 3.
• ***Summary:*** "Soyfoods Canada, a new industry association committed to the promotion of soyfoods, has had an excellent start. Although starting just 5 months ago, 21 companies from across Canada are already members of this organization.

"In May, Soyfoods Canada will take a first step towards achieving its goal of increasing consumer trial and usage of soyfoods. Several members of Soyfoods Canada are participating in the Good Food Festival, a major consumer food show in Toronto.

"Proposed future activities of Soyfoods Canada include hosting a soyfood symposium, developing a website, creating standards for soyfood processing, and lobbying the Ontario government for changes to the Edible Oil Products Act.

"Ontario Soybean Growers is a founding member of Soyfoods Canada." Address: Chatham, ONT, Canada N7M 5L8.

2735. *Ontario Soybean Growers Newsletter.*2001. Focus on safety nets. April. p. 1.
• ***Summary:*** "In this issue of the Ontario Soybean Growers newsletter, we are focusing our attention on safety nets for farmers. Safety nets are the #1 Priority issue for OSG. They have been featured in the farm press, as well as mainstream news, over the past several months.

"Starting on page 4, we provide a summary of what has happened on the safety net issue in the past two months. You will also find details of Quebec's stabilization program."

Note: "Safety nets" refer to government (taxpayer) payments or subsidies to agriculture in difficult times. Address: Chatham, ONT, Canada N7M 5L8.

2736. Soy Happy! 2001. "Get yer veggie dogs here!" Making the case for an all American healthy alternative in the ballparks (Color videotape). Los Angeles, California: VegTv.com. 8 minutes.
• ***Summary:*** An excellent color video. The goal of the Soy Happy! campaign, founded and led by Johanna (pronounced yo-HAN-nuh) McCloy, is to get "veggie dogs" (vegetarian/meatless hot dogs) into major league baseball parks and AAA baseball parks. The key concept is to give baseball fans a choice between a good-tasting, zero fat, zero cholesterol, low calorie vegetarian hot dog and the typical one loaded with meat and fat.

One spokesman says that about 100 million veggie dogs were sold last year in the USA, worth about $35 million in sales. The category has been growing at 25-35% a year in recent years, making it the fastest growing category in many supermarkets. Concession managers are realizing that veggie dogs make good sense financially.

Johanna says that (as of July 2001) seven major league baseball parks are now selling veggie dogs: Florida Marlins, Seattle Mariners [Washington state], Chicago White Sox, Toronto Bluejays, Montreal Expos, Oakland A's, and Los Angeles Dodgers.

Many movie stars endorse the idea on the video, and even more (including Tony La Russa, manager of the St. Louis Cardinals) endorse it on the video jacket. Dennis Weaver, for example, says that he became a vegetarian in 1958. If veggie dogs were sold at baseball games, that would be an incentive for him to attend the game.

Talk with Johanna McCloy. 2001. Sept. 17. This video was made in two parts. Most of it was shot in early April 2001, when only one ballpark had started to selling veggie dogs. The last part was shot in July 2001, when seven major league ballparks were selling them. For more details see Sept. 2001 interview with Johanna. Address: P.O. Box 42152, Los Angeles, California 90042. Phone: 323-363-7226.

2737. Amano, Shig. 2001. New developments with Amano Foods Ltd. (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Amano Foods outgrew its former plant in Burnaby, B.C., so it built a larger plant in nearby Richmond, BC. In about Sept. 1998 the company moved into its new plant. Business is better than ever. Graham Amano, Shig's son, is in charge of the company's miso operations. The miso is kosher, organic, and uses no genetically engineered ingredients. Address: Amano Foods Ltd., 5520 No. 6 Road., Richmond, BC V6V 1Z1 Canada. Phone: 604-303-9977.

2738. FutureHarvest. 2001. Research gives birth to Nigerian soybean industry: Tofu becomes a hunger fighter and cash earner for women farmers and entrepreneurs (Web printout). *www.scienceinafrica. co.za /may /tofu.htm.* May. Printed 27 Aug. 2009.
• ***Summary:*** The article begins: "Ask any farmer in central Nigeria which local food crop is good for her children, puts cash in her pocket, and enriches the soil, and she'll probably say 'soybean.' Then ask her how she prepares it, and she'll likely say 'as tofu.'

In just over two decades, Nigeria–the continent's most populous country (est. 148 million in 2007)–has become Africa's largest producer of soybeans and soy products. In the year 2000 Nigeria harvested about 500,000 tons of

soybeans, a 20-fold increase in just over 20 years. That crop, which was valued at US$85 million, "was used to produce a variety of traditional dishes, as well as processed foods such as soymilk and specially formulated foods to help malnourished infants and children."

"A near-perfect crop: 'Soybeans are a near-perfect crop for a country like Nigeria,' says Lukas Brader, director general of the International Institute of Tropical Agriculture, IITA, one of the 16 Future Harvest centers. 'Nutritionally, they carry twice the protein of meat or poultry and contain all eight essential amino acids needed for childhood development. Soybeans are also good for the environment,' Brader says. 'Because they evolved in Asia, they are far less vulnerable to local insects than African bean crops and require fewer insecticide sprays. They also fix atmospheric nitrogen, which reduces the need for farmers to purchase fertilizer.'

"Best of all, they are affordable. In Nigerian markets, soybeans cost about one-fifth as much as other forms of protein, including dairy and fish, and are easier to store and transport. "'Those are big advantages for a crop,' Brader says. 'But to get to that stage, our researchers had to produce an entirely new plant type that could cope with high disease pressure, compete with parasitic weeds, and grow in African soils.'

"'Basically, our plant breeders had to redesign the crop,' he says. IITA soybeans, he notes, are two to three times more productive under Nigerian conditions than U.S. and Asian varieties.

"Funding for the research, some US$20 million, was provided by the members of the Consultative Group on International Agricultural Research (CGIAR), building on seed money provided by Canada's International Development Research Centre (IDRC)."

"My Second Husband: 'Soybean has been a godsend for Nigeria,' says Professor Dele Fakorede, an agricultural expert based at Nigeria's Obafemi Awolowo University. 'Our farmers are earning good money, our small industries are prospering, and our children and young mothers are benefiting from a locally-made, protein-rich food.'

"Nigerian women would seem to agree. In Benue State, a major soybean producing area in the central part of the country, women farmers often describe the crop as their 'second husband' because it helps to pay school fees and medical bills.

"'Soybeans are making it possible for a lot of women to earn their own way and achieve a greater degree of independence than ever before,' says Fakorede.

"While the new plant types have made it possible to expand soybean farming across large parts of the country, most observers agree that what sparked production was the development of soy-based food products, including a West African version of tofu. It was a Japanese researcher, Osamu Nakayama, who got the idea to use tofu as a substitute for *wara*, a traditional but expensive kind of local cheese, says Brader. 'And, of course, there were skeptics.'

"'A lot of people had doubts that we would succeed or that tofu would ever be accepted by Nigerian consumers,' Nakayama says, 'but eventually we succeeded in making a good *wara* substitute using soymilk and local plant extracts.' Nakayama worked at IITA as part of a scientific exchange program sponsored by the Japan International Cooperation Agency (JICA).

"The idea, Nakayama says, came from watching what local village women did to prepare food for their families. 'We learned a lot through simple observation and by asking questions about traditional methods, he says.' Nakayama's 'wara-tofu' is similar in appearance to farmers' cheese or firm yogurt and has a taste and texture that's only slightly different than Asian-style tofu. Local cooks say that it is easily incorporated into traditional recipes and costs about a third as much as wara made from cow's milk.

"Today, the demand for tofu and other processed soy foods is growing at an annual rate of 20 percent, fueling a major cottage industry in rural Nigeria. A follow-up report by researchers at Nigeria's University of Ibadan points out that children who grow up in soybean-producing communities are generally healthier and suffer less malnutrition than the average Nigerian child. Improved nutrition, researchers believe, also helps to limit the spread of HIV/AIDS.

"In the places where soybeans are grown, roughly 40 percent of the income earned by women is thought to be derived from soybean production or processing. Thus far, nearly 100,000 Nigerians, three-fifths of them women, have been trained in soybean production and in the preparation of soy products by local NGOs, hospitals, and church groups working in cooperation with IITA and various government agencies.

"Currently, about 140 soy-based food products have been developed for use in Nigeria."

A color photo shows a Nigerian woman, in traditional dress, holding a plate filled with pieces of fried "wara-tofu."

2739. Cooper, Kim. 2001. Looking for early documents about the Ontario Soybean Growers (Interview). *SoyaScan Notes.* June 11. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** At the request of Soyfoods Center, both Kim and Fred Brandenburg have looked through all their vaults and files for documents relating to the founding of this organization and are unable to find any. The earliest documents they have been able to find are minutes from the 1960s. Their organization is under the Farm Products Marketing Commission.

Note: Originally named the "Ontario Soybean Growers Association," it was organized at a meeting at Leamington, Ontario, November 8, 1946. Address: Marketing Specialist,

OSG, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2740. Cooper, Kim. 2001. Major soybean crushers operating in Canada today (Interview). *SoyaScan Notes.* June 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** There are only two major soybean crushers currently operating in Canada: ADM Agri-Industries Ltd. in Windsor, Ontario, and CanAmera Foods, Ltd. in Hamilton, Ontario. The ADM plant is owned by ADM of Decatur, Illinois. CanAmera is owned by Ferruzzi-Montedison (of Italy), which also owns Central Soya Co. (USA). So neither of the two companies are Canadian owned.

In Ontario province there are also 5-6 smaller companies that use extruders to process soybeans into oil and meal. Address: Marketing Specialist, OSG, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2741. Cooper, Kim. 2001. Update on genetically engineered soybeans in Canada (Interview). *SoyaScan Notes.* June 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Canada has been growing identity preserved (IP) soybeans for many years, so when the genetically-engineered (GE) issue came along it was quite easy for Canada to adapt smoothly. They are presently working on an IP standard for the Canadian soybean industry, starting from the seed all the way up to loading containers. Kim does not like the term "non-GMO" because it has a negative slant and is inaccurate. Canada does not want to be known as a non-GE country, but as a country that can provide what the customer wants. Most of the soybeans that Canada ships for food-grade soybeans are sold as non-GMO with a specified guaranteed tolerance of either 99.0% or 99.5% non-GMO. This tolerance level has been included since about 1995 when Canadian companies first started getting requests for non-GMO soybeans. Initially they guaranteed whatever level the tests could measure. Canada refused from the start to say their soybeans were guaranteed to be 100% non-GMO–even though that is what their customers wanted. Thus they had to educate their customers about what was possible and realistic. Most of the Canadian companies exporting food-grade soybeans have an IP manual and accompanying documentation that the overseas companies sometimes come and audit. The documentation guarantees that the farmer bought certified seed, that he cleaned out his combine, etc. Address: Marketing Specialist, OSG, Chatham, Ontario, Canada N7M 5L8. Phone: (519) 352-7730.

2742. *SoyaScan Notes.*2001. Changes at Bunge (Overview). June 11. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The parent company is Bunge Ltd. (Website: Bunge.com). On 15 May 2001 Bunge Corp. changed its name to Bunge North America, Inc. (Website: bungenorthamerica.com); this is a subsidiary of the parent company and is responsible for the parent company's operations in North America (USA, Canada & Mexico). Bunge-Lauhoff is a subsidiary of Bunge North America.

2743. *SoyaScan Notes.*2001. Hain Celestial Group Inc. of New York has just acquired Yves Veggie Cuisine (Vancouver, BC, Canada) (Overview). June 15. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Dana Jacobi read two days ago that Hain acquired Yves. Hain CEO Irwin Simon said Yves' offices would serve as Hain Celestial's new Canadian headquarters. See June 12 article in the *Globe & Mail* (Toronto, ONT, Canada). Yves is Canada's largest manufacturer of meat alternatives, but the majority of their sales are in the United States.

2744. Nathoo, Maheb. 2001. Soyfoods Canada: Firmly planted and ready to grow. *Soyfoods Canada Newsletter.* June. p. 1.
• ***Summary:*** Discusses developments during the past few months. As of June 18, the organization has 25 members, whose names are listed. There was a Soyfoods Pavilion at the Good Food Festival. The Government of Ontario has been lobbied on the Edible Oil Act.

Note: The first issue of this newsletter was dated March 2001. Address: Chairman, Soyfoods Canada.

2745. *Ontario Soybean Growers Newsletter.*2001. 2001 Project SOY winners. June. p. 1.
• ***Summary:*** "First place in the undergraduate / graduate category went to edible and biodegradable food packaging trays, developed by engineering students Marc-Antione Joly, Eugene Mohareb and Phoung Nguyen.

"First place in the diploma category was awarded to Udderly Soft, a lavender-scented udder balm for cows, developed by Kemptville College student Jason McIntosh.

A large photo shows Jason McIntosh and one other unnamed winner. Address: Chatham, ONT, Canada N7M 5L8.

2746. *Ontario Soybean Growers Newsletter.*2001. Canadian and Ontario acreage estimates. June. p. 1.
• ***Summary:*** A table shows estimates of intended acreage for soybeans, corn and winter wheat for Ontario, Quebec, and Canada (total) for 2001 and the actual planted acres for the 2000 crop year.

For soybeans, the two figures are (2000 / 2001): Ontario: 2,248,935 / 2,099,006. Quebec: 385,320 / 412,490. Canada (total): 2,639,689 / 2,518,906.

Note: In both years, the Canadian total is slightly greater than the sum of Ontario and Quebec because small amounts of soybeans were grown in Manitoba and perhaps

other provinces. Address: Chatham, ONT, Canada N7M 5L8.

2747. *Soyfoods Canada Newsletter.*2001. Who is buying soyfoods in Canada? June. p. 3.
• ***Summary:*** In Sept. 2000 Flamaglo Food Consultants commissioned a study by Omnitel on the market for soy products. The study was basically a national telephone interview with 2,000 Canadians, randomly selected. The data was provided by Francis Lo.

Findings: Tofu was the most popular soy product; about 25% of the sample had tried it during the past 12 months. About 18% of the sample had tried soymilk and less than 7% had tried soy-based meatless patties or sausages. Only a small percentage had tried soy ice cream.

In general: About 40% of the sample had consumed one of the above four products in the last 12 months. Most current users live in metropolitan areas with a population over 500,000. The higher the person's income and/or the higher their income, the greater their use of soyfoods. Current users tend to be female.

2748. *Soyfoods Canada Newsletter.*2001. Ontario Ag minister responds to concerns re: Edible Oils Act. June. p. 2.
• ***Summary:*** "The Edible Oils Act of Ontario prohibits the sale of foods that resemble dairy products and contain a mixture of a dairy product and an edible oil. This regulation effectively prohibits the sale of many soy-based dairy analogs that are widely available in other jurisdictions across Canada." This act favors dairy producers and hurts soyfoods makers or marketers.

Last year a federal-provincial working group recommended that provinces eliminate regulations on foods that resemble dairy products and defer to existing federal regulations.

2749. *Soyfoods Canada Newsletter.*2001. Our membership continues to grow. June. p. 1.
• ***Summary:*** "As of June 18, 2001, there are 29 members of Soyfoods Canada. The following companies have made a commitment to promote soyfoods in Canada."

New companies, not listed as founding members in the March 2001 issue are: B.C. & Harvest Trading Co. Cold Springs Farms. Concord National. Daminco. First Line Seeds. Hensall District Co-op. Innosoy Inc. Nutrisoya Foods. ProSoya Inc. South West Ag. Partners. Tetra Pak Canada. Yves Veggie Cuisine.

2750. *The Non-GMO Source (Fairfield, Iowa).*2001. Canadian farmers capitalize on demand for non-GM soybeans. 1(3):3-4. June.
• ***Summary:*** Fred Brandenburg, manager of Ontario Soybean Growers (OSG), says that Canada exported 439,000 tons of soybeans in 2000 and 400,000 tons of that (91.1%) was non-GM varieties.

Canadian farmers are now earning 35 to 50 cents a bushel premiums for growing identity preserved, non-GM soybeans for export mainly to Europe and Asia. Snobelen Farms, a soybean exporter in Ripley, Ontario, contracts with 500 farmers who grow non-GM soybeans. Snobelen exports about 50,000 tons/year, mostly to Europe.

Talk with Kim Cooper of OSG. 2001. June 13. Some of the statistics in the above article are incorrect. In 1999/2000 (the crop year goes from 1 Sept. 1999 to 31 Aug. 2000) Canada exported 946,360 tonnes (metric tons) of soybeans. Of that 439,000 tonnes were exported to Asia and at least 90% of the soybean exports to Asia were non-GM.

2751. *SoyaScan Notes.*2001. On the English-language etymology of "green vegetable soybeans," "edamamé," "vegetable-type soybeans," and "food-grade soybeans": A chronology of terminology (Overview). July 6. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** No other soyfood has had so much difficulty in finding a single, standardized name. To this day, soybeans picked when still fresh and green in the pods, boiled or steamed, and served like a vegetable, are called by a bewildering variety of names: *edamamé* (pronounced ay-duh-MAH-may, the Japanese name), fresh green soybeans, vegetable soybeans, green soybeans, edible green soybeans, green vegetable soybeans, immature green soybeans, green immature soybeans, immature soybeans, garden soybeans, garden-type soybeans, garden soys, branch-beans, etc. The short names are all ambiguous and the precise names are all too long. Fortunately, since the late 1990s, the media have increasingly used one name: edamamé.

The first attempt to describe green vegetable soybeans appeared on 12 April 1855 when T.V.P. [T.V. Peticolas] of Mount Carmel, Ohio, writing in the *Country Gentleman* said: "They are inconvenient to use green, being so difficult to hull." For the next few decades other writers followed this pattern of describing rather than naming the tender green beans.

In Dec. 1890 C.C. Georgeson, writing in the *Kansas Agric. Exp. Station Bulletin* first used the term "Edamamé" in an English-language publication to describe his seeds imported from Japan; but he was using the word as the name of a soybean variety, rather than as the name of a food type.

It wasn't until Jan. 1915 that a real name for these tender fresh beans first appeared–in the *USDA Bureau of Plant Industry, Inventory* No. 33. Referring to Plant Introduction No. 34702, from Shantung Province, China, Dr. William R. Faries of Coachella, California, wrote that he had received the seeds in December 1912. They "grow well here. They are fine for green shelled beans."

On 19 May 1917 Anna R. Van Meter, writing in the *Ohio Farmer,* called them "Green Soybeans." The only problem was that dry soybeans with green seed-coats are called by the same name.

In July 1918 William J. Morse, wrote in the *USDA Farmers' Bulletin* No. 973 about this "green-vegetable bean."

The name we prefer was coined by William Morse while studying soybeans in Japan. In July 1929 he first called them "Vegetable soybeans," then in Jan. 1931 he started using the term "Green vegetable soybean," and finally in March 1932 "green vegetable soybeans" (our preference). Morse made a major effort to introduce both the new varieties and the new way of eating them to America.

During the 1930s, six new terms were introduced: "green shelled soybeans" (USDA Bureau of Home Economics, 1933), "fresh green soybeans" (Carey Miller of Hawaii, 1933), "green immature soybeans" (Carey Miller and Ruth Robbins, 1934), "shell soy beans" (Dr. John Harvey Kellogg, letter of 9 Dec. 1935 to William Morse), "immature green soybeans" (Dr. A.A. Horvath 1938), and "immature garden soy beans" (Helen Parsons, Abby Marlatt, and George M. Briggs, 1939).

The name "Green vegetable soybeans" first appeared in the title of a publication in 1935; it was an article by Morse in the *Proceedings of the American Soybean Association* (p. 44-45). In the same article he began to search for terms to describe the new *type* of large-seeded Japanese soybeans from which the best edamamé are grown: Being unaware of the word edamamé, he coined the terms "vegetable types" and "green vegetable types." In 1938 he began to call them "edible soybeans."

But the name that stuck was first appeared in March 1939 in a famous bulletin titled "Eighteen varieties of edible soybeans," by J.W. Lloyd and W.L. Burlison of the Illinois Agricultural Experiment Station. They called them "vegetable-type soybeans" and distinguished then from typical "field-type soybeans."

Other terms used to refer to regular soybeans include "grain type" (Deodhar et al., 1973), "oil beans" (Liu et al., 1995), and "commodity soybeans" (Poysa, 1999).

During the 1930s and 1940s William Morse did more than any other person to try to introduce green vegetable soybeans and "edible- or vegetable-type" soybeans to America as a new food and to popularize their use. He wrote and lectured widely about them, and therefore he thought a great deal about what name would best describe them. He was in a unique position to see the big picture in terms of soybean terminology, and by the 1940s he had clearly settled on the terms "green vegetable soybeans" and "edible types" as those he preferred.

After 1940 only a few new names appeared: "Garden soys" (Edward Dies, 1942), "garden-type soybeans" (Allan K. Smith, 1959), and "branch-beans" (a literal English translation of the Japanese name *edamamé) (Organic Gardening and Farming,* July 1977).

Then in the late 1990s a new name burst upon the scene: "edamamé," the Japanese word for green vegetable soybeans cooked and served in the pods. This name was first used in an English-language document, as far as we can tell, in 1991, by the Jameson-Williams Co. of Fairmont, Michigan. The company issued a 2-page leaflet titled "What is edamamé?" By the late 1990s and early 21st century, food writers and manufacturers were using the word "edamamé" for all kinds of green vegetable soybeans, including shelled ones that would never be called "edamamé" in Japan.

Today, most people using the term "edamamé" don't realize that they are using it to mean "green vegetable soybeans" and that the word "edamamé" has long been used to refer to a subcategory of green vegetable soybeans–namely those that are cooked and served in the pods. Moreover, many do not understand the important connection between "vegetable-type soybeans" and "green vegetable soybeans." This is unfortunate.

After studying these terminology questions for more than 25 years, Soyfoods Center would like to see the following terms adopted: (1) Green vegetable soybeans: Vegetable-type soybeans picked green and cooked until tender. They may be served either in the pods (as edamamé) or shelled. This term has a 50-year history of use in the professional literature. (2) Edamamé: Green vegetable soybeans sold, cooked, and served in the pods. For shelled green vegetable soybeans we favor the term "shelled edamamé." In Japan, the latter are just starting to become available in the produce section of grocery stores, sold refrigerated (not frozen), typically in rigid containers with clear plastic tops and called either *mukimi edamamé* or *edamamé no mukimi* or *mukimamé. Mukimi* means "shelled" and *mukimamé* means "shelled beans." (3) Vegetable-type soybeans: Certain varieties of large-seeded soybeans (most with Japanese pedigrees and clear hilums) recognized for their good flavor and texture when used as food–either as green vegetable soybeans or tofu, soymilk, etc. This term has a 50-year history of use in the professional literature. In Japan, such seeds are called *edamamé no tane* ("edamamé seeds"). They are widely available in Japan in the spring in typical paper seed packets at grocery stores next to the produce department or the cut-flower department.

An alternative, simpler approach (now used by the American media) would be to call both (1) and (2) above "edamamé" then to call the shelled ones "shelled edamamé."

Unfortunately each of these three approaches and terms has its disadvantages. (1) Green vegetable soybeans is a very descriptive term, but it is quite long and unfamiliar to most Americans. Since "shelled green vegetable soybeans"

is much too long, "shelled edamamé" (a term now starting to be used in Japan) or "green shelled soybeans" might be better. (2) Edamamé is nice and short, and widely used in the American press since the late 1990s. But it is difficult for English speakers pronounce correctly if there is no accent on the last letter, yet no English words have accents, and the keyboard character (é) only exists in special foreign-language character sets, which are a nuisance to use frequently. (3) The term "vegetable-type soybeans" is easy to confuse with "green vegetable soybeans." Moreover, the term sounds strange when used to describe large-seeded (often clear hilum) soybean varieties preferred for making tofu or soymilk. In addition, most American's have never heard of "vegetable-type soybeans." The term "food-grade soybeans," widely used in Canada since the 1980s, has its own problems. First, it is often used to refer to all soybean varieties utilized to make foods, including small-seed varieties used to make natto and soy sprouts. Second, all soybeans can be considered "food grade."

2752. Drosihn, Bernd. 2001. Genetically engineered soybeans and soyfoods in Europe (Interview). *SoyaScan Notes.* July 23. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** In Europe, soybeans are still not familiar and not many are grown in Europe, so no European government would say to the population that they should eat more soy protein or make a health claim like that from the FDA in late 1999. Most of the soybeans now used to make foods in Europe come from South America or China; no more than 10-15% are grown in Europe. Imports from the USA and Canada have dropped dramatically because of the issue of genetically engineered (GE) soybeans.

For consumers, it has become a question of image; the image of North American soybeans is very bad in Europe. "Our customers ask us, 'What kind of soybeans do you use?' If we say that we use American or Canadian soybeans, then they will not trust our tofu." Even though Bernd makes his tofu from organic soybeans, he regularly tests all the soybeans he uses. He generally finds less than 1.01% are GE. Europe is definitely ahead of the USA in their awareness of GE issues.

Note: Since President George W. Bush took office, Europeans seem to be increasingly upset with U.S. unilateralism on a wide range of issues, from global warming to missile defense. They seem to be venting their frustration in the way they buy soybeans as well.

Talk with Jim Skiff, President of U.S. Soy, LLC. 2001. July 23. Jim has repeatedly observed exactly what Bernd described above. European consumers are upset with and distrust the USA; they reflect that in the way they buy soybeans. The U.S. government continues to try to force the Europeans to purchase our soybeans, which just makes matters worse. They don't understand the basic law of marketing–you have to give consumers what they want.

Christian Nagel no longer makes soyfoods; he now buys his tofu from Sojafarm (Lothar Stassen, Trechtingshausen, in central Germany). Tempeh is a very, very small product in Europe; not many companies currently make it.

In September Bernd plans to visit White Wave in Colorado. Address: Founder and president, Viana Naturkost GmbH, 54578 Wiesbaum / Vulkaneifel, Germany. Phone: +49 06593-99670.

2753. Nordquist, Ted. 2001. Making tofu the hard way in Cheboksary, Russia (Interview). *SoyaScan Notes.* Aug. 28. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Ted has just returned from two weeks (Aug. 4-18) in Russia working as a volunteer consultant to Soya-Ch [pronounced SOYA-chee], a small tofu company in Cheboksary, which is a city of about 340,000 people situated on the Volga River about 650 km east of Moscow–a 14-hour train ride from Moscow. "They were great people and I had a wonderful time." He was sent there by ACDI/VOCA, a volunteer overseas organization that uses American tax dollars to send American consultants overseas to help businesses that apply to VOCA for help. VOCA stands for "Volunteers in Overseas Cooperative Assistance." Website: www.acdivoca.org.

The tofu company is: Soya-Ch Closed Joint Stock Company, 42800 Chuvashia Republic, Cheboksary, Kanashskoe shosse, 19, Russia. Phone: 8352/66-93-78 or 66-92-69. Director: Alexeeva Anna Alexandrovna.

This tofu company was started in 1998 by Alexeeva, a woman who had previously been hospitalized with severe digestive problems. The doctors couldn't figure out what her problem was; she was near death. Fortunately, her closest friend had read about soy, so in the hospital she stopped consuming dairy products and started eating soyfoods. Her symptoms quickly disappeared, which proved that she was lactose intolerant. As soon as she got out of the hospital, she started a company making tofu. She is now director and she hired her husband, Alexeev Vaycheslav Konstantinovich, as deputy director, and the son of her closest friend as marketing director. They have 32 employees and make about 17 tonnes (metric tons) of tofu a year–which is not very much.

They have two Russian-made SoyaCow USM-150 semi-continuous systems. Each SoyaCow produces 150 liters/hour of soymilk, so the two lines produce about 300 liters/hour. The equipment is very poor quality (it does not use the airless cold grind process so the soymilk has a beany flavor) and the process by which they make tofu is extremely slow and inefficient because their instruction manuals are so poorly written. Each line makes only about 16 kg/hour of tofu. The equipment is made illegally in

Russia with no supervision or license from ProSoya Inc., Raj Gupta's company in Canada.

Soya-Ch produces plain tofu and five types of flavored or seasoned tofu (with raisins, dried apricots, caraway, sea tangle or laminaria *{konbu,* a type of sea vegetable}, or salt). They call their tofu "soy cheese" and consumers buy it and use it like cheese. They typically slice it and serve it on bread; it is never pan-fried, deep-fried, sauteed, stir-fried, etc. It retails for about 30% less than dairy cheese–which is its most important selling point in Russia.

The company's total tofu production is about 15,000 kg/month; over 80% of this is plain tofu, which is sold in bulk to a dairy which uses the tofu as an extender for their low-fat dairy cheese. Of the remaining 20%: (1) About 30% is sold as plain tofu 125 gm packs; (2) About 50% is sold as flavored tofu (five flavors) in 125 gm packs; and (3) About 20% is sold as flavored soy cottage cheese dessert in 125 gm round cups.

To make the soy dessert: Place whole raisins or bits of pre-chopped dried apricots in the bottom of a curding vat. Run hot soymilk into the vat in three stages, adding one-third of the total nigari coagulant at each stage. The soymilk flowing into the vat stirs both the fruits and the nigari; no paddle is used for stirring. The fruit distributes itself evenly distributed throughout the curds–naturally! While the soymilk is finishing its coagulation, line a second perforated vat with a cloth pressing sack. Ladle the curd-fruit mixture into the pressing sack; whey will begin to drain out through the holes in the vat. When the sack (and vat) is full, lift the sack out of the barrel and hang it in a cold place over a drain or basin to catch the dripping whey. For best results, hang the sack in a walk-in cooler with a strong fan to hasten cooling and extend the shelf-life of the finished product. Package the fruit-sweetened curds in 125 mg cups. Serve cold as a ready-to-eat dessert. No added sweetener is needed. Ted found this latter product to be very innovative and interesting.

The company sells its tofu at all 42 supermarkets in Cheboksary, and they deliver it in their own refrigerated trucks. They do not make any soymilk for sale as such because of the expense of packaging; however they may sell a small amount in bulk. Financially, they are doing quite well.

It was very easy for Ted to show them how to make tofu correctly, and how to make many additional new products such as flavored tofu, soy yogurt, and soymilk. After Ted's visit, they plan to make soy yogurt using a 140 liter/hour yogurt plant from Israel. They expect to be able to make and sell soy yogurt for 25% less than dairy yogurt. Ted advised them to price the soy yogurt at the same price as dairy yogurt, but to periodically put it on sale at 20-25% off–a Western marketing trick! When they introduce the product, or introduce it to a new store or chain, have it on sale for one month. Then, 2-3 times per year, for one month at a time, have it on sale for 25% off; at those times, try to have demo in as many stores or chains as possible. When introducing new flavors, have the product on sale.

One big problem in Russia is the Sanitation Board. Each new product a company makes must get a permit from this department, but only after they have started to make the product. The product is then sent to Moscow where a bureaucrat must give it his stamp. "The one thing they seem to like most in Russia is stamps." Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2754. Buker, Robert J. 2001. Edamame soybeans from Vancouver to Kampala. In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 27-28.

• ***Summary:*** Dr. Al Probst, USDA soybean breeder at Purdue Univ., introduced the author to "soybeans as a green vegetable" when he was in graduate school. When he served steamed grain varieties to his children, they greatly enjoyed opening the salted pods and eating the beans with their fingers. He soon learned that they were nutritious, good tasting, and fun to eat. After 23 years of heading a program that bred grain type soybean, he resigned in 1984 and moved from Indiana to his ancestral home in Vancouver, Washington.

He then worked with USAID and introduced edamame soybeans to Uganda (where they were well accepted), Somalia and Zimbabwe. He obtained these soybeans from S. Shanmugasundaram of AVRDC. Later he started an edamame selection program in Vancouver, Washington. He also grew one variety (Buker's Favorite) in Belize and Oregon.

In 1998 he had two short-term assignments in Turkmenistan. Buker's Favorite was among the varieties planted in this cotton growing economy. This spring he received reports that this variety has been well received and production has expanded.

Buker returned to Uganda in Dec. 1998 and again in Dec. 2000. On both assignments he gave his hosts samples of his soybean variety and prepared local grain varieties as a grain vegetable snack. "In Kampala, I persuaded the hotel chef to steam some green grain soybean pods for me and invited a reporter and invited a reporter from the major newspaper to join me for a snack. He prepared a nice article for his paper on the benefits of eating soybeans as a green vegetable."

"In summary green vegetable soybeans can improve the human diet here and in the developing world. We must remember that in the developing world it is the small children that need a higher protein diet. Edamame soybeans satisfy this dietary requirement and taste good as well as

being fun to eat." Address: 5808 NW Alki Rd. Vancouver, Washington. bobbuker@spiritone.com. Phone: 503-630-5984.

2755. Li, Thomas S.C. 2001. Vegetable soybean development in Canada. In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 83-86. [7 ref]
• ***Summary:*** Contents: Introduction and methods. Results. Summary. The term "vegetable soybean" means edamame, which is a relatively new crop in Canada. The number of heat units required for vegetable soybeans is not a large as for grain soybeans since vegetable soybeans are harvested before the seeds reach maturity; thus they can be grown in most provinces in Canada. Canada has recently started a breeding program specially for vegetable soybeans, due to increased demand. In 1998 and 1999 four varieties (Maple Glen, Apache, Karikachi, and Tohya) were tested at the Pacific Agri-Food Research Centre, Summerland, British Columbia. Maple Glen is a grain variety with smaller seeds than the other three, which are vegetable varieties. "Maple Glen and Apache were developed at the Eastern Cereal and Oilseed Research Centre, Agriculture and Agri-Food Canada, Ottawa, Ontario. Seeds of both Karikachi and Tohya were obtained from Japan (Tokita Seed Co. Ltd., Nakagawa, Omiya-shi, Saitama-ken, Japan 330). Large beans from both Tohya and Karikachi have been especially selected for relatively early production.

Vegetable soybeans should be harvested at the R6 stage. A maturity indexing system was adopted by using corn heat units (CHU) to determine the suitability of different geographical regions. The CHU required for to reach the R6 stage was found to range from 2100 for Maple Glen to between 2200 and 2300 for Karikachi and Tohya. "These CHU requirements should allow most of the regions in Canada to grow vegetable soybean as a new alternative crop."

Table 1 gives height to bottom pod, height of plant, yield (gm per plant), seed to pod index, and fresh bean weight (gm per 100 seeds). Address: Agriculture and Agri-Food Canada, Pacific Agri-Food Research Centre, Summerland, British Columbia, Canada V0H 1Z0. lit@em.agr.ca.

• ***Summary:*** Focuses on products developed in the United States, such as hydraulic fluid, ultimate odor eater, truck bed liners, soy hydraulic fluids, soy-based ink, soy hand cleaners, soy furniture, bulk soy wax, Environ (soy building material), roasted soy nuts, general soy products. Gives the website URL for about half of these products. Address: Chatham, ONT, Canada N7M 5L8.

2758. *Ontario Soybean Growers Newsletter.*2001. Market scan [Total soybean imports and total foods soybean imports to selected Asian countries]. Aug. p. 12.
• ***Summary:*** A table shows total soybean imports / total foods soybean imports to selected Asian countries. All figures are in tonnes (metric tons):

Japan 4,800,000 / 980,000.
Hong Kong 35,000 / 35,000.
Singapore 26,000 / 26,000.
Malaysia 200,000 / 70,000.
Taiwan 2,400,000 / 350,000.
Indonesia 600,000 / 350,000.
South Korea 1,200,000 / 200,000.
Philippines: 100,000 / 28,000.
Thailand 900,000 / 100,000.
Total for these countries: 10,261,000 / 2,139,000.

"Canada has been exporting soybeans to Asia for 30 years."

2759. Shurtleff, William. 2001. On the English-language etymology of "green vegetable soybeans," "edamamé," "vegetable-type soybeans," and "food-grade soybeans". In: T. Lumpkin, ed. 2001. Second International Vegetable Soybean Conference. Pullman, Washington: Washington State University. 202 p. See p. 179-181.
• ***Summary:*** "After studying these terminology questions for more than 25 years, Soyfoods Center would like to see the following terms adopted: (1) Green vegetable soybeans: Vegetable-type soybeans picked green and cooked until tender. They may be served either in the pods (as edamamé) or shelled. This term has a 50-year history of use in the professional literature. (2) Edamamé: Green vegetable soybeans sold, cooked, and served in the pods. For shelled green vegetable soybeans we favor the term 'shelled edamamé.' In Japan, the latter are just starting to become available in the produce section of grocery stores, sold

refrigerated (not frozen), typically in rigid containers with clear plastic tops and called either *mukimi edamamé* or *edamamé no mukimi* or *mukimame. Mukimi* means 'shelled' and *mukimame* means 'shelled beans.' (3) Vegetable-type soybeans: Certain varieties of large-seeded soybeans (most with Japanese pedigrees and clear hilums) recognized for their good flavor and texture when used as food–either as green vegetable soybeans or tofu, soymilk, etc. This term has a 50-year history of use in the professional literature. In Japan, such seeds are called *edamamé no tane* ('edamame seeds'). They are widely available in Japan in the spring in typical paper seed packets at grocery stores next to the produce department or the cut-flower department.

"An alternative, simpler approach (now used by the American media) would be to call both (1) and (2) above 'edamame' then to call the shelled ones 'shelled edamame.'

"Unfortunately each of these three approaches and terms has its disadvantages. (1) Green vegetable soybeans is a very descriptive term, but it is quite long and unfamiliar to most Americans. Since 'shelled green vegetable soybeans' is much too long, 'shelled edamame' (a term now starting to be used in Japan) or 'green shelled soybeans' might be better. (2) Edamame is nice and short, and widely used in the American press since the late 1990s. But it is difficult for English speakers to pronounce correctly if there is no accent on the last letter, yet no English words have accents, and the keyboard character (é) only exists in special foreign-language character sets, which are a nuisance to use frequently. (3) The term 'vegetable-type soybeans' is easy to confuse with 'green vegetable soybeans.' Moreover, the term sounds strange when used to describe large-seeded (often clear hilum) soybean varieties preferred for making tofu or soymilk. In addition, most Americans have never heard of 'vegetable-type soybeans.' The term 'food-grade soybeans,' widely used in Canada since the 1980s, has its own problems. First, it is often used to refer to all soybean varieties used to make foods, including small-seed varieties used to make natto and soy sprouts. Second, all soybeans can be considered 'food grade.'" Address: Soyfoods Center, Lafayette, California, USA.

2760. McCloy, Johanna. 2001. Work with veggie dogs and the Soy Happy! campaign (Interview). *SoyaScan Notes.* Sept. 17, and April 21, 2003. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Johanna (pronounced yo-HAN-nuh, after her Icelandic grandmother) spent much of her early life overseas, including Spain (7 years), India (2 years), Japan (Tokyo, 6 years from 1975 to 1981), and Venezuela (one year). She moved to the USA to attend Duke University (Durham, North Carolina), and graduated with a degree in Comparative Area Studies and a minor in Anthropology. She speaks Spanish (her first language) and "manageable" Japanese. During the summer of 1985, she studied intensive Japanese at ICU (International Christian University) in Tokyo.

During her six years in Tokyo, Johanna got her first taste for acting; she performed in plays and landed roles in commercials, TV and movies. In 1989 she moved to Los Angeles after being accepted to Sanford Meisner's acting class. Much of her income is from acting and people recognize her from her role as Ensign Calloway in *Star Trek: The Next Generation*, or from her numerous commercials.

In 1989 she became a vegetarian, and in 1999 a vegan.

In about March 2000, while at a Dodgers Game in Los Angeles, when she realized there was nothing in the stadium for her to eat–nothing! So the next day she called the concession manager at the stadium. First she pointed out that no veggie hot dogs were available in the stadium, then added that she was very surprised to find at that, even among the five sandwiches at the Subway stand (Subway is a company known for offering vegetarian alternatives), there were no meatless subs. So asked him to consider having something vegetarian there. The guy said, that the issue of the veggie dogs was a long-term problem that he would be willing to discuss, but as for the meatless Subway sandwich, he would be glad to contact the stand and have it available next week. And the next week they were offering vegetarian food–just like that. Johanna realized that all she had to do was ask! Note: Not until June 2001 did Dodgers stadium started offering veggie dogs–one of the last 3-4 major league parks to do so.

For years, Johanna had been a member of PETA (People for the Ethical Treatment of Animals). In one of their newsletters from a previous year, PETA had suggested that readers who were baseball fans contact their local baseball park for menu information. So she called PETA, told them that she had just called her own ballpark, mentioned the previous newsletter about baseball parks, and asked PETA if they happened to have current menu information from baseball parks because she was curious to know if any of them presently sold veggie dogs–so she could tell her contact at Dodgers' stadium. They said they had a list, but it was very old and needed to be updated. She offered to call all the ballparks to update it if they would fax her a copy. The next day she was on the phone updating the list. She personally called the concession manager at every major league ballpark, introduced herself, encouraged them to start selling veggie dogs, then asked them what their vegetarian menu offerings were.

Then someone advised her to create a Website and post the updated list on it–so many people could access it quickly and easily. She had never dealt with the Internet before, but her e-mail provider helped her to set up a very simple home page. Soon she had posted the upated list on her site. Her Venue Reference Guide contained, for every major league ballpark: Contact information, concession

company, current veggie menu offerings, and where the vegetarian foods are located in the ballpark.

In May 2000 an story about her work with vegetarian foods at baseball parks appeared on Vegesource.com–the most popular vegetarian resource website on the Internet. Almost immediately, many people started to visit Johanna's little Website–as shown by the counter on her home page–which soon hit 700 visitors. She also got a few e-mails and phone calls. Then, because of the great interest in this subject, Vegsource.com offered to host her Website. She soon came to value the power of the Internet. Her consumer advocacy campaign began to pick up steam. She e-mailed concession managers, told them of her activities and number of visitors, encouraged them to sell veggie dogs at baseball games, and offered to help them get started by putting them in touch with manufacturers so they could sample different brands. She explained that many vegetarian baseball fans, who now eat before to the game or bring their own food to the ballpark, were potential customers.

In April 2000 she single-handedly started the Soy Happy! campaign to get veggie hot dogs into major league ballparks. Since that time she has devoted herself so wholly to this, and became so completely immersed in the cause and the campaign, that she put her life–her quest for an income and a viable way of life–on "hold."

The first major league ballpark to sell veggie dogs was the San Francisco Giants in about 1989. The product was a vegan hot dog made by Yves in Canada, but the Giants only sold them for about two years at a "Health Stand"–big mistake. Johanna has heard that the Giants did this because the concession manager's daughter was a vegetarian and she was insistent; moreover her dad had had a heart problem that year, and as a result decided to try the meatless hot dogs.

The next team was the Norfolk Tides, a AAA baseball team in Virginia–largely due to the efforts of PETA, which is headquartered in Norfolk. PETA agreed to buy a billboard ad in the stadium if the team would sell veggie dogs there. The first major ballpark to accept her idea was the Chicago White Sox, starting in April 2000. She was surprised and delighted.

In April 2001 she had a video (8 minutes, color) made about the Soy Happy! It was set at the Genesis Awards program. She mailed copy of the video of the video, with a cover letter, to every major-league ballpark. At that time only one major league park was selling veggie dogs. In July 2001 she added an appendix to the video and announced that seven teams were now selling veggie dogs.

Also in April 2001 she developed and launched the Soy Happy! website has been very instrumental in this campaign on EarthLink. Within a month, VegSource, the most frequently visited vegetarian site on the Internet, offered to host her website, make it even more professional, and pay expenses. Jeff Nelson of VegSource has been her "godfather." VegSource also hosts many other vegetarian and animal rights sites.

During the past year Johanna has met and worked with many concession managers at baseball parks. Most major league baseball teams have their own concession stands in addition to those they contract with to come into the ballpark. Johanna believes strongly that veggie dogs should be sold along with the other foods and not in some separate place, such as a "Health Stand." Today they are sold at only a few stands and those are often on a test-run basis, usually not advertised, and often not conveniently located–a formula for failure. The place where Johanna has learned the most about concession food is at Dodgers' stadium in Los Angeles. Their hot dog maker, Farmer John, is a major force at that stadium since it was first created in Los Angeles. Farmer John provides a large portion of the marketing expense and budget for the stadium through their sponsorship. On the back of every Dodger ticket sold is a Farmer John logo.

Since the Hain Celestial Group recently purchased Yves Veggie Cuisine (of Canada), a major source of veggie dogs, Johanna plans to reduce her work with Soy Happy! unless she can work as a paid consultant. However she plans to continue developing and maintaining the website. Acting is a possibility, but it hasn't been her principal focus for a long time. So she is pondering her future, which may include a move to northern California. Her mother lives in Walnut Creek, and she is attracted to that part of the world. She likes to write and is considering writing a book about growing up overseas.

An essay about her path to becoming a vegetarian will appear in the book *Voices from the Garden* (Lantern Books, fall 2001). Address: P.O. Box 42152, Los Angeles, California 90042. Phone: 323-363-7226.

2761. Soy Happy! 2001. SoyHappy.org. Let's get veggie dogs in major league ball parks (Website printout–part). http://www.soyhappy.org. Printed Sept. 17.
• ***Summary:*** Contents: Home page. 1. About the campaign (5 p.). 2. Veggie dog info. 3. Ballpark reference guide. 4. Soy Happy news. 5. Caps and patches. 6. Founder bio. 7. Links. 8. Contact us.

Dates when ballparks started selling veggie dogs: Norfolk Tides (before April 2000). Chicago White Sox (April 2001). Seattle Mariners (April 2001). Florida Marlins (April 2001). Montreal Expos (April 2001). Oakland A's (May 2001). Los Angeles Dodgers (June 2001). Toronto Blue Jays (June 2001). Most ballparks are selling Morningstar (Kellogg's) Veggie Dogs–which are vegetarian but not vegan. The Los Angeles Dodgers and a few others are selling Yves Veggie Cuisine's The Good Dog–which are vegan, kosher, and non-GMO, or Lightlife Foods' veggie dogs.

On page 1 of the home page is a color photo of Johanna McCloy, the campaign's founder. Address: P.O. Box 42152, Los Angeles, California 90042. Phone: 323-363-7226.

2762. Carter, Rachel; Kistner, Stephanie. eds. 2001. The soy alternative. Vancouver, BC, Canada: Whitecap Books Ltd. 240 p. Illust. (color). Index. 26 cm.
• ***Summary:*** This is an attractive book, with a full-color photo on almost every other page. However it is edited by a team of people who apparently don't know much about the subject, since it contains many factual errors. It has no real author and many publishers, the main one being Murdoch Books, a division of Murdoch Magazines Pty. Ltd. (Sydney, Australia).

Contents: The soy story. Glossary of ingredients. Soy for breakfast. Breakfast in a glass. Soy for lunch. Soy for Sunday lunch. Soy for vegetarians. Note: The rest of the book is not vegetarian, containing recipes for beef, lamb, chicken, pork, etc. Soy for dinner. Soy for parties. Soy for dessert. Soy at teatime. Cookery terms. Address: 351 Lynn Ave., North Vancouver, BC, Canada V7J 2C4.

2763. AGP–Ag Processing Inc a cooperative. 2001. Annual report. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 28 + 20 p. 28 cm.
• ***Summary:*** Net sales for 2001 (year ended Aug. 31) were $1,788.716 million, up 9.0% from $1,640,838 million (revised downward from $1,961,736 million) in 2000. Earnings from continuing operations (before income taxes): $46.038 million, up 2.70 fold from the $17.069 million (revised downward from $20.908 million) in 2000.

This year AGP has a new CEO, Martin P. Reagan. "In fiscal 2001, AGP began to divest its U.S. and Caribbean feed operations, its swine business, and its Sherman, Texas, refinery, ending its relationship with Archer Daniels Midland (ADM) in these businesses." "Through a transaction with ADM in fiscal 2001, AGP divested itself of Consolidated Nutrition which was jointly (50-50) owned by the two companies. In a related transaction, AGP acquired ADM's share of Masterfeeds, the Canadian feed operation that had been equally owned by the two companies." Also an "expansion of the Soybean Component Premium Program [to include protein], and an increase in bio-fuel visibility and growth." AminoPlus is "AGP's high performance dairy supplement" [bypass soy protein].

Contains color photos of (1) Leiting and Lindsay. (4) The board of directors. (5) Management staff. Contains many color photos. AGP now has a website listed on the rear cover: www.agp.com. Address: Omaha, Nebraska. Phone: (402) 496-7809.

2764. **Product Name:** [Soy & Rice Miso].
**Foreign Name:** Miso de Soya et de Riz.
**Manufacturer's Name:** Les Aliments Massawippi.
**Manufacturer's Address:** 4530 Chemin Capelton, North Hatley, Quebec, Canada J0B 2C0. Phone: 819-842-2264.
**Date of Introduction:** 2001. October.
**Ingredients:** Organic soybeans, organic rice, salt, *Aspergillus oryzae*, natural spring water.
**Wt/Vol., Packaging, Price:** 200 gm, 500 gm, or 2 kg plastic tubs.
**How Stored:** Refrigerated.
**New Product–Documentation:** Elwell, Christian. 2001. "Miso more than food: Life! Healing in Rwanda." *River Currents: News from South River Miso Company* (Conway, Massachusetts). Fall/Winter. p. 2. Nov.

Talk with Gilbert Boulay. 2002. Nov. 24. Their miso is somewhere between a red miso and a light yellow miso. They worked for 6 months adjusting the proportions of ingredients so that, when dissolved in warm water, the broth tasted as much as possible like chicken broth / soup; it is not pasteurized. It was first presented at expos and shows in Oct. 2001 and was first sold commercially that same month; it was first distributed in Dec. 2001.

2765. *Ontario Soybean Growers Newsletter.*2001. Biodiesel promoted across Ontario. Oct. p. 5.
• ***Summary:*** "In an effort to help raise the awareness and demonstrate the benefits of biodiesel fuel, the OSG recently teamed up with Ontario Agri-Food Technologies (OAFT) and Biox Corporation on some promotional activities. These promotions included a display and demonstration of biodiesel fuel at both the Canadian Outdoor Farm Show in Woodstock, Ontario on September 11-13, 2001 and the Rural Expo and International Plowing Match on September 18, 2001. Both of these venues provided an excellent opportunity to speak with the public and politicians about the many benefits of biodiesel to the environment, public health, agriculture and rural development. Other biodiesel promotions are planned in Toronto in conjunction with Agriculture Week in October.

"In addition to these activities, the OSG also furthered the biodiesel agenda by making a presentation before the Ontario Government's Select Committee on Alternative Fuel Source. This multi-party committee is touring the province consulting with various stakeholders regarding the development of energy alternatives to fossil fuels. The OSG presented a brief outlining the benefits and opportunities associated with biodiesel in Ontario and recommended that biodiesel should be granted tax parity with other alternative fuels in Ontario." Address: Chatham, ONT, Canada N7M 5L8.

2766. *Ontario Soybean Growers Newsletter.*2001. Profiles: Kevin Muxlow, Executive Director of Grain Growers of Canada. Oct. p. 7.
• ***Summary:*** "Grains and oilseeds organizations across Canada have talked about it for years–the need to lobby for

changes in federal policies with `one voice.' With the recent formation of Grain Growers of Canada, this need is being met.

"Grain Growers of Canada (GGC) is a coalition of 11 different commodity groups from across the country, with Ontario Soybean Growers being a founding member. Other members include the Alberta Barley Commission, the Alberta Winter Wheat Producers' Commission, the Atlantic Grains Council,..."

"In all, the group encompasses some 80,000 grain and oilseed farms worth an estimated $10 billion in economic activity, including exports, employment and benefits to the rural economy.

"The goal of GGC is to represent all Canadian grain producers and to maximize opportunities for farmers to pursue their interests within a competitive and open marketplace. The challenge is to provide a balanced and united approach, as opposed to focusing on a particular set of issues facing one group. 'We want to help forge a policy environment where all commodities and the producers who grow them can be successful worldwide,' says Kevin Muxlow, Executive Director (and sole staff member) of GGC. To meet its goal, Grain Growers of Canada has identified several areas of priority for the group.

"One main activity this year, relevant across Canada, has been to emphasize the need for equity in income support provided for Canadian grain and oilseed farmers compared to those for competing farmers in the United States. The GGC has made several submissions to the Canadian government, seeking new or revised safety net programs that better meet the needs of grain and oilseed producers,..."

"Another area of focus for GGC is market access and trade."

"One challenge with a possible opportunity for farmers is finding ways for crop farmers to benefit from carbon sinks and credits as part of Canada's strategy to meet climate change quotas."

A portrait photo shows Kevin Muxlow. Address: Chatham, ONT, Canada N7M 5L8.

2767. *Ontario Soybean Growers Newsletter.*2001. Market scan [Canadian exports and identity preserved (IP) soybeans]. Oct. p. 8.

• ***Summary:*** Our industry has now moved into a higher plateau, as Canada's food-grade soybean customers will have new confidence in their purchases with the recent launch of the National Identity Preservation Standard. The standard is a minimum guideline that outlines identity preservation (IP) procedures for all stages of production from growing to processing.

"The Canadian soybean industry has been producing food grade soybeans for over 30 years and running IP programs for over 15 years. 'Our customers already know we have the infrastructure and skills for sophisticated IP programs,' says Michael Loh, Chair of CSEA. 'This standard will take our industry to the next level.' Canadian soybean exports have increased dramatically over the past few years, from 468,000 tonnes in the 1996/97 crop year, to 946,000 tonnes in 1999/2000.

"Identity preservation is important for food grade soybean production because Canada's public and private breeding programs have developed superior soybean varieties. These varieties, with traits such as large seed size and elevated proteins and sugars, have helped the Canadian soybean industry capture niche markets overseas. These customers want assurances that they are receiving the highest quality product. This national standard will help give our food grade soybean customers an additional level of comfort with our ability to segregate individual soybean varieties.

"The Canadian Grain Commission will be the third party certifying body for the standard. They will conduct both a `desk audit' of processors' IP procedures manuals, as well as physical audits of their facilities. 'IP programs are the way of the future for agricultural production. We see this standard as an evolving process and will be making changes to the standard as new technologies become available,' says Wendy Jahn of OMAFRA, who led the committee that drafted the standard."

An illustration shows the "I.P. Identity Preserved" logo of the Canadian Soybean Export Association. Address: Chatham, ONT, Canada N7M 5L8.

2768. Watanabe, Koichi. 2001. Re: History of La Soyarie Inc. and list of current products. Letter to William Shurtleff at Soyfoods Center, Nov. 7. 5 p. Typed, with signature on letterhead. [Eng; Fre]

• ***Summary:*** Each page, except the cover letter, has a color heading and is written in two columns, the left one in French, the right one in English. "About us: La Soyarie produces many food products with soya: Tofu (firm, regular, silk), Tofu burger, Soy Nuts, Tofu Nuggets, Vegetarian Pate. We also distribute other products under the following brand names: Yves Veggie Cuisine, Fontaine Sante Foods Ltd., Nutrisoya, Noble Bean. Address, phone, and fax numbers." Mme. Jeanne d'Arc d'Astous is chief administrator.

"Company history: From very modest beginnings, La Soyarie produced its first Tofu in 1978, right in our founder's [Koichi Watanabe's] home kitchen. This product was supplied only to small local health food stores and friends.

"In 1979, we moved into our first real production facility at 25 St. Etienne St., Hull (Quebec). During this period, our production consisted of only 7 batches of tofu a week. Our company had 20 customers, and produced bulk tofu blocks for total sales of $1600 a week.

"La Soyarie was incorporated on the 31st of March, 1982.

"In 1823, La Soyarie Inc. launched new product lines derived from traditional Japanese recipes, and made with tofu: the burgers and nuggets.

"On October, 1st, 1989, the business and offices moved to a brand new location, with 6000 square feet, at 94 Adrien-Robert St. in Hull. From then, the company began to prosper and grow rapidly. We now own the building and use all of its space that is 12000 square feet.

"Today, La Soyarie contracts 13 distributors that serve the regions of Montreal, Quebec and Toronto. We sell to some supermarkets chains and we supply 'Fontaine Sante Foods Ltd', on a weekly basis, for them to make their tofu based products.

"We serve more than 70 other businesses in the Ottawa region: Supermarkets, natural food stores, and some restaurants.

"We use more than 400,000 kg of organically grown Canadian soya beans per year.

"We currently employ 24 persons.

"The name for our company, 'La Soyarie' was selected from the entries in a 'name the business' contest. The winner received a year's supply of tofu.

"The logo represents a soya leaf."

A 1-page list of products shows that the company makes the following: Tofu–Regular water pack, 500 gm. Tofu–Regular vacuum pack, 454 gm. Tofu–Herb vacuum pack, 454 gm. Tofu–Vegetable vacuum pack, 454 gm. Tofu–Silk water pack, 500 gm. Tofu burger fried 300 gm. Miso burger fried 300 gm. Teriyaki burger fried 300 gm. Ganmo burger fried 300 gm. Tofu burger baked 280 gm. Miso burger baked 280 gm. Teriyaki burger baked 280 gm. Ganmo burger baked 280 gm. Imperial burger 150 gm. Oriental burger 150 gm. Nut burger 300 gm (no soya). Pinto burger 300 gm (no soya). Regular tofu nuggets 150 gm. BBQ tofu nuggets 150 gm. Soynuts 250 gm (regular, BBQ, plain, no salt). Tofu cutlets (150 gm, or 300 gm). Vege pate 220 gm (yeast free, no soya). Address: President & plant manager, 94 Adrien-Robert St., Hull, Quebec, Canada J8Y 3S2. Phone: (819) 777-6716.

2769. Bond, Jane Zavitz. 2001. Recollections of Charles Zavitz (Interview). *SoyaScan Notes.* Nov. 15. Conducted by William Shurtleff of Soyfoods Center. [1 ref]

• ***Summary:*** Jane married a Zavitz and is a very distant cousin of James R. Zavitz. Jane's husband's grandfather and Charles Zavitz were double first cousins; the mothers were sisters and the fathers were brothers. "They were such interesting people." Jane's son-in-law has an organic farm in Ontario; he farms with Suffolk draft horses (instead of farm machines) and tries not to use petroleum if he can help it. Jane knows James R. Zavitz, who lives in Elderton, Ontario, is a retired officer from the Royal Canadian Mounted Police. Phone: 519-666-1512.

A building at the University of Guelph, Ontario, that was the field hut building named for Charles Zavitz. The university was planning to tear it down, but the students protested because it was historic, so they collected the money, renovated it, and named it after Prof. Zavitz. It is now the best fine arts building at any university in Canada.

Jane is sure that James will have a portrait photo of Dr. Zavitz, as will the archives at the University of Ontario. Jane has a lovely but small family photo taken when Charles was a younger boy; his father and mother are shown clearly. She also has a large photo showing the same family as adults. She will loan both to Soyfoods Center.

Jane is chair of the Canadian Friends Historical Association. She is working on a Canadian Quaker Biography file, and would like to know more about Charles Zavitz and specially his impact on agricultural history in Canada. She believes that Quakers have not been given the credit they deserve in many fields. She is also the archivist for the Canadian Yearly Meeting; keeping archives is a Quaker practice. She founded the archive, which contains records of how the Zavitz family (from Alsace-Lorraine) came into Canada from Buck's County, Pennsylvania. Then from Niagara, to Lobo, where he grew up around Coldstream. Charles' father wrote this account at Charles' home in Guelph when he was a very elderly man. Jane has lots of genealogical information on Charles Zavitz. Many of his ancestors were farmers and millers–so they were interested in grain, just like Prof. Zavitz.

A small handwritten notebook kept by Daniel Zavitz (1821-1904), father of Charles Zavitz (1863-1942) has been newly discovered. As Jane recalls, it shows that Daniel was growing soybeans in Ontario in the 1850s; unfortunately she has been unable to find the notebook again, so she can't check or be sure exactly what it says about soybeans. Daniel had a large seed grain business. This notebook was given to Jane, who is curator of the Quaker Archives at Pickering College (Newmarket, ON L3Y 4X2 Canada), by Perry Zavitz, who was born in 1928 and is still living. Perry is the son of Harold Zavitz, who was the son of Edgar Merritt Zavitz (who lived in Coldstream), who was the brother of Charles Zavitz.

Prof. Zavitz, who was a pacifist, helped to found the Canadian Friends Service Committee, and he was the first chairman. And he was clerk of the Genessee Yearly Meeting, which as one of the three yearly meetings.

Prof. Zavitz wrote a book of his spiritual thoughts, had it printed on lovely paper and bound; at Christmas one year he gave them to many friends, relatives, and fellow Quakers / Friends.

"When you see what he managed to accomplish in the agricultural field, you wonder how he had any time to do anything else." The agricultural tie to Quakerism is a very strong one. The northwest apple industry was originally Quaker, and a lot of California orange and other groves

were Quaker. Quakers played major pioneering roles at Cornell Univ., Iowa State College, and Swarthmore.

Jane will send a packet of materials related to Prof. Charles Zavitz to Soyfoods Center. Address: R.R. 5, St. Thomas (near London), ON N5P 3S9 Canada. Phone: 519-775-2463.

2770. Zavitz, James R. 2001. Recollections of Prof. Charles A. Zavitz (1863-1942), soybean pioneer in Canada (Interview). *SoyaScan Notes.* Nov. 15. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** James R. Zavitz is the grandson of Prof. Charles A. Zavitz, whom he knew personally for many years. From the time he was age 6 until he was age 18 he used to spend 2 months of every summer holiday with his grandparents in the same house where he now lives. Thus, James and his wife now live in the house formerly occupied by Prof. Zavitz and his wife. When Prof. Zavitz retired from the Ontario Agricultural College (OAC) in 1927, he moved to the house where James now lives. Charles bought the place in 1913 as a retirement home; it's only half a mile from the house in which he was born at Coldstream. For the first year after Charles moved into the house, there was no electricity. Then in 1928 hydroelectric power first became available there, so Charles made several changes to upgrade the house in order to accommodate the power. Charles and his wife traveled to St. Petersburg, Florida, during the cold months every year; they left a little before December and returned in about April–until about 2 years before he died; he had some pulmonary trouble. Each year they sent Charles' family a 25-lb bag of pecans. At his new home in Canada, Prof. Zavitz continued his agricultural experiments, but more as a hobby to keep abreast of things. James and Charles had a deal that if James worked with him in his experimental plots at home during the morning, he could have the afternoon off to go to the swimming hole. In addition, each summer they would have a different theme. For example, one summer it was: "If you start right and keep right, you'll end up right." They would explore and enlarge on this theme during the summer. He was quite a teacher, a very kind man with a quiet sense of humor; he never swore. "He was not one for self aggrandisement. He was just a fairly wonderful person."

Two years ago, for the 125th anniversary of the University of Guelph, he was awarded an honorary doctor of science. They selected Prof. Zavitz as the one person who had the most to do with the advancement of the OAC. A statement accompanied the award and James has a copy of it.

Charles' two older brothers founded a newspaper for Canadian Quakers titled *The Canadian Friend;* they published it for 22-23 years, then it was folded into the *Friends Intelligencer* from Philadelphia. Jane Zavitz Bond has many copies of that newspaper, which James donated to her.

James has just finished writing an autobiography (265 pages) at the request of his children. About 10 years ago Gil Stelter, an English professor from the University of Guelph, was writing such a biography of Prof. Zavitz and James worked with him quite closely on it.

Charles Zavitz had only one child, Raymond Wilson Zavitz (born 1894), who was James' father. Raymond, in turn, had three sons, Robert, James, and John, in that order. James has one son and two daughters. James' younger brother has 4 sons, and his elder brother has a son and a daughter. Of all Prof. Zavitz's descendants, James is the most interested in his life and work. He has a file of nearly 8 inches of material about his grandfather's life, much of it personal and handwritten material. Prof. Zavitz was a great keeper of documents. This includes the 27-page biography that was written more than ten years ago by Dr. Gil Stelter, a professor of history at the University of Guelph.

In the mid- to late 1980s, James donated a collection of materials by and about Charles Zavitz to the University of Guelph. As far as he knows, they are presently located in the basement of the OAC library, next to Zavitz Hall. Included in his donation were four of Zavitz's diaries from his student days.

Prof. Zavitz was born on 25 Aug. 1863 at Coldstream, Lobo Township, Middlesex County, Ontario, Canada–about 16 miles west of London, Ontario. Zavitz is a very common surname in Germany and Switzerland. The family's immigrant ancestor, a miller by trade, arrived in Bucks County, Pennsylvania, in 1727, from Strasbourg, which was then part of France. After the American Revolution, because the Zavitzs were conscientious objectors (though not yet Quakers), they came to Canada with Loyalists (American colonials loyal to Britain), arriving in the Niagara area in 1784. After the War of 1812 they moved from Niagara westward to Lobo Township, which was half way between the Niagara and the Detroit frontiers during the War of 1812. Lobo Township no longer exists; in late 1997 it was amalgamated with two other townships now known as Middlesex Centre.

Prof. Zavitz suffered a stroke in the summer of 1941; it damaged his mind, so he didn't do much after that. He was bedridden until he died in March 1942. Address: R.R. 2, Ilderton, ON Canada N0M 2A0. Phone: 519-666-1512.

2771. Bennett, Ken; Stoneman, Don. 2001. Japanese soybean investment helps Ontario farmers access good Identity Preserved markets. *Better Farming (Ontario, Canada)* 3(9):20-29. Nov.

• ***Summary:*** Ontario farmers are moving from growing commodity soybeans for crushing to growing identity preserved (IP) soybeans for specialty uses, as for the Japanese market. This year's drought and small soybean

crop may actually speed the transition. Growth of Ontario soybean sales overseas continues to grow.

Eric Bosveld "is president of the new Agromart Processing Company Incorporated, located at Belton in western Ontario, between St. Marys and London." Agromart is a new food-grade soybean processing plant; it is also "the missing piece of equipment that has kept the Agromart Group from accessing good Identity Preserved (IP) markets for farmers.

"The plant also represents a significant investment by three Japanese companies who are paying half of the total cost, which is in excess of $1 million." The three, Marubeni Corp., Nisshin Oil Mills, and Nisshin Logistics, have made a substantial commitment to the Ontario soybean industry. This gives Ontario soybean growers and Agromart Processing to their markets. With this investment, the Japanese companies are no longer just a buyer; they are now a partner and investor, directly involved with the new processing company.

The other half of the costs has been paid by 12 Agromarts. This should make Ontario soybean farmers more profitable.

"That business model has already been proven by the success of Agromart Terminals Incorporated, which also operates at Belton and is 50 per cent owned by 14 of the Agromart joint ventures."

Peter Hannam, president of First Line Seeds Limited in Guelph, Ontario, "is considered by many to by many to be the guru of the Ontario soybean industry. He found the cold-tolerant soybean variety named Now. The story begins in 1962, when Hannam saw some soybeans "growing outside the crop science building at the University of Guelph, where he was about to receive an agricultural degree." At the time soybeans were considered to be a warm season crop, better suited to the climate of a few of Ontario's southwest counties. When a professor told Hannam that soybeans would not grow in cold climates, he took it as a challenge. In 1963 he began experimenting with a small plot of soybeans on the outskirts of Guelph. It took him 8 years of planting 5 or 10 acres of soybeans before he found a way that was profitable. "He worked closely with the University of Guelph to find a cold-tolerant bean, searching as far away as Sweden."

"In the early 1980s, he was involved with the Canadian Seed Growers Association and met a dozen other seed growers across Ontario who shared his vision. In 1982, they joined forces and First Line Seeds was born" in Guelph. Hannam wants to get out of "the commodity cycle" by developing proprietary soybean varieties and finding proprietary IP markets. He believes this will benefit farmers.

"In 1993 it was not legal to breed the Roundup Ready (R) gene into soybeans in Canada. "Nobody else in Ontario was interested in doing that." First Line was the first company to incorporate the Roundup Ready gene. "That innovation gave them a huge lead in the Roundup Ready market, enabling them to offer the first [genetically engineered soybean] varieties in Canada in 1997. It also made them an attractive partner for a large crop technology company, and in 1998 Monsanto bought a majority stake in First Line." The active minority shareholders make First Line "the most unusual seed company in the world." Hannam sees "a very strong future for the bio economy, growing specialized crops for specialized purposes." There will be many new uses. There is "a long way to go in utilizing the protein of soybeans to its fullest extent," says Hannam.

John Cowan is manager of the Hyland Seed Division of W.G. Thompson and Sons Ltd. He notes that "Hyland was the original IP crop producer in Ontario, producing corn for the Kellogg plant in London," Ontario, Canada, as early as 1977–the same year Hyland began its soybean breeding program.

In the crop year ending September 2000, Ontario soybean growers sold 2.34 million tonnes of soybeans. "Exports were more than 400,000 tonnes. While the definition of IP remains vague," Kim Cooper, marketing manager of the Ontario Soybean Board, says that, "strictly speaking, IP soybeans represent about 40 per cent" of the exports. Peter Hannam, president of First Line Seeds, thinks that about 75% of this year's crop will be "sold by variety."

2772. Fleming, Richard. 2001. Corporate profile: The roots of sustainability run deep for Sunrich. With farmers as shareholders, this Minnesota foods company has a deep regard for the land. *Natural Business LOHAS Journal* 2(4):45-46. Fall.

• ***Summary:*** The article begins: "It seems every time a physician or nutritionist urges Americans to eat healthier, soy is mentioned. Indeed, soy is a key ingredient in almost every health and fitness product on the shelf today, from energy bars to supplements for menopause symptoms. As western appreciation for the protein-packed soybean has grown, so has the success of the Sunrich Food Group, a whole grain and natural ingredients supplier that furnishes 40 percent of the soy milk in the U.S., sold under a variety of brand names. It's a market that the company says is growing at more than 30 percent annually." An estimated 60-70% of the company's revenues come from the soybean.

Sunrich was founded in Hope, Minnesota, in 1978. The company's shareholders are mainly Minnesota farmers. The company was founded on and specializes in identity-preserved (IP) grains. CEO Allan Routh notes that IP was the company's original capability, and that was how the company developed. Sunrich now also focuses on non-GMO, organic grains and grain products. An estimated 85% of the food ingredients the company produces are organically grown. From Japan, the destination of the company's first exports and still the source of about 25% of

revenues, Sunrich borrowed edamame soybeans, which are marketed under Sunrich's Hearty and Healthy brand.

Sunrich was acquired in 1999 by Stake Technology (STKL) of Norval, Ontario, Canada. Stake recycles industrial materials and markets clean pulping technologies. It was a good marriage, since both companies have a deep regard for the planet. Sunrich now produces about two-thirds of its parent company's revenues. Sunrich projects sales for calendar 2001 at $75 million, up 50% from 2000, due in part to the acquisition of two companies last year: Nordic Aseptic, a packaging company focusing on private label manufacturing, and NFD, which specializes in technical food ingredient processing and R&D. Today Sunrich has about 250 employees.

Color photos show: (1) Portrait of Allan Routh. (2) A clean field of soybeans in long, straight lines over low rolling hills. (3) Two hands cupping yellow soybeans against a background of yellow soybeans.

Note: Talk with SunRich. 2001. Nov. 6. The company name should be written "SunRich" not "Sunrich"–as it is throughout this article.

2773. Hain Celestial Group, Inc. (The). 2001. Annual report 2001. Melville, New York. 36 p. Nov. 28 cm.
• ***Summary:*** Net sales for the year ended 30 June 2001 were $412.880 million, up 2.3% from $403.543 million in 2000. Net income in 2001 was $23.589 million, way up from a loss of $17.097 million in 2000, and 74.5% higher than the previous net income high of $13.517 reached in 1999.

The company now markets 26 brands with over 1,500 different products. "We continue to bring new organic products to market, as well as foods and snacks free of genetically engineered ingredients (GEIs).

In June 2001 the company acquired Yves Veggie Cuisine in Vancouver, BC, Canada. This gives Hain a strong base for growing its Canada operations. Yves has been extremely successful in Canada and the U.S. with its refrigerated meat and cheese alternatives. Hain will soon launch many of its U.S. products under the Yves brand in Canada, and also introduce many new product categories (p. 2).

"Soy beverages continue to be the largest natural food grocery category, and Westsoy has increased its #1 leadership position in aseptic products by growing 9.5% in the last 12 months in the grocery channel alone. This has been at the expense of both long-standing competitors and new entrants... Westsoy expanded to new beverage varieties including soy-based shakes and smoothies, and new refrigerated Westsoy is gaining in both distribution and sales velocity. We now also have the distribution network in place to aggressively support and merchandise the refrigerated section of natural food stores and supermarkets" (p. 3).

Photos show: (1) Westsoy, all natural soymilk beverages (p. 12-13). (2) Yves all natural soy protein products, incl. Veggie Bologna Slices, Veggie Ground Round, Good Slice (cheese alternative), Good Dog (hot dog alternatives), and Canadian Veggie Bacon. (p. 14-15). Yves "continues to lead the North American fresh meat alternative category with exceptional growth in both U.S. and Canadian fiscal markets in fiscal 2001. Yves led category growth with the introduction of new 'Great Tasting' products... Using Yves' strong brand name and distribution network in Canada, we will roll out over 70 new products in the Canadian market in fiscal 2002."

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (17 p.). Irwin Simon, the founder and CEO, age 43, had the following annual compensation: Salary: $460,000. Bonus: NA. Other compensation: $5,400. Andrew Jacobson, president of the company's Natural Products Group, earned a salary of $247,500. A color photo (p. 2) shows Irwin Simon pushing a shopping cart filled with Hain-Celestial products. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2774. *SoyaScan Notes.*2001. Chronology of major soy-related events and trends during 2001 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** April 12–Bill Bolduc, founder of Eden Foods and natural foods pioneer, dies in Southern California.

April 17–Martha Stewart, on her popular nationwide TV program *Living*, has a very positive segment on South River Miso Co.

April 18–Richard Rose, a soyfoods pioneer, sells Rella Good Cheese Co. to Tree of Life. He retains his company HempNut, Inc. in Santa Rosa, California. His Hempeh (hempseed tempeh) still contains soy.

May 11–The Kerry Group (of Wisconsin and Iowa) purchases Iowa Soy Specialties, LLC of Vinton, Iowa.

June 12–The Hain Celestial Group acquires Yves Veggie Cuisine (Vancouver, BC, Canada).

Aug. 24–Wildwood Natural Foods (Fairfax and Santa Cruz, California) and Midwest Harvest, Inc. (Grinnell, Iowa) merge to form Wildwood Harvest, Inc. Iowa Agricultural Finance Corporation (IAFC) invests $3.3 million in the new company, and the Iowa Farm Bureau Federation (IFBF) invests an additional $700,000. This investment will be used to build and equip a 20,000 square foot soyfoods plant in Grinnell and to remodel and equip another 20,000 square foot soyfoods plant in Watsonville, California.

Aug. 3–Bunge, in its initial public offering (IPO), raises $278 million by floating 23% of its shares on the New York Stock Exchange. Bunge his been a private grain trading company since it was founded in 1818 in the Netherlands by Johann Peter Gottlieb Bunge.

Sept.–SunRich's new soymilk plant in Wyoming starts production. By Nov. the plant is at full capacity and expansion begins.

Oct.–The Coca-Cola Co. acquires Odwalla, Inc. of California for $181 million. Odwalla has annual sales of about $130 million, mostly in fresh, refrigerated juices plus some delectable soy beverages.

Oct. 21–The U.S. National Organic Program and its standards take effect.

Nov. 4-7–Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California. General chairpersons and proceedings editors: Stephen Barnes and Mark Messina.

Dec. 10–The Hain Celestial Group, Inc. acquires Lima NV, the leading Belgian natural and organic foods manufacturer and marketer, and its Biomarché operations. Hain appoints Lima's Chairman, Philippe Woitrin, as Managing Director of Hail Celestial Europe. Lima is also a European pioneer in macrobiotic foods and soyfoods.

Dec. 11–Ralston Purina Co. (St. Louis, Missouri, a soy pioneer) is acquired by Nestle SA for $10.1 billion cash; on this date the deal is approved by the U.S. Federal Trade Commission. The new company is named Nestlé Purina. The merger brings together such household names as Ralston's Dog and Cat Chow and Nestle's Friskies cat food and Mighty Dog brands.

Dec. 24–The Federal Trade Commission approves the merger of Dean Foods and Suiza Foods Corp. (which owns 14% of Horizon Organic Dairy). A federal judge throws out White Wave's lawsuit arguing that White Wave has the right to buy back its own stock at the market price before the merger.

In 2001, for the first time in modern history, the USA lost the distinction of supplying more soybeans and soybean products (oil and meal) than all other countries combined. This year it supplied about 46% of the world's soybean exports. South America (mainly Brazil and Argentina) now supply more than 50%. Devalued currencies in Brazil (the *real)* and Argentina (the *peso),* plus the strong U.S. dollar, make it difficult for U.S. exporters to compete based solely on price. To compete in the future, U.S. growers must find a new strategy, which will focus on soybean quality.

2775. *SoyaScan Notes.*2001. Dramatic drop in soybean production in Ontario and Canada (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Soybean production in Ontario province (which produces most of Canada's soybeans) fell dramatically in 2001 to 47 million bushels–only 55% as much as the 85 million produced in Ontario in the year 2000.

Not since 1990 (when production was 44.5 million bushels) has soybean production fallen so low in Ontario.

2776. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2001. New food grade soybean cultivars developed at Harrow. Fall. p. 2.
• ***Summary:*** New varieties developed at the GPCRC (Greenhouse and Processing Crops Research Centre) include AC Hime, AC Vin-Pro, AC X790P. Canada's exports of food grade soybeans to Japan have increased dramatically from 36,000 tonnes in 1995 to 75,000 tonnes in 1998, to 175,000 tonnes in 2000. Address: Canadian Soybean Export Assoc., P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

2777. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2001. Canadian national soybean IP standard launched. Fall. p. 4.
• ***Summary:*** IP stands for "identity preserved." The Canadian soybean industry has been producing food grade soybeans for over 30 years and running IP programs for over 15 years.

Canadian exports have increased dramatically from 468,000 tonnes in the 1996/97 crop year, to 946,000 tonnes in the 1999/2000 crop year. Address: Canadian Soybean Export Assoc., P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

2778. Dionne, Suzanne. 2001. Miso–More than food: Life. Quebec, Canada: Les Aliments Massawippi, Inc. 82 p. Illust. 22 cm. Spiral bound. [49 ref. Eng]
• ***Summary:*** Contents: Acknowledgements. About the author. Introduction. What is miso? The art of making miso. Exceptional nutritive qualities. Non-pasteurized miso: a living food. • ***Summary:*** For contents, see the English-language edition. Address: North Hatley, Quebec, J0B 2C0, Canada.

2780. Loh, Michael. 2001. Message from the chairman. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada)* Fall. p. 1.
• ***Summary:*** "Once again we are reaching out to you, our valued customers, with a regular export newsletter to update you on the happenings of the Canadian Soybean industry. We recently made some changes in the newsletter. We hope you find the revised format more enjoyable to read.

"Canada has been a major supplier of food grade soybeans for over 30 years–quite an achievement

considering that we account for less than 2% of world soybean production."

Note: This newsletter was previously published by the Ontario Soybean Growers at the same address. Address: Chairman, The Canadian Soybean Export Assoc., P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

2781. *Ontario Soybean Growers Newsletter.*2001. Soyfoods Canada continues to promote soy. Dec. p. 5.
• ***Summary:*** "After completing a very successful inaugural year, Soyfoods Canada held its 2nd Annual Meeting in September. There are currently 30 members of the organization, representing all sectors of the soyfood industry. Soybean growers and suppliers, soyfood processors and distributors, as well as marketing firms involved with soy, have all joined in the effort to promote soy. OMAFRA also continues to play a pivotal role by supplying expertise and space for board meetings.

"In the past year, Soyfoods Canada has participated in the Good Food Festival in Toronto, voiced its opinion to government officials on Ontario's Edible Oil Products Act, hosted a soy health meeting in Vancouver, and produced a quarterly newsletter for its members. Plans are currently being made for a Soyfoods Canada website, a soy information / recipe brochure, and a soyfood promotion campaign.

For 2001/2002, the Executive Members of Soyfoods Canada are:

Bill Hawes, Tofutti-Cholac Foods–President.

Eric Hart, Galaxy Foods–Vice-President.

Andrew McVittie, W.G. Thompson & Sons–Secretary.

Ron MacDougall, Ontario Soybean Growers–Treasurer.
Address: Chatham, ONT, Canada N7M 5L8.

2782. *Ontario Soybean Growers Newsletter.*2001. Profiles: Paula Travado, Marketing Manager of OntarBio Organic Farmers Cooperative. Dec. p. 11.
• ***Summary:*** Discusses organic farming of soybeans and other crops in Ontario and Canada. "'One of the conventional food industry's biggest challenges in the years ahead will be addressing the question of GMO,' says Travado, acknowledging the controversial stand of the organic industry, while noting the importance of crop segregation to its survival. 'For the organic soybean producer, it's a very serious issue because of the fact that our national and international certification will not tolerate GMO.'"

"Still, Travado is optimistic about the future of the soybean industry, especially given its recently tremendous growth, noting more has been grown in the past few years than in the previous 20 years. She also states she's enthusiastic about the ongoing research into producing soybean varieties for areas of lower heat units." Address: Chatham, ONT, Canada N7M 5L8.

2783. Zavitz, James R. 2001. The Zavitz family of Ilderton, Ontario, Canada: Three family group sheets, with extensive notes. Ilderton, Ontario, Canada. 25 p. 28 cm.
• ***Summary:*** These three family group records were printed by James from his genealogical database. Chart 1 shows the descendants of Daniel Zavitz (1821-1904) and Susan Webster Vail (1827-1911). They were married on 2 Feb. 1847 in Oakfield, Genesee Co., New York, and had four children: Caroline Vail Zavitz (1847-1899; married David Cutler), Samuel Pound Zavitz (1850-1933; married Ida C. Haight), Edgar Merritt Zavitz (1857-1940; married (1) Alzina Brown; (2) Ada M. Cornes), and Charles Ambrose Zavitz (born 25 Aug. 1863 in Coldstream, Ontario; died 17 March 1942 at Poplar Hill, Ontario; married Rebecca Elizabeth Wilson on 3 June 1890 at Isaac Wilson's residence, Bloomfield, Ontario). The notes include transcriptions of: "Diary of Daniel Zavitz, written at Guelph on 23 Nov. 1896 (p. 2-6). The last will and testament of Daniel Zavitz (p. 6-7). Biography of Charles Ambrose Zavitz (p. 15-16). Citation honoring Charles Ambrose Zavitz on 11 June 1999 on the recommendation of the Senate of the University of Guelph, for the degree of Doctor of Science honoris causa, to be awarded posthumously.

Chart 2 shows the descendants of Charles Ambrose Zavitz and Rebecca Elizabeth Wilson. They had one child, Raymond Wilson Zavitz (1894-1968).

Chart 3 shows the descendants of Raymond Wilson Zavitz and Jessie Roscine Robertson. They were married on 31 Dec. 1918 in Knox Church, Toronto, Ontario, and had three children: Robert Charles Zavitz (1919-), James Robertson Zavitz (1922-), and John Wilson Zavitz (1926-). James joined the Royal Canadian Mounted Police in Jan. 1941 and retired at the end of 1970 with the rank of Sergeant-Major. He represented Canada at the Olympic Games in Melbourne, Australia, in 1956 (placing 13th), and at the World Shooting Championships in 1954 and 1958. He was Provincial Handgun Champion in Ontario, Quebec, and British Columbia almost continually from 1952 until his retirement in 1970. He has long been an active member of the United Empire Loyalists' Association. Address: R.R. 2, Ilderton, Ontario N0M 2A0, Canada. Phone: 519-666-1512.

2784. Boyte, Frances. 2001. Le tofu international: Délicieuses recettes des quatre coins du monde [Tofu–International: Delicious recipes from the four corners of the world]. Montreal and Paris: Les Éditions internationales Alain Stanké. 247 p. Recipe index. 22 cm. [Fre]
• ***Summary:*** Most of the recipes in this book were developed by four professional restaurant chefs; the name of the chef is given below each recipe name: Éric Boutin, Sébastien Leblond, Benoît Paquet, and José Trottier. The

name of the foreign country, a symbolic map, a quotation, and symbols for the degree of difficulty and cost are also given for each.

Contents: Foreword. Preface. A word from the author. Part I: Tofu. Introduction. What is tofu. Tofu and health. Part II: Tofu recipes. Entrées. Soups. Main dishes. Pâtes. Salads. Sauces. Side dishes / accompaniments. Breads and scones. Desserts. Iced drinks. The 3 chefs. About the author. Acknowledgments / appreciations. Recipe index (Alphabetical list of recipe names). Table of contents. Words of praise for the book and a color photo of the author appear on the rear cover. Address: Les Ateliers diététiques de Frances Boyte, 825, avenue Beauregard, Bureau 117, Sainte-Foy (Quebec), Canada G1V 4L7.

2785. Eden Foods, Inc. 2001. The history of Eden Foods. Clinton, Michigan. 3 p. Unpublished typescript. Undated.
• ***Summary:*** This chronology (1967-2001) begins as follows: "1967–Michael Potter and a small group of students on the Univ. of Michigan campus, begin making collective, small orders of natural foods from two of the largest wholesalers at the time.

"1968–Eden Foods Co-op is established in Ann Arbor, Michigan.

"1970–Eden Foods begins food processing, opening a bakery, cafeteria, and the 'Turtle Island' restaurant in Ann Arbor."

Note 1. The early entries in this chronology are deceptive and inaccurate. They make it appear as though Michael Potter founded Eden Foods since his is the only name mentioned in the chronology and since his name is mentioned just before the business was established. In fact, Potter did not join Eden Foods until Oct. 1971–a fact that is omitted in the chronology.

Note 2. Eden Foods was established in Nov. 1969–not in 1968. All of the founders (Bill Bolduc, Tim Redmond, etc.) and early publications agree on that date.

Note 3. The names of the founders of Eden Foods are, unfortunately, omitted from this chronology.

Note 4. One entry states: "1983–North America's 1st soymilk Edensoy is introduced." In fact, Miller's Soyalac Soya Milk had been made since 1940 in Mt. Vernon, Ohio, by International Nutrition Laboratory, founded by Dr. Harry Miller. It was on the market and sold well for more than 40 years.

The later entries are interesting and probably accurate: "1986–Eden opens a warehouse in San Francisco, California. 1987–Eden partners with the Hirzel family of Ohio to grow organic tomatoes, chilies & cabbage for Eden sauerkraut. 1989–Eden Organic Pasta Company becomes the first third party certified organic pasta facility in America.

"1991–The first Eden organic beans are canned in Eaton, Indiana. 1993–Eden expands its facilities in Clinton, Michigan. Eden first questions organic integrity under USDA/NOSB. Eden adopts a policy requiring affidavits from growers and suppliers guaranteeing that their food is GEO-free. 1994–Eden contracts with a cooperative of family orchards to secure organic tree fruit. 1997–Eden sponsors the first whole foods cooking show, 'Christina Cooks' nationally, on PBS. 1998–Eden introduces its first Biodynamic food, Whole Grain Rye Spirals and celebrates its 30th anniversary. 1999–Eden expands its warehouse facility for the eighth time.

"2000–AIB Certification, New Eden web site is launched and Edensoy Light is introduced. 2001–Eden purchases Sobaya, the Canadian producer of Eden Organic Traditional Japanese Pasta. Eden receives the prestigious 'Socially Responsible Business Award' for exemplary business practices. Over 400 vegetarian recipes are posted to Eden's renewed web site, along with detailed historical information, nutritional information and manufacturing descriptions for all of Eden's products." Address: 701 Tecumseh Rd., Clinton, Michigan 49236. Phone: 517-456-7424.

2786. Housez, Brita. 2001. The soy dessert and baking book. New York, NY: Avalon Publishing Group Inc. (Marlowe & Co. imprint). xxv + 213 p. Illust. (8 color photos). Index. 24 cm.
• ***Summary:*** Contents: Introduction. The soy baker's pantry. Cookies. Squares and bars. Cakes & frostings. Pies & tarts. Pancakes, crêpes, cobblers & dumplings. Muffins, biscuits & quick breads. Yeast breads. Hot & cold puddings. Custards, mousses, soufflés & trifles. Creams & sauces. Confections. Beverages. Acknowledgments. Address: St. Catharines, Ontario, Canada.

2787. Plante, Colombe. 2001. Le soja, le tofu et le seitan [Soya, tofu, and seitan]. Varennes, Quebec: AdA. 154 p. Illust. Index. 23 cm. [Fre]*
Address: Quebec, Canada.

2788. Popkewitz, Ian. 2002. Charles A. Zavitz and the American Society of Agronomy (Interview). *SoyaScan Notes.* Jan. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In 1910 Charles A. Zavitz was elected 2nd vice-president of the Society and in 1911 he moved up to first vice-president. He presented two papers at early annual meetings of the society in July 1908 and Nov. 1912. These were published in the *Proceedings of the American Society of Agronomy* in 1910 and 1913 respectively.

In 1925 Charles was selected as a fellow of the Society. Fellowship is the highest honor a member can receive in the American Society of Agronomy (ASA), and Charles was the first Canadian fellow of the society. Zavitz joined (became a member of) the ASA in or before 1915. To be nominated for

a fellow, one must have been an active member for 10 years. A committee reviews all the nominations each year, looks for the most outstanding members, and selects a small number of fellows. They can choose up to 0.3% of the society's active members that year, which is up to 1 out of 333 active members.

Each nomination consists of a write-up which asks: Title. Basis of nomination. Personal achievements, recognitions, and service. Degrees. Professional positions held. Membership in honorary academic societies. Membership in professional societies. Honors and awards received. Service to ASA: Appointed positions, elected positions. Other service: Significant committee work, or service to professional or honorary societies. Professional achievements.

In 1926 the Society started publishing a photograph and description of the new fellows each year in its Journal, so Charles was one year too early. Address: Head of Membership, American Society of Agronomy, Madison, Wisconsin. Phone: 608-273-8080.

2789. Carter, Jeffrey. 2002. More research dollars needed to breed export soybeans: There's less focus on producing new lines of foodgrade soybeans than on herbicide resistant beans. *Ontario Farmer (Canada)* 34(47):16. Jan. 15.
• ***Summary:*** This was the message of soybean exporter Michael Loh to farmers at the Southwest Agricultural Conference at Ridgetown. Loh emphasized that the Ontario soybean industry must respond to the needs of its customers. "My vision for southwestern Ontario and Canada is for us to have the image as being the place to go for the best foodgrade soybeans."

Roundup Ready varieties tend to produce a smaller sized bean, yet many Japanese customers want larger-seeded varieties–according to Morris Sagriff, a Lambton County farmer. A photo shows Michael Loh.

2790. *Soyfoods Canada Newsletter.*2002. 2001 annual meeting a great success. Jan. p. 1.
• ***Summary:*** Soyfoods Canada held its second annual meeting on 28 Sept. 2001 in Toronto at the Crowne Plaza Hotel. Speakers included Toby Davidson and Jeanne Cruikshank. A new board of directors was elected to serve during the coming year: Bill Hawes, President–President of Tofutti-Cholac Foods. Maheb Nathoo, Past-President–President and CEO of SoyaWorld. Eric Hart, Vice-President–Business Development Officer with Galaxy Nutritional Foods. Andrew McVittie,–Secretary–Soybean Sales Representative for W.G. Thompson & Sons and Sycamore Creek. Ron MacDougall, Treasurer–Soybean farmer representing the Ontario Soybean Growers. Paula Travado–OntarBio/Organic Meadows. Nick Feldman–Nutrisoya Foods. Peter Joe–Sunrise Soya Foods. Vivian Chiang–Momo's Kitchen. Garnet Pigden–PTI.

2791. *Soyfoods Canada Newsletter.*2002. Soyfoods Canada receives funding. Jan. p. 2.
• ***Summary:*** Soyfoods Canada's application for $30,000 to fund soyfood promotion was recently approved by Ontario's CanAdapt program. The main promotional activities will be: Website development (www.soyfoodscanada.com). Soy info / recipe brochure, with generic information on many different soy products. Portable display to take to various exhibits. Public relations / Soyfoods Month (April). Soyfoods Canada seal.

2792. Zavitz, James R. 2002. The Quaker system of meetings for worship and business (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** To understand the life of Charles Zavitz, it is important to understand the organization of Quaker meetings. The word "meeting" refers to an event and an organization. Quakers in Canada have four levels of meetings: (1) The Preparative Meetings are the local ones, where members worship once each week. Each weekly meeting typically lasts an hour. Charles Zavitz and his parents were members of the Coldstream Preparative Meeting, which they helped to establish in 1848, with meetings in the homes of four families. Ten years later, in 1858, they built the Coldstream Meeting House. Today there are roughly 25-50 Preparative Meetings in Canada. Most also have a "Burying Ground" (cemetery). The smaller meetings may not have a Meeting House–the Quaker equivalent of a church–but would meet in the homes of members.

(2) The Monthly Meetings contain about 2-5 Preparative Meetings. They are more for business than for worship. Monthly Meetings are held at the site of one of the constituent Preparative Meetings, in a rotating manner, after the meeting for worship at that Preparative Meeting. Each Preparative Meeting appoints several representatives to attend the Monthly Meeting, however anyone who wishes to attend any Monthly Meeting or any of the other two upper meetings is perfectly free to go. Many people typically choose to go voluntarily. The Zavitz family, as representatives of the Coldstream Preparative Meeting, helped to establish the Lobo Monthly Meeting in 1893. James used to be clerk of the Lobo Monthly Meeting, which had Coldstream and Sparta Preparative Meetings. Although 4-10 people were appointed to go, typically 100-125 people might attend. At the Monthly Meeting there would be an agenda of items to discuss, partly in preparation for the next Half Yearly Meeting, or items that came down from the last Yearly Meeting that required local discussion. They would also approve marriages (when both partners were Quakers), etc. The Monthly Meeting, after the local meeting for worship, would typically last for 45 minutes to 2 hours.

(3) The Half Yearly Meetings covers a relatively large area and number of meetings. For the Zavitz family, the Half Yearly Meeting was Pelham located to the southeast in the Niagara Peninsula. Sometimes Half Yearly Meetings were at Pelham and sometimes at Lobo. Lobo and the other Monthly Meetings would appoint 2-3 delegates/ representatives to attend, but many others (many more than the total number of appointed delegates) would also go of their own volition. Half Yearly Meetings typically lasted 1-3 hours. There used to be Quarterly Meetings, but they have been discontinued. (4) The Canadian Yearly Meeting (CYM) is equivalent to the "head office." They sponsor a yearly meeting in Canada of all Canadian Quakers, and have an historical archives. Pelham and each of the other Half Yearly Meetings appoints 2-5 people to attend, but the total attendance is typically 200-250, of which only 40-50 are appointed by subordinate meetings. The yearly meeting is typically held in July or August at a college (including Newmarket, the one Quaker-run college in Canada) and last for about a week. Each day there would be a 1-hour meeting for worship, followed by the business session. Quakers are famous for organizing committees, and they have so many committees that very few members can avoid all of them. The yearly meeting is broken up into the reports of various committees. There must be unanimity, everyone present must agree, on each issue discussed before it is resolved; a majority is never enough.

This structure is a very effective way for many people to communicate, to get to know one another, and to be in agreement with what is happening. In addition, it helped to prevent inbreeding. Quakers are expected to marry other Quakers (although this is not a written policy or readily admitted), so young Quaker men and women often attended Monthly, Half-Yearly, and/or Yearly meetings where they could find new Friends and possible marriage partners. If a Quaker married a non-Quaker, their children were not "birthright Quakers." In part because of this strict ruling, there are not nearly as many Quakers in Canada today as there were 50 or 100 years ago. "We're kind of our own worst enemies," says James. "We're so fussy, we're kind of working against ourselves. His wife is not a Quaker so his children cannot be Quakers, unless they join as "convinced Quakers."

A few words about religion and doctrine: Members of the Religious Society of Friends (nicknamed "Quakers") are Christians and the *Bible* is their basic book. Their other basic book is the *Book of Discipline of the Religious Society of Friends*, which tells Quakers how to behave (especially the "Advices and Queries" section, which is a series of questions) and sets forth duties, procedures (marriages, deaths, etc.); this book originated long ago and is amended from time to time. The section on tobacco and alcohol, for example, encourages Quakers to abstain altogether, but a member would not be "disowned" for being unable to follow this guidance–except in extreme cases. A central concept in Quaker teaching is the "Inner Light" which is akin to one's conscience. Quakers sit quietly in meetings so they come in tune with this Inner Light, then live their lives guided by this Inner Light and with a clear conscience. A person with questions or problems about worship could talk with the Ministry and Council Committee.

All members, both men and women, are equal. There are no leaders, no hierarchy, no clergy, and no ministers. The one exception would be Canadian Yearly Meeting (CYM) office, the headquarters in Toronto, where the clerk of the CYM (a fairly permanent job) and about 6 employees send committee reports and epistles to the various members and Preparatory Meetings. Examples of these would be: "The Quaker Attitude on Jails and Justice." "Work of the Friends Service Committee." The clerk records what is said (the minutes) at business meetings. When two Quakers are married during a worship service, they both stand up and take their vows to each other; the only third person is the registrar who signs the papers and forwards them to Canadian civil authorities. Everyone in attendance at the meeting signs a big document. Address: R.R. 2, Ilderton, ON Canada N0M 2A0. Phone: 519-666-1512.

2793. Zavitz, James R. 2002. Why Charles Zavitz retired to Poplar Hill, Middlesex Co., Ontario (Interview). *SoyaScan Notes.* Feb. 1. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** James now lives in the house at Poplar Hill that formerly belonged to Prof. Charles Zavitz. Near his house at Poplar Hill in 1927 were the Quaker Meeting House at Coldstream (about 1 mile to the northeast), and the homes of his two brothers (Sam and Edgar, near the Meeting House; Edgar still lived in the house in which Charles was born, about ½ mile from Poplar Hill) and of many cousins, nephews, and nieces (a little further north and to the south). In addition, many cousins lived in Elgin County, which is just to the south of Middlesex County. Charles' wife came from Prince Edward Co., far to the east on the eastern end of Lake Ontario. So his whole family was within a 200-mile radius. Ontario Agricultural College, in Guelph, Wellington Co., was about 85 miles to the northeast of Poplar Hill.

This house in Poplar Hill was built in 1895 on property that was owned by Charles' uncle, Benjamin Zavitz, the brother of Charles' father, Daniel. Benjamin later sold the property to a cousin, Dr. Daniel Stewart (a veterinarian and undertaker), who built the house of yellow bricks. Later, in 1902, Dr. Stewart built a yellow brick barn (to match the house) nearby; scratched in the plaster in the top of the barn is "Sept. 12, 1902." The house that Benjamin lived in is very close to Charles' house at Poplar Hill.

In 1913 Charles bought the house and rented it out to a year-round resident until his retirement in 1927; he never lived in it during that time. Charles is quite sure that Charles

bought the house from the estate of a woman surnamed Pincombe, who must have bought it from Dr. Stewart. She died when she fell down the cellar steps of the house. Address: R.R. 2, Ilderton, ON Canada N0M 2A0. Phone: 519-666-1512.

2794. Zavitz, James R. 2002. Chronology of Charles Ambrose Zavitz. Ilderton, Ontario, Canada. 1 p. Unpublished typescript. Feb. 12. 28 cm.

• ***Summary:*** James wrote this chronology of his grandfather at the request of William Shurtleff of Soyfoods Center.

"1863–Born at Coldstream, Middlesex County, Ontario.

"1884–Enrolled at Ontario Agricultural College, Guelph.

"1886–Instrumental in revamping the Ontario Agricultural & Experimental Union.

"1887–Appointed Assistant Chemist. Recorded the first crop test yields.

"1888–Graduated with Bachelor of the Science of Agriculture Degree (took Honours in 10 of 11 papers).

"1889–OAC 'Review' started. CAZ gave it its name and was on the Editorial Board.

"1890–Married Rebecca Elizabeth Wilson of Prince Edward County. Appointed Assistant Director of Experiments (with 56 experimental plots).

"1893–Brought first Soy Beans to Canada. Appointed in charge of all Field Research.

1894–Son, Raymond Wilson Zavitz, born.

"1902–Started cross-fertilization of plants to concentrate desirable characteristics.

"1903–Started the seed chain that resulted in OAC #21 Barley. Appointed Professor of Field Husbandry and Director of Field Experiments.

"1904–A driving force in forming the Canadian Seed Growers' Association.

"1910–OAC #21 Barley registered and released to the public. Ontario Variegated Alfalfa established as best variety for Ontario Conditions.

"1914–Field Husbandry Building (now Zavitz Hall) opened. Appointed Acting President of OAC.

"1915–Relinquished Acting Presidency upon return of the President.

"1916–Awarded Doctor of Science Degree from University of Toronto.

"1920–50,000 hybrid plants evaluated annually.

"1923–Started developing red clover and forage grasses.

"1924–Increased value of crops developed at OAC estimated at $161,000,000.\ "1925–Released OAC #211 Soy Beans, the first to be registered in Canada.

"1926–OAC has released 3 varieties of Oats, 1 of Barley, 3 of Winter Wheat, 1 of Spring Wheat, 1 of Spring Rye, 1 of Field Peas, 1 of Soy Beans, 1 of Millet and 1 of Mangels.

"1927–Retired from OAC (2,800 experimental plots) and moved to Poplar Hill, Middlesex County.

"1931–Appointed Chairman, Canadian Friends' Service Committee (a Quaker enterprise).

"1932–Awarded Honorary Doctor of Laws Degree, University of Western Ontario. Published 'Spiritual Life.'

"1942–Died March 17th at Poplar Hill.

"1974–Admitted to the Canadian Agricultural Hall of Fame.

"1984–Admitted to the Canadian Agricultural Hall of Fame.

"1993–Honoured by the Ontario Soybean Growers' Marketing Board, marking 100 years of Soybeans in Canada.

"1999–Awarded Honourary Doctor of Science Degree by the University of Guelph (The University singled out its most illustrious graduate as part of its 125th Anniversary celebrations).

"In addition: The first Canadian Fellow of the American Society of Agronomy.

"An Honourary Fellow of the American Association for the Advancement of Science.

"An Honourary Fellow of the Canadian Society of Technical Agronomists." Address: 2 Park Cr., Poplar Hill, R.R. #2, Ilderton, ON Canada N0M 2A0. Phone: 519-666-1512.

2795. *SoyaScan Notes.*2002. Canada: Soybean production summary (Overview). Feb. 13. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** From 1936 to 1941 Canadian soybean production was static at about 500 tonnes (metric tons) per year. As World War II began and traditional Canadian imports of oils and fats were cut off, the country promoted soybeans to help make up the difference. In 1942 (actually 1942-43) Canada's soybean production jumped to 25,000 tonnes, then fell back to 16,000 tonnes in 1942. Then, from 1942 to 1951, it began its most dramatic period of growth from 16,000 tonnes in 1942, to 22,000 tonnes in 1945, 50,000 tonnes in 1948, 90,000 tonnes in 1950, and 105,000 tonnes in 1951. Production had increased more than 6.5-fold in only 9 years. Most of Canada's soybean crop during these early years was grown in southern Ontario province.

Growth continued, but at a less dramatic rate, to 186,000 tonnes in 1959. Then production dropped for several years to 136,000 tonnes in 1963, whereafter it continued at its former less dramatic rate: 219,000 tonnes in 1965, 283,000 tonnes in 1970, 367,000 tonnes in 1975, 690,000 tonnes in 1980, 1,011,000 tonnes in 1985, 1,262,000 tonnes in 1990, 2,297,000 tonnes in 1995, 2,703,000 tonnes in 2000.

2796. *Bluebook Update (Bar Harbor, Maine).*2002. Canadian association spurs launch of IP standard. 9(1):8.

Jan/March.
• ***Summary:*** The Canadian Soybean Export Association [Ontario] recently developed and launched a National Identity Preservation Standard. Canada's soybean industry has been growing food-grade soybeans for more than 30 years, and conducting IP programs for more than 15 years. So Canada has the infrastructure and experience to run sophisticated IP programs.

2797. *Ontario Soybean Growers Newsletter.*2002. Profiles: ProSoya Inc. and the SoyaCow. Feb. p. 7.
• ***Summary:*** Contains a small photo of a SoyaCow. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2798. Tanner, Jack W. 2002. The rise of soybeans in Ontario, Canada, and Prof. C.A. Zavitz (Interview). *SoyaScan Notes.* Feb. 3. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Charles Zavitz was unquestionably the soybean pioneer in Ontario, but he retired in 1927. Soybeans became a fairly important crop in Ontario during World War II, when they served as a source of vegetable oil but the crop didn't really take off until the early 1980s. The increase in corn acreage, starting in the early 1960s, was a major cause of the subsequent increase in soybean acreage. Corn acreage growth was related mainly to herbicides, single-crop hybrids, early corn which would stand up, cheap nitrogen– all those things came together to cause growth in corn acreage. This, in turn, did several things to cause soybean acreage to increase: (1) It cleaned out the quackgrass. (2) The soybeans moved onto farms where the grower had developed some kind of a cash-crop philosophy / mentality. (3) Soybeans became part of the rotation with corn. So until the corn crop grew, the soybean crop could not. Jack recalls many failures in the 1960s when they tried to move soybeans onto a farm that didn't have corn; the farmer would try soybeans once and they would be taken over by weeds and/or groundhogs. And they often wouldn't bear seed due to insufficient nodulation. So, after that failure, many farmers were reluctant to try soybeans again.

Moreover, it was not until the 1980s that early soybean varieties were developed. Before that time, in southwestern and central Ontario, they had Harosoy and a couple of other varieties. Maple Arrow was the first really good, early, high-yielding soybean variety. It enabled soybeans to expand northward into central and eastern Ontario. During the 1980s the number of recommended varieties expanded greatly, into the hundreds.

Nodulation was another big problem. "We were moving onto land that had never grown soybeans before. Its not that simple to just inoculate the first crop of soybean planted. During the 1960s and 1970s Jack and a colleague spent a lot of time on nodulation in soybeans. Farmers knew the importance of inoculating soybeans. But no matter how hard you tried, you could not get decent inoculation the first year. At that all the inoculants were based on peat; it wasn't until the granular inoculants came along in about the mid-1970s that you could really get the number of viable nodule bacteria that you needed to get enough nodules the first year.

Finally in the 1990s all these technologies and practices came together as a package for soybeans: Herbicides, granular inoculants, good early varieties, and the cash-crop philosophy.

Dr. Zavitz did pioneering research on soybeans from 1893 to about 1927 when he retired. He evaluated more lines and did more production research, both for hay and for the beans than anyone else at the time. But after Dr. Zavitz, during the 1930s, basically nothing happened with soybeans in the short-season part of Ontario. Moreover, OAC as an institution was in the doldrums during the 1930s; true, that was the decade of the Great Depression, but OAC was part of the Ministry of Agriculture and the college became a political football. Governments would change and people would get fired. One of Canada's premiers threatened to close OAC completely. It was terrible what was going on. So it was really until after World War II, when young guys started coming it that OAC started moving again, and agriculture became an outstanding department.

There was hardly any research going on there until George Jones joined the faculty in about 1946-47. George was a corn and soybean person and he had expertise in herbicides; he was the one who really promoted the corn crop here. He was called "The Christ of Corn," he was such a missionary for the crop that, for the first time, corn acreage expanded greatly, setting the stage for soybean expansion. The University of Guelph gave George an honorary degree last year. George tried to get soybean acreage to expand, then Jack did the same thing, but Dave Hume was the one who really got it going because the whole soybean package came together when he was promoting soybeans. Jack and Dave did a lot of work jointly, published jointly, and their soybean crews operated as one. They worked together on nodulation, on row width, planting date, variety trials, cooperative USDA trials, etc.

Starting with Dr. Zavitz, many people worked very hard to promote soybeans in Canada, but perhaps the most outstanding contribution to soybeans in Canada came from Cass Owen, who took over the soybean research at Harrow from Fred Dimmock. Owen developed Harosoy, which occupied 95% of Ontario's soybean acreage at one time; it was also the leading variety in Ohio, Illinois, Iowa. "There never was nor will there ever be a soybean variety that dominated like Harosoy in both southern Ontario and in central the U.S. Cornbelt. Harosoy was released in 1952 and it was a dominant variety until the late 1960s. Any varieties that came after it were crosses onto Harosoy. We needed a short-season variety with a decent yields, but we also

needed the soybean package (herbicide technology, nodulation technology, etc.) that we discussed previously.

For more details see: *125 years of achievements: OAC–A proud tradition, an exciting future, 1874-1999.* Look for soybeans in the index. Jack, who is very interested in the history of the soybean in Canada, wrote most of the parts related to soybeans. Address: Retired Prof., Plant Agriculture Dep., Crop Science Bldg., Univ. of Guelph, Guelph, Ontario N1G 2W1, Canada.

2799. **Product Name:** SoYummi: Soya Dessert [Chocolate, Raspberry, Lime, Banana-Coconut].
**Foreign Name:** SoYummi: Dessert de Soya.
**Manufacturer's Name:** Les Aliments SoYummi.
**Manufacturer's Address:** 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
**Date of Introduction:** 2002. March.
**Ingredients:** Soy drink (80%; not subjected to UHT), sugar, soy oil (later changed to high oleic sunflower oil), modified cornstarch, modified rice starch, lactic acid (to lower the pH for longer shelf life), modified vegetable gums, xanthan gum, salt, agar, natural flavors, yucca extract (rich in saponins).
**Wt/Vol., Packaging, Price:** 125 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
**How Stored:** Refrigerated, 35-40 day shelf life.
**New Product–Documentation:** Cardwell, Mark. 2002. "As good as it gets." Food in Canada. May, p. 38.

Talk with Joanne Hollander. 2008. May 29. They introduced the first four products on 8 March 2002 at a food festival in Montreal; they were available for sale in stores about 2 weeks later. She has product labels in front of her. The products have always been made at the Food Research and Development Center (CRDA) in Saint-Hyacinthe, and the main office has always been at 3655 Redpath in Montreal. She started the research using tofu, but later switched to soymilk. She is a purist, and spent years trying to find the right tofu. Then she found that soymilk sold in ESL gable-top cartons has been subjected to UHT sterilization (up to 123ºC), which destroys 80% of the isoflavones and all of the vitamins–it ends up being a dead, inert food. She has read "many, many papers by Asian scientists about this destruction of isoflavones" and Dr. Ming (who she visited) at the University of Vermont has written about the destruction of vitamins. The process also kills all the enzymes and the bad bacteria–but it also kills the good bacteria. "The whole point of consuming soymilk is to get the isoflavones, the phytoestrogens." Her biggest obstacle to making healthy products is Health Canada; they won't let her use natural sweeteners. Stevia sold off the shelf but not allowed in commercial products. They push Splenda, Aspartame, and all those things that end in the letters "tol" (such an mannitol, sorbitol, glycerol, arabitol, erythritol), all the sugar-alcohols that acidify the body. "It's just a nightmare trying to develop a really healthy product in Canada." Her products has a shelf life of 40 days without using UHT soymilk. Joanne regards sugar (organic or not, including "cane crystals") as poison. "Its the worst thing; I don't think there is a good sugar. They are all acid-forming and terrible." "Soy oil is a omega-6 and it oxidizes quickly, so she doesn't like it, which is why she took it out of her first product. Yucca extract is a good source of saponins, which adhere to cholesterol molecules in the intestines so they can't get reabsorbed into the bloodstream, and are therefore excreted. Saponins are also foaming agents, so they help make a light mousse–which is the same consistency all the way through–no crust or topping. Its basically a pudding that is whipped and set. Her website is www.soyummi.ca. There is also a SoYummi (a different company) in New Jersey; URL: www.soyummi.com.

Because Joanne has done most of her research at the Center for Research and Development in Saint-Hyacinthe, she has access to many very smart food scientists and lots or reliable information about foods, food ingredients, and food processing.

Joanne's original product still contains sugar, but Joanne wanted to develop a product with no sugar, which led to her 2nd product, SoYummi GoLite.
*

2800. **Product Name:** Soy Chips [Original (Lightly Salted), or Barbecue Mesquite], or Soy Crisps [Original (Lightly Salted), or Honey Mustard].
**Manufacturer's Name:** Snackie Jack's.
**Manufacturer's Address:** Toronto, Ontario, Canada (Marketer). Made in USA. Phone: (213) 688-7882.
**Date of Introduction:** 2002. March.
**Ingredients:** Incl. GMO-Free soybeans.
**Wt/Vol., Packaging, Price:** 3.5 oz (98 gm).
**How Stored:** Shelf stable.
**New Product–Documentation:** Leaflet (8½ by 11 inch, color, glossy, front and back) from Natural Products Expo West (Anaheim, California). 2002. March. "Feeling Snackie? Grab a pack of Snackie Jack's!"

2801. *Ontario Soybean Growers Newsletter.*2002. Fish food and fuel take honors in 2002 Project SOY. April. p. 1.
• ***Summary:*** Project SOY (Soybean Opportunities for Youth) began in 1996 as a way to encourage University of Guelph students to learn more about soybeans, and create innovative new uses for them. There are two categories: undergraduate/graduate, and diploma. The first, second, and third place awards are valued at $2,500, $1,000, and $500 in each category.

The 6th Annual Project SOY was held on 3 April 2002 at the University of Guelph. First place in the undergrad/grad category went to Soy Fizzy, a soy-based tropical fish

food. First place in the diploma category went to a soy biodiesel project. Other winning ideas were soy pancakes, a clean-burning soy fireplace log, soy and maple snacks, dog treats, and ski wax.

Project SOY is sponsored by First Line Seeds and the University of Guelph. A photo shows some of the winning students with their product concepts. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2802. *Ontario Soybean Growers Newsletter.*2002. Montreal Transit to use biodiesel in its bus fleet. April. p. 2.
• ***Summary:*** Starting on 27 March 2002 thousands of Montrealers began boarding city buses fueled partially by soybean oil. The buses use 20% biodiesel and 80% petroleum-based diesel. The biodiesel will greatly reduce tailpipe pollution. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2803. *Ontario Soybean Growers Newsletter.*2002. Hannam Soybean Utilization Fund recipients announced. April. p. 3.
• ***Summary:*** The $1 million fund, launched in 2000, is working to change the way the public thinks about soybean use and the way industry uses soybeans. The fund was donated to the University of Guelph by Peter Hannam and his family. This year graduate students will receive awards for engineering, food science, and animal science research. One project will examine ways to incorporate soybeans into aquaculture feed. Another will work to develop a biodegradable replacement for polystyrene in food packaging. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2804. *Ontario Soybean Growers Newsletter.*2002. Soyfoods Canada receives funding. April. p. 3.
• ***Summary:*** The funding from Ag Canada's CanAdapt Program will be used to launch a soyfoods promotion campaign. More specifically, the money will be used for: Website development. A new soy info / recipe brochure. A display for use at consumer food shows. Public relations.

Ontario Soybean Growers (OSG) is a member of Soyfoods Canada. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2805. *Ontario Soybean Growers Newsletter.*2002. Quebec margarine battle heats up. April. p. 5.
• ***Summary:*** Butter-colored margarine has been illegal in Quebec since 1987, when legislation was enacted to protect Quebec's 10,000 dairy farmers from competition. Quebec is the only province–and one of the few jurisdictions in the world–still enforcing a ban on colored margarine. Ontario's ban officially ended in 1995.

In 1994, under the terms of the Agreement on Internal Trade (AIT), Quebec agreed to drop its margarine restrictions by Sept. 1997. However it backed down from that commitment after an aggressive campaign by the powerful dairy lobby. Now, after more than 4 years of non-productive negotiations between Ontario and Quebec governments, Ontario has asked a dispute settlement panel, allowed under the AIT, to make a ruling on the issue. The decision of the panel is final–although it may be difficult to enforce.

At the same time Unilever Canada Ltd. began a challenge of the ban in Quebec's Court of Appeal on March 25th. Unilever is appealing a 1999 Quebec Superior Court ruling that upheld the ban, but found the prohibition to be protectionist. Unilever, which makes three brands of margarine, says it incurs about $1 million annually in additional costs because of the ban. The court decision is expected within 6 months. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2806. *Ontario Soybean Growers Newsletter.*2002. Profiles: Tim Haig, president and CEO of BIOX, works to promote the benefits of biodiesel. April. p. 7.
• ***Summary:*** Haig's company, founded in Sept. 2000, builds biodiesel processing plants. The BIOX process cuts the cost to just $0.08 per liter, making it comparable and competitive with petroleum-based diesel products–as long as government subsidies are provided! A photo shows Haig. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2807. *Ontario Soybean Growers Newsletter.*2002. Market scan: The OSG position on Roundup Ready white hilum soybeans. April. p. 8, 6.
• ***Summary:*** In Jan. 2002, the Ontario Oil & Protein Seed Crop Committee (OOPSCC) recommended the registration of several varieties of white hilum soybeans that carry the Roundup Ready gene. Ontario Soybean Growers (OSG), which has one voting member on the Committee, voted in favor of the registration of Roundup Ready white hilum (RRWH) soybeans–but only after long thought and discussion. One of the main issues was whether the introduction of RRWH soybean varieties into Ontario would cause problems for special quality white hilum (SQWH) exports.

A survey conducted last year by Dr. George Brinkman and Jeremy Heigh of the University of Guelph found that in the past three years (1999-2001), exports of SQWH soybeans decreased by 39% while exports of identity preserved (IP) and other specialty soybeans increased by 57%. This trend is expected to continue. Generally, IP soybeans earn higher premiums than SQWH soybeans.

RRWH soybeans have been available in the USA for two years. There are no restrictions on soybean imports to Canada from the USA. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2808. *Soyfoods Canada Newsletter.*2002. Quebec margarine battle heats up. April. p. 1.
• ***Summary:*** "Quebec's long-standing refusal to lift a ban on butter-coloured margarine is now being challenged on two fronts. Both the Ontario government and Unilever Canada are fighting to have Quebec remove this inter-provincial trader barrier.

"Butter-coloured margarine has been illegal in Quebec since 1987, when legislation was enacted to protect Quebec's 10,000 dairy farmers from competition. Quebec is the only province–and one of the few jurisdictions in the world–still enforcing a ban on coloured margarine.

"In 1994, under the terms of the Agreement on Internal Trade (AIT), Quebec agreed to get rid of its margarine-colouring restrictions by September 1997, However it backed down from this commitment after an aggressive campaign by the powerful dairy lobby."

2809. *Soyfoods Canada Newsletter.*2002. Soyfoods Canada member profile–Tofutti-Cholac Foods. April. p. 2.
• ***Summary:*** "Tofutti-Cholac Foods was started in 1985 and incorporated under the present name in 1988. Tofutti-Cholac Foods has the distribution rights for Tofutti products for all of Canada, except Quebec, which operates independently as Tofutti Montreal.

Contact: Bill Hawes, Tofutti-Cholac Foods, 165 Kozlov Street, Unit 20, Barrie, ON L4N 7M7 Canada.

2810. Kiberd, B.A.; Clase, C.M. 2002. Cumulative risk for developing end-stage renal disease in the US population. *J. of the American Society of Nephrology* 13(6):1635-44. June. *

2811. McCreery, Liam. 2002. Chairman's corner. *Ontario Soybean Growers Newsletter.* June. p. 2.
• ***Summary:*** The U.S. Farm Bill is obscene and its' effects will echo through the entire agricultural world. And make no mistake, the industry that will be most affected will be the grains and oilseeds sector. The current farm bill spends about $10 billion U.S. annually in the base program, with emergency payments taking that number up to $17 billion. The new farm bill will see that base number, before emergency payments, jump to over $17 billion U.S. annually.

"To put that huge number into perspective, you must realize that the entire output of all of Canada's 240,000 farms adds up to around $18.5 billion U.S. This is almost the same as what the U.S. puts into subsidies. Every primary producer of grains and oilseeds in Canada will be negatively impacted. What can we do?" Gives several suggestions.

"We are good at what we do, but we are being bashed by the U.S. farm bill, European subsidies and prohibitive tariffs. These barriers keep us out of markets where we could compete, given a chance." Address: Chatham, ONT, Canada N7M 5L8.

2812. *Ontario Soybean Growers Newsletter.*2002. Canadian and Ontario acreage estimates. June. p. 3.
• ***Summary:*** A table shows estimates of intended acreage for soybeans, corn and winter wheat for Ontario, Quebec, and Canada (total) for 2002 and the actual planted acres for the 2001 crop year.

For soybeans, the two figures are (2001 / 2002): Ontario: 2,150,000 / 1,975,000. Quebec: 370,700 / 341,000. Manitoba: 45,000 / 100,000. Canada (total): 2,573,700 / 2,424,000.

Note: In both years, the Canadian total is slightly greater than the sum of Ontario, Quebec and Manitoba because small amounts of soybeans were grown in at least one other province. Address: Chatham, ONT, Canada N7M 5L8.

2813. *Ontario Soybean Growers Newsletter.*2002. Profiles: Jim Lowe, Regional Director of the Canadian Grain Commission's Bayport Region. June. p. 7.
• ***Summary:*** Discusses the workings and great importance of the Canadian Grain Commission (CGC).

"One of the hallmarks of the Canadian grain industry is its high quality; another is its consistency. The two components provide an element of certainty for food processors and other secondary industries that handle grains, whether it's corn, barley, chick peas, wheat or soybeans. There is nothing accidental about this country's reputation for excellence where its grains are concerned; the Canadian Grain Commission (CGC) has played a vital role in helping develop and maintain that reputation over the years."

A portrait photo shows Jim Lowe. Address: Chatham, ONT, Canada N7M 5L8.

2814. *Nutrition Business Journal (San Diego, California).*2002. U.S. consumers gain appetite for meat alternatives: Boca, Gardenburger and Sunrich expand market with new meat alternative products. 7(7):4-6. July.
• ***Summary:*** A pie chart shows the $395 million meat alternative market (wholesale figures, 2001) divided as follows: Kellogg (Morningstar Farms) 45%. Kraft (Boca Burger) 15%, Gardenburger 14%, ConAgra (Lightlife) 11%, Hain Celestial (Yves Veggie Cuisine) 8%. This converts to about $550 million in consumer sales, with about 60% via the mass market channel, 30% through natural / health food stores, and 10% through other channels. Soy-based meat alternatives accounted for about 85% of those sold in mass market outlets and 80% of those sold in natural / helath food stores. Growth during the previous year (2000) was estimated at 14.5% (16.4% in mainstream and 10.1% in natural / health).

In mainstream supermarkets and grocery stores, frozen products account for 68% of meat alternatives, while the remaining 32% are refrigerated. In natural food stores, 59% are sold refrigerated and 41% frozen. In the refrigerated category, Lightlife claims to have 50% of the market in natural food stores, followed by Yves (34.5%) and Veggie Patch (3%).

A new major player is Quorn, a European company making products from mycoprotein (myco = mold or fungi, not mushrooms).

Kraft owns both Boca Burger and Oscar Meyer; the latter just entered the meat alternative business. Kraft's newest introduction is Boca Ground Burger in microwaveable pouches, for use in recipes ranging from tacos to spaghetti.

2815. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2002. Overview of Ridgetown College, University of Guelph. Summer. p. 1-2.
• ***Summary:*** "The Western Ontario Experimental Farm, now known as Ridgetown College, University of Guelph, was established in 1922 for the purpose of agriculture crop and livestock research and development. In 1951, the College introduced its first two-year residential diploma educational program in agriculture. Today, there are over 4,200 graduates of Ridgetown College. Currently educational programs include diplomas in Agriculture, Horticulture and Veterinary Technology."

"Specifically in soybeans, there are research programs that cover the following area: soybean breeding and germplasm improvement, soybean agronomy, disease and insect control, economics, weed management, and feeding trials specifically in swine. The soybean breeding program concentrates on variety development for the MG I and MG II maturity zones as well as germplasm enhancement. Varieties released from the program include a number of higher-protein, yellow-hilum varieties suitable for export markets. This includes the following lines currently being grown commercially: RCAT Bobcat, RCAT Legacy, Ivory CK-01 and PRO 30-02.

"The germplasm development portion of the program attempts to modify the intrinsic properties of seed (protein, oil, carbohydrates) to produce a soybean of higher value for premium based production. Currently efforts have been targeted toward modifying the oil profile within soybeans. This includes decreasing linolenic acid and the saturated fats as well as increasing the monounsaturated fatty acid, oleic, to improve oil stability and nutritional characteristics. To date several soybean lines with unique modified oil profiles have been developed. The most advanced traits in terms of breeding are the low linolenic acid soybeans." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2816. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2002. Canadian and Ontario acreage estimates. Summer. p. 4.
• ***Summary:*** A table shows estimates of intended acreage for soybeans, corn and winter wheat for Ontario, Quebec, and Canada (total) for 2002 and the actual planted acres for the 2001 crop year.

For soybeans, the two figures are (2001 / 2002): Ontario: 2,250,000 / 2,075,000. Quebec: 365,700 / 333,600. Manitoba: 50,000 / 103,000. Canada (total): 2,672,700 / 2,545,100.

Note: In both years, the Canadian total is slightly greater than the sum of Ontario, Quebec and Manitoba because small amounts of soybeans were grown in at least one other province. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2817. Jenkins, David J.A.; Kendall, C.W.C.; Jackson, C.-J.C.; et al. 2002. Effects of high- and low-isoflavone soyfoods on blood lipids, oxidized LDL, homocysteine, and blood pressure in hyperlipidemic men and women. *American J. of Clinical Nutrition* 76(2):365-72. Aug. [49 ref]
• ***Summary:*** Many of the benefits of soyfoods consumption have been attributed to isoflavones. However this study found that substitution of soyfoods for animal products, regardless of isoflavone concentration, reduces the risk of coronary artery disease risk because of reductions in blood lipids, oxidized LDL cholesterol, homocysteine, and blood pressure. Address: 1. Clinical Nutrition and Risk Factor Modification Center, St. Michael's Hospital, 61 Queen Street East., Toronto, Ontario MC5 2T2, Canada.

2818. McCalla, Douglas. 2002. Afterword to James Zavitz's talk. *Canadian Quaker History Journal* No. 67. p. 17-18. [2 ref]
• ***Summary:*** He adds a few reflections: (1) Charles Zavitz's decision to attend the OAC suggests an interest in leadership within agriculture. But in those days few farmboys attended college. (2) Zavitz was a "weighty" Friend, in a community with egalitarian values. Yet leadership was essential to rural progress. (3) We "have a tendency to imagine earlier societies, especially rural societies, as somehow 'traditional'; we contrast them with our modern world." Charles Zavitz's lifelong efforts to apply science to agriculture are vivid testimony to his modernity. (4) Today knowledge and innovation have become the core of the economy. Yet Charles Zavitz systematically documented the economic value of his work to agriculture. Address: Canada Research Chair in Rural History, Dep. of History, Univ. of Guelph, Guelph, Ontario, CanadaUniv. of Guelph.

2819. *Ontario Soybean Growers Newsletter.*2002. Central Soya acquires CanAmera. Aug. p. 5.
• ***Summary:*** In late May Central Soya Co., "the North American operating unit of Cereol S.A., acquired full ownership of CanAmera Foods of Canada. CanAmera is Canada's largest producer of edible oil products. Central Soya has owned 50% of CanAmera since it was formed in 1992 as a joint venture partnership with Saskatchewan Wheat Pool, and Agricore United." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2820. *Ontario Soybean Growers Newsletter.*2002. Biodiesel gets a boost. Aug. p. 5.
• ***Summary:*** In June 2002, Ontario's provincial government took a major step toward establishing a viable biodiesel industry in Ontario when it announced the removal of the 14.3 cents/liter provincial tax on biodiesel fuels. Biodiesel is cleaner burning and renewable. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2821. *Ontario Soybean Growers Newsletter.*2002. Canadian Soyfoods Directory revised. Aug. p. 9.
• ***Summary:*** First published in 1997, the new version is available only on the website www.soybean.on.ca. Funding for the project came from Agriculture and Agri-Food Canada's CanAdapt program. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2822. Zavitz, James R. 2002. Recollections of my grandfather, Charles Ambrose Zavitz. *Canadian Quaker History Journal* No. 67. p. 4-16.
• ***Summary:*** These loving recollections, filled with fine stories and anecdotes, reveal many details that were previously unknown about the life and sterling character of Charles A. Zavitz.

The author, James R. Zavitz, was born on 28 July 1922 in Ottawa, Ontario, Canada. His first memories of his grandparents date from late 1925 when, at 2½ years of age, he was sent to live with them at Guelph. His mother was having a difficult pregnancy with his younger brother, John, who was born on 10 Feb. 1926–so things were much easier with little James out of the way.

Note: The subject of this special issue is "Quakers and agriculture." Soyfoods Center also owns the unpublished typescript, received 13 Feb. 2002 from James R. Zavitz. 28 cm. Address: R.R. 2, Ilderton, Ontario N0M 2A0, Canada. Phone: 519-666-1512.

2823. *Bluebook Update (Bar Harbor, Maine).*2002. Soy 20/20 explores new markets for Canadian soybeans. 9(3):2. July/Sept.
• ***Summary:*** Soy 20/20 is a pilot project within Canada's Agricultural Policy Framework (AF). Canada's federal government, the province of Ontario, and the soybean industry will contribute more than $400,000 in an attempt to capture more of emerging markets for value-added soybeans.

2824. *Bluebook Update (Bar Harbor, Maine).*2002. SoyaDairy provides consultants. 9(3):3. July/Sept.
• ***Summary:*** SoyaDairy is headed by Frank Daller and Brian Harrigan, both formerly of ProSoya, Inc. Also with the new consulting company are Koichi Watanabe, owner of La Soyarie, and Hart Melvin, owner of Gelato Fresco. Phone: 613-741-6888.

2825. Noble Bean. 2002. Tempeh–Noble Bean (Leaflet). McDonalds Corners, Ontario, Canada. 2 p. 6 panels. Front and back. 28 cm.
• ***Summary:*** The front 3 panels of this color leaflet are printed with black and yellow on a green background: (1) About the company in English, with an oval color photo of Casey, Marty, Susan, and Allan. "Noble bean is a family-run cottage industry nestled in the rolling hills of the Ottawa Valley. Here on 10 acres of land we produce 100 lbs. of tempeh a day." In 1979 the company was started. (2) Six tempeh products (packages and labels) made by Noble Bean, plus one old and two new photos of the family at work. (3) About the company in French with a cartoon illustration of the outside of the shop.

The inside 3 panels contain recipes for Tempeh Salad and Tempeh Teriyaki, plus an early photo of Allan and Susan making tempeh. Address: RR#1, McDonalds Corners, ONT, Canada K0G 1M0. Phone: (613) 278-2305. Fax (613) 278-0173.

2826. Bauch, Hubert. 2002. Obituaries–Hartland Molson: Senator presided over Molson dynasty. *National Post (Canada).* Oct. 1. p. S7.
• ***Summary:*** Molson (who died Sept. 28 at age 95) was "perhaps the Canadian establishment's quintessential figure" in his time. "He was a business visionary; he saw the potential of soya beans decades before tofu became a household word in the Western world."

Note: Talk with Jim Zavitz of Canada. 2002. Oct. 1. Jim has a book about the Molson family, but it does not mention soy. The Molson family was one of Canada's oldest, wealthiest, and most influential families. Hartland Molson was a pilot in the Oct. 1941 Battle of Britain (he was shot down but survived), in 1955 (at age 48) he was appointed to the Canadian senate by Canada's Prime Minister, and in 1957 he became long-time owner of the Montreal Canadiens hockey team as they were in the midst of their unequalled run of five consecutive Stanley Cup championships. In 1995 he received the Order of Canada and in 2000 was made a member of the Order of Quebec. A portrait photo shows Hartland Molson.

2827. Belleme, Jan. 2002. Miso production in the USA (mainland), Hawaii, and Canada. Miso exports from Japan to the USA and the UK (Interview). *SoyaScan Notes.* Oct. 23. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** John interviewed each of the miso manufacturers in these three regions and they gave him their company's production statistics, sometimes on the understanding that he would only publish aggregate figures–which are: USA (including Hawaii) 1,326,000 lb/year (601.5 metric tons/year). Hawaii 660,000 lb/year (299.4 metric tons/year). Canada 313,200 lb/year.

Miso exports from Japan to the USA were 5,561,160 lb/year (2,520 metric tons/year) and to the UK were 308,644 lb/year (140 metric tons/year).

Note: Comparing these figures with comparable 1982 figures published in *The Book of Miso* (1983, p. 240): Miso production in the USA (including Hawaii) has decreased 56.7% from 3,064,444 lb/year (750 metric tons/year) in 1982. Miso production in Hawaii has decreased 53.3% from 1,410,944 lb/year (640 metric tons/year) in 1982. Miso imports from Japan to the USA have increased 263% from 2,114,211 lb/year (959 metric tons/year). Address: P.O. Box 457, Saluda, North Carolina 28773.

2828. American Soybean Assoc. 2002. Bean beat: ASA activities increase market for soy products in India. *Soybean Digest.* Oct. p. 26.
• ***Summary:*** Suresh Itapu, ASA/India Technical Director of Soy Food Marketing, says that as a result of ASA promotion work, 55 Indian entrepreneurs are now making soymilk and tofu using the Canadian SoyaCow technology. Last year at this time only 31 such entrepreneurs were in business. In addition, with strong support from the ASA-managed World Initiative for Soy in Human Health (WISHH) program, three medium-sized SoyaCow units (53 gallons/hour capacity) have been installed in India alone. And Godrej, a major Indian food manufacturer which failed in the late 1980s in its efforts to launch soymilk, has entered the market again after extensive trials and test marketing.

As a result of all this activity, soymilk production in India during the past year has increased from 290,000 gallons to 924,000 gallons. And Itapu believes that the future looks bright. Soyfoods look like an idea whose time has finally come in South Asia.

2829. *Ontario Soybean Growers Newsletter.*2002. Ontario farmers quickly adopting herbicide-tolerant [Roundup Ready] soybeans. June. p. 7.
• ***Summary:*** Note: Herbicide-tolerant soybeans have been genetically engineered so that the herbicide kills weeds but not the soybean plants on which it is sprayed.

"The rising trend of adopting herbicide-tolerant (HT) soybeans and environmentally friendly no-till practices is documented in a new report by the George Morris Centre.

"The study, surveying 352 Ontario soybean growers on their cropping practices, found that 30 percent of Ontario's soybean acreage was planted to HT seed in 2001. The new technology makes good economic and environmental sense, because producers report making 1.7 fewer field passes than they did three years ago.

"Put into the context of the 2002 soybean crop, farmers continue to vote with their seeders. Adoption rates have increased again from 30 percent in 2001 to an estimated 40 to 45 percent of 2002 soybean acreage.

"'Our study also found a positive correlation between size of operation and the adoption of HT seed and no-till practices,' says Cher Brethour, lead researcher for the George Morris Centre. 'Larger farm operations with gross farm income of more than $200,000 tend to use more HT soybeans, use better conservation tillage practices and leave more crop residue on the land.'" Address: Chatham, ONT, Canada N7M 5L8.

2830. *Ontario Soybean Growers Newsletter.*2002. Profiles: Bill Walters, OSG Director from Elgin, farms near St. Thomas. Oct. p. 7.
• ***Summary:*** "In terms of identifying the greatest potential for soybean producers, Bill views the industrial market as the key growth sector, but only because there is so much competition for food grade quality product. 'With limited returns on the extra management and effort required to produce IP [identity preserved] food quality soybeans, I believe more growers will continue to grow Roundup Ready commercial beans,' explains Bill.

"The big impact on how markets will take shape in the future, he adds, will come from Brazil. And the impact won't be felt south of the border only, but around the world. As Brazilian production continues to increase, world export markets will become limited and serve to deflate prices. To fight this, adds Bill, the U.S. will continue with its lavish subsidies to its grains and oilseeds producers, which will only help them to maintain their current production levels. That scenario isn't one that Bill welcomes.

"'I fear that without more Canadian government support, Ontario may become a dumping ground for US soybeans.'" A portrait photo shows Bill Walters. Address: Chatham, ONT, Canada N7M 5L8.

• ***Summary:*** The website was launched in September: www.soyfoodscanada.com.

2832. Elwel, Christian. 2002. Miso more than food: Life! Healing in Rwanda. *River Currents: News from South River Miso Company (Conway, Massachusetts).* Fall/Winter. p. 2. Nov.

• ***Summary:*** Note: Some dates and details were added to this published story by William Shurtleff based on an interview with Gilbert Boulay conducted by Shurtleff on 24 Nov. 2002.

Gilbert Boulay and Suzanne Dionne met in Quebec in about 1982. She was a student of forest engineering and she a student of food science and agronomy; they soon became a couple and shared a common interest in international development and refugee problems. In 1984 they applied to various organizations. Gilbert was hired by a volunteer organization in Quebec. In Aug. 1984 they both first arrived in the central African nation of Rwanda, where he and began to work as a Canadian volunteer with the United Nations as an advisor to the Rwandan Ministry of Agriculture and Forestry in the field of forest management and reforestation. Suzanne began working in nutrition centers introducing food products that promote health. They both soon decided to teach Rwandans how to make miso. Suzanne first learned to make miso by herself following the method in *The Book of Miso.* In about Sept/Oct. 1988 she made a quick trip to study miso making with Yoshi and Lulu Yoshihara in British Columbia; she was there 3-4 days. Back in Rwanda, she made miso at their at home in the capital, Kigali. In 1989 they returned to Quebec, where they were married. Soon the president of Rwanda, Juvénal Habyarimana became interested in miso and in July 1989 he actually mentioned it in one of his speeches. Soon thereafter, Suzanne gathered the means to rent a house and turn it into a miso workshop and neighborhood restaurant. She soon had 22 people on her staff making miso and other natural foods. Miso saved the life of a five-year-old girl who had been unable to digest food. "This and similar experiences were a major turning point for Suzanne, as she realized more fully the healing potential of miso."

In 1992 she returned to Canada to study business management with the goal of establishing an organic food-processing business.

After receiving her MBA, Suzanne Dionne and her husband Gilbert Boulay launched their business, *Les Aliments Massawippi,* at 4530 Chemin Capelton, North Hatley, Quebec, Canada J0B 2C0. Phone: 819-842-2264. In 2001 they made their first batch of commercial miso for local distribution. In June 2001 Suzanne received the *Prix Entrepreneurship Fémenin* at the *Concours Québécois en Entrepreneurship* for creating two new health food products.

In Dec. 2001 she published the French-language edition of her book about miso. The English-language edition was published in June 2002.

Both Suzanne and Gilbert presently work full time at their miso company; they make the miso in their home and have one employee, a woman who is a chemical engineer from Yugoslavia.

Note: The most recent genocide in Rwanda began in April 1994.

2833. Hain Celestial Group, Inc. (The). 2002. Annual report 2002. Melville, New York. 36 p. Nov. 28 cm.
• ***Summary:*** Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (33 p.). Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2834. *Nutrition Business Journal (San Diego, California).*2002. Mergers & acquisitions in the organic industry. 8(11):9. Nov.
• ***Summary:*** Discusses: Stake Technology, two Canadian distributors, and Opta Ingredients. Dean Foods and White Wave. Danone, Stonyfield Farm, and Lifeway Foods. Coca-Cola, Odwalla, and Mad River. Hain-Celestial, Imagine Foods, Yves (Canada), and Lima (Belgium).

2835. *SoyaScan Notes.*2002. Chronology of major soy-related events and trends during 2002 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Jan. 1–The Kerry Group (of Wisconsin and Iowa) creates Nutriant as its new nutritional division; into Nutriant it merges Solnuts and Iowa Soy.

March–Proceedings of the Fourth International Symposium on the Role of Soy in Preventing and Treating Chronic Disease held at San Diego, California, published as a supplement to the *Journal of Nutrition,* 132(3):545S-619S. General chairpersons and Supplement editors: Stephen Barnes and Mark Messina.

March–A new tofu plant owned by Sunrise Soya Foods of Vancouver, starts operation in Toronto, Canada. This is the company's first plant in eastern Canada.

March 15–Minnesota becomes the first U.S. state to pass legislation requiring diesel fuels sold in their state to contain a 2% blend of biodiesel (B2). By 1 July 2002 nearly every gallon of diesel fuel sold in Minnesota must contain a 2% blend of biodiesel.

May 8–Dean Foods announces that it has signed a definitive agreement to acquire the 64% equity interest in White Wave, Inc. it does not currently own. The price of this 64% was approximately $189 million, bringing Dean's total investment to approximately $204 million. White Wave had total sales of approximately $125 million during the 12 months ending 31 March 2002.

May (late)–Central Soya Co. acquires CanAmera, Canada's largest producer of edible oil products. Central Soya had owned 50% of CanAmera since it was established in 1992.

July 22–Bunge Ltd., North America's leading soybean processor, announces an agreement to acquire a majority stake in Cereol S.A., the Paris-based parent of Central Soya Co., headquartered in Fort Wayne, Indiana.

Aug. 13. Pharmacia spins-off Monsanto; as a result, Pharmacia no longer owns any equity interest in Monsanto. During fiscal 2002 Monsanto suffered huge financial losses. Net income showed a *loss* of $1,693 million–down dramatically from +$295 million in 2001.

Oct. 1–Bunge acquires Cereol S.A. (based in Paris), which includes Central Soya (a U.S. soybean processing pioneer and leading manufacturer of soy protein concentrates and soy lecithins) and CanAmera Foods (in Canada).

Oct. 4–Mr. Shoan Yamauchi, the most important tofu pioneer in the United States and Hawaii, dies in Torrance, California. He began making tofu in Hawaii in 1939 at a company that was started in 1923. In 1947 he and his wife came to Los Angeles, where in late 1947 they purchased the Hinode Tofu Co. at 6th St. and Towne Ave. This company, which is now named House Foods America Corporation (still in Los Angeles), is the oldest existing Japanese-American tofu manufacturer in the United States.

Oct. 21–The National Organic Standards take effect.

Sept. (late)–U.S. Food & Agribusiness Exhibition in Havana, Cuba. Some 290 U.S. companies take the rare opportunity to present their products to over 16,000 visitors.

Nov. 14–Biodegradable hydraulic fluid made from soy oil is first used in the elevator inside the Statue of Liberty. Its advantages over the petroleum-based oils previously used are its environmental friendliness and improved safety–says the National Park Service and USDA.

Dec.–Hain-Celestial buys Imagine Foods (maker of Soy Dream and Rice Dream) for $52 million. Imagine has annual sales of about $70 million.

2836. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2002. Overview of the University of Guelph–Guelph, Ontario. Winter. p. 1-2.
• ***Summary:*** The University of Guelph, established in 1964, consists of six colleges with a broad range of undergraduate and graduate programs. The oldest of these is Ontario Agricultural College (OAC), which has long been an essential part of the agricultural research conducted at the University, including that on soybeans. "Professor Charles Zavitz, himself a graduate of OAC's class of 1888, is considered the pioneer in bringing soybeans to Ontario." He initiated numerous field evaluations and management techniques, and identified some "selections that had superior performance such as Early Yellow in 1898, a selection from Early Yellow named OAC 111, and OAC 211, which became the first soybean variety registered in Canada in 1925."

"These early research efforts by Zavitz were continued on a larger scale on oilseed soybeans by many faculty, graduate students and other researchers at the University of Guelph from the 1940s until the present. The development of many high-yielding early season varieties and a complete production package by the University of Guelph researchers has led to a wide expansion of soybean growing area in Ontario, making it the largest cash crop in the province since 1997." Address: Canadian Soybean Export Assoc., P.O. Box 1199, Chatham, Ontario, Canada N7M 5L8. Phone: 519-352-7730.

2837. *Canadian Soybean Bulletin (CSEA, Chatham, Ontario, Canada).*2002. Soybean soybean harvest 2002. Winter. p. 2.
• ***Summary:*** Soybean production in Canada for the crop years 2001 and 2002 (Sept. 1 to Aug. 31) are as follows (in tonnes = metric tons): Canada 1,641,100 / 2,389,100 (up 45.6%). Ontario 1,279,100 / 1,905,100 (up 48.9%). Quebec 315,000 / 350,000 (up 11.1%). Manitoba 47,000 / 134,000 (up 185%).

In 2001 the soybean crop was ravaged by drought. Source: Statistics Canada, Sept. 2002 crop report. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2838. *Canadian Soybean Bulletin (OSG, Chatham, Ontario, Canada).*2002. Canadian soybean exports. Winter. p. 2.
• ***Summary:*** A large table shows statistics in tonnes (metric tons) of soybeans exported to various countries, and regions, each year from 1998/99 to 2001/2002. The countries are: In Asia–China, Hong Kong, Indonesia, Japan, Malaysia, Philippines, Singapore, South Korea, Taiwan, and Thailand. In Western Europe–Austria, Belgium, Denmark, France, Germany, Italy, Netherlands, Norway, Portugal, and Spain. By continent–Africa, Central America, Eastern Europe, Middle East, Oceania, South America, and United States.

In 2001/2002 the countries to which the largest amount of Canadian soybean exports went were (in tonnes): Japan 126,619, Malaysia 101,698, United States 60,244 Germany 29,377, Indonesia 26,836, Hong Kong 22,800.

Total soybean exports have declined dramatically during the past two years, from a peak of 946,360 in 1999/2000, to 746,241 in 2000/2001, down to 471,492 in 2001/2002.

2839. Jenkins, D.J.; Kendall, C.W.; Faulkner, D.; et al. 2002. A dietary portfolio approach to cholesterol reduction: Combined effects of plant sterols, vegetable proteins, and viscous fibers in hypercholesterolemia. *Metabolism* 51:1596-604. Dec. *
• ***Summary:*** In this study, 13 subjects were provided with pre-measured quantities of foods and were told what and

when to eat for a one-month period. The diet, composed of a variety of foods each known to be moderately effective in combatting cholesterol levels, cut bad cholesterol by close to 30% among study participants.

Soy products used in the study included soymilk, margarine, soy deli meats, and tofu. Address: Univ. of Toronto.

• ***Summary:*** A color photo on the top half of the first page shows many soy products, both foods and Industrial products, including: Kaukauna Nacho Cheese, Yves Veggie Tofu Wieners, ProSobee soy formula, NutriGrain energy bars, Betty Crocker Creamy deluxe, Wish-Bone salad dressing, Edensoy soymilk, Mori-Nu Tofu, Ken & Robert's Veggie Burgers, SoyGold industrial solvent, Natural Touch Okara Pattie, soy ink and a newspaper printed with it.

Many "products that people use every day could justifiably carry the stamp 'Courtesy of ARS Research.'" Omaha Steaks began offering irradiated hamburger patties and ground beef in November 2000–to be sure it is free of *Escherichia coli* O157:H7, bacteria that can cause serious, even life-threatening illness. Today all the 6.5 million pounds of ground beef they sell is irradiated, which means it is treated with "ionizing radiation produced by cobalt and cesium atoms, machine-produced X-rays, or electron beams. Treated meat in no way becomes radioactive." Final FDA approval for irradiation treatment of meat came in Feb. 2000.

Nutrim, a product similar to Oatrim developed by USDA's Agricultural Research Service (ARS), is now being used to make vegan, organic chocolate truffles. Mrs. Mudd's Inc. (Oceanside, California) makes the delicious products; Nutrim flows like heavy dairy cream or coconut cream.

Tifsport is a variety of bermuda grass developed for football and soccer fields, and golf courses. Address: USDA-ARS Information Staff, 55601 Sunnyside Ave., Beltsville, Maryland 20705-5128. Phone: 301-504-1637.

2841. *Ontario Soybean Growers Newsletter.*2002. Fred's health report. Dec. p. 7.
• ***Summary:*** "Fred Brandenburg, General Manager of the Ontario Soybean Growers, suffered an aortic aneurysm in October. Following emergency openheart surgery to replace the valve in his aorta and also to repair the wall of the aorta, Fred is doing well and has returned home to recover.

"Fred is thankful for all the thoughts and prayers from his friends and colleagues, and he hopes to be back to work in the new year.

"Get well soon, Fred!" Address: Chatham, ONT, Canada N7M 5L8.

2842. Jenkins, -; et al. 2002. Dietary portfolio approach to cholesterol reduction. *Metabolism* 51:1596-1604. [29 ref]*
• ***Summary:*** In 2002 the Joint Health Claims Initiative (JHCI) in the United Kingdom approved a health claim for the cholesterol lowering effects of soy protein. "Although the effects of soy protein are not as pronounced as that of cholesterol-lowering drugs such as statins, they can be a very important part of a heart-healthy diet.

This article tests the effects of using a combination of dietary approaches on serum cholesterol levels. Address: Univ. of Toronto.

2843. **Product Name:** [Mo' Tuna: Veggie Filets].
**Foreign Name:** Filets Végétariens de Thon.
**Manufacturer's Name:** Momo's Kitchen Ltd.
**Manufacturer's Address:** P.O. Box 94203, Richmond, BC V6Y 2A4, Canada.
**Date of Introduction:** 2002.
**Ingredients:** Water, non GM soy protein concentrate, non GM sunflower oil, wheat gluten, glucose, evaporated cane juice, salt, seasoning, natural food flavours, dill weed, lemon oil, natural food color.
**Wt/Vol., Packaging, Price:** 6 oz (170 gm) paperboard box (2 patties). Retails for $2.69 at Safeway supermarket (2002/03, Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Product with Label purchased at Safeway supermarket in Lafayette, California. 2002. March 11. 4 by 4½ by 1½ inches. Blue, white, red, orange and green on purple.

2844. Kneen, Brewster. 2002. Invisible giant: Cargill and its transnational strategies. 2nd ed. London and Sterling, Virginia: Pluto Press. x + 222 p. Index. 22 cm. 1st ed. 1995. [210 ref]
• ***Summary:*** A critical (and we think sometimes unfair) analysis of Cargill's strategies, activities, and structure. Contents: 1. Mutant giants: Introduction, Bunge Ltd., Louis Dreyfus & Cie, Cargill's world, public policy. 2. Cargill Inc.–The numbers. 3. Origins, organization and ownership. 4. Policy advocacy and capitalist subsidies. 5. Creatures: Feeding and processing. 6. Cotton, peanuts, malting. 7. Invisible commodities. 9. E-commerce. 10. Coming and going: Transport and storage. 11. Typical stories–Canada and Mexico. 12. Fertilizer. 13. The West Coast. 14. Rivers of soy–South America. 15. Juice. 16. The 'Far East.' 17. Seeds. 18. Salt. 19. Only Cargill's future? Notes.

On the rear cover we read: "Transnational corporations straddle the globe, largely unseen by the public. Cargill, with its headquarters in the US, is the largest private corporation in North America, and possibly in the world. Cargill trades in food commodities and produces a great many of them... There are few national economies are unaffected by Cargill's activities, and few eaters in North

America whose food does not pass through Cargill's hands at some point. Yet Cargill remains largely invisible to most people and accountable to no one outside the company. This is the second edition of an explosive book that breaks the silence on the true extent of Cargill's power and influence worldwide–its ability to shape national policies, and the implication of those strategies for all of us."

About the author: "Brewster Kneen is Canada's foremost analyst and critic of agribusiness." Address: Canada.

2845. Praestiin, Julie. 2003. Sanitarium buys out Soyaworld. *Record (SDA, Victoria, Australia)* 108(2):3. Jan. 18.

• ***Summary:*** Kevin Jackson, CEO of Sanitarium Foods (Australia), recently announced the company successful purchase of Soyaworld in Canada. "'On entering the initial agreement [about 2 years ago] we purchased half of the business and also negotiated an option to buy the remaining part of the company. We have now exercised our option to purchase the remaining 53% of Soyaworld, and, as such, we now own 100 per cent of the Canadian company' said Mr Jackson on announcing the takeover."

Soyaworld, which produces So Good soymilk, now has a 60% share of the soymilk market in Canada. Its current annual sales is about $A46 million (Australian). A photo shows Kevin Jackson. Address: Berkeley Vale, NSW, Australia.

2847. Russnogle, John. 2003. Old market, new possibilities: Non-GMO is now part of life in Japan. *Soybean Digest.* Jan. p. 24.

• ***Summary:*** Japan was for many years the world's No. 1 buyer of American soybeans until 1999, when it was surpassed by China and Mexico. In 1993 Japan bought 980,000 tonnes (metric tons) of U.S. food-grade soybeans, or 75.6% of that country's total soybean imports. But by 2002 that figure dropped by one-third to an estimated 659,000 tons–just 57.9% of Japan's imports. During that time, Canada's soybean exports to Japan increased 2.6 fold, from 57,600 tonnes to 150,000 tonnes (from 4.4% in 1993 to 13.2% of Japan's total imports in 2002). And Japan has almost tripled its own production of food-grade soybeans from 68,000 tonnes to 200,000 tonnes. Japan's increased production is partly the result of a government program that gives growers big financial incentives to convert rice acres to soybeans. Japan grows more rice than it can consume, but produces only 5% of its total soybean needs. Japanese like Brazilian soybeans, which tend to be higher in protein and oil than their U.S. counterparts.

2848. Sarwar Gilani, G.; Sepehr, Estatira. 2003. Protein digestibility and quality in products containing antinutritional factors are adversely affected by old age in rats. *J. of Nutrition* 133(1):220-25. Jan. [29 ref]

• ***Summary:*** "The protein digestibility-corrected amino acid score (PDCAAS) has been recommended to be the most suitable method for routine evaluation of protein quality of foods by FAO / WHO." Address: Nutrition Research Div., Food Directorate, Health Canada, Ottawa, ONT, Canada.

• ***Summary:*** "Do you want to receive your soybean news faster?

"The Ontario Soybean Growers newsletter is now on-line, and every issue can be sent directly to your e-mail. To subscribe, go to our website at www.soybean.on.ca. In the left hand index, click on Newsletter, and then completely fill out the required information form. You have the option of receiving your newsletter by e-mail only, or you can receive it both electronically and in hard copy." Address: Chatham, ONT, Canada N7M 5L8.

2850. *Ontario Soybean Growers Newsletter.*2003. OSG promotes Canadian soybeans on mission to Asia. Feb. p. 2.

• ***Summary:*** "The Canadian soybean industry travelled to Asia in November 2002 to conduct eight seminars in eight Asian cities. The seminars were held in Japan (Tokyo, Nagoya, Osaka, Fukuoka), Malaysia (Penang, Kuala Lumpur), Singapore and Hong Kong.

"Liam McCreery and Kim Cooper from the Ontario Soybean Growers participated in this trip, along with 12 other members of the Canadian Soybean Export Association, representing exporters, researchers and government.

"The objectives of this trip to Asia were:

"To meet with soyfood associations and various buyers and give them presentations on the Canadian soybean industry and the IP [identity preserved] soybean standard that was developed by the Canadian Soybean Export Association last year.

"To demonstrate how both the Canadian and Ontario governments are working in partnership with the Canadian soybean industry to develop, market and ensure the highest quality of food-grade soybeans to meet export customers' needs.

"To gather information on customers' markets, needs and suppliers (market intelligence) in order to better provide a quality and competitive product.

"To provide information to export customers on the 2002 soybean crop in terms of yield, quality and grade. To emphasize Canada's commitment to further develop research and marketing programs in response to buyer's needs.

"This trip was very successful in attaining its objectives. All mission members and our overseas buyers felt these seminar presentations were very informative and needed if we are to further expand our market base around the world."

A large photo shows OSG past chair, Lam McCreery. Address: Chatham, ONT, Canada N7M 5L8.

2851. *Ontario Soybean Growers Newsletter.*2003. Profiles: Peter Joe, President of Sunrise Soya-Foods, says that with soy, "Tasting is Believing." Feb. p. 7.
• ***Summary:*** "Sunrise Soya Foods is the success story created by Leslie and Susan Joe, who came to Canada from China in 1955. Two years later, they began producing tofu for customers in Vancouver's Japantown and Chinatown. Sunrise Soya Foods grew out of its original location in 1963; the Joe family continues to operate this location as a food store, serving the local community. The tofu manufacturing plant expanded again in 1983 to its current manufacturing and head office location. According to current president Peter Joe, this was the most significant move in the company's 26 year history. "'With the new facility, "pasteurized, packaged" tofu was produced. This allowed the company to open markets in other provinces in Canada, including Ontario and Quebec, and helped build the company into the largest tofu processor in Canada–and fifth in North America,' explains Peter, the eldest of four children, all of whom are involved in the Sunrise Soya Foods business. Peter holds an MBA from the University of British Columbia and has managed the business full-time since 1984.

"Besides running his own business, Peter is helping to improve consumer acceptance of all soy products through his involvement in Soyfoods Canada. This national soy industry group has been working for the last 3 years to show consumers the benefits of adding soy to their diets through in-store promotions, a new soy information / recipe brochure, displays at consumer shows and a website (www.soyfoodscanada.com). Peter is currently President of the association."

A portrait photo shows Peter Joe, looking very happy. Address: Chatham, ONT, Canada N7M 5L8.

2852. *Ontario Soybean Growers Newsletter.*2003. Market scan [Soybean meal usage, Chinese meat consumption, and Chinese annual per capita disposable income are all up dramatically]. Feb. p. 8.
• ***Summary:*** "Soybean meal consumption (what we will call usage) around the world in 1992 was 76.12 million tonnes [metric tons], while in 2001 that figure jumped to 124.3 million tonnes, an increase of 63% in those same ten years.

"The main market for soybean meal is animal feed. Soybean meal has become the most important source of protein for livestock around the world. It is the standard against which other protein sources are compared.

"The growth in soybean meal consumption can be directly attributed to the increasing world consumption of meat. It is not in North America that meat consumption is seen increasing, but rather in many of the Asian countries.

"If we look at China, total meat sales over the past seven years have increased 62%. With over 1.2 billion people, even a slight rise in per capita consumption of meat translates into a huge amount of meat. In order to meet the corresponding increase in demand for animal feed, soybean crushing plants are quickly being built. Chinese officials report there are presently 20 to 25 crushing plants either being built or now operating in coastal regions. Chinese crush capacity was expected to reach 35,000 tonnes per day by the end of 2002.

"One of the reasons for the higher meat consumption is the increase in disposable dollars in the average Chinese consumer's pocket. The per capita annual disposable income of the average Chinese urban household has risen an amazing 240% in the past ten years.

"When more money is available, one of the first things low-income people spend it on is food. And one of the main foods bought with these extra dollars is meat. Exports of total meat products from Canada to China in 1992 were valued at $639,000. By 2001, the value of meat exports to China had jumped to $22,700,000." Address: Chatham, ONT, Canada N7M 5L8.

2853. *Soyfoods Canada Newsletter.*2003. Soyfoods Canada member profile–Nutrisoya Foods. Winter. p. 3.
• ***Summary:*** "Nutrisoya Foods Inc. first commenced operations in 1988 as a manufacturer of pasteurized, high protein tofu for sale in supermarkets under the Nutrisoya brand. Its production facilities are ideally located in St. Hyacinthe, Quebec, 30 miles east of Montreal, in the agricultural heartland of Eastern Canada, and is immediately adjacent to the most advanced food research centre in North America.

"In 1992 Nutrisoya Foods made its first foray into the aseptically packaged, dairy alternative beverage market with

the launching of its *natur-a* brand of soy beverages.

"Today Nutrisoya Foods operates out of an altra-modern, fully automated, computer driven plant..."

2854. *Soyfoods Canada Newsletter.*2003. Soyfoods Canada membership list. Winter. p. 4.
• ***Summary:*** For 2002/2003 there are 26 members in Soyfoods Canada. Their names are listed.

2855. *SoyaScan Notes.*2003. Chronology of the pioneering work of Ms. Frances Boyte of Quebec with vegetarianism and soyfoods in Canada (Overview). March 7. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Frances, who now lives in Quebec City, Canada, is a registered dietitian, and is currently working with a Metro, a chain of 300 supermarkets, to introduce organic foods.

1980–She starts Club Vegetarien (C.P. 8953, Ste-Foy, Quebec G1V 4N8), which at its peak in about 1982 had 100 members. The club held dinners at a restaurant with guest speakers. It was discontinued in about 1987.

1982–*La Magie du Tofu,* which she co-authored with chef Yvonne Tremblay, is published. As of 2003, it has sold 60,000 copies. She developed and started to sell a tofu kit at the time of publication of the book.

1984–She sends her detailed Curriculum Vitae (4 typed pages) to William Shurtleff at Soyfoods Center in California.

1985–She visits Soyfoods Center in California. Shortly thereafter she has the idea for and establishes the Soyfoods Assoc. of Quebec–the first soyfoods association in Canada; however it never really got off the ground.

2001 April 7–Her latest book titled *Le Tofu Internationale* published. An English-language edition will be published in Dec. 2003.

2856. SunRich Food Group Inc. 2003. Sunrich (Portfolio). Toronto, Ontario. 9 inserts. 31 cm.
• ***Summary:*** The cover of this portfolio is a composite color photo on a tan background. The photo shows (L-R) whole soybeans, a glass of soymilk, green edamame (in the pods), a farmer in a field examining heads of wheat, a wooden scoop of corn flour and grits, whole kernels of corn. Below it is the SunRich logo, the name in red, a stylized yellow sun background, and the tag line below: "Your direct link to Nature." On the inside front cover are six oval color photos, each explaining Sunrich's mission.

Inserts: (1) Identity preserved grain program. (2) SunRich: Your direct link to nature–Quality, integrity, expertise. (3) Maltodextrins & sweeteners. (4) Fours, meals & grains. (5) Vegetable oil. (6) Premium whole soybeans. (7) Soy ingredients (incl. soymilk, oatmilk, multigrain beverages, soymilk powders, soy flour, textured soy protein). (8) One company: One mission–Unlimited organic snack solutions! The SunRich Food Group Inc. is a Stake Technology Company. (9) Shelled edamame recipe ideas. Address: Toronto, Ontario.

2857. **Product Name:** Pete's Tofu 2 Go [Sesame Ginger Tofu with Jazzed Ginger Soy Sauce, Lemon-Pepper with Mango Chipotle Sauce, Santa Fe Sizzle with Pineapple Mango Fusion Sauce, Thai Tango with Mango Wasabi Sauce].
**Manufacturer's Name:** Sunrise Soya Foods.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC Canada V6A 1H5. Phone: 1-800-661-2326.
**Date of Introduction:** 2003. March.
**Ingredients:** Sesame Ginger: Tofu (water, certified organic soybeans, calcium sulfate), whole sesame seeds, dehydrated ginger, dehydrated garlic, spices, soybean oil, soy sauce (water, wheat, soybeans, salt), vinegar, brown sugar, salt. Jazzed ginger soy sauce: water, soy sauce (water, wheat, soybeans, salt), brown sugar, dehydrated organic ginger, sesame seeds, sesame oil, vinegar, lemon juice, dehydrated onion, dehydrated garlic, citric acid, xanthan gum.
**Wt/Vol., Packaging, Price:** 14.4 oz (206 gm) in tray inside plastic bag. Retails for $2.79 (2004/03, Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Leaflet (8½ by 11 inch, color) from Natural Products Expo West (Anaheim, California). 2003. March. "Pete's Tofu: Taking the guesswork out of tofu!" "Pete's Tofu: A whole new way to enjoy tofu."

Product (Sesame Ginger) with Label purchased at Trader Joe's in Lafayette, California. 2004. March 13. 4¼ by 8½ by 2 inches deep. Brown, green, black, and white on tan. Color photo shows four triangles of tofu around a square pan of the sesame ginger sauce with mint leaves on a red plate. "Made from organic soybeans. Cholesterol free, High in soy protein. High in calcium. No preservatives added. Ready-to-eat tofu with sauce for snacking and more." Contains two 6.2 oz pouches of tofu plus two 1 oz packets of sauce. Logo: "Certified organic by Quality Assurance International (QAI)." Soyfoods Center evaluation: This product comes in innovative packaging. Four tofu triangles (which have been marinated and baked, or deep-fried) are packed two-deep in each of two vacuum pack cubes. These cubes are placed in the two compartments (2½ inches square by 3/8 inch deep) of a plastic tray. The sesame ginger sauce comes in small plastic pouches. These three items are invisible inside the outer plastic bag. To serve. Cut open the vacuum pack cubes. Place tofu triangles in compartments of plastic tray. Cut open pouches and pour sauce over tofu. Eat as a finger food

or with a food. Product concept: Excellent. Flavor and texture: Very good, but there is too much liquid in the two vacuum pack cubes; it must be drained off when they are opened.

2858. **Product Name:** Pete's Tofu [Medium Firm for Mixing, Super Firm for Dicing, Italian Herb Super Firm Tofu, Very Berry Dessert Tofu, Peach Mango, Soft for Blending, Lemon-Pepper with Mango Chipotle Sauce, Santa Fe Sizzle with Pineapple Mango Fusion Sauce, Thai Tango with Mango Wasabi Sauce].
**Manufacturer's Name:** Sunrise Soya Foods.
**Manufacturer's Address:** 729 Powell St., Vancouver, BC Canada V6A 1H5. Phone: 1-800-661-2326.
**Date of Introduction:** 2003. March.
**Wt/Vol., Packaging, Price:** 12-16 oz (206 gm) inside plastic bag.
**How Stored:** Refrigerated.
**New Product–Documentation:** Leaflets (8½ by 11 inch, color) from Natural Products Expo West (Anaheim, California). 2003. March. (1) "Pete's Tofu: Taking the guesswork out of tofu!" Color photos show 5 of the packages. "Innovative overwrap packaging–now to the tofu category. Unique color-coded packaging. Eye-catching colors." (2) "Pete's Tofu: A whole new way to enjoy tofu."

2859. *Seedling (Quarterly Newsletter of Genetic Resources Action International, Barcelona, Spain).*2003. Contaminating Canada's seed supply. April. p. 7-12, 19. [26 footnotes]
• ***Summary:*** The subtitle reads: "In Canada, the privatisation of the farmer's seeds continues to advance at a breathtaking pace. Canadian farmers have fewer and fewer varieties of seed to choose from, fewer places to buy it from and fewer rights to produce their own seed. Now they face another threat: the contamination of the entire seed supply with genetically modified [GM] seed.

In 2002, 65% of Canada's oilseed rape (canola) was genetically engineered for herbicide resistance. That same year, genetically engineered [GE] crops were grown on 3.5 million hectares in Canada, up 90% from the previous year. The following technical terms are defined: Breeder seed, foundation seed, certified seed, and pedigreed crop.

"Traditionally, crop development in Canada has been an informal partnership between public breeders, farmers, and government. In the early 1980s, the public sector still accounted for 100% of formal plant breeding of cereals and oilseeds. The government provided the financial support and farmers were responsible for the multiplication and diffusion of public varieties and seed saving."

"Farm-saved seed has traditionally provided the bulk of Canada's seed supply." But in the 1970s and 1980s, the Canadian government decided to reorient its policy. "Establishing a private seed and agricultural biotechnology industry became its new priority, and conflicts with the traditional plant breeding framework became inevitable.

"The private seed industry could not make a profit in Canada on its own. The Canadian government provided hundreds of millions of dollars to the seed industry in direct subsidies, tax credits and matching public-private partnership grants... In just twenty years, the seed industry and the government have reduced the old partnership to tatters. The foundations of the old system–the free exchange of germplasm and the active participation of farmers in the seed supply–are on the verge of disappearing."

"Most major food crops in Canada are self-pollinating and highly stable." Until recently, genetic "contamination" was a meaningless concept. But with the introduction of GE crops, genetic contamination has become a major concern. Oilseed rape, has the largest area plant to GE plants in Canada, Now unwanted GE oilseed rape is "turning up all over the place in western Canada–even in the fields of farmers who have never planted it–at the rate of 4 plants per square meter! "Monsanto, the leading GM oilseed rape company in Canada, claims that all oilseed rape plants in farmers' fields containing their patented Roundup Ready gene belong to them, even if plants arrived in the fields accidentally or the gene was transferred through cross-pollination. The Federal Court of Canada recently upheld Monsanto's interpretation in a case between the company and Percy Schmeiser, an oilseed rape farmer from Saskatchewan (see box, p. 10, titled "Percy Schmeiser: pawn in a dangerous game." It tells his story and has his portrait photo).

But contamination in happening not only in the farmers' fields. "A number of studies show that the pedigreed oilseed rape supply is deeply contaminated... Walter Fehr, an agronomist and director of the Office of Biotechnology at Iowa State University, says the same is true of other crops such as soybeans and maize. If the breeder seed supply is contaminated, then the whole system is contaminated and it will be hard to find any fields that can be considered GM free."

On page 11 is a long discussion of the origins and meaning in Canada of "identity preservation" (IP) which is seen as "a way to shift the responsibility for genetic contamination on to farmers, while boosting seed sales." IP was set up to give Canada a "significant competitive advantage." "The actual problem for farmers is not with securing competitive advantage but with preventing the competitive disadvantages caused by the introduction of GM varieties... It is also a way to shift the costs and responsibility of contamination onto farmers growing non-GM crops."

Now farmers are fighting back. In June 2001, organic farmers in Saskatchewan, spurred by the GM contamination of virtually all oilseed rape and the looming introduction of Roundup Ready wheat, formed the Organic Agriculture

Protection Fund. The fund is pursuing a lawsuit against Monsanto and Aventis for making it impossible to grow organic oilseed rape and has initiated a nationwide campaign with the National Farmers Union (NFU)... to stop the introduction of GM wheat. The transnational biotech industry has managed to co-opt government for its own purposes.

2860. *Ontario Soybean Growers Newsletter.*2003. Bad breath? Try soy! May. p. 1.
• ***Summary:*** "Bone-healthy breath strips and biodegradable planters were the top winners in this year's Project SOY (Soybean Opportunities for Youth), an annual contest for University of Guelph students to develop new uses and markets for soybeans. The event wrapped up April 3 in Guelph with an awards ceremony where winners were presented with first-, second- and third-place awards valued at $2,500, $1,000 and $500, respectively.

"First place went to Flavone Ice, breath strips containing bone-healthy soy isoflavones. They were developed by master of science student Vicky Lee and hospitality and tourism MBA student Wilda Lau. Lee and Lau got the idea for Flavone Ice after reading government literature recommending 90 mg of isoflavones–a secondary nutrient in soybeans–a day to help prevent osteoporosis. Each Flavone Ice strip acts quickly to freshen breath and contains 30 mg of isoflavones. "Having three strips throughout the day could have positive effects on bone health," said Lau.

"Second place went to biological engineering undergraduate students Renzo Gomez, Brian Palmer and Stephanie Sage for biodegradable planters called Plant SoyLutions. Because soy contains nitrogen, which plants require for growth, the plant containers made of soy reduce labour for the gardener, eliminate waste of empty containers and help the plant grow.

"Third place went to four students who developed Pastawave–a soy macaroni and cheese product. Honourable mention went to the creators of SmartStart Power Muffin Mix."

"Participants in Project SOY who want to advance their products to the commercialization stage can apply to the Hannam Soybean Utilization Fund for assistance. The fund is a $1-million gift to the University from Peter Hannam and his family. Peter is an Ontario Agricultural College graduate who was instrumental in initiating Project SOY."

A photo shows the three student inventors of Plant SoyLutions. Address: Chatham, ONT, Canada N7M 5L8.

2861. *Ontario Soybean Growers Newsletter.*2003. Repeal of EOPA delayed until 2004. May. p. 1.
• ***Summary:*** "In December, the Ontario Legislature gave unanimous approval to a bill that delays the repeal of the Edible Oil Products Act (EOPA) to June 1, 2004. Under the Food Safety and Quality Act, 2001, the EOPA was originally scheduled for repeal in June, 2003.

"The EOPA is an outdated piece of legislation that regulates foods made with edible oils that resemble dairy products. It prohibits the manufacture and sale of such products in Ontario if they contain any dairy ingredients. Repealing this Act would increase the opportunities for the soy industry to develop innovative vegetable oilbased spreads and other products for the health-conscious consumer market.

"The Ontario government has promised to meet with affected stakeholders and the federal government to seek consensus on the outstanding issues involving dairy and edible oils. The OSG will participate in these consultations and continue to work with Soyfoods Canada and the Edible Oil Foods Association of Canada to ensure that the EOPA is repealed as currently legislated."

Note: In short, EOPA says: (1) Vegetable oils cannot be added to commercial dairy products. (2) Dairy products cannot be added to commercial dairy alternatives. Address: Chatham, ONT, Canada N7M 5L8.

2862. *Ontario Soybean Growers Newsletter.*2003. Welcome back Fred! May. p. 4.
• ***Summary:*** "The OSG Board is pleased to announce that former General Manager Fred Brandenburg has returned to work after a 4 month absence due to illness.

"Before returning to the OSG, Brandenburg requested a change in his responsibilities; the Board honoured his request and Fred's position is now Industry and Government Relations Manager. In his new role, Brandenburg will focus on maintaining the relationships that the OSG has with both the federal and provincial governments, as well as with others in the soybean industry. He will also work to ensure that any programs developed by the government meet the needs of Ontario's soybean producers.

"'It is great to welcome Fred back to the OSG team. His expertise on government programs has been greatly missed,' says Bill Allison, Chair of the Board. 'With Fred working specifically on government relations, we are assured that the OSG's voice is being heard on issues affecting our growers.'

"To fill the vacant General Manager's position, the Board has appointed Matt McLean to serve as acting GM. Matt has been with the OSG for 5 years, and also serves as the Board's Research and Technology Coordinator." Address: Chatham, ONT, Canada N7M 5L8.

2863. *Ontario Soybean Growers Newsletter.*2003. Federal government helps make biodiesel viable. May. p. 4.
• ***Summary:*** "The federal government took a big stride towards increasing the viability of biodiesel production and use in Canada with February's budgetary announcement of

the removal of the 4-cent-per-litre federal excise tax on biodiesel. This federal tax exemption complements the 14.3 cent fuel tax that the Ontario government removed in June, 2002.

"Biodiesel is a non-toxic, cleaner burning, renewable diesel fuel derived from agricultural commodities such as vegetable oils or animal fats. The Ontario Soybean Growers sees biodiesel as an opportunity to create new markets for Ontario soybean oil, while providing a cleaner burning alternative to fossil fuels. In addition, the use of biodiesel fuel is an excellent opportunity for Canada to meet obligations agreed to under the Kyoto Protocol." Address: Chatham, ONT, Canada N7M 5L8.

2864. *Ontario Soybean Growers Newsletter.*2003. The Australian soybean industry. May. p. 5.
• ***Summary:*** "This article was written by Dr. Malcolm Morrison, an Oilseed Physiologist with Ag Canada. He is currently on a study leave in Australia.

"In 2002, Australia produced 70,000 metric tonnes of soybean on 30,000 ha (74,000 acres) of land. Major production areas are in southern Queensland and northern New South Wales, with pockets in other irrigated regions of the country. Soybeans are planted during summer and most production is irrigated. Soybeans are used as a green manure crop in sugar cane, returning 40 to 300 kg/ha (35-267 pounds / acre) of nitrogen, depending on whether the seeds are harvested or the crop ploughed in green.

"Annual Australian demand for soybeans far outstrips national production. The crushing industry imports about 40,000 tonnes of seed and the livestock industry imports up to 360,000 tonnes of solvent extracted meal, mostly from the United States. The baking industry uses another 14,000 tonnes of Australian grown, full-fat soy flour.

"With the drought of 2002-2003, production has dropped by 50%. Farmers have only planted the crops that they could afford to irrigate. This year it was almost as profitable to sell stored water as it was to plant and harvest a field of soybeans. In the irrigated cash crop regions, soybeans are last on the list of preferred crops after cotton, corn, grain sorghum, and sunflowers.

"Phytophthora, white mold, mildew, and soybean rust are major diseases, while insect pests are silverleaf whitefly, green veggie bug, aphids, scale bugs and mites. Plant breeders are developing disease resistant varieties and pest specialists are releasing parasitic insects, and creating viral and fungal biopesticides. Plant breeders are selecting white hilum varieties with good yield, agronomics and natto and tofu characteristics. Many of the new varieties have Canadian parents and are being tested in Asia with favourable results.

"The Australian soybean industry is beginning to target the same high value soyfood markets in Asia that Canada has been focusing on for years. Australia has a 'clean/green' reputation since they do not produce GMO food crops. They intend to capitalize on this image to capture food grade soybean niche markets in the near future. Producing an assured supply of high quality, non-GMO soybeans will be a challenge in the Australian environment." Address: Chatham, ONT, Canada N7M 5L8.

2865. *Ontario Soybean Growers Newsletter.*2003. Soybean consumption expected to grow. May. p. 5.
• ***Summary:*** "A recently published study from Soyatech states that world soybean production has increased 400% over the last 30 years. Each year, 85% of the total world soybean production is crushed into soybean meal and oil.

"Of this crush, 3.2%, a small but growing portion, is further processed into a variety of soy protein ingredients, such as soy flour, soy protein concentrates and isolated soy proteins. The study also states [predicts] that between 2000 and 2010, the use of soybeans for food use will increase by 72%, which will dramatically increase the per capita consumption of soybeans." Address: Chatham, ONT, Canada N7M 5L8.

2866. *Ontario Soybean Growers Newsletter.*2003. Canadian Soybean Export Association holds annual meeting. May. p. 6.
• ***Summary:*** "The Canadian Soybean Export Association (CSEA) held their 8th annual business meeting recently in Guelph. The following members were elected to lead the association in 2003-2004:

Chair: Brad Richmond, Maple Leaf Foods International

Vice-Chair: Marty Huzevka, Hensall District Co-operative

Past-Chair: Martin Vanderloo, Huron Commodities Inc.

Executive Member: Jim Gowland, OSG

Secretary / Treasurer: Kim Cooper, OSG

"CSEA is a voluntary association of members of the Canadian soybean industry, working to promote exports of Canadian soybeans and soya products into world markets. This year's activities included hosting a group of soybean industry members from Japan, Taiwan and Western Europe, participating in a technical mission to Japan, Taiwan, South Korea and Singapore, and the development of two resources to promote the Canadian soybean industry." Address: Chatham, ONT, Canada N7M 5L8.

2867. *Ontario Soybean Growers Newsletter.*2003. Market scan [Soybean production in Brazil and South America]. May. p. 8.
• ***Summary:*** "Soybean production in Brazil has dramatically increased over the past 30 years. In 1970, Brazil produced 1.3 million tonnes, of soybeans. From 1980-1990, production remained steady at 15.5 million tonnes. Huge jumps in production then occurred, and in 2002 Brazil harvested over 43 million tonnes of soybeans. In fact,

Brazil's soybean production has risen an amazing 3,150% since 1970. By comparison, Ontario's soybean production grew 750% in the same time period.

"So why has soybean production increased so much in Brazil? A number of factors are responsible for this. One is cost of production, which is estimated to be around $6.00 Cdn. per bushel, which includes transportation costs to get the soybeans to a port. Mato Grosso, which is the largest and fastest growing area in Brazil, also has fairly inexpensive land. Prices have doubled in the last two years, but you can still purchase land ready to plant for around $450-900 per acre. Other costs you may be interested in would be Round-up ($3.00 per litre), soybean seed ($15 per bag) and labour ($8 per person per day).

"One area that has always plagued Brazil is their infrastructure, especially when it came to transporting the soybeans from the field to the port. That problem is now being resolved. Millions and millions of dollars are being invested into improving road, rail and water transportation systems. Again, if we look at the Mato Grosso area, it is estimated that when these systems are completed in the next few years, transportation costs will be reduced by 40-50% in that region.

"It is hard for producers here in Ontario to compete with what is happening in Brazil. Regardless of what is happening there, we need to continue to develop niche markets for soybeans. We cannot compete very well on a straight, commodity traded soybean, but we have the producers and the infrastructure to compete in the world of value-added soybeans. If the Ontario soybean industry is to survive, we need to seek out more of the specialty soybean markets and determine how to meet those market needs. This will take a lot of determination and hard work on the parts of producers, industry members and both levels of government.

A table gives soybean production statistics (acres, production in tonnes, yield in bushels per acre) for the top five soybean producing states in Brazil. The production figures are:

Mato Grosso 11,636,700.
Parana 9,478,000.
Rio Grande do Sul 5,579,000.
Goias 4,661,878.
Mato Grosso do Sul 3,278,000.
Brazil total 43,500,000. Address: Chatham, ONT, Canada N7M 5L8.

2868. *Soyfoods Canada Newsletter.*2003. Soyfoods Month promotions a huge success. Spring. p. 1.
• ***Summary:*** "Soyfoods Canada launched its first official public relations campaign in March, timed to promote April as 'Soyfoods Month'. The media campaign served to introduce our 'Soy, Always in Good Taste' recipe booklet and the soyfoods Canada website. Other information supplied to the media was an association profile and a summary of the soyfoods Canada website. Other information supplied to the media was an association profile and a summary of the soyfoods industry in Canada. A complimentary basket of members' products was also delivered with the media kit.

"The response to this initiative was tremendous. From April 1 to May 1, 21 newspapers and e-mail newsletters across the country featured articles on soy. The estimated audience reach for the month of April was 4,051,533 readers across Canada. The following publications helped promote the joy of soy to consumers:" The names of 21 newspapers are given.

"This media exposure resulted in a significant increase in traffic at the Soyfoods Canada website. In the seven months prior to the PR campaign, www.soyfoodscanada.com averaged just four visitors and 118 hits per day. In April, these figures increased to an average of 91 visitors making 2843 hits/day. At the peak of the campaign, up to 360 people a day were visiting the Soyfoods Canada site. We hope to keep people coming back to the site by adding new recipes and information on a regular basis.

"Another result of the Soyfoods Month promotion has been an increase in the demand for 'Soy, Always is Good Taste' brochure; over 800 requests were received in April and May. Feedback on this brochure has been very positive, and several consumers who tried the recipes have sent follow-up notes to Soyfoods Canada commenting on the excellent recipes.

"The consumer interest in new recipes and ideas for using soyfoods has been overwhelming. A second media campaign will hopefully be launched in the fall to build on this momentum."

2869. *Stagnito's New Products Magazine.*2003. "Navigating change" at IFT. June 1. p. 1.
• ***Summary:*** Garden Protein International has reserved booth No. 1325 at this year's Institute of Food Technologists' Annual Meeting and Food Expo, July 12-16 at Chicago's McCormick Place.

Note: This is the earliest document seen (Jan. 2010) that mentions Garden Protein International.

2870. Richmond, Akasha. 2003. McDonalds is now running national TV ads for their Veggie Burger–made by Yves (Interview). *SoyaScan Notes.* June 12. Conducted by William Shurtleff of Soyfoods Center.
Address: Los Angeles, California.

2871. **Product Name:** SoyQuick Iso 85 (Organic Hexane-free Soy Protein Isolate-like Product).
**Manufacturer's Name:** American Health and Nutrition, Inc.

**Manufacturer's Address:** 3990 Varsity Dr., Ann Arbor, MI 48108. Phone: (734) 677-5570.
**Date of Introduction:** 2003. June.
**Wt/Vol., Packaging, Price:** 25 lb bulk.
**How Stored:** Shelf stable.
**New Product–Documentation:** Talk with Cindy Maynard, director of marketing and public relations at AHN. 2003. May 28. They plan to introduce this organic product in June. AHN has the exclusive distribution rights to this product. It is made in Quebec (extruded by a company that has state-of-the-art equipment), and contains 85% protein. Talk with Cindy. 2003. July 18. This product is now on the market. Because it is organic, the FOB price to manufacturers is about $4.20/lb.

Press Release. 2003. March 10. SoyQuick ISO 85 is the "result of a partnership between Oleanergie Co. of Quebec, Canada, and American Health & Nutrition [AHN]. Oleanergie developed the product over 5 years, winning a 1st place award in all of Canada for new products benefitting health, the environment and the economy." It "contains the highest % protein of any organic soy protein concentrate in the world today." It has superb functionality, such as solubility, water absorption characteristics, emulsion and fat binding properties. Since 1992 AHN has specialized in the marketing and processing of Non-GMO Organic and other Non-GMO soybeans and soyfoods ingredients such as soy meal, soy flour, TSP and FSP Fine Soy Powder.

2872. Dominy, Suzi Fraser. 2003. Soybeans for dinner? Animal feed continues to consume the lion's share of the world's soybeans, but a new report suggests that an increasing portion is being utilized for human food products. *World Grain* 21(6):24, 26-27. June. [1 ref]
• ***Summary:*** A new report, titled *Whole Soybeans as Food Ingredients,* by Soyatech Inc., shows that there is a large and growing use of soybeans for human food. The biggest market for such foods is in Asia, but a growing market for soy protein products and soyfoods in the Western world is helping to create a new value-added market for soybeans–beyond crushing.

Worldwide, soybean production has grown more than 300% during the past 30 years; in 2002 it was about 184 million tonnes (metric tons). Today the USA ranks first worldwide in total soybean production, but South America (mainly Brazil and Argentina) will soon pass North America (mainly USA and Canada) as the world's leading soybean producing region.

Each year, on average, about 85% of the world's soybeans are crushed to make oil and meal, about 9% are used to make human foods, and the remaining 6% are used on the farm as feed or seed, or last as waste. The crushing of soybeans yields about 79% soybean meal, 18% crude soybean oil, and 3% hulls and waste. Of the soybean meal, 95% is further processed to make animal feeds; the remaining 5% is processed into various soy protein products such as defatted soy flour, grits, soy protein concentrates, soy protein isolates, and textured soy protein products.

According to the report, the proportion (about 5%) processed into soy protein products has been growing at about 12% a year over the past six years.

Of the roughly 9% of world soybeans that are used whole to make human foods, roughly 95% are used in Asia (with almost 60% of that amount used in China alone).

Since the market is now calling for two kinds of identity-preserved soybeans (those that are not genetically engineered {GE} or have special traits, and GE soybeans that have special processor traits such as modified oils or proteins) the commodity market will continue to fragment for the next 10 years or so. Golbitz predicts that per capita annual consumption of soybeans will grow over 50% worldwide, from 3.1 kg (6.82 lb) in 2000 to 4.8 kg (10.56 lb) by 2010.

2873. Sosland, Morton I. 2003. Upholding suit to end ban on GMOs [editorial]. *World Grain* 21(6):6. June.
• ***Summary:*** The USA, supported by a group of importing and exporting countries, filed a lawsuit in the World Trade Organization (WTO) to challenge the moratorium the European Union first imposed 5 years ago that prohibits imports of GMO that are not properly labeled and traceable back to their origins. Joining in the suit were Canada, Argentina, and Egypt.

2874. Jenkins, David J.A.; Kendall, C.W.C.; Marchie, A.; et al. 2003. Effects of a dietary portfolio of cholesterol-lowering foods vs. lovastatin on serum lipids and C-reactive protein. *J. of the American Medical Assoc.* 290(4):502-10. July 23. [51 ref]
• ***Summary:*** This study compared the Portfolio eating plan with cholesterol-lowering drugs and found that both achieved the same LDL-lowering results. Subjects on the Portfolio eating plan (which contains added plant sterols and viscous fibers) also lowered their C-reactive protein levels, an indicator of inflammation in the arteries and a risk factor for heart disease.

Most dietary changes result in modest cholesterol reductions of 4-13%. Diet has come to be considered by some a relatively ineffective therapy. In contrast, statins "repeatedly have been shown to reduce mean serum low-density lipoprotein cholesterol (LDL-C) concentrations by 28% to 35% in long-term trials, with corresponding reductions in cardiovascular death of 23% to 32% in both primary and secondary prevention trials." Address: 1. M.D., Clinical Nutrition and Risk Factor Modification Center, St. Michael's Hospital, 61 Queen St. E., Toronto, Ontario, Canada M5C 2T2.

2875. Montaigne, Fen. 2003. Everybody loves Atlantic salmon: Here's the catch... As wild populations falter and salmon farms go global, this noble sport fish has turned into the chicken of the sea. *National Geographic.* July. p. 100-23.

• ***Summary:*** Where have all the salmon gone? Before the industrial age, at least ten million Atlantic salmon *(Salmo salar,* the "leaper" in Latin) once spawned each year in every river in New England and around the Atlantic Ocean, jumping rapids and waterfalls as it swam upstream. Then came the industrial revolution, with its dams and pollution that rendered many ancient salmon rivers uninhabitable. Conservationists fought back and by the late 1990s most commercial nets had been purchased and retired. People waited for a rebound in salmon numbers–but so far they have been disappointed. Wild Atlantic salmon populations are now about 3.5 million–half of what they were 30 years ago. In the United States, whose rivers once teemed with nearly half a million Atlantic salmon, there are now only a few hundred.

But wild Atlantic salmon have been in steep decline for decades, and today they are rapidly being replaced by about 50 million farmed Atlantic salmon which "swim round and round in pens as they are fed pellets to speed their growth, pigments to mimic the pink hue of wild salmon flesh, and pesticides to kill the lice that go hand-in-hand with an industrial feedlot." The new industry, with 2 billion dollars a year in sales, produces 2.6 billion pounds of fish and is largely controlled by a handful of multinational corporations. The industry, still dominated by Norwegian firms, spread to the UK and Canada in the 1970s and to the USA in the 1980s. Some 800,000 of these once-noble creatures may be packed into one nylon net cage, where they can find no outlet for their strength; the cage and soon the shallow estuary around it is polluted with their defecation. We have bent them to the will of man; it is completely unnatural and very sad to see.

These salmon are now widely sold in markets for $5 a pound. Farmed salmon now outnumber wild salmon about 300 or 400 to one. Norway has the largest population of wild salmon; some 600,000 of them migrate up the nation's 650 salmon rivers to spawn. And it was in Norway in the late 1960s that Atlantic salmon farming began as a cottage industry.

But there is now growing evidence that Atlantic salmon raised in pens using aquaculture threaten their wild relatives. Many experts believe aquaculture is the single most serious threat to the survival of Atlantic salmon, because the sea lice escape from the net cages and attack the wild salmon.

2876. *Ontario Soybean Growers Newsletter.*2003. Farewell to the *Ontario Soybean Growers' Newsletter.* July. p. 1.

• ***Summary:*** This newsletter will disappear at the end of this year. Like so many others, it will migrate to the Internet, to the OSG website, www.soybean.on.ca. Beginning in September, a monthly one-page bulletin will also appear in the *Ontario Farmer.* Or you can subscribe by e-mail at the OSG website by adding your name to the OSG newsletter list. Finally, OSG operates a telephone market service.

Note: The online newsletter that replaced this excellent 8-page printed one was a very poor substitute; it was only 1 page long, took a long time to download, and then the type was too small to read.

Talk with Lisa McClain, new full-time communications manager at OSG. 2004. Oct. 28. The printed version, sent to about 25,000 people, mostly soybean farmer members, was just too expensive. Lisa writes the 1-page newsletter, then OSG buys 1 page of space in *Ontario Farmer* magazine, where it is printed. The magazine does the layout and design, which is why the type is so small. Feature stories will also appear occasionally in *Top Crop Manager* and simultaneously on the OSG website. The most recent one is about food-grade soybeans. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2877. *Ontario Soybean Growers Newsletter.*2003. Soyfoods promoted in April. July. p. 3.

• ***Summary:*** "Soyfoods Canada launched its first official public relations campaign in March, timed to promote April as Soyfoods Month. The media campaign served to introduce the *Soy, Always in Good Taste* recipe booklet and the Soyfoods Canada website. The response to this initiative was tremendous." Over 800 requests for the recipe booklet were received in April and May. OSG is a member of Soyfoods Canada. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2878. *Seedling (Quarterly Newsletter of Genetic Resources Action International, Barcelona, Spain).*2003. Blinded by the gene (Editorial). July. p. 1-5. [7 footnotes]

• ***Summary:*** One of the most interesting articles seen on genetic engineering, it undercuts the foundations of Watson & Crick's 50-year-old "Central Dogma"–which is still the backbone of molecular biology and the basis on which today's multi-billion dollar genetic engineering industry is built. Today we have "pigs with genes from cows producing bovine growth hormone, plants with genes from bacteria producing natural pesticides, and bacteria with human genes to produce insulin. So if the trick works, what is the problem? The problem is that the trick doesn't work. Or at least not the way it should."

In 2001, when the first draft of the human genome was finally published, scientists were surprised to discover that it contained about 30,000 genes, "less than one-third of the number originally calculated to take into account of the number of different proteins and inherited traits that humans

have." If we have more proteins than genes, what instructs the building of proteins that do not have a corresponding gene? The only logical conclusion is that each gene is responsible for a whole range of different proteins and traits and/or that other regulator mechanisms exist in protein production. Recent research has shown that both these conclusions are true." Proteins even feed back information to DNA, and parts of DNA (arrogantly called "junk DNA") "produce molecules that interfere with protein production and are therefore an essential part of the cell's regulatory system." Much recent research has led to the death of the "Central Dogma," but "genetic engineering... only makes sense if you believe in the sole supremacy of DNA, in the dominance of the gene. It only makes sense if you discount all other scientific observations which complicate the hereditary process as interesting but irrelevant." Thus the "mounting evidence that questions the simplistic 'one gene, one trait' logic is still being ignored by the majority of the scientific establishment.

"At the time that Watson and Crick published their findings, the vast majority of plant breeders were working in the public sector. This situation has drastically changed in the past few decades. By the mid-1990s in the US, there were twice as many plant breeders active in the commercial sector than in universities and government agencies combined. This imbalance is fast shifting towards the private sector." Today a small number of corporate giants–Monsanto, Syngenta, Bayer, and Dupont–control the bulk of all commercial crop research and development." There is an ever-widening gap between the worlds of plant breeding and genetic engineering; "plant breeders are becoming an endangered species."

"The adoption of increasingly strict Intellectual Property Rights (IPR) regimes–especially in industrialized countries–has been the crucial enabling factor in this process... Plant variety protection was the death knell for public breeding programmes..."

The gene giants are now arguing that they finally have a great new tool to combat world hunger–genetic engineering. But solving hunger problems has never been the business of powerful transnational corporations and never will be. The International Agricultural Research Centers, the powerhouses behind the Green Revolution, "are now looking for a place to hide in the genetic turmoil." They "risk not only becoming less relevant to farmers in the South, but also becoming part of the problem rather than the solution."

In 2002 only 4 crops constituted more than 90% of commercially grown GM plants: canola, soybeans, cotton, and maize–the bulk of which are being grown for feed or export, not for food. And 90% of these crops are grown in only 4 countries: USA, Canada, China, and Argentina. Most of the GM crops come from Monsanto. Virtually all these crops are engineered for just two traits: resistance to herbicides and incorporation of the toxic Bt gene–a natural insecticide.

We need to go beyond our "genetic myopia" and start dealing with the broad gamut of issues that peasant farmers face. Various impressive success stories are given.

2879. **Product Name:** SoyQuick Iso 90 (Hexane-free Soy Protein Isolate-like Product).
**Manufacturer's Name:** American Health and Nutrition, Inc.
**Manufacturer's Address:** 3990 Varsity Dr., Ann Arbor, MI 48108. Phone: (734) 677-5570.
**Date of Introduction:** 2003. August.
**Wt/Vol., Packaging, Price:** 25 lb bulk.
**How Stored:** Shelf stable.
**New Product–Documentation:** Talk with Cindy Maynard, director of marketing and public relations at AHN. 2003. July 18. They plan to introduce this organic product in August. AHN has the exclusive distribution rights to this product. It is made in Quebec (extruded by a company that has state-of-the-art equipment), and contains 90% protein. is now on the market. Because it is not organic, the FOB price to manufacturers is about $2.00/lb.

2880. *D-brief (e-newsletter).*2003. Customer clips: Saputo Inc. Sept. 17. p. 3.
• ***Summary:*** "Saputo Inc. plans to close two Canadian Milk Division plants and will sell a third, leaving it with 10 fluid milk processing plants in Canada."

Soyaworld, a soy beverage company in British Columbia, will purchase Saputo's Annacis Island, B.C., facility in a deal expected to close by Feb. 2004. Saputo presently co-packs Soyaworld products in that facility.

Note: D-brief is a weekly dairy business e-newsletter produced by DairyField at www.idfa.org.

2881. *The Non-GMO Source (Fairfield, Iowa).*2003. UN biosafety protocol on GMOs takes effect: First international law giving nations the right to regulate imports of GM foods goes into force September 11. 3(9):8. Sept.
• ***Summary:*** Fifty nations have ratified the Cartagena Protocol on Biosafety, the first international law regulating genetically modified organisms. Formed under the United Nations Convention on Biological Diversity, it will take effect on September 11. It was first adopted (by 130 nations) in Jan. 2000 in Montreal [Canada], after 4 years of negotiations. It was named after the Colombian city that, in 1999, hosted the meetings to establish the protocol–which seeks to protect biological diversity worldwide and is guided by the "precautionary principle"–which forms the basis of the European Union's regulations on GM foods. The USA believes this protocol creates barriers to international trade, and wants the WTO to supersede the protocol.

2882. Turtle Island Foods, Inc. 2003. No holiday guest left behind–Tofurky and Dumplings set for 2003 (Press release). P.O. Box 176, 601 Industrial Ave., Hood River, OR 97031. 1 p. Oct. 21.
• ***Summary:*** "Hood River, Oregon–Turtle Island Foods, Inc. announced today the introduction of a New and Improved version of its flagship product, Tofurky Vegetarian Feast. This year's changes include: the addition of a full pound of Cranberry-Apple, Potato Dumplings, a new 'Tofu Tender' Stuffed Tofu Roast, a new box with beautiful photos and graphics and a larger, 3.5 lb size for the entire package which retails in natural foods and grocery stores for around $20.

"Tofurky was first introduced in the USA during the Thanksgiving Holiday season in 1995 when 500 Tofurky Feasts were sold. It was the first product that had been marketed to fill the need of what to serve vegetarian guests at one's holiday table. The product has been wildly successful providing an alternative to Turkey for people who otherwise were left out of holiday celebrations. Last year, the company sold 120,000 Tofurkys in the U.S., Canada, and UK. This year, the products are to be offered to such major grocery chains as Safeway on a national level as well as in the natural foods supermarkets where it was the #4 overall selling meat alternative in 2002 despite only being sold in the 4th quarter of the year." Address: Hood River, Oregon.

2883. SunOpta Inc. 2003. SunOpta Inc.–Our new name (News release). Toronto, Ontario. 1 p. Oct. 31.
• ***Summary:*** "SunOpta Inc., the new name of Stake Technology Ltd., became effective today. The new corporate name combines the names of two of the Company's historical operating food groups, the Sunrich Food Group and Opta Food Ingredients. The change reflects the Company's commitment to environmental responsibility and to the natural and organic foods markets.

"The trading symbols of STKL on NASDAQ and SOY on the TSX (Toronto Stock Exchange) will remain the same."

"SunOpta Inc. is an owner / operator of high-growth ethical businesses, focusing on integrated business models in the natural and organic food markets. For the last five consecutive years, SunOpta was included in Profit magazine's 'Profit 100' list of the 100 fastest growing companies in Canada. The company has three business units:" the Food Group, the Environmental Industrial Group, and the Steam Explosion Group. Address: Toronto, Ontario.

2884. *Iowa Soybean Review (Iowa Soybean Association, Urbandale, Iowa).*2003. Top U.S. customers received assistance. 15(1):15. Oct.
• ***Summary:*** Every one of the top ten U.S. soybean customers was once a recipient of some type of U.S. foreign assistance. "Today these nations are powerful U.S. trade partners. A table shows export value in millions of U.S. dollars."

Whole soybeans: European Union $1,167 million. China $1,012. Mexico $755. Japan $724. Taiwan $385. Indonesia $245. Korea $226. Canada $130. Thailand $115. Israel $95.

Soybean meal: Canada $200 million. Indonesia $167. Philippines $138. Dominican Republic $71. Turkey $62. Saudi Arabia $59. Japan $59. Mexico $50. Egypt $49. Thailand $44. Source: U.S. Department of Commerce.

2885. Steed, Judy. 2003. Percy Schmeiser vs. Monsanto reaches Canada's Supreme Court early next year. *Toronto Star (Ontario, Canada).* Nov. 12.
• ***Summary:*** This case, which is expected to be heard in Ottawa, Canada, in Jan. 2004, is a classic David vs. Goliath match-up. Percy Schmeiser, age 73, is a lone farmer from Bruno, Saskatchewan, a town of about 640 people some 90 km east of Saskatoon. For decades, he has selected and crossbred his own canola seed to thrive in the unique conditions of his family farm. Following an age-old tradition, he exchanged seeds with other farmers, shared what he was learning, and contributed to biodiversity. He never took out a patent on the seeds he developed. The trouble began when Monsanto's Roundup Ready canola appeared (unwanted, called "volunteers"), in Schmeiser's fields. Schmeiser did not spray Roundup on his crop, because it would have killed his heritage canola seeds. The next spring Monsanto came calling. Schmeiser didn't buy the unwanted canola seeds and he didn't sign a "technology use agreement" (TUA). In fact, he suffered injuries, because Monsanto's seed contaminated his own. In most cases, Monsanto settles these cases out of court, but Schmeiser decided to fight. In June 2000, the case went to Saskatoon federal court; Schmeiser lost. He appealed in May 2002 and lost again–which cost him big money, including $153,000 to Monsanto for court fees. With most infringing farmers, Monsanto settles out of court, and the money from such settlements goes into charities, not to corporate revenues. For the last five years, his life has been consumed by court battles, constant fund-raising, traveling and speaking.

Monsanto, founded in 1901 in St. Louis, Missouri, was built on saccharine, caffeine, and aspirin.

The Saskatchewan Organic Directorate (SOD), comprised of about 1,100 organic farmers, says it can no longer grow certified organic canola because even the pedigreed seed stock has been contaminated by Monsanto's GE Roundup Ready canola or Bayer's GE Liberty Link canola. SOD has launched a class action lawsuit to get compensation for this loss and to get an injunction to stop GE wheat.

2886. Brown, Reg. 2003. Back to the beginnings: 3. *Record (SDA, Victoria, Australia)* 108(47):8-9. Nov. 29.
• ***Summary:*** "This article continues a series on the history of the Adventist Church in the South Pacific." In 1897, Edward Halsey, one of Dr. John Harvey Kellogg's bakers at the Battle Creek Sanitarium, Michigan, arrived in Melbourne, Australia, and began manufacturing Granola, caramel cereal (a coffee substitute), and peanut butter. "The Sanitarium Health Food Company was registered as a business on April 27, 1898." On the advice of Ellen G. White, the health food factory was moved to Cooranbong, NSW, to be near the newly established school at Avondale.

Sanitarium Foods is the soymilk market leader in Australia. Its flagship product, So Good, enjoys almost 50% of the market share, and is also the leading brand in New Zealand, the UK, and Canada. So Good was developed at Sanitarium's laboratory at Cooranbong. "In 2002 Sanitarium purchased a Canadian company, Soyaworld, which gives it 60 per cent of the Canadian [soymilk] market." Address: Australia.

2887. Boyte, Frances. 2003. Tofu gourmet cuisine: Delicious recipes from the four corners of the world. Translation of Le Tofu International, by Ed and Marilyn Bell. Burlington, Ontario, Canada: Dillon Publishing Co. 119 p. Illust. (color photos). Recipe index. 27 cm.
• ***Summary:*** Most of the recipes (more than 100) in this book were developed by four professional restaurant chefs; the name of the chef is given below each recipe name: Éric Boutin, Sébastien Leblond, Benoît Paquet, and José Trottier. The name of the country, a quotation, and symbols for the degree of difficulty and cost are also given for each.

Contents: Acknowledgements: One great book–One great team. A note from the author. Part I: Tofu gourmet cuisine. The art and tools of making tofu. How to make homemade tofu. What is tofu? Its history, varieties, ready to eat tofu, where do we got tofu, how to store tofu. Tofu and health: The soybean, and now–tofu, you should be aware that..., what to make of those nutritional values, fat and cholesterol, minerals and vitamins, calories, other characteristics of tofu, one last word! The chefs and Francis Boyte: Biographies.

Part II: Tofu: Gourmet cuisine. The appetizers. The soups. The salads. The main dishes. The sauces and accompaniments. The breads and scones. The desserts and chilled drinks. Acknowledgments / appreciations. Recipe index (Alphabetical list of recipe names). Words of praise for the book and a color photo of the author appear on the rear cover. Address: Les Ateliers diététiques de Frances Boyte, 825, avenue Beauregard, Bureau 117, Sainte-Foy (Quebec), Canada G1V 4L7.

2888. Hain Celestial Group, Inc. (The). 2003. Annual report 2003: 10 years of changing the way the world eats. Melville, New York. 32 p. Nov. 28 cm.
• ***Summary:*** Marks the company's 10th anniversary with a nice chronology: "1993. Irwin Simon forms 21 Century Foods with the Farm Foods brand. We acquire Kineret Foods, a specialty kosher brand. Our name becomes Kineret Acquisition Corp. and we sell 1 million shares and warrants in an initial public offering at $3.25 per unit. We are listed on NASDAQ under the ticker symbol NOSH. The FDA issues its Nutrition Labeling and Education Act (NLEA), regulations establishing general requirements for health claims and food labeling.

"1994. We acquire Hain Pure Food Co. and Hollywood cooking oils from PET Inc. We change our name to The Hain Food Group, Inc. Our ticker symbol is changed to HAIN. Sales in our first full year are $14 million." 1995. Sales grow to $58 million. 1996. Sales reach $69 million.

Net sales for the year ended 30 June 2003 were $466.459 million, up 18% from $395.954 million in 2002. Net income in 2003 was $27.492 million, way up from $2.971 million in 2002. Many new products containing soy in the product name are pictured and described incl. Imagine Organic Broth [California Miso or Soy Ginger], Westsoy Soy Slender. Lima Soya Drink.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (33 p.). Irwin Simon, the founder and CEO, age 45, had the following annual compensation: Salary: $643,077. Bonus: More than $175,000. Other compensation: $16,000. Stock options: 600,000 shares. Note: The value of the company's stock has decreased for the last 3 years in a row. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2889. Jenkins, D.J.; Kendall, C.W.; et al. 2003. The effects of combining plant sterols, soy protein, viscous fibers, and almonds in treating hypercholesterolemia. *Metabolism* 52(11):1478-83. Nov. *
• ***Summary:*** Jenkins' team has found new ways of achieving dramatic cholesterol-lowering effects through diet. In this study, 25 healthy hyperlipidemic individuals were put on a dietary plan (Portfolio eating plan) which included 30 gm of almonds, 2 gm of plant sterols (from enriched margarine), 15 gm of viscous fibre (from foods such as oats, barley, eggplant, or okra), and 35 gm of soy protein (from foods such as tofu, soymilk, or soy meat alternatives). The diet reduced their LDL cholesterol by 35% in two weeks. Address: Univ. of Toronto, Canada.

2890. *SoyaScan Notes.*2003. Chronology of major soy-related events and trends during 2003 (Overview). Dec. 31. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jan. 13–DuPont and Bunge announce an important partnership that includes the creation of a stand-alone ingredients company, Solae, and alliances in agricultural production and biotechnology.

April 1–Solae officially begins operations, owned by DuPont (72%) and Bunge (28%). To the partnership, DuPont contributed its Protein Technologies International business and Bunge contributed its North American (Central Soya and CanAmera Foods) and European soy ingredients operations. At about that same time, for marketing purposes and from the public's viewpoint, "Protein Technologies International" and "Central Soya" (pioneering and venerable business names in the soyfoods industry) were quietly and unceremoniously "disappeared."

April–The 63-year-old name of *Soybean Digest* is changed to *Corn and Soybean Digest.* The subtitle on the cover now reads: "Maximizing production and marketing for profit." The magazine also has new graphics and a new look.

April 26–Soyfoods Center and H.T. Huang, PhD (an expert on the history of food and agriculture in China) finish a two-year project to translate into English all known passages that mention soy in the Chinese literature from 1100 B.C. to 1923–from 236 different documents–and to make this information available in electronic form in the SoyaScan computerized database.

May–Bunge sells its Brazilian soy ingredients operations (Samrig Division of Santista Alimentos) to Solae for $251 million in cash, realizing a tax-free profit of $111 million on the sale.

July 9–FDA and U.S. Department of Health and Human Services announce that the trans-fatty acid content of all packaged foods sold in retail stores (but not in restaurants) must be listed on the "Nutrition Facts" portion of food labels starting 1 Jan. 2006. "Trans fats," like saturated fats, are considered "bad fats" which contribute to heart disease and obesity. Trans fats rarely occur naturally; they are created by hydrogenation of vegetable oils–including soy oil.

Oct. 31–Stake Technology Ltd. (of Canada, which owns SunRich) changes its name to SunOpta.

Trends: (1) Soybeans are starting to be seen as an enemy of the environment, especially in Brazil where they are expanding onto and leading to deforestation of environmentally precious or sensitive land, as in tropical rain forests, as world demand for high-protein feeds to produce animal products (meat, poultry, and fish)–especially in China.

(2) The FDA decision on labeling of trans fatty acids will clearly lead to a rush (by both private and public soybean breeders) to develop soybean varieties whose oil is low in linolenic acid and therefore does not have to be hydrogenated. These specialty soybeans, which will be grown on at least a million acres, will have to produced and marketed using the "identity preserved" system rather than the traditional "commodity" system. This change will probably transform the way all soybeans are handled in America. Today only organically grown, non-GE (non-GMO), and specialty soybeans are identity preserved.

2891. FBX. 2003. Soyfoods Summit: February 18-20, 2004. Hyatt Regency La Jolla, San Diego, California. www.foodbevx.com (Brochure). Little Falls, New Jersey: IQPC. 12 p. 28 cm.

• ***Summary:*** This brochure begins: "The Food & Beverage Exchange is proud to present its 7th Annual Soyfoods Summit." In association with Soyatech. Media partners: Nutrition Business Journal, The Soy Daily, Nutraceuticals World. The conference, which is being organized by The Food & Beverage Xchange, a division of IQPC (London, England), will have two separate tracks of presentations: (A) Technology & applications, and (A) Health benefits of soy. Summit chairs: Peter Golbitz, president, Soyatech, is chair of track A. Geri Berdak, Director, Public Affairs, The Solae Company, is chair of track B.

The facts: (1) "The US Soyfoods market has grown at an average annual rate of 14% per year for the past ten years and hit $3.65 billion in 2002." (2) "Per capita soy consumption will rise by 50% in the next 5 years." The main speakers, with their organization, track, an outline of their talk, and a small photo are given. Track A: Dr. Jonathan F. Gordon, Firmenich Inc. Hiraoki Iwamoto, Tendre Corp., Japan (frozen tofu). Phil Fass, ADM. Dr. Michael Shemer, Tivall Corp., Israel. Motohiko Hirotsuka, Fuji Oil Co Ltd, Japan. Brad Strohm, Wenger Manufacturing Inc. Mian Riaz, Texas A&M University. KeShun Liu, Univ. of Missouri at Columbia. Victor Braverman, Braverman & Associates, Mexico. Jorge Arturo Canas Diaz, Central Heledra Diaz, Costa Rica.

Track B: Milagros Virginia C. Lim, Nestle Philippines Inc, Philippines. Mark Messina, Nutrition Matters Inc. John L. Williams PhD, Univ. of South Dakota. Prof Fujian Yang Zhenhua 851 Bio-Science Co Ltd, China. Omer Kucuk M.D., FACN, Wayne State Univ., Karmanos Cancer Inst. Helen Kim PhD, Univ. of Alabama at Birmingham. Prof. Mindy S. Kurzer, Univ. of Minnesota. Dr. Ari Babaknia, DrSoy. Wendy Barrett, Eat Smart. Deborah Miller, The Solae Group.

Day 1–General session at end of day: John A. Schillinger, PhD, Heartland Fields, LLC. Peter Hannam, First Line Seeds.

Day 2–General session running all day: Paul Lang, Natural Products Inc. Seth Tibbott, Turtle Island Foods. Tom Woodward, Tetra Pak, Singapore. Ted Nordquist, WholeSoy Co. Hsien-Hsin Chang, Lightlife Foods. Gerard Klen Essink, Prosoy Research & Strategy, The Netherlands. Frank Daller, Soyadairy, Canada. Daniel Burke, Pacific Soybean & Grain. Garnet Pigden, The Solae Company.

Gerry Amantea, Hain Celestial Group Inc. Johanna McCoy, Soy Happy. Kim C. Kristoff, Gemtek.

Post-conference interactive workshops: Tim Redmond, formerly with American Soy Products. Patricia Godfrey & Danielle Karleskind, Cargill Soy Protein Solutions. Peter Golbitz, Soyatech.

For those who register and pay in full by Dec. 5, the Gold Package of conference plus three workshops the price is $2,999. By Dec. 31 it rises to $3,099. By Jan. 9 it rises to $3,199. After Jan. 9 the full price is $3,299. This does not include lodging and food. The price is $1,299 for those who register by Aug. 1, but $1,599 after Sept. 15.

Note: Talk with two people who will speak at this conference. They are paid no honorarium for speaking, and they must pay their own transportation both ways and all room and board expenses while at the conference. Why do they go? Both say this gives them an opportunity to attend the conference free of charge, to have a nice vacation in a warm and beautiful part of California, and to meet now people and promote their ideas and (informally) their products.

2892. *Ontario Soybean Growers Newsletter.*2003. Ontario Soybean Growers' office relocating to Guelph. Dec. p. 1.
• ***Summary:*** The move is scheduled to occur in the spring of 2004; an office location has not yet been determined. "OSG has been considering a move to Guelph for several years. With the government, the University of Guelph, ag-related private industry, and other farm organizations all located in Guelph, the area has become the hub of agriculture in Canada. 'The increased opportunities to interact with government and work closely with other organizations will serve our growers well in the dynamic years to come,' says Bill Allison, Chair of the OSG." Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2893. *Ontario Soybean Growers Newsletter.*2003. Ontario Soybean Growers: Auditor's report and financial statements. Dec. p. 3-7.
• ***Summary:*** Contents: Balance sheet. Statement of operations and accumulated surplus. Statement of cash flows. Notes to financial statements.

Assets in 2003 were $3.199 million (Canadian), up from $2.609 in 2002. Income in 2003 was $1.868 million, with most of that coming from "License fees." Expenses in 2003 were $1.741 million; the three main expenses were salaries ($443,045), research projects (see note 7; research grants and market research grants) ($318,500), and professional dues ($112,789).

Note: This is the list issue of this excellent newsletter. What a shame. Address: Box 1199, Chatham, ONT, Canada N7M 5L8.

2894. Farnworth, Edward R. 2003. Handbook of fermented functional foods. Boca Raton, Florida: CRC Press. 390 p. See p. 227, 295. Index.
• ***Summary:*** An overview, with two chapters on fermented soyfoods (natto and miso) cited separately. Chapter 1, titled "History of fermented foods" (p. 1-25) includes brief and vague histories of "Soy foods" including (p. 18-19) soy sauce, miso, tempeh, natto, and sufu [fermented tofu].

Chapter 4, titled "Kefir: A fermented milk product" (p. 77+) states (p. 85-86) that kefir can be made by growing kefir grains in soybean milk (Abraham and de Antini 1999, p. 327-33).

Chapter 9 is "Natto–A food made by fermented cooked soybeans with *Bacillus subtilis (natto),"* (p. 227-245).

Chapter 11 is "Miso: Production, properties, and benefits to health" (p. 277-87). Chapter 12 is "Korean fermented foods: Kimchi and doenjang" (p. 287-305). Address: PhD, Senior Research Scientist, Food Research and Development Centre, Agriculture and Agri-Food Canada, St. Hyacinthe, Quebec, Canada.

2895. Food and Agricultural Organization of the United Nations. 2003. Soybeans: Area harvested, yield, and production. *FAO Yearbook–Production (Rome, Italy)* 57:115-16.
• ***Summary:*** The 2003 Production Yearbook, under "Soybeans" (p. 115-16, in English, French, and Spanish) gives area harvested (1,000 ha), yield (kg/ha), and production (1,000 metric tons), each for the years 1989-91, 1995, 1996, 1997, for the following places: World. Africa: Benin, Burkina Faso, Burundi, Congo–Democratic Republic, Cote d'Ivoire, Egypt, Ethiopia PDR, Ethiopia, Gabon, Liberia, Madagascar, Morocco, Nigeria, Rwanda, South Africa, Tanzania, Uganda, Zambia, Zimbabwe.

North and Central America: Belize, Canada, El Salvador, Guatemala, Honduras, Nicaragua, Panama, USA.

South America: Argentina, Bolivia, Brazil, Colombia, Ecuador, Paraguay, Peru, Suriname, Uruguay, Venezuela.

Asia (fmr = former). Asia: Azerbaijan, Bhutan, Cambodia, China, East Timor, Georgia, India, Indonesia, Iran, Iraq, Japan, Kazakhstan, Korea–Democratic People's Republic of (north), Korea–Republic of (south), Laos, Myanmar, Nepal, Pakistan, Philippines, Sri Lanka, Syria, Tajikistan, Thailand, Turkey, Viet Nam (Vietnam).

Europe (former). Europe. Albania, Austria, Bosnia Herzegovina, Bulgaria, Croatia, Czechoslovakia, Czech Republic, France, Germany, Greece, Hungary, Italy, Moldova Republic, Romania, Russian Federation, Serbia-Montenegro, Slovakia, Slovenia, Spain, Switzerland, Ukraine. Note: Serbia-Montenegro appears for the first time. Harvested 112,000 ha (yield = 2,099F kg/ha) in 1999-2001, 87,000 (yield = 2,369F) in 2001, 100,000 (yield = 2442F) in 2002, and 131,000 (yield = 1,720F) in 2003.

Produced 224,000 metric tons in 1999-2001, 207,000 MT in 201, 244,000 MT in 2002, and 226,000 MT in 2003.

Oceania. Australia.

Note: In this 2003 Yearbook the USSR was not listed for the first time in the history of the publication.

2896. Levenstein, Harvey A. 2003. Paradox of plenty: A social history of eating in modern America. Revised ed. Berkeley, California: University of California Press. ix + 353 p. Index. 23 cm. Series: California studies in food and culture No. 8. [1529* endnotes]

• ***Summary:*** This revised edition is identical to the original 1993 edition except that: (1) The publisher and cover are different. (2) It contains a new Epilogue (which updates the book, p. 256-67) after the last chapter, plus 56 endnotes that accompany it. The index appears to be the same. Levenstein was born in 1938. Address: Prof. Emeritus of History, McMaster Univ., Univ. of Hamilton, Ontario, Canada.

2897. *National Enquirer.*2004. Miracle snack beats heart disease: 'It lowers cholesterol and blood pressure.' Major university studies reveal. Jan. 27. p. 12-13. Cover story.

• ***Summary:*** Written across the top of the cover of this tabloid newspaper: "University studies reveal: Miracle snack beats heart disease."

The article begins: "Forget about salty peanuts and fatty potato chips. The newest snack craze sweeping the nation is nothing less than a miracle food–tasty, crunchy and it fights heart disease too." Dr. David Jenkins (University of Toronto, Ontario, Canada) says that "one terrific way to get your soy is by eating edamame beans." They are easier to digest than mature soybeans and full of disease-fighting nutrients and protein. Mark Messina, PhD (Loma Linda University) says there is "no downside to eating edamame beans." Also cites studies at Wake Forest University school of medicine, New York's Mt. Sinai Medical School, and the University of Alabama. The American Heart Association endorses soy as part of heart-healthy diet.

Sunrich of Hope, Minnesota, a leading grower of edamame, sells 2 million pounds of the miracle snack food a year and can hardly keep up with the demand, which has been increasing by 25% a year.

Photos show: (1) A tray filled with edamame, ready to eat. (2) Aerial close-up of a field of green soybean plants. "Edamame is easy to digest." (3) A barefoot lady in Asia, seated on a step, shelling edamame in a wooden bowl.

2898. Nordquist, Ted. 2004. Looking back: Overview of work with soymilk in America (Interview). *SoyaScan Notes.* Jan. 29. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Jeremiah Ridenour was the first person in the USA to have the idea of selling soymilk in extended shelf life (ESL) gable-top cartons. That was a huge breakthrough. Ted wanted to build a soyplant to produce his soy base in America–ideally in California. Ted met Jeremiah, and Jeremiah told Ted about his idea for using gable-top cartons. Jeremiah took Ted to Gustine, the plant where Ted developed a soymilk product for Jeremiah using Ted's proprietary formulation. He sent many samples to Jeremiah, on the understanding that Jeremiah would use his distribution to sell the new product. After the product was developed, Ted did a feasibility analysis, which showed that he had to produce about 4,000 cases (at 3 gallons per case) to make this a competitive, viable product. Jeremiah said he was unable to buy and sell that much volume–including the big initial cost of buying and printing the cartons. Then Ted took the idea to Westbrae (to Myron Cooper–who said "sorry"), and then to Steve Demos of White Wave; Steve had refrigerated distribution, saw the product's potential, and was very interested. "You have to give Steve all the credit for selling the product." Ted still did not have a plant that could make his soybase. So Ted bought ProSoya's soybase made at the ProSoya plant in British Columbia, had it shipped by tanker trucks to Gustine, where Ted formulated it, had it packaged in White Wave's ESL cartons, then shipped the finished cartons in cases to White Wave. White Wave paid for the carton's plates and developed the graphics, but Ted had to pay to print the packaging on the ESL stock. White Wave paid for the product (incl. the package) after he received it. Ted make Silk soymilk for Steve for two years. At the end, Steve ordered $320,000 worth of product and refused to pay for it. Ted thinks that he used that money to move to Utah.

Gary Stein was making tofu for Trader Joe's. Trader Joe's was also buying soymilk in fresh (not ESL) cartons from Rockview Farms–Trader Joe's distributor. Rockview bought its soymilk in bulk from a guy in Los Angeles, who set up his own Alfa Laval plant to produce soybase and to formulate it for Rockview. Ted does not remember the guy's name but he was only up and running for several years. One day Gary called Ted and explained that Rockview Farms was having all kinds of problems with their soymilk, and that Trader Joe's had called Gary and asked him if he could produce soymilk for Trader Joe's. At this time, Ted was still selling Silk soymilk to White Wave–but he was feeling tension in the relationship. Ted's contract with White Wave said that Ted could not sell soymilk packaged in gable-top cartons out of Gustine. Ted adhered to the contract. But by this time Ted had his first soybase plant up and running at Soyfoods of America in Duarte, near Los Angeles, California. So instead of buying soybase from ProSoya, Ted was now making his own in California. Gustine bought the packaging, Gary Stein formulated Ted's soybase to make soymilk, Ted packaged it in Gustine, then Gary sold it to Trader Joe's; they split the profits 50:50.

In April 1999, Ted's WholeSoy Co. launched WholeSoy: Creamy Cultured Soy, a Swiss-style soy yogurt

in four flavors; he sold it to Trader Joe's through Gary Stein; Ted and Gary split the profits 50:50. Ted did not sell his yogurt direct to Trader Joe's because he is friends with Gary. "I don't do things like that. Our relationship with Trader Joe's was through Gary Stein. So I honored that." Gary got Ted's yogurt into Trader Joe's. But a year or so later, Ted and Gary agreed that the arrangement was getting too complicated, and that Gary would take the soymilk (packed in Gustine) and Ted would take the yogurt. So Ted now sells his soy yogurt and a 96-ounce soymilk directly to Trader Joe's. Gary Stein is still making soy products for Trader Joe's. Gary no longer works much at his soy plant, which is run by his employees; he is often at Lake Tahoe or skin diving. "More power to him."

Jeremiah did not start selling soymilk in ESL packages until after Steve stopped buying soymilk from Ted. Address: TAN Industries, Inc., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2899. *Ontario Soybean Growers Soybean Report.*2004—. Serial/periodical. Chatham, ONT, Canada. OSG: Jan. 2004.
• ***Summary:*** This monthly electronic 1-page newsletter (no longer printed or mailed) replaces the much higher quality, 8-page *Ontario Soybean Growers Newsletter.* It has a red border. No address is given for OSG, however their phone and fax numbers, and their e-mail are given. No volume or issue numbers are given. What a shame. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2900. Dietz, John. 2004. Soybeans march way north: Is Manitoba, Canada, the soybean's new frontier? *Corn and Soybean Digest.* Mid-Feb. p. 31-32.
• ***Summary:*** Note: Most of the soybeans grown in Manitoba are grown in the far south of the province in the Red River Valley. The Red River (also known in the USA as the Red River of the North to distinguish it from the river that forms part of the border between Texas and Oklahoma) originates in the United States and flows northward through the Red River Valley. It empties into Lake Winnipeg, whose waters join the world's oceans in Hudson Bay via the Nelson River. The Red River flows through several urban areas along its path including Fargo-Moorhead and Greater Grand Forks in North Dakota (USA) and Winnipeg in Canada.

Soybeans are a relatively new crop in Manitoba, made possible largely by plant breeders who breed soybeans for latitudes in the far north (as in Quebec and Ontario), but also by better soil inoculants–which contain higher numbers of bacteria, more protein, and use stickers and sterile peat to produce better nodulation.

Twenty years ago, a few Manitoba farmers tried growing soybeans but gave up on the crop because of low yields, low prices, and low protein content. In 1996 a few growers in the Red River Valley of Manitoba, near the Canadian border, successfully planted 800 acres. The province's soybean acreage increased to 40,000 acres in 2001, then to and 120,000 acres in 2002, and (most recently) to 220,000 acres in 2003 (a whopping 83% increase over the previous year).

A color photo shows Blye and Don Sissons who planted 300 acres of soybeans last year on their farm at Portage la Prairie in the Red River Valley–50 miles due west of Winnipeg, Manitoba.

2901. *Soyfoods Canada Newsletter.*2004. Soyfoods Canada member profile: SunOpta. Winter. p. 3.
• ***Summary:*** "The Sunrich Foods Group is a global supplier of Identity Preserved and Organic soy, corn and rice products. From ingredients to consumer packaged products, we help out customers create great tasting foods, naturally. The Sunrich Food Group is made up of four operating divisions–Sunrich, Nordic Aseptic, Northern Foods and Dairy and Hearty and Natural.

"Founded in 1978, the Sunrich grain division is a fully integrated producer, supplier and ingredient developer for the food industry. Based in Minnesota, Michigan and Ontario, we are in the best position to both produce and supply Identity Preserved (IP), Non Genetically Modified (Non-GMO) and organic grain based food ingredients.

"Nordic Aseptic is an aseptic packaging facility with a focus in private label manufacturing. The facility specializes in Tetra Pak slim, square, wedge and Combi Bloc packages, with a variety of opening types. The extended shelf life and logistical benefits of aseptic packaging make it one of the fastest growing delivery vehicles for liquid products."

"Hearty and Natural is the consumer products division of the Sunrich Food Group. Consumer products edamame, veggie burgers, frozen soy vegetables and functional foods.

"The Sunrich Food Group is a wholly owned subsidiary of SunOpta (formerly Stake Technology). SunOpta owns and operates high-growth ethical businesses, focused on environmental responsibility and the health and well-being of its communities. SunOpta's Food Group is well positioned in the rapidly growing natural and organic foods sectors through its vertically integrated operations throughout North America."

2902. *Soyfoods Canada Newsletter.*2004. Soy industry news. Winter. p. 3.
• ***Summary:*** "After 80 years in business, W.G. Thompson and Sons Ltd., a supplier of food-grade quality soybeans to the soyfoods industry, announced in January that it has shortened its name to Thompsons Limited."

2903. *The Non-GMO Source (Fairfield, Iowa).*2004. Taiwan's demand for non-GM and organic soybeans increasing. 4(2):3. Feb.

• ***Summary:*** Taiwan has a large market for soybeans for food use, estimated at 225,000 tons. Most of the soybeans are used to make tofu and soymilk. In 2002/03 about 7,500 tonnes (metric tons) of the food-use soybeans came as identity preserved, non-GM "food grade," and organic. Of this total the USA supplied an estimated 4,500 tonnes, Australia 2,000 tonnes, Canada 500 tonnes, and all other countries combined 500 tonnes.

2904. Brown, Allan; Brown, Susan. 2004. Tempeh tofu and other new developments (Interview). *SoyaScan Notes.* March 20. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** They recently had a visitor who makes "tempeh tofu" commercially in Australia. Tempeh is probably pasteurized then crumbled and added to the tofu curds before they are pressed into tofu. When you slice the tofu, there is a marbled effect with tempeh in the middle. The visitor is sending Allan the labels. "What a great, original idea!" It is widely distributed and Australians love it because it has more flavor than tofu and it is not as heavy as tempeh."

In Vancouver, BC, a company named Gaia Enterprises Inc. makes natto and sells the spores. Noble Bean has been thinking about making natto, but Shurtleff warns against letting natto spores (a strong contaminant) get near tempeh.

Two years ago, Soy City Foods joined with another company, Second Nature, to become Sol Cuisine. They still make lots of good tofu but they have stopped making tempeh; they made only okara tempeh (to add value to the okara left over from making tofu) and only for the institutional market (mostly university cafeterias). The nutritional profile and consistency were both poor. Sol Cuisine is using certified organic soy isolates to make meat alternatives (incl. ground round, hot dogs, etc.), thereby challenging Yves, which uses regular isolates–perhaps made using hexane. The sales manager at Sol Cuisine is a close friend of Allan and Susan's from The Farm. Sol Cuisine wanted Noble Bean to private label tempeh for them. Allan now wants to talk with them about making "tempeh tofu."

The Farm in Summertown, Tennessee, is now a good, reliable source of tempeh spores. Noble Bean gets all its tempeh spores from the Farm.

Sooke Soyfoods has become Green Cuisine in British Columbia; established in 1989, they have a vegan restaurant and also make a line of soyfood products. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

2905. Desroches, Sophie; Mauger, J.; Ausman, L.M.; et. al. 2004. Soy protein favorably affects LDL size independently of isoflavones in hyperchlesterolemic men and women. *J. of Nutrition* 134(3):574-79. March. [34 ref]
• ***Summary:*** Soy is shown to reduce blood levels of homocysteine, which is a marker for cardiovascular problems. Address: Institute on Nutraceuticals and Functional Foods, Laval Univ., Set-Foy, Quebec, Canada.

2906. Institute of Food Technologists. 2004. The IFT exhibitor list: (as of March 2004) (Web article printout). http://www.allbusiness.com/manufacturing/food-manufacturing/160210-1.html. 25 p. Printed 2008 May 29.
• ***Summary:*** One of the companies planning to exhibit at the IFT convention is Garden Protein International (p. 4).

2907. *Nutrition Business Journal (San Diego, California).*2004. Eden Foods maintains independence in a consolidating industry. 9(3):18. March.
• ***Summary:*** A good interview with Michael Potter about the history and organic philosophy of Eden Foods. The company, "founded in 1969 as a retail food cooperative," is the last significant organic food manufacturer in the USA, according to Potter, the company's sole owner. Walnut Acres used to be the oldest independent, until they were purchased and eliminated by Acirca.

Refrigerated soymilk has hurt sales of aseptically packaged soymilks, and Eden's soymilk sales have been down 8.6%/year for each of the past 4 years. But Potter is optimistic about sales of Eden's other products. In 2003 Eden's sales were about $45 million.

Eden's sales or 98% from organically grown products. Potter estimates that Eden supports about 300 family farms with 40,000 acres of organically managed farmland in the USA and Canada. The advent of USDA organic regulations [NOP] in 2002 brought major changes to Eden, from adding new organic ingredients to having to redesign all labels. Potter is critical of NOP for lax enforcement of organic standards, but he does not agree with those who think that the industry should work to make organic prices closer to those of conventional foods. "The percentage of income that Americans spend on food is the smallest in the world. Food is undervalued, and when you think 'cheap, cheap, cheap' what you end up with is conventional American food, the laughing-stock of planet Earth." Instead of using lower prices to attract new customers, Potter believes that educating consumers about organic and conventional food should drive future growth.

2908. SunOpta Inc. 2004. Sunrich (Portfolio). Toronto, Ontario, Canada. 12 inserts. 31 cm.
• ***Summary:*** The cover of this portfolio is a composite color photo on a tan background. The photo shows (L-R) whole soybeans, a glass of soymilk, green edamame (in the pods), a farmer in a field examining heads of wheat, a wooden scoop of corn flour and grits, whole kernels of corn. Below it is the SunRich logo, the name in red, a stylized yellow sun background, and the tag line below: "Your direct link to

Nature." On the inside front cover are six oval color photos, each explaining Sunrich's mission.

Inserts: (1) The SunRich Food Group: Unique vertically integrated soymilk business model. Identity preserved non-genetically modified soy foods ingredients. Five photos show from seed producer to third party distribution.

(2) SunRich company fact sheet (on letterhead). Sunrich (a Sun-Opta company) was founded in 1978. In Aug. 1999 Sunrich, led by SEO Allan Routh, was acquired by Stake Technology Ltd. The Sunrich Food Group, composed of four companies (Sunrich, Nordic Aseptic, Northern Food and Dairy, and Hearty and Natural) now has $150 million in sales.

(3) Reprint of an article: Fleming, Richard. 2001. "The roots of sustainability run deep for Sunrich." *Natural Business LOHAS Journal* 2(4):45-46. Fall.

(4) SunRich Food Group product and services. (5) Soy and organic food trends. Soymilk sales nationwide have grown from $100 million in 1995 to $550 million in 2001. (6) William Fenske: Vice president of technical services for Sunrich Food Group (Bio). (7) Allan Routh: President of the Grains and Soy Products Group of Sunrich Food Group (Bio). "Mr. Routh has been involved with Sunrich since it was established in 1978, originally to develop export markets for waxy corn growers. A graduate of the University of Minnesota and the University of St. Thomas (Minnesota)." Mr. Routh is also involved in the production of high quality Berkshire Pork for export to Japan, and continues to be active in his family's farming operations in southern Minnesota. (8) Unlimited soy solutions! Color, glossy, back to back. (9) Unlimited Organic Solutions! (10) Cooking with SunRich Naturals brand edamame and shelled edamame (9 p. of recipes). (11) SunRich Food Group patents low fat, high protein organic soymilk formulation–Soy Lite (Feb. 2003). (12). SunRich Food Group executive named new president of Soyfoods Association of North America (Tina Nelson, Feb. 2003). (13) SunRich Food Group introduces new SunRich Naturals line of frozen edamame and fully organic, gluten-free veggie burgers (Sept. 2003, expected to hit stores by Jan. 2004). (14) SunRich to co-sponsor soy tasting event, hosted by Soyfoods Association of North America (on March 6 during 2004 Expo West). (13) Edamame and shelled edamame: New food service item. Address: Toronto, Ontario.

2909. *Ontario Soybean Growers Soybean Report.*2004. Ontario Soybean Growers' office is relocating. April. p. 1.
• ***Summary:*** "As of May 1, 2004, our new address and contact information will be:

Ontario Soybean Growers
Suite 205, Second Floor
Research Park Centre
150 Research Lane
Guelph, Ontario
N1G 4T2 [Canada].
Phone: (519) 767-1744.
Fax: (519) 767-2466.
E-mail: cansoy@soybean.on.ca.
Web: www.soybean.on.ca. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2910. *Ontario Soybean Growers Soybean Report.*2004. Inaugural conference focuses on producer awareness. April. p. 1.
• ***Summary:*** "Renewable fuels, grain marketing, international trade and corn and soybean production were among the hot topics presented at the first-ever Ontario Corn and Soybean Conference in London last month.

"More than 400 corn and soybean growers were joined by representatives from industry, government and the farm supply sector at the inaugural meeting hosted by the Ontario Corn Producers Association (OCPA) and the Ontario Soybean Growers (OSG)." Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2911. *Ontario Soybean Growers Soybean Report.*2004. Federal funding will improve CAIS program. April. p. 1.
• ***Summary:*** "A $995-million assistance package for Canadian agriculture will help to address concerns with the new Canadian Agricultural Income Stabilization (CAIS) program. And the chair of the Ontario Soybean Growers, Bill Allison, is pleased with the announcement.

"The announcement made last month by Prime Minister Paul Martin and Agriculture and Agri-Food Minister Bob Speller outlined the package, which includes $680 million for direct payments to cattle producers, $250 million for general transition payments to all producers and $65 million to cover the federal government's share of the shortfall for the 2002 claim year under the Canadian Farm Income Program."

"The funding acknowledges two holes in the CAIS program, he says. First, the $250-million transition payment will help the program counter the price depressing effects of foreign subsidy programs. Second, the $680-million assistance to cattle producers will supplement the gap currently unavailable for helping farmers during major disasters, such as BSE" ["mad cow disease"]. Address: Box 1199, Chatham, ONT, Canada N7M 5L8. Phone: 519-352-7730.

2912. Dansby, Angela. 2004. Global adoption of biotech crops rising: European Union wild card on future acreage and rate of adoption. *Seed World* 142(5):6, 8-9. May.
• ***Summary:*** As of 2003, 18 countries have adopted genetically engineered (GE) crops. The countries with the largest GE acreage (in million acres) are USA 42.8, Argentina 13.9, Canada 4.4, Brazil 3.0, China 2.8, South

Africa 0.4, Australia 0.10, India 0.10, and Romania and India each less than 0.1.

The European Union's regulations on biotech food and feed traceability and labeling went into effect on 18 April 2004; these are seen as paving the way for new GE crop approvals, and ending the EU's 5-year ban on them. "The rules, officially adopted in July 2003, require food and animal feed to be labeled if they contain 0.9 percent or more biotech ingredients." Address: Editor, Seed World.

2913. Piscopo, Lauren. 2004. PowerBar founder Brian Maxwell, 1953-2004. *Natural Foods Merchandiser.* May. p. 12.
• ***Summary:*** Brian died of a heart attack on March 19 in San Anselmo, California, at age 51. He was born in London and raised in Canada. He graduated from the University of California at Berkeley where he ran track and studied architecture. In 1977 he was tanked No. 3 marathoner in the world, and went on to become No. 1 marathon runner for the Canadian Olympic team that boycotted the Moscow Olympic Games.

In 1983, the idea for an endurance-boosting bar for athletes who came to him after "bonking" (what runners call the point at which the body runs out of carbohydrates and starts burning muscle). In 1986, he and his wife Jennifer created one of America's first energy bars in their Berkeley kitchen. Then the couple started handing out PowerBars (chocolate or malt nut flavors) and coupons at races, with coupons for mail-ordering the bars.

Brian Maxwell was "completely dedicated to athletes performing at their best."

The company eventually grew to $150 million in sales and 300 employees before Maxwell sold PowerBar Inc. in March 2000 to Nestle S.A. for a reported $375 million. He is survived by his wife and 6 children.

2914. Sorensen, Jean. 2004. Top 10: Going green–Yves Potvin launches a new meat alternative. *Food in Canada* 64(4):41-43. May.
• ***Summary:*** "Former Chef Yves Potvin makes it quite clear that he has nothing against meat as he launches his second company, Garden Protein International, which produces a meat-substitute called 'Gardein' from vegetable proteins."

Potvin has developed chicken, pork and beef flavoured products, which "can be used in soups, stir-fries, curries or combined with sauces. The new product is already being distributed through SYSCO Foods to commercial outlets and institutions in Canada and the U.S. By fall, Potvin expects to see one or more North American manufacturers package Gardein to sell through retail stores. Discussions are currently on with many of the largest Canadian and U.S. company labels."

Potvin is best known as the founder of Yves Veggie cuisine, which he built into a $50 million enterprise. He is a "flexitarian," who sometimes eats meat and sometimes eats non-meat dishes. Potvin says that right now, the price of Gardein is about the same price as the price of meat. Address: Freelance writer, Victoria, British Columbia.

2915. Tunick, Barbara. 2004. Rise and fall: Use the glycemic index to regulate blood sugar. *Vegetarian Times.* May. p. 75-77, 79. [1 ref]
• ***Summary:*** In about 1984 the glycemic index was developed by David Jenkins, MD, at University of Toronto, Canada. The idea was to help diabetics manage their insulin response to foods. He challenged the notion that all carbohydrates have the same effect on blood-glucose–or glycemic–levels. His index ranks foods on their immediate impact on blood-glucose levels. Foods on the GI are rated from 1 to 100. Low GI foods have a value of 0-55. Medium GI are 56-69. High GI are 70-100.

Carbohydrates that break down quickly during digestion and that cause blood-glucose levels to rise quickly (such as a white French baguette 95, or a baked potato 84, or a white bagel 72, or Coca-Cola 53) have high ratings. Lower ratings are given to carbohydrates that break down slowly (almonds 0, avocado 0, large eggs 0, canned soybeans 14). For best results, give up all sugar and artificial sweeteners, substituting fruits. Use whole grains instead of refined, white ones.

2916. Davis, Robert. 2004. Dying to the Self. Leaving Good Karma Foods and moving to Nelson, British Columbia, Canada, to create a Safe Space and make miso (Interview). *SoyaScan Notes.* June 5. Conducted by William Shurtleff of Soyfoods Center.
Address: Founder, Good Karma Foods (GKF), 4527 Hilltop Drive, Clinton, Washington 98236.

2917. Gupta, Raj. 2004. New developments at ProSoya in the USA, India, and Canada (Interview). *SoyaScan Notes.* June 8. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** ProSoya has just acquired a former dairy cheese plant (41,000 square feet) in Heuvelton, New York state (about 10 minutes drive from the Canadian border) and is now setting up a soymilk extraction plant. He hopes to begin shipping products in early Sept. 2004. ProSoya will sell soy extract to third parties, just as SunRich now does.

Raj estimates (based on statistics from SoyaWorld) that total soymilk sales in Canada from all manufacturers is about 75 million liters, which is about 2.5% of the dairy milk market. The soymilk market is growing rapidly, and ProSoya is also doing well. ProSoya has decided not to license its process to other manufacturers, but to make the soymilk itself–in part because ProSoya has developed an improved technology (by adding an additional step to their previous airless cold grind process) which gives soymilk with a much better flavor. Raj will never apply for another

soymilk patent. This process is largely independent of the quality of the soybeans used. The contract between SoyaWorld and ProSoya has changed; starting last month they began a non-exclusive license, compensations have been changed from royalties to other types from them, and other new terms have been added to the agreement. Therefore ProSoya can now produce soymilk and soyabase in Canada and the USA and compete with them.

Concerning Dean Foods and White Wave: Who could ever have imagined that America's biggest dairy company (Dean) would become a major manufacturer and promoter of soymilk? Dean is the right company; they saw the opportunity and took it–while other dairy companies wished that soymilk would somehow go away. Raj is proud of the fact that, even though his competitors do not acknowledge it, his airless cold grind process has become the basis of making good-tasting modern soymilk. All the major soymilks taste the same these days. Yet Raj believes that there is a long way to go in improving the taste of soymilk.

ProSoya recently established its own soymilk plant in India; in Jan. 2004 the products were first sold in stores. The head office is in Bombay and the soymilk is made only from whole soybeans grown in India. In both India and the USA its soymilk will be sold in aseptic cartons and will be brand named Staeta–but the word "soy" (in "soy milk") appears on the front panel in even larger letters than the word "Staeta." Soy is no longer a "dirty word" in India; it now has a positive connotation. For details see www.staeta.com. Click India. This is a different website from ProSoya.com. Last time ProSoya entered the Indian market, they tried to go from the "bottom up," targeting their products to the lowest income people. This time they will go from the "top down," by establishing the fact that soymilk is being consumed by affluent people. As in North America, the soymilk will be more expensive at retail than dairy milk, not because of the cost of the soymilk but because of the cost of packaging and a smaller distribution system. The product has been very well accepted in India. Flavors include natural (unformulated), original (slightly sweetened), malt, chocolate (with real cocoa), and kesar-pista. Even the hundreds of smaller SoyaCows made by ProSoya are making soymilk consumed mostly by wealthier people, and not by the poor.

In the next phase, ProSoya will start to make powdered soymilk (already developed), sold in plastic pouches, which will be less expensive. This product has an excellent flavor and texture, after it is reconstituted; people can't tell the difference. They say this is the only powdered soymilk that doesn't taste like "paper pulp." Raj's goal in India is to sell soymilk for one-half to one-third the price of dairy milk. The problem with selling liquid soymilk in plastic pouches is the high cost of shipping water, the shorter shelf life, and the need to protect the pouches with secondary packaging. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2918. *Food Processing (Chicago).*2004. Wellness Foods–New Product Profiles: Two next-generation analogues better simulate full muscle texture. 65(8):s38. Aug. 1.
• ***Summary:*** ADM has introduced NutriSoy Next using soy proteins combined with other vegetable proteins such as wheat gluten or, in some cases, egg whites. Using a twin-screw extruder with the ingredients at relatively high moisture levels of 50-80% locks in flavor and gives them a moist texture.

Garden Protein International has launched Gardein, which is extruded non-GMO soy protein and wheat. It comes in a variety of formats and flavors. "Beef, chicken, and pork analogs are available in small or medium shreds as well as 3/4 inch and 3/8 inch dice. Pre-sauce options include teriyaki, BBQ, sweet and sour, honey garlic as well as roasted garlic and pepper."

2919. **Product Name:** Mellow Organic Brown Rice Miso.
**Manufacturer's Name:** Tradition Miso.
**Manufacturer's Address:** R.R. #4-2090, Claremont, ON L1Y 1A1, Canada. Phone: 905-649-2513.
**Date of Introduction:** 2004. September.
**Ingredients:** Organic soybeans, organic brown rice, unrefined sundried sea salt [from Brittany, France], deep well water, culture *(Aspergillus oryzae).*
**Wt/Vol., Packaging, Price:** 450 gm glass jar.
**How Stored:** Refrigerated.
**New Product–Documentation:** Labels for Mellow Organic Brown Rice Miso brought to Soyinfo Center by Jerry Lewycky, Suzanne Cardinal, and their two kids, Katrina and Maxim. 2007. Jan. 2. Self adhesive. 2.6 by 10.5 inches. Black and reddish brown on peach. Product with this label first sold Dec. 2005. Product is certified organic by OCPRO Canada. The logo is still the black illustration of the monk. Letter (e-mail) from Jerry Lewycky (whose last name is pronounced luh-WIK-ee), founder and owner. 2007. Jan. 22. Jerry and his wife and co-worker Suzanne Cardinal, first began selling this miso on 13 Sept. 2004. "I used cut-up Brown Rice Miso labels with printed stickers for the first year."

2920. Hymowitz, Ted. 2004. Meetings connected with the Uniform Soybean Tests (Interview). *SoyaScan Notes.* Oct. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** From time when the cooperative soybean trials began in the late 1930s and early 1940s, the cooperating breeders from the various northern states and Canada would meet once a year, typically near at the University of Illinois. They would discuss basic issues, such as which strains should go into the next year's variety trials, issues of disease resistance, protein and oil content, etc. Ted attended

some of the early meetings; 30-40 people were there. Then the meetings got too large, so they were moved to St. Louis, Missouri.

Most of this took place before the major rise of private commercial soybean production following the Plant Variety Protection Act of 1970. Address: Retired Prof. of Plant Genetics, Dep. of Crop Sciences, Univ. of Illinois, Urbana, Illinois.

2921. AGP–A Cooperative. 2004. Annual report to members: Adding value to your harvest. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 38 + 22 p. 28 cm.
• ***Summary:*** Net sales for 2004 (year ended Aug. 31) were $2,663.640 million, up 25.3% from $2,125.765 million in 2003. Earnings from continuing operations (before income taxes): $28.941 million, up 80.9% from the $15.996 million in 2003.

"During fiscal 2004, we were without the crushing capacity at Sergeant Bluff due to the accident at the end of fiscal 2003. Although the downtime was very costly to AGP during the year, the plant was rebuilt incorporating the most efficient and cost-effective technology... This plant was also the site of our methyl ester operation, and we are optimistic that the new energy initiative will promote the better use of methyl ester in the biodiesel market. This will give us an opportunity for a methyl ester expansion in fiscal 2005."

This year Masterfeeds marks its 75th anniversary; it is one of Canada's premier animal nutrition companies. "In 1929, Gordon C. Leith established Masterfeeds as part of Toronto Elevators Limited at Queen's Quay, Toronto."

Income taxes (p. F14): "The Company, as a nonexempt cooperative, is taxed on nonmember earnings and any member earnings not paid or allocated. Deferred income taxes are computed based on an estimate of the portion of temporary differences that are attributable to nonmember earnings." Address: Omaha, Nebraska. Phone: (402) 496-7809.

2922. Boyte, Frances. 2004. Tofu: Tout flamme [Tofu: On fire]. Outrement, Quebec, Canada: Éditions de Trécarré. 94 p. Illust. (color photos). No index. 26 cm. [Fre]
• ***Summary:*** A very attractive book, printed on glossy paper, with many stylish full-page color photos. Many of the recipes in this book were developed by professional restaurant chefs incl. Éric Boutin, Sébastien Leblond, Benoît Paquet, and José Trottier. The name of the recipe creator is given below each recipe.

Contents: Acknowledgments. A word about the author. Tips for cooking with tofu. How to make tofu at home. Entrees, soups, and potages. Main dishes. Desserts. On the rear cover is a color photo and some words about the author. Address: Les Ateliers diététiques de Frances Boyte, 825, avenue Beauregard, Bureau 117, Sainte-Foy (Quebec), Canada G1V 4L7.

2923. McClinton, Lorne. 2004. Brazil's land-rushed lessons: Farmers tell what its like to buy farmland in ag's new frontier. *Furrow (The) (John Deere Co., Moline, Illinois)* 109(6):34-37. Sept/Oct.
• ***Summary:*** American and Canadian farmers are rushing to buy soybean farmland in Brazil's cerrado.

2924. Hain Celestial Group, Inc. (The). 2004. Annual report 2004. Melville, New York. 58 p. Nov. 28 cm.
• ***Summary:*** Net sales for the year ended 30 June 2004 were $544.058 million, up 16.6% from 2003. Net income in 2004 was $27.008 million, down 1% from 2003.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (35 p.). Irwin Simon, the founder and CEO, age 45, had the following annual compensation: Salary: $810,000. Bonus: More than $850,000. Stock options: 300,000 shares. Note: The value of the company's stock rose very slightly during the past year. Now the management is begging for compensation. Address: 58 South Service Road, Melville, New York 11747. Phone: 516-237-6200.

2925. **Product Name:** SoYummi [Coffee].
**Manufacturer's Name:** Les Aliments SoYummi.
**Manufacturer's Address:** 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
**Date of Introduction:** 2004.
**Wt/Vol., Packaging, Price:** 125 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
**How Stored:** Refrigerated, 35-40 day shelf life.
**New Product–Documentation:** Talk with Joanne Hollander. 2008. May 29. In 2004 the company added a 5th flavor, coffee, to their "Classic" line. She doesn't recall which month. In 2003 the company won an award–the Grand Prix–for the best new dessert product in Canada. That included non-organic products, so she was competing against Pillsbury and Big Food. The prizes are organized and sponsored by the Canadian Grocers Association.

2926. Johnston, Robert D. ed. 2004. The politics of healing: Histories of alternative medicine in twentieth-century North America. New York: Routledge. viii + 386 p. 26 cm. *
• ***Summary:*** Many chapters by various authors. From grocery store to doctor's office, alternative medicine is everywhere. A recent survey found that more than two in five Americans uses some form of alternative medicine. "The Politics of Healing" brings together top scholars in the fields of American history, history of medicine, anthropology, sociology, and politics to counter the view

that alternative medical therapies fell into disrepute in the decades after physicians established their institutional authority during the Progressive Era. From homeopathy to Navajo healing, this volume explores a variety of alternative therapies and political movements that have set the terms of debate over North American healing methods." Contents: Introduction: The Politics of Healing. Precursor: The years in the Wilderness: Negotiating Dissent: Homeopathy and Anti-Vaccinationism at the Turn of the 20th Century, by Nadav Davidovitch. Making Friends for 'Pure' Homeopathy: Hahnemannians and the Twentieth-Century Preservation and Transformation of Homeopathy, by Anne Taylor Kirschmann. Revisiting the 'Golden Age' of Regular Medicine: The Politics of Alternative Cancer Care in Ontario [Canada], 1900-1950, by Barbara Clow. Science and the Shadow of Ideology in the American Health Foods Movement, 1930s-1960s, by Michael Ackerman.

Intersections: Allopathic Medicine Meets Alternative Medicine: 'Voodoo Death': Fantasy, Excitement, and the Untenable Boundaries of Biomedical Science, by Otniel E. Dror. Western Medicine and Navajo Healing: Conflict and Compromise, by Wade Davies.

Contesting the Cold War Medical Monopoly: Sister Kenny Goes to Washington: An Unorthodox Nurse, Polio, and Medical Populism in Postwar America, by Naomi Rogers. 'It Could Happen Here': California Housewives, Anti-Communism and the Alaska Mental Health Bill of 1956, by Michelle M. Nickerson. 'Not a so-called democracy': Antifluoridationists and the Fight Over Drinking Water, by Gretchen Ann Reilly.

Contemporary Practices / Contemporary Legacies: Engendering Alternatives: Women's Health-Care Choices and Feminist Medical Rebellions, by Amy Sue Bix. Inside-Out: Holism and History in Toronto's Women's Health Movements, by Georgina Feldberg. A Quiet Movement: Orisha and the Healing of People, Spirit, History, and Community, by Velana Huntington. The Politics and Poetics of 'Magazine Medicine': New Age Ayurveda in the Print Media, by Sita Reddy. Complementary and Alternative Medicine Cancer Therapies in Twentieth- Century North America: The Emergence and Growth of a Social Movement, by David J. Hess. Beyond the Culture Wars: The Politics of Alternative Health, by Matthew Schneirov and Jonathan David Geczik.

Conclusions: Contemporary Anti-Vaccination Movements in Historical Perspective, by Robert D. Johnston. From Cultism to CAM: Alternative Medicine in the Twentieth Century, by James C. Whorton.

Soy is mentioned on pages 163-64, 174, 177, 178, 179, 348.

2927. Veer, Christine. 2004. Un aliment aux mille vertus: le miso [A food with a thousand virtues: Miso]. Brossard, Quebec, Canada: Pure Simple Nutrition. 46 p. 14 cm. [Fre]* Address: Quebec, Canada.

2928. Herring, Sandy. 2005. The Solae Branded Products program (Interview). *SoyaScan Notes.* Jan. 5. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** For a product to become part of the Solae Branded Partners program, the manufacturer must agree to two things: (1) To put the Solae logo (of at least a minimum size) on the product. (2) To include a minimum amount of Solae brand isolated soy protein (ISP) in the product. Usually Solae's advertising program ("Protein in Unexpected Places") promotes some of the Branded Partners' products. The makers of some products that do contain Solae might decide not be part of the Branded Partners program because (for example), the package might be too small to include the logo, the amount of protein that gives the maximum acceptability and profitability might be less than Solae requires.

In the past, many products contained ISP for its functional properties, such as being a good binder or emulsifier. The new program is designed to add value to consumer products by making Solae a "characterizing ingredient" and by advertising that the product contains Solae. Before Solae approaches a potential new customer about "a co-branding opportunity," they do a great deal of consumer research and market research about the concept of a product that contains Solae–its acceptability and how the new product or product concept "would resonate with their consumers." Solae presents their ideas of how the ad might look, the packaging might look, etc.

A media release (faxed by Sandy to Soyfoods Center) lists the following 16 branded products: 8th Continent Soymilk (www.8thcontinent.com), Snapple-A-Day Meal Replacement Beverages (www.snappleaday.com), V8 Splash Smoothies (www.v8juice.com), Gardenburger Meat Alternatives (www.gardenburger.com), Mori-Nu Tofu (www.morinu.com), Yves Veggie Cuisine (www.yvesveggie.com), NuGo Bars (www.nugonutrition.com), DelightFull Meal Replacement & Snack Bars (www.affinta.com), DelightFull Smart Snax (www.delight-full.com), Hormel Health Labs Great Shake & Great Shake Plus (www.hormelhealthlabs.com), Perky's 100% Natural Nutty Grains & Soy Cereal (www.pacgrain.com), Natural Harmony Foods SoyLean (www.soylean.com), So Good Soymilk (available in Canada) (www.so-good.com), Linda McCartney Spicy Peanut Pasta with Vegetarian Chicken (www.linda-mccartney.com), Body Choice Premium High Protein Cookies (www.bodychoicenutrition.com), El Burrito Meat Alternatives (www.elburrito.com).

Note: The Solae Company Logo and Solae* are trademarks or registered trademarks of Solae LLC. Address: The Solae Co., P.O. Box 88940, St. Louis, Missouri 63102. Phone: 314-982-2680.

2929. *Food Processing (Chicago).*2005. Faux fowl foods with full flavor. 66(1):s26. Jan.
• ***Summary:*** "Gardein is a high-moisture vegetable protein product with all the taste and texture of meat." It contains more protein per ounce than meat, but is low in fat, and is fortified with vitamins and minerals. "It is made from non-GMO soy protein, wheat gluten, carrot fiber and pea protein."

Contact Garden Protein International, Richmond, British Columbia. Phone: 604-278-7300. www.gardenprotein.co.

2930. McLean, Lisa. 2005. Producers, come to Toronto March 2 (News release). Feb. 21.
• ***Summary:*** "Guelph, Ontario–Ontario's seven grains and oilseeds organizations are expecting all their members to make their voices heard by attending the rally at Queen's Park [site of the Ontario Legislative Building] in Toronto that is being sponsored by commodity organizations, and general farm organizations on Wednesday, March 2.

The rally–being called "The One Voice March"–is the first of its kind where so many of Ontario's agriculture sectors and other general farm organizations are working with the Ontario Federation of Agriculture (OFA) to call attention to the crises currently being faced by farmers across the province."

Among the demands that OFA will take to the legislature are: (1) A "Grain Market Disaster Payment." Producers need a $300 million infusion. (2) An adequately funded, effective replacement for MRI; and (3) Refinements to CAIS.

Note: A follow-up news release sent by McLean on March 2 states: "Ontario's grains and oilseeds sector is facing a drastic price collapse that have [sic] sunk prices to a 25-year low. The prices of fuel, electricity, and other resources that allow growers to plant crops have risen far beyond the value of the harvest." In Ontario, the AgriFood industry is the 2nd largest next to the auto industry.

2931. *Ontario Soybean Growers Soybean Report.*2005. First joint conference and OSG AGM in March, Feb. p. 1.
• ***Summary:***

"Monday, March 7, 1pm: Soybean growers are invited to attend OSG's Annual General Meeting on Monday, March 7 at 1pm at the London Convention Centre (following OCPA's AGM). Anyone who grows and markets soybeans in Ontario is eligible to vote on resolutions brought forward at the meeting.

"Tuesday, March 8: Join us for Ontario Corn Producers' Association (OCPA), the Ontario Soybean Growers (OSG) and the Ontario Wheat Producers' Marketing Board (OWPMB) first joint conference, hosting an excellent speaker program and trade show for cash crop farmers. For registration details contact the Ontario Wheat Producers' Marketing Board 519-767-6537." The full conference program (with speakers) is given. Address: Guelph, ONT, Canada.

2932. Ladouceur, Andre. 2005. Installing a soymilk plant in Iran (Interview). *SoyaScan Notes.* March 10. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** André has just returned from Iran, where (from Feb. 18 to March 8, 2005) he installed and commissioned a $16 million soymilk plant (VS4000), made by ProSoya, with a capacity of 4,000 liters/hour of soybase, plus mixing stations. Next to that plant he installed a Tetra Pak aseptic packaging line. The plant, located near the capital city of Tehran, expects to start making soymilk commercially (i.e. launch their first products) in 1-2 months. They are now developing flavors and products suited to Iranian consumers. The soybeans used to make the soymilk will be imported from Canada. The plant is owned by a corporation named Soya Sun; the majority of the shares are owned by Iranians, but ProSoya, and he, and other Canadians also own shares. ProSoya contracted with him to do this work in Iran.

For the past 10 years, Andre has lived in Ontario, where he worked for ProSoya doing R&D and commissioning their larger soymilk plants worldwide, and especially in Russia. He also installed a 2,000 liter/hour soymilk plant in Israel. He is now starting a consulting company in Toronto, Canada named MaxSoy Canada Inc.; he is a soy operation specialist, and now lives on Vancouver Island in British Columbia. His second company is Soy Joy Health Products Development, Inc.; he develops products from soy, such as soy kefir.

Talk with Andre. 2005. June 6. He does not know whether or not this company has started to sell soymilk in Iran. They owe him $3,000, and they have broken two contracts with him to do further work. Address: Founder, I&PS, 305b Dogwood Dr. Ladysmith, BC, Canada V9G 1T5. Phone: (250) 616 1714.

2933. Ladouceur, Andre. 2005. Industry and Production Systems Consulting Inc. Business introductory. Ladysmith, BC, Canada. 7 p. Unpublished typescript. March 16.
• ***Summary:*** Contents: Executive summary. Services to be offered. Management. Summary of qualifications. Relevant skills. Achieved travel history and experience (1997-2004). Service (rates and fees). Marketing strategy: "Soy Operations Specialist." Address: Founder, I&PS, 305b Dogwood Dr. Ladysmith, BC, Canada V9G 1T5. Phone: 250 616 1714.

2934. Froehlich, George. 2005. Chinese market beckons B.C. business: But exporters told they need to take risks. *Business Edge (Canada).* March 17. p. 6.

2938. *Ontario Soybean Growers Soybean Report.*2005. April is soyfoods month. April. p. 1.
• ***Summary:*** "Soyfoods Canada is kicking off soyfoods month by promoting a new teaching kit. The teaching kit–developed by Ontario Agri-Food Education (OAFE) and Soyfoods Canada and being distributed by OAFE–is based on Ontario's curriculum for grades four to six, and is available nationwide from agriculture in the classroom organizations. Touching on many curriculum areas, students are encouraged to write stories about how soybeans are processed, calculate the amount of soybean meal made from one bushel, and learn the nutritional breakdown of various foods made from soy.

"Once all 2,000 of the reusable teachers kits are distributed, they are expected to reach up to 50,000 students. Funding for this project was provided in part by Agriculture and Agri-Food Canada through the Agricultural Adaptation Council's CanAdapt Small Project Initiative." Address: Guelph, ONT, Canada.

2939. Bunge North America. 2005. History (Website printout–complete). http://www.bungenorthamerica.com/about/history.htm. 7 p. Printed May 12.
• ***Summary:*** A good chronology with many photos. 1818-Johann Peter Gottlieb Bunge founds Bunge & Co. in Amsterdam, the Netherlands, as an import/export trading company. 1859–Edouard Bunge, Johann's grandson, develops the company into one of the world's leading commodity trading firms. 1884–Ernst Bunge, Edouard's brother, emigrates to Argentina where he and his partners found an associated company, named Bunge y Born, to trade in Argentina's grain exports.

1905–Bunge begins its global expansion. It starts to invest in Brazil. 1918–Bunge establishes a presence in the United States to trade in raw agricultural commodities. 1923–Bunge North America Grain Corporation is incorporated in New York as a privately-held company. 1935–Bunge North America Grain Corporation purchases its first sizeable grain facility, buying an old wooden rail terminal in Midway, Minnesota and constructing a new concrete terminal alongside it.

1967–Bunge Corporation constructs its first soybean processing plant at Destrehan, Louisiana (an aerial photo shows the plant).

1992- Bunge Corporation partners with ContiQuincy Export Company, a joint venture between Continental Grain Company and Quincy Export, Inc. to promote export sales of soybean meal produced by Bunge Corporation's Soybean Processing Division and Quincy Soybean. The joint venture is disbanded in 1999 following the creation of Bunge Global Markets.

1998–Bunge Corporation's Soybean Processing Division opens a soybean crusher-refiner with the largest oil extractor in the U.S. at Council Bluffs, Iowa, and builds an integrated refinery at its Decatur, Alabama, crushing facility. 1999–Bunge Limited moves its global headquarters from Sao Paulo, Brazil, to White Plains, New York.

2000–Bunge Limited announces its intention to go public (IPO) within two years. Bunge Global Markets, a sister company of Bunge Corporation, is established to pursue export trade opportunities in bulk commodities, thereby extending the global reach of Bunge Corporation.

2001–Bunge Corporation changes its name to Bunge North America, highlighting the key role the Company plays in executing Bunge Limited's global strategy and reflecting its North American experience and the geographic focus of its operations.

2001 Aug. 2–Bunge Limited, Bunge North America's parent company, goes public. It issues 17.6 million shares in its initial public offering (IPO) on the New York Stock

Exchange (NYSE: BG), ending almost 200 years as one of the largest privately held companies in the world.

2002 Oct. 15–Bunge Limited announces that it has purchased a controlling interest in Cereol S.A. [formerly owned by Ferruzzi], an oilseed processor and manufacturer of soy ingredients with operations in Europe and North America. As a result of this transaction, Bunge North America will integrate its operations with Cereol's North American oilseed businesses–Central Soya in the United States and CanAmera Foods in Canada.

2940. *Ontario Soybean Growers Soybean Report.*2005. Global Alliance for Liberalized Trade in Food and Agriculture. May. p. 1.

• ***Summary:*** "The Canadian Agri-Food Trade Alliance (CAFTA), along with 38 other organizations from 15 countries, participated in the launch of the Global Alliance for Liberalized Trade in Food and Agriculture in Geneva on April 19.

"'This new alliance will be an important voice supporting more open trade for the entire agriculture and food value chain, from producers to processors, food services and consumers,' says Liam McCreery, President of CAFTA. " The Global Alliance's declaration calls for negotiators to heed the Doha mandate by agreeing to commit to:

"Deep cuts to overall trade distorting subsidies;

"An early date for the elimination of all export subsidies;

"Enhanced market access for all products, including 'sensitive' products, through deep and harmonizing tariff cuts and substantial expansion of minimum access requirements;

"Special and differential treatment for developing countries that also provides them flexibility to reach their full competitive potential; and

"Rules based on sound science [re: genetic engineering] to avoid their use as non-tariff barriers.

"The full declaration and more information on CAFTA can be found at www.cafta.org." Address: Guelph, ONT, Canada.

2941. Ag Processing Inc. (AGP). 2005. Ag Processing Inc. (AGP). (Website printout–part). http://www.agp.com. Printed June 27.

• ***Summary:*** Home: About AGP (2 p.). AGP News. Employment. E-store. Links. Contacts. Map / Hotels. Insurance. Products and services: Soybean processing, export, AminoPlus, food, grain, industrial products, feed, Protinal / Proagro. AGP News. Contract / Premium opportunities with AGP Member Cooperatives. MaxYield Cooperative announces partnership agreement with AGP. 2004 AGP Annual Report.

About AGP: A farmer owned company. Introduction. Formation in 1983, composition, and ownership. AGP's distinctions. AGP's mission. AGP's reason for existence. Our cooperative motto is "Partners in food production." "Since its formation in 1983, AGP has been committed to the success of its owners. Today, that is 222 local cooperatives and six regional cooperatives, representing 250,000 farmers from 16 states throughout the United States and Canada.

"AGP operates nine soybean processing plants including six plants in Iowa, located at Eagle Grove, Emmetsburg, Manning, Mason City, Sergeant Bluff, and Sheldon. Other AGP processing plants are located at Dawson, Minnesota, St. Joseph, Missouri, and Hastings, Nebraska. The Hastings plant is the first farmer-owned soybean processing facility in that state. AGP holds the distinction of being: (1) The largest 'cooperative' soybean processing company in the world. (2) The fourth largest supplier of refined vegetable oil in the United States."

Company history: A cooperative (3 p.). "In 1983, Land O'Lakes, Inc., a Minnesota corporation, Farmland Industries, a Kansas Corporation, and Boone Valley Cooperative Processing Association, an Iowa corporation doing business only in soybean processing, entered into a joint venture agreement to form one cooperative soybean processing company. On August 31, 1983, Land O'Lakes Inc. and Farmland Industries combined their soybean processing plants located at Dawson, Minnesota; Fort Dodge, Iowa; Sergeant Bluff, Iowa; St. Joseph, Missouri; and Van Buren, Arkansas into a new company.

"Shortly after the reconfiguration of 1983, the new company name 'Ag Processing Inc a cooperative' was adopted with the corporate logo AGP as our company trademark.

In December 1985, the company acquired additional processing plants at Manning Iowa and Mason City, Iowa from American Grain and Related Industries (AGRI).

"Soybean processing: Soybean processing is AGP's primary business. AGP is the largest soybean processor in Iowa and the fourth largest soybean processor in the United States based on capacity. Additionally, AGP is the largest *cooperative* soybean processor in the world. Every month, AGP plants acquire more than 18 million bushels of soybeans for processing. That's the equivalent of the soybeans grown on 15 thousand acres per day. AGP annually purchases and processes more than 5.5 million acres of members' soybeans. AGP continues to expand crushing capacity with the addition of plants in Emmetsburg, Iowa (1997) and Hastings, Nebraska (1999).

"In 1985, AGP began refining soybean oil by purchasing equipment for installation in an existing building located at the St. Joseph, Missouri, soybean processing plant." AGP's refining business has since greatly expanded. AGP also makes ethanol from corn.

"Methyl esters: In 1997, AGP expanded in many areas with the completion of a soybean methyl ester plant in Sergeant Bluff, Iowa." The products are sold under the SoyGold brand and "are used in a wide variety of applications including soydiesel fuel, solvents, and spray adjuvants (used to enhance the effectiveness of agricultural chemicals)."

AGP 2005 contract programs: Vistive soybean premiums, Non-GMO contracts (Manning, Iowa). AGP guaranteed premium program: Rate table. Address: Omaha, Nebraska.

2942. Eaglesham, Allan; Wildeman, Alan; Hardy, Ralph W.F. 2005. Agricultural biotechnology: Finding common international goals. *NABC Report (National Agricultural Biotechnology Council, Ithaca, New York).* No. 16. 324 p. (Proceedings of the NABC 16th annual meeting, held 13-15 June 2004 at the University of Guelph, Ontario, Canada).
• ***Summary:*** The common goals are: "Diminish the ecological footprint. Improve the quality of life. Ensure safe and healthy food." But are these the real issues? An excellent critique is found on pages 97-99.

The National Agricultural Biotechnology Council provides an open forum for the discussion of issues related to the impact of biotechnology on agriculture. Established in 1988, it is a consortium of not-for-profit agricultural research, extension and educational institutions. Address: 1. Executive Director, NABC, Boyce Thompson Inst., Room 419, Tower Road, Ithaca, NY 14853; 2. Vice President for Research, Univ. of Guelph; 3. NABC President. Phone: 607-254-4856.

2943. *Ontario Soybean Growers Soybean Report.*2005. CAFTA campaign stresses importance of international markets. June. p. 1.
• ***Summary:*** "OSG Director and Bruce County farmer Jim Gowland is among the six Canadians to be featured with his family in the 'My Future is Global' campaign from the Canadian Agri-Food Trade Alliance (CAFTA).

"The 'My Future is Global' campaign is designed to highlight the importance of international markets to Canada's agriculture and agrifood sector. Canada is the world's third largest exporter of agriculture and food products. More than 90% of Canada's farmers, representing 80% of farm cash receipts, rely on international markets. And more than a million Canadian jobs depend on trade.

"Yet the sector continues to be forced to compete in a market that is severely distorted by subsidies and access barriers."

"'We are really happy to be telling the positive story of trade to Canada's decision makers,' says CAFTA President Liam McCreery. 'We want Canada's decision makers and negotiators to understand how important trade is to the Canadian agriculture and food sector, and how innovative and competitive our industry is. But we also want them to understand that this very vibrant industry is relying on them to negotiate aggressively at the World Trade Organization to remove market distortions. Our future is global, and it's in their hands.'"

A photo shows Jim Gowland and his family. "Jim's specialty soybeans are found in tofu in Japan. They are also considered special health foods in Europe." Address: Guelph, ONT, Canada.

2944. *Ontario Soybean Growers Soybean Report.*2005. Ontario farmers kick off postcard campaign for Risk Management Program. July. p. 1.
• ***Summary:*** "Ontario grain & oilseed producers are gearing up for a fight for a larger piece of the provincial funding pie for agriculture with a large-scale postcard campaign aiming to involve farmers, rural citizens, and the general public.

"The postcards, reading 'Farmers Feed Cities,' have a clear message for the Premier: 'Please increase support to Ontario Agriculture and the Rural Economy. I encourage the Premier to support the Risk Management Program (RMP) for Ontario's farmers.'

"'We're facing a potentially long process with government to get funding for this program, and we need support from growers, other farm organizations, and the general public,' says Greg Devries, Chair of Ontario Soybean Growers. 'It's vital that we have grassroots involvement in this lobby campaign–growers need to be ready to get involved when their commodity boards call on them for help.'

"The Committee plans to collect signed postcards throughout the summer and personally deliver them to the Premier in the Fall. This is the first initiative in a series of plans to garner support for the program.

"Committee representatives have been meeting regularly with senior government officials and staff members. They hope to meet with the new Minister and Deputy Minister in the coming weeks.

"The Ontario Grain & Oilseed Safety Net committee also plans to work with the general farm organizations on the Unified Voice movement to support other commodity groups in their work with government." Address: Guelph, ONT, Canada.

• ***Summary:*** "Organic certification has always been a system guaranteeing that all the production, handling and processing of an organic product has been done in accordance with a practice standard. It has never claimed to be a purity standard and makes no claims as to purity of the certified products." Address: Founder and President of Nature's Path Foods, an organic food manufacturer based in Richmond, BC, Canada.

2947. Jackson, Harry. 2005. Recollections of Irving Rosen and Quincy Soybean Products Co. Part II (Interview). *SoyaScan Notes.* Sept. 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: What kind of a man was Irving? Hal recalls: "He was a wonderful man, a sweet, kind, quiet guy who worked very hard. He came from a very poor family on the west side of Chicago. I hear he had only 5th grade education. He arrived at work early each day, was a hands-on guy, low key with a low voice, never put on a show about anything, not obtrusive at all, intelligent. He wasn't the kind who would put it in the newspaper every time they started up something; he sort of kept things quiet. He didn't want to be in the news. Like the other Sinaikos, he was a self-made man. He joined the local clubs in Quincy because our people were not well accepted in those days–the good old establishment. He had a hell of a time getting the funds to build the original plant. No bankers would loan him money–except for one man at the State Street Bank, which is why I go there still. He joined the Rotary Club and all that sort of thing but he was still an unknown. He was one of the first people in Quincy to hire black people at his plant.

"Alex Sinaiko, Joe's father, was the big guy in the family; he and his sons were in the grain business in Madison, Wisconsin. The Sinaiko brothers shared people as well as information. Joe had some very fine people who came in and installed equipment. One man was Louis Langhurst, a wonderful man who designed flaking mills and knew a lot about soybean plants. They don't make 'em like that any more." Another guy was Howard Devine from Iowa. He sold the Devinolator, a conveyor that had metal plates that moved the flakes into the extractor, and also brought the extracted flakes out of the desolventizer–without mashing the flakes or creating any sparks. Devine's product was similar to that of Linkbelt. Another excellent equipment supplier was Les Mauer from St. Louis, Missouri; he sold conveyors and helped do plant layout; he would climb all over the equipment and the plant, and he knew how everything worked. "We had wonderful people that we worked with–many of them little guys who Joe Sinaiko helped to get started."

How did Irving make money in those early days of soybean processing? Crushing margins, set by the government, were good during World War II. So they made good money during the war. "They got in the right business ahead of time."

The Moorman company, which was headquartered in Quincy, bought soybean meal for the livestock feed business from Irving. Then they decided to expand into the soybean processing business. Irving felt that the time was right for him to retire. So Irving sold his company to them in Sept. 1961 when he was about age 60 and in good health; Hal stayed on until 31 Dec. 1980. Marcella, Irving's wife, had died on 8 March 1958 in Quincy (of a brain tumor), even though Irving, a very loving husband, had done everything he could to save her. Shortly after her death, he moved to Chicago, gave much more responsibility for Quincy Soybean to other people, and visited from time to time. After about 2 years he met a widow named Ida; they were married and continued to live in Chicago. He and Ida vacationed in Miami Beach, Florida, and Hal thinks he contracted hepatitis B there. This turned into liver cancer. He went to the Mayo Clinic in Minneapolis, Minnesota, for treatment. It was important to Irving that, in his will, the money he made from the sale of his business be distributed equally among his four children. Irving died on 18 April 1964 at the Mayo Clinic in Rochester, Minnesota, of liver cancer.

The Moormans ran the company in a totally different way than Irving had. Hal recalls that they were Christian evangelists; he was the only Jewish guy that ever worked there. Some of the old-timers were very anti-Semitic. "I wasn't that comfortable." Mr. Hulsen, later the president, was very good to Hal. Moorman brought in an outsider from Canada, who made millions for arranging the sale of the company to ADM, then left the company. After ADM bought the company in 1998, they put up ADM stock for the profit-sharing plans. But when the ADM stock dropped from 24 to 12, the Moorman retirees who had profit-sharing

and pension plans lost about half their money. This was very upsetting to all the old-timers who had been there for 30-40 years. Some of them had hundreds of thousands of dollars in these profit-sharing plans.

At Quincy Soybean, Hal worked for Ted Bean, who came to Quincy from Lauhoff Grain in Danville, Illinois. "Ted was one of the most astute marketing men I ever met." He kept us out of the soy protein ingredients. business. Things were done very efficiently and people worked very hard, so that Quincy made more money than Moorman's other divisions. Quincy had a very efficient plant and excellent marketing–from Ted Bean. Joe taught his friends how to save money by buying used equipment; Hal traveled all over the world buying used equipment–and a lot of it was just as good or better than new. Every year Quincy increased its volume to gain efficiency. When Hal retired on 31 Dec. 1980, Quincy was the single largest soybean processing plant on one site in the United States. They had solvent extraction plants on both sides of the railroad tracks. The oil refinery is still there.

Quincy used a very unusual process to remove the hulls from soybean meal to make 50-51% protein meal. Starting in about the mid-1960s, they removed the hulls at the tail end of the process using gravity separation vibrating tables named "Sutton tables." Tail-end dehulling cost much less than the other technology which dehulled at the front end. There were 5-6 Sutton tables in the Quincy plant; they were shaped somewhat like a sloping triangle with air coming up from underneath. The heavy material came off the at top and the light fluffy stuff (like the soybean hulls) came off at the bottom. Quincy was one of the few plants in the industry that used Sutton tables; the plant never used expensive front-end dehulling. Louis Langhurst started his own company that made excellent low cost cracking mills and flaking mills.

Ike Sinaiko started a small oilseed crushing company (using expellers) in California. He definitely crushed soybeans; Hal went there and saw them being crushed. Ike was a very sweet guy. Irving Field, Ike's son in law, took over the company from Ike. Note: Liberty Vegetable Oil Co. in Norwalk, California, started in 1948.

Hal remembers Joe Sinaiko as "tough and smart. He was all business. He was the brains, but he didn't lollygag around [fool around]. He knew what he wanted to do and he knew how he wanted to do it. He was the lead guy and he had a lot of weight on his shoulders. It's not easy to be a pioneer."

Hal offers to help Soyfoods Center do research on the early history of Quincy Soybean Co. He has called the French Oil Mill Machinery Co. (Piqua, Ohio) and they have offered to look in their archives for the date that Quincy Soybean ordered their equipment. He will also work with the local newspaper and historical society.

Note: In Nov. 2005 Hal sent Soyfoods Center a wealth of valuable documents on the history of Quincy Soybean. Adrienne Rosen, wife of Norman Rosen (Irving's son, who now has Alzheimer's), sent many early and very interesting photographs. Address: Quincy, Illinois.

2948. *Ontario Soybean Growers Soybean Report.*2005. New Canadian Soybean Council promotes grower strengths across provinces. Sept. p. 1.
• ***Summary:*** "Organizations representing soybean growers in Ontario, Manitoba and Quebec are now formally working together with a goal of improving the profitability of Canadian soybean producers.

"The Canadian Soybean Council consisting of representatives from the Ontario Soybean Growers (OSG), the Manitoba Pulse Growers Association (MPGA), and the Federation des Producteurs de Cultures Commerciales du Quebec (FPCCQ) will initially focus on identifying and developing new export markets for Canadian soybeans.

"The Council's first initiative is the formation of an Export Committee, consisting of representatives from the three provinces and the Canadian Soybean Export Association, who will direct export market development activities.

"The Council's first market development activity is an incoming technical course from Asia, coordinated by the Canadian International Grains Institute. The course will tour sites showcasing Canada's soybean industry from September 26 to October 5." Address: Guelph, ONT, Canada.

2949. *Ontario Soybean Growers Soybean Report.*2005. We're moving! Sept. p. 1.
• ***Summary:*** "Ontario Soybean Growers will be moving into the Ontario AgriCentre on September 30, 2005. The organization will increase efficiencies by sharing office space with the Ontario Corn Producers' Association, Ontario Wheat Producers' Marketing Board, and the Ontario Canola Growers' Association."

OSG's phone and fax numbers will remain the same, and mailing address is:

Ontario Soybean Growers
Ontario AgriCentre, Suite 201
100 Stone Rd. W Guelph, ON N1G 5L3
Phone: 519-767-1744. Fax: 519-767-2466.
ww.soybean.on.ca. Address: Guelph, ONT, Canada.

2950. McLean, Lisa. 2005. Re: Fred Brandenburg, Wendy Jahn, Rob Black, and Ontario Soybean Growers (OSG). Letter (e-mail) to William Shurtleff at Soyfoods Center, Oct. 3. 1 p.
• ***Summary:*** Fred Brandenburg left OSG in the spring of 2005. After some health problems several years ago, he had stepped down as General Manager. Wendy Jahn has held the

position for the two years. Rob Black has now taken Wendy's position as General Manager, effective Nov. 7, 2005. Rob was most recently executive director of 4-H Ontario, where he worked for 5 years. Previously he worked with the Ontario Ministry of Agriculture, Food and Rural Affairs for 15 years. A brief bio of Rob is given.

Fred is presently with Agriculture Canada. Address: Communications Coordinator, Ontario Soybean Growers, Guelph, Ontario, Canada.

2951. AGP–A Cooperative. 2005. Annual report to members: Adding value to your harvest. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 40 + 20 p. 28 cm.

• ***Summary:*** Net sales for 2005 (year ended Aug. 31) were $2,349.849 million, down 11.8% from $2,663.632 million in 2004. Earnings from continuing operations (before income taxes): $50.656 million, up 75.0% from the $28.941 million in 2004.

The report begins with a 2-page list of AGP's members (as of 31 Aug. 2005). They are located in the following states (listed alphabetically): Arkansas (1). California (1). Illinois (1). Iowa (87). Kansas (23). Michigan (1). Minnesota (40). Missouri (3). Nebraska (28). North Dakota (1). Oklahoma (1). South Dakota (30). Utah (2). Wisconsin (4). Saskatchewan, Canada (1).

"Double vegetable oil refining capacity at Hastings, Nebraska plant... New product launches: Vistive low-linolenic soybean program in the U.S." (p. 5).

"Renewable fuels: In 1996, AGP became the first company in the industry to construct a methyl ester production plant that exclusively utilized soybean oil. That plant, at Sergeant Bluff, Iowa, not only produces biodiesel but also products for industrial uses such as solvents and agricultural spray adjuvants... The biodiesel industry grew from 25 million to approximately 70 million gallons this fiscal year and is expected to increase to at least 400 million gallons in the next two to three years. In part, the increase will be due to passage of the federal energy bill. New state biodiesel legislation also will have an impact. In Minnesota, for example, a new law requires that all diesel fuel sold in the state contain a two percent vegetable oil blend, known as B2. Illinois also ordered government fleets to use biodiesel beginning in 2006, and similar standards are being considered in at least seven other states.

"In light of these circumstances the AGP Board of Directors approved expansion of the Sergeants Bluff plant to more than double biodiesel capacity. The project was completed this year, giving AGP the ability to produce over 15 million gallons of biodiesel per year... AGP was the first and remains the industry leader in methyl ester and biodiesel production. AGP markets its biodiesel, branded as SoyGold, through its wholly owned subsidiary Ag Environmental Products LLC" (p. 20-21).

AGP now has European offices in: Antwerp, Belgium. Barcelona, Spain. Komarno, Slovakia. Pecs, Hungary. Address: Omaha, Nebraska. Phone: (402) 496-7809.

2952. **Product Name:** O Organics Organic Soymilk [Plain, Vanilla, Chocolate].
**Manufacturer's Name:** Lucerne Foods, Inc. (Safeway) (Distributor). Made in Canada.
**Manufacturer's Address:** P.O. Box 99, Pleasanton, CA 94566-0009.
**Date of Introduction:** 2005. October.
**Ingredients:** Chocolate: Filtered water, organic whole soybeans, organic cane sugar, organic cocoa, tricalcium phosphate, sea salt, carrageenan, zinc gluconate, niacin, pantothenic acid, riboflavin (vitamin B-2), vitamin B-6, vitamin A palmitate, thiamine mononitrate (vitamin B-1), folate, vitamin D-2, vitamin B-12.
**Wt/Vol., Packaging, Price:** Half-gallon Tetra Pak ESL gable-top carton. Retails for $3.79 (2006/07, Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Product with Label purchased at Safeway supermarket in Lafayette, California. 2006. July 31. 3.75 by 3.75 by 9½ inches. Brown, blue, yellow, light green, on white. Front panel: "Cholesterol free. Vitamin fortified. Calcium enriched." A color photo shows chocolate soymilk being poured into a glass. Top front: "Lactose free. Contains 40 mg of isoflavones per serving." Sometimes on sale for $2.49. Nice flavor.

Talk with Sherry at Safeway Corporate Brands. 2006. Aug. 2. This line of 3 flavors was introduced in the USA in Oct. 2005 and in Canada in Dec. 2005.

2953. Hain Celestial Group, Inc. (The). 2005. Annual report 2005: A healthy way of life. Melville, New York. 12 + 62 p. Dec. 28 cm.

• ***Summary:*** Net sales for the year ended 30 June 2005 were $619.967 million, up 13.9% from 2004. Net income in 2005 was $21.870 million, down 20.1% from 2004.

Most of the report is Form 10-K/A. Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (40 p.). Irwin Simon, the founder and CEO, age 46, had the following annual compensation: Salary: $980,000. Bonus: More than $1,000,000. Stock options: 300,000 shares. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2954. Lyddon, Chris. 2005. Global grain trade review. *World Grain* 23(12):34-38, 40-41. Dec.

• ***Summary:*** For soybeans in 2004-05, the top exporters (in 1,000 tonnes [metric tons]) are: 1. USA 29,801. 2. Brazil 20,538. 3. Argentina 9,600. 4. Paraguay 2,600. And Canada 1,025. Total world exports: 65,034.

Top importers: 1. China 25,700. 2. E.U.-25 16,000. 3. Japan 4,300. 4. Mexico 3,500. 5. Taiwan 2,300.

Statistics are also given for soybean meal.

The five leading U.S. seaports for imports and exports of all grains are (in million tonnes): 1. South Louisiana 44.169. 2. Houston, Texas 5.273. 3. Portland, Oregon 3.548. 4. Duluth, Minnesota 2.573. 5. Corpus Christi, Texas 1.687. Address: World Grain's European Editor, chris.lyddon@ntlworld.com.

2955. Nature's Path. 2005. [Chronology of Lifestream and Nature's Path: 1952–2005]. Richmond, BC, Canada. 8 p.
• ***Summary:*** In the upper left corner of each colorful page is the Nature's Path oval logo. At the lower right is the text "Nurturing People, Nature & Spirit." On page one are described events from the years 1952, 1971, 1977, and 1980–describing the history of Lifestream Natural Foods, Ltd. A color oval photo shows Arran Stephens "holding the mother of all loaves" and smiling broadly.

The remaining 7 pages contain a chronology of Nature's Path. On the last page are 3 entries for the year 2005. Address: 9100 Van Horne Way, Richmond, BC Canada V6X 1W3.

2956. Brand-Miller, Jennie; Wolever, Thomas M.S.; Colagiuri, Stephen; Foster-Powell, Kate. 2005. The new glucose revolution: The authoritative guide to the Glycemic Index–The dietary solution for permanent weight loss. Emmaus, Pennsylvania: Rodale Press. xvii + 382 p. Subject index. Recipe index. 24 cm. [32 ref]
• ***Summary:*** Contents: Introduction. Part I: What is the glycemic index? 1. What's wrong with today's diet? 2. Why we all need carbohydrate? 3. All about the glycemic index. 4. Fats: Facts and fallacies. 5. The most frequently asked questions–Answered. Part II: Your guide to low-GI eating. 6. Making the change to a low-GI diet. 7. Cooking the low-GI way. 8. Recipes–Breakfasts, light meals, main meals, desserts, snacks.

Part III: The glycemic index and you. 9. The glycemic index and weight control. 10. The glycemic index and diabetes. 11. The glycemic index and hypoglycemia. 12. The glycemic index and heart health: The insulin resistance syndrome. 13. Children and the glycemic index. 14. The glycemic index and peak sports performance. Part IV: The glycemic index tables. The tables: An introduction and how to use them. Condensed tables. Comprehensive tables. Further reading: Sources and references. Glossary. Acknowledgments. About the authors.

"The right kind of carbohydrate can make an important contribution to the quality of your life." That is the essential message of this book, which is about the glycemic index, a physiologically based measure of carbohydrate quality, and the degree to which the carbohydrates in different foods will raise blood glucose levels. The newer idea of glycemic load is also relevant for everyone. The first book about the glycemic index (GI), titled *The Glucose Revolution* (1996) was written by these same authors. Carbohydrates that break down quickly during digestion have high GI values, and they raise blood glucose rapidly to a high level. Carbohydrates that break down slowly, releasing glucose slowly into the blood stream, have low GI values. Glucose is blood sugar. Low fat diets are automatically high in carbohydrate, But not all carbohydrates are the same. Are all starches good for health? Are all sugars bad? We all must look at carbohydrates in a whole new way!

A healthy diet leads to neither too much nor too little blood sugar. Extreme #1: Too much blood sugar. The typical American diet, which is high in refined carbohydrates (such as table sugar and white flour), results in too much blood sugar. This causes your pancreas to flood your body with the hormone insulin and makes it difficult for your body's cells to burn fat.

Extreme #2. Too little blood sugar. Diets low in carbohydrates cause blood sugars to plunge, which also makes your body stop burning fat. Instead it begins burning muscle tissue and converting it into blood sugar. You quickly begin to crave carbohydrates.

Low GI is less than or equal to 55. Moderate GI is 56-69. High GI is 70+.

Prevention says that "high-GI foods" (those with a GI of 70 or above) are bad. "Forget total carbs; its total GI that matters." There are good carbs (low-GI) and bad carbs. A low-GI diet is generally a healthy diet, a weight loss diet, and a diet with low risk of diabetes. A large and growing body of research now reveals that the real issue isn't how much fat or carbohydrate you are eating, but how that food affects your blood sugar. Eating high-GI foods causes sharp spikes in blood sugar. Since blood sugar is a readily available energy source, your body chooses to burn it as fuel, in place of fat. This means you are not burning fat, no matter how hard you exercise.

The Glycemic Index (GI) is a precise scientific ranking of foods based on how much they increase blood sugar levels during a 2-hour period after eating. Current methods of measuring GI use glucose (blood sugar) as the reference food, giving it a GI value of 100 by definition. The GI was first created as an aid to diabetics.

Low-GI foods: Fruits: Apples 40, banana 51, blueberries 40, cherries 22, grapefruit 25, orange 51. Vegetables: Asparagus, beans (all), broccoli, cabbage, lettuce, mushrooms, onions. Breads: Pumpernickel, rye, sourdough, whole wheat. Dairy products. Eggs. Nuts. Seeds.

Soyfoods are not discussed much in this book since they are low in carbohydrates. However: Recommendation 3 (p. 112-13): "Eat more legumes (beans, peas, and lentils) and use nuts (in small amounts) more frequently." Legumes, including soybeans, are inexpensive, low in calories, free of

unsaturated fat and cholesterol, filling. "Soybeans are particularly rich in ALA [alpha-linolenic acid, the plant form of polyunsaturated omega-3 fat] (the plant precursor of omega-3s) and also contain genistein–an anti-cancer phytochemical. Tofu (soy bean curd) is an easy way of using soy. It has a mild flavor itself but absorbs the flavors of other foods, making it delicious when its been marinated in soy sauce, ginger and garlic and tossed in a stir-fry."

The section on the GI values of different food types states, under legumes (p. 129): "Soy beans (GI value of 14-20). These have one of the lowest GI values, possibly due to their higher protein and fat content. Their viscous [soluble] fiber, as in other legumes, reduces physical availability of starch to digestive enzymes."

On p. 329 is a table showing the GI value and glucose load per serving of various soy milks and soy yogurts (mostly from Australia). Similar values are given for soy beans (p. 337).

Concerning ALA (p. 115): "Our bodies can convert this plant-based omega-3 fat to EPA [eicosapentanoic acid, an essential omega-3 fatty acid found in fatty fish and shellfish] and DHA [docosahexanoic acid, another essential omega-3 fatty acid found in fatty fish], but it takes about 10 grams of ALA to yield 1 gram of DHA and EPA."

Is this a weight-loss book that does not mention calories? No, although calories and energy are considered less important than GI (see p. 133, 202, 205). Address: PhD, Prof. of Nutrition, Univ. of Sydney, Australia; 2. MD, PHD, Prof., Dep. of Nutritional Sciences, Univ. of Toronto, Canada.

2957. Koerbitz, Werner. 2005. Status of biodiesel in Asia, the Americas, Australia, and South Africa. In: G. Knothe, J. Van Gerpen and J. Krahl, eds. 2005. *The Biodiesel Handbook.* Champaign, Illinois: AOCS Press. ix + 302 p. See p. 211-18. [7 ref]

• ***Summary:*** Contents: Introduction. The Americas: Argentina, Brazil, Canada, Nicaragua. South Africa. Australia. Asia: China, India, Japan, Malaysia, Philippines, South Korea, Thailand. Address: Austrian Biofuels Inst., Vienna, Austria.

2958. Monson, Shaun. 2005. Earthlings (Motion picture) USA: Nation Earth. 95 minutes. Narrated in English by Joaquin Phoenix and Persia White. Music by Moby. [3 ref]

• ***Summary:*** Contents: 1. Pets.

2. Food. Six billion animals are killed for food each year.

Kosher slaughter: Done with huge machines, not as you might imagine. Kosher prohibitions vs. actual practice.

Veal: Calves chained in a crate for 4 months before slaughter. Fed a mineral deficient diet.

Pigs: Gestation crates, cannibalism, waste pits, tail docking, ear clipping, teeth cutting castration (on done on baby pigs without anesthetics), electric prods, throat slitting, boiling, hair removal and drowning.

Poultry: Americans consume as many chickens in one day in the year 2005 as they did in one year in 1930; the biggest poultry companies kill 8.5 million chickens a day. Debeaking infant chicks, living conditions (60-90,000 chickens in some buildings), transportation, slaughter, dangled upside down on a conveyor belt, throats slit while alive so they bleed to death. If these slaughterhouses had glass walls, we might all be vegetarians–but who wants to look.

Emerson quotation (1860): You have just dined, and however scrupulously the slaughterhouse is concealed in the graceful distance of miles, there is complicity (Source: "The Conduct of Life." Chapter on "Fate)."

Sea food: What happens to all the waste? Most of it is dumped back into the oceans, huge factory trawlers. Whaling was outlawed in 1985. Dolphin slaughter in Japan–their throats are slit out of water and they die of suffocation in agony. Their blood runs back into the ocean as pollution.

Pfiesteria: A disease that is 1,000 times more potent than cyanide. Originates in hog farms and has killed many fish.

Clothes: Leather: Where does it come from? India! Cattle slaughter is forbidden in most of India, so the cattle must be captured (often brutally) and transported to a part of India where their slaughter is condoned.

During transportation the cattle may be treated badly by their handlers and they fall or "go down." So their tails can be broken or chili pepper rubbed in their eyes to make them stand.

All this before slaughter, when their throats are cut–while they are still alive–and they bleed to death.

Tanning involves the use of harsh chemicals to prevent the hide from its natural decomposition. These chemicals can be toxic to tannery workers in India. Most leather retail chains sell leather from Indian cattle since their hides make better leather than the hides of other cattle.

Fur: More than 100 million animals are killed each year for fur; of these, 25 million are killed in the United States.

Most of these animals are raised in cages on fur farms. Cage madness is endless circling and complete disorientation. After they are killed and their skins / furs stripped off, the remaining meat is fed back to the animals in the cages.

Canadian seal hunt.

4. Entertainment: Mark Twain quotation: "Of all the creatures ever made [man] is the most detestable... He is the only creature that inflicts pain for sport, knowing it to be pain."

Rodeos: What causes the broncos to buck? A strap that causes genital pain. Roping.

Gambling: Dog and horse racing.

Fairground animals.

Hunting: Hunters kill more than 200,000 animals a year.

Fishing: Fish feel about the same degree of pain as humans. They too are sentient organisms.

Circuses: Long sequences of brutal footage. Why do circus animals behave as they do? Their owners want us to think it is because of rewards. No! It is because of pain inflicted and fear of punishment. Training is based on punishment and fear. Animals feel, and none would choose captivity. Scenes of animals who escaped retaliating against their trainers.

Zoos: Are they educational. What do they teach. All the animals in them must be captured, caged, transported and trained to do what humans want.

Bull fighting.

Commercial exploitation of wildlife. They do not exist for our pleasure. We do not take seriously the interests of the animals. We use them.

5. Science Vivisection: Inflicting suffering without anesthesia. Two possible erroneous conclusions can be drawn from results.

Medical experiments.

Military research on animals.

Conclusion: It all comes down to the pain and suffering that all animals experience. Antibiotics. Hormones. Pollution. What goes around comes around. We reap just what we sow.

We must change the way we treat animals and we must change our way of thinking about animals.

2959. Mullin, W.J. 2005. Miso as a functional food. In: John Shi, C.-T. Ho, and F. Shahidi. 2005. Asian Functional Foods. Boca Raton, Florida: CRC Press. xxi + 647 p. See p. 537-53. Chap. 19. [34 ref]

• ***Summary:*** Contents: Introduction. Raw materials: Soybeans (preferred qualities), rice, barley, salt, water, [yeast and] bacterial cultures (halophilic yeasts: *Zygosaccharomyces rouxii, Candida versalitis;* lactic-acid producing bacteria: *Tetragenococcus halophilus),* koji starter *(tane-koji).* Processing technology: Organoleptic properties. Nutritional properties. Standards and regulations.

Of the macronutrients in soybeans, the carbohydrate content is the most important, particularly the level of oligosaccharides.

Page 242: Traditionally, making miso was a family operation that took place after the fall harvest; the food was preserved in times of plenty, which were followed by times of uncertainty in the food supply.

Miso cooperatives: The system of miso cooperatives is very well organized. Local cooperatives throughout Japan are organized into 51 unions, and these are grouped into eight national blocs based on geographical location. The blocs have joined to form a national organization called the Japan Federation of Miso Manufacturers Cooperatives (JFMMC) *[Zenkoku Miso Kogyo Kyodo Kumiai Rengokai],* with headquarters in Tokyo. JFMMC represents about 1,400 miso manufacturers of all sizes. All miso makers are eligible to become members of the local organization, and the vast majority take advantage of the membership, which can provide many benefits. "The JFMMC operates the Central Miso Research Institute, which conducts basic research, tests new domestic and imported varieties, troubleshoots processing problems, and prepares and distributes cultures for fermentation." The JFMMC is very active in public relations and publicity; it also sponsors research into the health benefits and nutritional value of miso. It publishes an annual report which includes detailed statistics on miso production in Japan, as well as discoveries based on new miso research.

Annual miso competitions are held at the local and national level to keep miso in the spotlight; they do much to maintain and improve the quality of miso. Most take place in the fall, with the national JFMMC competition held last of all in early November in Tokyo–a climax of the miso production year. "The competitions are keenly contested with several hundred entries and are widely reported in the national and local media." "Winning a class can be of great promotional benefit to the winner." New uses for miso are also on display with leading chefs preparing dishes that are offered to members of the JFMMC, competition participants, and to the media. Address: Agriculture and Agri-Food Canada, Ottawa, Ontario, Canada.

2960. Shi, John; Ho, Chi-Tang; Shahidi, Fereidoon. 2005. Asian functional foods. Boca Raton, Florida: CRC Press. xxi + 647 p. Illust. Index. 24 cm. Series: Nutraceutical Science and Technology.

• ***Summary:*** Contents: Preface. About the editors. Series introduction. Contributors. Table of contents. 1. Functional foods and their impact on nutrition and health: Opportunities in the Asia Pacific... Contains two chapters on fermented soyfoods (Chap. 19, Miso, and Chap. 20, Doenjang) which are cited separately.

The Preface begins (p. v): "Health and 'healing' foods have a long history in Asian cultures." Asians such as the Chinese and Indians have long known that food and medicine come from the same source; they can treat illnesses and build a healthy life. Since ancient times, Chinese have compiled a remarkable amount of information about the materia medica, the use of natural substances–plants, animals, and chemical–to treat illness.

Kudzu *(Pueraria lobata, ge geng),* one of the earliest medicinal plants used in traditional Chinese herbal medicine, is discussed on pages 83-86.

In chapter 7 titled "Traditional Functional Foods in Korea," the section on "Fermented soybean foods" (p. 165-

66) states that typical daily per capita consumption of these foods are: Soy sauce 20 ml, soy paste 20 gm, and hot soy paste 10 gm. In recent years there has been a decrease in soy intake due to increased use of Western seasonings such as mayonnaise, tomato ketchup, meat sauces, etc.

In Chapter 8, titled "Evolution of Korean dietary culture and health food concepts," the section on "Food as medicine" begins (p. 210): In traditional Korean culture, food was regarded as the basic source of health. It was believed that all diseases could be cured by foods. Korean knowledge of the medicinal effects of foods came, not through the sciences of nutrition, medicine, chemistry, or physiology, but through long human experience. Moreover, a key practice and discipline has long been to eat only when hungry, and not to overeat. The enormous size of the health food market in Korea today reflects the country's long tradition of 'food as medicine.'"

Page 229: "Micronutrients." Asian fish sauces are good sources of vitamin B-12 (cobalamine) because they are made from animal protein. Fish sauce from Thailand contains 1.91 mcg (micrograms) per 100 ml. This amount protects the Thai population from megaloblastic anemia caused by vitamin B-12 deficiency. The estimated average requirement for vitamin B-12 is only 2 mcg per day. However fermented soybean sauce contains very little (0.14 mcg per 100 ml); the small amount present is attributed to microbial synthesis.

Page 230: "The high salt problem." Japanese men rank highest in daily per capita sodium intake at 5.4 gm; the United States, Thailand, and New Zealand each average about 3.9 gm.–72% as much, or 28% less. Some cultures consume as little as 0.69 gm / day.

Pages 248-49: "Future potential for fish sauce." It is unclear whether fish sauce was first developed in Asia or Europe. But while it has vanished in Europe, it has become a thriving industry in Southeast Asia–perhaps because the extensive use of bland-tasting rice requires a salty and tasty protein-rich seasoning. Several species of anchovy are the preferred raw material for fish sauce. Some say that soy sauce was first developed in Japan. Address: 1. Research Scientist, Federal Dep. of Agriculture and Agri-Food Canada, Ottawa, Ontario, Canada; 2. Rutgers Univ., Rutgers, New Jersey; 3. Memorial Univ. of Newfoundland, St. John's, Newfoundland, Canada.

2961. Raphael, Philip. 2006. Solving the beef with veggie foods: Richmond company cooks up the taste and texture of meat with soy-based food. *Richmond Review (The) (British Columbia, Canada).* Jan. 28. p. 17.
• ***Summary:*** Richard Vann, Garden Protein's vice president of corporate development, says that his company has perfected a way of mixing ingredients. The company now operates in a facility of 30,000 square feet on Bathate Way. The key to the process is a line of machines, which are proprietary technology. They are such a closely guarded corporate secret, that some people in the company haven't even seen them. Vann was willing to describe it as a sophisticated pasta machine. The basic ingredients are wheat, soy, spices, and other ingredients.

The company has been delivering products to customers for the past six months [i.e. since July 2005]–mostly to U.S. distributors.

A photo shows Yves Potvin standing in his plant, holding a package of MorningStar Meal Starters.

2962. Altieri, Miguel; Pengue, Walter. 2006. GM soybean: Latin America's new coloniser. *Seedling (Quarterly Newsletter of Genetic Resources Action International, Barcelona, Spain).* Jan. p. 13-17. [17 footnotes]
• ***Summary:*** Contents: Introduction. Soybean deforestation. Forcing small farmers out. Soybean cultivation degrades the soil. Monocultures and ecological vulnerability. Other ecological impacts. A table titled "Global status of biotech crops in 2005," with a world map, states: "21 countries have adopted biotech crops. In 2005, global area of biotech crops reached 90 million hectares, representing an increase of 11% from 2004, equivalent to 9 million hectares. Biotech mega-countries, with 50,000 hectares or more, are (in million ha): USA 49.8. Argentina 17.1. Brazil 9.4. Canada 5.8. China 3.3. Paraguay 1.8. India 1.3. South Africa 0.5. Uruguay 0.3. Australia 0.3. Mexico 0.1. Romania 0.1. Philippines 0.1. Spain 0.1. Those with 50,000 acres or less are Colombia, Iran, Honduras, Portugal, Germany, France, Czech Republic.

A graph shows global area (million hectares) of 4 GM crops (in descending order of acreage in 2005): Soybean, maize, cotton, canola. Address: 1. Prof. of Agroecology, Univ. of California at Berkeley; 2. Prof. of Agriculture and Ecology, Univ. of Buenos Aires, Argentina.

2963. Global Industry Analysts, Inc. (GIA). 2006. Soy foods–Global strategic business report. 5645 Silver Creek Valley Rd., San Jose, California. 302 p. Jan. *
• ***Summary:*** Publisher description: This report analyzes the worldwide markets for Soy Foods in Millions of US$. The specific product segments analyzed are Soy Ingredients, and Soy Oil. The report provides separate comprehensive analytics for the US, Canada, Japan, Europe, Asia-Pacific (excluding Japan), Latin America, and Rest of World. Annual forecasts are provided for each region for the period of 2000 through 2010. The report profiles 151 companies including many key and niche players worldwide such as Archer Daniels Midland Company, Dean Foods Company, White Wave, Eden Foods, Inc., Galaxy Nutritional Foods, Inc., Gardenburger, General Mills, Glenn Foods, Greet Spot (Thailand), Griffith Laboratories (UK), H.J. Heinz Co. Hain Celestial Group, Hartz International (Australia), Hazlewood Grocery (UK), Heartland Fields (USA), Hermans Foods

(Australia), High Mark Foods (New Zealand), Imagine Foods, Inc., Kerry Group PLC (Ireland), Kerry Ingredients (Australia), Kikkoman (Japan, Australia, USA, Singapore), Kimlan Foods Co. (Taiwan), Kuhne Nederland BV (Netherlands), Soyaworld, Inc., Turtle Island Foods, Inc., and Vitasoy USA, Inc.

Price: Electronic or hard copy 3,496 euros. Please note: Reports are sold as single-site single-user licenses. The delivery time for hard copies is between 3-5 business days, as each hard copy is custom printed for the organization ordering it. Electronic versions require 24-48 hours as each copy is customized to the client with digital controls and custom watermarks. Address: San Jose, California. Phone: 408-528-9966.

2964. Eden Foods. Inc. 2006. Edensoy: Prepared as if it were for our children (Ad). *Utne Reader.* Jan/Feb. p. 31.
• ***Summary:*** This ad (full page, color) shows a boy (son of Eden's production manager) drinking soymilk through a straw from a carton of Original Edensoy. "At Eden this means: no irradiation, no preservatives, no chemical additives, no food colorings, no refined sugars, no genetically engineered ingredients–the safest, most nutritious, certified organically grown food that can be found. More than 200 Eden Foods are available at discerning retailers in the USA and Canada. Pure food is our passion. Great taste is our joy." Copyright 2002. Address: Clinton, Michigan 49236. Phone: 1-888-424-EDEN.

2965. Laws, Forrest. 2006. WTO opposes EU's biotech 'moratorium.' *Western Farm Press* 28(8):3. March 11.
• ***Summary:*** "A WTO dispute settlement panel has issued a preliminary ruling that the European Union is engaged in an illegal moratorium on the importation of genetically modified foods as charged in a complaint brought by the United States, Canada and Argentina.

"The ruling, which reportedly runs more than 1,000 pages, said similar bans imposed separately by France, Germany, Austria, Italy, Luxembourg and Greece also violated WTO rules."

"EU officials say they have allowed the import of nine biotech crops since 2004,..." Rick Ostlie (Northwood, North Dakota), first vice president of the American Soybean Association says: "'What must follow is the more important "step two," a challenge to EU's unfair traceability and labeling laws.'"

2966. **Product Name:** SoYummi GoLite Soy Mousse [Black Cherry, Dark Chocolate, California Peach, Bavarian Cream].
**Foreign Name:** Soyummi Golite Mousse de Soya.
**Manufacturer's Name:** Les Aliments SoYummi.
**Manufacturer's Address:** 3655 Redpath, Montreal, Quebec, Canada H3G 2W8.
**Date of Introduction:** 2006. April.
**Ingredients:** Organic soy drink, chicory syrup (sweetener), soy oil, modified cornstarch, modified rice starch, natural flavors, modified vegetable gums, salt, agar, xanthan gum, lactic acid, yucca extract.
**Wt/Vol., Packaging, Price:** 100 gm in a low plastic (polypropylene) cup, with flat lid and individual sleeve. Retails for Canadian $1.39.
**How Stored:** Refrigerated, 30 day shelf life.
**New Product–Documentation:** Cardwell, Mark. 2002. "As good as it gets." Food in Canada. May, p. 38. Talk with Joanne Hollander. 2008. May 29. She wanted to develop a product that contained no sugar and fewer calories. She started developing this product in 2004 using basically the same formula and finally launched it in April 2006. The company got a new CEO at the end of 2004. The label was equally French and English, but in Quebec they always write the French first. "Chicory syrup is a great alternative to sugar but it is expensive." She wanted a product that diabetics could eat–and they are allowed 15 gm of carbs per serving. Another great sweetener is the Chinese fruit *lohan guo (Siraitia grosvenorii;* literally "arhat's fruit" or monk's fruit), from which a natural sweetener is extracted. Wikipedia says: "The fruit extract is nearly 300 times sweeter than sugar and has been used as a natural sweetener in China for nearly a millennium due to its flavor and lack of food energy, only 2.3 kcal/g [calories per gram] (9.6 kJ/g). It has also been used in traditional Chinese medicine."

"I could go 100% organic but nobody would be able to buy the product." This product contained about 1/3 fewer calories than the original SoYummi. They were trying to compete with yogurt, so the Bavarian Cream is 86 calories per 100 gm.
*

2967. Nordquist, Ted; Webster, Robin. 2006. New developments making dairylike soyfoods in America (Interview). *SoyaScan Notes.* May 9. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** WholeSoy & Co. is a wholly-owned subsidiary of TAN Industries; Ted now prefers to used the former name instead of the latter. Modesto WholeSoy Co. is its own entity. Ted and his business partner, Henry, now own 85% of the stock.

Silk soymilk was launched in Jan. 1996. Ted was having a lot of problems with the soy base made by Pacific ProSoya in British Columbia. About a year later [probably in about March 1997] Ted installed a soy base plant at Soyfoods of America in Duarte, California. He did this together with Wally Rogers, owner of Bean Machine Inc. (BMI–using a stainless steel grinder / disintegrator made for BMI by Corenco, owned by Chris Cory). Wally took Ted to Chris and together they designed the grinders to be installed at Soyfoods of America. In about Sept. 1997 Ted started

producing soy base for Silk soymilk at the plant in Duarte. This soy base was sent in tankers from Duarte to Gustine, where Ted and coworkers formulated the Silk soymilk.

Ted's next product was made together with Gary Stein. Gary (of San Diego) called Ted and said that Trader Joe's wanted a soymilk. Ted said to Gary, "That's fine, but I have a contract with Steve Demos, so I can't do that." So Ted set up Gary. He told Gary that Ann Shaw and Laura Tewnion knew how to formulate soymilk. He and Gary talked a lot about it but he told Gary, "I can't touch it with a ten foot pole, but I'm happy to ship the soy base to you." So Ted shipped the soy base from Duarte to Gustine, then Gary Stein formulated the soymilk for Trader Joe's and sold it to Trader Joe's.

Ted next product was Certified Organic Soymilk, made for Wildwood Natural Foods and launched in July 1998.

Next, in 1999, Ted and Henry came up with the WholeSoy name. So they had cups designed for WholeSoy but, of course, they had no sales volume, so they sent that idea to Trader Joe's, which agreed for Ted to private label the product for Trader Joe's. So Ted launched both the WholeSoy and the Trader Joe's private label at exactly the same time. They were exactly the same products but in different cups.

In about May 2004 changed the name of his company to WholeSoy & Co. from TAN Industries, and his brand to WholeSoy & Co. from The WholeSoy Co. The words "WholeSoy & Co." first appeared on their Lite Smoothies in September 2004. Ted did a focus group in which he put out packaging from products made by Silk [White Wave], Stonyfield, Wildwood, and TAN Industries. The members of the focus group were asked to describe what they understood by looking at the different packages. "They thought that WholeSoy was a generic name, that companies like Safeway and Albertsons were making. They thought WholeSoy was a really big corporation, and that therefore its products should sell for the lowest price." Ted recalls: "It was unbelievable. I was just speechless. I wanted to go in there and tell them how wrong they were!" They knew the Stonyfield brand and thought that product was worth the money. The Wildwood product attracted them because of it had a real good appearance."

In about Jan. 2006 Ted started printing "Soy Yogurt" in large letters on the front of his yogurt cups–which previously said only "Cultured Soy." It happened like this. Ted's soy yogurt is made by SSI (Super Store Industries), which is owned by Raley's and Save Mart (both supermarket chains). Ted was going into new packaging and he asked them: "Do you have any problem using the terms "Soy Yogurt" or "Soy Frozen Yogurt" on the cups? They said they would check. They checked all of their contacts then told Ted that there was no objection to using those terms.

In Jan. 2006 Ted started using the term "Soy Yogurt" in large letter at the top front panel of his yogurt cups. He gradually phased it in to all flavors as new cups had to be printed.

In Sweden, Ted had only one plant in the county of Enkoeping (pronounced en-CHUR-ping) where he made soyfoods. He built (together with Mark Jungstrum of Trensusms Musteri) a soybase plant in the commune and city of Tingsryd near Karlshamn; it produced 3,000 to 3,500 liters/hour of soybase. And he had a test plant at Alfa-Laval in Lund.

WholeSoy's Soy Cream Cheese was introduced in Feb. 2005 in two flavors: Original and Garlic & Herb. It had a 90-day shelf life with 12 packs per case. Both are still on the market but Ted is in the process of discontinuing the product by letting them "sell through" until they are all off the shelves. He got them into all the natural food stores, but the total market for this product category is too small, so sales were too slow.

In about Sept. 2004 Ted also launched a WholeSoy Smoothie Light, but discontinued it in about Nov. 2005. it. It contained very little sugar and used Lo Han fruit concentrate as the natural sweetener. Address: WholeSoy & Co., 49 Stevenson St., Suite 1075, San Francisco, California 94105-2975; 660 Vischer Ct., Sonoma, CA 95476. Phone: 415-495-2870.

2968. Gupta, Raj. 2006. New developments at ProSoya in the USA and Canada (Interview). *SoyaScan Notes.* May 30. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** "ProSoya" is the popular name of Raj's company. ProSoya Corporation in Heuvelton, New York state is not a new entity. ProSoya Corporation has long existed as a holding / parent company, based in St. Louis, Missouri. The one in New York is a branch of that. The ProSoya UK Ltd. in Livingston, Scotland, which was a separate entity under license from ProSoya Inc., no longer exists. ProSoya Foods India Pty. Ltd. is now active in India.

ProSoya Corp. in Heuvelton is now shipping "soy extract" [soybase / soya base] to a company in Canada. They have also developed a delicious "creamy orange" soymilk with a thick consistency like a smoothie–but it is not yet for sale. Supermarkets that have their own brand of soymilk do not buy soyabase; they want a finished product delivered to their door in their package. Last year Raj could not find a co-packer; but now he has found one in Toronto that packs about 3 truckloads a day for him. He is still looking for one in the USA. If he had been able to find one a year ago, he would be in almost every store by now.

SoyaWorld is now very strong everywhere except in the USA; they have the best-selling soymilk brands in Canada. Since about 2001-2002 they have been owned by Sanitarium Foods of Australia. Originally SoyaWorld was owned by Dairyworld, which was sold to Saputo, then

Saputo sold the soymilk business to Sanitarium Foods. Sanitarium kept "SoyaWorld" as a name for both the business and the brand. They don't want to call it Sanitarium, which is sort of an outdated, old-fashioned funny name. SoyaWorld no longer has royalty or exclusivity agreements with ProSoya (they expired in May 2004), which is why ProSoya can now make and sell soybase, soymilk, and soymilk products.

Raj's soybase is now made by an improved process. It is still made by the basic airless cold-grind process, so that change is more in the art than in the science–it is not a breakthrough, but a fiddling with details. He has not licensed his process to anyone. It is better for formulation, is more bland, and is unique in that it has no soy taste. Raj likes to say that his soybase has "no soy taste" and "no beany taste." Most good manufacturers have be able to get rid of the "beany taste, which is normally associated with rancid oil-like flavors, chalkiness, and astringency," but Raj believes that only his company has been able to also get rid of the "soy taste," which is more subtle yet still a big obstacle to widespread acceptance of soyfoods and soy beverages. When Raj talks to big distributors, they say that all the soyfoods manufacturers claim to have gotten rid of the "beany taste," yet the taste still leaves something to be desired–"it still tastes like soy." So Raj speaks of "no soy taste" to distinguish his products from the others. Raj has found that the people of India "hate soy taste." But they love his products, which have no soy taste. Certain flavors go very, very well with his soybase. If a company uses strong flavors or heavy masking, consumers say the product tastes like medicine.

One interesting phenomenon is that the flavor of soybase or soymilk improves as it is allowed to age for 4-5 days.

Raj is not sure whether or not he should put the word "soy" on the package or not. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

2969. Benner, Peter. 2006. Turning to tempeh: The Brown family has been making tempeh since the late seventies. They're having lots of fun with it and still marvel at the process of turning organic soybeans into a fermented food that is high in complete protein and fibre, yet contains no cholesterol. *Canadian Organic Grower (The)* 3(2):14-18. Spring. [4 ref]

• ***Summary:*** Contents: Introduction. Turned on to tempeh. Slow food, soyfully. Tempering tempeh traditionally (how the Browns make tempeh). Fomenting a fermented sustainability.

For about 12 years the Browns made about 200 lb/day of tempeh. Recently they have increased their volume to 300 lb/day and soon plan to be producing 400 lb/day of certified organic tempeh. They focus on the process and paying attention. They've joined a slow food convivium in Perth. Photos show: (1) Michell Larin, Susan Brown and Allan Brown at the end of a work day at Noble Bean Tempeh Shop. (2) Susan loading trays for incubation. (3) Michelle bags soybeans while Jake mixes beans for inoculation. (4) Jake cooks the beans. Address: Journalist and salesperson for Monteagle Herbs, living in a solar-powered intentional community named Morninglory Farm in Killaloe, Ontario.

2970. Cardwell, Mark. 2006. Top ten: As good as it gets–Les Aliments SoYummi, Montreal, Quebec. *Food in Canada*. May. p. 38.

• ***Summary:*** Joanne Hollander was born in New Jersey, but raised in a tony [aristocratic, stylish] Montreal neighborhood in the 1960s. She was educated in francophone French schools, then returned to the USA for college. In 1982 she developed a nutritious soy mousse for your young son, Aaron, who was completely lactose intolerant; dairy products gave him bad headaches and eczema. The mousse "was an instant hit with her son, as well as everyone else who tried it. Her friends urged her to commercialize it. So in 1987 she paid a McGill University professor of food science $2,000 to help her stabilize it, to increase the shelf life. But when she took samples to dairy and wholesale food distributors in the Montreal area, they all loved the flavor and texture, but said there was no market for a soy product. "'No one was doing anything with soy back then,' says Hollander."

In 1997 soy milk hit Quebec grocery shelves; Holland decided to try again. This time, with $35,000 in private funds, she went to the Food Research and Development Center in Saint-Hyacinthe, Quebec. "Located a half-hour's drive southeast of Montreal, the federally funded facility offers technical assistance and the use of processing equipment to food companies trying to develop new products."

In 2002 She founded Les Aliments SoYummi, a partnership with Roland Degani and Max Druker (who had offered advice and financial support) and that year she launched SoYummi in four flavors, which "first appeared on shelves in Metro and IGA grocery chains across Quebec." The business has continued to grow from a weekly output of 3,000 cups a week to about 48,000 cups a week today. In April 2006 she launched SoYummi GoLite–a low-calorie version.

A photo shows Joanne Hollander.

2971. Eaglesham, Allan; Bessin, Ricardo; Trigiano, Robert; Hardy, Ralph W.F. 2006. Agricultural biotechnology: Beyond food and energy to health and the environment. *NABC Report (National Agricultural Biotechnology Council, Ithaca, New York).* No. 17. 280 p. (Proceedings of the NABC 17th annual meeting, held 27-29 June 2005 at

the University of Kentucky, Lexington, and the University of Tennessee, Knoxville).
• ***Summary:*** This is the first NABC report distributed on CD-ROM, rather than in book format. Each new report shows that NABC is becoming more and more in favor of the basic idea of genetic engineering. The question is how to get the public and consumers to accept these ideas.

The 2005 annual meeting focused on four major areas: (1) Plants as new sources of medicinals. (2) Bioremediation, phytosensing, and ecorestoration. (3) Gene-to-product development, and (4) Regulation, consumer acceptance, and risk management.

One interesting paper, "Can you get there form here? Speed bumps on the road to health and environmental biotech applications," by Michael Rodemeyer (Pew Initiative on Food and Biotechnology, Washington, DC) observes that "the most salient finding of numerous polls is that US consumers remain largely uninformed about GM [sic, GE] foods and their presence in the food supply (Hallman, 2005; PIFB, 2005)."

The National Agricultural Biotechnology Council provides an open forum for the discussion of issues related to the impact of biotechnology on agriculture. Established in 1988, it is a consortium of not-for-profit agricultural research, extension and educational institutions. Address: 1. Executive Director, NABC, Boyce Thompson Inst., Room 419, Tower Road, Ithaca, NY 14853; 2. Vice President for Research, Univ. of Guelph; 3. NABC President. Phone: 607-254-4856.

2972. Green, Carolyn. 2006. Top ten: Welcome to the garden–Garden Protein International, Richmond, BC. *Food in Canada.* May. p. 39.
• ***Summary:*** Garden Protein International makes meatless chicken and beef from identity preserved (IP), non-GMO soy protein and wheat protein, plus various other ingredients such as carrot fiber, minerals and vitamins. In its first year, ending March 31, the company had sales of $10 million.

By contrast, Yves Fine Foods, which he started in 1985, had sales of $235,000 its first year. When Potvin began considering the next generation of meat alternatives in the early 1990s, he used the example of surimi, a Japanese crab-like product made from pollock fish. The result was Gardein, which is made like pasta (sort of) by a unique process of extrusion technology.

By 2003, Potvin began demonstrating Gardein to other food Manufacturers. One of his first customers was Morningstar Farms, a division of the Kellogg Co., Battle Creek, Michigan. Gardein will also be a major ingredient in Loblaw's President's Choice Blue Menu products this fall.

In 2001, when Yves sold Yves Veggie Cuisine to the Hain Celestial Group, he signed an agreement that contained a "non-compete clause" (covenant not to compete–CNC), which prevented Potvin from putting Gardein in the market as a stand-alone product until the fall of 2006. At that time he hopes to have four Garden Protein products in grocery stores: chicken or beef strips can be used in recipes such as stir fries or fajitas, and a chicken or beef dish in a sauce. The price is expected to be about $3.99 for 250 gm.

A photo shows Yves Potvin, a native of Sherbrooke, Quebec, Canada (the only major city in the Eastern Townships) standing and looking happy.

Note: Yves was born in Waterloo, Quebec, then moved with his family to Sherbrooke, Quebec, when he was a teenager.

Discusses Quebec's Semences Program. The work of P. Marc Ham, Prograin's director of international market development. Prograin, which has been working with Quebec's Ministry of Agriculture via the Healthy Grain Program (in which growers do not use pesticides, herbicides, or fertilizers, but are not certified organic), is one of the few private companies in Canada that maintains a breeding program. Address: Freelance journalist, Montreal, Canada.

2975. *Vitality (Toronto's Monthly Wellness Journal).*2006. Healthy product news: Tempeh, the soyfood with culture. May. p. 98. [2 ref]
• ***Summary:*** Based on a 25th anniversary news release from Noble Bean, "Canada's largest and oldest tempeh producer." "Noble Bean is a family-run cottage industry nestled in the rolling hills of the Ottawa Valley. There, on 10 acres of land, Allan and Susan Brown and friends produce from 250 to

400 pounds of tempeh a day." They firmly believe that "small is beautiful."

"After using certified organic ingredients for over 20 years, Noble Bean is now an OCPP (Organic Crop Producers and Processors) certified facility."

2976. Associated Press (AP). 2006. Wendy's will switch to more healthful oil. *Los Angeles Times.* June 9. p. C6.
• ***Summary:*** Wendy's International Inc. (based in Dublin, Ohio), America's third largest burger chain, said that, starting in August, in 6,300 restaurants in the U.S. and Canada, it will start frying French fried and breaded chicken parts with non-hydrogenated oil. The change to a blend of corn and soy oil will cut "artery-clogging trans fat" in those menu items by 95%.

2977. Grubb, Steve. 2006. W.G. Thompson & Sons of Canada sold Sycamore Creek Co., America's leading maker of oil-roasted soynuts, to the Splinter Group, which in turn sold it to Central Iowa Soy (Interview). *SoyaScan Notes.* June 26. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** In Jan. 1999 W.G. Thompson & Sons Ltd. of Canada purchased Sycamore Creek Co. (Mason, Michigan) from Len and Irene Stuttman. The company was named INARI, Ltd. before 1993. Then Thompson moved the company to Stockbridge, Michigan, as part of an expansion plan to triple capacity. They bought some new equipment, paid premium prices, and some of it didn't work properly. They took no advantage of Len Stuttman's experience and free consulting advice. Then the soynuts market started to be flooded with dry roasted soynuts which almost killed the industry since most consumers don't like the less expensive dry-roasted product. The dry-roasted nuts are now losing lots of market share. Genisoy (Mel Williams) was hurt by that; they sold their business in about March 2006 to a big investment group, after almost having to declare bankruptcy. The company is still called Genisoy.

In about March 2004 Thompson decided to get out of the soy roasting business and sold Sycamore Creek to The Splinter Group. Splinter ran the company for a while unsuccessfully, almost went bankrupt, then ceased operations in Nov. 2005. Thompson's contract allowed him to take back all the equipment.

The SoyNut Butter Co., which makes I.M. Healthy SoyNut Butter, America's best-selling brand of soynut butter, used Sycamore Creek's oil-roasted soynuts as their main ingredient. They had to scramble to find a new supplier with sufficient capacity. In March 2006 a group of large Iowa farmers named Central Iowa Soy Co. (CIS), working with Jeff, purchased Sycamore Creek and moved the plant to Jefferson City, Iowa, where it is now located at 1577–235th Street, Jefferson City, IA 50129. Phone: 515-386-4445. The CIS plant is expected to be up and running in a week or so. The former production manager agreed to make the move and to continue on in that position. Jeff has known Len Stuttman for decades and long ago used to be on the INARI / Sycamore Creek board of directors.

As part of Iowa's value added program, CIS received a grant of $100,000 on 19 Jan. 2006. An online report says the company is expected to create 21 incented jobs at an average hourly wage of $15.66, plus 3 other jobs. The capital investment is $662,920. Central Iowa Soy producers started as a cooperative in 2002.

Steve is interested in two potentially large and growing markets for soynuts: (1) A replacements for peanuts for the growing number of people who are allergic to peanuts–due in large part to sanitation and urbanization. OB/GYNS and pediatricians now advise that pregnant women and kids under age 3 should not eat peanuts. (2) As an extender or replacer for pecans, almonds, or cashews which now wholesale in large quantities for $3-4/lb, compared with $1/lb for oil-roasted soynuts. The SoyNut Butter Co. makes soynut butter in a plant that never processes peanuts or tree nuts, and the company states this on their label–a claim which virtually all his competitors' companies cannot make, because they do process peanuts or tree nuts.

Central Iowa Soy will focus on selling diced soynuts to large food processors that now use peanuts or expensive tree nuts. They also plant to introduce their soynuts in a can like Planters Nuts. They will used the word "roasted" with interested graphics but they will not use the term "oil roasted" and they rarely say "roasted soynuts." They say: "We have a nut replacer or extender, that happens to be made from soy." Their soynuts are still sold in Reduced-Fat Pecan Sandies. Now they think it is time to get them into every cookie and bar, plus cluster-type cereals. The reason is economic, not nutrition or soy benefits. Dry roasted soybeans don't work nearly as well; they don't have that good flavor, richness, or mouthfeel.

Steve tried to buy Sycamore Creek from Thompson but he lost out in the bidding to The Splinter Group. Address: Senior Partner, T&G Food Ingredient Services, 4220 Commercial Way, Glenview, Illinois 60025. Phone: 1-800-288-1012.

2978. Noble Bean Tempeh Shop. 2006. Noble Bean: 25th anniversary. Thank you tempeh lovers everywhere (Leaflet). McDonalds Corners, Ontario. 1 p. Single sided. 28 cm.
• ***Summary:*** The Canadian original. Certified organic / OCPP. Naturally pure water. Fresh frozen / Not pasteurized. Tasty traditional tempeh. Genuine slow food. The right half is in French. Printed with black ink on mottled tan paper. Two smaller versions (22 cm) are in either English or French, printed with black ink on a cardstock light green background. A pressure sensitive logo in light green, black and white on a dark green background is affixed to the top one-third of each.

2979. Silver, Jimmy. 2006. Re: Recollections of Lifestream and its founder, Arran Stephens, in British Columbia, Canada. Letter (e-mail) to William Shurtleff at Soyfoods Center, July 5. 1 p.
• ***Summary:*** Jimmy has known Arran for many years, starting in the 1970s, when what was then his distribution company, Lifestream, was a customer of Erewhon's. Eventually he began to make his own Lifestream products, then sold the company [in mid-1981] and started his cereal venture, Nature's Path, which has done very well. A few years ago he bought back the Lifestream brand, but it doesn't seem to do much compared to NP. "He is a very interesting guy... Susan and I like him and his wife."

For a number of years when Jimmy was exporting some of their products under private label to Japan, he worked with their daughter, who was then their export manager (and living in London, UK, not in Vancouver, BC, Canada).

Even though Arran has "moved" with the market in terms of ingredients, partly driven by cost and competition and consumer taste, Jimmy knows from talking with him that his preference would be to make things more in line with what Jimmy likes too–sweetened with fruit juice rather than organic sugar or cane juice, for instance. Address: President, Pure Sales, California.

2980. Anderson, George. 2006. Early installations of Crown Iron Works' solvent extractors for processing soybeans (Interview). *SoyaScan Notes.* July 11. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** The first 8 solvent extractors were installed in 1950; all used trichloroethylene as the solvent for extracting oil from soybeans and had a capacity of 25 tons/day. Crown got its original solvent extractor by buying a patent for the process and equipment from Iowa State University. Al Kaiser was head of the solvent department at that time and Joe Givens worked for him. From 1955 on, hexane replaced trichloroethylene in almost all extractors processing soybeans. The initial numbers (in parentheses) indicate the sequence in which the extractors were sold. The list contains entries for about 260 extractors.

(1) Glencoe, Minnesota. (2) Vermont, Illinois. (3) Grand Forks, North Dakota. (4 & 5) Dawson, Minnesota. (6) Blooming Prairie, Minnesota. (7 & 8) Millsboro, Delaware. (9 & 10) 1955–Millsboro, Delaware (25 tons, soybeans). (11 & 12) 1955–Altona, Manitoba, Canada (25 tons soybeans and about 15 tons rapeseed. Note: The capacity of an extractor depends on the type of oilseed it is processing). (13 & 14) 1955–Fremont, Nebraska (40 tons each). (15) 1959–Dawson Minnesota (250 tons).

(16) 1963–Millsboro, Delaware (400 tons). (17) 1963–Dawson, Minnesota (600 tons). (18) 1965–Altona, Manitoba, Canada (250 tons soybeans or 150 tons rapeseed). (21) 1965–Fremont, Nebraska (250 tons). (22) 1966–Monticello, Illinois (less than 100 tons, wheat germ). (23) A laboratory in Hershey, Pennsylvania.

(29) 1968–Clarksdale, Mississippi (600 tons). (30) 1970–Ashdod, Israel (75-100 tons; especially for soy protein concentrate).

(36) 1971–Mason City, Iowa (1,000 tons; the first of this capacity; still running)... (72) 1979–Decatur, Illinois (3,000 tons; the first new stainless steel model 3 extractor–the big seller today. Running on corn germ; still running).

As of 2004, Crown Iron Works has installed 389,622 tons of soybean processing capacity. 90% of the extractors it has ever installed are still in operation–somewhere. The largest extractor Crown has ever built and installed has a capacity of 8,800 tons/day. All Crown Extractors are loop shaped. About 5-6 years ago De Smet bought French Oil Mill's solvent extraction business and shut it down. Address: Vice President for Engineering, Crown Iron Works, P.O. Box 1364, Minneapolis, Minnesota 55440-1364. Phone: 651-639-8900.

2981. Stephens, Arran. 2006. Work of with natural foods, vegetarianism, Lifestream Natural Foods Ltd. and Nature's Path. Remembrances of Kirpal Singh and meditation (Interview). *SoyaScan Notes.* July 18. Conducted by William Shurtleff of Soyfoods Center.
• ***Summary:*** A wide ranging interview on many subjects of interest to Arran over his very productive life. Address: Founder and CEO, Nature's Path, Vancouver, BC, Canada.

Prof., Dep. of Human Health and Nutritional Sciences, Univ. of Guelph, Ontario, Canada; 2. MSc, manager for Nutritional Fundamentals for Health (NFH), a nutritional supplement company.

2983. **Product Name:** It's All Good [2 Veggie Chick'n Breasts in a Tomato Tuscan Marinade, 2 Veggie Chick'n Breasts in a Herb Dijon Marinade, 2 Veggie Chick'n Breasts Lightly Seasoned, 8 Veggie Chick'n Filets in a Mediterranean Herb and Spice Rub, 8 Veggie Chick'n Filets in a Zesty Lemon Herb Rub, Veggie Chick'n Strips Lightly Seasoned, Veggie Beef Strips Lightly Seasoned, 6 Veggie Chick'n Satays in a Chili Lime Marinade, 5 Veggie Beef Skewers in a Chipotle BBQ Sauce].
**Foreign Name:** C'est tout bon (2 Suprême de poulet végé dans une marinade Toscane, 2 Suprêmes de poulet végé dans une marinade dijonaise, 2 Suprêmes de poulet végé légerèment assaisonnés, 8 Filets de poulet végé assaisonnés d'épices méditerranéennes, 8 Filets de poulet végé

assaisonnés aux citron et fines herbes, Lanières de poulet végé légèrement assaisonnés, Lanières de boeuf végé légèrement assaisonnés, 6 Satés de poulet végé dans une sauce au chili et à la lime).
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2006. September.
**Ingredients:** Veggie Chick's Breasts: Water, isolated soy protein, vital wheat gluten, natural flavors, modified vegetable gum, potato starch, expeller pressed canola oil, tomato paste, spices, red bell pepper flakes, pea protein, carrot fiber, organic beet root fiber, organic evaporated cane juice, yeast extract, vinegar, sea salt, and citric acid. Contains Soy and Wheat.
**Wt/Vol., Packaging, Price:** 10.5 oz (300 gm). Paperboard box.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 6½ by 6½ by 1¼ inches. Green, red and black on white. A color photo on the front panel shows a Chick'n Breast sliced in half on a bowl of rice. On the front and back panels is the logo of Garden Protein International Inc. "Made with Gardein. Garden grown protein." On one side panel: "No artificial flavors, colors or preservatives. A good source of protein. Grain and vegetable ingredients. Suitable for vegans. Low fat. Manufactured for Its All Good Foods, Inc., Richmond, V6V 1Y5 Canada. itsallgoodfoods.com. Product of Canada copyright 2007." On the other side panel: "Pan fry. Bake. Microwave. Barbecue, Good with rice, potatoes, couscous, pasta." On the bottom panel: Heat & serve: Ready in 2 minutes. On the back panel are Nutrition Facts, ingredients list and recipe ideas. Pressure sensitive sticker (white, black, and gold) on front panel "Winner–Canadian Grand Prix: New product awards." Note: This was GPI's first commercial product.

2984. Mateljan, George. 2006. Healthy foods: Tempeh, the soyfood with culture. *Healthy Directions (Ontario's Natural Health & Nutrition Guide)*. Aug/Sept. p. 37.
• ***Summary:*** A nice introduction to tempeh. Note: Two business cards photocopied with the article show: (1) Noble Bean's 25th anniversary. (2) Noble Bean, "Culturing fine tempeh since 1979. Allan and Susan Brown."

2985. Gupta, Raj P. 2006. Re: An improved process for making soymilk has been developed. Letter (e-mail) to William Shurtleff at Soyfoods Center, Oct. 25. 1 p.
• ***Summary:*** "We have been working on a major process improvement for some time now. Only now we are in a position to share with you our excitement of this greatly improved process we have developed that has the following advantages:

"(a) up to 25% higher yield for each kg of soybeans used (b) reduction in residual particle size in soymilk to submicron size (c) flavor profile improvement–further reduced beanyness (d) reduced viscosity (e) soymilk base can now be cost effectively produced at higher than 10% concentration

"Fortunately, these huge process improvements do not increase the cost of our equipment to the buyer.

"Our new juice-soy beverages–Creamy Orange (that you had tasted during your visit), Peach-Mango, and Pineapple Banana were a hit at the Natural Products Expo in Baltimore in early October. They are seen as truly mainstream, loved even by the most soy-phobic people. Adez and Ades soy drinks of Unilever do not come even close to them in taste and nutrition (7g protein per 250 ml serving). A color .pdf file of our new package design is attached.

"As we discussed before we can build a soymilk system for you to fit almost any budget. We are able to trade automation with increased labor input and dramatically reduce equipment cost without compromising soymilk base quality.

"We recently sold a VS1000BB system to a party in Bolivia for US$200,000 whereas a standard VS1000 system is priced at US$600,000.

"With best regards, Raj." Address: Founder, ProSoya Corp., 26 Annette St., Huevelton, New York 13654. Phone: 315-244-7030.

2986. AGP–A Cooperative. 2006. Annual report to members: Adding value to your harvest. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 33 + 4 p. 28 cm.
• ***Summary:*** Net sales for 2006 (year ended Aug. 31) were $2,360.484 million, up 0.5% from $2,348.167 million in 2005. Earnings from continuing operations (before income taxes): $75.136 million, up 49.2% from the $50.360 million in 2005.

AGP now has marketing offices in: Pecs, Hungary. Jakarta, Indonesia. Queretaro, Mexico. Manila, Philippines. Singapore. Komarno, Slovakia. Bangkok, Thailand. Istanbul, Turkey. Hanoi, Vietnam.

This was "the second best year of earnings in AGP's 23-year history... Accordingly, your Board of Directors approved total patronage refunds of $32.6 million, designating 30 percent to be paid in cash again this fiscal year... [and] equity redemption for fiscal 2006 of $28 million, making the two year total of equity redeemed $56 million. Cash patronage, equity redemption and value-based premium programs totaled over $43 million dollars for fiscal 2006, also the second best in the history of your cooperative" (p. 5).

Today AGP's "owners are 205 local cooperatives and six regional cooperatives, representing 250,000 farmers from 15 states throughout the United States and Canada" (p. 7). Note: Technically AGP represents 250,000 "producers." A producer can refer to either a farmer or a land-owner, and both can be a member of a local cooperative.

"Record premiums paid: Participants in AGP's value-based premium programs–oil and protein components, Vistive soybeans, and non-GMO soybeans–earned a record $6.4 million in premiums from those programs" (p. 9).

Note: Talk with Bill Lester, formerly of AGP. 2007. Feb. 24. AGP will pay its member co-ops total patronage refunds of $32.6 million this year. 30% of this amount ($9.78 million) will be paid in cash (from this year's earnings), and the remaining 70% ($22.8 million) comes from retained earnings (or equity) (from past years' earnings), and is called "equity redemption." AGP is redeeming the old equity that the member co-ops owned in it. Retained earnings is the members co-ops' investment in AGP. On the AGP balance sheet, this equity appears as a debt to individual member co-ops. For example: Heartland Co-op, Des Moines, Iowa. In 1999 AGP owes it $12,300. In 1998 AGP owes it $13,465, etc. right up to the current year. This debt is paid when the members' equity in the company is redeemed / allocated. The oldest debts to each member co-op are always paid first, and they are always paid before Dec. 31 each year.

A local member co-op's total earnings for any given year consists of its own earnings plus the earnings it gets from AGP. By law, the co-op must pay 20% of its net earnings that year in cash to its producer members. A typical local co-op pays 30% of that year's earnings in cash to its member producers (since that cash takes care of the tax liability) and keeps 80% as "retained earnings." Each member producer must pay the income taxes on these retained earnings–even if he doesn't get the money. One of the problems in the past is that sometimes the producer doesn't receive enough cash from his co-op to pay the tax on the "retained allocated earnings." When the producer finally gets paid his retained earnings, it is tax free.

Retained earnings is the way AGP borrows money from its co-op members to finance its ongoing operations. It takes a certain amount of cash or "working capital" to operate a business. AGP has two choices: Keep it as "retained earnings" from the membership or borrow it (as from a bank). Presently AGP has about 7 years of retained earnings (back to about the year 1999) that it has not yet paid to its co-op members. Yet this is perpetually rotating, or "rolled forward" as the oldest debts are paid back each profitable year to the co-op members. This system of paying the oldest debts first is also a way of transferring money form older producers (some of who may no longer be living) to current producers. Well-run cooperative soybean processors, such as AGP, have a relatively small number of years of unpaid retained earnings (7). Address: Omaha, Nebraska. Phone: (402) 496-7809.

2987. Dietz, John. 2006. Biodiesel ignites up north: Canadian biodiesel use is slated to grow 10-fold in the next five years. *Corn and Soybean Digest.* Oct. p. 28.
• ***Summary:*** As of Jan. 2006, Canada's production capacity for biodiesel was 26.4 million gallons. In Nov. 2005, Canada's first commercial scale biodiesel manufacturing plant was commissioned in Montreal by Rothsay Biodiesel, the rendering division of Maple Leaf Foods. Capacity: 9.2 million gallons a year.

Canada's second commercial scale biodiesel plant, Biox Corporation, Inc. at Oakville, Ontario, was schedules to begin full production before September (last month). Capacity: 15.8 million gallons.

Millegan Biotech, a farmer-owned cooperative in Saskatchewan is developing a biodiesel plant that will use canola oil as a feedstock. Capacity: 0.5 million gallons. One key feature of this biodiesel will be its "cold pour point" (desirable in cold climates) of -15ºC (5ºF), which is much lower than the U.S. standard of -7ºC (19.4ºF).

2988. Hain Celestial Group, Inc. (The). 2006. Annual report 2006. Melville, New York. 8 + 55 p. Nov. 28 cm.
• ***Summary:*** Net sales for the year ended 30 June 2006 were $738.6 million, up 19.1% from 2005. Net income in 2006 was $39.6 million, up 19.6 from 2005.

Acquisitions and divestitures: In Dec. 2005 acquired Spectrum Organic Products and their brands Spectrum Naturals and Spectrum Essentials. March 2006 acquired the Queen Helene Batherapy, Shower Therapy, and Footherapy brands of skin care, hair care, and body care products. "We established a foothold in the United Kingdom in April with the purchase of a fresh prepared foods business, and in June [June 12] we acquired the Linda McCartney brand (under license), a frozen meat-free [vegetarian entrees] business" from the H.J. Heinz Co., for about $6.6 million, including its manufacturing facility in Fakenham, England.

At the beginning of fiscal 2007 Hain divested Biomarché, a Belgium-based provider of fresh organic fruits and vegetables, to focus on branded products that complement our growth strategy in Europe. Note: Hain's 2007 Annual Report states (p. F-43) that on 31 Aug. 2006 Hain complete the sale of Biomarché for about $8.3 million (6.5 million euros).

Most of the report is Form 10-K/A. Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (42 p.). Irwin Simon, the founder and CEO, age 47, had the following annual compensation: Salary: $1.1 million. Bonus: $1.7 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

2989. Lyddon, Chris. 2006. Global grain trade review: IGC [International Grains Council] predicts sharp drawdown in grain stocks, particularly wheat, in 2006-07. *World Grain* 24(11):32-36, 38-39, 42. Nov.
• ***Summary:*** A table titled "Global grain trade activity (in 1,000 tonnes)" gives the following statistics for soybeans: 2005-06 Top exporters: 1. Brazil 26,750. 2. U.S. 25,719. 3. Argentina 7,300. 4. Paraguay 2,600. 5. Canada 1,267. World total 65,195 (unchanged).

Top soybean importers: China 27,700. E.U.-25 14,100. 3. Japan 4,050. 4. Mexico 3,725. 5. Taiwan 2,300.

Also gives the top 5 importers and exporters of soybean meal for 2005-06. Exporters include: 4. India 3,500. 5. Bolivia 870. Total 51,062 (+9%). Address: European editor; chris.lyddon@ntlworld.com.

2990. PETA [People for the Ethical Treatment of Animals]. 2006. 4th annual PETA proggy awards for progress–Best New Faux Meat Product: Gardein, made by Garden Protein International Inc. of Richmond, BC, Canada.
• ***Summary:*** This color award, 8½ by 11 inches, shows a frog leaping from left to right and is signed by Ingrid E. Newkirk, President. The PETA proggy awards are presented at the end of each year in late December. This one was awarded in late 2006. PETA is based Norfolk, Virginia.

Soy Applications in Food. Boca Raton, Florida, London, New York: CRC Press (Taylor & Francis Group). [x] + 288 p. See p. 155-84. [11 ref]
• ***Summary:*** Contents: Introduction. Textured soy protein products. Soy grits. Textured soy flour. Textured soy protein concentrates. Textured isolated protein products. Textured vegetable protein blends. Meat coatings. Regulations governing the use and labeling of products containing textured vegetable protein products: United States, People's Republic of China, Canada, Japan, European Union. Meat product formulations containing textured soy protein ingredients: Preparation procedure for raw frozen beef patties, preparation procedure for precooked beef patties, preparation procedure for chicken patties, preparation procedure for beef meat loaf, preparation procedure for beef chili, preparation procedure for reduced-fat pepperoni. Meat analog food products: Meat analog product formulations (preparation procedure for vegetarian patty nugget, preparation procedure for vegetarian chili). Summary.

Tables: (1) Water-holding capacities and cooked texture of textured soy protein concentrate flake, crumble, and granule particles. (2) Texture comparison of different treatments. (3) Characteristics of textured soy protein products. (4) Characteristics of beef patty formulated to contain various levels of hydrated textured soy protein concentrate. (5) Minimum meat content requirements for selected meat and poultry products produced and sold in the United States. (6) Summary of use of textured vegetable protein meat products having a standard of identity. (7) Minimum meat requirements for selected Canadian standardized meat products. (8) Minimum meat requirements for Japanese agricultural standards. (9) Contents of raw frozen beef patties (U.S. formulation). (10) Contents of precooked beef patties (U.S. formulation). (11) Contents of chicken patties (U.S. premium formulation). (12) Contents of U.S. beef meat loaf. (13) Contents of beef chili. (14) Contents of reduced-fat pepperoni. (15) Contents of chicken-flavored vegetarian patty nugget. (16) Contents of vegetarian chili. Address: All: The Solae Company LLC, St. Louis, Missouri.

2993. The beans, lentils & tofu gourmet. 2006. Don Mills, Ontario, Canada: Robert Rose. 191 p. Illust. (color). 26 cm. *
Address: Canada.

2994. Tibbott, Seth. comp. 2007. Tofurky brand products overview: Natural foods segment. Hood River, Oregon: Turtle Island Foods, Inc. [36] p. 28 cm. [1 ref]
• ***Summary:*** A full-color booklet bound with a handsome, black ProClick plastic spine. On the front cover: "1980-2006: 26th anniversary Turtle Island Foods, Inc." "Sales data from: SPINscan Natural and SPINscan Conventional. 52 weeks ending December 30, 2006. All statistics are for the total U.S. market.

Contents (unnumbered pages): (1) "Turtle Island Foods honored by Inc. magazine: 2,240th fastest growing small business in the USA (of 6 million total). 159.7% growth rate over last 4 years. 57th fastest growing food and beverage company in the USA. 19th fastest growing food processor.

(2) About Tofurky products: 100% vegan. Based on organic soy products. Use non hexane extracted proteins. VejNews. Winner veggie awards–Best meat substitute.

(3) Natural foods market without Whole Foods (which no longer shares sales info with the industry). Growth of top ten brands ranked by dollar volume. Frozen and refrigerated meat alternatives. 52 weeks ended Feb. 24, 2007. Category: $35.5 million. Growth: 4.7%. Turtle Island is the fastest-growing brand: 16.1%, followed by Quorn, Nates, Amys Kitchen, Morningstar Farms, Gardenburger, and Yves.

Lightlife, Boca Foods, and White Wave all have negative growth.

(4) Natural foods market. Frozen and refrigerated meat alternatives. Top ten of 478 items by dollar volume. 52 weeks ending Dec. 30, 2006. #1. Quorn Chicken Style Nuggets. 10.6 oz. $1,507,537. 5.6%. #2. Turtle Island Tofurky Italian Sausage (organic) 14 oz. $1,262,616. 25.7%. #3. Quorn Chicken Style Patties. #4. Lightlife Gimme Lean Sausage. #5. Quorn Veg. Naked Chicken Cutlet. #6. Turtle Island Tofurky Deli Slices, Hickory Smoked. 5.5 oz. $1,131,760. 19.2%. #7. Lightlife Smart Dogs. #8. Boca Original Patties Chicken Natural (4-pack). #9. Amys Burger California Veggie. #10. Quorn Meat Free Chicken Tenders.

(5) Natural foods market. Refrigerated meat alternatives, Top 10 of 260 items by dollar volume. 52 weeks ending Dec. 30, 2006. Turtle Island currently as the #1, #3, #9 and #10 best selling items among the 260. They are: Tofurky Italian Sausage. Tofurky Deli Slices Hickory Smoked. Tofurky Deli Slices Oven Roasted. Tofurky Kielbasa (sausages).

(6) Tofurky deli slices: Six features, incl. "Organic tofu based." The six types of deli slices are: Oven roasted, Hickory smoked, Peppered, Italian deli, Cranberry & Stuffing, "Philly-style" steak.

(7) Tofurky deli slices. Bar charts of refrigerated meatless deli sales, 2001-2006. For each year are given: Competitor #1. Competitor #2. Turtle Island. Overall category. "While the competition sales have been flat, Turtle Island has grown the subcategory 72 and has become the #1 brand.

(8) Deli slice standings. (9) Tofurky gourmet sausages. (10) Frozen and refrigerated meat alternatives. (11) Tofurky Jurky: 5 features.

(12) Top 10 jerky items (meat and meatless)–SPINscan natural channel. 52 weeks 2nding Feb. 24, 2007. The category is 8.3 million. There are three vegetarian jerkys among the top 10. Tofurky Jurky Original is the #2 seller and Tufurky Jurky Peppered is #7. The other vegetarian brand (#6 seller) is Primal Strips Seitan Teriyaki.

(13) Tofurky "foot long" veggie dogs: 5 features, incl. organic tofu based. (14) "Open mouth, insert foot."

(15-17) Turtle Island tempeh: Five features.

(18-22) Happy Tofurky Day: Five features.

(23-35) Glossy color sell sheets, printed on both sides, with the following titles: (23-24) Happy Tofurky Day! (25-26) Brave New Tempeh. (27-28) Tofurky Jurkey. (29-30) Frankly speaking Tofurky Franks & Links are the best! (31-32) There's 3 big new dogs in the house. (33-34) Go beyond the bun: Introducing Tofurky 'foot long' veggie dogs. (35-36) Tofurky deli slices: New look. Other Turtle Island glossy color sell sheets. Address: Founder and President, Turtle Island Foods, P.O. Box 176, Hood River, Oregon 97031.

2995. **Product Name:** President's Choice Blue Menu [Mediterranean Meatless Chicken Strips, Meatless Beef Strips].
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2007. January.
**Ingredients:** Chicken breasts: Water, wheat gluten, soy protein isolate, malted barley extract, natural flavour, yeast extract, garlic powder, onion powder, canola oil, evaporated cane juice, salt, sweet red bell pepper flakes, spice, malic acid, vitamins and minerals [the name of each is given], pea protein, carrot powder.
**Wt/Vol., Packaging, Price:** 227 gm. in plastic bag.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Plastic seam-seal bag. 7.75 by 7.25 inches. Bluish green, dark blue, light blue, red and black on light blue. "Loblaws Inc.," Montreal, Toronto, and Calgary. A color photo on the front shows the Chicken Strips with lettuce and veggie strips in a tortilla wrap and the Beef Strips with veggies on bed of rice.

On the back panel are Nutrition Facts, ingredients list and recipe ideas. On the lower back panel is the logo of the manufacturer, Garden Protein International Inc. (in English and French) on a white background: "Made with Gardein. Protein from the garden. www.gardein.com. Gardein is a registered trademark of Garden Protein International Inc."

2996. *Ontario Soybean Growers Soybean Report.*2007. A commitment to biofuels. Jan. p. 1.
• ***Summary:*** "Recent federal announcements have committed to regulating the use of renewable fuels in Canada and deliver $345 million to assist farmers and rural communities to seize new market opportunities in the agricultural bioproducts sector.

"The Honourable Rona Ambrose, Minister of the Environment, announced the Government would regulate an annual average renewable content of five per cent in gasoline by 2010. She added the Government intends to regulate a two per cent requirement for renewable content in diesel fuel and heating oil by 2012.

"The Honourable Chuck Strahl, Minister of Agriculture and Agri-Food and Minister for the Canadian Wheat Board, announced $345 million for two agriculture programs that will help bolster the development of biofuels and other bioproducts. The Agricultural Bioproducts Innovation Program and the Capital Formation Assistance Program for Renewable Fuels Production are designed to create new market opportunities for Canada's agricultural producers.

"'Advancing Canada's bio-based economy is a priority for Canada's New Government,' said Minister Strahl.

'These programs are an important step in achieving the government's objective of five per cent renewable content in transportation fuels by 2010, while also creating new economic opportunities for our farmers and agricultural sector.'" Address: Guelph, ONT, Canada.

2997. *Ontario Soybean Growers Soybean Report.*2007. Soybean rust update. Jan. p. 1.
• ***Summary:*** "In the fall of 2006, one of the most important questions surrounding soybean rust (SBR) in North America was answered. Over the course of a few months, under the proper weather conditions soybean rust developed over a very large geographical area. From October 1st, 193 new counties tested positive for SBR in the southern and the midwestern United States. The majority of these finds were on late season soybeans and or double crop beans. On October 26th, SBR was found on soybeans in Lafayette, Indiana (home of Purdue University). Lafayette is 165 miles south of Chicago and this represents the most northern find of SBR in the US ever.

"The total numbers for SBR as of December 21, 2006 for this year's soybeans are 231 different counties in 15 states and if you include kudzu (the over wintering host) the number increases to 274 counties over those same 15 states. This late spread of SBR from Louisiana up the Mississippi river and the Ohio River Valley was attributed to the prolonged stormy weather that occurred in late September that brought persistent rain showers and thunderstorms into Ontario and the midwestern United States." Address: Guelph, ONT, Canada.

2998. Anderson, G. Harvey. 2007. Glycemic Index: Pros and cons. *Soy Connection* 15(1):1, 3. Winter.
• ***Summary:*** In the past, carbohydrates (CHOs) have been "classified by their molecular size as sugar, oligosaccharides, polysaccharides, and polyols (hydrogenated CHOs). However the goal [proposed in the early 1970s] of having a physiologic measure of the impact of carbohydrate foods on blood glucose was motivated by the desire to try to provide dietary advice for the control of blood glucose in diabetic persons."

So the concept of carbohydrate exchange was developed. This "approach was put on a more quantitative basis as a result of the development of the glycemic index (GI) by Jenkins." Low GI is less than or equal to 55. Moderate GI is 56-69. High GI is 70+. "Carbohydrates that break down quickly during digestion have the highest glycemic index, and the blood glucose curve is high." "The glycemic load (GL) of foods, meals, and diets is calculated by multiplying the GI by the amount of carbohydrate in the food." This whole area has become quite controversial. Address: PhD, Prof. of Nutritional Sciences and director of the program in food safety, nutrition and regulatory affairs, Univ. of Toronto, Ontario, Canada.

2999. Brown, Allan; Brown, Susan. 2007. Re: Photographs of making tempeh at McDonalds Corners, Ontario, Canada. Letter (e-mail) to William Shurtleff at Soyinfo Center, March 29-30. 14 p.
• ***Summary:*** Each of these color digital photos is accompanied by a caption or explanation. In chronological they are:

2005 summer–Allan and son Casey Brown cranking a wooden grain cleaner / winnower by hand. They soon motorized it.

2005 June–A color poster celebrating Noble Bean's 25th anniversary of making tempeh commercially at R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Susan and Allan founded the company that June, having previously lived with Farm folks (and made tempeh) in Wisconsin, Tennessee, and Lanark, Ontario, Canada. To celebrate the occasion, Allan writes (March 2007): "We did have a toast and a large feeling of accomplishment. We advertised and ran stories in 3 mags [magazines] that get out all over Ontario... Then we ate some chocolate and had a distinct lightness of being experience."

2005 summer–Rosemary Kotze, a neighbor, with the wooden grain cleaner.

2006 Jan/Feb.–Noble Bean headquarters in the snow.

2006 spring–Susan and Allan Brown, pioneer tempeh makers in Canada, standing together, his arm around her shoulder, in their tempeh shop. Caption: "The boss and her assistant."

2006 spring–Susan Brown carrying a tray of burger size tempeh to incubator; each plastic bag makes nine 3 x 3-inch burgers.

2006 spring–Jake Dixon cranking cooked soybeans out of the kettle with a cool custom colander (under sheet of stainless steel that is used as a ramp between kettle and centrifuge).

2007 Jan.–Jake Dixon cleaning the centrifuge.

2007 March 18–Noble Bean's tempeh products displayed on a table at Manger Santé Montreal. Note recent Kosher certification symbol OVH (Ottawa). Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3000. *Ontario Soybean Growers Soybean Report.*2007. Connecting producers with programs. March. p. 1.
• ***Summary:*** "An update from Agricorp: Over the past three years, Agricorp has delivered approximately $1.5 billion in government funds to Ontario farmers. We are committed to connecting Ontario soybean growers with programs that help manage risk, and to upholding the high-quality customer service you've come to expect from us."

The CAIS [Canadian Agricultural Income Stabilization] program: We have been working hard to deliver the CAIS Inventory Transition Initiative (CITI) and the Ontario Inventory Transition Payment (OITP). Agricorp is planning to complete the delivery of 2003 and 2004 program years by the end of February. Statements showing how benefits are calculated will be available for all CAIS participants shortly after.

"We have devoted significant resources to this effort and are in line with other jurisdictions. To date, we have issued over $69 million under CITI and over $44 million under OITP. We anticipate roughly 7,000 participants from the 2003 program year and roughly 10,000 participants from the 2004 program year will receive these additional benefits. To date, we have mailed over 96 percent of the 2003 cheques and 70 percent of the 2004 cheques."

Note: According to the CAIS website: "As of the 2007 Program Year, CAIS is being replaced by AgriStability and AgriInvest." Address: Guelph, ONT, Canada.

3001. Crowell, Lewis. 2007. Shocked! *Acres U.S.A.* 37(4):7. April.
• ***Summary:*** "I am shocked that your editorial staff endorses the production of biofuels. Where would we find the acreage to feed even a small fraction of our nation's energy appetite."

"Recent USDA-based studies estimate that to meet only 7% of gasoline production, we would have to convert all U.S. crop land to corn. This excludes biodiesel and all food crops. Even a fraction of this production would leave us a countryside of 'fuel farms,' highly mechanized operations requiring vast quantities of water, fertilizer, and pesticides. As for the environmental costs: would the highly touted 'biofuel economy' be worth eliminating our natural and cultural landscapes. making even the worst urban sprawl look tame?

"A few years ago my wife and I noticed large soybean fields replacing many picturesque hay fields and pastures in southern Ontario. Recently, we observe entire regions throughout rural Ontario have become rolling seas of

soybeans and corn–many from horizon to horizon. In the fall, herbicide 'plowing' [no-till] turns most of these fields into grey poisoned moonscapes. We have also notice many wildlife refuges have leased big chunks to crop growers... Millions of acres of heavily sprayed corn and soybean fields leave absolutely no room for wildlife." Address: East Aurora, New York.

3002. Larivée, Josée. 2007. Profil: Yves Potvin [Profile: Yves Potvin]. *Le Must Alimentaire (Quebec, Canada)* 1(6):16-20. March/April. [Fre]
• ***Summary:*** Two color photos show Yves Potvin, and several others show his Gardein being used in various ways.

3003. *Ontario Soybean Growers Soybean Report.*2007. How do you put soy on your plate? April. p. 1.
• ***Summary:*** "April is Soyfoods month, and Canada's soyfood industry is inviting Canadians to share their favourite soy recipes for a chance to win prizes.

"'How do you put soy on your plate?' is a contest being run by Soyfoods Canada–an organization that represents Canadian soyfood companies, soy ingredients, and soybean farmers. With a mandate to promote soy, one role of the organization is to provide soy recipes to consumers and to a large portion of nutritionists, dieticians, and cardiac care centres within Canada.

"The recipe contest–running through the month of April–seeks recipes that include soyfoods that are available for purchase within Canada. Submitted recipes will be posted on the organization's website, www.soyfoodscanada.com. Five recipes will be selected for inclusion in Soyfoods Canada's next recipe brochure, and one winning recipe will receive a prize package from Canada's leading soyfood companies.

"For more information, visit www.soyfoodscanada.com." Address: Guelph, ONT, Canada.

3004. Gupta, Raj. 2007. New developments at ProSoya worldwide (Interview). *SoyaScan Notes.* June 27. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** A very interesting and far-reaching discussion including: (1) Assoy in Russia, Firouz Zanjani and Alexander Podobedov. (2) Soymilk factory in Iran, Andre Ladoucer (he commissioned the plant but is no longer active in the soymilk business), and the ProSoya agent in Iran. (3) People in the Middle East have a palate very similar to that of people living in India; both like soy yogurt. (4) ProSoya's best small machine for making soymilk is the one that makes 2,000 liters/hour, which has a vacuum deodorizer. The basic plant without packaging equipment costs $60,000. A chiller costs an additional $15-20,000. Yogurt incubation tanks are extra. (5) ProSoya's continuous curding machine which makes 1,000 kg/hour of tofu; it costs about $135,000. (6) ProSoya's plant in New York is still in operation. It makes 2 tankers a week of soymilk, all of which is sold in Canada. (6) Many taste tests show that ProSoya's SoNice is the best tasting soymilk in the world. The most important thing for soymilk to become a mainstream product is to improve its taste. (7) Raj Gupta's discussions and negotiations with major companies that sell soymilk: Unilever (Ades, Adez), Coca Cola and Odwalla. All these companies agree that ProSoya's soymilk is the best tasting. It is very frustrating that marketing is of top importance to all, while product quality is much or relatively low importance. (8) The soymilk market in North America is now worth about #1,000 million, with 90% of the sales in the USA and 10% in Canada, where Soyaworld is the leading player, with about 40% of the market. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

3005. **Product Name:** Garden Goodness: 6 Veggie Chick'n Breasts, Lightly Seasoned.
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2007. June.
**Ingredients:** Water, soy protein, Canadian wheat protein, modified cellulose, natural flavors, potato starch, expeller pressed canola oil, organic evaporated cane juice, yeast extract, spices, sea salt, pea protein, carrot fibre, organic beet root fibre, vitamins and minerals [each one is named].
**Wt/Vol., Packaging, Price:** 700 gm. Paperboard box. Six individual packs.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 9 by 6 by 2½ inches. Black, yellow, green, red and white. A color photo on the front panel shows a Chick'n Breast sliced in half on a bed of lettuce. On the front and back panels is the logo of Garden Protein International Inc. "Made with Gardein. Garden grown protein." side panel: "No artificial flavors, colors or preservatives. Manufactured for Its All Good Foods, Inc., Richmond, V6V 1Y5 Canada. www.gardein.com. Product of Canada. Copyright 2008." At one end panel: "Heat & serve: Ready in 2 minutes." On the back panel are Nutrition Facts, ingredients list and recipe ideas.

3006. Gupta, Raj. 2007. The purchase of SoyaWorld by Sanitarium Foods (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** SoyaWorld is now completely owned by Sanitarium Foods of Australia. First Sanitarium bought the 47% of SoyaWorld owned by Sunrise Soya Foods. Later they bought the remaining 53% owned by Saputo. The

person who knows the exact dates is Maheb Nathoo, who is still president of SoyaWorld.

SoyaWorld still makes two soymilk products: (1) Soy Good, made from soy protein isolates, is made using the formula developed by Sanitarium Foods. It is very heavily promoted in Canada, using both TV and print, and has about 60% of the Canadian market, but because it is so heavily promoted and costs more to make, Raj thinks that it is presently not as profitable as the other product, So Nice. (2) So Nice is made from whole soybeans, using the ProSoya process. It is never promoted or advertised by Sanitarium Foods. It has about 40% of the Canadian market.

The fact that So Nice is outsold by So Good no longer effects Raj's income, because the exclusive agreement between ProSoya and SoyaWorld (from which ProSoya earned royalties) has expired. SoyaWorld now has non-exclusive use of the process and ProSoya does not get any royalties.

It is difficult to do blind taste tests comparing these two products, in part because so many people already have developed. There are also issues about using another person's branded product in a taste test and publicizing the results. Address: President and CEO, ProSoya Inc., 2-5350 Canotek Road, Ottawa, ONT, K1J 9N5, Canada. Phone: 613-745-9115.

3007. Joe, Peter. 2007. Sale of Sunrise's share of SoyaWorld Inc. and starting a new tofu plant in Toronto, Canada (Interview). *SoyaScan Notes.* July 24. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** In Dec. 2000 Peter Joe sold his 47% share of SoyaWorld to Sanitarium Foods of Australia.

He recently built a new tofu manufacturing plant in Toronto, Ontario. It began production in March 2002. All is well for Peter and Sunrise. The market for tofu in Canada is growing. Address: General Manager, Sunrise Soya Foods, 729 Powell St., Vancouver, BC, V6A 1H5 Canada.

3008. Reuters. 2007. SunOpta Inc. acquires operating assets of ProSoya Corporation located in Heuvelton, New York (News release). Aug. 7.
• ***Summary:*** SunOpta (incl. Sunrich), headquartered in Canada, announces that it has acquired a soymilk manufacturing plant in Heuvelton, New York from ProSoya Corporation. The plant (incl. building, machinery, and equipment) was acquired for cash.

Allan Routh is president of the SunOpta Grains and Foods Group. Steve Bromley is president and CEO of SunOpta.

3009. Wallace, Kate. 2007. Meatless meals for the meat lover. *Telegraph-Journal (New Brunswick, Canada).* Aug. 9. p. D1 (Magazine).
• ***Summary:*** Potvin has created a line of meatless, "center of the plate" products named "It's All Good," including veggie chicken breasts in herb dijon and Tuscan tomato marinade, and seasoned veggie beef strips. A photo shows Yves Potvin standing by a produce case.

3010. Charles, Sean. 2007. Soybean demand continues to drive production (Document part). In: Linda Starke, ed. 2007. *Vital Signs 2007-2008: The Trends that are Shaping Our Future.* New York, NY: W.W. Norton & Co. 166 p. 166 p. See p. 22-23; 13, 24, 40. [28 ref]
• ***Summary:*** Figures show: (1) Graph of world soybean production, 1961-2005. It has risen steadily and continues to accelerate. In 2005 world soybean production reached a record 214 million tons.

(2) Pie chart of soybean production: Top seven countries, 2005 (in million tons): 1. United States 83.4. 2. Brazil 53.1. 3. Argentina 38.3. 4. China 16.8. 5. India 6.3. 6. Paraguay 3.5. 7. Canada 3.2. Note that the top 4 countries accounted for 90% of world production. Over the past 25 years, U.S. market dominance has eroded, as Brazil and Argentina have risen. "The United States produced 60% of the world's soybeans in 1980 but only 35% in 2005.

(3) Graph of world soybean harvested area, 1961-2005. It has risen steadily and is accelerating.

A table shows "World soybean production 1961-2005" (million tons). It grew from 27 in 1961 to 59 in 1973, to 101 in 1985, to 160 in 1998, to 2005 in 2004 and 214 in 2005.

The declining role of the USA as an "exporter can be traced to increased competition from South American producers, growing domestic competition with corn, the production of biodiesel, and the resistance in some markets to genetically modified (GM) soybeans."

A major source of information is FAO's FAOSTAT Statistical Database, at faostat.fao.org. Address: Worldwatch Inst., 1776 Massachusetts Ave., N.W., Washington, DC 20077-6628.

3011. *Ontario Soybean Growers Soybean Report.*2007. Chuck Strahl turns back on Ontario farmers, rejects RMP: Conservative Agriculture Minister wants producers beholden to ad-hoc government aid instead. Aug. p. 1.
• ***Summary:*** "The federal Conservative government has sold out farmers across Canada by refusing to participate in the proposed Ontario Risk Management Program (RMP), said the Ontario Grains and Oilseeds Safety Net Committee (Ontario G&O).

"Comments by federal Agriculture Minister Chuck Strahl published yesterday indicate that Ottawa will not participate in the three-year pilot RMP for grains and oilseeds farmers in Ontario, announced last month by the provincial government's Agriculture Minister Leona Dombrowsky.

"'After 18 months on the job, Minister Strahl still thinks farm-income programming is a one-size-fits-all proposition, where what's good in Saskatchewan has to work in Ontario, or it's just too bad,' said G&O chair Leo Guilbeault. 'What is astonishing is that the federal government actually has the surplus money available to fully fund RMP, while the provincial government has a much tighter treasury.'

"The RMP is an insurance-based program designed to sustain farm incomes during times when world commodity prices are driven to uneconomical levels by international subsidies. World farm subsidies are the biggest cause of declining farm incomes over the past five years. The provincial government had intended the costs to be shared on the customary 60-40 basis between Ottawa and Queen's Park respectively.

"By refusing to participate as a federal partner in the Ontario RMP, Minister Strahl has told farmers across Canada his government won't help them develop regional programs that are tailored to their specific needs. This concept, known as regional flexibility, is common in other industrial sectors.

"'The message is clear: Minister Strahl wants farmers beholden to the federal government's ad hoc, politically motivated emergency aid,' Guilbeault said. 'The whole point of RMP is to allow farmers to plan for the long-term, without waiting for some politician from Ottawa to show up–usually three years too late–with a cheque for a photo op.'

"'We are families with deep roots in the countryside, and we're proud to grow the food that feeds our cities,' Mr. Guilbeault added. 'This RMP is about sustainability, not just for farmers, but for rural communities.'

"Ontario G&O wants to know if Ontario Progressive Conservative Leader John Tory supports the position of his federal cousins in Ottawa.

"'Mr. Tory made a big deal about supporting RMP back in June when he announced his party's agriculture policy. Mr. Tory should demonstrate that support by calling on his federal cousins to adopt RMP today.'" Address: Guelph, ONT, Canada.

3012. Ward, Valerie. 2007. The surge in soy: Changing consumer attitudes toward this plant protein have made soy an increasingly popular product ingredient. *Food in Canada.* July/Aug. p. 47-48.

3013. *Ontario Soybean Growers Soybean Report.*2007. The McGuinty government delivers for Ontario's 25,000 grain and oilseed farm families. Sept. p. 1.
• ***Summary:*** "Ontario grain and oilseed producers applauded the McGuinty government for following through on its commitment of a pilot Risk Management Program (RMP). Announced back in June, the program will be operational this fall, with the government accepting applications this September.

"'This is tremendous step forward. The McGuinty government has listened to farmers, and is now delivering a program that will help us find some stability in the next few years,' said Leo Guilbeault, chair of Ontario Grain and Oilseeds Safety Net Committee. 'For years our producers asked for a flexible, regional-based support program. Today the Ontario government came through for farm families.'

"Mr. Guilbeault was on hand for the announcement made by Ontario's Premier Dalton McGuinty, and the Minister of Agriculture, Leona Dombrowsky. The announcement was made at the farm of Lloyd Crowe, grain & oilseed farmer from the Picton area.

"RMP is an insurance-style program with costs shared by farmers (through premiums) and the provincial and federal governments. It will kick in when a commodity's average price falls below an agreed-upon floor price per bushel, delivering an income-support payment to participating farmers. In years where prices are sustainable, there will not even be a need for payouts.

"The RMP is intended to give farm families the planning tools to carry on with their livelihood in the face of a depressed international market. "The government could have done what it has in the past by making a huge announcement of ad-hoc aid dollars. We have been telling them for a long-time now that ad-hoc announcements may make good television, but they are rarely effective. We advocated for RMP because it can help ensure long-term stability for our producers. We thank Premier McGuinty, Minister Dombrowsky and the government's rural caucus for listening to us. Now we need the federal government to do the same," Guilbeault said.

"RMP is designed so that producers will supply one-third of the total funding, while the federal and provincial governments will invest the remaining two-thirds based on the 60-40 funding formula.

"'Our hope is that the federal government will come to see that a flexible, regional-based model works best for farm families. To date the Harper government in Ottawa has resisted producers, opting instead to put a new sheen on failed support programs like CAIS. This announcement should help convince the federal government that regional-based flexible programs can work.'" Address: Guelph, ONT, Canada.

3014. Debruyne, Ignace. 2007. Global product opportunities: Value creation using soy protein. Paper presented at Unlocking the Value of Soy Protein in Consumer Foods, Guelph Food Technology Centre (GFTC)–Soy 20/20, Brampton, Ontario, Canada. 108 p. Presented 18 Oct. 2007.
• ***Summary:*** Contents: 1. Why consuming soybean foods?: Different objectives for different stakeholders, major drivers

and objectives–Value creation. 2. Soybeans, soy protein and soyfood market: Soy protein products. soyfood products. 3. Similar markets: EU, USA, Canada. 4. Value creation through innovation and product development: IP [identity preserved] and non-GM supply, soy as a functional ingredient, novel food product applications. 4. Value creation through marketing & communication: Nutrition & health communication. 5. Conclusions. The page titled "Soy processors & supporting services: a vast list of players" [in Canada] (p. 32) includes: Cargill Texturixing Solutions, Concord Sales, Galaxy Foods, Garden Protein International, Guelph Food Technology Centre, Gain Celestial Canada, Hilton Soy Foods, Internova, La Soyarie, Leading Blends, Maple Leaf Foods, N2 Ingredients, Noble Bean, Nutri-Soya foods, Nutritel Food Technologies, Oléangerie, Okanagan's Soya, Ontario Soybean Growers, Parmalat Canada, Prograin, Protenergy Natural Foods, Protex Foods, Roy Legumex, Sol Cuisine, So Soya, Southwest Ag Partners, Soya Dairy, SoyaWorld, Soyfoods Canada, Soylutions, SunOpta, Sunrise Soya Foods, Tayo Foods, Tetra Pak, Thompsons, Tixena Int'l Marketing, White Wave.

Source: Statistics Canada, Census of Agriculture, 1976 to 2006.

Ontario, Manitoba, Saskatchewan, and Alberta in the census years of 1976, 1981, 1986, 1991, 1996, 2001, and 2006. Soybeans were planted in each of these provinces in the three most recent census years. (2) Top 10 soybean producing nations (Average 2000 to 2005): After the USA, Brazil, and Argentina, China is 4th, India 5th, Paraguay 6th, Canada 7th, Bolivia 8th, Indonesia 9th. and Italy 10th. (3) Average soybean composition. Columns: Characteristic, oil, feed and meal beans, soy milk / tofu soybeans. For the latter: 100 seeds should weigh more than 20 gm. Colour very light with clear hilum, oil content 17-19%, protein content 44-47%, soluble sugar content 11-13%, insoluble sugar content 21-25%, minerals 5%. (4) Nutritional comparisons: Tofu and soy milk with ground beef and cow's milk.

Maps: (1) Soybeans in Canada (3 maps on one page). Map A shows that quite a bit of Quebec's soybean acreage lies south of the Saint Lawrence River, in the region named "Southern Quebec" (which includes the Eastern Townships at its southernmost area–its south-western end).

"Until the mid-1970s, soybeans were restricted by climate primarily to southern Ontario. Intensive breeding programs have since opened up more widespread growing possibilities across Canada for this incredibly versatile crop: The 1.2 million hectares of soybeans reported on the Census of Agriculture in 2006 marked a near eightfold increase in area since 1976, the year the ground-breaking varieties that perform well in Canada's shorter growing season were introduced" (p. 1).

"For years, soybeans were being grown in Canada but it wasn't until the Second World War that Statistics Canada began to collect data showing the significance of the soybean crop, with 4,400 hectares being reported in 1941. In fact, one year later the area had jumped nearly fourfold, to 17,000 hectares. In 1943 a program aimed at actively breeding soybeans suitable for southern Ontario was initiated.

"During the Second World War, North American manufacturers used oil from soybeans not only as a food but also to produce a wide number of industrial products including glycerine for the manufacture of nitroglycerine used for explosives and ammunition.

"By 1951, 62,967 hectares had been planted with soybeans (Figure 1), but they were still mostly confined to southern Ontario, the region with the longest and warmest growing season in Canada" (p. 2).

"It wasn't until varieties with earlier maturity and improved tolerance of cooler climates were successfully developed–the 'Maple' series of soybean cultivars–that significant soybean production was pushed beyond southern Ontario. The 1976 release of the Maple Arrow variety in particular is credited with expanding the range of soybean production into eastern Ontario (Table 1)."

The "growth between 2001 and 2006 was particularly notable in the Prairie provinces, with Manitoba's soybean area increasing sevenfold to over 141,869 hectares and its more western neighbours, Saskatchewan and Alberta, beginning to actively pursue soybean production. These gains in area were the payoff from research aimed at finding and breeding soybean varieties suited to the Prairies as well as from crop promotion and market development" (p. 5).

"In the 2006 calendar year, farm cash receipts from soybeans amounted to $680 million in Canada, making it the fifth most valuable field crop, trailing canola ($2.5 billion), wheat ($1.8 billion excluding durum), potatoes ($899 million) and corn ($753 million). In Ontario, where it was also the most planted crop, it was the top crop in terms of farm cash receipts, at $547 million, eclipsing the receipts from corn ($449 million) and wheat ($275 million)" (p. 6).

"International trade contributed to the value of soybean receipts. Preliminary figures place soybean exports at over 40% (1.5 million tonnes) of the soybeans grown in Canada in the 2006 crop year (3.5 million tonnes).

"Of the four top buyers in 2006, Japan led the list, importing $138 million in Canadian soybeans, followed by Malaysia ($52 million), the Netherlands ($49 million) and Iran ($43 million). At the same time, Canada imported about 302,000 tonnes of soybeans valued at approximately $81 million, 99% of which came from the United States" (p. 7). Address: Statistics Canada.

3017. **Product Name:** It's All Good [2 Veggie Chick'n Breasts in a Tomato Tuscan Marinade, 2 Veggie Chick'n Breasts in a Herb Dijon Marinade, 2 Veggie Chick'n Breasts Lightly Seasoned, 8 Veggie Chick'n Filets in a Mediterranean Herb and Spice Rub, 8 Veggie Chick'n Filets in a Zesty Lemon Herb Rub, Veggie Chick'n Strips Lightly Seasoned, Veggie Beef Strips Lightly Seasoned, 6 Veggie Chick'n Satays in a Chili Lime Marinade, 5 Veggie Beef Skewers in a Chipotle BBQ Sauce].
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2007. October.
**Ingredients:** Veggie Chick'n Breasts: Water, isolated soy protein, vital wheat gluten, natural flavors, modified vegetable gum, potato starch, expeller pressed canola oil, tomato paste, spices, red bell pepper flakes, pea protein, carrot fiber, organic beet root fiber, organic evaporated cane juice, yeast extract, vinegar, sea salt, and citric acid. Contains Soy and Wheat.
**Wt/Vol., Packaging, Price:** 10.5 oz (300 gm). Paperboard box.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 6½ by 6½ by

1¼ inches. Green, red and black on white. A color photo on the front panel shows a Chick'n Breast sliced in half on a bowl of rice. On the front and back panels is the logo of Garden Protein International Inc. "Made with Gardein. Garden grown protein." On one side panel: "No artificial flavors, colors or preservatives. A good source of protein. Grain and vegetable ingredients. Suitable for vegans. Low fat. Manufactured for Its All Good Foods, Inc., Richmond, V6V 1Y5 Canada. www.itsallgoodfoods.com. Product of Canada, copyright 2007." On the other side panel: "Pan fry. Bake. Microwave. Barbecue, Good with rice, potatoes, couscous, pasta." On the bottom panel: "Heat & serve: Ready in 2 minutes." On the back panel are Nutrition Facts, ingredients list and recipe ideas.

3018. **Product Name:** FreeNut Butter (Soynut Butter).
**Manufacturer's Name:** Hilton Soy Foods.
**Manufacturer's Address:** Staffa, Ontario, Canada. Phone: 734-973-0778.
**Date of Introduction:** 2007. October.
**Ingredients:** Non-GMO toasted soy, soy oil, granulated cane sugar, monoglyceride (from vegetable oil), sea salt.
**Wt/Vol., Packaging, Price:** Plastic jar.
**How Stored:** Store in a cool, dry, dark place.
**New Product–Documentation:** Letter (e-mail) from David Singsank, Hilton Soy Foods, 2863 Quail Hollow Ct., Ann Arbor, Michigan 48108. 2009. March 28. FreeNut Butter is a private label by a small Canadian customer. It is in only a small number of smaller Canadian retail stores, mostly natural food stores. It will stay in Canada. It was introduced about last half of 2007. It retails for about US$4.75.

3019. *Ontario Soybean Growers Soybean Report.*2007. Message from OSG general manager [Dale Petrie]: Open letter to Ontario soybean growers. Aug. p. 1.
• ***Summary:*** "It is with pleasure that I write this letter as the new General Manager for the Ontario Soybean Growers. I look forward to working with all Soybean Growers, Board Members, Industry, Government and staff in this very dynamic and important crop sector.

"I was born and raised on a dairy / cash crop farm in the heart of Glengarry county in the very eastern corner of the province but have resided in Chatham-Kent for the last 25 years. My brother and father continue to grow corn and soybeans and represent the 4th the 5th generation of Petrie's on the family farm. My background has been primarily in the seed industry and I have had the privilege of visiting many farm operations from one end of the province to the other. I look forward to renewing these friendships and acquaintances at the upcoming regional meetings in early 2008.

"In the few short weeks that I have been with OSG, I have been very impressed with the talented, dedicated and hard working members of the OSG Board of Directors and the staff. They are all truly focused on ensuring we continue to look for exciting opportunities such as new export food grade markets, biodiesel, and other new industrial uses for Ontario soybeans.

"I look forward to joining OSG's efforts directed at both levels of government to address much-needed support mechanisms for producers, and to grow the soybean value chain–with special emphasis on flowing benefits back to producers.

"As you are aware there are a number of changes afoot with respect to the grain grower organizations in the province and I assure you I will do my utmost to ensure decisions that are made, are in the best interest of growers and for the overall good of the agricultural industry."

A portrait photo shows Dale Petrie. Address: Guelph, ONT, Canada.

3021. Ontario Soybean Growers. 2007. Ontario Soybean Growers willing to resume MOU [memorandum of understanding] negotiations (News release). Guelph, Ontario, Canada: OSG. 1 p. Dec. 19.
• ***Summary:*** "Guelph, Ontario–Over 10 soybean producers attended the Ontario Soybean Growers (OSG) Committee Members meeting today in London, Ontario where they expressed their views on the recent OSG Board of Directors decision to withdraw from the MOU process. Multiple resolutions were brought forward from several districts across Ontario requesting the Board of Directors to continue resuming negotiations with Ontario Corn Producer's Association (OCPA) and the Ontario Wheat Producers' Marketing Board (OWOMB).

"Following the Committee Members the OSG Board of Directors met where a unanimous decision was made to resume MOU negotiations by meeting with the executives and general managers of OCPA and OWPMB."

Leo Guilbeault, Chair, OSG, said the meeting was a very positive one and the growers "presented a very balanced point of view of what the amalgamated organization could look like."

"OSG's recently developed strategic plan was presented at the meeting and was received with positive feedback from growers. The strategic plan complements OSG's mission statement that focuses on grower opportunities and value-added initiatives.

For further information:
Leo Guilbeault, Chair, OSG, 519-796-2289.
Dale Petrie, General Manager, OSG, 519-767-1744.

Note: This story also appeared in the Jan. 2008 issue of *Ontario Soybean Growers Soybean Report* (p. 1). Address: Ontario AgriCentre, Suite 201, 100 Stone Rd. W., Guelph, Ontario CANADA, N1G 5L3.

3022. Anderson, Fiona. 2007. Meatless meat wins animal rights award: Veggie-based chicken and beef look-alikes are created by Richmond's Garden Protein. *Vancouver Sun (British Columbia, Canada).* Dec. 26.
• ***Summary:*** PETA (People for the Ethical Treatment of Animals) has awarded its Proggy award for the "Company of the year" to Garden Protein International Inc. of Richmond, BC, Canada. makers of Gardein meatless protein.

3023. *SoyaScan Notes.*2007. Chronology of major soy-related events and trends during 2007 (Overview). Dec. 31. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** Feb.–The Soy Connection for the Food Industry (Vol. 1, No. 1) starts to be published by United Soybean Board as an free e-newsletter. The subject of the first issue is Qualisoy soy oil.

March 6–8 International Soy Utilization conference in Bangkok, Thailand. It is organized by: The Institute of Nutrition, Mahidol University (INMU), ASA International Marketing (ASA IM), and the Soy Food Forum Southeast Asia (SFF).

April 4–Organizations listed in the Soya & Oilseed Bluebook are invited and enabled to update their own listings online. The update listing will appear as soon as the Bluebook editors review it and in the print edition in the fall. The Bluebook will continue to be printed as a bound book. Preferred customers will receive a free copy. Qualified people or organizations in the industry who request a copy pay shipping and handling. Those outside the industry must pay for shipping and handling plus a $95 fee.

June 11–The Hain Celestial Group completes its acquisition of the tofu and meat-alternatives business of WhiteWave Foods Co., a subsidiary of Dean Foods. The product line includes grilled and baked tofu, seitan, tempeh, etc. These products are expected to complement Hain Celestial's existing meat alternatives under the Yves brand in Canada and the United States. The White Wave tofu business generated sales of approximately $8 million in the last financial year.

July 11–Solae announces that it has completed its purchase of Cargill's Prolisse line of isolated soy proteins (ISP; soy protein isolates), including the patented membrane technology for processing ISP.

Aug. 16–CPM (Waterloo, Iowa) acquires Crown Iron Works (Minneapolis, Minnesota). CPM is owned by Golbert Global, a private equity group. The acquisition doubles the size of CPM.

Aug. 7–SunOpta (incl. SunRich), headquartered in Canada, announces that it has acquired a soymilk plant in Heuvelton, New York, from ProSoya Corporation (Ottawa, Ontario). Allan Routh is president of the SunOpta Grains and Foods Group.

Sept. 11–Hain Celestial Group announces it will delay filing its annual report with the U.S. Securities and Exchange Commission (SEC) pending a review of its practices in granting stock options. Thus, the annual report was received by shareholders in April 2008, rather than the typical Nov. 2007.

3024. *Ontario Soybean Growers Soybean Report.*2007. Soybean rust in Ontario. Dec. p. 1.
• ***Summary:*** "Asian Soybean Rust infection was recently detected and confirmed for the first time in Canada. The disease was found on a soybean plant collected in October 2007 from a field in Ridgetown, Ontario by OMAFRA and confirmed through molecular tests by Agriculture Canada in Ottawa.

"This confirmation, along with the first detection of soybean rust spores this past summer in Ontario (from rainfall and air samples) illustrates that the disease can spread through wind-borne spores into Ontario from US infected areas.

"Soybean rust, common throughout Asia and South America, was discovered in the fall of 2004 in the U.S. The fungus is not harmful to humans or animals but it can have a crippling effect on soybean plants and yields. The impact on yield depends on when infection occurs. The earlier the disease starts in the summer the greater chance of a yield impact. Soybean rust can be managed with early detection and the use of fungicides.

"At present all Ontario commercial soybean varieties are susceptible to the soybean rust, but public breeders at the University of Guelph and Agriculture Canada in conjunction with OMAFRA and the Ontario Soybean Growers are working to build soybean rust resistance into future Ontario varieties. Screening of Ontario breeding lines was done this summer in Florida and demonstrated that our breeders are on the right track. Some lines are showing resistance, but it will take time to incorporate this into commercial varieties.

"What does this mean for Ontario soybean farmers? This is the first time soybean rust has infected Canadian soybeans. However, it arrived late enough in the growing season that it is unlikely to have affected 2007 soybean yields.

"But what about 2008? Researchers can't predict how the disease will act in Canada's climate, but we do not expect this disease to over winter in Ontario. Soybean rust requires a living host plant to survive, reproduce and over-winter. It is unlikely that a winter host exists in Ontario or the northern US.

"As a result, the risk of soybean rust infecting Ontario soybeans during the next growing season will depend on spring and summer weather systems that move air into Ontario from the southern US. It will be critical to monitor the spread of soybean rust northward during the 2008 season in order to ensure early detection, should it arrive in Ontario again. Likely the largest factor in our risk for 2008 will be the type of winter in the southern US. A mild winter will cause less frost kill and more overwintering of soybean rust. This will increase the amount of rust available to move North early in the season.

"To monitor soybean rust developments in Ontario and in the US, OSG supports Ontario's participation in the most comprehensive disease monitoring and forecasting program in North America, often referred to as the Sentinel plot network. This is coordinated by the US Department of Agriculture, United Soybean Board and the North Central Soybean Research Program.

"Funding for many of the Ontario soybean rust projects was provided in part through the Canada-Ontario Research and Development or CORD Program administered by the Agricultural Adaptation Council as well as Ag Canada's Pest Management Centre, the Ontario Soybean Growers and the Ontario Soybean Rust Coalition (through the CanAdvance Program)." Address: Guelph, ONT, Canada.

3025. PETA [People for the Ethical Treatment of Animals]. 2007. 5th annual PETA proggy awards for progress–Garden Protein International: Company of the year.
• ***Summary:*** This color award, 8½ by 11 inches, shows a frog leaping from left to right and is signed by Ingrid E. Newkirk, President. The PETA proggy awards are presented at the end of each year in late December. This one was awarded in late 2007.

Note: Founded in 1980 and based in Norfolk, Virginia, PETA is a nonprofit, tax exempt corporation. PETA's slogan is "animals are not ours to eat, wear, experiment on, or use for entertainment." The organisation focuses on four core issues: factory farming, fur farming, animal testing, and animals in entertainment. It also campaigns against fishing, the killing of animals regarded as pests, abuse of chained, backyard dogs, cock fighting, bullfighting and the consumption of meat. (Source: Wikipedia, Oct. 2008).

3027. Smith, Jeffrey M. 2007. Genetic roulette: The documented health risks of genetically engineered foods. Fairfield, Iowa: Yes! Books. v + 319 p. Index. 29 x 23 cm. [1131 endnotes]
• ***Summary:*** Contents: Praise for Genetic Roulette (4 p.). Foreword by Michael Meacher, MP. Acknowledgments. Introduction: Deceptions, assumptions, and denial– Exposing the roots of genetically modified crops: Industry is in charge of safety, genetic engineering creates widespread, unpredictable changes, how genetic engineering works and why it is not an extension of natural breeding, GM crops–two traits in four crops by five companies in six countries, GM is not like natural breeding, how to make a GM crop (two primary methods of gene insertion involve using a specific bacterium or a gene gun), its difficult to identify health problems from GM foods, even if widespread. What is presented in this book. Terms and concepts used throughout this book ("The terms genetically modified (GM) and genetically engineered (GE) are used interchangeably"). Organizational abbreviations.

Part 1. The documented health risks of genetically engineered foods. 1.1 Evidence of reactions in animals and humans (p. 40-59): 1.10 Mice fed Roundup Ready soy had liver cell problems. 1.11 Mice fed Roundup Ready soy had problems with the pancreas. 1.12 Mice fed Roundup Ready soy had unexplained changes in testicular cells. 1.13 Roundup Ready soy changed cell metabolism in rabbit organs. 1.14 Most offspring of rats fed Roundup Ready soy died within three weeks. 1.15 Soy allergies skyrocketed in the UK, soon after GM soy was introduced [in 1999]. 1.19. Eyewitness reports: Animals avoid GMOs.

1.2 Gene insertion disrupts DNA: 1.2.9 Roundup Ready soybeans produced unintentional RNA variations. Differences in nutritional composition of Roundup Ready soybeans (p. 86-87). 1.3 The protein produced by the inserted gene may create problems: 1.3.2 GM proteins in soy, corn and papaya may be allergens (p. 92-93). 1.4 The foreign protein may be different than what is intended. 1.5 Transfer of genes to gut bacteria, internal organs, or viruses: 1.5.4 Transgenic transfer to human gut bacteria is confirmed (p. 130-31). 1.6 GM crops may increase environmental toxins and bioaccumulate toxins in the food chain: 1.6.2 Herbicide-tolerant crops increase herbicide use and residues in food (p. 146-47). 1.6.4 GM crops may accumulate environmental toxins or concentrate toxins in milk and meat of GM-fed animals (p. 150-51).

1.7 Other types of GM foods carry risks. 1.8 Risks are greater for children and newborns. Connecting the dots: looking for patterns and causes.

Introduction to Parts 2 and 3. 2. The regulation of GM foods is inadequate to protect public health. 3. Industry studies are not competent to identify most of the unpredicted side effects: Research must be stopped when companies refuse to provide GM seeds (p. 196). Compositional changes are obscured by pooling crop data from varied growing conditions or making comparisons with plants of diverse genetics (p. 218-19).

4. Flaws in the arguments used to justify GM crops: Why GM crops are not needed to feed the world. Golden rice is the wrong way to supplement vitamin A. Conclusion.

Appendixes: 1. Gathering data and staying up to date on the risks of GM foods 2. How to avoid eating genetically modified foods. 3. List of GM crops. 4. Food enzymes from genetically modified organisms. 5. Special alert on aspartame, a genetically engineered sweetener. 6. Institute for Responsible Technology. 7. Credentials of those cited often in the text. About the author.

Monsanto, a major manufacturer of PCBs (polychlorinated biphenyls), systematically denied and covered up their known dangers to humans and animals. A court fined Monsanto $700 million (p. 5).

The five major "ag biotech" companies are Monsanto (the largest), DuPont, Syngenta, Bayer CropScience, and Dow. These five companies control 35% of the worldwide seed market and 59% of the world pesticide market. The four major genetically engineered [GE] food crops in commercial production are soybeans, corn, canola, and cotton. There are also GE zucchini, crookneck squash, papaya, and alfalfa. GE tomatoes and potatoes were introduced commercially but taken off the market. Quest cigarettes contain GE tobacco (p. 7).

Although Ag biotech promotes GE as a way of feeding the world's hungry, growing crops in the desert, or boosting nutritional value, the single dominant trait is herbicide tolerance (HT). The second popular GE trait is a built-in pesticide, Bt. Six countries grow nearly all commercialized GE crops: The USA (54%), Argentina (18%), Brazil (11%), Canada (6%), India (4%), and China (3%).

Note: Jeffrey Smith grew up in New York and graduated from college at SUNY Binghamton in 1981. He also has an MBA degree. Address: Fairfield, Iowa.

3028. SunOpta Inc. 2007. Annual report 2006: Sustainable growth. Brampton, Ontario, Canada. 114 p.
• ***Summary:*** SunOpta describes itself as "A healthy products company." On page 1 are financial highlights from 2001 to 2006. All dollar amounts are in U.S. dollars. Much of SunOpta's growth has come from acquisition. Revenues increased from $93.362 million in 2001 to $598.026 million in 2006. This is a 6.5-fold increased in 6 years.

Gross profit increased from $12.722 million in 2001 to $101.784 million in 2006. This is a 8.4-fold increased in 6 years.

Gross profits as a percentage of revenues ranged from a low of 13.8% in 2001, to a high of 19.1% in 2004, to 17.0% in 2006–all very high percentages.

Net earnings (profit or loss) increased from a loss of $231,000 in 2001 to a record profit of $13.558 million in 2005, decreasing to $10.959 million in 2006–with earnings per share of $0.19. Note: The company does not issue dividends and has no plans to in the future. Its stock is sold on both the Nasdaq and Toronto stock exchanges. Address: 2838 Bovaird Drive West, Brampton, Ontario L7A 0H2, Canada.

3029. AGP–A Cooperative. 2008. Annual report to members: Your cooperative. 12700 West Dodge Road, P.O. Box 2047, Omaha, Nebraska 68103-2047. 32 + 21 p. 28 cm.
• ***Summary:*** Net sales for 2007 (year ended Aug. 31) were $2,685.065 million, up 13.8% from $2,360.484 million in 2006. Earnings from continuing operations (before income taxes): $90.296 million, up 20.2% from $75.136 million in 2006.

Records achieved (p. 3): Soybean crush. Aminoplus production and sales. Growth in Vistive contract areas. Refined vegetable oil production. Renewable fuels production. Earnings by Protinal / Proagro in Venezuela.

Capital investments (p. 3): Soybean processing upgrade and expansion under construction at St. Joseph, Missouri. Methyl ester plant expansion at Sergeant Bluff, Iowa. New methyl ester plant at St. Joseph, Missouri. Masterfeeds expansion and upgrade of Daco premix and testing plant.

Message to the stockholders, from Marty Reagan (CEO and General Manager) and Brad Davis (Chairman of the Board). "All AGP businesses were profitable, and each contributed to the excellent financial performance. As a result, AGP will pay patronage funds of $46.2 million, of which the Board approved 30 percent to be paid in cash to members.

"The excellent cash flow generated from these strong earnings combined with your cooperative's ongoing balance sheet strength allowed your Board of Directors to approve equity redemption of $28 million for $2007. This amount brings the three year total of equity redeemed to $84 million. Cash payments for 2007 totaled $45.2 million including current cash patronage, equity redemption, and value-based premium programs. These payments bring the three-year total of cash returned to members to over $123 million–the most cash returned in any three-year period in AGP's history" (p. 5).

AGP is "the largest cooperative soybean processing company in the world." It "processes more than 15,000 acres of soybeans every day." "Today its owners are 195 local cooperatives and six regional cooperatives, representing 250,000 farmers from 15 states throughout the United States and Canada" (p. 7).

"Vistive soybeans, developed by Monsanto Company through conventional breeding, contain 3% linolenic acid, compared to the typical 8% found in traditional soybeans. The result is a more stable, low-linolenic (low-lin) soybean oil which, for certain applications, does not need the partial hydrogenation process that produces trans fatty acids (trans fats).

"Labeling of trans fats content in food became mandatory in Jan. 2006, so in partnership with Monsanto, AGP began contracting acres for Vistive production in 2005. Since then, growth of Vistive contract acres through AGP's membership has been outstanding. From 2006 to

2007, acres increased almost five-fold, and the number of participating members that offer local delivery of Vistive more than doubled.

"AGP expanded processing of Vistive soybeans from two to six plants,..." "AGP has been a leader in identity preserved soybeans for many years." Contains many color photos. Address: Omaha, Nebraska. Phone: (402) 496-7809.

3030. **Product Name:** President's Choice Blue Menu–The World's Best [Meatless Chicken Breast, Meatless Chicken Strips].
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2008. January.
**Ingredients:** Chicken breast: Water, soy protein isolate, wheat gluten, natural flavour, methyl cellulose, potato starch, canola oil, spices (contain garlic), vitamins and minerals [name of each is given], pea protein, carrot powder, beet root powder, cane juice powder, yeast extract, salt.
**Wt/Vol., Packaging, Price:** 900 to 936 gm. Paperboard box.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. The Chicken Breast was first sold in Jan. 2008 and the Breaded Chicken Strips in June 2008. Paperboard box. 9.5 by 7.5 by 2.5 inches. Light green, bark blue, light blue, red and black on light blue. "Loblaws Inc.," Montreal, Toronto, and Calgary. A color photo on the front panel shows the Chicken Breast and the Breaded Chicken Strips (one of each is sliced) with veggies on a white plate.

On the back panel are Nutrition Facts, ingredients list and recipe ideas. On the lower back panel is the logo of the manufacturer, Garden Protein International Inc. (in English and French) on a light blue background: "Made with Gardein. Garden grown protein. www.gardein.com. Gardein is a registered trademark of Garden Protein International Inc."

3031. *Ontario Soybean Growers Soybean Report.*2008. RMP checques arrive in time for the holidays. Jan. p. 1.
• ***Summary:*** "Members of Ontario Grains & Oilseeds would like to thank Agricorp and the Ontario Ministry of Agriculture, Food and Rural Affairs for its quick response on implementing the Risk Management Program (RMP) for Ontario grain & oilseed producers. Many producers have received RMP payments for the '07 crop year before the Christmas season. This payment is greatly appreciated by Ontario farm families at this time of year." Address: Guelph, ONT, Canada.

3032. *Ontario Soybean Growers Soybean Report.*2008. RMP update from Agricorp. Jan. p. 1.
• ***Summary:*** "Over $40 million in Ontario Risk Management Program (RMP) income support continues to make its way to eligible grain and oilseed producers across Ontario. Agricorp, the delivery agent for the Ontario government, expects to deliver the remaining balance of more than 10,000 pre-harvest price period payments to enrolled producers this month, and approximately 14,000 post-harvest price period RMP payments by the end of June 2008.

"'I am pleased that Agricorp partnered with industry to launch this new program and start making payments so quickly,' said Leo Guilbeault, Chair of the Ontario Grain and Oilseed Safety Net Committee.

"Launched by representatives from industry and the Ontario Federation of Agriculture in August 2007, RMP was designed to offset losses to grain and oilseed producers caused by low commodity prices. Most eligible commodities will trigger two payments for each crop year, typically in the fall and the spring if the market price falls below the support level. The three-year RMP pilot joins Production Insurance (PI) and the Canadian Agricultural Income Stabilization (CAIS) as one more component of an effective business risk management package. For that reason, producers who want to participate in RMP must also participate in both Production Insurance and the CAIS program." Address: Guelph, ONT, Canada.

3033. Shurtleff, William; Aoyagi, Akiko. 2008. Le livre du tofu: La source de protéines de l'avenir–dès maintenant! [The book of tofu: Protein source of the future–now! Translated from the English by Nathalie Tremblay]. Varennes, Quebec, Canada: Éditions AdA Inc. 430 p. Illust. by Akiko Aoyagi. Index. Feb. 28 cm. [53 ref. Fre]
• ***Summary:*** Contents: Preface. Acknowledgements. Part I. Tofu: Food for mankind. 1. Protein East and West. 2. Tofu as a food. 3. Getting started. Our favorite tofu recipes (lists about 80 recipe names for each of the different types of tofu, plus soymilk, yuba, whole soybeans, gô, okara, and curds; very favorites that are also quick and easy to prepare are preceded by an asterisk).

Part II. Cooking with tofu: Recipes from East and West (500 recipes). 4. Soybeans: History, cooking with whole dry soybeans, roasted soybeans *(iri-mame),* fresh green soybeans *(edamame),* kinako (roasted full-fat soy flour), soybean sprouts *(daizu no moyashi),* natto (sticky fermented whole soybeans, with "gossamer threads"), tempeh (fermented soybean cakes), Hamanatto and Daitokuji natto (raisin-like natto), modern western soybean foods (natural soy flour [full-fat], soy granules, defatted soy flour and grits, soy protein concentrates, soy protein isolates, spun protein fibers, textured vegetable protein (TVP), soy oil products). 5. Gô (a thick white puree of well-soaked

uncooked soybeans). 6. Okara or Unohana. 7. Curds and whey. 8. Tofu (includes history, and preparatory techniques: Parboiling, draining, pressing {towel and fridge method, slanting press method, sliced tofu method}, squeezing, scrambling, reshaping, crumbling, grinding).

9. Deep-fried tofu: Thick agé or nama agé, ganmo or ganmodoki (incl. *hiryozu / hirosu),* agé or aburagé (incl. "Smoked tofu," p. 197). 10. Soymilk. 11. Kinugoshi ("*Kinu* means 'silk'; *kosu* means 'to strain'; well named, kinugoshi tofu has a texture so smooth that it seems to have been strained through silk"). 12. Grilled tofu. 13. Frozen and dried-frozen tofu. 14. Yuba (incl. many meat alternatives such as Yuba mock broiled eels, Buddha's chicken, Buddha's ham, sausage). 15. Tofu and yuba in China, Taiwan, and Korea (incl. Savory tofu *{wu-hsiang kan};* see p. 258 for illustrations of many meat alternatives, incl. Buddha's fish, chicken, drumsticks, and duck, plus vegetarian liver and tripe, molded pig's head, and molded ham). 16. Special tofu.

Part III–Japanese farmhouse tofu: Making tofu for more and more people. 17. The quest. 18. Making community tofu. 19. The traditional craftsman. 20. Making tofu in the traditional way. Appendices: A. Tofu restaurants in Japan (many are vegetarian). B. Tofu shops in the West (Directory of 43 shops in the USA, 3 in Europe {Germany, Austria, Belgium, Denmark, Finland, France, Ireland, Italy, Netherlands, Portugal, Spain, Switzerland, UK, Wales}, and 3 in Latin America {Brazil, Colombia, El Salvador, Guatemala, Mexico}). C. People and institutions connected with tofu. D. Table of equivalents. Bibliography. Glossary. Index. About the authors (autobiographical sketches; a photo shows Shurtleff and Aoyagi, and gives their address as New-Age Foods Study Center, 278-28 Higashi Oizumi, Nerima-ku, Tokyo, Japan 177). Sending tofu in the four directions.

Pudding recipes include: Rice pudding with gô and apple (p. 76, incl. 2 cups soymilk). Tofu chawan-mushi (p. 147; Steamed egg-vegetable custard with tofu). Tofu fruit whips (p. 148). Tofu rice pudding (p. 150, incl. 1 cup soymilk). Tofu custard pudding (p. 152). Soymilk custard pudding (p. 208). Brown rice pudding (p. 208, with 2 cups soymilk). Soymilk chawan-mushi (p. 209). Chawan-mushi with yuba (p. 249).

Dessert recipes include: Tofu whipped cream or yogurt (p. 148; resembles a pudding or parfait). Tofu ice cream (p. 149, with chilled tofu, honey, vanilla extract and salt). Banana-tofu milkshake (p. 149). Tofu cream cheese dessert balls (p. 149). Tofu icing (for cake, p. 149). Tofu cheesecake (p. 150). Tofu-pineapple sherbet (p. 151). Also: Soymilk yogurt (cultured, p. 205). Healthy banana milkshake (p. 206). On p. 160 is a recipe for "Mock tuna salad with deep fried tofu." Address: Soyinfo Center, P.O. Box 234, Lafayette, California 94549 USA. Phone: 925-283-2991.

3034. Golbitz, Peter. 2008. Sale of Soyatech, major contributions, future plans. Part II (Interview). *SoyaScan Notes.* March 24. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** Continued: (1b) Soyatech's electronic newsletter is a way for the company to have a presence with its customers every day. The last printed, mailed issue of *Bluebook Update*, Soyatech's quarterly newsletter, appeared in Dec. 2003 (Vol. 10, No. 4). Thereafter the newsletter moved to an electronic online format and was renamed eNews Daily and Weekly.

(1c) Soyfoods conferences: Soyatech did a series of about ten of these jointly with IQPC and IBC. Peter was asked by the organizers to helped design the agenda, made sure the topics were relevant, and help promote the event (make mailing lists etc. available) to ensure satisfactory attendance. It was a contract for services agreement; Soyatech was paid a flat fee and/or a "piece of the gate" (percentage of income from attendance).

(1d) Market studies: These were a way for Soyatech to benchmark where the soy industry was in any particular year, and measure the value being added. For Soyatech it was a great way to promote the company's expertise in a particular area. Soyatech has done about 10 syndicated studies–7 soyfood reports, one on whole soybeans for food use and another on soy protein. They are currently in production with 2 more. (1e) Proprietary consulting: For one customer such as an equipment supplier, a technology provider, a seed supplier, a processor, a food company, etc. It crossed the whole value chain. People who wanted to understand what they had or what the size of the market was. Today Soyatech does 15-20 medium- to large-size projects a year. For example, in April 2006, the sixth report produced by a partnership of Soyatech and SPINS was released. Having a good staff is one key to doing all this.

Peter resigned as president of Soyatech on 17 Jan. 2008 and it became effective on March 7; his role is now "Founder and Senior Advisor." Peter is actively working with the company; he has three projects on which he is consulting with HighQuest Partners, helping to find and provide information. The Soyatech office in Bar Harbor, Maine, is fully staffed and more active than ever. Keri Hayes is now publisher of the Bluebook and Joe Jordan is general manager of content and events. So HighQuest has promoted the people at Soyatech rather than bringing HighQuest people into the Bar Harbor office. Peter believes that this is the best arrangement for both Soyatech and HighQuest. He is extremely happy with the way things have worked out, and he has a tremendous amount of respect for the vision that they had and for their respect for what Soyatech was and is. "They've done a great job. More than anything else, I am grateful." People from Boston come up regularly, and are working very effectively with the Soyatech staff. Soyatech has more of a horizontal /

egalitarian management chart than most companies. In short, the merger seems to be working out really well. Peter plans to meet Keri and Joe today to discuss upcoming events and Bluebook layout issues. Peter thinks that it is unlikely that HighQuest will shut down the Bar Harbor office and consolidate it into any of their other offices. The Boston office is also headquarters for a number of other businesses that HighQuest operates. HighQuest has five consultants in their Boston office.

(2) Peter's work with the Soyfoods Association of North America (SANA): When Peter left as president of Soyatech, he resigned his seat on the SANA board, because it is a company board seat. Although he could stay on because he is still an advisor to Soyatech, he decided to let Philippe de Lapérouse take the seat. Another reason for the decision to step down is that, during the past 4-5 months, Peter's work with the World Soy Foundation, has taken quite a bit of his time.

(3) Peter's work with WISHH (the World Initiative for Soy in Human Health). Peter became involved with WISHH in 2003 after Soyatech considering forming its own foundation; Peter realized that it made more sense to work with an established group. WISHH is now a committee of the American Soybean Association (ASA); it no longer has its own board. That is a recent change; for more information contact Jim Hershey, who is executive director of WISHH. Peter works with WISHH as a volunteer and ex officio member. He has been to Africa (South Africa, for 1 week each trip) 3 times so far, in 2005, 2006 and 2007. Soyatech helped to raise the $750,000 needed to establish the "Soy in Southern Africa Alliance"; Sarah Day from Soyatech's office just recently went to Ghana and Nigeria for WISHH as a researcher / consultant.

On the first several trips to South Africa, Peter met with companies to advise them on their soy sourcing, processing, marketing, and to generally help them solve their problems and improve their operations. On the most recent trip, when he visited the SoyaCow and SoyaGoat training center in KwaZulu-Natal, the easternmost province of South Africa, he helped them process soymilk using these two mechanical soymilk making machines, and gave several lectures on soymilk processing, flavorings, the types of technologies available, and to help develop that industry further. WISHH, whose objective is market development for foods and ingredients made from U.S. soybeans, is working to create fertile ground through education of the benefits of soy products in the human diet. The focus is on foods, but soy oil and meal are not excluded. WISHH is trying to get the SoyaGoats into communities such as orphanages, feeding kitchens, etc. and to train people to make soymilk using this technology. There are a number of large soymilk companies in South Africa; they generally sell soymilk in TetraPak cartons that is too expensive for most people. By using a SoyCow or VitaGoat the people drink fresh soymilk and omit the packaging, which is more than half of the cost. In 2007 Malnutrition Matters of Ottawa, Canada, (Frank Daller, president) got a grant from the World Bank to place about 16 VitaGoats in India; they hope to feed 4,000 to 5,000 children. Daller developed the VitaGoat using simple, inexpensive parts suited for Third World villages without electricity. "We're still just beginning in developing countries but there is a tremendous amount of interest." WISHH is also working with a Rotary group, and together they are sending SoyCows and soybeans, to Guatemala. In Peter's experience, the people in Africa loved the fresh soymilk made using relatively inexpensive technology. He found there was very little difference in the taste and appearance of the soymilk made by the low-tech bicycle-powered VitaCow and the electric high-tech cold-water-grind SoyaCow. "We just sent Sarah Day, research analyst in the Bar Harbor Office, to Nigeria and Ghana for a week in February." Two years ago Peter helped to raise $250,000 from industry for WISHH; WhiteWave and Solait were the two largest contributors. WISHH added $100,000, and that $350,000 was matched by USAID making a total of $700,000 for the South African project, which including establishing the center and running short courses in soymilk processing and teaching seminars.

A remarkable gentleman named Henry Davies (a white Afrikaner businessman) has set up this training center in Bergville, KwaZulu-Natal. It is dedicated to teaching and training people about soyfoods. There is a full SoyaCow in the tiled processing room, which is really a pilot plant. There is also a meeting and lecture room. There was an extrusion plant that made pet food and textured soy flour.

(4) Peter's work with the World Soy Foundation (WSF): In March 2007 Peter was elected to the board of directors of WSF; he is also chair of their fundraising committee. WISHH could not be a foundation or a nonprofit organization–such as 501(c)(3)–because part of its agenda was market development. So in late 2006 the Internal Revenue Service (IRS) gave ASA and USB permission to create the World Soy Foundation as a 501(c)(3) charitable foundation, which would disperse funds to various kinds of organizations related to U.S. soybeans. Presently WISHH is their primary beneficiary, but WSF can only give to certain types of WISHH projects. So WISHH is expected to get some of its funding through the American Soybean Association (ASA) and some through the World Soy Foundation. ASA, as well as the big state soybean boards such as Illinois, Iowa and Indiana, are all major contributors to WISHH. The board is comprised of soybean farmers, who provide great leadership, and each of whom sits on their state soybean board. Ellen Feeney from White Wave Foods and Peter have provided some soyfoods industry perspective. White Wave has been a great supporter of both WISHH and the World Soy Foundation.

Future plans: Peter is putting the finishing touches on a home office. He is thinking about some travel ideas, book ideas, and writing projects. He's trying to keep his time open. He cannot consult for the next few years with companies outside of Soyatech and HighQuest Partners–being restricted by a non-compete clause in his contract with HighQuest. Looking at the big picture, Peter says: "If there's some way I can do more for promotion of soy in the world–bring it on!"

Peter recently took a trip to visit Nasoya, Lightlife, and South River Miso Co. "It was wonderful. It was really nice to be welcomed with open arms into all those companies." Their original vision is still alive. So is his.

Peter remarried in 2004 to Mary Cline Golbitz, a lawyer, who has also become a certified yoga teacher. They have three sons; two are Peter's stepsons. Peter has two kids in college (one at Middlebury College in Vermont and one at Northeastern in Boston) and a third about to start college, so he can't afford to retire. He needs a source of income to pay for the kids in college. Peter lives on Mount Desert Island, which is several hundred yards off shore and is connected by one road to the mainland. It is the largest island off the coast of Maine (with a permanent population of about 10,000) and the 2nd largest (after Long Island) on the Eastern Seaboard of the USA. Bar Harbor is on the island. Half the island is occupied by Acadia National Park. Address: Founder and Senior Advisor, Soyatech, Bar Harbor, Maine. Phone: (503) 386-7766.

3035. *Globe & Mail (Toronto, ONT, Canada).*2008. Veggie innovator breaking new ground [Yves Potvin and Garden Protein International]. March 26. Eat Well, p. 2. Special information supplement.

• ***Summary:*** A photo show Yves Potvin shopping in a grocery store. In 1988, Mr. Potvin invented the meatless wiener.

Note: The first meatless wiener (named "Meatless Wiener") was introduced in 1944 by Battle Creek Food Co. in Michigan. By 1988 more than 115 different meatless wieners and sausages had been launched in the USA. The first tofu hot dog was "Weissman's Original Tofu Sausage," introduced in Nov. 1980 by the Vegetable Protein Co., Cambridge, Massachusetts. At least ten tofu hot dogs had been launched in the USA before 1988. These included: Tofu Links (Nov. 1981, by Soya Food Products, Cincinnati, Ohio). Light Links (July 1982, by Light Foods Inc., St. Louis, Missouri). Lightlife Meatless Tofu Pups (Sept. 1985, by Tempehworks, Greenfield, Massachusetts).

3036. Hain Celestial Group, Inc. (The). 2008. Annual report 2007. Melville, New York. 8 + 69 + 3 p. April. 28 cm.

• ***Summary:*** Net sales for the year ended 30 June 2007 were $900.4 million, up 21.9% from 2006. Net income in 2007 was $47.5 million, up 22.1% from 2006.

Acquisitions and divestitures: On 8 Dec. 2006 Hain acquired Haldane Foods Ltd., a UK-based producer of meat-free food and non-dairy beverage products, from the Archer Daniels Midland Co. (ADM). Haldane's brands include Realeat frozen foods, Granose, Direct Foods and Realeat dry mixes, and Granose non-dairy beverages. Price: About $10.1 million.

On 11 Jan. 2007 Hain acquired Avalon Organics, a leader in body care, for approximately $126.1 million in cash. This includes the brands Avalon Organics, Alba Botanica, and Alba Organics. On 7 Dec. 2007 Hain acquired Tender Care International, Inc., a marketer and distributor of chlorine-free and gel-free natural diapers and baby wipes under the Tender Care and Tushies brand names for $3.9 million in cash (see 2008 Annual Report, p. 37).

Most of the report is Form 10-K/A. A table of the company's common stock prices, as listed on the NASDAQ Global Select Market under the ticker symbol Hain, shows the highs for FY 2006 ranged from $20.59 to $27.94. The highs for FY 2008 ranged from $32.33 to a record high of $35.14.

Page F-2: "On June 15, 2007, we announced that the company had received an informal inquiry from the SEC [Security and Exchange Commission] concerning the company's stock option granting practices and the related accounting and disclosures." An independent investigation was conducted. The numerous problems found in the dating and documentation of stock options are discussed. For example: "Approximately one-third of all options granted were priced at quarterly or annual lows." "Some grant dates in earlier periods appear to have been selected in hindsight." Tables on page F-8 and F-9 show that the above problems resulted in $6.5 million of additional income taxes and a total loss to the company of $11.7 million. For example, net income for FY 2006, previously reported as $37.067 million, is now restated as $36.367 million, a decrease of about 1.9%.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (34 p.). Irwin Simon, the founder and CEO, age 49, had the following annual compensation: Salary: $1.25 million. Total compensation: $3.851 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3037. Garden Protein International. 2008. Lifestyle (Website printout–part). http://www.gardenprotein.com. 7 p. Printed May 28.

• ***Summary:*** Tabs (across the top): Product info (Garden Beef or Garden Chicken). Product usage. Availability. Formats & flavors. Nutrient info. Contact us. "Gardein (TM)–the new vegetable protein. More than an ingredient, its a foundation." E-mail: wow@gardenprotein.com.

Talk with Seth Tibbot, founder and president of Turtle Island Foods, Inc. 2008. May 27. Yves Potvin has started a new company (after selling his original company to the Hain Celestial Group in June 2001) named Garden Protein International. He probably had to wait until his "noncompete agreement" had expired. He has worked with Solae and soy protein isolates to develop a new generation of extruded meat alternatives, with an excellent texture and flavor. Yves also has a second and newer website with the latest info on its products: www.gardein.com. Address: 12751 Bathgate Way, Vancouver (Richmond), BC, Canada V6V 1V5. Phone: 604-278-7300.

3038. Garden Protein International. 2008. Gardein–Garden Grown Protein (Website printout–part). http://www.gardein.com. 12 p. Printed May 28.

• ***Summary:*** This is Garden Protein International's new website–much more interesting than their previous www.gardenprotein.com. At the heart of the new website is a superb color video (6 minutes, 26 seconds) of Yves Potvin telling the story of his life and work.

Tabs (across the top): About Gardein (TM): What is Gardein?, our story (color video), our philosophy, how Gardein is made, news. Our products: Retail, food service, feature product. Healthy eating (Go flexitarian). Recipes: Veggie chick'n, Veggie beef. Partners. Contact us: Directions, employment.

Sayings that change about every 8 seconds at top of every page in the website: "Never take your ego too seriously. Learn something new everyday. Try something new everyday. Do something new everyday. Love your family. Eat your veggies. Be part of something bigger than you. Help people. Feed your body and your body will feed you. What comes around goes around–do unto others as you would like to have done unto you. Do something kind for another being. In your own way, make a contribution to making the world a better place. Today is more important than tomorrow. Be thankful. Embrace change. Step back and recharge your batteries. Success is always learning. If you have the ability to learn, you have the ability to grow." These same sayings are also found (written) at About Gardein > Our philosophy.

Most of the homepage is devoted to still color graphics that appear to move. Inside of a rectangle 8½ inches wide and 3¼ inches high, three color photos, side by side, fade in (from left to right) then fade out. The photos include: A young lady doing yoga, another sitting in the cross legged position facing away toward the sea, many photos of Gardein in prepared dishes, a little girl blowing a round white head of milkweed seeds, a field of wheat, a girl leaping down onto the sand. This set of 3 takes about 12 seconds, and then is replaced by three more After two sets of three photos the Gardein logo (green, red, and yellow) slowly moves into place, with the tagline "Garden grown protein" in black letters below it. The full cycle of 3 sets of 3 takes about 39 seconds.

The story of Yves life (told in the 2nd person): He was born in small town of Waterloo, Quebec, the fourth of a family of five. He enjoyed a typical French-Canadian childhood of hockey, school, and church. And from a very early age he loved independence. Following high school and a brief stint studying architectural design, he asked himself a true entrepreneurial question: "Is this really what I want to do for the rest of my life? The answer was very clear to me." So he left school, went traveling to South America, learned Spanish, and discovered the world. He returned a year later with a fresh perspective. He decided then to pursue his passion for food, so he enrolled in the school of culinary art. With his degree in hand, he started his first venture, a French nouvelle cuisine restaurant called *Le Bateleur* (the magician). Two years later with the restaurant successful, he woke up one extremely cold Quebec morning and thought, "Gosh, Vancouver sure looks good!" So he followed the old saying "Go West young man." But always being wont to do it differently, he thought, *Mais oui!* Why not bicycle across Canada. The journey was an adventure to discover just what he was made of. He didn't know then that his future would be in Vancouver, and it would be there that he would find his spot in life. When he arrived in Vancouver he noticed that people were interested in health, fitness, and nutrition–just like him. But there was no healthy, convenient food in the marketplace. So he thought, "Why not create a healthy fast food," and *voila!* He was 28 years old and full of energy when he started Yves Fine Foods in Quebec. With $5,000 from his own pocket, $10,000 from family, and $25,000 from a small business loan. "It was very much a one-man operation: Me, myself, and I." He worked seven days a week manufacturing, packaging, marketing, selling, and distributing. His first product was a Veggie Dog. Initial production: 17 cases. Unfortunately, another 19 cases went to waste–not a great beginning. "I've always said, its okay to make a mistake, but in order to stay in business, learn and don't repeat them." The company started to take off and over the next 13 years it experienced an average growth of 50% per year. In that time we built a state of the art, 60,000 square foot facility and increased our distribution across 7,000 supermarkets in North America, Europe, and Asia. Their product line had grown to include 20 different items. Along the way, the company was fortunate to receive many national and international awards for entrepreneurship, export excellence, and product innovation. By the spring of 2001 the meatless market had changed drastically. Multinationals were buying up private companies left and right. In life, timing is everything. So Yves decided to sell to the Hain Celestial Group, a publicly traded company on the Nasdaq. It was time to recharge his batteries. Over the next year he spent quality time with his young family and

traveled the world. The time off allowed him to reflect on the challenge our society is facing. Fast food epidemic, factory farming, and major population growth were placing our environment at risk. It was then that he decided to pursue an idea that he had long ago–to develop an ingredient made entirely of vegetable and grain sources, but which had the same taste and texture of premium lean meat or fish. So in 2003 he founded Garden Protein International. For the next two years he spent a great deal of money and time creating this new protein that was named Gardein (pronounced gar-DEEN)–a mixture of the words "garden" and "protein." Today GPI is a rapidly growing, award winning company, selling across North America, the UK, and Japan. Their strategy has three pillars: Private label, foodservice, and their own retail brand–all made with their proprietary ingredient Gardein. So why is he not at the beach enjoying life or playing golf every day. "Well, to be honest, the main reason is that I love what I do. I think this is the right food at the right time. In my own way, I can make a small contribution to make this world a better place. *Pourquois pas?* [Why not?]. And you know–I'm not the only one that believes in the potential of our vegetable resources. Take it from someone a bit smarter than me." There follows a color photo of Albert Einstein with a quotation by him in support of vegetarianism. Address: 12751 Bathgate Way, Vancouver (Richmond), BC, Canada V6V 1V5. Phone: 604-278-7300.

3039. SunOpta Inc. 2008. SunOpta (Website printout–part). http://www.sunopta.com. Printed June 21.
• ***Summary:*** Contents: Home page. About us: Company history. Operating groups. Investor relations. News & events. Site map. Contact us [USA and Canada].

Company history: "SunOpta was founded in 1973 under the name 'Stake Technology' to commercialize its proprietary steam explosion technology. These efforts continue today within SunOpta BioProcess Inc. "The acquisition of Barnes Environmental in 1995 led to the creation of Opta Minerals Inc., a vertically integrated player in the industrial mineral and environmental recycling markets. The company has grown steadily since that time, and in February 2005 completed an initial public offering, listing its common shares on the Toronto Stock Exchange. SunOpta currently owns 66.7% of the common shares of Opta Minerals Inc.

"The SunOpta Food Group was created in 1999 and through combination of internal growth and acquisitions has grown to become a North American leader in sourcing, organic, processing and distribution of natural and organic food products integrated from seed through packaged products.

"Through this evolution a strong and vibrant organization has emerged with a strong commitment to natural, organic and specialty foods and environmental responsibility.

"From less than $200,000 revenues in 1994, the Company has grown to expected revenues of $740–$760 million in 2007.

On this page is an excellent timeline of almost 30 key events in the SunOpta Food Group's history–starting on 3 Aug. 1999 with the acquisition of Sunrich, Inc., based in Hope, Minnesota.

Also at About us > Company policies, is a statement of SunOpta's "Environmental philosophy and principals." And at About us > Chairman's message is a statement from Jeremy N. Kendall.

SunOpta stock price: During most of 2007 until about Nov. 2007 the stock sold for $12-14 a share. From Nov. 2007 until about Aug. 2008 it averaged $6. In Oct. 2008 it reached an all-time low of about $1.15 with the world economy downturn. But by 29 Jan. 2009 it had climbed back to $2.42. Address: 3824 SW 93rd St., Hope, Minnesota 56046; Headquarters: 2838 Bovaird Drive West, Brampton, Ontario, Canada. Phone: 507-451-4724.

3040. **Product Name:** Eating Right [Lightly Seasoned Veggie Chicken Breasts, Lightly Seasoned Veggie Chicken Strips, Lightly Seasoned Veggie Veggie Beef Strips, Veggie Chicken Breast in Tomato Basil Sauce].
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2008. June.
**Ingredients:** Chicken breasts: Water, soy protein, wheat protein, natural flavors, modified cellulose, potato starch, canola oil, spices, pea protein, carrot, organic beet root fibre, organic evaporated cane juice, yeast extract, sea salt + vitamins and minerals.
**Wt/Vol., Packaging, Price:** 200 to 300 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 5 by 6.5 by 1.5 inches. Green, blue, red, black and yellow on white. "Prepared for Lucerne Foods, Calgary, Alberta T2P 2J6, Canada." On the back panel are Nutrition Facts, ingredients list and recipe ideas. On the lower back panel is the logo of the manufacturer, Garden Protein International Inc. (in English and French) on a light green background: "Made with Gardein. Garden grown protein. www.gardein.com. Gardein is a registered trademark of Garden Protein International Inc."

3041. **Product Name:** Tesco Meat Free: 2 Chicken-style fillets.
**Manufacturer's Name:** Tesco Stores Ltd. (Retailer).
**Manufacturer's Address:** Chestnut EN8 9SL, UK.

**Date of Introduction:** 2008. June.
**Ingredients:** Rehydrated soy protein (33%), rehydrated wheat protein (33%), natural flavouring, stabiliser (methyl cellulose), red pepper flakes, yeast extract, beetroot fibre, onion powder, spices (black pepper), parsley, garlic powder, salt, cane sugar, vegetable oil, potato starch, white sugar, wheat flour, sage, pea protein, carrot fibre, white pepper, celery seed, smoke flavouring, pepper extract, sage extract.
**Wt/Vol., Packaging, Price:** 200 gm. Paperboard box.
**How Stored:** Refrigerated.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 6 by 5.75 by 1.25 inches. Pea green, orange, and black on white. "Produced in the U.K. for Tesco Stores Ltd., Chestnut, UK. On one side panel is the logo of Garden Protein International Inc. (Richmond, BC, Canada): "Made with Gardein. Farm grown protein." A color photo on the front panel shows a Chicken Fillet sliced open, surrounded by veggies on a white plate. On the front panel: "A lightly seasoned blend of soya and wheat gluten, dusted with herbs. Low in saturates. A good source of fibre. No artificial preservatives, flavours or colours. A round logo says "Super Foods." On the back panel are Nutrition Facts, ingredients list and recipe ideas. Note: Tesco is a leading supermarket chain in the UK.

3042. **Product Name:** Trader Joe's Chicken-Less Strips, Beef-Less Strips.
**Manufacturer's Name:** Trader Joe's (Marketer-Distributor).
**Manufacturer's Address:** Monrovia, CA 91016.
**Date of Introduction:** 2008. June.
**Ingredients:** Chicken-less: Water, isolated soy protein, vital wheat gluten, natural flavors, expeller pressed canola oil, organic evaporated cane juice [sugar], spices, yeast extract, sea salt, garlic powder, onion powder, red bell pepper flakes, parsley flakes, pea protein, carrot fiber, sunflower oil.
**Wt/Vol., Packaging, Price:** 8 oz (227 gm) in plastic bag. Retails for $2.99 at Trader Joe's (2008/07, Lafayette, California).
**How Stored:** Refrigerated.
**Nutrition:** Chicken-less: Per 76 gm. (about 9 strips): Calories 110, calories from fat 15, total fat 1.5 gm (2% daily value; saturated fat 0 gm), cholesterol 0 mg, sodium 330 mg (14%), total carbohydrate 3 gm (dietary fiber 1 gm [4%], sugars 1 gm), protein 20 gm (40%). Vitamin A 6%, calcium 4%, vitamin C 2%, iron 35%. Percent daily values are based on a 2,000 calorie diet.
**New Product–Documentation:** Product (Chicken-less) with Label purchased at Trader Joe's in Lafayette, California. 2008. July 6. Paperboard box is 5 by 6½ by 1½ inches deep. Light blue, light green, white and black. Large color photo of product with fried vegetables on front panel. Front panel text: "Heat & serve. Ready in 2 minutes. Lightly seasoned." Heart healthy logo and Vegan logo. On back panel are nutrition facts and ingredients. For best flavor, saute on stove for 2-3 minutes. Soyfoods Center taste test. 2008. July 7-8. Good flavor, appearance, and label design; excellent texture. This extruded product contains too much protein for our taste if eaten by itself, but is nice if used as an ingredient. Note: The main ingredient is Gardein, made by Garden Protein International (GPI) (Richmond, BC, Canada). However, neither Gardein nor GPI are mentioned on the product. Two packages sent by Yves Potvin of GPI. 2008. Oct. 28.

3043. *Ontario Soybean Growers' Update.*2008. OSG supports SOBIN Ridgetown biodiesel facility. July. p. 1.
• ***Summary:*** "On June 20th, the Southwestern Ontario Bioproducts Innovation Network (SOBIN) and the University of Guelph's Ridgetown Campus announced federal funding of almost $1 million for the establishment of an on-campus farm-scale biodiesel demonstration, education and applied research facility.

"Ontario Soybean Growers' support of the project was recognized at the launch event, held at the Ridgetown Campus. "OSG's commitment of $10,000 toward the quality testing laboratory for the Ridgetown biodiesel facility underlines our members' support for clean, renewable energy research", notes Dale Petrie, OSG General Manager. A main objective of the project is to demonstrate to farmers how they can be engaged in the renewable energy sector, by making it easier for them to successfully produce fuel from their farms, and add value to the by-products.

"Funding for the facility comes through Agriculture and Agri-Food Canada's Advancing Canadian Agriculture and Agri-Food Program, delivered in Ontario by the Agricultural Adaptation Council. SOBIN, a not-for-profit organization, works primarily within the agriculture, automotive, chemical and energy industries to encourage increased bio-based enterprise."

Note that the title of this 1-page monthly e-mail report has changed slightly. Address: Guelph, ONT, Canada.

3044. Martin, Dennis. 2008. Re: How Dennis, The Farm in Tennessee, and Plenty went to Guatemala after the 1976 earthquake and hooked up with CIDA (the Canadian International Development Agency). Early history of Plenty's work with soyfoods in Guatemala. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 4. 1 p. Followed by interview on Oct. 31.
• ***Summary:*** "On 4 Feb. 1976 a huge earthquake, magnitude 7.5, struck Guatemala, eventually killing more than 22,700 people. I was working in Mobile, Alabama, at the time, as a satellite of The Farm (Summertown, Tennessee). I had a ham radio and listened to it every night studying for my

ham license. I heard about the earthquake, and immediately contacted The Farm. Shortly thereafter, myself and two other guys, Melvyn Stiriss and Peter Gray, went down to Guatemala with $150 and 150 lb of carpenter's tools. Plenty had recently been established at The Farm as a relief organization and this was their first work outside the United States.

"We attended a meeting sponsored by Guatemala's newly-formed National Reconstruction Committee overseen by the president of Guatemala. The president asked that each NGO [non-governmental organization] adopt a village or town that suited their budget and take responsibility for helping the people there. Plenty had made a commitment to us of $15,000 which Plenty would raise. But we soon found that the only available wood for building was in sawmills, which had no supply. Then we heard that the Canadian government was sending an emergency boatload of lumber from Canada. I went to the Canadian Embassy to ask if we could buy some wood. The Canadian Chargé d'Affaires, Clive A. Carruthers (the top Canadian Embassy man in Guatemala), had control of about $7 million of aid funds after the earthquake. Clive had hired Rick for a dollar year to oversee the NGOs who were to work with the Mayans, and to keep out those whose main goal was really trying to build churches and / or convert Mayans to other religions. Plenty arrived with a sympathetic and interested attitude toward the indigenous people and a history of working with such people in the United States. I had long hair and beads on my jacket.

"Clive first tested my knowledge of basic carpentry. When I answered his first tough question correctly, he welcomed me and said that if we would work with the Canadian relief effort, they would give us any supplies we needed. My agreement with them was that we would feed and clothe ourselves if they would help us maintain livable quarters and provide all the building materials and equipment we needed.

"I helped them to design a pre-fab building and to establish a pre-fabrication shop to produce these inexpensive buildings in the town of San Andreas Itzapa, municipality of Chimaltenango, where over 1,600 houses were built in 5 months. Then some monks arrived from Canada and largely took over the factory.

"I had planned to stay in Guatemala for about 1½ months since I had a wife and kids at home. After 6 weeks in Guatemala, Clive offered to fly down my wife and youngest child; the other two kids stayed with a family at The Farm in Tennessee.

"The Plenty connection in Guatemala really rests with two key players who were not part of Plenty: Clive Carruthers, Chargé d'Affairs for the Canadian Embassy in Guatemala, with a background in geology and a minor in archaeology, and Richard Bronson, who had a PhD in archaeology, who taught this subject at the UC Santa Cruz campus and who also worked for years with National Geographic in Turkey, Liberia and sites of the ancient Etruscans outside of Rome. They opened the doors to the Mayan world to us. Clive and Rick became friends prior to the 1976 earthquake when Rick was poking around some of the ancient Mayan sites. On the weekends, they would venture up to the highlands and throw bones with the local shamans, visit traditional Mayan villages etc. On one occasion they happened upon an ancient dance ("The dance of the conquistadores"–the Spanish conquerors) and ten-festival, sponsored by a local Mayan, who must have been fairly affluent to pay for 10 days of food at 10 different locations. In this case that person was named Estevan Chu, the former Mayan mayor of the Cakchiquel Nation and broker of corn for the local farmers who feared traveling to Guatemala City to sell their produce and risk being cheated or robbed. The dance involved very lavish costumes and recounted the dramatic story of the battle in 1524 between Pedro Alvarado, a Spaniard and lieutenant of Cortez, who came to Guatemala in the early 1500's, and Tecun Uman, a leader of the Mayans. The Spaniards defeated the Mayans, and founded old Antigua, which became the hub of all Spanish missionary activity in the New World. During this extraordinary ten-day event, rarely attended by outsiders, Clive and Rick became friends with Estevan Chu.

"Clive and Rick felt the dusty, dirty city was unhealthy for my child, so they told us of their favorite places in the highlands, home of very traditional Mayans, great weavers, etc. at an elevation of about 9,000 feet. Rick and Clive knew people in these villages, and they helped us to get established. First we worked in Chimachoy, then in neighboring Chicasanga, where we built 2-3 schools. About half way through this period of school building Clive and Rick, in person, introduced us to Estevan Chu; we got to know him well while building a school in his canton of El Tablon. We ended up building (not rebuilding) 11 new schools in the first 13 months. We had an agreement with the Canadian government that if we built the schools they would put teachers in them.

"I soon realized we needed more carpenters, so I phoned The Farm and asked for skilled carpenters who were willing to work hard without any pay. They sent me a small group of Farm members who were truly "angels." The Canadian embassy paid their air fare." Continued. Address: Founder and President, Carpenters without Borders (Carpenteros Sin Fronteras).

3045. Martin, Dennis. 2008. Re: How Dennis, The Farm in Tennessee, and Plenty went to Guatemala after the 1976 earthquake and hooked up with CIDA (the Canadian International Development Agency). Early history of Plenty's work with soyfoods in Guatemala. Part II. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 4. 1 p. Followed by interview on Oct. 31.

• ***Summary:*** Continued: "After we had built 5-6 schools in Chimaltenango (and about 2 years after we arrived), Clive and Rick asked us to go to Solola, the traditional capital and highland market center of the Cakchiquel [Kaqchikel in modern orthography] Nation of Mayas, on a mountainside some 600 meters (about 2,000 feet) above Lake Atitlan, where they had connections with traditional Mayas. By now a deep bond of love and respect had grown up between Plenty and Clive and Rick; I told them I thought that the Mayas truly have a superior worldview. They appreciated that attitude.

"We learned that a problem, which was important to Clyde and Rick among others, had arisen in Solola. The Mayan municipality building, which had long been located in the central square at Solola, was a one-story adobe structured that had been badly damaged by the earthquakes. The Guatemalan government was pressuring the Mayas to re-locate the building to an area four blocks from the center of town, saying that they did not have the resources to rebuild and the town would be better served if the state of Solola could build its own (Spanish) municipality on that site.

"There are only two Mayan municipality seats left in Guatemala; one in Solola (the capital city of the Solola department) and the other in Chichicastenango (in the El Quiché department of Guatemala).

"At this point, Clive and Rick intervened, and said that the Canadian Government would provide materials and funds to rebuild the Indian Municipality building on the same location. Plenty was asked to participate in this project.

The Mayan municipality was both nonsecular (selected) and secular (elected). The nonsecular part were the *cofradias,* who were Mayan elders and spiritual leaders with stature in the 5-6 Mayan communities (cantons). The secular tribal representatives had little or nothing to do with the *cofradias*. The secular people (including the *acalde* or mayor) went to work in the Mayan building every day; the spiritual leaders would come only on special occasions.

"We learned that extra money was needed to rebuild the Indian Municipality building. Clyde arranged for me to fly to Ontario, Canada, with Estevan Chu, the former Cakchiquel mayor of the Indian Municipality (he wore his traditional Mayan clothing–*traje*–and sandals). We made a presentation and proposal to CIDA (the Canadian International Development Agency, which is part of the Canadian government) to rebuild the Indian Municipality building and four other buildings in other towns in the highlands. This was my first contact with CIDA. We stayed at the Canadian Farm with Larry McDermott and Norman and Sarah Ayerst. CIDA said that they would send us money if they could send it through an NGO in Canada. The Canadian Farm applied for and was accepted to be that NGO. Now we were hooked up with CIDA and the funds soon started to flow to us in Guatemala.

As soon as the money from CIDA arrived, our crew went to work on the projects we had proposed to CIDA, starting with the Indian Municipality building. We ended up lived in the home / compound of the current Mayan mayor at that time. While completing the municipality building, we (Plenty) developed friendships and connections with the local Mayas–which eventually led to Plenty building the soy dairy.

"We also installed a radio station in the Mayan Municipality building. We brought Estevan's son, Jose, to The Farm in Tennessee, and he learned how to run a radio station, then returned to Guatemala to run the one we had installed.

"Then we moved to San Bartolo (about 1 mile away, on the outskirts of Solola), where we built a water system. It was in San Bartolo that the soy dairy was later established and its building constructed–just as I was leaving Guatemala.

"By the time we reached Solola, we had established a base. Stephen Gaskin had come down and seen that what we really needed was first response medical capability, so he sent a paramedic and a midwife and a bunch of ladies to watch the kids. Eventually, on my watch, we increased our volunteer base in the camp from three carpenters to over 80 volunteers with specialties in midwifery, paramedics, radio telecommunications for health promoters in remote villages, and soybean cultivation and variety testing (Daryl Jordan). The midwives and others were soon working closely with their local counterparts and they became very close to one another. Then they got to know families. We took in 5-6 street children from Guatemala City and elsewhere, who were orphaned or alone after the earthquake. Many of these stayed for while at The Farm in Tennessee.

We also built schools in the surrounding villages and the water system I mentioned for a canton of Solola called San Bartolo, which adjoins the town. We also lived there in an encampment of tents with an old cracked wall villa which no one would sleep in because of the constant earth tremors. During that stay, a lot of the local folks would come over and of course we would invite them for meals; at this time there began an introduction of soyfoods into the Mayan world. One thing led to another and we met the most wonderful couple, Augustine and Elena Xoqic, who were both from the village of San Bartolo and both Cakchiquel Maya. (Later Elena's photo would grace the front cover of *Mother Earth News).* They became the Mayan heart of the soy diary, which they have managed and worked for the last 30 plus years. The first 15 years, before the Guatemalan Civil War (when we left), the soy dairy ran very smoothly.

"I worked in Guatemala for about 3 to 3½ years; I think the longest anyone else was there was 14 months.

"The details of the development into a working soy diary is best left to Suzi, Laurie, Jorge and company as I left after three years of rough living with my wife and three young children, just as the blocks were being laid for the diary, which I just visited about two months ago. It is a very popular spot for the neighborhood as the soy cones [soft-serve soymilk ice cream cones] are absolutely delicious."

Afterword: In early 1984 I returned to Guatemala on my own, alone, and I snuck up to Solola to see if I could find the Chu family. It was very dangerous and Rick told me not to go, but I really loved those people. I wanted to talk to some of the villagers to find out where they were. I learned that in 1981, during the Civil War, about 18 months after Plenty had left Guatemala, Estevan and about half his family, including Jose and his other son, were dragged out of their houses and executed. The Guatemalan government went to the Mayan municipality building and ripped out the radio station. Most Mayans tried to stay neutral during the Civil War; they just wanted to be left alone. Rick (who is American and Canadian) also returned several times over the years. Rick is the co-founder of Carpenters without Borders; Dennis now lives on Rick's ranch in Napa, California. Address: Founder and President, Carpenters without Borders (Carpenteros Sin Fronteras).

3046. Yoshihara, Susan-Marie ["Lulu"]; Yoshihara, Yasuo ["Yoshi"]. 2008. Re: History of Shin-Mei-Do Miso Company. Letter to William Shurtleff at Soyinfo Center, Aug. 12. 3 p. Typed, with signature.

• ***Summary:*** "Dear Bill, In 1977 I met you and Akiko in Tokyo. Our miso making journey began a year before when I found "The Book of Miso" in Uwajima-ya department store in Seattle. Your book, "The Book of Tofu," was already my favourite cookbook and I was looking forward to new culinary adventures. It may sound trite but what I found in the "The Book of Miso" literally changed my life.

"Inside the book was not only a wealth of miso lore and recipes, complete and detailed instructions for making miso at home and on a commercial scale were there in the back of the book, too. With this information I knew that our family could set up our own miso business.

"In 1976 we had just moved to rural Denman Island but still had no idea of how we would make our living. My husband, Yoshi, was from a Japanese farm family and he remembered how his family had made miso at home every fall. But he was only a child then and knew only some of the details involved. Nevertheless, we were interested and in the fall of 1977, accompanied by our 4 year old son, I went to Japan.

"Thanks to an amazing bit of luck I received an introduction to Yaeko Nakata, sister of the president of Maruman Miso Company in Nagano prefecture. Ms. Nakata was in charge of the hand-made division of the company. She and miso maker Chisato Kobayashi allowed me to observe and participate in the koji making process. Because I was able to experience the making of koji, so crucial to the making of good miso, I felt that Yoshi and I would be able to succeed in miso making.

Note: Susan-Marie arrived in Japan in Oct. 1977 and was there until the end of February 1978–about 5 months. Thus, she was the first Caucasian and the first Westerner to travel to Japan with the specific goal of making miso commercially in the North America or Europe. She got very little support from anyone in the beginning. The trip was funded in part by money she had earned from planting trees for two weeks on Vancouver Island. "Most folks in Japan and Canada probably thought I was out of my mind to try to make miso in Canada." Yet without her struggle and her hands-on experience, the miso business in Canada could never have existed. On this trip she was accompanied by the now famous Japanese photographer, Mr. Ryuji Miyamoto.

"With very little capital but with youth and enthusiasm on our side we started work. It was 1979 and we had a 5 year old and a new baby boy. We made our first few batches in a woodshed. Our beans and grains were steamed in ½ whiskey barrels over a wood fire in a maple syrup cooker that we found in an antiques store. The upper part of our 10 acre property had been clear-cut some years before we bought it, so Yoshi used the logging slash to stoke the fires.

"That summer we built a new building. About once a month Yoshi drove our little red Datsun pickup truck to Vancouver where he bought sea salt and organically grown rice and soybeans. He also bought large oak barrels from Sweeney Cooperage in Vancouver. Two of the barrels could just squeeze into the back of the pickup and the bags of salt and grains and soybeans fit inside the barrels.

"We had no machines–no grinder, no mixer. Using a ½ barrel and a special pair of clean new gum boots, Yoshi and I took turns smashing cooked soybeans while the other poured in the salted koji and turned the miso-to-be with an extra large rice paddle that Yoshi carved from Douglas fir. Often one of us was carrying the baby on our back. Our elder son played in the shop while we worked. Over about 3 years we made 22 tons of miso that way.

"Did I tell you that Yoshi's first carpentry project ever was to build the koji incubation room in the woodshed? Our neighbours made the koji boxes from red alder wood and those boxes are still in good condition, nearly 30 years later.

"It is amazing what you can do when you are young, healthy, idealistic and ignorant! Even so, we realized soon enough that we'd have to have mechanical help to make a living. In 1982 we built an addition to the building and added 8 large wooden tanks from Arrow Tank Company of Buffalo, New York. By that time Sweeney Cooperage had already been torn down for Expo 86 in Vancouver. We also imported a miso mixing machine from Japan and bought a used grinder. A neighbour helped us set up a low pressure steam boiler by adapting a wood-fired house furnace. Used

stainless steel steam kettles completed the production equipment.

"Every summer Yoshi bucked, split and stacked firewood for the boiler. He made an extra long wooden spoon to harvest the finished miso from the large tanks. He packed the miso by hand no matter how hot or cold the weather was. Only the koji incubation room was heated, yet even in mid-winter Yoshi stood there at the packaging table for hours in the freezing cold. Yoshi is very strong and fit.

"In September of 2006 Yoshi broke his collarbone in a bicycle accident. It never healed properly. In the meantime the cost of doing business had gone up incredibly. Ferry fares to the islands more than doubled. In 2008 we decided to retire and shut down our business after producing 220 tons of miso in nearly 30 years of business.

"If you would like to know more about how we made miso please don't hesitate to contact us. We are enclosing newspaper articles, 9 photographs and captions that explain them. Please keep these copies as we have backup copies of them. "Sincerely,..."

Photos (mostly black and white) accompanying this letter show: (1) Susan-Marie learning koji making at Maruman Miso in Iida, City, Nagano prefecture, Japan. Feb. 1978. Photo by Mori Akiko of Sankei Shinbun.

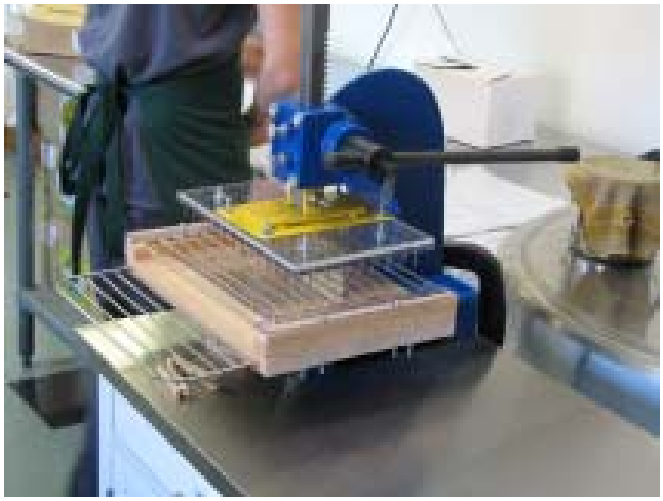
3047. Brown, Allan; Brown, Susan. 2008. Re: Photographs of improved technology for making tempeh at McDonalds Corners, Ontario, Canada. Letter (e-mail) to William Shurtleff at Soyinfo Center, Aug. 21-22. 2 p.
• ***Summary:*** Each of these two color digital photos is accompanied by a caption or explanation. They are:



(1) Improved bag puncher. In the western world, many companies incubate their tempeh in perforated plastic bags. This bag puncher, designed and built by John Drozdowski, Allan's equipment engineer, was first used in Sept. 2007. Allan says: "The holes we punch in our bags are much bigger than the industry standard." He thinks every tempeh maker in North America "gets their bags or rolls in tube stock punched with really small perforations from the same supplier." That size of hole did not give us the growth and quality of tempeh we are used to."

(2) Improved soybean dehuller. Allan writes: Here is a picture of a dehuller we designed from that article you sent to us from *Soyfoods magazine* [Fiering, Steve. 1981. "Low technology soybean dehuller." *Soyfoods.* Winter. p. 52]. Wow! This knocks 2/3 of our time off of our old system of dehulling. Plus very little clean up and virtually no dust in the air. Note dust collector sucks the hulls out of the falling split beans from the grinder and into the lower bag. Upper bag is for air release. We now can do this inside our shop instead on the cold, cold porch. Address: Founders, Noble Bean, R.R. #1, McDonalds Corners, ON K0G 1M0 Canada. Phone: 613-278-2305.

3048. *Ontario Soybean Growers' Update.*2008. Thoughts from the OSG chair [Leo Guilbeault]. Aug. p. 1.
• ***Summary:*** "It's been busy here at OSG. New staff members are fitting in well, new Directors are taking active roles in the organization and as you'll see by the following, the whole association has been working hard on behalf of our growers. In this OSG Update, you'll find information on the Grower Requested Own Use (GROU) Program that allows farmers to economize by importing U.S. versions of Canadian registered crop protection products for their own use; Farm Input Price Monitoring done by Ridgetown College; the 2008 Canadian Soybean Harvest Survey, and OSG's 2008 Soybean Yield Challenge.

"The OSG Board has been busy dealing not only with the GROU program, but also with research projects, and of course the ongoing Memorandum of Understanding (MOU) process. Keep an eye out for more information on the MOU in the next few weeks; things are finally coming together.

"Results of OSG's strategic plan, unveiled last winter, are beginning to take shape. We have quite a few projects and proposals on the go that will have a positive impact on maximizing value for the whole Ontario soybean industry. To learn more on this topic, be sure to visit the OSG–Soy 20/20 Innovation booth at Canada's Outdoor Farm Show, September 9, 10, 11, 2008. We will be located in the Grow Guelph tent, on the North Mall between 2nd and 3rd Lane, along with the University of Guelph and other agri-food innovation partners." A portrait photo shows Leo Guilbeault. Address: Guelph, ONT, Canada.

3049. **Product Name:** Cassington's [2 beef-style peppered steaks, 2 chicken style fillets in a tomato & herb marinade].
**Manufacturer's Name:** Cassington's Food Co. (Retailer).
**Manufacturer's Address:** Dale House, Leeming Bar, Northallerton, North Yorkshire DL7 9UL. Phone: 0800 84 4776.
**Date of Introduction:** 2008. September.
**Ingredients:** Peppered steaks: Rehydrated wheat protein (43%), rehydrated soya protein (31%), peppercorn marinade (12%) [contains water, sugar, vinegar, garlic puree, onion, bell peppers, salt, yeast extract, corn flour, black pepper, pink peppercorns, thickening agent, pectin], natural flavourings, stabiliser (methyl cellulose), potato starch, barley malt extract, onion powder, cane sugar, pea protein, carrot fibre.
**Wt/Vol., Packaging, Price:** 200 gm. Paperboard box.
**How Stored:** Frozen.

**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Paperboard box. 5.75 by 5.75 by 1.125 inches. For peppered steaks: Golden brown, red, yellow, black, and light blue on white. On the upper front panel is the logo of Garden Protein International Inc. (Richmond, BC, Canada): "Made with Gardein. Farm grown protein." A color photo on the front panel shows a Peppered Steak surrounded by lettuce and veggies on a white plate. On the front panel: "Meat free steaks made from a blend of beans, grains and vegetables. Less than 3% fat. 194 calories per portion. Vegetarian (logo). A passion for Healthier eating." On the back panel are Nutrition Facts, ingredients list and recipe ideas.

3050. **Product Name:** Cassington's beef-style meatballs.
**Manufacturer's Name:** Cassington's Food Co. (Retailer).
**Manufacturer's Address:** Dale House, Leeming Bar, Northallerton, North Yorkshire DL7 9UL. Phone: 0800 84 4776.
**Date of Introduction:** 2008. September.
**Ingredients:** Rehydrated wheat protein (43%), rehydrated soya protein (32%), vegetable oil, onion, sugar, natural flavouring, tomato puree, stabiliser (methyl cellulose), salt, sugar, maize starch, chili powder, garlic powder, potato starch, yeast extract, barley malt extract, onion powder cane sugar, garlic puree, tomato puree, herbs [basil, marjoram, oregano, thyme], black pepper, pea protein, carrot fibre, cumin.
**Wt/Vol., Packaging, Price:** 300 gm. plastic foil pouch.
**How Stored:** Frozen.
**New Product–Documentation:** Packages sent by Yves Potvin of GPI. 2008. Oct. 28. Plastic foil pouch. 8.75 by 8.5 inches. Golden brown, red, yellow, black, and light blue on white. On the upper front panel (and on the back panel) is the logo of Garden Protein International Inc. (Richmond, BC, Canada): "Made with Gardein. Farm grown protein." Two color photos on the front panel show (1) Two kids running down a hill with their dad. (2) Meatless meatballs with sauce on spaghetti, on a white plate. On the front panel: "Meat balls made from a blend of beans, grains and vegetables. Less than 4% fat. 123 calories per portion. Vegetarian society approved (logo). A passion for Healthier eating." On the back panel are Nutrition Facts, ingredients list and recipe ideas.

3051. Greey, Madeline. 2008. Battle of the butters: We blindfolded five young peanut butter enthusiasts for a taste-test trio of nut-free PB substitutes. Here's the spread on how they measured up to the real thing. Nutrition nibbles. *Today's Parent (Toronto, Ontario, Canada).* Sept. p. 188.
• ***Summary:*** The benchmark was "Organic 10% natural smooth peanut butter." 1 tablespoon (15 gm) contains: 10 calories, 3 gm protein, 8 gm fat, 0 mg sodium, 1 gm sugar, 1 gm fibre.

The three contenders: (1) FreeNut Butter. Made from soy. $4.49 per 500 gm jar. website: www.totallynutfree.ca. FreeNut Butter [Soynut Butter, made by Hilton Foods, Staffa, Ontario, Canada] was the top pick of four of the five young taste testers. Nutrition: Fewer calories (90), similar protein, fat, and fibre. "Higher in sodium, with 60 mg per serving–still not bad, considering Skippy brand BP contains 75-95 mg per serving."

(2) I.M. Healthy SoyNut Butter. $6.89 per 435 gm jar. website: soynutbutter.com. Nutrition: 85 calories, similar protein and fibre; less fat than real PB, with only 5.5 gm per serving. Same deal with FreeNut regarding sodium. Kids say: "Sticks to the roof of my mouth like a good peanut butter should."

(3) NoNuts Golden PeaButter. Made from brown peas [not soy]. Contains hydrogenated vegetable oil and thus a small amount of trans fats. Kids say: "It's smooth, no after-taste and tastes a lot like peanut butter.

Color photos show: (1) The three jars of soynut butter. (2) Madeline Greey.

3052. *Organic and Non-GMO Report (The) (Fairfield, Iowa).*2008. Monsanto sale of rBGH called a major milestone. 8(8):4-5. Sept.
• ***Summary:*** Monsanto announced that it has agreed to sell Posilac, its bovine growth hormone, to Eli Lilly and Co. for $300 million. The drug has failed to be approved in Canada, the European Union, Japan, Australia, and New Zealand. Milk "from cows injected with rBGH contains high levels of insulin growth factor-1 (IGF-1), a hormone that is linked to prostate and colon cancer."

3053. Potvin, Yves. 2008. The basic business model of Garden Protein International, Inc. (GPI) (Interview). *SoyaScan Notes.* Oct. 7. Compiled by William Shurtleff of Soyinfo Center.
• ***Summary:*** GPI's main product is Gardein (TM, pronounced gar-DEEN, derived from Garden + protein). In his previous business, Yves Veggie Cuisine, Yves was a retail brand manufacturer. He manufactured everything he sold, and built a brand. Then he realized in 1998, when he developed this new proprietary process, Gardein, that he is now an ingredient manufacturer. That was one reason he sold his former business, but also because his present business is very capital intensive, so he needed more money to get it started.

Many different formulas / recipes are used to make Gardein; its both an art and a science–and constantly evolving with new R&D. All the formulas have much in common (all are meatless. The main ingredients are wheat gluten and soy protein), but each one is different–and thus custom designed–to suit each individual product application. Yves works closely with a chef (and he is also a trained chef with many years of experience) to develop the

best possible formula for each application. The product behaves differently with different sauces (when its a low pH sauce they must start with a softer product. The protein in Gardein reacts to a dairy-based sauce much differently from the way it reacts to a tomato sauce). They have recently started to add new grain ingredients such as quinoa, kamut, amaranth, etc. to give new and interesting textures, and to increase the percentage of grain in the product. In Canada Gardein must be fortified to makes its nutritional value equal to or better than that of the meat product it is designed to replace; this is not required in the USA. The strips that they make for Trader Joe's are simply the raw material (plain Gardein), whereas the Chick'n Breasts they make for Costco are carefully formulated and formed to make a second generation product. GPI has no list of all the different types of Gardein. Rather, each company tells GPI the application, and GPI develops Gardein specifically for that product; no two are the same.

Gardein is always sold in a moist form (62-65% moisture, very much like that of meat)–never dry.

GPI sells Gardein either refrigerated or frozen–to keep it fresh. Any product sold refrigerated must be pasteurized first, which creates a whole new manufacturing cycle. Gardein is still much more difficult to process and handle than meat–for example. Most retailers buy it refrigerated, but most of the bulk product (shipped overseas or to foodservice) is frozen as to Cysco, Kellogg, Loblaw.

In 2005, after two years of solely R&D, Yves started to sell Gardein; his first customer was the Kellogg Co., which was already selling a line of meat alternatives under their Morningstar Farms brand. This began even before sales in bulk to foodservice.

Yves' basic strategy is to sell the ingredient (Gardein) to food product manufacturers, but they are required by a license agreement to put the Gardein logo on the label. The agreement specifies very precisely the size and location of the logo, how the ingredients are to be listed, etc. and the fact that the buyer cannot mix Gardein with meat.

But GPI also sells Gardein in four other ways: (2) Private label, as when they sell to Kellogg's, Loblaw's, President's Choice or Trader Joe's. Each of these customers also signs a licensing agreement. GPI and the customer work together to design and name the product and ingredients. Many private label customers (such as Kellogg and Trader Joe's) design their own package / label–but this can be frustrating sometimes, as when Yves can see that a poor package design will hurt sales of the product. The customer then sends its packages to GPI in Vancouver (actually in Richmond, BC, a suburb of Vancouver) where GPI packages its product.

(3) Control label, as for very large customers such as Costco, under the name Garden Goodness. The Gardein logo appears prominently on both the front (lower right corner) and the back (bottom center) of the attractive box. GPI owns the brand "Garden Goodness." Costco asks GPI to develop the product and to design the package; Costco has to approve of both, but they do not get involved in the details. Costco is happy because no other company has that Garden Goodness brand, and GPI is happy because it is their own label and their Gardein brand prominently displayed. "It is a win-win situation." Presently GPI makes only one SKU for Costco–"6 Veggie Chick'n Breasts," but they are about to launch several new items with Costco. GPI has already made the presentation and Costco liked the ideas.

(4) Under its own label, using the "It's All Good" brand. Initially Yves had no intention of going back into the retail business, because its very painful. But as he was trying to work with his previous company (Yves Veggie Cuisine), they kept saying it was too complicated, etc. So he realized he could use his own brand to do basic R&D. For example, in Canada he has tried selling "Its All Good in the meat section, the deli section, and the produce section of food stores. From this experiment, he has learned where it sells best, and he can share this valuable information with his customers that buy Gardein. He has also learned which product types and names sell best, what's the price point, etc. And he gets lots of consumer feedback about those products. Customers such as Trader Joe's, Costco, and Safeway in Canada always want the best seller in the It's All Good" line. Yves always changes the product name slightly, as from "Tuscan Tomato" to "Basil Tomato." A new product Yves is developing to sell under his own label is a stuffed product (like a stuffed chicken), which is Gardein stuffed with black beans (frijoles) and corn; the package has a tomato sauce inside. GPI uses a broker (who is paid 5%) to get these products into the retail market. In addition, GPI has its own sales force (1 person each in Ohio, New Jersey, and Toronto, and 3 in Vancouver). One guy is responsible for private label, one for the club business, etc. Next Wednesday they will make a presentation at Safeway headquarters; GPI wants to launch the "It's All Good" line with Safeway in the U.S. The week after that they go to Kroger headquarters, then the next week to Publics. Yves attends the most important presentations, which causes him to travel a lot.

Yves is also in the process of raising some money to finance that growth; he projects sales to double in the next 24 months. Currently Yves owns all the shares in GPI Inc. He's basically looking for one venture capitalist who will invest about $1 million in exchange for 10% of the business–just enough to go to the next level. He hopes to find a person who understands his vision and wants to be part of the journey. Yves believes this can be a $1 billion company.

Yves believes that he GPI must be strong in its own back yard before it tries to conquer the world. So his initial focus has been on Vancouver, British Columbia, and Canada

(with 30 million population). His products are all over Canada, with 80% distribution. "But the big market for us is really the U.S." Right now, about 40-50% of his sales are in the USA and 10% in the UK, but in 1-2 years he expects that figure to rise to 70%.

GPI presently has two manufacturing sites in Vancouver, located 5 minutes apart; the second facility is leased, 20,000 square feet, and houses all the sales and marketing. One is the distribution center where all products are shipped fresh, refrigerated. The other site makes products that are sold frozen. As soon as every batch of product is made, it is frozen to keep it fresh. Within the next 2-3 years Yves expects to have one plant in the USA and one in Europe, then one in Asia within 5 years. The product has tremendous global potential. Yves is fortunate to have already started one business, and to have already had so much business experience. This makes the growth go much faster, but its still painful–yet he wouldn't want to be doing anything else. Yves is married and has two kids. He feels that raising a family and growing a business are quite similar.

(3) GPI sells Gardein (as an ingredient, frozen, by the container) to a customer, such as Tesco or Grassington's Food Co. in the UK, which has the product developed and produced, and packaged. Of course they also sign GPI's licensing agreement as described above. In this case the Gardein logo and text must appear in the lower right corner of the front panel: "Made with Gardein (TM). Farm grown protein." UK customers have (so far) asked for GPI's opinion on their package design, and GPI always gives an honest opinion. A new brand in the UK will be "Pick of the Crop."

(4) Food Service Products started with Whole Foods Market in Los Angeles, California, but are now sold to delis, restaurants, schools, catering companies, cafeterias, hospitals, etc. and go mostly through a distributor (such as CANA, UNFI, or Cysco Corp.), unless a company has large enough volume to go direct. GPI's main foodservice customer at present is Whole Foods, which sells Gardein in their deli and displays the Gardein logo prominently on the deli case. When a product is sold to foodservice, GPI realizes that this product will be served in a wide variety of ways (salads, sandwiches, fajitas, in a sauce, etc.), so it must be designed with that flexibility in mind. Moreover, the product must keep its good texture and flavor whether it is eaten hot or cold. As of Oct. 2008 the following products were available to food service: Chicken Cubes, Chicken Strips, Beef Strips, Chicken Breasts (nonbreaded), Beef Burger, Chicken fillets (non-breaded or breaded), and a seasonal Stuffed Turkey.

3054. **Product Name:** SoyButter (Soynut Butter) Smooth, or Crunchy).
**Manufacturer's Name:** Hilton Soy Foods.
**Manufacturer's Address:** Staffa, Ontario, Canada. Phone: 734-973-0778.
**Date of Introduction:** 2008. October.
**Ingredients:** Non-GMO toasted soy, soy oil, granulated cane sugar, monoglyceride (from vegetable oil), sea salt.
**Wt/Vol., Packaging, Price:** 20 kg bag in box, 20 kg pail, 500 lb drums, 2,400 lb bulk totes.
**How Stored:** Store in a cool, dry, dark place.
**New Product–Documentation:** Mailing sent by David Singsank, Hilton Soy Foods, 2863 Quail Hollow Ct., Ann Arbor, Michigan 48108. 2009. March 19. Contains a cover letter, 2 undated news releases, a glossy sell sheet (titled "SoyButter: You won't believe its NOT peanut butter"), and a new product announcement. Website: www.soybutter.com.

Soyinfo Center taste test: Very nice. Tastes a lot like peanut butter, but quite a bit sweeter.

E-mail from David Sinksank. 2009. March 20. The company deliberately decided not to call this "Soynut Butter" in order to keep the dreaded word "nut" (for those with peanut allergies) out of the product name. Moreover, 95% of mainstream consumers have never heard of either "soy butter" or "soynut butter." "Right now we have this product in 85 food service distributors, most of which is sold in schools, some in vegetarian restaurants."

"Our SchoolSafe SoyButter has been sold in 17.6 oz jars in 2,000 Walmart superstores for 6 months now as SoyButter under its Private Label Great Value. Tree of Life just finished its new label for both smooth and crunchy as Soy Wonder SoyButter. Also A&P stores on the East Coast. About 10 other supermarket chains will launch the jars in 2009 as well." As for the ingredient listing, which now reads "Non-GMO toasted soy," they originally had "Soybeans," "but considering such a large percent of mainstream still turns their nose up at soy or bean anything, we wanted to use what we felt was the most likely soy word to not cause that reaction. We may add the word 'whole' in front of 'soy.' Hilton's product is 10-15% less expensive that competing brands. Why? "Hilton grows their own soybeans, and does all the cleaning, toasting and processing themselves (on farm), so I guess they have lower overhead, including no transporting here and there for those various processes."

The product is made by Hilton Whole Grain Millers Ltd. A member of Soyfoods Canada. Their listing reads: Contact: Scott Mahon RR#2 6939 Line 26 Staffa, ON Canada N0K 1Y0. Phone: 519-345-0111.

Letter (e-mail) from David Singsank. 2009. March 28. Hilton is owned by Barry & Karen Mahon and their 3 sons, all of whom are involved in the farming and all steps of processing. They make the "best" soynuts (the most important part of the soybutter), toasted soynut pieces, and toasted soy flour. Nothing else, just Soy. Non-GMO and Kosher. The plant is also certified organic, and indeed currently has customers for the OG SoyNuts and Flour.

David also send 3 color attachments: (1) Hilton Soy Foods: Soy foods have never tasted this good! Hilton has their own 20,000 sq. foot. facility, located near Stratford, Ontario, Canada. They are able to maintain the highest quality standard. "Our plant and products are Gluten Free, Dairy Free, Kosher certified and 100 Peanut Free and Tree Nut Free." (2) SoyButter: The testimonials keep coming. Eight glowing testimonials. (3) Article from *Today's Parent* magazine [Toronto, Ontario, Canada], titled "Battle of the butters" (Sept. 2008, p. 188). FreeNut Butter [Soynut Butter, made by Hilton Foods, Canada] was the top pick of four of the five young taste testers.

3055. McMullen, Michelle. 2008. Needed: Consistent non-GM soybean supply from Canada. *Ontario Soybean Growers' Update.* Oct. p. 1.
• ***Summary:*** "The Canadian Soybean Council's (CSC) 2008 incoming mission of Japanese buyers emphasized the importance of Canada's continued commitment to producing quality non-GM soybeans. Tsuento Sasaki, Trade Commissioner from the Canadian Embassy in Tokyo, joined the mission. Japan is Canada's largest market for food-grade soybeans.

"The group unanimously said that Japan's consumers will continue to demand non-GM food products. This presents a tremendous opportunity for Canada to increase its share of the Japanese market, as other non-GM soybean producing countries are unable to meet the demand.

"'The Japanese market is confident in Canada's ability to produce a quality, segregated non-GM soybean product,' says Jim Gowland, CSC Chair. 'Japanese soyfood manufacturers are now looking to Canada to be a consistent supplier of non-GM soybeans.'

"Japan continues to be Canada's largest importer of IP (identity preserved) non-GM soybeans. Nearly 100% of Canada's exports are non-GM for the food market. In 2007, Japan's total soybean imports totaled 4.16 million metric tonnes, and Canada accounted for 7% of that amount. Of that 2007 total, approximately 1 million metric tonnes were for food uses.

"'Companies from across Japan are concerned about their ability to source non-GM soybeans in the future and are offering attractive premiums to producers for the extra work associated with growing IP soybeans,' says Gowland. 'Skilled, innovative Canadian soybean producers are needed to help meet the demand of markets such as Japan.'"

A photo shows a team of about five Japanese soy food manufacturers examining Ontario soybeans growing on a farm in September. "Ontario soybeans are the basis for Japan's highest quality tofu and miso products." Address: Canadian Soybean Council Manager.

3056. *Organic and Non-GMO Report (The) (Fairfield, Iowa).*2008. Japanese company to triple non-GMO soy production in Canada: Market news. 8(9):9. Oct.
• ***Summary:*** In a few years, Kanematsu Corporation (Japan) plans to triple planting of non-GMO (not genetically engineered) soybeans for food use on 50,000 acres on Prince Edward Island, Canada.

Next year, PEI's soybean production is expected to be 15,000 metric tons grown on 15,000 acres–all for shipment to Japan. PEI farmers are shifting to growing organic soybeans from potatoes, which require high pesticide use and are less profitable due to falling demand.

Japanese makers of tofu, soy sauce, and other food processors use about 1 million tons a year of non-GE soybeans from overseas in addition to domestic organic soybeans. Kanematsu provides about 10% of those non-GE imports.

3057. Lyddon, Chris. 2008. Global grain trade review: Volatility the dominant factor in the 'wildest 12 month history of the grain market.' *World Grain* 26(11):26-33. Nov.
• ***Summary:*** A table titled "Global grain trade activity (in 1,000 tonnes)" gives the following statistics for soybeans: 2007-08 Top exporters: 1. United States 31,434. 2. Brazil 25,500. 3. Argentina 13,500. 4. Paraguay 5,080. 5. Canada 1,825. World total 78,968 (+15% over last year).

Top soybean importers: China 36,500. E.U.-27 15,400. 3. Japan 4,050. 4. Mexico 3,750. 5. Argentina 2,950.

Also gives the top 5 importers and exporters of soybean meal for 2007-08. Exporters include: 4. India 4,850. 5. Paraguay 1,112. World total 56,2062 (+6%). Top importers: 1. E.U.-27 23,900. 2. Indonesia 2,400. 3. Vietnam 2,400. 4. Thailand 1,950. 5. Korea 1,835.

Various factors have been cited as the cause of this volatility: (1) Energy policy–using maize, rapeseed, and soybeans to make biofuels. (2) Commodity speculators–who can make prices rise faster than they would otherwise. (3) Hedge fund position limits. (4) Government intervention by embargoes and export taxes. (5) The low value of the U.S. dollar. (6) The long term trend (spanning about 15 years) of declining wheat acres. (7) Fundamentally tight stocks. (8) Disruption of supply by things like floods. Address: European editor; chris.lyddon@ntlworld.com.

3058. Ontario Farm Products Marketing Commission. 2008. "Grain Farmers of Ontario" transition begins (News release). Ontario, Canada: Ontario Ministry of Agriculture, Food & Rural Affairs (OMAFRA). 1 p. Dec. 12.
• ***Summary:*** "Guelph, Ontario–The three organizations representing Ontario corn, soybean, and wheat producers will immediately begin the transition to Grain Farmers of Ontario (GFO) following a news release from the Vice Chair of Ontario Farm Products Marketing Commission earlier today.

The announcement completes a four-year process driven by resolutions from members of Ontario Corn Producers' Association (OCPA), Ontario Soybean Growers (OSG) and Ontario Wheat Producers' Marketing Board (OWPMB). Resolutions were in support of forming one organization to represent the needs of Ontario corn, soybean and wheat producers. A producer vote involving all 29,000 members of the three organizations was held in Sept. 2008.

"Under the current transition plan OCPA, OSG, and OWPMB are expected to dissolve upon completion of the legislative process. A transitional board and CEO will be in place later in 2009. Elections for 150 delegate positions and 15 directors will take place on an annual basis beginning Jan. 2010."

3059. Schweitzer, Peter. 2009. Re: Plenty's soy dairy project at Solola, Guatemala. Letter (e-mail) to William Shurtleff at Soyinfo Center, Jan. 5–in reply to questions. Typed, with signature on letterhead.

• ***Summary:*** Q: Why were you attracted to Mayans after the Feb. 1976 earthquake rather than just any Guatemalans? Ans: "We immediately noticed that the Mayans were the poorest segment of the population and we identified with their indigenous culture and spiritual world view. They had suffered the most from the earthquake and needed the most help. When we connected with the Canadian Embassy they had already decided to get involved in reconstruction and they wanted Plenty to help rebuild the Mayan town of San Andres Itzapa–a Mayan community."

Q: Why give them a radio station–which the Military government must have suspected as being subversive / revolutionary and thus highly suspect? Ans: "After the earthquake, the military government was more benign than it would become after Ronald Reagan was elected in 1980. We were also more naive about how truly ruthless that government would become with the encouragement and support of the right-wing Reagan foreign policy team."

Q: Does anyone ever discuss the question: Would the soy dairy in Solola have been more successful in the long run if it had be a private rather than a communal enterprise? Ans: "It would have been difficult to start the dairy as a private enterprise without stirring up a lot of jealousy within the community so it had to start as a community-based enterprise in order to gain acceptance. The concept of "private enterprise" was foreign to the Mayan culture and remember, the Farm was collective during that period which gave Plenty many advantages as a nonprofit with a large source of volunteers and very low overhead." Address: Executive Director, Plenty, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4864.

3060. WISHH. 2009. WISHH–World Initiative for Soy in Human Health. (Website printout–part). http://www.wishh.org. Printed Jan. 29.

• ***Summary:*** Contents: Home. About WISHH: Mission and vision, WISHH Committee, Our supporters / partners, Staff. Global outreach: WISHH has activities in the following countries, listed alphabetically and highlighted in green: Afghanistan, Bangladesh, Botswana, Burkina Faso, Cambodia, Ivory Coast, Ghana, Guatemala, Haiti, Honduras, India, Indonesia, Kenya, Mozambique, Pakistan, Senegal, South Africa, Uganda, Vietnam, Zimbabwe. These countries are shown on a map of the world and each program is described in considerable detail if you click on the name of that country below the map. Another group of countries in the same list, whose names are written in black, are those where WISHH presently has projects but (being very busy and active) has not yet had time to describe that project and add a color photo. They are: Angola, Democratic Republic of the Congo (DRC), Ethiopia, Malawi, Nicaragua, Nigeria, Tajikistan, Tanzania.

Media communications: Press releases, Newsletters, Annual reports, Photo gallery (very interesting). Workshops / Training: International workshops, Washington, DC, workshops, Midwest workshops, Other training. Nutrition library: Nutrition HIV/AIDS overview, WISHH presentations, WISHH papers / publications, WISHH HIV/AIDS activities, HIV/AIDS resources, SoyCow & VitaGoat, Economics of soy. Resources / Links: Soybean organizations and agencies (33), U.S. government and international organizations (13). About soy: Soy products, composition of soy, US soy production, Supplier list. Contact us: The WISHH office is co-located with the American Soybean Association office near St. Louis, Missouri.

"Global outreach: WISHH works with multiple private voluntary organizations and commercial companies in more than 28 different developing countries in Africa, Asia and Central America. Many of these groups are using U.S. high-protein soy to improve diets and health as well as encourage growth of food industries in developing countries."

Supplier list–Suppliers of soy and soy products: ADM, Bunge Milling, Cargill, Inc., CHS (Cenex Harvest States), Soya Kenya (agent for CHS in Kenya), Louis Dreyfus Corp., Nedan Oil Mills (Pty) Ltd. (Afgri Products) (Republic of South Africa), North American Millers' Association, Rab Processors Ltd. (Malawi). Seba Foods (Malawi), The Solae Co., Soy Afric (Kenya), SunOpta Food Group LLC (USA), Zeeland Farm Soya (USA).

SoyCow & VitaGoat: Both are manufactured and supplied by Malnutrition Matters (Frank Daller), 498 Rivershore Crescent, Ottawa, ON, Canada K1J 7Y7. www.malnutrition.org. Details about each low-tech machine are given.

Color photos show: The SoyaCow and VitaGoat, from Nutrition Matters (Frank Daller), Ottawa, Ontario, Canada, at a soymilk and tofu workshop (May 2007) in KwaZulu-Natal, South Africa. Photos by Peter Golbitz.

## Canadian SoyCow and VitaGoat Bring Soymilk and Tofu to South Africa

**Cutting the Block of Tofu into Cakes**

**Curding the Soymilk to Make Tofu**

**Taste Panel for Tofu and Soymilk in Kwa-Zulu, Natal, South Africa**

3061. *Ontario Soybean Growers' Update.*2009. Canadian Soybean Council–Conseil Canadien du Soya. Jan. p. 1.
• ***Summary:*** "The Canadian Soybean Council (CSC) is pleased to announce the launch of its new website, www.soybeancouncil.ca. The site is a comprehensive source for information on Canadian soybeans.

"The website's content currently targets the information needs of international soybean buyers, and will grow to include information for Canadian soybean growers and industry stakeholders. The site will be fully bilingual in English and French, with some aspects also being translated into Japanese and Chinese. "'The goal of our website is to keep our current and potential soybean customers informed about what's happening in Canada,' says Jim Gowland, CSC Chair. 'We look forward to seeing the site grow to meet the needs of our industry stakeholders and Canadian soybean producers.'

"The new CSC website was developed by the Canadian International Grains Institute (CIGI)." Address: Guelph, ONT, Canada.

3062. *Ontario Soybean Growers' Update.*2009. Yield challenge winners announced. Jan. p. 1.
• ***Summary:*** "Nine growers from across the province were recognized for outstanding soybean yields at a special award ceremony on December 18 in Guelph. The winners were chosen from among the forty farmers who entered the first-ever Ontario Soybean Growers' Yield Challenge.

"Some interesting overall statistics were gleaned from the entrants' submitted harvest surveys. The average yield reported was 59.4 bushels per acre, with a range from 47.5 to 72.1 bushels per acre. May planting was the norm, with 48 per cent using conventional seed and 52 per cent using Roundup Ready varieties. Tillage practices were evenly split between conventional, no-till and minimum till. The most common seeding rate was between 200,000 and 225,000 seeds per acre. In terms of field rotation, 88 per cent of the entrants grew corn in the prior year; the rest grew either wheat, alfalfa or other beans. Thirty-two percent

reported using foliar fertilizer, and fifty-two per cent used foliar fungicide.

"First, second and third place prizes were presented for each of three provincial heat unit zones based on maturity groups. All nine finalists received an OSG Yield Challenge jacket. The runners-up received two complimentary tickets each for both the Canadian International Farm Show in Toronto, and Canada's Outdoor Farm Show. First-place winners received a cheque for their yield per acre, multiplied by $10.00.

"OSG established the Soybean Yield Challenge to raise awareness among growers of factors affecting soybean yields. A panel discussion among the winners illuminated their crop production management techniques.

A table shows: (1) The zone and cumulative heat units (CHU). (2) Names of the winner, 1st runner-up, and 2nd runner-up. (3) Location in Ontario. (4) Yield in bushels per acre. (5) Variety–NK (Northrup King) varieties won the most prizes.

Zone 1 is 2700 CHU and under. Zone 2 is 2725 to 3000 CHU. Zone 3 is 3025 CHU and above.

Note: Warmer areas generally have higher CHUs and higher yields. The highest yield was achieved by Casey Claver in Seaforth (Zone 3) at 72.1 bu / acre using an NK-S21-N6 variety. winners Address: Guelph, ONT, Canada.

3063. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• ***Summary:*** A cry for help on the ham radio: On February 4, 1976, a devastating earthquake hit Guatemala at 3:01 a.m. local time, while most people were asleep, taking at least 23,000 lives. Approximately 76,000 were injured, and many thousands left homeless. Some areas went without electricity and communication for days, but a desperate cry for help on the ham radio managed to reach "The Farm," a self-sufficient spiritual community in Summertown, Tennessee, founded by Stephen Gaskin. In response, Plenty, The Farm's community outreach program, chose three carpenters to help with the reconstruction efforts. Dennis Martin, Pedro Grey and Melvyn Stiriss were soon flying to Guatemala armed with only their skills, a backpack full of tools and a desire to help rebuild.

Reconstruction Project: Dennis Martin, a natural at networking, was quick to forge strong connections with members of the Canadian Embassy, Clive Carruthers, acting as the Canadian Chargé d'Affaires, and Rick Bronson, administrator of funds for the Canadian International Development Agencies (CIDA). Martin soon discovered that CIDA had a shipment of prefab housing materials and funds on the way for the reconstruction of Guatemalan towns that had been destroyed in the earthquake. Martin pledged to CIDA that if they were to grant him funds and these materials, Plenty would aid in the reconstruction of the town of San Andres Itzapa, in the municipality of Chimaltenango, and build thirteen schools. CIDA agreed, and thus began Plenty's Guatemalan Project.

The Clinic Program: With a few months, many carpenters from The Farm had volunteered for the reconstruction effort, and the Project was quickly underway. However, as they began clearing debris and rubble, a new crisis emerged. They were horrified to find infants, many orphaned, in dire need of medical attention. The Project urgently requested volunteers with medical knowledge to come and provide assistance. Mary Louise Perkins and her medical and public health crew from The Farm answered that call and soon set up a medical clinic in the Plenty camp, which at that time was no more than one kitchen structure, a few platformed tents surrounded by a coffee plantation and corn field. The clinic was later joined by Thomas Wartinger acting as site physician.

The Orphanage: The number of infants and children orphaned by the earthquake had reached a critical point. The Farm sent out request to its members for single female volunteers to help establish an orphanage. In June 10, 1977, I volunteered along with five other women to go to Guatemala and help set up the orphanage. We became known as the Angel Crew. Our responsibilities involved one-on-one parenting of a single infant, collectively caring for 37 children, and preparing three meals a day for around 90 people consisting of orphans, patients at the clinic, and volunteers involved in the Project. Along with the orphans, many locals joined our team, including several teenagers who had been living on the streets of Guatemala, who we helped recover from drug addictions. My baby was Maria Cruz who was severely malnourished. After several months of nursing her back to health using primarily diluted soy formula she regained her health and was later adopted by Alan and Jane Graf, one of the Plenty couples.

At that time the infant mortality rate was around 50%. Some of the infants came to us extremely malnourished and underweight–at an age of eight months some weighed a mere eight pounds (the weight of most infants at birth!). We fed these babies diluted soy formula through an eyedropper, but in some cases it was simply too late. The only thing that made the heart-breaking experience of losing a child bearable was that we were able to save others. Some returned home if they had one, and others were adopted. However, many of the children we treated went home only to return to us again in a short time, again malnourished. Most of the children in Guatemala were given only tortillas to eat, and it became increasingly clear to me that many Guatemalan mothers needed to be educated about how to provide for their children's basic nutritional needs.

Soy Agriculture & Demonstration Program: Aware of the undernourishment of the people of Itzapa and the high nutritional benefits of soybeans and soy products, we forged a plan to introduce soybeans as a new crop to the local

farmers. Our goal was to supplement the diet of the local villagers with high-quality protein while also providing a source of income to the farmers. Soybeans seemed like a viable solution since the farmers had only small plots of land and soybeans can yield high amounts of protein per acre.

In October of 1978, Darryl Jordan, a member of the Plenty team who specialized in agriculture, initiated the soy program. He contacted INTSOY at the University of Illinois and asked if he could conduct one of their international soybean variety trials; he was sent 20 soybean varieties, written procedures to follow, and forms showing results to fill out and return to INTSOY. Itzapa sits at an elevation of 5,860 feet, which at that time, was the highest growing elevation ever tested. Darryl was joined later by Craig Bialick, another team member, who planted and tested the different varieties of which Cobb, Bosier & Davis proved to yield well. As the interest in the new crop increased among the passing farmers, they wanted to know about the new bean and how could they grow it. Since I had a background in producing tempeh for The Farm, Darryl approached me with the idea of teaching the locals about soy products and how to prepare them.

I began by writing a proposal which I submitted to UNICEF Guatemala requesting $6,000.00 to fund in-home soy cooking classes in the area of Itzapa. They gave me the funds I requested along with a two-gallon stainless steel pot and The Soy Demo Project was born. The first classes were held with the wives of the farmers that were involved in growing the soybeans which had proven to grow well at the 5,860 ft. elevation. I taught them using the same utensils that they used themselves, such as a rock grinding stone and cooking on a wood fire; this way every woman who took the class would be able to use the same methods in her own home.

The class size averaged 6-8 neighborhood women along with about 15 children. I would teach the class in Spanish (which I learned informally after arriving in Guatemala), and Maria Sal, a local Indian mother of five who joined our team, would translate in Cakchiquel (a Mayan dialect). The children loved eating the soyfoods and news traveled fast; at the end of each class I would find myself surrounded by 20-30 children, all waiting eagerly for a sample. Interest among the women grew quickly as well. Word spread throughout the area and the requests for classes became overwhelming. I was soon teaching soy demo classes not only in Itzapa, but in many of the neighboring villages as well. By June 1979 approximately 200 women were taught.

The Soy Promoters Program: In one of Itzapa's neighboring villages, San Jose Poaquil, a Guatemalan agency named World Neighbors had set-up a cooperative that held classes in agriculture. While performing a class there, I met a Latino Guatemalan named Amado del Valle, who was the director of the program. (Note: In this context, "Latino," refers to one whose ancestry is largely Spanish rather than indigenous Mayan; for centuries there has been both conflict and intermarriage between these two groups). With his background in agriculture he was very interested in what the soybean had to offer for Guatemala's protein crisis. I realized I needed help spreading the word, so he offered 8 women from his cooperative to become teachers.

In August 1979, we wrote a proposal requesting funding from CIDA to provide the equipment, supplies and training for the cooperative promoters, who would in turn train others in the preparation of soyfoods. I donated my salary as a volunteer and UNICEF donated several thousand dollars towards the project, the total amount of which would then be matched by CIDA. Previously CIDA was able to contribute matching funds through Plenty USA. However at this time, to continue their funding, Plenty needed to obtain a Canadian NGO nonprofit status; we did this through our sister Farm in Canada and we received $11,000.00 for the program. There was good acceptance in Poaquil, especially in the low parts of the municipality. Each promoter had about five groups, some of them walked 15 miles and approximately four hours to get to their groups. We trained them at their cooperative and later went with them to their villages to observe one class. We left them with soybeans, supplies, and funding to continue teaching on their own, visiting them occasionally checking in on their books, and charts, which they kept on all classes. Continued. Address: Salt Lake City, Utah.

3064. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. II. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• ***Summary:*** Continued: In September 1979 the immediate food and housing crisis in the area had been solved, so we began to focus on long-term developments in agriculture and nutrition. As we moved from that area of Guatemala we began to realize the town had grown accustomed to our medical assistance and were growing dependent upon our charity. It became apparent that we needed to develop a means to allow the indigenous community to help themselves. We moved our camp from Itzapa to Solola, where we had built a Mayan municipality building and several schools. Darryl and his wife Leslie returned to the Farm with their adopted baby named Irma, one of the recovered babies that had been abandoned. Since our project focus changed, as we moved to Solola most of the medical crew returned to the USA after adopting (and taking with them) most of the rest of the 7-10 children in our orphanage; most of these children grew up in the USA and never returned to Guatemala to stay.

The Soy Dairy Project: Although the soyfoods were very popular and classes were available, many women in

Guatemala did not consistently have time to make their own soy products at home. To address this need, Plenty wrote another proposal to CIDA for $31,000.00 to build a soy dairy that would operate as a cottage industry. Building the dairy would enable us to produce soyfoods on a large scale, create job opportunities, and make soy products available for purchase to the people of Guatemala. Soy ice cream seemed to be a good product choice to focus on. Its production required less education and ice cream was very popular throughout Guatemala.

We decided to build the dairy in the community of San Bartolo, Solola, where we had moved our camp. We had established a good rapport with the community's reconstruction committee. We had already built a school and installed a water system for them which featured a water spigot in every home. The water system had improved the quality of life immensely in San Bartolo, as before they had to carry water for several miles to their homes. My knowledge of large scale soymilk production was limited so Plenty approached Laurie Praskin, the soyfoods expert who for years was in charge of producing soy milk and tofu on a large scale for The Farm community in Tennessee. Laurie accepted and I returned to the United States to help her purchase the equipment needed. We traveled across the country educating people about our cause. We were able to get some of the equipment donated and purchased the rest with the funding we had received–including two 50 gallon stainless steel pots that Laurie acquired from the Boy Scouts of America.

In the summer of 1979 we shipped the equipment to Guatemala along with seven tons of soybeans, and I returned to Guatemala with Laurie as my partner. Laurie's husband, Alan Praskin, was also an agriculture specialist who joined with Craig Bialick to continue doing more soybean variety trials at different altitudes. They did one trial with 16 different varieties in San Martin Jilotepecque, where they partnered with Amado del Valle, the director of the World Neighbors Cooperative where we trained the eight soy promoters. They also did a trial in the Solola area which at 7,200 ft. was the highest elevation ever tested at that time using INTSOY varieties.

On February 19, 1980 the facility was finished, and the Soy Dairy was inaugurated. Our long-term plan was to turn over full operation of the dairy to the people of San Bartolo so our first task was to choose and train a local to oversee the project. We chose Agustin Xoquic. He had been head of the reconstruction committee in San Bartolo at the time we had installed the water system, and we had developed a very strong bond with him and his family. We lived in the Mayan community, training Agustin and his wife Elena to oversee the dairy. The Soy Demo Promoter's project continued while also operating the soy factory project.

As of August 31, 1980, there had been 117 promoter classes and 1,013 men and women were taught how to make soymilk and tofu in their homes through the Soy Promoter program. Small women's groups had collectively grown their own plot of soybeans. This program was similarly implemented in San Martin Jilotepecque, Chimaltenango, with another World Neighbors Cooperative. Eight women were approved as soy promoters and taught 307 men and women. Over 100 people in San Martin planted soybeans that year. Between all the cooperatives, they harvested approximately 8,000 pounds of soybeans for their own needs and the remaining amount was sold to the *Fabrica de Soya* (Soy Dairy) in Solola.

In Solola, Laurie and I held cooking classes in the town, teaching Latino women, how to prepare fancier dishes such as lasagna, blended tofu dishes, fried and scrambled tofu. These ladies had electric blenders, ovens, and tofu, which was now available in the local market produced by the Fabrica de Soya in Solola. We also continued our classes with the Indigenous people in the surrounding villages of Solola.

We also began working with Berhorst Hospital in Chimaltenango, where we had often taken some of our patients. They were very enthusiastic about soy technology and asked us if we could get them enough soybeans to supply soymilk and tofu for their patient's daily consumption. They also asked us if we could get them an ice cream machine for making soy ice cream for sales to their patients. The current practice is for the patients to go to the local store and get junk food without much nutritional value. They wanted a high quality protein product such as soy ice cream, to be available for their patients. We began holding demonstrations at the hospital with 35 volunteer promoters from the surrounding villages of Chimaltenango.

After eight months of training the employees at the soy factory, the political climate in Guatemala became violent. People we worked with on our water projects were put on "hit lists," and since we did not want to jeopardize anyone's safety we were forced to prematurely leave the soy factory project in the hands of people in San Bartolo.

On September 22, 1980 we returned to the U.S. Since Darryl Jordan returned earlier he had published an article about the soy project in a development newsletter titled *League for Food Education (L.I.F.E.).* We received responses from fifty different countries requesting advice on how to set up similar projects. We then published the *Plenty Agricultural Program: Guatemala* booklet (1980, 46 p.) and the *Plenty Integrated Soy Program, Guatemala* (1982, 48 p.) booklet to help educate the many people from whom we had received inquiries, along with those from other interested organizations.

After we left Guatemala, Amado Del Valle worked with Food for the Hungry in efforts to set up two more soy dairies in Zacapa, but the political violence from Guatemala's civil war made it too dangerous to complete. It

had also become too dangerous for the Soy Factory in Solola to operate, so it closed as well.

On May 27, 1981, Amado left Guatemala and arrived at The Farm in Tennessee, to study large scale production of soyfoods; he later went on to the Canada Farm. In September of 1985, he returned to Guatemala with funding from Plenty Canada at which time he helped Agustin reopen the soy factory and become the Director for three years. It was reborn as Alimentos San Bartolo, community owned and managed, although Agustin and Elena were still in charge of production, and remain so to this day.

On March 7, 1991 the soy project land was officially turned over to the committee of San Bartolo. Chuck Haren and other members of Plenty periodically traveled to Guatemala to help with funding and equipment upgrades.

In June of 1995 with help from Plenty USA and funding from Food for the Hungry, I returned to Guatemala to do a marketing upgrade which I completed in three months. I wrote a Spanish-language booklet with local recipes titled *Recetas de Soya (Soyfoods Recipes)*, had 1,000 copies printed, and used it at soyfoods classes, some of which were held at local restaurants.

In August of 2006, each household in San Bartolo was bought out for an amount of money equal to their share of the project. The project was restructured from a community owned business to an association named *Asociacion de Desarrollo Integral Belen (ADIBE)*, but it is still directed by the committee of San Bartolo, which is elected every 4 years by the community. Address: Salt Lake City, Utah.

3065. Viavant, Suzi Jenkins. 2009. Re: Introducing soyfoods to the highlands of Guatemala. III. Continued. Letter to William Shurtleff at Soyinfo Center, Feb. 5. 6 p. 28 cm.

• ***Summary:*** Continued: In July of 2008 the members of ADIBE traveled to Guatemala City to compete and present all of their products at a National Rural Development contest; they were recognized as one of ten winners and were awarded 46,000 quetzals.

The project has become a model project worldwide. The soy dairy has operated as a self-sufficient business for twenty-nine years. It employs seven members of the Mayan community full-time and perhaps most importantly, continues to supplement the protein intake of the Mayan children.

As of August 21, 2008: The current items produced and sold weekly are: 40 gallons of soymilk, 110 pounds of tofu, 15 gallons of soy ice cream, 20 pounds of tempeh, and 20 pounds of soy flour.

In October of 2007, Amado del Valle developed several new products which the soy factory now produces; shampoo, face cream and hand soap (all made from tofu whey, which was previously discarded).

As it is becoming increasingly more popular to be "green," we, the people of this planet, should harness this global consciousness and set up more projects of this kind, which has proven to make the most of our world's resources and provide quality nutrition and education to people who would otherwise not have them. With more funding, education and organization of the planet's resources, there would be plenty of protein to go around, and malnutrition could be a thing of the past–this is my dream. My experience has taught me that small donations, desire, grass roots commitment and organization can change and save lives.

Note: This article is written from the memory of my experience setting up the Soy Demonstration Programs in Guatemala. However I would like to acknowledge that the success of the soy program involved many Plenty volunteers and Farm members, who have contributed or supported the project directly or indirectly over many years. I apologize if I missed mentioning anybody.

Even though I am no longer a member of Plenty, I have still consistently returned to Guatemala to check-up on the project and bring them supplies.

For more information please contact: Suzi at soysolutions@gmail.com or Plenty International, P.O. Box 394, Summertown, Tennessee 38483. Phone: (931) 964-4323. www.plenty.org. plenty@plenty.org. Address: Salt Lake City, Utah.

3066. Hain Celestial Group, Inc. (The). 2009. Annual report 2008. Melville, New York. 60 p. Feb. 27. 28 cm.

• ***Summary:*** Begins with an 8-page question and answer session with Irwin Simon, the CEO. Net sales for the year ended 30 June 2008 were $1,056,371, up 17.3% from 2007. Net income in 2008 was $41.221 million, down 13.3% from 2007.

Acquisitions and divestitures: On 6 March 2008 Hain acquired nSpired Natural Foods Inc., with its MaraNatha and SunSpire brands, for approximately $37.6 million in cash, including transaction costs. MaraNatha makes nut butters and SunSpire gives Hain an entry into the natural Candy category.

On 10 March 2008 Hain Pure Protein Corp., a 50.1% owned subsidiary, acquired the turkey production facility and distribution center of Pilgrim's Pride Corp. of New Oxford, Pennsylvania, for $19.1 million in cash. This expands Hain's ability to offer branded, premium poultry products.

On 2 April 2008 acquired Daily Bread Ltd., a London-based manufacturer of branded fresh prepared foods for the foodservice channel in the UK for about $36.5 million in cash.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (71 p.). Irwin Simon, the founder and CEO, age 50, had the

following annual compensation: Salary: $1.325 million. Total compensation: $7.380 million. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3067. *Ontario Soybean Growers' Update.*2009. Grain Farmers of Ontario: Transition in progress. Feb. p. 1.
• ***Summary:*** "It's been almost five years since the leaders of the three organizations representing Ontario corn, soybean and wheat producers signed a Memorandum of Understanding to explore the idea of forming one association. At that time the Ontario Soybean Growers (OSG), Ontario Corn Producer' Association (OCPA), and Ontario Wheat Producers' Marketing Board (OWPMB) had "no predetermination" of how the result might look.

"Nearly five years later the results of last September's producer vote have sent a clear message to the Minister of Agriculture, who announced in December 2008 a decision to form "Grain Farmers of Ontario."

"Now, the real work begins.

"Staff, directors, and government will spend the coming months working out the logistics for GFO to become a reality. An oversight committee has been appointed to monitor the transition both from a government and regulatory perspective, as well as implementation. Both teams are aiming to complete their work by the target date of June 2009.

"From a legislative side, the provincial government needs to follow a process that would make GFO responsible for a number of the authorities currently held by one or all three of the existing boards, such as the authority to market wheat, or negotiating authority that is held by the soybean board.

"Implementing a new structure for staff and directors is a more detailed process, and the leadership of the three organizations is determined to get it right. The Boards have hired the expertise of a "change management" firm to engage staff during the transition while a staff structure incorporating the three teams is put into place.

"Another significant change to come is the adjustment from a total of 41 directors to 15, and a shift toward 150 delegates that will have more involvement in board committees.

"Despite the changes that are to come, all three boards are operating on a "business as usual" basis to ensure a smooth transition to the official launch of GFO. That means directors and committee members elected at January district meetings will continue to serve their particular boards, and staff will maintain the status quo on programs and projects until GFO is in place.

"For updates and information about Grain Farmers of Ontario visit www.grainfarmersontario.ca." Address: Guelph, ONT, Canada.

3068. Singsank, David. 2009. Re: Hilton Soy Foods (Staffa, Ontario, Canada) and American Health and Nutrition, Inc. (Ann Arbor, Michigan). Letter (e-mail) to William Shurtleff at Soyinfo Center, March 28. 1 p.
• ***Summary:*** David has worked with the Mahons (founders, owners and operators of Hilton Soy Foods) since 1990 when they were first involved with making organically grown rolled oats and other oat and flaked grain products. In about 1995, they purchased a large soybean toasting machine and that was their start in that business. "We (American Health & Nutrition {AH&N}) were the exclusive USA distributor for them thru 2006." They then exited the oat business and went solely into making soynuts, soynut butter, and soy flour.

In about 1998 or 1999 we (AH&N) created our soynut line under the name "The Organic Garden," of course using their soynuts. We exited that in about 2004 due to not having sufficient capital to expand it. Right now, Hilton only produces these for various bulk customers. Genisoy recently lost their supplier and almost went with ours (Hilton) but went for a cheaper priced product.

Dennis (David's twin brother) and David jointly manage all of Hilton's sales and marketing worldwide, concentrating on the SoyButter. They sold 80% of AH&N at the beginning of 2007, stayed with the company until the beginning of 2008, and finally sold the last 20%. Then, starting in the summer of 2008, they began working exclusively with Hilton Soy Foods.

AH&N changed its name to NewOrganics last year. "We have a noncompete agreement with NewOrganics until the end of 2010 on virtually anything organic or conventional Non-GMO, except the products Hilton makes.

The Mahons were originally dairy farmers until sometime in the mid-1980s when they sold off their dairy operation and started the rolled oats business.

"AH&N's address is 3990 Varsity, but my only address now is 2863 Quail Hollow Ct. Ann Arbor, MI 48108. This is also the USA address for Hilton Soy Foods." Address: 3990 Varsity Dr., Ann Arbor, Michigan 48108. Phone: 734-973-0778.

3069. Mahon, Scott. 2009. History of work with soybeans, soyfoods, and SoyButter (Soynut Butter) (Interview). *SoyaScan Notes.* March 30.
• ***Summary:*** Scott's grandfather, William Mahon (pronounced MA-hun, who is now age 93), used to own land near Toronto, Ontario, where he was a farmer. The family traces is roots back to Ireland. William raised dairy cows, had a dairy operation (but not a dairy processing plant), and grew soybeans, corn, wheat, alfalfa, etc. In 1973 the land was appropriated by the Canadian government to put through highway 401 and create a conservation area. On the land was a waterfall named Hilton Falls. The area is now named Hilton Falls Conservation Area.

The Mahons completely "picked up shop" and moved 2 hours west to their present location, where they started farming in 1973. In 1984 the family stopped raising animals. Presently the family grows mostly soybeans (non-GMO, but not organic) and occasionally wheat. They also contract with local farmers to grow a certain variety of soybean for them.

Starting in the early 1980s, Scott's father, Barry Mahon, had wanted to add value to the crops that they were growing. So on 25 March 1980 he had founded a food processing company named Hilton Whole Grain Millers Ltd.; the word "Hilton" came from the name of the falls and conservation area. But the business was largely inactive until the early 1990s when, on the family property, he built an oat processing plant and line to make specialized oat products, such as oat flakes–using a specific variety of oats which they grew and which a researcher had developed. The company made a superb oat product, but they had products marketing it, because buyers were always looking for the lowest price, even though the Mahon's was a far better quality product. It got to the point where they were having a very hard time competing with the big mills. So in 2006 they stopped making oat products–but they still get calls from consumers who claim that these were the best oat products they had ever tasted. "It was really tough." Most people don't realize that the buyers make the decisions as to what consumers get–the lowest-price products.

Scott graduated from the University of Waterloo in Canada with a mechanical engineering degree. In 1998, when he graduated, he decided not to take a job in Toronto working as a mechanical engineer, but rather to accept his father's offer to start developing soy products on the family farm. The first problem was to decide what to do. Scott (with his family decided) to developed toasted soy products that tasted really good. Most comparable products that he tasted were not very palatable. So they developed a line of toasted (dry roasted) whole soynuts, halves, chopped pieces (2 sizes), and gritty flour. In 1999 they started making and selling these five products as ingredients to food processors, not to retailers. The company still makes this line of soy products from the soybeans they grow on the family farm.

In 2003 the family started developing a line of soynut butters; but they did not start making and selling these until 2006. They tasted the products that were on the market and again decided that most were of poor quality. Scott recalls: "I couldn't eat it myself and I couldn't figure out what anyone else would want to eat it. And I like soy. So we decided we could do a far better job than what was available, and we started working on it." Scott found that the variety of soybean had a large influence on the taste and consistency (texture, nutritional composition) of the finished SoyButter. So he tested many varieties in order to get the best possible taste and other characteristics. The processing method is another key to good quality. "A few varieties give us what we want for flavor, but they don't work properly in our process. Most people couldn't imagine how important the variety is to the success of the finished product."

Scott also had an original marketing idea: To market the product to schools and other organizations that would not but peanut butter and, increasingly, would not allow it on the premises to reduce their financial liability from kids who were extremely allergic to peanuts and peanut butter. Many other makers of soynuts and soynut butter have a disclaimer on their labels with statements such as: "May contain traces of peanuts, tree nuts, or other nuts." Or: "Made on equipment shared with tree nuts and peanuts." Scott decided to make a much stronger claim: That their plant processes nothing but soy products, and that their products are guaranteed to be free of peanuts, tree nuts, etc.

"The company's SoyButter is doing well, and we are slowly starting to take market share to because people do recognize the superior taste of our product." They are going after several markets: (1) People who are not allergic to peanuts and who like peanut butter, but cannot eat it at school because of the banning. (2) The people who can't eat peanuts or peanut butter because of allergies, but who are looking for an alternative. About 90% of Hilton SoyButter is sold in retail jars. They have found that sales to food processors develop only after a new product is well established Scott has developed a generic private label / own brand retail product with a green label, named "Wow! Tastes Just Like Peanut Butter: School Safe SoyButter" (both creamy and chunky, launched Jan. 2009). They offer this as a generic private label for companies who don't want to take the time and money and minimum run to develop their own private label. The term "soynut butter" confuses people; you say you have a nut-free product but then you call it soynut butter. Many people have called to say that name "SoyButter" makes a lot more sense to them than "soynut butter." Most of what Hilton does is SoyButter is private label / co-packing. In Canada, they now co-pack two brands: "Salba Ole: SoyButter with Salba" (launched in the fall of 2008. Salba, also called chia, *Salvia hispanica,* is very rich in omega-3 fatty acids) and "FreeNut Butter: Totally Nutfree" (smooth) (the company's 1st such product, launched in about June 2006). In the USA, Wal-Mart sells their product as "SoyButter: Peanut Free Smooth" (launched June 2006). A&P sells their product labeled as "Smooth SoyButter: Healthy for Kids of All Ages" (launched March 2009). They sell private label smooth and chunky SoyButter to Hong Kong and China. For details see www.soybutter.com where-to-buy.html.

Hilton was in a partnership in Canada to try to market their first product, FreeNut SoyButter. The guy was supposed to be the marketing guru, but he basically failed to perform, so recently they have both decided to go their separate ways. Hilton has decided to promote its green

"Wow!" label more than its FreeNut label in Canada. Of the SoyButter, Hilton now has about 10 SKUs. They have more being developed that they plan to launch shortly. One is a private label portion cup for Ian's Natural Foods (a six-pack of 1½ oz. cups) where, for example, a mom could toss one in her kid's lunch.

Hilton has a foodservice partner, whom Scott met in 2006 or 2007. Scott was at an IFT [Institute of Food Technologists] regional table-top show in Chicago; he was exhibiting the SoyButter there for use as an ingredient in processed foods. A man came by, tasted the SoyButter, and said to Scott, "That's It! This is what I've been looking for for 25 years." He introduced himself as Herb Horn, and explained that in 1972 he had written his MSc thesis at the University of Illinois on "soybean butter." Herb owns a foodservice business named Clown-Gysin Brands in the United States (with a little in Canada' www.Clown-Gysin.com). Hilton signed an agreement with Herb giving him exclusive rights to foodservice in the USA and Canada. Now CGB SoyButter is available to foodservice in three package sizes: 1.1 lb (500 gm) jars, 22 lb pails, and ½ oz. ISP cups. Its going quite well. Hilton is getting new foodservice customers on a daily basis. "Herb is just ecstatic. He said he's never had a product where people are phoning him and demanding it."

Scott thinks there are three basic markets [channels] for his product: Retail, industrial [as an ingredient for food processors], and foodservice. SoyButter can replace peanut butter 1 to 1, which makes it easy to use as an ingredient. Scott has a customer that uses his SoyButter to make peanut-free Thai sauces.

Scott has found that the hardest part is trying to get people to taste the product. Their initial reaction is that they have tasted soynut butter before and they didn't like it. One of his brokers on the East Coast likes to say: "As long as I can get it into their mouth, they love it. I haven't had one person say a bad thing about the product once they taste it. But, it's so difficult to get them to try it!" Address: Hilton Soy Foods, Staffa, Ontario, Canada.

3070. *Ontario Soybean Growers' Update.*2009. Soybean, corn & wheat producers fund $1.16 million in research & innovation. March. p. 1.

• ***Summary:*** "Ontario's soybean, corn and wheat producers collectively funded fifty-eight research and innovation projects to the tune of $1.16 million in the past year. Research dollars invested by the Ontario Soybean Growers, Ontario Corn Producers and Ontario Wheat Producers leverage a significant amount of funding from both public and private sources. On average, every grower dollar invested generates four dollars from these sources, resulting in a total research investment of over four million dollars.

"'We've decided to shine a spotlight on the significant amount of agronomic, utilization, insect and disease research that is carried out each year by Ontario's grain farmers', says Crosby Devitt, Research & Innovation Manager for Ontario's soybean, corn and wheat producers. The fifty-eight projects are being featured at this week's soy, corn and wheat producers' Joint Conference in London, Ontario.

"'Farmers who grow soybeans, corn and wheat are really interested in the latest research being funded by their check-off dollars', added Alison Walden-Coleman, Research Projects Coordinator for the three organizations. 'We have created a special publication summarizing current research projects being done on growers' behalf. It's available in hard copy at the Joint Conference, or can be accessed through the Ontario soybean, corn and wheat websites. Our goal is to help better inform producers about how their research dollars are being spent'.

"Ontario Soybean Growers' current research investment totals $550,000, which has leveraged over $2,000,000 in Ontario soybean research. $350,000 of the OSG funding is spread over the twenty-six projects listed to the right; another $200,000 will help to fund new projects beginning in 2009.

"A call for research proposals for this additional $200,000 in OSG research funding was recently issued. For more information, contact Crosby Devitt: cdevitt@soybean.on.ca or Alison Walden-Coleman: alison.walden@ ontariowheatboard.com."

A photo shows the cover of the *2009 Research Projects Guide.*

A full-page table shows (for soybeans only): (1) Project type (soy agronomy, utilization, insect & disease control, combination projects). (2) Names of researcher(s). (3) Institution where research will be conducted. (4) Project title. For example: Development of high oil soybeans to improve the production efficiency of biodiesel. Development of industrial soy protein films. Development of soy protein isolates for the food industry from Ontario soybeans. Address: Guelph, ONT, Canada.

3071. *SoyaScan Notes.*2009. Soybean germplasm collections on the IPGRI website (Overview). May 6. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** These four spreadsheet databases were sent to Soyinfo Center by Dr. Randall Nelson, curator, USDA Soybean Germplasm Collection, Urbana, Illinois. He created the databases (which reside only on his computer) using information found at the FAO website for germplasm collections: http://www.bioversityinternational.org / Information_Sources /Germplasm_Data bases / Germplasm_Collection_Directory /index.asp. At the "Biodiversity Directory of Germplasm Collections Query Form," after "Taxon" enter "Glycine max" then click "Search" at bottom of page. Wait for several minutes for results to be displayed.

(1) The 40 largest global *Glycine max* [domesticated soybean] germplasm collections–in descending order of no. of accessions in collection. (1) Institute of Crop Germplasm Resources (CAAS), China, 23,578 accessions. (2) Soybean Germplasm Collection, USDA, USA, 18,046. (3) Asian Vegetable Research and Development Centre (AVRDC), Taiwan, 12,508. (4) Nanjing Agricultural University, China, 10,000. (5) Institute of Agroecology and Biotechnology, Ukraine, 7,000. (17) All India Coordinated Res. Project on Soybean, Govind Bal. Plant Univ., India, 7. (18) Maharashtra Association for the Cultivation of Science, India, 6. (19) Sukamandi Research Institute for Food Crops (SURIF), Indonesia, 4. (20) Research Institute for Food Crops Biotechnology–RIFCB, Indonesia, 4. (21) Kariwano Laboratory, Tohoku Nat. Agricultural Experiment Station, Japan, 3. (22) Genebank, Inst. for Plant Genetics and Crop Plant Research (IPK), Germany, 2. (23) S.K. University of Agriculture and Technology, India, 1.

(4) Germplasm collections that have at least one wild perennial relative of the soybean *(Glycine* species, such as

*Glycine clandestina),* in descending order of total number of accessions: (1) CSIRO Division of Plant Industry, Australia, 2,102. (2) USDA Soybean Germplasm Collection, USA, 919. (3) Plant Genetic Resources Unit, Agricultural Research Council, South Africa, 281. (4) CSIRO Division of Tropical Crops and Pastures, Australia, 87. (5) Asian Vegetable Research and Development Centre (AVDRC), Taiwan, 69. (6) N.I. Vavilov Research Institute of Plant Industry, Russia, 31. (7) Breeding Laboratory, Faculty of Agriculture, Iwate University, Japan, 23. (8) National Dept. of Agriculture, Dir. of Plant and Quality Control, South Africa, 23. (9) Seed Bank, Seed Conservation Sect. Royal Botanic Gardens, Kew, UK, 1.

3072. Chapman, Sasha. 2009. The new gourmets: They're ordering octopus, having *Iron Chef*-themed birthday parties and learning their multiplication tables with edamame. Gastro-kids are the latest parental status symbol. *Toronto Life (Ontario, Canada)* 43(5):89. May.
• ***Summary:*** Describes how North American kids are dining out more often than in previous decades and are therefore exposed to more worldly, sophisticated cuisines. For instance, "While my father likes to recall the first time he tasted yogurt–when he moved to Paris in his 20s–these kids are learning their multiplication tables with edamame."

3073. *Soyfoods Canada Newsletter.*2009. Canadian soybeans–a sustainable crop. Spring. p. 4.
• ***Summary:*** "Canada accounts for almost 2% of the world's soybean production. In 2007, approximately 2,700,000 tonnes [metric tons] were produced in Canada, on 2,870,657 acres (1,161,755 hectares). Soybeans are grown in three provinces: 215,006 acres in Manitoba, 434,715 acres in Quebec, and 2,224,936 acres in Ontario.

"Canadian soybean producers are known for innovative and sustainable production practices... Canada's soybean industry is known for its superior ability to segregate and trace soybean crops from seed through to end user, referred to as Identity Preservation (IP).

"Over 40%, or about 1.7 million tonnes of Canadian-grown soybeans are exported to markets such as Japan, Malaysia, Singapore, Hong Kong and Taiwan. They are used to make Asian food staples such as tofu, miso, natto, and soymilk. Japan only produces about 12% of its own country's food grade soybean requirements, and their consumers demand non-genetically modified product. Japanese buyers value Canadian soybeans because of our industry's IP ability.

"Growing soybeans leaves a relatively small carbon footprint. As a legume, the soybean plant's ability to 'fix' its own nitrogen virtually eliminates the need for petroleum-based nitrogen fertilizer. The wide canopy of leaves formed by soybean plants helps to minimize the need for herbicide sprays."

3074. Wiley, Mary. 2009. OSG and Quality Homes partner to create Soy House! *Ontario Soybean Growers' Update.* June. p. 1.
• ***Summary:*** "Imagine stepping into a house that symbolizes the power of Ontario's emerging bio-economy. Featured in the heart of the 2009 Royal Agricultural Winter Fair (RAWF) will be a special house made and furnished with as many soy-based products as possible. The Ontario Soybean Growers have partnered with Quality Homes to create the Soy House!

"OSG's main priority is market development of the 101+ Uses of Soy. The goal is to add value to Ontario's soybean crop, and capture that value within the Ontario economy, by identifying specific end uses for soy components. For example, soybeans are a good source of renewable polyol that can replace the petroleum content in a wide range of products.

"OSG hosted a symposium in December 2008 at the Toronto Stock Exchange to highlight the use of soy in many commercial, industrial, residential and personal products such as sofas, mattresses, bedding, car parts, clothing, food, and health and beauty products. The goal was to illuminate for media and Queen's Park representatives the important role Ontario-grown soybeans will play in capturing value-added opportunities for renewable crops grown in this province.

"The symposium highlighted various room vignettes made from soy-based products: soy lubricants, engine oils, and car parts in the garage; no-VOC (volatile organic compound) paints on the walls; soy foam furniture, mattresses, pillows and candles in the living and bedroom areas. Soy soaps and skin care products as well as a wide variety of soy food and beverage products were also featured.

"From that original symposium came the idea to raise awareness of the 101+ Uses of Soy by building a Soy House! With 326,000 urban and rural visitors seeking an educational experience, the RAWF was chosen as the perfect base for the house.

"OSG partnered with Quality Homes (www.qualityhomes.ca) to display the house. The home will be built in Quality's climate controlled production facility in Kenilworth. This type of building means construction materials and trades are always protected from the effects of harsh weather, which means homes are delivered straight, true and are guaranteed on-time.

"Visitors to the RAWF will be able to tour the 1200 square foot house, and learn about the companies producing the soy-based products which comprise the house and its contents. Through this process, they will become familiar with the long-term health, environmental and economic benefits of Ontario soybeans.

"Set the dates for the 2009 Royal on your calendar now: November 5 to 16, at the Direct Energy Centre, Exhibition Place, Toronto. While you're there, be sure to visit OSG's Soy House!"

A large photo shows an interior view of the Soy House. "Soy-based furniture, cushions, carpet backing, candles and low-VOC paints are just some of the 101+ Uses of Soy that will be featured in the OSG-Quality Homes Soy House!" Address: OSG Communications Director, Guelph, ONT, Canada.

3075. **Product Name:** It's All Good [Meat-Free Tuscan Breasts in a Tomato and Basil Sauce, Meat-Free Chicken-Style Filets].
**Manufacturer's Name:** Garden Protein International Inc.
**Manufacturer's Address:** 12751 Bathgate Way, Richmond (near Vancouver), BC V6V 1Y5, Canada. Phone: 604-278-7300.
**Date of Introduction:** 2009. July.
**Ingredients:** Tuscan Breasts: Water, soy protein*, vital wheat gluten, ancient grains (quinoa, amaranth, millet, kamut), natural flavors (from plant sources), gum, potato starch, expeller pressed canola and/or safflower oil, pea protein, modified vegetable gum, carrot fiber, organic beet root fiber, organic evaporated cane juice, yeast extract, vinegar, sea salt. Marinade: Water, tomato paste, spices, red bell pepper flakes, vinegar, citric acid. Contains Soy and Wheat. * = Non-genetically engineered soybeans.
**Wt/Vol., Packaging, Price:** 7 oz (200 gm). Paperboard box. Retails two for $6.00 (2009/07. Lafayette, California).
**How Stored:** Refrigerated.
**New Product–Documentation:** Product with label purchased at Safeway in Lafayette, California. 2009. July 24. Paperboard box. 6½ by 6½ by 1¼ inches. Green, red and black on white. A color photo on the front panel shows each of the products on a white background. At bottom of front panel is an innovative horizontal table: Protein 11 gm. Fat: 1.5 gm. Cholesterol: 0. Calories: 70. Carbs: 3 gm. On all four panels is the logo of Garden Protein International Inc. "Made with Gardein. Garden protein." On one side panel: "Low fat. No artificial flavors, colors or preservatives. A good source of protein. And suitable for vegans and meat lovers alike." Manufactured for Its All Good Foods, Inc., Richmond, V6V 1Y5 Canada. www.itsallgoodfoods.com. Made in Canada, On the other side panel: "Microwave. Stovetop. Grill. Bake. Good with rice, couscous, pasta." On the bottom panel: "There are lots of good things growing at www.gardein.com." On the back panel are Nutrition Facts, ingredients list and recipe ideas.

3076. *Ontario Soybean Growers' Update.*2009. Record 2.4 million Ontario acres seeded to soybeans. July. p. 1.
• ***Summary:*** "Statistics Canada's 2009 June Farm Survey showed Ontario's seeded soybean acres had risen 14.3% over 2008, to reach a new high of 2.4 million acres. The 2008 figure was 2.1 million acres. The previous record set was 2.3 million acres planted in 2004. The survey of 5,039 Ontario farmers was taken between May 25th and June 3rd; at that time, seeding across the province was over 87% complete." Address: OSG Communications Director, Guelph, ONT, Canada.

3077. Ontario Soybean Growers. 2009. OSG marks 60th anniversary by announcing legacy award (News release). Guelph, Ontario, Canada: OSG. 1 p. Aug. 20.
• ***Summary:*** "London, Ontario. The Ontario Soybean Growers marked their 60th Anniversary by creating a fifteen thousand dollar OSG Graduate Student Legacy Award. Over the next ten years, an annual award of fifteen hundred dollars will be presented to one graduate student per year, in support of research providing value to the Ontario Soybean Industry.

"The award announcement was made today by OSG Chairman Leo Guilbeault at a special event held in London, Ontario, to recognize past Directors and Chairmen of the OSG Board for their contribution to the industry. Upon announcing the award, he said, 'Since OSG was formed in 1949 by foresighted farmers, our Board has been committed to seeing Ontario's soybean industry grow and prosper. We created this Legacy Award in recognition of the vital role that research, innovation and market development play in driving sustainability back to soybean growers' family farms.'

"Chairman Guilbeault also noted that the OSG's proud history and commitment to building a sustainable future for Ontario's soybean industry will be carried forward into the new Grain Farmers of Ontario (GFO) organization. Later this year, OSG will be merging with Ontario's corn and wheat producers' groups to form the GFO, one provincial association representing the interests of Ontario's grains and oilseeds farmers.

"Since 1949, the number of soybean growers in Ontario has grown from 6,000 to 23,000, and the growing area for this crop has spread across the province. This expansion is largely due to the work of public researchers, who developed soybean varieties specifically for Ontario. Today, soybeans are grown on nearly half of Ontario's farmed acreage. In 2008, the farm gate value of Ontario's soybean crop was over $800 million, with the value-added figure for the crop approaching $1 billion.

"In 2009, Ontario's 2.4 million acres of soybeans are projected to yield approximately 1.1 metric tons (MT) per acre. Over 30% of Ontario's soybeans are exported to Asian markets, with the balance going to animal feed, soy food and beverage processing, and industrial uses such as soy-based polyols, which are increasingly replacing petroleum-based content in a wide range of products including plastics, foams and lubricants."

For more information contact: "Dale Petrie, OSG General Manager (cell) 519-993-7692; dpetrie@soybean.on.ca." Address: Ontario AgriCentre, Suite 201, 100 Stone Rd. W., Guelph, Ontario CANADA, N1G 5L3. Phone: 519-767-1744.

3078. Daller, Frank. 2009. Chronology of work with soy and Malnutrition Matters worldwide, especially soymilk and development of the VitaGoat (Interview). *SoyaScan Notes.* Aug. 31. Conducted by William Shurtleff of Soyinfo Center.
• ***Summary:*** 1951–Born in Bavaria, Germany.

1956–Emigrated to Toronto, Canada.

1989–Began occasional volunteer work with Child Haven International, a Canadian charity active in India.

1991–Introduced to Raj Gupta by Child Haven, which was considering doing a trial with SoyaCows at their children's homes in India.

1991–Saw first prototype of SoyaCow at Raj Gupta's house. He was then working as a research scientist with the Canadian government and moonlighting on soymilk processing with Grant Wood, a technologist also with the Canadian government.

1992–Moved to Ottawa and invested some money in ProSoya Inc. and began working as vice-president to complete technology development and begin commercial phase of operations.

1993–First beta models of SoyaCow–made in Canada sent for field trials at Child Haven homes in India.

1993-94–Began to develop technology transfers with Indian company SSP and Russian company ASSOY. Gives equipment design and know-how to foreign partner to make equipment for ProSoya and for the partner to sell (in their own country) after paying a royalty to a local NGO (Child Haven in India).

1993–ProSoya continued development of larger systems including continuous process soymilk plants.

1994–Became President of ProSoya Inc.

1997–Resigned and sold my shares in ProSoya Inc.

2000–Founded non-profit organization Malnutrition Matters (MM) with partner Brian Harrigan. Objective was to develop small-scale food processing systems including soy, for developing countries. By this time, ProSoya had almost stopped promoting SoyaCow etc. since the business was too small compared to larger commercial systems.

2001-03–MM developed VitaGoat system for non-electric production of soymilk and other foods.

2003–First three "beta" models of VitaGoat, built in Canada, were delivered to Africare projects in Guinea, Chad, and Mozambique.

2005–Transferred VitaGoat technology to G.D. Machines in India.

2007–Brian Harrigan left MM to work with Africare in Zambia for two years.

2007–MM won a Laureate Award from the Tech Museum of Innovation in San Jose [Silicon Valley], California. It was an honor without money.

2007–Alpro, N.V. of Belgium began sponsoring the VitaGoat. [Philippe Vandemoortele introduced Frank to Alpro after Philippe had ceased to be active in Alpro].

2008–MM Won World Bank Development Marketplace competition [project design with local partner] for VitaGoat school feeding project in Orisssa, India. With the funds from winning, MM developed the project in India.

2008–Developed new lower-cost version of SoyaCow (named SoyCow) with separate electric grinder and pressure cooker and lower cost press, and with option of multi-fuel boiler used by all VitaGoat systems. [Note: Raj Gupta had not used the name SoyaCow for years].

2009 Aug.–Currently there are over 90 VitaGoats in operation worldwide. The greatest number [about 40] are in Africa, followed by South Asia and North Korea. Others in Thailand and Brazil, plus demo systems in–Europe, U.S. and Canada.

With each system that is installed, the cost of the equipment, shipping, installation and training fees are provided (as a commercial transaction) by a partner organization–typically a non-governmental organization (NGO) or a government sponsored organization–but rarely an individual businessperson.

For more details see the very interesting Malnutrition Matters website at www.malnutrition.org Address: Founder, Malnutrition Matters, 498 Rivershore Crescent, Ottawa, ON K1J 7Y7, Canada. Phone: 613-742-6888.

3079. Joe, Peter. 2009. Message from the president. *Soyfoods Canada Newsletter.* Summer. p. 3.
• ***Summary:*** "In April, Soyfoods Month, we sampled soy food products at the Good Food Festival in Toronto, which is attended by almost 30,000 consumers. We also sent an April mailing to more than 700 Dietitians." A oval portrait photo shows Peter Joe, looking very happy. Address: Sunrise Soya Foods, 729 Powell St., Vancouver, BC V6A 1H5.

3080. Grain Farmers of Ontario. 2009. Grain Farmers of Ontario brand identity unveiled (News release). Guelph, Ontario, Canada: GFO. 1 p. Sept. 1.
• ***Summary:*** "Ingersoll, Ontario–Ontario's newest farm commodity group, Grain Farmers of Ontario (GFO), unveiled its brand identity in the Woodstock area today. The launch was marked by a special gathering of Delegates and Committee Members from its three founding groups–the Ontario Corn Producers' Association, Ontario Soybean Growers, and the Ontario Wheat Producers' Marketing Board.

"The farmers attending today's event represent the 28,000 Ontario corn, soybean and wheat farmers who

comprise the new Grain Farmers of Ontario organization. The crops they grow generate over $2.5 billion in farm gate receipts."

Contact: Barry Senft, CEO–1-800-265-0550 Mary Wiley, Communications–519-993-2070; mwiley@soybean.on.ca. Website: www.gfo.ca.

Question from Soyinfo Center: Does this means that the Ontario Soybean Growers will longer exist as a separate organization, but will be (or has been) merged into GFO? In short, is this the beginning of the end of OSG?

Mary Wiley replies: "The merger is a work in progress. All three founding organizations still exist and will operate in parallel to the new GFO until such time as the new legislation that empowers the GFO is in place, and the legislation for the three existing organizations is wound down."

Talk with Darci Wheeler, receptionist, Ontario Soybean Growers. 2009. Oct. 14. On Sept. 1 she changed the way she answered the phone, from "Ontario Soybean Growers" to "Grain Farmers of Ontario." Address: Ontario AgriCentre, Suite 201, 100 Stone Rd. W., Guelph, Ontario CANADA, N1G 5L3.

3081. *Ontario Soybean Growers' Update.*2009. Canadian soybeans promoted at World Soybean Research Conference in China. Sept. p. 1.

• ***Summary:*** "Two thousand delegates from fifty countries attended the World Soybean Research Conference (WSRC) held in Beijing in August. It is a soybean-specific research conference held once every five years. Twenty-five Canadian soybean researchers, graduate students, government and industry representatives attended this year's event.

"The Canadian Soybean Council (CSC) was invited to speak at the conference about Canada's experience with growing and supplying identity preserved soybeans. The presentation covered global demand for IP crops and the realities of production in a commodity-driven world.

"CSC worked with the Canadian International Grains Institute and Agriculture & Agri-Food Canada (AAFC) to organize a "Canadian Soybeans" booth at the conference trade show. Canada's Quality; Canada's Experience; and Canada's Expertise was the booth theme. It was designed to raise awareness of Canada's capabilities across the value chain to produce and supply quality soybeans to world markets." "Canadian researchers play an active role in organizing the WSRC. Gary Ablett from the University of Guelph (Ridgetown Campus) and Lorna Woodrow from AAFC in Harrow are part of the conference team. The next WSRC will be held in South Africa in 2014." Address: Guelph, ONT, Canada.

3082. Pipe, Elizabeth A.; Gobert, C.P.; Capes, S.E.; Darlington, G.A.; Lampe, J.W.; Duncan, A.M. 2009. Soy protein reduces serum LDL cholesterol, LDL cholesterol:HDL cholesterol and apolipoprotein B:apolipoprotein A-I ratios in adults with type 2 diabetes. *J. of Nutrition* 139(9):1700-06. Sept.

• ***Summary:*** Consumption of soy protein isolate "can modulate some serum lipids in a direction beneficial for cardiovascular disease (CVD) risk in adults with type 2 diabetes." Address: Dep. of Human Health and Nutritional Sciences, Univ. of Guelph, Guelph, Ontario, Canada.

3083. Petrie, Dale. 2009. Big changes at Ontario Soybean Growers (OSG) in Canada (Interview). *SoyaScan Notes.* Oct. 16. Conducted by William Shurtleff of Soyinfo Center.

• ***Summary:*** OSG (Ontario's trade association for soybean producers) is now in the process of merging with the Ontario's Corn Producers Association (OCPA) and the Ontario Wheat Producers' Marketing Board (OWPMB) groups to form the Grain Farmers of Ontario (GFO), one provincial association representing the interests of Ontario's grains and oilseeds farmers.

On 29 April 2004 OSG moved from Chatham to Guelph, to Suite 205, Second Floor, Research Park Center, 150 Research Lane.

Then on 30 Sept. 2005 (17 months later) all three groups relocated to the new building of the Ontario AgriCentre, 100 Stone Road West, Guelph, Ontario, where they were able to increase efficiencies by sharing office space there with OCPA and OWPMB.

Shortly before the move, a memorandum of understanding (MOU) was signed between the three commodity organizations stating that they would eventually join forces and become a new organization named Grain Farmers of Ontario (GFO). All three organizations and their crops were strong and in good shape at the time; they did not merge out of weakness or because of a problem. They will have a new website, a new magazine, etc. A lot of the staffing and operational activities are underway, but the actual legislation (from the Farm Products Marketing Commission) which gives GFO the power to collect license fees (somewhat like a tax collection, and somewhat like the U.S. checkoff situation) has not yet been enacted. GFO expects that this will become law in about December 1 of this year. On that date, the three will become one. Some aspects of the legislation are presently being negotiated. There are many important details that must be in the new regulations. Very little will be changed from existing powers. There are no new requests for government money or subsidies.

Why did the three groups decide to merge? First, they have the same grower base. Out of the 28,000 farmers across the province of Ontario, about 23,000 grow soybeans, 21,000 grow corn, and about 16,000 to 17,000 grow wheat. Typically they grow all three in rotation or at least two in rotation (corn and soy, or soy and wheat). In the

same geography, there used to be 45,000 farmers. Due to consolidation, the farms have become much larger. So the actual acreage of this 5 million acres of farmland has changed very much. A small percentage of the farmland has been lost as Toronto expands. Moreover, politically, when a farm group goes to the government "for an ask," they always say something like, "Well, what does corn think?" So then you have to go back to the corn (or wheat) growers for consultation. "So in the near future, when GFO knocks on the door with a unified voice, they certainly will listen even more. And we will represent more farmers and more potential voters."

One organization (GFO) made sense to farmers for many reasons. Things started to develop from the ground up. For example, instead of going to three farmer meetings (for soybeans, corn, and wheat), farmers started to consolidate the three into one joint farmer meeting.

In short, the focus has shift from the three individual crops to farmers in Ontario province. Farm organizations and farmers in other provinces of Canada are watching the formation and development of GFO with great interest. There are also some economies of scale that will be helpful–for example one receptionist, one set of photocopiers, one IP system, one computer system, one magazine, one newsletter, one letterhead, one set of lawyers–the savings add up fast.

GFO will have one board of directors composed of 15 farmers representing each of the 15 new districts into which Ontario has been divided by GFO to get fair member representation. "The soybean model (OSG) is probably the closest to what the new organization will look like in structure. Each of the 15 districts will carry a minimum of 8 delegates. So 8 x 15 = 120 delegates minimum. The district is divided by 6.7% of the production.

"We have 30 delegates which are somewhat transferable depending on production by district. Some of the counties [especially those near the southern tip of Ontario] produce more than 6.7% of production, so we can add more delegates from the pool of 30 delegates to those high-production counties. For example, Lambton county has 17 delegates–the most. Middlesex has 14, etc. This system gives a better representation by total production of soybeans, corn and wheat. In fact, the representation tends to be very close to the soybean production because soybeans tend to be the common denominator in any rotation. The producer delegates are elected by their peers to represent the concerns and wishes of all three crops." So the total number of delegates will be exactly 150, and average of 10 per district. From those delegates they choose one director, who will sit on the new board of 15 producers which will be formed in Feb. or March 2010. One member of the board will be chair, one will be vice-chair a total of four executives. In addition, a CEO, Barry Senft, has been hired; he will be Dale's Boss when this all gets enacted. For GFO, Dale will be director of strategic planning and innovation–everything outside the organization including government relations, market development, research or communications. Ryan Brown, who is currently head (general manager) of the Ontario Corn Producers Association, will take care of all things that are inside the organization, including wheat trading, accounts receivable, accounts payable, etc.

About 35% of these three commodities are marketed as "identity preserved" (IP). In Ontario, corn is predominantly genetically engineered (GE); soybeans are 65% GE and no wheat is GE. There is some interest in GE wheat, not for weed control but for control of disease (especially Fusarium head blight), or in nutritional composition, or in milling quality.

Ontario Soybean Growers (OSG) still has its own website and has continued to publish an 8-page (usually) color monthly (or occasionally bi-monthly) newsletter. All of these since Feb. 2001 are archived on the OSG website: On the top bar click "OSG info" then click "Newsletter." They also have a monthly newsletter that goes into one of the widely read farm publications, a tabloid-size newspaper named the *Ontario Farmer,* but it doesn't get mailed since the mailing costs were too high.

Bottom line is: A new printed magazine (to be sent by mail to 28,000 farmers plus 2,000 other stakeholders, industry and media people) will soon be available, titled *Ontario Grain Farmer* (Kim will send), which will include all important news about soybeans. A PDF version of the magazine will also be available on the new OGF website.

Looking at the big picture and the future of soybeans in Ontario and Canada, Dale thinks that the future looks good and promising. Acreage and yields continue to rise. The key to expanding acreage (this year is a record of 2.4 million acres) is the better, earlier varieties, which replace barley, edible beans, canola, etc. and are grown further northward. They have a yield contest to highlight the growers who are getting the best yields. "Canada hasn't gotten to the biodiesel business because the economics of using soybean oil for biodiesel has always been suspect." Moreover, it is basically turning one commodity into another. OSG is more interested in adding value by transforming soybean oil into high-value industrial uses, such as lubricants, greases, special time-release coatings on pharmaceutical products, cosmetics, foods, etc. Value-added products have long been Dale's major focus. OCS was the founding supporter in a research organization at Trent University, studying higher value applications and products. Dale believes that Canada has an advantage over its soybean competitors because of its excellent IP (identity preserved) infrastructure. IP is one important key to adding value and getting away from selling commodity soybeans, oil, or meal. Canada is too small to compete in a straight commodity world market.

Why do Canadians grow Roundup-Ready or other GE soybeans. Above all for the weed control of many annual and perennial weeds found in Canada. "Its so easy. You just plant GE soybeans, let the weeds grow, zap them with 1 liter / quart per acre of Roundup herbicide, you park and you're done. You don't have to worry about going back onto the field. And there is less stress on the farmer. Also, it dramatically reduces the weeds in fields for the next crop grown on that field. As in the USA, weeds always develop resistance. But to minimize this, for that past ten years in Ontario they have been very strict about avoiding continuous use of Roundup herbicide on the same field; they preach this important message year after year.

In short, the past 20 years have been good for soybeans in Ontario and the future looks bright, in part because of the new organization, Grain Farmers of Ontario. Address: OSG General Manager, Ontario AgriCentre, Suite 201, 100 Stone Rd. W., Guelph, Ontario CANADA, N1G 5L3. Phone: 519-993-7692.

3084. Grain Farmers of Ontario; Ontario Soybean Growers. 2009. Ontario 2008 soybean area and production by county. Guelph, Ontario, Canada: GFO. 2 p. Unpublished typescript.
• ***Summary:*** Almost 75% of Canada's soybeans are grown in one province: Ontario–which produced 91.0 million bushels in 2008.

Ontario is divided into five groups of counties for purposes of soybean production statistics: Southern Ontario (55.49% of total Ontario soybean production in 2008), Western Ontario (26.72%), Central Ontario (6.74%), Eastern Ontario (10.97%), and Northern Ontario (0.07%). More than half of all of Ontario's soybeans are grown in Southern Ontario, largely because its southern tip it extends much further southwards than any other part of Canada.

In Southern Ontario, the counties with the largest soybean production in 2008 were (in million bushels): (1) Lambton 10.719. (2) Middlesex 7.433. (3) Chatham-Kent 7.383. (4) Essex 6.255. (5) Haldimand-Norfolk 6.226.

To view the location of these counties, please see map at front of this book. Address: 100 Stone Road West, Suite 201 Guelph, ON N1G 5L3, Canada. Phone: 1-800-265-0550.

3085. *Ontario Grain Farmer.*2009. Serial/periodical. Guelph, Ontario, Canada: Grain Farmers of Ontario. Vol. 1, No. 1: Oct. 2009.
• ***Summary:*** News and information that was formerly found in the *Ontario Soybean Growers' Marketing Board Newsletter* (1989-1999) and later in the *Ontario Soybean Growers Newsletter* (2000-2003) will now be found in this magazine.

The first issue (38 pages), which is full color on semi-gloss paper, is published by the new trade association representing soybeans, corn, and wheat in Ontario. Address: Grain Farmers of Ontario, 100 Stone Rd. West, Suite 201, Guelph, ON N1G 53L, Canada. Phone: 1-800-265-0550.

3086. *Ontario Grain Farmer.*2009. Continuing the push: To bring the message forward, we need all hands on deck (Editorial). 1(1):4. Oct.
• ***Summary:*** "It is estimated by some that agriculture could once again become the number one industry in Ontario." The hard work and innovation by soybean, corn, and wheat growers in Ontario "brings in nearly $3 billion a year worth of food and biofuel products to Ontario..."

On the provincial level, OGF's main public policy objective is "permanent implementation of the Risk Management Program (RMP)."

"As we all know, we have lurched from income crisis to income crisis in Canadian agriculture and, historically, federal agricultural programming has been ineffective and slow to respond. The data shows that not only does ad-hoc aid show up too little, too late, and often into the wrong pockets, but that it is also far more expensive for governments than a shared-cost, shared-risk program like the Risk Management Program (RMP)." Address: Grain Farmers of Ontario, 100 Stone Rd. West, Suite 201, Guelph, ON N1G 53L, Canada.

3087. *Ontario Grain Farmer.*2009. Farmer representation. 1(1):20. Oct.
• ***Summary:*** Describes in detail how farmers will choose their representatives to the new trade organization, Grain Farmers of Ontario, representing soybean, corn, and wheat farmers. A color map shows the 15 districts into which Ontario has been divided. A color table shows the exact number of delegates / representatives allotted to each district, based in part on production of these three main crops.

An organizational chart shows the structure of GFO: From top to bottom (line by line): (1) Producers [growers / farmers]. (2) 150 voting delegates. (3) Board of directors (15 directors). Board executive. (4) Wheat trading advisory. Market development. Research and innovation. Government relations. Communications. Finance & audit. (5) Wheat issues subcommittee. Corn issues subcommittee. Soybean issues subcommittee. Resolutions subcommittee.

Contents: Introduction. How to get involved in GFO. Media training (to help farmers feel more comfortable talking to the media). Charting a new course for AGCare (which was formed 20 years ago when Ontario crop and horticulture farmers banded together in support of responsible pesticide use in agriculture). Agricorp update. Address: Grain Farmers of Ontario, Guelph, ON N1G 53L, Canada.

3088. *Ontario Soybean Growers' Update.*2009. Soyfoods Canada: Soy for life. Oct. p. 1.
• ***Summary:*** "'Healthy eating is easy with soy', says Dr. Brian Wansink of Cornell University, commenting on the fact that 85 per cent of Canadian families are becoming more health-conscious when it comes to their eating habits. 'The great nutrition, enhanced flavors and variety of today's soy foods and beverages make them an excellent solution for time-strapped, busy families.' Dr. Wansink, of Cornell's Food & Brand Lab, was the keynote speaker at Soyfoods Canada's October 5th Soy Symposium.

"A recent Angus-Reid online poll found that almost half of the respondents agree that soy represents an essential part of a healthy and balanced diet. Fifty-nine per cent of Canadians said the main reason they eat soy is because it is part of a healthy diet, while 26 per cent said they just don't know how to cook with soy products.

"Soyfoods Canada's new Soy for Life campaign will re-introduce Canadians to the benefits of soy and soy products. 'We have listened to Canadians. The Soy for Life campaign is about our member companies coming together

to educate Canadians about how far soy has come,' says Todd Hoffman, vice-president, Soyfoods Canada. 'From soy based beverages, to meat substitutes, to baked goods made with soy, there is something for everyone. If it's been a while since you've tried cooking with soy–you're definitely in for a treat.'

"In a study published recently in the Journal of Nutrition and conducted by researchers at the University of Guelph, soy protein was found to lower risk of heart disease in Type 2 diabetics. Soy protein reduces serum LDL–so-called 'bad' cholesterol–in adults with Type 2 diabetes who are managing their disease by controlling their diets rather than with medication. 'It is encouraging to show that it is possible to control one of the major risk factors by using soy as a dietary preventative strategy,' says Dr. Alison Duncan, a professor in the Department of Human Health and Nutritional Science." Address: Guelph, ONT, Canada.

3089. *Ontario Soybean Growers' Update.*2009. Soybean Rust coalition monitoring Kudzu. Oct. p. 1.
• ***Summary:*** "Ontario's first detection of the invasive Kudzu plant, near Leamington, will probably not increase Ontario's risk of Soybean Rust, according to Albert Tenuta, OMAFRA Field Crop Plant Pathologist at Ridgetown. 'The soybean rust fungus requires a living host to survive, and will not produce spores on dead plant material, whether that is soybeans or Kudzu', notes Tenuta. 'Kudzu is sensitive to below freezing temperatures and just about the time we bring out the winter coat, Kudzu plants will defoliate, or drop their leaves.'" Address: Guelph, ONT, Canada.

3090. Statistics Canada, Agricultural Division. 2009. September estimate of production of principal field crops. *Field Crop Reporting Series* 88(7):1-68. Oct. Catalogue no. 22-002-X.
• ***Summary:*** Table 4 (p. 20) is titled "Estimate of the 2008 production of principal field crops–Imperial." For each of the 11 crops is given area seeded, area harvested (1,000 acres), yield (bu/acre), and production (1,000 bushels).

The following figures are for soybean production only:

Total Canada for 2008: 122,576 (i.e., 122.5 million bushels).

Ontario: 91,000 (74.2%).

Quebec: 22,046 (18.0%).

Manitoba: 8,900 (7.3%)

Prince Edward Island: 630 (0.5%). Address: Canada.

3091. Duncan, Allison M. 2009. Soy improves heart disease risk in adults with type 2 diabetes: Report from a University of Guelph nutrition study. *Soyfoods Canada Newsletter.* Fall. p. 1-2.
• ***Summary:*** "Diabetes has become an epidemic in our society with alarming numbers; for example, 246 million people are affected by diabetes worldwide and one in every three children born in North America in the year 2000 will be diagnosed with diabetes in their lifetime (1). The economic burden of diabetes is also alarming with an estimated 2010 cost of greater than $15 billion per year for the Canadian health care system (1). Type 2 diabetes is the most common type of diabetes affecting 90% of those with diabetes with its high rates particularly influenced by unhealthy lifestyles including poor diet and low physical activity (1)."

Canadian Diabetes Association, http://www.diabetes.ca; accessed September 15, 2009.

Soy protein reduces serum LDL cholesterol, LDL cholesterol/HDL cholesterol and apolipoprotein B/apolipoprotein A-I in adults with type 2 diabetes. *J. of Nutrition.* 2009; 139:1700-6. Address: Ph.D., R.D., Assoc. Prof., Dep. of Human Health and Nutritional Sciences, Univ. of Guelph.

3092. Hain Celestial Group, Inc. (The). 2009. Annual report 2009. Melville, New York. 60 p. Nov. 9. 28 cm.
• ***Summary:*** Begins with an 6-page question and answer session with Irwin Simon, the CEO. Net sales for the year ended 30 June 2009 were $1,135,306, up 7.5% from 2008. Net income in 2009 was a loss of $24.723, a dramatic decrease from the profit of $41.221 million in 2008. There were no acquisitions or disposals of companies during fiscal 2009.

Accompanying the annual report is a "Notice of Annual Meeting of Stockholders and Proxy Statement" (71 p.). Irwin Simon, the founder and CEO, is age 51. Address: 58 South Service Road, Melville, New York 11747-2342. Phone: 631-730-2200.

3093. Schaer, Lilian. 2009. Bio-based lubricants: Building a market that's good for farmers, good for the environment. *Ontario Grain Farmer* 1(2):10-12. Nov.
• ***Summary:*** One market "that is growing rapidly is that of bio-based lubricants and industrial fluids, which are made using soybean oil. This includes everything from hydraulic and transmission fluids to greases, motor oils, fuel additives and even a WD-40-like product," made by companies such as Renewable Lubricants of Ohio.

All lubricants are now available made from bio-based ingredients. Large color photos show: (1) Plastic bottles containing two different types of renewable lubricants. One, "Bio-Plus," is a an injector cleaner and gas conditioner. It is said to improve fuel efficiency and reduce emissions. (2) A field of dry soybeans, with several plants with dry pods shown up close.

3094. Wiley, Mary. 2009. Soy science takes off: Common goals make Trent biomaterials research program a reality. *Ontario Grain Farmer* 1(2):16-17. Nov.

• ***Summary:*** "Ontario Grain Farmers have reason to celebrate as the Biomaterials Research Laboratory is officially opened at Trent University. The centre, which will focus on utilization of the natural oils found in oilseed crops like soybeans, will be a crown jewel in Trent's Centre of Knowledge in the Environment."

Ontario soybean growers are a founding partner. The focus will be to develop new food products and environmentally friendly products to replace those presently manufactured from petroleum.

Phase one of the 1,500 square foot laboratory at Trent has been completed. Plans are in progress for Phase two, which will be a 1,500 square foot expansion in 2010.

"To make the laboratory work, Trent has recruited Dr. Suresh Narine and a team of seven scientists from the University of Alberta." Narine is "a global pioneer and leading scientist" in the field of commercial lipid utilization in the development of new food and industrial products.

A photo shows Narine and three members of his team in the laboratory.

3095. Grain Farmers of Ontario. 2009. Welcome (Website printout, part). http://www.gfo.ca/. 1 p. Printed Dec. 11.

Middle row: Marketing. Production. Research and innovation. Market development. Prices & marketing: Corn prices, corn market trends, soybean prices, wheat prices. News. Research & innovation. Production (Corn, soybean, wheat). Market development (Corn, soybean, wheat). Industry (Corn, soybean, wheat). Consumer resources (Corn, soybean, wheat).

Bottom row: Copyright. Terms of use. Privacy policy.

The 4.5 cm high band across the top (between the top and middle rows) shows rotating views of corn, soybean, and wheat plants or fields. The GFO is at the left end of this band.

Text on home page: "Welcome to the Grain Farmers of Ontario website. Grain Farmers of Ontario represents Ontario's 28,000 farmers who grow corn, soybeans and wheat. Our organization is the trusted and definitive resource on all issues related to growing these crops in Ontario. This site is designed to provide vital resources to help Ontario's corn, soybean and wheat farmers make daily business decisions. It also highlights the dynamic ways corn, soybeans and wheat are being utilized both here at home and around the world!

"Grain Farmers of Ontario (GFO) is in the process of merging our three founding groups: the Ontario Corn Producers' Association, Ontario Soybean Growers and Ontario Wheat Producers' Marketing Board into one organization. During this transition, some sections of this site remain linked to the OCPA, OSG and OWPMB websites. Please check back often, as GFO transition updates unfold."

3096. Ontario Farm Products Marketing Commission. 2009. It's official: Grain Farmers of Ontario is newest marketing board. McGuinty government supports agriculture sector (News release). Ontario, Canada: Ontario Ministry of Agriculture, Food & Rural Affairs (OMAFRA). 2 p. Dec. 17.
• ***Summary:*** Ontario's 28,000 corn, soybean and wheat producers officially have one marketing board as of New Year's Day, 2010.

"Effective January 1st, Grain Farmers of Ontario (GFO) replaces the Ontario Corn Producers' Association, Ontario Soybean Growers and Ontario Wheat Producers' Marketing Board.

"The announcement caps months of work following a vote among producers that showed the strategy had the necessary support to move forward."

Quotes: Leo Guilbeault, Chair, Ontario Soybean Growers says: "It is an exciting time for Ontario's grain farmers. This new organization that represents five million acres of farmland and $2.6 billion in sales will have a positive impact on the province."

Note: On December 17 the legislation was passed by the Ontario government that ties up all the loose ends, makes GFO official, and gives it the powers it requested. The legislation takes effect on 1 Jan. 2010.

3097. Schaer, Lilian. 2009. Can soybeans be the solution to potholes? New soy-based asphalt sealant is improving North American roads. *Ontario Grain Farmer* 1(3):22-23. Dec.
• ***Summary:*** "RePLAY is a soy and canola-based pavement preservation agent that extends the life of existing asphalt surfaces like roads and parking lots by protecting them from the freezing and thawing cycles of Canada's harsh winters. Asphalt oxidizes and wears out due to the oxygen in the air. Small cracks form in the asphalt and fill with water, which freezes in the winter, causing larger cracks and potholes." This can be prevented by spraying on RePLAY, which has no significant on the skid resistance of the asphalt surface.

The cost of applying RePLAY is about $1 to $2 per square meter depending on the age of the asphalt.

Note: RePLAY: Asphalt Preservation Agent was developed and is now manufactured by BioSpan Technologies, Inc., 6540 Meyer Dr., Washington, Missouri 63052 USA.

3098. Wiley, Mary. 2009. Soy for life: The soy food industry is poised for growth. *Ontario Grain Farmer* 1(3):10-11. Dec.
• ***Summary:*** "Soy for Life" is the name of a new communications campaign launched by Soyfoods Canada (a

trade association composed of Canada's leading soy food and beverage manufacturers) to help boost sales. "Their products represent a $340 million business in Canada," making soy foods and beverages part of Canada's grocery mainstream.

"This mainstream presence came as a result of... a 1999 US government labeling claim for soy, but sales have slowed somewhat in the past couple of years."

Peter Joe, President of Sunrise Soya Foods and head of Soyfoods Canada's board of directors says that his association has been "focusing on encouraging a labeling health claim for Canadian soy food and beverage products similar tot he one that exists in the US." But recently the association "has shifted its attention back to marketing and communications activities targeted to consumers and consumer influencers." The campaign is designed to re-introduce Canadians of all ages to the benefits of soy.

"Dr. Brian Wansink of Cornell University's Food and Brand Lab was the keynote speaker at Soyfoods Canada's Soy Symposium, held recently [Oct. 5] in Toronto. He advised the gathering of marketers, retailers, distributors, and other soy industry stakeholders to target young women in the 18 to 35 age group, using an incremental usage approach." Dr. Wansink sees a bright future for soyfoods in Canada.

"Results of an Angus Reid September 2009 online survey of 1,000 Canadians about soy foods... showed that consumption of soy food products is highest among young Canadians, higher income households and women. It also showed that women in the 18 to 34 age group, who tend to be more frequent soy consumers, are particularly attuned to messaging about soy, both positively and negatively.

"Nutritional benefits: Dr. Allison Duncan, Canada's leading soy nutrition researcher, provided a thorough update at the symposium. Duncan and her human nutrition team at the University of Guelph recently released results of a study showing soy protein helps lower cholesterol and reduces the risk of heart disease in adults with type 2 diabetes."

"Market leaders in the tofu and soy beverage categories are using identity preserved [IP] non-GMO and organic soybeans in response to consumer demand."

A photo shows the Soyfoods Canada booth at The Journey to Your Good Health area of the Royal Agricultural Winter Fair. Some 150,000 visitors attended the fair.

3099. Cooper, Kim. 2010. Main developments leading to Grain Farmers of Ontario (GFO) (Interview). *SoyaScan Notes.* Jan. 6. Conducted by William Shurtleff of Soyfoods Center.

• ***Summary:*** Of the three organizations that recently merged to form Grain Farmers of Ontario, the Ontario Soybean Growers (OSG) was clearly the strongest financially and generally otherwise. The corn growers had spent a lot of money on legal costs arguing before the World Trade Organization (WTO) that U.S. corn was being dumped into Canada. It was partially for this reason that, about three years ago, OSG suddenly backed out of the merger negotiations for a while. Kim attended a meeting in Chatham on the subject. The soybean growers were getting a little antsy because the other two groups didn't have much money; the soybean growers were concerned that they would be paying more than their share of the expenses in the new organization.

But the three groups talked some more and did more political maneuvering and before long resumed the negotiations. Farmers were not at these merger negotiations; rather, they were represented by about 2 top executives for each of the three organizations at any given time. But over the years many of the negotiators changed–which caused even more problems as far as continuity. The meetings were not open to the public and not a lot of information came out–although a sincere effort was made to keep the soybean growers informed. So growers were informed, but there wasn't a lot to tell them, because the talks were going slowly and the content was not yet for public knowledge. Thus, the growers were not aware of the details of the negotiations. There was no attempt to conceal anything from the growers.

Remember that the farmers were a major reason for the original idea that the three organizations should merge–to avoid paying duplicate checkoff fees and duplicating activities. They could see that each of the three groups were doing many of the same things. So things started out based on good ideas, but (as often happens) politics gets mixed in and things start to go off track.

Finally each of the three groups of growers voted on the merger plan. To pass, the vote had to be favored by a certain percentage of the growers and of the production. Some soybean growers still think that the results of that vote were not accurate, that "the numbers just don't add up," but that the Ontario minister okayed them anyway. One of the objectors to the results was a former director of OSG, Dave McClary (District 5–Middlesex). He was quite upset. He wrote a number of letters to the farm newspapers detailing his objections. He went to the Ontario Farm Marketing Products group, which oversees the whole process, and again explained his objections.

Kim has been concerned for a number of years that all the soybean growers hear about is asking the government for more money. When OSG was planning its move from Chatham to Guelph, Kim was offered a position at Guelph. He turned down the offer (in April 2004) for various reasons. One reason was that he thought the leadership was getting too political while moving away from the grass-roots level. Instead of focusing on how growers could make more profit from growing soybeans, there was a huge push toward trying to get more money from the government. "I just didn't agree with where they were heading."

OSG was the last of the three groups to move to Guelph, into the same big building with the wheat and corn growers. Much politics surrounded the decision to move into that building.

From 1989 to Dec. 2003 OSG had published a very interesting and content-rich 8-page monthly periodical, *Ontario Soybean Growers Newsletter.* All of a sudden it disappeared. In its place, a 1-page monthly color insert was placed in the *Ontario Farmer.* Kim thought it was basically a way to cut costs. "It was a huge change. It also went overseas to all of our customers"–such as tofu and miso makers in Asia. "I think it was another shift away from meeting the needs of your customers, which included the growers and overseas customers, and putting more focus on lobbying. That's my reading on things. The thrust and focus of OSG has changed dramatically over the past 10 years. I addressed the board of directors before I left. I said: "I think you're moving away from serving the needs of your growers. You are becoming a little bureaucracy of your own, moving to Guelph.' The feeling was: All the other agri organizations are in Guelph, so we'd better be there too. A lot of politics were involved, a lot of back-room maneuvering.

OSG originally chose to locate in Chatham because the location was central to Essex, Kent, and Lambton, the main three soybean growing areas. Guelph is not the center of soybean growing in Ontario, but it is the center of Ontario ag organizations. The capital of Ontario is Toronto." Guelph is between Chatham and Toronto, about 85% of the way to Toronto, and far to the northeast of Chatham.

Kim thinks the main reason for the big changes in OSG was a change in the leadership. At the annual meeting, the directors are elected by the soybean growers in each district, and an executive is elected from within the directors. Kim believes that the leadership has deteriorated greatly over the last 5-8 years. Their top priority has shifted to politics and lobbying–rather than the farmers.

One of the "buzz words" or basic ideas during this time has been that Ontario soybean growers were not on a level playing field with their competitors, and especially with farmers in the USA who were given big federal subsidies in the farm bills. Canadian farmers came to expect the same subsidies per capita that U.S. farmers were given by their government–even though they knew it wasn't going to happen, in part because Canada's government was trying to reduce its spending and deficits, be fiscally responsible and balance its books. "So the farmers are still asking for more money, even though they realize the government is giving out less money in subsidies to agriculture." Kim is a city guy and all year he hears the criticism from non-farmers: "Farmers are always whining for more money." That's a real knock against Ontario's farmers.

The growers launched a big campaign: "Farmers feed cities." It started out as a good idea, to make the public more aware of the importance of farmers in their daily lives. But it soon became political, and the idea was implied, "Therefore we need your subsidies." It was a way to get the public to pressure the government to give farmers more money. "It was never going to happen and the growers knew it as never going to happen."

Kim agrees with this basic idea that the playing field was not level. American farmers are much better represented in their federal government than Ontario or Canadian farmers. And federal subsidies to U.S. farmers makes it hard for Canadian farmers to complete with their American counterparts.

When Kim was at OSG, there was great focus on breeding soybeans which were as close as possible to what Asian soyfood makers said they wanted, then shipping them identity preserved (IP) overseas. There were both incoming and outgoing missions to serve these soyfood makers. The key group became the Canadian Soybean Export Association (CSEA) which did these trips. In recent years the executives of OSG felt that CSEA was not performing as well as they could. So they formed their own organization named the Canadian Soybean Council (CSC), which in the beginning was a farmer-to-farmer group working on various research projects such as disease resistance. Originally it was not designed to compete with CSEA, but it evolved into that and now there is conflict between CSC and CSEA and quite a bit of duplication of effort. "Now two groups going to Asia and our soybean customers there asking 'What's going on here?' They are confused and the grass-root soybean growers are not aware of what is happening in this area. "With OSG's main focus on lobbying, this sort of thing gets shuffled to the sidelines or back pages. Yet it is a real issue; the overlap doesn't help Ontario soybean farmers and it doesn't help our customers overseas. People have stood before the OSG board and explained this problem, and they are still doing it. Representatives from CSEA have also met with representatives of CSC.

Victory Soya Mills didn't really shut down and disappear; it was basically moved to Hamilton, Ontario. Ontario now has two soybean crushers, but it used to have three. There were many reasons that Victory Soya Mills was shut down and demolished–from environmental issues (it stunk), to high taxes, to terrible traffic jams when trucks filled with soybeans tried to go to and from the plant, to the rising value of the property for condominiums.

Fred Brandenburg is fine. He now works full-time for Agriculture and Agrifood Canada in Guelph. Kim keeps in touch with him. He was the perfect man for the job while he was at OSG and a great man to work for.

Does Kim think the new organization, Grain Farmers of Ontario, will work? Yes, he thinks it will work because the farmers want it to work. Obviously, as with any new

organization, they will have to go through some bumps and obstacles.

Dale Petrie is an import to the soybean industry; his background was in seed corn. Kim worked for him when he worked at King Grain.

None of what Kim has said above is confidential; he has said it before and people know his position. Kim's grandfather was part of OSG in the early days. Address: Agricultural Coordinator, Economic Development Services, Municipality of Catham-Kent, Chatham, Ontario, Canada.

3100. Agriculture and Agri-Food Canada. 2010. Canadian Agriculture Library (Website printout–part). http://www.agr.gc.ca. 1 p.

• ***Summary:*** "The Canadian Agriculture Library provides a wide range of information services to Agriculture and Agri-food Canada, and its portfolio partners such as the Canadian Food Inspection Agency. Through its partnership with the Canada Institute for Scientific and Technical Information (CISTI), the Canadian Agriculture Library also provides the research and academic community, the agri-food industry and Canadians access to its collection.

"Since its formal establishment in 1910, the Canadian Agriculture Library has built one of the foremost collections in the world in the agricultural and food sciences, with more than one million volumes, including 4,000 current subscriptions and numerous special collections. Specialty subjects include dairying, entomology, horticulture, pesticides, plant diseases, soil science and veterinary medicine.

"The Canadian Agriculture Library provides services through its Main library in the National Capital Region and its 21 information centres located in research stations across the country." Address: 1341 Baseline Road, Ottawa, Ontario K1A 0C5, Canada. Phone: 613-773-1000.

3101. The 2010 non-GMO sourcebook: A buyers guide to global suppliers of non-GMO and organic seeds, grains, ingredients, and foods. 2010. Fairfield, Iowa: Evergreen Publishing, Inc. 106 p.

• ***Summary:*** Contents: Editor's introduction (by Ken Roseboro, publisher and editor). Suppliers of non-GMO products: United States, Canada, Europe, Africa / Middle East, Asia / Australia, Latin / South America. The Non-GMO Project special section (includes comments by Michael Potter and Nature's Path {in Canada}). Related products, services, and organizations. rBGH-free dairy processors in the US. Index of non-GMO suppliers by product category: Seeds (corn, soybeans), canola / rapeseed, processed canola /rapeseed products, corn / maize, processed corn / maize products, soybeans (identity preserved, specialty, organic), processed soy products (flakes, flour, germ concentrate, grits, lecithin, meal, nuts, oil, low linolenic oil, phytosterols, protein, textured protein, soymilk, soymilk powder, soy sauce, tofu, vitamin E / tocopherols), other grains / oilseeds and processed products (alfalfa / hay, barley, cotton,...), other ingredients and processing aids (citric acid, dairy ingredients...), sweeteners, food products, food supplements, animal feed. Index of related products, services and organizations. Complete index of listings. Index of advertisers.

Note 1. In the Suppliers section, many company entries have the Non-GMO Project logo (with an orange and black butterfly on a green leaf) next to their company name (e.g., Eden Foods, p. 17; WholeSoy & Company, p. 42).

This comprehensive book gives the single best picture of the growing industry, worldwide, opposed to genetic engineering. Address: P.O. Box 436, Fairfield, Iowa 52556. Phone: 1-800-854-0586.

3102. Stelter, Gilbert A. 2010. Defending the rural way of life: Charles Zavitz and the improvement of agriculture in Canada. Ontario, Canada. 27 p. Unpublished typescript. 28 cm. [79* footnotes]

• ***Summary:*** An outstanding, carefully documented biography of Charles A. Zavitz. As of Jan. 2010, Dr. Stelter hopes to update it and have it published soon. Gil thinks the best Zavitz archives are in basement of McLaughlin Libe; James R. Zavitz contributed most of it. Address: History Prof., Univ. of Guelph, Ontario, Canada. Phone: 519-821-9267.

3103. *SoyaScan Notes.*2010. Commercial soyfoods products wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1. Organic, non-GE soy protein isolates (2002/03). 2. A very low calorie soy beverage for weight loss in hospitals. Must be able to be used as a sole source of nutrition. 3. More smoked tofu in America.

4. Meatless pepperoni, sausage shaped, for use atop a meatless pizza. 5. Natural shoyu brewed in America, ideally as part of a joint venture with a Japanese shoyu company. 6. A vegetarian Worcestershire sauce, with no anchovies (John Troy developed "The Wizard's Worcestershire Sauce" for Joel Dee's Premier Japan line in about 1995; it was vegetarian).

7. A low-calorie, low-fat tofu. Fat and calorie content should be at least 30% lower than that made from whole soybeans. The easiest way to make this product would be to run soymilk made from whole soybeans through a decanting centrifuge (like a cream separator) to remove the desired amount of fat, just like the dairy industry does to make low-fat or non-fat milk. There is a big potential market for such a product since 1% fat milk has now passed low-fat milk (2%) as the best-seller in American supermarkets (11 Sept. 1991). 8. Bland soymilk base (11 July 1997). Presently no company (including International ProSoya Corp. of Canada,

Pacific Foods of Oregon, and Ted Nordquist dba TAN Industries, Inc. etc.) offers this product.

9. A soy-based kefir made from authentic kefir grains/ cultures plus FOS (fructooligosaccharides), a dietary fiber derived from chicory roots. FOS feeds and increases the level of "good guy bifidobacteria by up to five times in the gastrointestinal tract, and boosts the body's absorption of calcium and other minerals by up to 50 percent." See article in *Ag Innovation News* (April 1999, p. 3, 14).

3104. *SoyaScan Notes.*2010. Europe's biggest international food fairs / shows and expositions: ANUGA, SIAL, Helfex, and CIBUS (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** ANUGA and SIAL are held in Cologne (Germany) and Paris (France) respectively on alternating years in October. Each fair lasts for about 6 days, and tickets cost about $20. Food people and companies come from all over the world to exhibit and see the latest in all kinds of foods and food equipment. ANUGA is held on odd numbered years (1987, 1989, 1991, etc.) and SIAL on even numbered years (1986, 1988, 1990).

ANUGA (pronounced uh-NEW-guh) stands for *Allgemeine Nahrungs und Genussmittel Ausstellung* ("General exhibition of food and food adjuncts {stimulants / enjoyables"}). Billed as the "World Food Market–Consuma–Gastroma–Tecnica," it is held at the Cologne Messe (Exhibition Center) and is sponsored / produced by Messe und Ausstellungs Ges. mbH, P.O. Box 210760, D-5000 Cologne, West Germany. Phone: 221-8210. The first ANUGA fair was held in 1929. Statistics at ANUGA in 1986 were mind-boggling: 200,000 visitors; 5,201 companies exhibiting, from 86 different countries; and what seemed like 50 miles of exhibit space (actually 227,000 square meters).

SIAL (pronounced see-AL) stands for "Salon International de l'Alimentation," and is also called the 'International Food and Dairy Exhibition'. The first SIAL was held in Nov. 1964. The permanent address of SIAL is 39 rue de la Bienfaisance, 75008 Paris.

The 'SIAL d'Or' (also called 'Golden SIAL' or Food Oscar') gold medal awards, first presented in Oct. 1986, are given for the best new food products in each food category at the AIDA-SIAL International competition judged in Paris in June. The Oscars are a bi-annual competition between 16 nations, including Canada, Great Britain, Italy and the USA. Each country presents products in 7 food and beverage categories: Grocery, alcoholic drinks, non-alcoholic drinks, dairy, deep-frozen, meat / poultry and delicatessen. The retail trade in each country nominates the representative products. At least one soy product, So Good, a soymilk produced by Sanitarium Foods in Australia, has been awarded the Golden SIAL.

Helfex, the International Health Food Trade Exhibition and Convention, is much smaller than the two fairs mentioned above and its scope is much more limited. Held biannually in the spring in the United Kingdom on even numbered years, it is sponsored by the British Health Food Manufacturers Association and the British Health Food Trade Association. The Foreign Agricultural Service (FAS) of the USDA typically has a large pavilion featuring booths representing U.S. health / natural food manufacturers. In 1988 at least 8,000 visitors came to Helfex from 25 countries. About 600 exhibitors were there and the U.S. Pavilion was the biggest booth at the entire show. About 88% of the natural foods products at Helfex '88 came from the U.K. The first Helfex was held on 17-19 March 1974 at the Bloomsbury Centre Hotel in London. The tenth Helfex was held on 8-9 April 1990 in Birmingham, England; over 200 companies exhibited in Birmingham. For more information contact the British Health Food Trade Assoc., Angel Court, High Street, Godalming, Surrey, GU7 1DT, England. Phone: 0483-426450. Fax: 0483-426921.

CIBUS (pronounced CHI-bus), the biggest food fair in Italy, is held in Parma in about May each year.

3105. *SoyaScan Notes.*2010. Historical research on the dissemination of the soybeans worldwide: Wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** In the record titled "Countries, overseas dependencies, and Canadian provinces in which we have no record of soya ever having been cultivated (Overview)," try to find when and where soybeans were first cultivated in each of these geographical areas.

Africa: In 1873 Prof. F. Haberlandt obtained soybeans from Tunisia. What was his source? When, how and from where were these soybeans first introduced to Tunisia?

Asia–Central: In 1873 Prof. F. Haberlandt obtained soybeans from Transcaucasia. What was his source?–Perhaps the Republic of Georgia. When, how and from where were these soybeans first introduced to Transcaucasia. Clarify when and where soybeans were first cultivated in the Republic of Georgia (before 1911, maybe before 1873), and in Kazakhstan (before 1940), and in general in Transcaucasia. Learn more about the work of G. Sturua with soybeans.

Canada–The story of the arrival of the soybean in Canada between 1855 and 1894 needs to be researched. There must be some early records, similar to those from the Commissioner of Patents.

Europe–Western: Make a good translation of F. Haberlandt's 1878 classic *Die Sojabohne*, accompanied by 2 maps of the places in Europe where Haberlandt and his cooperators grew soybeans (one of the area in 1878 and one now; travel in Eastern Europe to get these) and a database for making a good overview: What kind of people tested the

soybeans? (Gutsbesitzer, Freiherr, Schloss-gaertner, agricultural institutions, etc.). Who got the best yields and where? In Aug. 1878 Prof. Friedrich Haberlandt wrote: "In Tirol [Tyrol, Austria] the soybean is called the Coffee Bean *(Kaffebohne)* and used to prepare a coffee substitute." When and how were these soybeans introduced to Tirol?

Europe–Eastern: Write a biography of Mr. Ovsinskii (Also spelled Ovsinski, Owinsky, Ovinsky) of Podolia, Ukraine (See Sempolowsky 1900) who traveled to Asia, introduced soybeans to Russia, was the first man in Russia to grow and test them extensively, then publicize their many virtues.

USA: Write a good history (with a good bibliography) of Chinese growing and processing soybeans in California. They must have grown them between 1849 and 1899! Likewise with Japanese growing soybeans in California.

3106. *SoyaScan Notes.*2010. People I want to contact to do an interview: Wish list (Overview). Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** Bob Swanson, founder of Llama, Toucan & Crow.

Charlie Smail, founder of Shadowfax.

Parshan Sahota, owner of LifeSource.

Gene Newman of Manna Foods (Scarborough, Ontario, Canada). Who founded the first natural foods distributors headquartered in Canada? Lifestream, founded by Arran Stephens was first I think.

3107. *SoyaScan Notes.*2010. Chronology of tofu worldwide–1930 to present. Part II. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1930s early–Azumaya Tofu Seizo-sho (later renamed Azumaya Co.) starts making tofu, *yaki-dofu* (grilled tofu), and *ganmodoki* (fried tofu patties) in San Francisco at 1636 Post St. between Buchanan and Laguna streets. The company is owned by Mr. Teranishi, who may have started it as early as the early 1920s. In Feb. 1937 it was sold to George and Jack Mizono, and their mother and father (Saichi Mizono).

1932, Dec.–Madison Foods, part of Madison College in Madison, Tennessee, was making Soy Cheese, then by 1939 they had launched Cheze-O-Soy (seasoned tofu), and by 1940 they were making a canned tofu bologna named Yum.

1934–By this year Loma Linda Food Co. (Adventist) in Loma Linda, California, was making Loma Linda Vege-Cheese (canned tofu with pimiento).

1942 Sept.–Dr. Harry Miller, a Seventh-day Adventist doctor who had worked for many years in China as a medical missionary, begins making Miller's Soya Cheese (tofu) at Mt. Vernon, Ohio.

1944 Sept.–Butler Food Co. in Cedar Lake, Michigan, introduces Butler's Soynut Cheese. Note that the first five Caucasian-run tofu companies in the Western World were all founded and run by Seventh-day Adventists. Note also that each of these five Seventh-day Adventist tofu products used the word "cheese" in the name and that each was canned. 1957 Aug.–Shizuka Hayashi, head of the Japanese-American Soybean Institute in Tokyo, publishes (in *Soybean Digest)* the earliest English-language statistics on tofu in Japan. "There are approximately 45,000 tofu manufacturers in Japan, of which about 23,000 are members of the Tofu Association. There is one large factory in Osaka, the largest in Japan, which consumes 2 tons of soybeans a day." In 1957 Japan will use somewhere between 160,000 and 308,000 tons of soybeans to make tofu.

1958–The world's first packaged tofu is sold in Los Angeles, California, by Matsuda Hinode Tofu Co. Mr. Shoan Yamauchi, owner, conceived of the idea of putting individual cakes of tofu each in a plastic bag with water, sealing the bag with a heat sealer, placing the bag in a stiff paper deli carton with a wire handle, then folding over the top. The process was labor intensive. This happened at about the same time that a letter from journalist George Yoshinaga had led the city to pass a new regulation requiring tofu to be packaged in individual containers.

1958–Tofu is first sold in a U.S. supermarket–Boy's Market supermarket chain (which had about 12 stores at the time) in Los Angeles. The tofu was sold in individual packages (see above) and made by Matsuda Hinode Tofu Co., whose owner, Mr. Shoan Yamauchi was responsible for this major innovation, and for seeing the mainstream potential of tofu.

1965–The Library of Congress establishes the subject heading "Tofu" as the official name for that food in cataloging books for libraries across America. However, in the mid-1970's disputes arose there about the proper form of romanization of that term. The dispute was resolved by the decision to use the common English term "Bean Curd" instead.

1966–Tofu is first packaged in plastic trays/tubs, the type so widely used today. Again, Mr. Yamauchi conceived of the idea. He went to the Sealright Company in Los Angeles that made Sealright trays and asked them to make a waterproof plastic tray for his tofu. Mr. Yamauchi created three specific early innovations in tray packaging: (1) A very deep tray, holding 26-28 ounces; (2) A method for heat sealing a plastic film to the flange of a tray which had cold water flooding over the flange; (3) High-speed sealing machines to pack and seal the tofu in his plant.

1975 March–Alec Evans, owner of first of the new breed of Caucasian-run tofu shops, starts to make "Tofu" in Corvallis, Oregon. His Welcome Home Bakery and Tofu Shop is the sixth Caucasian-run tofu company in America.

1975 Dec.–*The Book of Tofu,* by Shurtleff and Aoyagi, is published by Autumn Press. This book, which had sold about 550,000 copies by 1997, played a major role in introducing tofu to the Western World.

1977 Aug.–Takai Tofu & Soymilk Equipment Co. publishes its first English-language equipment catalog, which helps many American and European tofu shops to get started.

1977 Sept.–White Wave, owned by Steve Demos, starts making tofu at 1738 Pearl St., in Boulder, Colorado.

1977–Morinaga Milk Industry Co., Ltd. in Japan introduces the world's first aseptically packaged tofu in a Tetra Brik carton. It is named "Morinaga brand Tofu. Soybean Curd." In 1978 the name was changed to "Morinaga brand Ever-Fresh Silken Tofu."

1977–Swan Foods Corporation, owned by Robert Brooks and Mary Pung, starts making "Tofu–Organic" at The Soybeanery, 5758½ Bird Rd., Miami, Florida. This is the first tofu in the Western World labeled "Organic." Swan Foods is also the first American company to make a wide variety of soyfoods, and the first to open a soy deli–which had a take-out menu.

1978 April–Nasoya Foods, owned by John Paino and Bob Bergwall, starts making Nasoya Organic Tofu (water pack) at Mechanic Street Exit, Leominster, Massachusetts.

1978 Dec.–*The Book of Tofu*, by Shurtleff and Aoyagi, is published by Ballantine Books in a mass-market edition that retails for $2.95.

1979 July.–*Tofu & Soymilk Production*, by Shurtleff and Aoyagi, is published by Soyfoods Center in California. This book is used to start hundreds of tofu manufacturing companies throughout the Western World and in some Third World countries.

1982 April–There are 242 tofu manufacturers in the Western World, including 173 in the United States.

1985 June–The Library of Congress decides to change its subject heading from "Bean curd" back to "Tofu." This, perhaps more than any other single thing, makes the word tofu "official."

1983–House Food Industrial Co., Ltd. of Japan purchases 50% ownership in Yamauchi Enterprises (formerly Hinode Tofu Co., owned by Mr. Shoan Yamauchi) in Los Angeles. The company is renamed House Foods & Yamauchi, Inc.

1989 Dec.–Sixty-five books (more than 48 pages long) on tofu have been published in the Western World since 1970. Each one has the word "tofu" or its equivalent in the title. Forty of these books were published in the United States, 6 in Canada, 5 in Switzerland, 5 in Japan (but written in English for sale primarily outside of Japan), 3 in West Germany, 3 in France (but 2 of these were published simultaneously and primarily in Quebec, Canada), 2 in England, and 1 each in Italy, Sweden, and Brazil.

1990 Aug. 3–Hong Kong Soya Bean Products Co. Ltd. (makers of Vitasoy) acquires Nasoya Foods of Leominster, Massachusetts.

1993 June–Vitasoy purchases Azumaya Inc. (America's largest tofu manufacturer, and the low-price leader) in California for an estimated $4-$5 million.

1993–House Foods Corp. of Japan purchases the remaining 50% of House Foods & Yamauchi, Inc. from Mr. Shoan Yamauchi. The new company is renamed House Foods American Corporation.

1997 March 12–House Foods America Corporation holds the opening ceremony for America's largest tofu factory, in Garden Grove, California; the company closes its tofu plant in central Los Angeles.

3108. *SoyaScan Notes.*2010. Chronology of Kikkoman Corporation. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** This chronology is based largely on the excellent chronologies near the back of Kikkoman annual reports, and dates in Fruin (1983). "Ideally situated close to soybean-growing regions as well as the Edo River, which provided a convenient transportation route for consumers in or near Edo, or present-day Tokyo, Noda has been well-known for its soy sauce (shoyu) production since the Edo period. Noda is located about 30 miles northeast of Tokyo in Chiba prefecture.

"Kikkoman Soy Sauce first went on the market in 1661 when the Takanashi and Mogi families constructed breweries and started the brewing of soy sauce."

1914–When World War I started, excessive competition arose between Japan's many shoyu producers because of the wartime economy, causing a very confused market situation. 1917 Dec.–With these conditions as a background, eight Mogi and Takanashi family companies, the leading shoyu producers in the Noda area, merged to form Noda Shoyu Co., Ltd., a company with capital of ¥7 million and the predecessor of Kikkoman Corporation."

"1925 April–Noda Shoyu Co., Ltd. absorbs Noda Shoyu Jozo Co., Ltd., Manjo Mirin Co., Ltd., and Nippon Shoyu Co., Ltd., through a merger. 1926–Kikkoman No. 7 shoyu brewing plant constructed.

30 August–The Takasago soy sauce production plant (formerly the Kansai Plant) is constructed near Osaka and completed in 1931. 1936–Kikkoman Worcestershire Sauce plant completed. 1939–With the start of World War II, government controls on the price of soy sauce are established.

1946–Kikkoman stock first becomes available to the public. 1949–Export of Kikkoman soy sauce is reestablished after the war.

1950–Wartime soy sauce controls end and free competition resumes. "1957 June–Kikkoman International Inc. (KII) is established in San Francisco, California, in the United States. 1958–The first KII branch is established in Los Angeles.

"1960–The second KII branch is established in New York.

"1961 July–Kikko Food Corporation is established (later renamed Kikko Food Industries Co., Ltd.) In July 1991, the company becomes Nippon Del Monte Corporation. 1961–Seishin Pharmaceutical Co., Ltd. established. 1962 February–Tone Beverage Co., Ltd., is established. In February 1963, the company becomes Tone Coca-Cola Bottling Co., Ltd. 1962 October–Katsunuma Yoshu Co., Ltd., is established. In March 1964, the company becomes Mann's Wine Co., Ltd. 1963–Japan Calpak Co., Ltd. established. 1964 October–Noda Shoyu Co., Ltd., is renamed Kikkoman Shoyu Co., Ltd. 1965–The third KII branch is established in Chicago, Illinois. 1966–Sales of Higeta brand products assumed by Kikkoman. 1968–Bottling of Kikkoman Soy Sauce for the American market begins at the Leslie Foods plant in Oakland, California.

1969 June–Kikkoman invests in and merges with Japan Food corporation, the biggest distributor of Oriental food in the United States. In June 1978 the company becomes JFC International Inc.

"1970 March–Kikkoman invests in and merges with Pacific Trading Co., Ltd., a sister company of Japan Food Corporation. 1972 March–Kikkoman Foods, Inc. (KFI), is established in Walworth, Wisconsin (USA) for the purpose of manufacturing soy sauce and teriyaki sauce. Shipping starts in early 1973. 1972 August–Kikkoman + Daitokai (Europe) GmbH is established in Düsseldorf, in Germany. 1974 February–Kikkoman Restaurant, Inc. is established. 1979 March–Kikkoman Trading Europe GmbH is established in Neuss, in Germany.

1980 October–Kikkoman Shoyu Co., Ltd. is renamed Kikkoman Corporation–the company's present name. 1983 January–Kikkoman Ajinomingei Co., Ltd., is established. 1983 June–Kikkoman (S) Pte. Ltd., a production facility, is established in Singapore. 1983 October–Kikkoman Business Development Inc. is established. 1986 August–New *Shoyu* production facilities come on stream at Kikkoman's Chitose Plant, in Hokkaido.

"1990 January–Kikkoman buys perpetual marketing rights for the Del Monte brand in the Asian-Pacific region, excluding the Philippines. 1990 February–A joint venture company, President Kikkoman Inc. is established to produce soy sauce in Tainan, in Taiwan. 1996 April–Kikkoman invests in Kikkoman Foods Europe B.V., Europe's first soy sauce manufacturer, located in Hoogezand-Sappemeer, in the Netherlands. 1996 May–Production of *Shochu* a clear Japanese spirit, commences at a new facility of the Ojima Plant. 1997 March–Kikkoman holds a ground-breaking ceremony for its second U.S. soy sauce production plant, in Folsom, California, in the United States. 1997 October–Kikkoman Foods Europe B.V. begins operations at its plant [in Hoogezand-Sappemeer, the Netherlands]. 1998 October–The second manufacturing plant of Kikkoman Foods, Inc., in Folsom, California, begins shipments. 1999 July–Kikkoman opens its new headquarters in Noda, Chiba prefecture, to commemorate the Company's 80th anniversary. 1999 October–Kikkoman Institute for International Food Culture is opened at the Company's new headquarters. 1999 November–Kikkoman announces a joint venture with its partner in Taiwan [Uni-President Enterprises, Taiwan's largest food manufacturer] to build a soy sauce plant in China" [In Kunshan, near Shanghai].

2000 May–Kunshan President Kikkoman Biotechnology Co., Ltd. is established. 2000 Aug.–Construction starts on a soy sauce plant in China. The first shipments are slated for spring 2002.

2002 May–The China plant Kunshan President Kikkoman Biotechnology Co., Ltd., holds its grand opening.

2003 May–Kikkoman Foods, Inc. (with its plant at Walworth, Wisconsin) holds its 30th anniversary ceremony.

2004 March–Kikkoman invests in Higeta Shoyu Co., Ltd. and Kibun Food Chemifa Co., Ltd.

3109. *SoyaScan Notes*.2010. Chronology of miso and soybean chiang. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1st century B.C.–Soybean chiang is first mentioned in China in the *Shih chi [Historical records]* by Ssu-ma Ch'ien, and in the *Chi chiu p'ien [Primer on addressing matters],* by Shih Yu.

535 A.D.–The *Ch'i min yao shu* in China gives the first detailed descriptions of making soybean chiang–and other soyfoods.

701–Soybean hishio, miso, and soy nuggets start to be made in Japan by the *Hishio Tsukasa,* a government bureau. References to these seasonings are found in documents published between 730 and 748.

901-08–The modern word for *miso* first appears in Japan in the *Sandai Jitsuroku.*

927–The *Engi Shiki* gives the first details about the production of soybean hishio-miso in Japan.

1597–Miso is first mentioned by a Westerner, the Florentine Francesco Carletti; he calls it *misol.*

1712–Englebert Kaempfer, a German who lived in Japan, is the first European to give detailed descriptions of how miso and shoyu are made in Japan. Also mentions koji.

1727–Miso is first mentioned in an English-language publications, *The History of Japan,* by E. Kaempfer. He spells it *"Midsu,* a mealy Pap, which they dress their Victuals withal, as we do butter."

1779–The word "miso" ("that is used as butter") first appears in an English-language publication, the *Encyclopaedia Britannica.* 1847–The word "miso" first appears in print in the United States, in a letter from T.W.H. of Cambridge, Massachusetts, to the *Farmers' Cabinet and Herd Book.*

1908–Miso is first made commercially in the continental United States by the Fujimoto Co. of San Francisco, California. Brand name: Kanemasa Miso.

1921–The term "bean paste" is first used to refer to miso by J.L. North of England in the *Illustrated London News.*

1929–Amano Brothers, Canada's first commercial miso maker, starts in Vancouver, British Columbia. Founder: Mr. Teiichi Amano. 1960–Dr. C.W. Hesseltine and K. Shibasaki, of the Northern Regional Research Laboratory in Peoria, Illinois, publish the first of many important scientific articles on miso.

1963–Michio and Aveline Kushi, teachers of macrobiotics in Boston, start to teach Americans about miso.

1966 April–Aveline Kushi (with Evan Root) starts Erewhon, a pioneering retailer in Boston, that soon starts selling miso.

1968–Erewhon expands to become an importer and distributor of natural and macrobiotic food. Their first two misos, Mugi Miso and Hacho Miso, are imported from Japan.

1976 June–Miyako Oriental Foods, a division of Yamajirushi Miso Co. in Japan, starts making miso in Los Angeles. Owned by Noritoshi Kanai. Brands: Yamajirushi, Kanemasa, Yamaizumi.

1976 Sept.–*The Book of Miso,* by Shurtleff and Aoyagi, is published by Autumn Press of Hayama, Japan. This is the first book about miso in the Western world.

1978 Oct.–The Ohio Miso Co., the first Caucasian-run miso company in the Western world, is founded by Thom Leonard and Richard Kluding. They begin miso production on 13 March 1979.

1978 Nov.–Joel Dee of Edward & Sons (New Jersey) launches Natural Instant Miso Cup, an instant miso soup made with freeze-dried miso from Japan.

1978 Dec.–Miyako Oriental Foods of Los Angeles introduces Cold Mountain Firm Granular Rice Koji, the first koji sold commercially in the USA. In 1979 they start selling Cold Mountain Miso, the first miso with an American-style brand.

1979 Oct.–John and Jan Belleme arrive in Japan to study traditional miso–and koji-making with the Onozaki family in Yaita, Japan. They are the first Caucasians to do this, and then to return to the West to start making miso commercially. From 1981 on they write many superb articles about miso, published in America.

1979 April–Shin-Mei-Do Miso is founded by Lulu and Yasuo Yoshihara in British Columbia, Canada.

1981 April–John Troy of Elf Works, Ltd. in Chapel Hill, North Carolina, launches Hot Stuff, an early and very successful American miso product. He first learned about miso from Joel Dee.

1981 Aug.–John and Jan Belleme begin full-time, large-scale production of miso and koji at Erewhon Miso Co. in Rutherfordton, North Carolina. By early 1982 their company is renamed American Miso Co. with Barry Evans as the new owner.

1982 Oct. 25–Christian and Gaella Elwell start making miso and koji at South River Miso Co. in Conway, Massachusetts. Earlier that year they purchased The Ohio Miso Co. Address: Lafayette, California. Phone: 925-283-2991.

3110. *SoyaScan Notes.*2010. Chronology of green vegetable soybeans and edamamé (incl. maodou) worldwide–A.D. 1275 to 1939. Part I. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** First a few basic definitions: (1) "Vegetable-type soybeans" refers to certain large-seeded soybean varieties developed for use as a vegetable crop. (2) "Green vegetable soybeans" refers to vegetable-type soybeans harvested at the green stage for use as a vegetable. The beans can be cooked and served in or out of the pods. (3) "Edamamé" is the Japanese term for green vegetable soybeans cooked and served in the pods, often as a snack–like peanuts in the shell. The green beans are popped out of the pods directly into the mouth of the person eating them.

Before 7th century BC–The *Shijing (Book of Odes)* is China's earliest classic and the earliest document seen worldwide that mentions the soybean, which it calls *shu.* It does not mention green vegetable soybeans. Zheng Xuan (Wade-Giles: Chêng Hsüan), the most important commentator of the 2nd century AD, confirms that *shu* refers to the soybean and that soybean leaves, called *huo,* can be pickled–presumably when green, then presumably eaten.

AD 100–The term *Sheng dadou* [Chinese characters: raw / fresh + large + bean] appears in both *Shennong bencao jing (Classical pharmacopoeia of Shen Nung)* and later (about AD 450-500) in the *Mingyi bielu (A critical record of famous doctors. A materia medica).* However a careful analysis of the context by a Chinese scholar who is an expert in the history of Chinese foods and of soybeans (H.T. Huang, PhD) indicates that this term refers to raw soybeans rather than fresh green soybeans. Therefore, surprisingly, we know of no early reference to green vegetable soybeans in China.

1275 July 26–The word "edamamé" first appears in Japan when the well-known Buddhist saint Nichiren Shônin writes a note thanking a parishioner for the edamamé he left at the temple. In: In: *Nichiren Shonin Gosho Zenshu (The Collected Writings of Saint Nichiren).*

1406–The Ming dynasty famine herbal titled *Jihuang bencao,* by Zhu Xiao is the earliest Chinese document seen that describes: (1) eating the tender leaves of soybean seedlings *(doumiao);* (2) eating the whole pods of young

soybeans, (3) eating green vegetable soybeans; (4) or grinding the green beans for use with flour. The last three uses are recommended for times of famine only.

1620–*Maodou* (Chinese characters: hairy + bean) are first mentioned in the *Runan pushi [An account of the vegetable gardens at Runan],* by Zhou Wenhua. "*Maodou* has green, hairy pods. It is also called *qingdou* ('green beans).' It is mentioned in the *Bencao* [materia medica] literature [we are not told which book], which states that it has a sweet flavor, is neutral, and nontoxic. It can be used medicinally mainly to 'kill bad / evil chi.' It stops bodily pain, eliminates water [reduces edema], dispels heat in the stomach, reduces bad blood, and is an antidote to poisonous drugs... Boil the beans in the pods until done, then remove the beans from the pods and eat them. The flavor will be sweet and fresh. Or you can remove the beans from the pods before cooking, then cook the beans in lightly salted water. Or the beans can be placed on a metal screen over a charcoal fire to roast or dry them... They can be served with tea or fruits, as a snack." This is also the earliest document seen that gives medicinal uses for green vegetable soybeans.

1855 April 12–T.V. Peticolas of Mount Carmel, Ohio, is the first Westerner to mention green vegetable soybeans. In an article on soybeans in the *Country Gentleman* (p. 12) he writes: "They are inconvenient to use green, being so difficult to hull."

1856–Only a year later, at least two Americans have apparently figured out how to shell them with ease, and to enjoy them. Thomas Maslin of Virginia writes: "They are fine for table use, either green or dry..." Abram Weaver of Bloomfield, Iowa, praises them in the *Report of the Commissioner of Patents, Agriculture* (p. 256-57). "I had some of them cooked, while green, at their largest size, and found them delicious."

1890 Dec.–The first large-seeded vegetable-type soybean variety arrives in America. Named Edamame, it was introduced from Japan by Charles C. Georgeson, who had been a professor of agriculture in Japan. Other early large-seeded varieties included Easycook (introduced in 1894 from Shandong Province, China) and Hahto (1915, from Wakamatsu, Japan).

1915 Jan.–William J. Morse (of USDA's Office of Forage Crop Investigations), the man most responsible for introducing green vegetable soybeans and vegetable type soybeans to the United States, mentions them for the first time in a USDA special publication titled "Soy beans in the cotton belt": "The green bean when three-fourths to full grown has been found to compare favorably with the butter or Lima bean."

1917–During World War I, USDA researchers conduct cooking tests on many soybean varieties in search of an inexpensive source of protein that lacks the typical unpleasant beany flavor and will cook quickly. Only two such varieties are found–Hahto and Easy Cook; both are large-seeded. Some progress is made in convincing Americans to eat these varieties–but only as whole dry soybeans.

1923 March–*The Soybean,* by Charles V. Piper and William J. Morse, published by McGraw-Hill (329 p.), is the first major book written about this plant in the United States. It contains a long section titled "Immature or Green Soybeans" (p. 221-22) that includes a description, nutritional analysis, recipe ideas. It also includes the first photograph in a U.S. publication of green vegetable soybeans, showing many cooked, open pods on a white plate. The caption reads: "Seeds and pods of the Hahto variety of soybeans, the seeds being especially valuable as a green vegetable." Between 1915 and 1929 Morse mentioned green vegetable soybeans in more than 20 publications.

1929-32–During the USDA sponsored Dorsett-Morse Expedition to East Asia, William J. Morse (now a soybean expert) and P.H. Dorsett were surprised to learn that: (1) Soybeans are widely "used as a green vegetable" or as "green vegetable beans," served in the pods. (2) The seeds for these soybean varieties are sold by horticultural seed companies, are listed with the garden beans in their seed catalogs, and are larger and sweeter than regular soybeans. On 24 April 1929, while in Tokyo, Dorsett made the first edamamé purchases, seven varieties with "Edamame" in the varietal name from T. Sakata & Co. They eventually collected more than 100 varieties of large-seeded vegetable-type soybeans (other suppliers included Yamato Seed Co. in Tokyo) and had them grown for a year at USDA's Arlington Farm in Virginia. (3) Edamamé account for less than 1% (actually 0.8%) of all the soybeans used in Japan. (4) Green soybeans are salt-pickled in the pod in Hokkaido, the northernmost main island. (5) The soybean seeds are planted at intervals of several weeks in the same field, then, when ready, the plants are uprooted and sold in bundles. On 15 July 1929 Morse wrote: "Saw many plantings of soybeans from just coming up to ready to pull for market. It is extremely interesting to note how they are planted for succession. We saw many plantings of beans ready for pulling for market with rows interplanted as seedlings or transplants just coming into bloom." Near Tokyo, three crops of vegetable soybeans are grown during the season–early, medium and late season. The 8,000-page typewritten report is interspersed with many photos of green vegetable soybeans at various stages from the farm to the table.

1929 July 20–A letter from William Morse in Tokyo is read before the attendees at the Tenth Annual Meeting of the American Soybean Association in Guelph, Ontario, Canada, and later published in the *Proceedings of the American Soybean Assoc.* (Vol. 2., p. 50-52). It is the first publication in which Morse describes his many new discoveries concerning vegetable soybeans.

1931 Jan. 3–Morse writes in his log in Tokyo: "At one of the department stores, in the vegetable market section, we

found small bundles of soybean sprouts and also some bundles of green vegetable soybean plants." This is the earliest document seen that contains the term "green vegetable soybean(s)."

1934–Vegetable-type soybean varieties that yielded well at Arlington Farm are sent to many state agricultural experiment stations for further trials. In addition, extensive investigations of the cooking qualities and composition of the green shelled and dry edible soybeans are conducted at various departments of home economics. The green beans are found to be one of the most nutritious vegetables ever analyzed.

1935 Dec.–Dr. John Harvey Kellogg of Battle Creek, Michigan, is the first person on record to can green vegetable soybeans, or to consider harvesting them mechanically. In a letter dated Dec. 9 he writes to William Morse at USDA. "We have been doing some experimenting this year with growing and canning shell soy beans. I am having a couple of cans sent you so you can see what our product is like. We think it is very fine. The few thousand cans we put up went off like hot cakes... One of the difficulties in the way of the soy shell bean business is the expense of picking from the vines and shelling the pods. Do you know of any machinery that is used for either of these purposes?"

1935 Aug.–Rokusun, the first vegetable-type soybean is mentioned in a U.S. publication–followed in March 1936 by Bansei, and Chusei. These soybeans are now publicly available in the U.S.

1936 April–A 2-page leaflet titled "Soybean introductions named in January 1936" is published by the USDA, Bureau of Plant Industry, Div. of Forage Crops and Diseases. It is the first official publication in which varietal names are given to the new vegetable type soybeans introduced by Dorsett and Morse from Japan and tested at USDA's Arlington Farm. Twenty varieties suitable for use as a "green vegetable" are listed, together with their seed color, days to maturity, and region of the USA best suited for production. This is the earliest English-language document seen that mentions the following vegetable-type varieties–all with Japanese names: Chame, Fuji, Goku, Hakote, Higan, Hiro, Hokkaido, Jogun, Kanro (in USA), Kura, Nanda, Osaya, Sato, Shiro, Sousei, Suru, Toku, and Waseda. It is also the earliest document seen in which soybeans are classified by use as "green vegetable" or "dry edible bean" or both.

1936 July–Green Shelled Soy Beans (canned) are first sold in the USA by Dr. John Harvey Kellogg's Battle Creek Food Co. in Battle Creek, Michigan. This is the earliest known commercial green vegetable soybean product in the USA.

1936 Oct. 30–A long article titled "Canning green soy beans," by Corinne Loskowske, appears in the *Herald*, published by the students of Henry Ford's Edison Institute. They have mechanized the canning process. They canned and sold 500 cans in 1935 and 1,000 cans in 1936. Similar canned green soybean products soon follow: 1939–Mother's Choice Brand Green Vegetable Soybeans (Canned), by the Fox Valley Canning Co. of Hortonville, Wisconsin.

1939 March–"Eighteen Varieties of Edible Soybeans," by J.W. Lloyd and W.L. Burlison is published at the *University of Illinois Agricultural Experiment Station, Bulletin* No. 453. The 58-page report is the most detailed and interesting to date, being based in part on comments received from 1935 to 1938 from more than 685 home gardeners, market gardeners, and canners in Illinois. The university offered to send free seed and growing instructions to any gardener who would test the green soybeans and submit frank comments in writing. The new way of growing and eating soybeans got rave reviews. For example: "Fresh soybeans had a satisfying flavor... They were delicious... We like them better than peas or beans... I served soybeans to all guests this summer and most everyone liked them... Everyone who tried them said they were splendid... We have never eaten beans as good... The beans were delicious to eat and were universally liked by my family and guests. In fact it took persuasion to leave any for seed."

During the 1930s William Morse and the University of Illinois took the lead in popularizing both green-vegetable soybeans and vegetable-type soybeans in the USA. Continued. Address: Lafayette, California. Phone: 925-283-2991.

3111. *SoyaScan Notes.*2010. Chronology of Charles Ambrose Zavitz (1863-1942) of Ontario Agricultural College, Guelph, Ontario, Canada. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** 1863 Aug. 25–Born at Locust Grove Farm, Coldstream village, Lobo Township, Middlesex County, Ontario, Canada, the fourth and youngest child (and third son) of Daniel Zavitz and Susan Webster Vail. The family were devout Quakers and Charles was a leading figure in Canadian Quakerism. Primary and secondary education: Middlesex Country School System, then Strathroy Collegiate Institute (a high school from which he obtained his second class teacher's certificate).

1884–Enters the Ontario Agricultural College (OAC).

1886–The first cooperative experiment starts (and with it starts the pioneering Experimental Union), with twelve farmers participating. In the following year the number increased to sixty, and in the next year to ninety. This number has gradually increased until at by 1913 more than 5,000 Ontario farmers were conducting experiments on their own farms. These coöperative experiments are all conducted with material and according to instructions,

furnished by the college through the medium of the Ontario Agricultural and Experimental Union.

1888 Oct. 1–Graduates with a Bachelor of Science in Agriculture degree from OAC. Although OAC opened in 1874, he was a member of the first class (of five) to graduate with a degree from the four-year course.

1890 June 3–He and Rebecca Elizabeth Wilson are married at Isaac Wilson's residence in Bloomfield, Ontario.

1893–Placed in charge of the experimental work at OAC when Prof. Shaw resigns.

1893–Receives five soybean varieties from Dr. C. Georgeson, professor of agriculture in the Kansas Agricultural College at Manhattan, Kansas. Dr. Georgeson had received the seeds from Japan three years earlier (April 1890).

1893–Zavitz cultivates the first soybeans in Canada at the Experimental Farm, OAC, Guelph.

1894–Son, Raymond Wilson Zavitz, born.

1900–Presents the first report on soy beans to appear in the *Ontario Agricultural and Experimental Union, Annual Report* (See vol. 21, p. 9, 16, 31-32, for the year 1899. "Co-operative experiments in agriculture").

1902–Starts cross-fertilization of plants to concentrate desirable characteristics.

1904–First head, Department of Field Husbandry, OAC.

1904–A driving force in forming the Canadian Seed Growers' Association.

1908 July–Presents his first paper to the American Society of Agronomy at the annual meeting in Ithaca, New York. Titled "The relation between the size of seed and the yield of plants of farm crops," it is published in 1910 in volume 1 of the society's proceedings.

1910–Elected 2nd vice-president of the American Society of Agronomy and in 1911 he moved up to first vice-president.

1912 Nov.–Presents his second paper to the American Society of Agronomy at the annual meeting in Atlanta, Georgia. Titled "Care and management of land used for experiments with farm crops," it is published in 1913 in volume 4 of the society's proceedings.

1913–Buys a house at Poplar Hill, near Coldstream, Middlesex Co., then rents it out for the next 14 years.

1914–He designs and has built the Field Husbandry Building (now known as Zavitz Hall) on the OAC campus; it opens in 1914.

1914–Announces that he is developing O.A.C. 81, a new Canadian soybean variety, and gives yield statistics; this is the first named or numbered soybean variety ever developed in Canada.

1914–Appointed Acting President of the OAC, a position he holds until 1915, when President Creelman returns from abroad.

1916–The University of Toronto confers on Charles Zavitz the degree of Doctor of Science (honorary) in recognition of his achievements in Field Husbandry.

1919–Announces that he is developing O.A.C. 111, his second new Canadian soybean variety, and gives yield statistics.

1920–50,000 hybrid plants evaluated annually at OAC.

1922–Announces that he is developing O.A.C. 211, his third new Canadian soybean variety, and gives yield statistics.

1924–Increased value of crops developed at OAC estimated at $161 million.

1925–Registers and releases the soybean variety O.A.C. 211, the first variety to be officially registered and released in Canada. 1925–Selected as a fellow of the American Society of Agronomy. Fellowship is the highest honor a member can receive, and Charles was the first Canadian fellow of the society.

1927 June–Zavitz, the much respected Head of the Department of Field Husbandry, who has served OAC with distinction for 39 years, retires at the end of the college year because of poor health, and moves to Poplar Hill, Middlesex County, Ontario. Near his house at Poplar Hill are the Quaker Meeting House at Coldstream (1 mile to the northeast), and the homes of his two brothers (Sam and Edgar) and of many cousins, nephews, and nieces. Prof. W.J. Squirrell succeeds him as head of the department.

1931–Appointed Chairman, Canadian Friends' Service Committee (a Quaker enterprise).

1932–Publishes *Spiritual Life: Personal Thoughts,* a booklet (15 leaves, hardcover), containing his personal thoughts and beliefs on spiritual themes.

1935–Receives Doctor of Laws *in honoris causa* (honorary degree) from University of Western Ontario.

1942 March 17–Charles dies in his home at Poplar Hill, Ontario, Canada, and is buried at the Friends Burying Ground, Coldstream, Ontario.

1974 Nov. 17–Inducted into the Canadian Agricultural Hall of Fame.

1984–Inducted into the Ontario Agricultural Hall of Fame.

1993 Oct. 6–Honored by the Ontario Soybean Marketing Board on the 100th anniversary of the cultivation of soybeans in Canada.

1999 June 11–On the 125th anniversary of the Ontario Agricultural College, Zavitz is honored by the University of Guelph with an honorary Doctor of Science degree, awarded posthumously.

3112. *SoyaScan Questions.*2010. Questions about the history of soybeans and soyfoods in Canada. Further research needed. Compiled by William Shurtleff of Soyinfo Center.

• ***Summary:*** (1) Try to find out when and from whom Mr. Bruce (of John A. Bruce & Co.) in Hamilton, Ontario, obtained the soja beans which he sent in 1881 to Canada's Central Experimental Farm at Ottawa. Which library in Canada or the USA has the best collection of John A. Bruce & Co.'s seed catalogs? Look at these starting in the year 1881, going backward, then forward to see if the company ever sold soybeans in its seed catalog. Has a history of this seed company or of its founders ever been written? Is there an archival collection anywhere for this seed company? Has anyone written a genealogy of this branch of the Bruce family which includes its founders?

(2) What was the relationship between the company in Toronto that made Sunsoy (Soy Bean (Sunsoy) Products Ltd. Renamed Sunsoy Products Ltd. in about 1939) and Victory Mills Ltd.? Both were subsidiaries of Canadian Breweries Ltd. When, why and by whom was Soy Bean Products Ltd. founded? What kind of a company was it–a soybean crushing company? A maker of whole (full-fat) soy flour? Did it import any soybeans or soyfoods? What products did it make and what was the name of each?

(3) When, where, and by whom were soybeans first cultivated in Quebec? Where did Leonard Klinck get the soybeans he cultivated? When did he first cultivate them?

(4) When and where was soy sauce first imported to Canada?–probably during the period 1750 to 1800? In what newspaper or book (and in what language–French or English) is this information first recorded? Which were Quebec's earliest surviving newspapers? Have they been digitized? What were the various early names of soy sauce in Canadian French and English?

(5) When and where were soybeans first grown in Quebec (probably at Macdonald College). When and from where did Leonard Klinck obtain his first soybeans? The Quebec No. 92 was originated by selection by Dr. L.S. Klinck, when in charge of the agronomy work at Macdonald College, Quebec.

An asterisk (*) at the end of the record means that SOYFOODS CENTER does not own that document.
A plus after eng (eng+) means that SOYFOODS CENTER has done a partial or complete translation into English of that document.
An asterisk in a listing of number of references [23* ref] means that most of these references are not about soybeans or soyfoods.

## SUBJECT/GEOGRAPHICAL INDEX BY RECORD NUMBERS
