# DEDICATION AND ACKNOWLEDGMENTS

**This book is dedicated to Dr. Charles Ambrose Zavitz of the Ontario Agricultural College (OAC) - the soybean pioneer in Canada.**

Part of the enjoyment of writing a book lies in meeting people from around the world who share a common interest, and in learning from them what is often the knowledge or skills acquired during a lifetime of devoted research or practice. We wish to give deepest thanks...

Of the many libraries and librarians who have been of great help to our research over the years, several stand out:

University of California at Berkeley: John Creaser, Lois Farrell, Norma Kobzina, Ingrid Radkey.

Northern Regional Library Facility (NRLF), Richmond, California: Martha Lucero, Jutta Wiemhoff, Scott Miller, Virginia Moon, Kay Loughman.

Stanford University: Molly Molloy, who has been of special help on Slavic-language documents.

National Agricultural Library: Susan Chapman, Carol Ditzler, John Forbes, Winnifred Gelenter, Henry Gilbert, Kim Hicks, Patricia Krug, Veronica Lefebvre, Julie Mangin, Ellen Mann, Josephine McDowell, Wayne Olson, Mike Thompson, Tanner Wray.

Library of Congress: Ronald Jackson, Ronald Roache.

Lane Medical Library at Stanford University.

Contra Costa County Central Library and Lafayette Library: Carole Barksdale, Kristen Wick, Barbara Furgason, Sherry Cartmill, Linda Barbero.

Harvard University's Five Botanical Libraries (especially Arnold Arboretum Library): Jill Gelmers Thomas.

French translation: Martine Liguori of Lafayette, California, for ongoing, generous, and outstanding help since the early 1980s.

Japanese translation and maps: Akiko Aoyagi Shurtleff.

Loma Linda University, Del E. Webb Memorial Library (Seventh-day Adventist): Janice Little, Trish Chapman.

We would also like to thank our co-workers and friends at Soyinfo Center who, since 1984, have played a major role in collecting the documents, building the library, and producing the SoyaScan database from which this book is printed:

Irene Yen, Tony Jenkins, Sarah Chang, Laurie Wilmore, Alice Whealey, Simon Beaven, Elinor McCoy, Patricia McKelvey, Claire Wickens, Ron Perry, Walter Lin, Dana Scott, Jeremy Longinotti, John Edelen, Alex Lerman, Lydia Lam, Gretchen Muller, Joyce Mao, Luna Oxenberg, Joelle Bouchard, Justine Lam, Joey Shurtleff, Justin Hildebrandt, Michelle Chun, Olga Kochan, Loren Clive, Marina Li, Rowyn McDonald, Casey Brodsky, Hannah Woodman, Elizabeth Hawkins, Molly Howland, Jacqueline Tao.

Special thanks to Tom and Linda Wolfe of Berwyn Park, Maryland.

■ For outstanding help on this Canada book we thank: Frances Boyte, Fred Brandenburg, Lorne Broten, Allan and Susan Brown, Maya Clarke, Jon Cloud, George Conquergood, Kim Cooper, Dusty Cunningham, Frank Daller, Dick Filteau, Peter Joe, Raj Gupta, Brian Harrigan, Doug Jessop, Michael Loh, Janet Nauta, Kathleen O'Bannon, Dale Petrie, Yves Potvin, Gerald G. Smeltzer, Arran Stephens, Jack W. Tanner, Wes Thompson, Joe Tsukamoto, Harvey D. Voldeng, Ian Walker, Lulu and Yasuo Yoshihara, Stephen Yu, and James R. Zavitz. The title and affiliation of each person appears in the body of this book.

■Finally our deepest thanks to Tony Cooper of San Ramon, California, who has kept our computers up and running since Sept. 1983. Without Tony this series of books on the Web would not have been possible.

This book, now doubt and alas, has its share of errors. These, of course, are solely the responsibility of William Shurtleff.

# INTRODUCTION

## Brief Chronology of Soy in Canada

**1831 Jan. 8 – Soyfood products are first sold in Canada:** William Scammell of Saint John, New Brunswick, advertises in the *Courier* that he has imported and is offering for sale "A few dozen India Soy" [sauce].

**1850 March 2 – Worcestershire Sauce** (which uses soy sauce as a major ingredient), made by Lea & Perrins in England, starts to be imported and sold in Fredericton, New Brunswick, Canada (Troughton 1850).

**1855 – Soybeans may have been cultivated in Canada** at this early date. T.V. Peticolas (of Mt. Carmel, Ohio) writes in two American newspapers: "... on the subject of the Japan Pea, or rather Bean. I have cultivated it for the last three years, and have disseminated it from Canada to Texas" (T.V.P. 1855). Unfortunately he gives us no more details.

**1881 May – Ontario**: Soja beans (soybeans) are first cultivated in this province or in Canada at the Ontario Agricultural College. They were obtained from Mr. Bruce [of the John A. Bruce & Co., seedsmen] of Hamilton. Yield: 15 bushels per acre (Brown 1882, p. 199).

**1893 – Ontario**: Soybeans (Early Yellow variety) are cultivated for a second time in this province. They are introduced by Charles A. Zavitz of the Ontario Agricultural College; he obtained the seeds from Prof. Charles C. Georgeson of the Kansas Agricultural Experiment Station (USA); Georgeson had obtained his soybeans from Japan. With these soybeans, Zavitz begins a lifetime of research on soybeans suited to Ontario, Canada. He deserves the title "Father of soybeans in Canada" (Zavitz 1894; Zavitz 1908; Zavitz 1927).

**1897 May – William Saunders, LL.D., director of the Central Experimental Farm, Ottawa, Ontario, plants his first soybean trials.** His first early soybeans were received from Peter Henderson & Co., seedsmen of New York, in the spring of 1897 (Saunders 1898). He soon begins sending soybeans samples to counterparts in the Dominion Experimental Farms system in other Canadian provinces (see 1898 below) for testing (Saunders 1898).

**1898 April – British Columbia**: Soybeans are first cultivated in this province (Sharpe 1899).

**1898 May – Saskatchewan**: Soybeans are first cultivated in this province (MacKay 1899).

**1898 June – Nova Scotia**: Soybeans are first cultivated in this province (R. Robertson 1899).

**1898 – Manitoba**: Soybeans are first cultivated in this province (Bedford 1899).

**1901 – Zavitz starts to send soybean varieties to Ontario farmers for evaluation** through the Experimental Union (McEwen et al. 1999).

**1909 – Imports of soy sauce from Japan**: About 250,200 liters of Japanese-style soy sauce (shoyu) are imported to Vancouver, BC, where an estimated 8,000 Japanese live (Yada 1910); they consume all or almost all of it. The best selling brand is Kikkoman (Yada 1912).

**1910 March– Quebec**: Soybeans are first cultivated in this province (Dimmock & Kirk 1934).

**1910 – Two Japanese tofu shops** are now making and selling tofu in Vancouver, BC, Canada. Unfortunately the names and addresses of the shops are unknown *(Nichi-Bei Nenkan [Japanese-American Yearbook]*, 1910, p. 224).

**1913 – Imports of soya cake.** Canada begins importing small amounts of soya cake and soya beans from Asia, continuing until 1917 (International Institute of Agriculture, 1918).

**1922 – Alberta**: Soybeans are first cultivated in this province (MacConkey 1936).

**1922 Nov. 16 – Soybeans are now cultivated commercially in Ontario, Canada. "**Jeffrey Bros., and the Broadfield Stock Farm, near Whitby, Ontario, Canada cultivated nearly 100 acres of soybeans this year. People are growing soybeans in a commercial way in Canada" (Campbell 1922. p. 641).

**1923 – OAC 211**, a soybean variety developed by Charles Zavitz, becomes the first soybean registered in Canada. By 1939 six soybean varieties had been registered in Canada (Tanner 1993).

**1925 Oct. – Vi-tone**, "A delicious Malted Milk Chocolate-flavored drink [soymilk]. Rich in proteins and vitamines of the soya bean," it is now made commercially in Hamilton, Ontario (Ad in *Toronto Daily Star*. 1925 Oct. 25. p. 10; Dimmock 1929).

**1926 – Ontario**: About 1,000 acres of soybeans are now grown Ontario, used principally as a substitute hay crop (Meharry 1926; statement by Prof. John Buchanan of Guelph).

**1927 – Charles Zavitz** and co-workers have now evaluated over 100 soybean varieties.

**1928 – Soybeans in Canada**: The main areas of production are the central and southwestern portions of the province of Ontario. Small areas have been grown in every province in the Dominion. Canada has imported annually, during the last 7 years, an average of about 5,000,000 pounds of soybean oil for use in the manufacture of soaps and paints (McRostie et al. 1928).

**1929 – Amano Miso Seizo-sho**, owned and run by the Amano Brothers, starts making miso at 2121 Powell St., Vancouver, BC. (*The New Canadian* 1941. Aug. 22, p. 8)

**1930 March – Milton Oil Refineries Ltd.**, Canada's first soybean crusher, begins operation at Milton, Ontario, Canada (*Toronto Daily Star*. 1930. March 1, p. 28).

**1933 May – New Brunswick**: Soybeans are first cultivated in this province (Dimmock & Kirk 1934).

**1933 June – Prince Edward Island**: Soybeans are first cultivated in this province (Dimmock & Kirk 1934).

**1936 June 10 – Miyazaki Tofu-ten**, Canada's first tofu shop with a name and address, starts operations at 216 Gore Ave., Vancouver, BC (*Hokubei Nenkan* 1936. p. 254).

**1936 – The first official soybean production statistics are recorded for Canada and for Ontario** – 248,000 bushels (*Soybean Blue Book*, 1956, p. 30).

**1939 June – Newfoundland**: Soybeans are first cultivated in this province (Lloyd 1940).

**1938 –Toronto Elevator**s starts crushing soybeans in Toronto, Ontario (Vinall 1982, p. 24-27).

**1938 – Canada uses some 2.4 million lb of soybean oil**, including 1.6 million lb in soaps and washing compounds (*Soybean Blue Book*).

**1939-42 – As World War II begins**, Canada experiences critical shortages of oil and protein. Soybeans grown in Canada offer a new source of both. In 1942 Ontario produces 871,290 bushels on 41,490 acres.

**1942 – Manitoba, Canada**: The province's first soybean production statistics are recorded - 53,710 bushels produced on 2,510 acres. Production continues until 1945. Soybean production statistics are also first recorded that year for British Columbia – 4,500 bushels on 900 acres (*Soybean Blue Book*).

**1944 Nov. – Victory Soya Mills**, a wholly-owned subsidiary of Canadian Breweries Ltd., begins operations on Toronto's waterfront (*Toronto Daily Star*. 1944. Nov. 20, p. 10). The company aggressively promoted the crop in the late 1940s and 1950s. However soybeans were slow to expand out of the traditional five-county area in southwestern Ontario (Tanner 1993).

**1945 – Canada crushed 981,000 bushels of soybeans**, increasing to 4.5 million bushels in 1949 (*Soybean Blue Book*).

**1946 Nov. 8 – The Ontario Soybean Growers Association** is organized at a meeting at Leamington, Ontario (Peck 1947, p. 8).

**1946 – Canadian soybean production tops 1 million bushels**, up from only 217,000 bushels in 1941-42 (*Soybean Blue Book*).

**1949 – The Ontario Soybean Growers' Marketing Board is reorganized** from the 1946 Association. The "The Ontario Soya-Bean Growers' Marketing Scheme" is likewise established in 1949 under the "Farm Products Marketing Act" of Ontario. The Board's membership grew from 1,722 in 1949 to 17,272 in 1991.

**1951 – The soybean variety Harosoy in released**, developed by Cass Owen at the Harrow Research Station starting in 1936. Harosoy dominated Canadian soybean acreage for more than 35 years (Tanner 1993).

**1954 – Ontario soybean growers begin to seek export markets** when the Ontario Soybean Growers' Marketing Board organizes the first export of Canadian soybeans to the United Kingdom.

**1970-71 – Canadian soybean production tops 10 million**

**bushels** (*Soybean Digest Bluebook*).

**1972 – Canada's identity preserved (IP) program begins**, pioneered by C. Itoh in Toronto exporting the Harwood variety, favored for making tofu and miso, to Japan (Epp 1984).

**1976 April 1 – Maple Arrow soybean variety** is registered. A ground-breaking variety with earlier maturity and improved tolerance to cooler climates, it is the first of the "Maple" series of varieties that enable soybeans to be cultivated northward and eastward, in areas with shorter growing seasons, expanding their range from southern Ontario (Beversdorf et al. 1995; Dorff 2007).

**1976–1997 – Soybean acreage and production in Canada expand at a faster rate** than at any prolonged period after World War II. This is caused by better prices, a new cash-crop mentality, improved varieties, better herbicides, better inoculants, and narrow-row seeding (Beversdorff et al.1995).

**1984 – Soybean varieties developed by private breeders.** In 1984, 24 of the 35 varieties recommended by the Ontario Ministry of Agriculture and Food (OMAF) were developed in the private sector (Beversdorf 1984).

**1985 June – Yukon Territory**: Soybeans are first cultivated in this province (Loeks 1985).

**1991 March – Victory Soya Mills**, Ontario's largest soybean crusher, ceases operations and padlocks the doors of its plant on the Toronto waterfront (Yakabushi 1991, p. C1).

**1999 Dec. 1 – Ontario Soybean Growers** is the new name of Ontario Soybean Growers' Marketing Board which celebrates its 50th anniversary this year.

**2010 Jan. 1 – Grain Farmers of Ontario (GFO)** is created by the merger of Ontario Soybean Growers, Ontario Corn Producers' Association, and Ontario Wheat Producers' Marketing Board.

**Current Status**:

The soybean is Canada's most important grain legume crop.

Most of Canada's soybeans are produced in southern Ontario, with secondary production areas in eastern Ontario, southern Quebec, southern Manitoba, and Prince Edward Island.

In 2008/09 Canada was the world's 7th largest soybean producing country, producing 3.060 million tonnes (metric tons) of soybeans – about 1.3% of the world's total.

Canada has the world's most advanced, integrated, pervasive, and trusted identity preserved (IP) program.

Canadian soybeans for export are carefully cleaned and inspected; they contain less foreign matter than their U.S. counterparts.

Canada is a world leader in export of premium-quality food-grade soybeans to Pacific Rim countries such as Japan, Malaysia and Singapore, where they are used to make tofu, soymilk, miso, natto, soy sauce, and other traditional soyfoods.

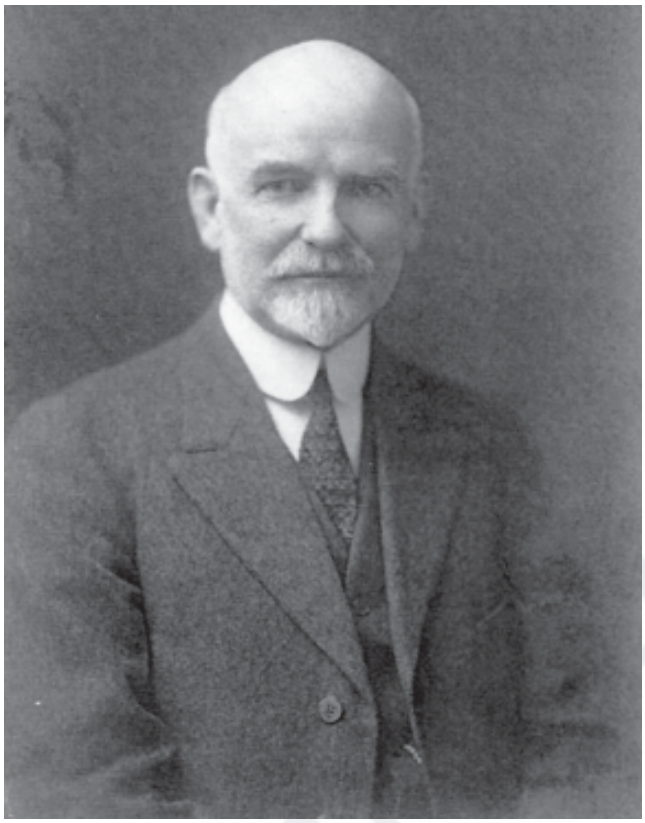
Canada has a long-term program of breeding soybeans to fit the exact specifications and needs of different soyfoods industries (such as tofu or miso). This includes incoming missions of Asian soyfoods makers and outgoing missions of Canadian professionals, with continuing feedback aiming at ever higher soybean quality and customer satisfaction.

About 65% of the soybeans produced in Canada are genetically engineered (Petrie 2009). Almost all of these are for non-food uses.

For excellent histories of the soybean in Canada, especially during the period after World War II, see:

- Tanner, J.W. 1973. "Where we are and how we got there: An historical review of soybean production in Ontario."
- Voldeng, Harvey. 1979. "Soybeans in Canada – Past, present and future."
- Tanner, Jack. 1993. "The first one hundred years."
- Beversdorf, W.D.; et al. 1995. "Soybean." A history of soybean breeding in Canada.
- McEwen, Freeman;… Tanner, Jack; et al. 1999. "125 years of achievements: OAC…" See also Soyascan interviews with J.W. Tanner in Feb. 2000 and March 2002.
- An earlier edition of this book, *Soya in Canada - Bibliography and Sourcebook*, was published in 1993 on the 100th anniversary of the soybean in Canada.

**Note**: We have no record of soybeans ever having been cultivated in the Northwest Territories or in Nunavut – in northern Canada.



**Charles A. Zavitz - 1920**

## ABOUT THIS BOOK

This is the most comprehensive book ever published about History of Soy in Canada. It has been compiled, one record at a time over a period of 35 years, in an attempt to document the history of soy this region. It is also the single most current and useful source of information on this subject.

This is one of more than 50 books compiled by William Shurtleff and Akiko Aoyagi, and published by the Soyinfo Center. It is based on historical principles, listing all known documents and commercial products in chronological order. It features detailed information on:

- 73 different document types, both published and unpublished.
- 2,384 published documents - extensively annotated bibliography. Every known publication on the subject in every language.
- 383 original Soyinfo Center interviews and overviews never before published.
- 274 unpublished archival documents
- 347 commercial soy products.

Thus, it is a powerful tool for understanding the development of this subject from its earliest beginnings to the present.

Each bibliographic record in this book contains (in addition to the typical author, date, title, volume and pages information) the author's address, number of references cited, original title of all non-English language publications together with an English translation of the title, month and issue of publication, and the first author's first name (if given). For most books, we state if it is illustrated, whether or not it has an index, and the height in centimeters.

For commercial soy products (CSP), each record includes (if possible) the product name, date of introduction, manufacturer's name, address and phone number, and (in many cases) ingredients, weight, packaging and price, storage requirements, nutritional composition, and a description of the label. Sources of additional information on each product (such as advertisements, articles, patents, etc.) are also given.

A complete subject/geographical index is also included.

# ABBREVIATIONS USED IN THIS BOOK

A&M = Agricultural and Mechanical
Agric. = Agricultural or Agriculture
Agric. Exp. Station = Agricultural Experiment Station
ARS = Agricultural Research Service
ASA = American Soybean Association
Assoc. = Association, Associate
Asst. = Assistant
Aug. = August
Ave. = Avenue
Blvd. = Boulevard
bu = bushel(s)
ca. = about (circa)
cc = cubic centimeter(s)
Chap. = Chapter
cm = centimeter(s)
Co. = company
Corp. = Corporation
Dec. = December
Dep. or Dept. = Department
Depts. = Departments
Div. = Division
Dr. = Drive
E. = East
ed. = edition or editor
e.g. = for example
Exp. = Experiment
Feb. = February
fl oz = fluid ounce(s)
ft = foot or feet
gm = gram(s)
ha = hectare(s)
i.e. = in other words
Inc. = Incorporated
incl. = including
Illust. = Illustrated or Illustration(s)
Inst. = Institute
J. = Journal
J. of the American Oil Chemists' Soc. = Journal of the American Oil Chemists' Society
Jan. = January
kg = kilogram(s)
km = kilometer(s)
Lab. = Laboratory
Labs. = Laboratories
lb = pound(s)
Ltd. = Limited
mcg = microgram(s)
mg = milligram(s)
ml = milliliter(s)
mm = millimeter(s)
N. = North
No. = number or North
Nov. = November
Oct. = October
oz = ounce(s)
p. = page(s)
P.O. Box = Post Office Box
Prof. = Professor
psi = pounds per square inch
R&D = Research and Development
Rd. = Road
Rev. = Revised
RPM = revolutions per minute
S. = South
SANA = Soyfoods Association of North America
Sept. = September
St. = Street
tonnes = metric tons
trans. = translator(s)
Univ. = University
USB = United Soybean Board
USDA = United States Department of Agriculture
Vol. = volume
V.P. = Vice President
vs. = versus
W. = West
°C = degrees Celsius (Centigrade)
°F = degrees Fahrenheit
> = greater than, more than
< = less than

# HOW TO MAKE THE BEST USE OF THIS BOOK

Here are a few tips to help you get the most out of the information contained in this book.

**Chronological Order**: The publications and products in this book are listed with the earliest first and the most recent last. Within each year, references are sorted alphabetically by author. If you are interested in only current information, you might want to start reading at the back, just before the indexes.

**A Reference Book: Search It with Adobe Acrobat**: Like an encyclopedia or any other reference book, this work is meant to be searched - to find exactly the information you are looking for - more than to be read.

At the small "Find" box (top center) click the down arrow. Click "Open full Acrobat search." In the box "What word or phrase would you like to search for?" type in your word or phrase. Then click search. The results will appear below. Try clicking the first one - to see how it works.

**How to Use the Index**: A subject and country index is located at the back of this book. It will help you to go directly to the specific information that interests you. Browse through it briefly to familiarize yourself with its contents and format.

Each record in the book has been assigned a sequential number, starting with 1 for the first/earliest reference. It is this number, not the page number, to which the indexes refer. A publication will typically be listed in each index in more than one place, and major documents may have 30-40 subject index entries. Thus a publication about the nutritional value of tofu and soymilk in India would be indexed under at least four headings in the subject and country index: Nutrition, Tofu, Soymilk, and Asia, South: India.

Note the extensive use of cross references to help you: e.g. "Bean curd. See Tofu."

**Countries** and States/Provinces: Every record contains a country keyword. Most USA and Canadian records also contain a state or province keyword, indexed at "U.S. States" or "Canadian Provinces and Territories" respectively. All countries are listed under their region or continent. Thus for Egypt, look under Africa: Egypt, and not under Egypt. For Brazil, see the entry at Latin America, South America: Brazil. For India, see Asia, South: India. For Australia see Oceania: Australia.

Most Important Documents: Look in the Index under "Important Documents -."

**Organizations**: Many of the larger, more innovative, or pioneering soy-related companies appear in the subject index – companies like ADM / Archer Daniels Midland Co., AGP, Cargill, Dupont, Kikkoman, Monsanto, Tofutti, etc. Worldwide, we index many major soybean crushers, tofu makers, soymilk and soymilk equipment manufacturers, soyfoods companies with various products, Seventh-day Adventist food companies, soy protein makers (including pioneers), soy sauce manufacturers, soy ice cream, tempeh, soynut, soy flour companies, etc.

Other key organizations include Society for Acclimatization (from 1855 in France), American Soybean Association, National Oilseed/Soybean Processors Association, Research & Development Centers (Peoria, Cornell), Meals for Millions Foundation, and International Soybean Programs (INTSOY, AVRDC, IITA, International Inst. of Agriculture, and United Nations). Pioneer soy protein companies include Borden, Drackett, Glidden, Griffith Labs., Gunther, Laucks, Protein Technologies International, and Rich Products.

**Soyfoods**: Look under the most common name: Tofu, Miso, Soymilk, Soy Ice Cream, Soy Cheese, Soy Yogurt, Soy Flour, Green Vegetable Soybeans, or Whole Dry Soybeans. But note: Soy Proteins: Isolates, Soy Proteins: Textured Products, etc.

Industrial (Non-Food) Uses of Soybeans. Look under "Industrial Uses ..." for more 17 subject headings.

**Pioneers -** Individuals: Laszlo Berczeller, Henry Ford, Friedrich Haberlandt, A.A. Horvath, Englebert Kaempfer, Mildred Lager, William Morse, etc. Soy-Related Movements: Soyfoods Movement, Vegetarianism, Health and Dietary Reform Movements (esp. 1830-1930s), Health Foods Movement (1920s-1960s), Animal Welfare/ Rights. These are indexed under the person's last name or movement name.

**Nutrition**: All subjects related to soybean nutrition (protein quality, minerals, antinutritional factors, etc.) are indexed under Nutrition, in one or more of 14 subcategories.

**Soybean Production**: All subjects related to growing, marketing, and trading soybeans are listed under Soybean Production. E.g. Soybean Production: Nitrogen Fixation, or

Soybean Production: Plant Protection, or Soybean Production: Variety Development.

**Other Special Index Headings**: Browsing through the subject index will show you many more interesting subject headings, such as Industry and Market Statistics, Information (incl. computers, databases, libraries), Standards, Bibliographies (works containing more than 50 references), and History (soy related).

**Commercial Soy Products**: All Soyinfo Center sourcebooks that focus on a specific soyfood (tofu, soymilk, tempeh, miso, etc.) or geographical area (Africa, Japan) contain extensive information about every known commercial soyfood product - a unique feature. We list the product name, manufacturer's name, address, and phone number, year and month of introduction, ingredients, weight-packaging-price, how stored, nutritional analysis, and documentation on sources of additional information on that product.

**SoyaScan Notes**: This is a term we have created exclusively for use with this database. A SoyaScan Notes Interview contains all the important material in short interviews conducted and transcribed by William Shurtleff. This material has not been published in any other source. Longer interviews are designated as such, and listed as unpublished manuscripts. A transcript of each can be ordered from Soyinfo Center Library. A SoyaScan Notes Summary is a summary by William Shurtleff of existing information on one subject.

"Note:" When this term is used in a record's summary, it indicates that the information which follows it has been added by the producer of this database.

**Asterisks at End of Individual References.**
1. An asterisk (*) at the end of a record means that Soyinfo Center does not own that document. Lack of an asterisk means that Soyinfo Center owns all or part of the document.
2. An asterisk after eng (eng*) means that Soyinfo Center has done a partial or complete translation into English of that document.
3. An asterisk in a listing of the number of references [23* ref] means that most of these references are **not** about soybeans or soyfoods.

**Documents Owned by Soyinfo Center.** Lack of an * at the end of a reference indicates that the Soyinfo Center Library owns all or part of that document. We own roughly three fourths of the documents listed. Photocopies of hard-to-find documents or those without copyright protection can be ordered for a fee. Please contact us for details.

**Document Types**: The SoyaScan database contains 51 different types of documents, both published (books, journal articles, patents, annual reports, theses, catalogs, news releases, videos, etc.) and unpublished (interviews, unpublished manuscripts, letters, summaries, etc.).

**Customized Database Searches**: This book was printed from SoyaScan, a large computerized database produced by the Soyinfo Center. Customized/personalized reports are "The Perfect Book," containing exactly the information you need on any subject you can define, and they are now just a phone call away. For example: Current statistics on tofu and soymilk production and sales in England, France, and Germany. Or soybean varietal development and genetic research in Third World countries before 1970. Or details on all tofu cheesecakes and dressings ever made. You name it, we've got it. For fast results, call us now!

**BIBLIO**: The software program used to produce this book and the SoyaScan database, and to computerize the Soyinfo Center Library is named BIBLIO. Based on Advanced Revelation, it was developed by Soyinfo Center, Tony Cooper and John Ladd.

History of Soybeans and Soyfoods: This book has a corresponding chapter in our forthcoming scholarly work titled History of Soybeans and Soyfoods (4 volumes). Manuscript chapters from that book are now available on our website, www.soyinfocenter.com.

**About the Soyinfo Center.** An overview of our publications, computerized databases, services, and history is given on our website.

**Soyinfo Center**

# HISTORY OF SOYBEANS AND SOYFOODS IN CANADA

1. Scammell (William). 1831. On sale–By the subscriber (Ad). *Courier (Saint John, New Brunswick, Canada).* Jan. 8. p. 4.
• ***Summary:*** "Small Jars East-India Ginger.
"A few dozen India Soy [sauce].
"Madeira and Port, by the doz. [dozen] or otherwise."
Note: This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in New Brunswick, or in Canada. This document contains the earliest date seen for soybean products in New Brunswick or in Canada (Jan. 1831); soybeans as such have not yet been reported.

2. Smith (William O.). 1831. Ann–From London. The subscriber has received by the above vessel–a fresh supply of genuine drugs, medicines, patent medicines; perfumery, pickles,... among which are... (Ad). *Courier (Saint John, New Brunswick, Canada).* July 23. p. 1.
• ***Summary:*** "Essence of Gorgona Anchovies, Mushroom and walnut Ketchup, Harvey's Sauce, Browning Sauce, Indian Soy [sauce], Tomato Ketchup, Sallad Oil,..."
Note: William O. Smith ran several subsequent ads for India Soy, Walnut and Mushroom Ketchup, etc. in 1832 in this newspaper. Address: No. 1, North side of the Market-square.

3. Watson (William R.). 1843. Drugs, medicines, and select groceries (Ad). *Palladium (The) (Charlottetown, Prince Edward Island, Canada).* Dec. 28. p. 4.
• ***Summary:*** "Has just received per Acadian from Greenock, and Jane Sprat from Halifax, his winter supply... Mustard, assorted Pickles, do. [ditto = assorted] Sauces, Real Indian Soy, Olives, Capers, &c..."
Note: This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in Prince Edward Island, Canada. This document contains the earliest date seen for soybean products in Prince Edward Island (Dec. 1843); soybeans as such have not yet been reported. Address: No. 14, Cheapside.

4. Bell (Lucius) & Co. 1844. Wholesale and retail grocers (Ad). *Globe (The) (Toronto, Canada).* July 9. p. 4.
• ***Summary:*** This company in Rochester, New York (on the central southern shore of Lake Ontario), is advertising in a newspaper in Toronto, Ontario, Canada (on the northeastern shore of Lake Ontario). The two cities are about 90 miles apart as the crow flies.
"We propose to keep in Rochester, an assortment of Teas, Coffees, Fruits, Spices, Sugars, &c., embracing every variety and quality that can be found in the finest establishments in the City of New York.
A long list of goods, divided into categories, is given.
"Sauces, &c. Canton Soy [Sauce], Mushroom, Walnut and Tomato Catsup, Harvey, Reading. Anchovy, John Bull, Quinn and General Sauce." Address: No. 26, Buffalo St., Second Store East of Arcade Hall, Rochester, New York.

5. Watson (W.R.). 1845. Select groceries (Ad). *Islander (The) (Charlottetown, Prince Edward Island, Canada).* Feb. 1. p. 2.
• ***Summary:*** Includes: "... Tarrogan and Chilly Vinegar [Tarragon, Chili], Tomato Sauce, Indian Soy [sauce], Mushroom Catsup,..."

6. Troughton (G.). 1850. Grocery, wine & spirit store (Ad). *Head Quarters (Fredericton, New Brunswick, Canada).* March 2. p. 4.
• ***Summary:*** "Sauces and pastes: Harvey Sauce,... Lea & Perrin's Worcestershire Sauce,... Tomato Ketchup, Mushroom ditto [Ketchup], Essence of Anchovies,... India Soy [sauce], Gorgona Anchovies,..." Address: Queen Street, Opposite the Stone Barracks, Fredericton.

7. Troughton's Grocery, Wine, & Spirit Store. 1850. Constantly on hand, at lowest rates (Ad). *Head Quarters (Fredericton, New Brunswick, Canada).* Oct. 16. p. 4.
• ***Summary:*** "Sauces and pastes: Harvey's Sauce,... Lea & Perrin's Worcestershire Sauce,... Tomato Ketchup, Mushroom Ketchup, Essence of Anchovies, India Soy [sauce], Gorgona Anchovies,..." Address: Queen Street, Fredericton.

8. T.V.P. [T.V. Peticolas]. 1855. Japan pea. *Country Gentleman* 5(15):232. April 12. Whole No. 119. Also published in The Cultivator 3(5):159. May. Series 3.
• ***Summary:*** "... on the subject of the Japan Pea, or rather Bean. I have cultivated it for the last three years, and have disseminated it from Canada to Texas. It produces abundantly in common corn ground, planted six inches apart in the row, and the rows from 18 inches to two feet apart–wide enough to hoe or use a small cultivator. When eaten a few times they are pleasant enough, but have very little flavor–better when mixed with other beans. Before cooking, they must be soaked at least twenty-four hours. They are inconvenient to use green, being so difficult to hull. Chickens are very fond of them, and hogs devour them with great gusto. I think they would do for a field crop sown broadcast in good soil."

Note 1. This is the earliest document seen (Jan. 2010) concerning soybeans in Canada or in Texas. This document contains the earliest date seen for soybeans in Canada or Texas (April 1855). These soybeans may well have been grown in Canada and/or in Texas, but we cannot be certain of that.

Note 2. This is the 2nd earliest English-language document seen (June 2009) that mentions green vegetable soybeans; it notes "They are inconvenient to use green, being so difficult to hull."

Note 3. This is the earliest document seen (Oct. 2003) that uses the word "cultivator" in connection with soybean production.

Note 4. This is the earliest document seen (July 2002) concerning the feeding of soybeans or soy products to chickens in the United States.

Note 5. Letter from Ted Hymowitz. 1994. May 18. He says this man's full name is T.V. Peticolas. He probably received his soybean seeds from A.H. Ernst. His evaluation of soybeans as a potential new crop was amazingly astute (Hymowitz 1987, p. 31). Address: Mount Carmel, [Clermont Co.], Ohio.

9. T.V.P. 1855. Japan pea. *Cultivator (The)* 3(5):159. May. Third Series.

• ***Summary:*** Reprinted from *The Country Gentleman.* 1855. April 12. p. 32. "... on the subject of the Japan Pea, or rather Bean. I have cultivated it for the last three years, and have disseminated it from Canada to Texas. It produces abundantly in common corn ground, planted six inches apart in the row, and the rows from 18 inches to two feet apart–wide enough to hoe or use a small cultivator. When eaten a few times they are pleasant enough, but have very little flavor–better when mixed with other beans. Before cooking, they must be soaked at least twenty-four hours. They are inconvenient to use green, being so difficult to hull. Chickens are very fond of them, and hogs devour them with great gusto. I think they would do for a field crop sown broadcast in good soil." Address: Mount Carmel, Ohio.

10. Lea & Perrins. 1855. Lea & Perrins' celebrated Worcestershire Sauce (Ad). *Islander (The) (Charlottetown, Prince Edward Island, Canada).* Oct. 19. p. 4.

• ***Summary:*** "Pronounced by connoisseurs to be the 'only good sauce' and applicable to every variety of dish.

"Extract of a letter from a medical gentleman at Madras [India], to his brother at Worcester. May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Sold universally by the principal dealers in Sauces.–Wholesale for Exportation by the Proprietors Lea and Perrins, 68, Broad-street, Worcester, and 19, Fenchurch-street, London. Barclay and Sons; Crosse and Blackwell, and other Oilmen and Merchants, London.

An illustration shows a bottle of Lea & Perrins' Worcestershire Sauce.

11. Harrington (W.M.) & Co. 1858. Spring supplies–1858 (Ad). *British Colonist (Halifax, Nova Scotia, Canada).* June 15. p. 1.

• ***Summary:*** "The Subscribers have completed their stock, ex White Star, London, George Bradford, Liverpool, and Roseneath, Glasgow, consisting of–English Pickles and Sauces, Anchovy Paste,... Bengal Chutney, India Soy [sauce], Sallad Oil,..."

12. Lea & Perrins. 1862. Lea & Perrins celebrated Worcestershire Sauce (Ad) *Quebec Mercury (Canada).* Jan. 2. p. 1.

• ***Summary:*** "Pronounced by connoisseurs to be the 'only good sauce' and applicable to every variety of dish.

"Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Extensive frauds. L. & P. having discovered that several of the Foreign Markets have been supplied with Spurious Imitations of the 'Worcestershire Sauce,' the labels of which closely resemble those of the Genuine Sauce, and in one or more instances the names of L. & P. forged, they have deemed it their duty to caution the public, and to request purchasers to see that the name of Lea & Perrins are upon the *Wrapper, Label, Stopper, and Bottle.*

"L. & P. further give notice, that they will proceed against any one who may infringe upon their right, either by manufacturing or vending such imitations, and have instructed their correspondents in the various parts of the world, to advise them of such infringements.

"Wholesale and for exportation by the Proprietors Lea & Perrins, Worcester, England; Crosse and Blackwell, and other Oilmen and Merchants, London.

"Quebec, Nov. 9, 1861.

A small illustration shows a bottle of Lea & Perrins' Worcestershire Sauce.

Note 1. This is the earliest document seen (Feb. 2010) concerning soybean products (Worcestershire sauce, whose main ingredient was soy sauce) in Québec. This document contains the earliest date seen for soybean products in Québec (May 1862); soybeans as such have not yet been reported.

Note 2. This is the earliest document seen (Feb. 2010) in which Lea & Perrins uses the term "will proceed against" to threaten a lawsuit.

Note 3. This ad appears about 20 times in this newspaper from 1862 to 1864.

13. Lea & Perrins. 1862. Sauce.–Lea and Perrins Worcestershire Sauce (Ad) *Quebec Mercury (Canada).* Nov. 25. p. 2.

• ***Summary:*** "Pronounced by connoisseurs to be the 'only good sauce' and applicable to every variety of dish.

"Extract of a letter from a medical gentleman at Madras [India] to his brother at Worcester. May, 1851. 'Tell Lea & Perrins that their Sauce is highly esteemed in India, and is, in my opinion, the most palatable as well as the most wholesome Sauce that is made.'

"Caution. Lea & Perrins beg to caution the public against spurious imitations of their celebrated Worcestershire Sauce.

L. & P. have discovered that several of the Foreign Markets have been supplied with Spurious Imitations, the labels closely resembling those of the genuine Sauce, and in one or more instances the names of L. & P. *forged.*

"L. & P. will proceed against any one who may manufacture or vend such imitations, and have instructed their correspondents in the various parts of the world to advise them of any infringement of their rights.

"Ask for Lea and Perrins' Sauce. Sold Wholesale and for Export by the Proprietors, Worcester; Messrs. Crosse and Blackwell; Messrs. Barclay and Sons, London; &c. and by Grocers and Oilmen universally.

"Quebec, Nov. 18, 1862.

A small illustration shows a bottle of Lea & Perrins' Worcestershire Sauce.

Note: This is the earliest document seen (Feb. 2010) by Lea & Perrins that uses the term "will proceed against" to threaten a lawsuit.

14. Photograph of the family of Daniel and Susan Zavitz, of Lobo Township, Ontario. 1867.

• ***Summary:*** This black-and-white photo (6½ by 10 inches) shows the family of which Daniel Zavitz is husband. Left to right: Charles (born 25 Aug. 1863, so about age 5), Daniel, Caroline, Samuel, Susan (wife), and Edgar Zavitz. All are dressed formally. They appear to be at home (in Coldstream, Ontario, Canada) seated in front of a metal stove around a small table. Daniel's left hand is on an open book (probably a Bible) on the table. On the right margin of the photo is printed: "J. Cooper, London" [Ontario]. Address: Ontario, Canada.

15. Photograph of the family of Daniel and Susan Zavitz, of Lobo Township, Ontario. 1869.

• ***Summary:*** This black-and-white photo (6½ by 10 inches) shows the family of which Daniel Zavitz is husband. Left to right: Samuel P., Edgar M., Susan Vail Zavitz (wife), Caroline (Cutler), Daniel, and Charles A. (the youngest,

born 25 Aug. 1863, so about age 7). All are dressed formally. They appear to be at home (in Coldstream, Ontario, Canada). Samuel, Susan, and Daniel are seated; the other three are standing. Address: Ontario, Canada.

16. *Sarnia Observer (Ontario, Canada).*1879. Farm and garden: Household recipes. May 30. p. 7.
• ***Summary:*** "Worcestershire sauce.–One quart of *thin* tomato catsup made and spiced the usual way, with the addition of cayenne pepper and a sufficient quantity of crushed garlic, added to the catsup while boiling and before it is strained, to give it a decided garlic taste. Then add enough soy sauce–to be obtained at almost any good grocery store–to make the catsup a deep chocolate color; two tablespoonfuls will probably be sufficient."

Note 1. By 1879 "soy sauce" was apparently available "at almost any good grocery store" in the area of Sarnia, in southwestern Ontario. Sarnia is located where the upper Great Lakes empty into the St. Clair River.

Note 2. This is the earliest document seen (Feb. 2010) concerning soybean products (soy sauce) in Ontario, Canada. This document contains the earliest date seen for soybean products in Ontario (May 1879); soybeans as such have not yet been reported.

17. *Daily Advertiser (London, Ontario, Canada).*1880. Medical notes and queries: The value of cereals as food. Feb. 18. p. 3.
• ***Summary:*** "In a lecture on the chemistry of food, Prof. Church gives some points in regard to diet which are suggestive and practical... Speaking of peas, beans, and various kinds of pulse, it was pointed out how much more nearly the different kinds agree in composition than the cereals do. The great drawback to the various kinds of pulse is that they are difficult to digest. They are an excellent theoretical food, according to analysis, but they are a severe tax on digestion. Of all the beans, non presents a better typical food than the Soy bean."

Lentils are also good, "but they are bitter, astringent, and not easy of digestion. It has come to be pretty well recognized that the food of man doing hard word should have flesh-formers [protein] to heat-givers [calories / starch] in proportion of 1 to 4½, and that the need of a child should have 1 to 7. Bread gives 1 to 7½... Pulse gives (taking an average) 1 to 2¼, which is far too small."

18. *Toronto Daily Mail (Canada).*1881. The days of salad. A chapter for epicures. April 6. p. 3.
• ***Summary:*** From the London Globe: "The Duke... was a great friend of Dumas the Father–Father of the best novels, travels, cookery books that were ever published." Giorgio

Ronconi, the celebrated Duke of Ferrara, sometimes used to retired to Dumas' private chambers in Paris, "where the following salad was always ready for him. Dumas himself describes it as a salad of high fantasy,... And here shall follow the great novelist's recipe for making the salad, or rather the mixture...

"'I place,' says Dumas, 'in my salad bowl for two guests the yolk of an egg, and stir it in oil till it becomes a paste. To this paste I add chervil, minced tunney, pounded anchovies, mustard of Maille, a large spoonful of soy [sauce], gherkins, and the whites of eggs, also minced. Then dilute the whole with the best vinegar I can procure, and my servant stirs it; while over all I cast a pinch of "paprico," an Hungarian pepper. And there,' says the most conceited but delicious novelist that ever lived, 'you,' meaning the world in general, 'possess the salad that so astonished poor Ronconi.'"

Note: Alexandre Dumas (père = father; 1802-1870), of France, is best known for his famous historical novels of high adventure, including *The Count of Monte Cristo* and *The Three Musketeers.*

19. Brown, W. 1882. Report of the Professor of Agriculture and Farm Superintendent. *Ontario Agricultural College and Experimental Farm, Annual Report (Guelph)* 7:126-207. For the year ending 31 Dec. 1881. See p. 199.
• ***Summary:*** In section IV, "The experimental" (p. 162), part B, "The plant" (p. 184), subsection 10, titled "Sundry small experiments," states (p. 199).

"2. The Soja beans obtained from Mr. Bruce [of John A. Bruce & Co.], of Hamilton, have done well, half crops producing fifteen bushels per acre. A low-branched bush one foot high, some individual plants had 125 pods, with two and three in each pod."

Note: This is the earliest document seen (Jan. 2010) that refers to soybeans in Canada, or in Ontario province, Canada, or to the cultivation of soybeans in Canada, or in Ontario province, Canada. This document contains the earliest date seen for soybeans in Canada, or in Ontario province, Canada, or the cultivation of soybeans Canada, or in Ontario province, Canada (spring 1881). The source of these soybeans was a Mr. Bruce of Hamilton, Ontario. We do not know when or where Mr. Bruce got his soybeans. However, we have some leads!

John A. Bruce & Co. was established in 1850– according to an ad in *Canada: A Memorial Volume* (published in 1889 in Montreal, by E.B. Biggar; see p. XV at end of book). This ad further describes the company as "Seed growers and importers, Hamilton, Ontario... Descriptive and Priced Catalogues on Application."

*The Horticulturist* (April 1865, p. 123) states: "Bruce's Great Upper Canada Seed and Nursery Establishment. Descriptive Catalog of Seeds for the Farm, the Kitchen Garden, and the Flower Garden... with brief hints on sowing, planting, cultivation, &c. John A. Bruce & Co., Hamilton, C.W."

In a 1903 report we read: "Messrs. John A. Bruce & Co., of Hamilton, Ontario," have handled leguminous crops (See Fletcher, James. 1903, "Report of the Entomologist and Botanist," p. 177, 185).

In 1906 John A. Bruce & Co. sent varieties of field pea and bitter vetch (leguminous seeds) to USDA's Bureau of Plant Industry.

Various published document show that Bruce & Co. was in business until at least 1939. Address: Prof. of Agriculture and Farm Superintendent, OAC, Guelph, Ontario, Canada.

20. *Sessional Papers–Legislature of the Province of Ontario.*1882. 10. Sundry small experiments. Vol. XIV, Part II, p. 639. Third Session of the Fourth Legislature of the Province of Ontario, Session 1882.
• ***Summary:*** Page 639: "The Soja beans obtained from Mr. Bruce, of Hamilton, have done well, half crops producing fifteen bushels per acre. A low-branched bush one foot high,..."

Note: This information is from W. Brown 1882.

21. C.A. Zavitz collection (Finding aid for archival collection). 1883. Guelph, Ontario, Canada: University of Guelph, McLaughlin Archives. 3 boxes and 1 unboxed volume (probably oversize).
• ***Summary:*** This archival collection in the Univ. of Guelph library has the call number RE1 OAC A0813. It includes Zavitz's work in both agriculture and with the Society of Friends (Quakers). Handwritten notes by C.A. Zavitz concern oat variety tests. Also includes very valuable notebooks written by Zavitz: 1884 (2), 1885 (5), 1886 (2), 1887 (1), and five undated.

Note 1. C.A. Zavitz's roll top desk is located in the O.A. C. Boardroom (Johnston 104).

Note 2. The bulk of this collection was donated on 29 Nov. 1992 by James R. Zavitz, the grandson of Charles A. Zavitz. Additional materials were donated separately by Owen Roberts. One rare book owned by Prof. Zavitz is catalogued separately in the rare books collection: *The Rural Economy of Glocestershire,* 2 vols. (1789). Address: Guelph, Ontario, Canada.

22. Zavitz, Charles A. 1885-1887. Daily journal. 3 vols. Guelph, Ontario, Canada. *
• ***Summary:*** Zavitz kept this diary while a student at Ontario Agricultural College. It is a rich source of information about his thoughts, interests, and activities. Unfortunately he stopped in early 1887, so the details of his personal life thereafter are not so readily available. Location: Archives, Univ. of Guelph Library, Ontario, Canada.

23. Photograph of the family of Daniel and Susan Zavitz, of Lobo Township, Ontario. 1890. Undated.

• ***Summary:*** This black-and-white photo (8 by 10 inches) shows the family of which Daniel Zavitz is husband. Left to right: Edgar Merritt Zavitz (residence: Coldstream). Alzina Brown Zavitz (standing, wife of Edgar from Pickering, Ontario). Susan Vail ZavitEz (seated, wife of Daniel, and mother of four children in photo). Charles A. Zavitz (center, residence: Guelph). Rebecca Wilson Zavitz (seated at front, center, wife of Charles, from Bloomfield, Prince Edward County, Ontario, daughter of Isaac Wilson). Ida Haight Zavitz (standing, wife of Samuel, from Yarmouth Twp., Elgin Co., Sparta Preparatory Meeting, daughter of Ephraim Haight and Elizabeth Chase). Samuel Pound Zavitz (standing, residence: Coldstream). Caroline Zavitz Cutler (seated on arm of father's chair; her husband, David Cutler, is deceased). Daniel Zavitz (seated in armchair, husband of Susan, father of four children in photo, born in Bertie Twp., Niagara, Black Creek Preparatory Meeting).

Note 1. James Zavitz thinks that this photograph may have been taken in June 1890 on the occasion of the marriage of Charles A. Zavitz and Rebecca Wilson, who are both seated at the center of the photo. James knows of no other wedding photo. Rebecca has on a lovely black dress. Quaker women did not spend a lot of money to make or rent a special flouncy white wedding dresses which they would never wear again, nor did and Quaker men do likewise with a tuxedo; that would not be practical. Rather, they both wore their very best plain clothes–the clothes they wore to Quaker meetings or to town. Sometimes Quakers might have a new dress or suit of clothes made for the wedding,

but afterwards they would wear it to meetings or town. This expressed their basic beliefs in practicality, plain clothes, and plain talk.

In her notes accompanying the photograph, Jane Zavitz Bond writes: This photograph is in the Canadian Yearly Meeting (CYM) archives at Pickering College, Newmarket, Ontario. The order of birth was Caroline, Samuel, Edgar, and Charles. This family prized the values as established by the Discipline of the Society of Friends (Genesse Yearly Meeting). They believed in the development of each individual's capacity to give and serve the local and larger community. Support of formal and continued education was the key to this. It was expected that each would contribute, out of training, to needs where they were! Caroline and Edgar attended Swarthmore College, near Philadelphia, Pennsylvania. Charles attended Ontario Agricultural College at Guelph. Samuel went to business school in New York and London. Local schools in Lobo township were supported by Friends as good citizens.

Edgar (editor) and Samuel (businessman) were responsible for the *Young Friends Review,* published 1886-1899 from Coldstream (a Quaker community), printed in London, Ontario. Address: Ontario, Canada.

24. Zavitz, C.A. 1891. Report of the assistant superintendent of experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 16:152-202. For the year 1890. See p. 202.
• ***Summary:*** In 1890 C.A. Zavitz, the newly appointed director of experiments, drew the attention of President Mills to two pressing needs which he believed were "of the utmost importance to the real practical bearing and greater development of the experimental work at this institution for the best interests of the farmers of Ontario.

"(1) That an experiment station building should be erected upon the college grounds where work could be accomplished during the winter months in preparing grains and fertilisers for the coming season's experimental work and for distributing over the province..."

"(2) That there be a number of branch experiment stations established throughout Ontario" because of the province's variation in both soil and climate. Address: B.S.A., Asst. Superintendent of Experiments, Ontario Agricultural College [Guelph, Ontario, Canada].

25. *Toronto Daily Mail (Canada).*1892. Theory and practice: The Ontario Agricultural and Experimental Union. Fourteenth annual meeting–Ex-students of the college on the farm. Dec. 27. p. 4.
• ***Summary:*** "Guelph, Dec. 26–The fourteenth annual meeting of the Ontario Agricultural and Experimental Union opened on the 22nd inst. in No. 1 class room at the Ontario Agricultural College. Mr. Nelson Monteith, B.S.A., president of the union, occupied the chair."

"Second day: After the reports of committees were received, the following officers were elected for the ensuing year:... Editor, Mr. C.A. Zavitz... Delegate to Central Farmers' Institute, Mr. C.A. Zavitz."

"The report on agricultural experiments was presented by Mr. C.A. Zavitz, B.S.A. He reported on co-operative work in agriculture for the last seven years. The successful experiments this year, so far heard from, were nearly 1,600, viz.,..." These experiments were conducted on 164 farms in Ontario. "Mr. Zavitz was enthusiastic in his report, and thoroughly convinced his hearers of the importance, wide extent, and thoroughness of his work."

26. *Sarnia Observer (Ontario, Canada).*1893. Feeding horses: Give them more nitrogenous food and less corn–Work horses. July 14. p. 4.
• ***Summary:*** "One sees the finest draft horses in the streets of English cities. Those equine monsters, the brewers' horses, black as coal, sleek and spirited, are strong enough to walk off with ease with a load of six or seven tons. The solid food of these giants of their race mainly consists of crushed oats or barley and beans, with sheaves of green barley and tares [perhaps the common vetch, *Vicia sativa,* a legume], in addition to the accustomed hay." Sometimes a dozen eggs are added to the regular food. "This is an excellent thing for the skin, and the coat glistens like satin under this kind of feeding.

"These horses have the advantage of the richest kind of diet in their beans. These contain as much nitrogen as lean beef, and for the restoration of wasted muscle caused by hard work the nitrogenous elements of food are specially useful. We have no such food for our horses on this side of the world [in Canada]. Our climate seems to be unfavorable for the growth of the crop, but we have a substitute almost precisely constituted in the dried brewers' grains which have recently come into the market. Peas have nearly the same composition as beans and might be used as a substitute for them, but the southern [U.S.] cow pea is a bean, and the soja bean, closely related, is equally rich in this needed nitrogenous matter. This bean is the choice food for horses in India and is well worth cultivation here as a partial substitute for our to starchy corn."

27. Mills, James. 1894. Report of president. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 19:3-18. For the year 1893. See p. 6-8.
• ***Summary:*** In the section titled "Changes in staff," president Mills notes (p. 6): "Prof. Shaw left for Minnesota at the same time [1 Oct. 1893]; and his place was filled by making C.A. Zavitz, B.S.A., head of the Experimental Department, appointing G.E. Day, B.S.A., Lecturer on Agriculture, Live Stock, etc., and placing Wm. Rennie of Swansea in charge of the farm. As Farm Superintendent, Mr. Rennie devotes his whole time to the management of

the farm and live stock, and the control and oversight of men and students at work. By this arrangement, the office of Farm Foreman has been dispensed with..."

In the section titled "Experimental Department," president Mills states (p. 7-8): "Our experimental work has been carried on with vigor throughout the year, especially in testing varieties of grain, dates of seeding, and methods of cultivation. On the plots at the College, Mr. C.A. Zavitz, our experimentalist, tested 70 varieties if winter wheat, 73 of spring wheat, 73 of barley, 133 of oats, 81 of peas,..." Mr. Zavitz also supervised some live stock experiments: Two experiments with 6 steers, one experiments with 4 cows, and 3 experiments with 160 lambs.

"For detailed information on the nature and results of all these experiments, see report of the Experimentalist in Part VIII. of this volume." Address: President, Ontario Agricultural College [Guelph, Ontario, Canada].

28. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report.*1894. Appendix VI. Meetings of farmers' institutes. 1894. 19:219-22.
• ***Summary:*** These meetings are held in January of each year and divided geographically into various divisions. Division 2 is the responsibility of "C.A. Zavitz, B.S.A., L. Patton and D.W. Beadle." A table shows that from Jan. 2 to Jan. 19 they held eleven meetings of one or 1½ days each (the one day meetings started at 10:30 a.m. and the 1½ day meetings started at 1:00 p.m.) in the following towns: Parkhill, Forest, Brigden, Petrolea, Appin, Glanworth, Brucefield, Exeter, Coldstream, St. Mary's, and New Hamburg. The county in which each town is located is also given.

29. Zavitz, C.A. 1894. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 19:53-130. For the year 1893. See p. 79.
• ***Summary:*** The section titled "Beans, comparative test of 17 varieties" (p. 79), states: "In 1893, 17 varieties of beans were grown on plots side by side... Each plot was one one-hundred and-sixtieth of an acre. The beans were planted in rows 25 inches apart on May 22nd..."

A table shows the names of the 17 varieties and the yield of each. "Yellow Soy" yielded 20.4 bushels/acre and Edamaine [Edamame] yielded 7.7 bushels/acre. The seed of the Yellow Soy was obtained from the United States, and that of the Edamaine [sic], a fodder plant, was obtained from the Kansas Experiment Station [from Prof. Charles C. Georgeson]. "Other varieties [sent by Georgeson] which did not mature their seed were Yamagata, Cha Daidzie [sic, Yamagata Cha-Daidzu], Kiyusuke Daidzie [sic, Kiyusuke Daidzu; both soy bean varieties, the first having a brown seed coat] and Black Podded Adyuski [sic, Adzuki]. These varieties will be tested again in another year.

Note 1. This is the 2nd earliest document seen (Jan. 2010) that clearly refers to soybeans in Canada, or in Ontario province, Canada, or to the cultivation of soybeans in Canada, or in Ontario province, Canada (May 1893). The source of these soybeans was the United States, probably from Kansas.

Note 2. This is the earliest document seen (Jan. 2010) by or about C.A. Zavitz in connection with soybeans. Zavitz apparently does not realize that Yamagata Cha-daidzu and Kiyusuke daidzu are the names of soja bean varieties (see p. 79).

Note 3. This is the earliest document seen (Jan. 2010) in which C.A. Zavitz states that he obtained soybeans from Kansas. Between 1890 and 1893 the Kansas Agricultural Experiment Station and Prof. Charles C. Georgeson who worked there published more than twenty articles on soybeans; Prof. Zavitz probably read at least one of these before he contacted Kansas to request soybean seeds.

Note 4. Bound at the back of this volume is the 15th "Annual Report of the Ontario Agricultural and Experimental Union." Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

30. Zavitz, C.A. 1894. Report of experiments in agriculture. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 19:246-69. For the year 1893.
• ***Summary:*** This report is part of the 15th "Annual Report of the Ontario Agricultural and Experimental Union," bound at the back of this volume. The 15th annual meeting of the Ontario Agricultural and Experimental Union was held at the Agricultural College [OAC], Guelph, on December 21st and 22nd, 1893, commencing at 10 a.m. on the 21st. The report describes experiments conducted by Ontario farmers in cooperation with the Ontario Agricultural College.

In the section titled "Report of committees," Mr. Zavitz reported (p. 223) that he and Mr. E. Lick had visited the Minister of Agriculture and requested that the "Union" grant be increased from $400 to $700 per year. They were very kindly received by the Hon. Mr. Dryden, "who spoke very favorably of the work being done by the Association and also increased the grant to $650."

Zavitz begins his report (p. 246): "There were thirteen distinct co-operative experiments in agriculture conducted by the Association during the past year, two were with fertilizers, three with fodder crops, three with root crops and five were with grain crops. Two years ago 2,642 packages of fertilizers and seeds were distributed, one year ago 5,688 packages were distributed and during the present year no less than 7,181 packages were sent out to members of the 'Union' and other interested farmers throughout the province. Nothing was sent out but choice material, both in regard to quality and variety. The seeds and fertilizers were forwarded to twelve hundred experimenters over Ontario, and not one complaint has been received from the

experimenters regarding the material of the material sent or the manner of preparing the same. The majority of those who carried on experiments in 1893 forwarded us reports after the crops were harvested..."

"The following circular was sent out in February to members of the Association, previous experimenters and to others who applied for seed of different kinds: 'Dear sir,– The members of the Ontario Agricultural and Experimental Union, along with other interested farmers over Ontario, are carrying out a system of co-operative experiments in agriculture. This work was started upon its present plan in the spring of 1886 with twelve experimenters, who received the grains and fertilizers, carried out the necessary instructions, and reported the results at the end of the season. For the first two or three years the experiments were confined almost entirely to the ex-students of the Agricultural College, but as many other farmers expressed a desire to join in the work, the invitation was extended to them also... on the condition that they would be careful to follow the necessary instructions and report the results of the tests after harvest. The work has steadily increased... In 1891 there were 2,642 plots and in 1892 there were upwards of 5,000 plots used for these co-operative tests over Ontario."

A table shows the number of promising varieties of each crop tested, the number of plots for each, and the size and shape of each plot–typically 2 rods by 1 rod (0.0125 square acres; 1 rod = 5.50 yards, 16.5 feet, or 5.029 meters). Soy is not mentioned. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

31. Thompson (T.) and Son Co. 1894. We might give you a much longer list than this one... (Ad). *Evening Star (Toronto, Canada).* June 21. p. 4.
• ***Summary:*** Groceries:... "Tomato Catsup 10¢, large bottle. Worcestershire Sauce 8¢ bottle. Epps' Cocoa 10¢ package."

Note: This is the earliest document seen (Jan. 2010) that mentions Worcestershire sauce (whose main ingredient was soy sauce) in Canada.

32. *Chicago Daily Tribune.*1894. Japanese substitute for coffee. The soy bean declared to be equal to the genuine article (Abstract). July 7. p. 14.
• ***Summary:*** From New York *Sun:* "The agricultural experiment station of the Purdue University of Indiana has issued a circular setting forth the qualities of the soy, or soja bean and advocating its use as a substitute for coffee. The soy bean (soja hispida) is a Japanese plant which can be grown in this country.

Note: This is a summary of: Plumb, Charles S. 1894. "A substitute for coffee." *Purdue University (Indiana) Agric. Exp. Station, Newspaper Bulletin* No. 6. 4 p. May 9.

To that is added new information about chicory. "Inquiry among coffee merchants in this city discovered that the soy bean as a substitute for coffee was not commercially or otherwise known here. According to an expert who has been a coffee taster for nearly a quarter of a century, chicory is the only thing which can be considered a substitute for coffee. By substitute he means adulterant, using the word in a good sense... Chicory,... mixed with a good grade of coffee is a better and more wholesome drink than some of the low-grade coffees. The expert said that while he and his partners sold pure coffee to their customers unless they ordered otherwise, they used coffee mixed with chicory themselves.

"Chicory, although considered the best adulterant, is not the only one. Several of the cereals play a part in the preparation of cheap coffee, if they do not pretend to be substitutes. It is said that the entire Canadian pea crop, and a large part of the Michigan crop are devoted to the adulteration of coffee. Rye and barley are also used as adulterants."

33. Mills, James. 1895. Report of president. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 20:ix-xxiv. For the year 1894. See p. xv-xvi.
• ***Summary:*** In the section titled "Experimental plots, etc." president Mills draws Zavitz' work to the attention of the government via a table which shows the growth in the number of plots used in experimental work from 1886 to 1894. That number grew from 56 in 1886, to 464 in 1889, to 1,045 in 1891, to 1,705 in 1894. President Mills also pointed out that during the last four years (1890 to 1894) the Experimental Department had distributed over 23,000 packages of choice grain throughout Ontario. province. He concluded that section: "I commend the report of Mr. Zavitz, our experimentalist, in Part IV of this volume, as one of the most valuable reports ever issued by our experimental department."

A photo (facing p. viii) shows the college officer and staff, including Prof. Zavitz. Address: President, Ontario Agricultural College [Guelph, Ontario, Canada].

34. Zavitz, C.A. 1895. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 20:63-128. For the year 1894. See p. 86.
• ***Summary:*** In the section titled "Beans, comparative test of 13 varieties" (p. 85-86), a table shows that two soy bean varieties were tested for yield in 1893 and 1894. Yellow Soy produced the equivalent of 20.4 bu/acre in 1893 and 15.56 bu/acre in 1894, for a 2-year average of 17.98 bu/acre. Edamaine [sic, Edamame] produced the equivalent of 7.6 bu/acre in 1893 and 6.94 bu/acre, for a 2-year average of 7.44 bu/acre. For Yellow Soy, a measured bushel weighed 59.13 lb and Yellow Soy yielded 1.82 tons/acre of straw. For Edamaine, a measured bushel weighed 59.00 lb and Edamaine yielded 1.19 tons/acre of straw.

Bound at the back of this volume is the 16th "Annual Report of the Ontario Agricultural and Experimental Union" (p. 243-301). In a "Report of experiments in agriculture," presented by C.A. Zavitz, B.S.A., Director, Ontario Agricultural College, Guelph (p. 276-301), 12 experiments on various crops and soils are described; soy is not mentioned. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

35. *Evening Star (Toronto, Canada).*1895. The label on the bottle: Crosse & Blackwell, and Lea & Perrin may be heard from. Said to be on the trail of those who refill bottles: An effort to be made to stop the fraud. March 21. p. 1.
• ***Summary:*** "There is a species of fraud that has been practiced generally all over, that will likely before long be suppressed, for steps have already been taken in that direction, not only in Toronto, but also in other parts of the province."

An Englishman is here in the interest of several English sauce and pickle manufacturers, who think that their bottles and their labels are being too freely used to hold bulk articles of an inferior quality.

The label and the bottle: You have noticed in restaurants and hotels, even of good name, that the bottles containing Worcester sauce, and Crosse & Blackwell's pickles have labels that look as though they had been roughly handled," and that the contents of the bottle is of inferior quality.

Many of the people who fill these trade-marked bottles are apparently unaware that what they are doing is illegal. The Englishman is making a list of the names and addresses of the proprietors of such establishments.

36. *Evening Star (Toronto, Canada).*1895. Ketchups–pickles. Recipes for making choice relishes. July 13.
• ***Summary:*** Recipes are given for: Cold tomato ketchup. Tomato soy. Neither recipe calls for soy as an ingredient.

37. *Prairie Farmer.*1895. New fodder crops. 67(41):7. Oct. 12.
• ***Summary:*** The article begins: "The experiment station at Guelph [Ontario], Canada, has been experimenting with some new fodder plants. A report of the work says: 'Several specimens of new and valuable fodder plants are in the display, among which the following may be mentioned: The Yellow Soy bean, which is one of the best of fifteen varieties of this plant brought from Japan to the state of Kansas a few years ago, and which were obtained by the Agricultural College from that State three years ago. It produces one of the richest grains known among all cultivated plants. It is used to a certain extent for green fodder and also allowed to ripen for the grain. It has been found to thoroughly mature in this climate."

Note: The report to which this article refers is probably: Zavitz, C.A. 1894. "Report of the experimentalist." *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 19:53-130. For the year 1893. See p. 79.

38. Zavitz, C.A. 1896. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 21:191-269. For the year 1895.
• ***Summary:*** In the section titled "Beans–Comparative test of 13 varieties" (p. 218), a table shows that two soy bean varieties were tested for yield in 1893, 1894, and 1895. In 1895 they were sown on June 3 and again on June 24. Yellow Soy produced the equivalent of 20.4 bu/acre in 1893, 15.56 bu/acre in 1894, and 12.30 bu/acre in 1895, for a 3-year average of 16.09 bu/acre. Edamaine [sic, Edamame] produced the equivalent of 7.6 bu/acre in 1893, 6.94 bu/acre in 1894, and 7.79 bu/acre in 1895, for a 3-year average of 7.44 bu/acre.

In the section titled "Fodder crops–8 varieties," a table (p. 262) includes Yellow Soy Beans. Average height of crop: 22.8 inches. Average yield per acre: 11.26 tons. General appearance as a valuable crop for fodder purposes: 8 out of 10 (where ten is the least valuable). Relished by cattle when fed in the stable: 3 out of 10 (where 10 is the least relished).

Bound at the back of this volume is the 17th "Annual Report of the Ontario Agricultural and Experimental Union" (p. 345-432). Zavitz's long and detailed report is on pages 366-93, but soy is not mentioned. This latter report is a summary of trials by farmers on their farms; it went to all cooperating farmers. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

39. *Farming (Toronto, Ontario, Canada).*1896. Mr. C.A. Zavitz. 14(4):292-93. Dec.
• ***Summary:*** "Mr. C.A. Zavitz, of the Ontario Agricultural College, is perhaps, for so young a man, the most widely know agriculturalist in the province. As experimentalist to the Ontario Agricultural College, secretary of the Agricultural and Experimental Union, and director of co-operative experiments in agriculture for Ontario, Mr. Zavitz is undoubtable doing a work which directly brings him into touch with more farmers in their actual business as farmers than any other man in the province. Mr. Zavitz was born in 1863, at Coldstream, Middlesex county, where his father still lives. Having received a good public and high school education he attended the Agricultural College, where he spent three years and had a most brilliant career, not only taking a full part in all the wholesome student-life of the college, but also pursuing his studies so well that he gained enough of prizes to establish for himself a first-class scientific library.

"Immediately at the closing of his college courses in June, 1886, Mr. Zavitz was appointed assistant superintendent of the experimental department of the

college. After serving in this capacity for seven years he was appointed to the position of experimentalist, which office he still holds. But Mr. Zavitz is almost as well known for his work in connection with the Ontario Agricultural and Experimental Union as he is for his work directly connected with the college. For nine years he has been editor to the union, and for ten years secretary of the committee on co-operative experiments, and for the same length of time director of the experiments.

"When Mr. Zavitz first became connected with the experimental work of the college there were only fifty-six field plots in the experimental department, and there was no co-operative experimental work conducted in Ontario. Since that time the whole system of experimental work has been a rapid but also a sustainable growth, until now there are about 2,200 field plots in the experimental department of the college, and 11,124 plots in connection with the co-operative work of the Experimental Union, the latter of which are located on 2,260 different farms situated in as many different parts of Ontario.

"During the last ten years the publication of the results of these experiments has taken up 44 distinct bulletins, 580 pages of the annual reports of the O.A.C., and 180 pages of the annual reports of the Agricultural and Experimental Union. Mr. Zavitz is an enthusiastic worker in any sort of work that he takes up. In institute work, for example, he has taken part in no fewer than 220 separate sessions. He has also done a great deal towards placing the agricultural work of the college before the public by means of exhibits at leading fairs, and the very striking and attractive exhibit of Ontario agriculture which was made at the World's Fair, Chicago [Illinois], was designed and arranged by him."

Contains a portrait photo with the caption: "C.A. Zavitz, B.S.A., Experimentalist, O.A.C." He looks very youthful despite his complete baldness and a large mustache.

40. Zavitz, C.A. 1897. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 22:117-202. For the year 1896. See p. 193-94.
• ***Summary:*** The section titled "Fodder crops" (p. 193-94) contains a table showing the results of eight kinds of crops for two years. Each plot was 1/100 of an acre, and the experiment was conducted in duplicate each year. Concerning Yellow Soy Beans: Average height of crop in 1896: 25.0 inches. Average height during two years (1895 and 1896): 23.9 inches. Average yield per acre in 1896: 6.85 tons. Average yield per acre during two years (1895 and 1896): 9.06 tons.

Note: Rape produced nearly twice as much green crop per acre as any other crop–18.28 tons in 1896. Soy beans gave the fourth best yields. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

41. *Stanstead Journal (Rock Island, Stanstead, Quebec, Canada).*1897. Farm, field and garden: A new fodder crop. June 3. p. 2.
• ***Summary:*** "The soja bean is one of the newer fodder plants that are not sufficiently appreciated, according to The American Agriculturalist, authority for the following: The soja bean is a leguminous or cloverlike plant, which seems to possess great facility for getting its nitrogen from the air. The dry matter in either the green fodder or straw of the soja bean contains twice as much fat and protein as in fodder corn, while the grain is hardly exceeded in richness by cottonseed meal. Indeed, it is probably true that 'these beans are the richest known vegetable substance,' and as they can be raised in any climate or soil that will mature corn, this crop enables the northern farmer to raise concentrated feed instead of buying it.

"The medium green variety is best for forage, being leafy and succulent. In fairly fertile soil it will produce 10 to 12 tons of green fodder per acre. It should be sown in drills 2 1/2 feet apart, using 1 to 1 1/4 bushels of seed per acre. Sow about corn planting time and cultivate freely early in the season. It will produce a valuable fodder for stall feeding in August or early September, to be fed green or put into the silo in the proportion of one part soja bean to two parts of corn. Such silage is a balanced feed for milk cows. The black variety is a good fodder plant, but not equal to the green. Both kinds will ripen seed wherever the larger kinds of corn mature. Owing to the wonderful root development of the medium green variety, it has an admirable effect on the soil when the stubble is plowed under. Like the notion of alfalfa on land adapted to that crop, the soja bean brings to the upper status of soil plant food from below."

Note 1. This is the earliest document seen (Feb. 2007) concerning soybeans / soya beans in connection with (but not yet in) Quebec.

Note 2. Stanstead is a town in the Eastern Townships of Quebec. Stanstead is located on the Canada-United States border across from Derby Line, Vermont.

42. *Consular Reports [USA].*1897. Tariff of Canada, 1897. 55(205):151-232. Oct. See p. 159. [Eng]
• ***Summary:*** This new Canadian tariff comes with an index. Page 159: "67. Pickles, sauces and catsups, including soy [sauce], thirty-five per cent ad valorum."

43. *Stanstead Journal (Rock Island, Stanstead, Quebec, Canada).*1897. Dairy and creamery. Dec. 2. p. 2.
• ***Summary:*** "Cowpea hay and soja bean contain more protein or nutritious elements than clover does. Cowpeas are 50 per cent richer in protein than wheat bran is, while

soja beans are richer even than linseed meal in this milk and muscle making element."

44. Zavitz, C.A. 1898. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 23:153-213. For the year 1897.
• ***Summary:*** The section titled "Miscellaneous crops" at the end of this Report (p. 212-13) states: "Besides the systematic experiments which have been reported upon in the foregoing table, there were quite a number of minor experiments, the result of which cannot be place in tabulated form to advantage. Under the heading might be mentioned experiments with flax, hemp, pea-nuts, ground almonds, horse beans, soja beans, tares, winter rye, winter barley, Speltz spring wheat, sand buckwheat, prickly comfrey, schaline, flat pea *(Lathyrus Sylvestrus)*, collards, teosinte, ramie, Australian salt bush, lupines, lentils, banana field beans, cow peas, sweet clover, chicory, field pumpkins, and field squashes." This is the only place that soja beans or soy beans are mentioned.

The Conclusion (p. 213) notes: "The plots, which now number upwards of 2,000, were admired by the thousands of farmers who visited our College during the past summer." Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

45. Grange Wholesale Supply Co., Ltd. 1898. Grocery specials (Ad). *Evening Star (Toronto, Canada).* Feb. 15.

• ***Summary:*** "Holbrook's Worcestershire Sauce (Limited) (United States of America and Canadian rights) has been formed with a share capital of £100,000... to acquire the trading rights in the sale of 'Holbrook's Worcestershire Sauce' for the United States of America and Canada from the Birmingham Vinegar Brewery Company, 1897 (Limited)."

48. Saunders, Wm. 1898. Report of the director and acting agriculturist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 5-89. For the year 1897. See p. 39. Appendix to the Report of the Minister of Agriculture.
• ***Summary:*** The section titled "Experiments with Soja beans *(Soja hispida)* (p. 39) begins: "The Soja or Soya bean is an annual leguminous plant, somewhat resembling the upright varieties of cow pea. These beans are extensively used in Japan as food, both for men and animals. They may also be used as a soiling crop, as hay, and as ensilage. There are several varieties of these beans, some of which are much earlier than others, one late variety was tried which appears to be of little or no value, and one early variety which gave a large crop and promises to be exceedingly useful." The soil and the late variety are then discussed.

"Early Soja beans. These were received from Peter Henderson & Co., seedsmen of New York, in the spring of 1897." Plants were sown May 25. Vines were well podded at harvest. The 12 x 15 foot plot yielded the equivalent of 15 tons 855 pounds of fodder per acre. "As this plant is said to endure hot, dry weather, it is hoped that it may be found useful to grow for ensilage in those districts where horse beans have not succeeded. As a nutritious and nitrogenous food for animals, the analyses which have been published of this plant, show that it compares favorably with the horse bean. We hope to give this promising fodder plant a more extended trial during the coming season."

Note: This is the earliest document seen (Aug. 2000) that contains a systematic description of the testing of soybean varieties in Canada–first conducted at the Central Experimental Farm in Ottawa, Ontario province. Address: Director, LL.D., F.R.S.C., F.L.S., Experimental Farms, Ottawa, ONT, Canada.

49. Zavitz, C.A. 1899. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 24:119-83. For the year 1898. See p. 174, 181.
• ***Summary:*** The section titled "Fodder crops" (p. 174) contains a table listing six varieties of fodder crops that have been tested for 4 years in succession on plots of 1/100 acre in size. One of the crops was Yellow Soya Beans. Average height of crop in 1898: 23.0 inches. Average height in four years: 25.5 inches. Average yield per acre in 1898: 8.07 tons. Average yield per acre in four years: 8.52 tons. Egyptian peas gave the largest average yield of green crop per acre in 4 years (9.0 tons), followed by Grass peas (8.88). "The Yellow Soya bean, which has proven to be one of the best soja beans which have been grown at this place, occupies third place in production of green crop per acre" [8.52 tons].

In the section titled "Miscellaneous crops" we read (p. 181): "Soya, Soja, or Japanese beans. Five varieties of Japanese beans have been grown for two years in our experimental grounds. Most of these varieties were brought out from Japan by Prof. Brooks of Amherst University,

Massachusetts. Some of them are doing well in the State of Massachusetts. They produce grain which is the richest of any produced on the farm. Our experiments, so far, are not of sufficient extent to justify our saying much in regard to the place these beans are likely to occupy in the future of agriculture in Ontario. It might be stated, however, that in yield of grain per acre, the Yellow Soya beans, the seed of which we originally obtained from the state of Kansas, stands highest, and that the Early White, Medium Black and Medium Green gave yields in the order named. The seed of the last three were secured from Prof. Brooks. In yield of green crop per acre the largest returns were secured from the Yellow and from the Medium Green varieties of Soya beans." Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

50. *Examiner (Sherbrooke, Quebec, Canada).*1899. Farm and garden: The soy bean. Cultivated like corn, the Medium Early variety recommended. July 21. p. 3.
• ***Summary:*** "The soy bean is one of the staple crops of Japan which is now becoming quite commonly grown in this country." Discusses the findings of Prof. Rane at the New Hampshire Agric. Exp. Station. An illustration shows three varieties of soy beans–early, medium, and late.

51. Bedford, S.A. 1899. Experimental farm for Manitoba. *Annual Report of the Experimental Farms (Ottawa, Canada)* p. 271-325. For the year 1898. See p. 298-99.
• ***Summary:*** The section titled "Experiments with fodder crops" (p. 298) states: Early in the season, seed of Japanese Millet, Early Soja Beans and Horse Beans were received from the Director with instructions for sowing. The chief object in view in these tests was to gain information as to the relative usefulness of these plants for fodder purposes in this climate, and to ascertain the weight of crop obtainable from each when sown in different ways."

The section titled "Early soja beans" (p. 298-99) states: "This plant can probably be utilized as a soiling crop also for hay and ensilage. During the past season the Early Soja Beans have not proved as productive as horse beans here... There were only a very few plants with pods on, and the pods were only partly grown." A table shows the "Yield of early soja beans sown at different distances." These beans were planted in three plots (each 1/20 acre) in rows. The yield of green matter per acre ranged from 7 tons 1,400 lb to 8 tons, 560 lb. The lowest yield was from plants sowed 3 feet apart, and the highest yield from plants sowed 2 ft apart.

Note: This is the earliest document seen (Jan. 2009) concerning soybeans in Manitoba province, Canada, or the cultivation of soybeans in Manitoba province. This document contains the earliest date seen for soybeans in Manitoba province, or the cultivation of soybeans in Manitoba province (1898). The source of these soybeans was probably the Central Experimental Farm in Ottawa, and was probably the same material reported by Wm. Saunders in 1898 and 1899. The Central Experimental Farm, in turn, got its soybeans from Peter Henderson & Co., seedsmen of New York, in the spring of 1897. Address: Superintendent, Experimental Farm, Brandon, MAN, Canada.

52. MacKay, Angus. 1899. Experimental farm for the North-West Territories. *Annual Report of the Experimental Farms (Ottawa, Canada)* p. 327-73. For the year 1898. See p. 347.
• ***Summary:*** The section titled "Early soja beans" (p. 347) states: "Three plots were first sown May 15 and cut by frost May 27. They were sown again on May 28th. The first plot was sown in drills 2 feet apart, the second 2½ feet apart and in the third the drills were 3 feet apart. All the plots made a fair growth and were just forming pods when destroyed by frost on September 8th." The frosted beans were weighed after cutting. The highest yield (1,650 lb/acre) was obtained from seeds planted in drills 2 feet apart. "The weights of these frosted vines gives scarcely a fair idea of what the weights would have been had frost come later."

Note 1. According to a letter dated 8 March 1991 to Soyfoods Center from R.K. Downey (Head Oilseeds Section, Agriculture Canada Research Station, 107 Science Crescent, Saskatoon, Saskatchewan, S7N 0X2, Canada. Phone: 306-975-7014), in 1898 "the Northwest Territories included Saskatchewan and Alberta, and parts of Manitoba. Saskatchewan became a province in 1905. Indian Head is now a town in south Saskatchewan province, 44 miles east of Regina, on the #1 highway [highway #1, the Trans-Canada Highway] between Regina and Winnipeg. Indian Head was one of the first Experimental Farms established in western Canada by the Experimental Farm Service which is now the Research Branch of Agriculture Canada. I think I can safely say that the source of the soybeans grown at Indian Head would have been the Central Experimental Farm in Ottawa, and would have been the same material as reported by Wm. Saunders in 1898 and 1899."

Note 2. We know of no record showing that soybeans have ever been grown in what is today the Northwest Territories of Canada, the southern border of which is 60º north latitude. This may be too far north for soybeans to mature. Indian Head, by comparison, is located at about 50º north latitude. Yet it is interesting to note that in Sweden, soybeans have been grown successfully at Uppsala (60º), Fiskeby-Norrköping 58.5º, and the Kalmar-Oland region (56-57º; here they are grown commercially).

Note 3. This is the earliest document seen (Jan. 2010) concerning soybeans in Saskatchewan province, Canada, or the cultivation of soybeans in Saskatchewan province. This document contains the earliest date seen for soybeans in Saskatchewan province, or the cultivation of soybeans in Saskatchewan province (15 May 1898). The source of these

soybeans was probably the Central Experimental Farm in Ottawa, Ontario, Canada, which received their soybeans from Peter Henderson & Co., seedsmen of New York, in the spring of 1897 (see Saunders 1898).

Note 4. Mr. Angus MacKay was the first superintendent of the experimental farm in the Northwest Territories, from 1888 to 1913. He accompanied Dr. William Saunders when Saunders chose the site for the new farm. MacKay had moved to the Indian Head area in 1882 and had farmed there since that time. In May 1887, Mr. MacKay was invited by the Minister of Agriculture, the Hon. John Carling, to spend some time at the Central Experimental Farm in Ottawa, to become better acquainted with the aims of the experimental farms (W.E. Johnson and A.E. Smith. 1986. *Indian Head Experimental Farm, 1886-1986.* Research Branch, Agriculture Canada. Historical Series No. 23. p. 10). Address: Superintendent, Experimental Farm, Indian Head, Assiniboia, NWT, Canada.

53. Robertson, R. 1899. Experimental farm for the Maritime Provinces. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 241-61. For the year 1898. See p. 255.

• ***Summary:*** The section titled "Experiments with soja beans" (p. 255) states: "The seed used in these experiments was of a very early variety of soja bean from Japan, sent by the Director. The experiments were planned with the object of finding out the best distance apart for growing this variety of bean, and also its value as a forage crop... The seed was sown 5th June." The best yield, 5 tons 600 pounds, was obtained by sowing the beans in drills 2 feet apart. Distances of 2.5 and 3 feet gave lower yields.

Note 1. This is the earliest document seen (Jan. 2010) concerning soybeans in Nova Scotia province, Canada, or the cultivation of soybeans in Nova Scotia province. This document contains the earliest date seen for soybeans in Nova Scotia province, or the cultivation of soybeans in Nova Scotia province (5 June 1898). The source of these soybeans was Japan.

Note 2. Robertson was the first superintendent of the experimental farm for the maritime provinces, at Nappan, Nova Scotia, serving from 1897-1913. Address: Superintendent, Experimental Farm, Nappan, Nova Scotia, Canada.

54. Saunders, Wm. 1899. Report of the director and acting agriculturist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 5-91. For the year 1898. See p. 51.

• ***Summary:*** The section titled "Experiments with Soja beans *(Soja hispida)"* (p. 51) states: "The Soja or Soya bean was first grown at the Central Experimental Farm as a fodder plant in 1897, when two varieties, a late and an early sort were tested. The early variety, the seed of which was obtained from Peter Henderson & Co., seedsmen, of New York, proved very promising and produced on the small plot grown a weight of fodder equal to 15 tons 855 lb per acre. In this case the beans were sown in rows 9 inches apart. Further experiments have been tried with this early ripening Soja bean during the past season, when two sets of plots were sown at different dates and of different widths in the rows with the object of finding out the best time to plant and the most profitable method of planting."

"From these experiments it would appear that the best results may be looked for from planting these beans about the middle of May in drills 14 inches apart."

Note: Wm. Saunders was director of the entire system of experimental farms across the Dominion of Canada. But he was located at, and did his work at, the Central Experimental Farm in Ottawa, Ontario. Address: Director, Dominion Experimental Farms, Ottawa, ONT, Canada.

55. Sharpe, Thomas A. 1899. Experimental farm for British Columbia. *Annual Report of the Experimental Farms (Ottawa, Canada)* p. 375-412. For the year 1898. See p. 392.

• ***Summary:*** The section titled "Soja beans" (p. 392) states: "These were sown in drills at different distances apart. The growth was from 35 to 40 inches high... The branches were well loaded with pods containing from two to four beans each. This crop requires a longer season to ripen the bean, but it makes a fine fodder for green feed, the cattle and horses preferring it to any other food. All of it was fed green as our silo was full and the weather was unfavourable for curing it" [to make hay]. The highest yield from 3 plots was obtained from a variety planted in drills 2 feet apart. Sown on April 27, the plants were cut on Oct. 5, when the beans were in a soft green state. The straw was 30-40 inches long and the yield of fodder was 6 tons and 800 lb per acre.

Note 1. This is the earliest document seen (Jan. 2009) concerning soybeans in British Columbia, Canada, or the cultivation of soybeans in British Columbia. This document contains the earliest date seen for soybeans in British Columbia, or the cultivation of soybeans in British Columbia (27 April 1898). The source of these soybeans was probably the Central Experimental Farm in Ottawa, and was probably the same material reported by Wm. Saunders in 1898 and 1899. The Central Experimental Farm, in turn, got its soybeans from Peter Henderson & Co., seedsmen of New York, in the spring of 1897.

Note 2. The last section on p. 392, titled "Experiments with clover seed inoculated with Nitragin and without Nitragin," contains an early reference to the use of this commercial product. Address: Superintendent, Experimental Farm, Agassiz, BC, Canada.

56. Shutt, Frank T. 1899. Report of the chemist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 123-165. For the year 1898. See p. 124, 147-48.

• ***Summary:*** The section titled "Forage plants, fodders and feed stuffs" (p. 124) states: "3. Soja beans as a forage crop for the silo. This is practically a new field crop and has been recommended for ensiling with Indian corn to supply nitrogenous matter and thus make the ensilage nearer a 'balanced' ration. Analyses are given depicting the composition of the beans grown under different methods of seeding and culture."

The section titled "Soja Beans *(Soja hispida)"* (p. 147-48) states: "During the season of 1897, this annual legume was first tried as a field crop on the Central Farm. The results obtained gave promise of it becoming a valuable fodder for siloing in conjunction with corn." Tables show: (1) "Soja beans–Percentage composition of fresh material." (2) "Percentage composition of legumes" (mostly in bloom) including soja beans, alfalfa, bokhara clover, broad windsor beans, cowpea, English horse beans, serradella, and telephone beans. Address: M.A., F.I.C., F.C.S., Chemist, Experimental Farms, Ottawa, ONT, Canada.

57. *Examiner (Sherbrooke, Quebec, Canada).*1900. Farm and garden: Facts from the field. Soy bean stands drought, defies bugs and is richest of feed. Oct. 15. p. 3.
• ***Summary:*** "The Kansas experiment station began raising soy beans in 1889 and has raised them every year since, in 1899 having 70 acres in this crop." A long summary of an article about soy beans in Kansas is given.

58. Bedford, S.A. 1900. Experimental Farm for Manitoba. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 283-335. For the year 1899. See p. 310.
• ***Summary:*** The section titled "Experiments with early soja beans and horse beans" (p. 310) states: "A further trial was made of these two leguminous plants, but the returns were not as large as last year. During the past two seasons both Soja and Horse Beans have been tried for ensilage, but with very poor success. In both years the plants rotted in the silo and partly spoilt any corn coming in contact with them." The best yield from Early Soja Beans, 4 tons per acre green, was obtained from beans sown June 20 in rows 21 inches apart. They reached a height of 28 inches and were cut Aug. 31. Address: Superintendent, Experimental Farm, Brandon, Manitoba, Canada.

59. MacKay, Angus. 1900. Experimental Farm for the North-West Territories. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 337-88. For the year 1899. See p. 355.
• ***Summary:*** The section titled "Soja beans" (p. 355) states: "Plots 1/20 acre. Seed sown in rows at different distances apart. The beans were sown May 19, cut Sept. 13, and when partially dry were weighed and put in silo. The best yield per acre, 2 tons 1300 pounds, was from rows 28 inches apart, rather than 21 or 35 inches. The beans grew 25 inches high. All were slightly injured by frost in August." Address: Superintendent, Experimental Farm, Indian Head, North-West Territories, Canada.

60. Macoun, W.T. 1900. Report of the horticulturist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 73-127. For the year 1899. See p. 101.
• ***Summary:*** In the section titled "Cover crops" (p. 100+), page 101 states: "Soja Beans:–sown in drills 6 inches apart on June 17, at the rate of 3 bushels per acre, came up June 24. Ploughed under on August 7. Average height 14 inches. Estimated yield per acre of green crop: 3 tons 446 pounds."

Note 1. This is the earliest document seen (May 2005) concerning the use of soy beans as a cover crop; it was done in Canada. This is also the earliest English-language document seen (May 2005) that contains the term "cover crops" (or "cover crop"). Address: Horticulturist, Central Experimental Farm, Ottawa, ONT, Canada.

61. Robertson, R. 1900. Experimental Farm for the Maritime Provinces. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 227-58. For the year 1899. See p. 246.
• ***Summary:*** The section titled "Experiments with soja and horse beans sown at different distances apart" (p. 246) states: The best yield of soja beans, 6 tons per acre, came from plants sowed in rows 24 inches apart, rather than 30 or 36 inches apart. Fertilizer was applied at the rate of 400 pounds per acre. Address: Nappan, Nova Scotia, Canada.

62. Saunders, Wm. 1900. Report of the director. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 5-51. For the year 1899. See p. 23.
• ***Summary:*** The section titled "Experiments with Soja beans *(Soja hispida)"* (p. 23) states: "Experiments have been conducted in the growing of an early ripening variety of Soja beans for fodder purposes for the past three years, with the object of finding out the best time to plant and the most successful method of planting. Four plots of one-fortieth acre each were used for this purpose. The soil was a sandy loam of medium quality but somewhat variable. The previous crop was pease. The land was gang-ploughed soon after harvest and ploughed again later in the autumn about 7 inches deep. In the spring of 1899 it received a dressing of barn-yard manure, about 12 tons per acre. This was spread and ploughed under about 6 inches deep and harrowed twice with the smoothing harrow before sowing."

The four plots were sown on May 31 and cut for ensilage on September 15. The best yield of green fodder, 12 tons 1,600 pounds per acre, was obtained from soja beans, sown in rows 21 inches apart. "Growth strong and even, very leafy, average height 40 to 44 inches. The pods

were well formed but the beans were still soft when the crop was cut."

Note: This is the earliest document seen (Jan. 2003) that uses the word "harrow" ("the smoothing harrow") in connection with soybean production. Address: Director, Dominion Experimental Farms, Ottawa, ONT, Canada.

63. Sharpe, Thomas A. 1900. Experimental Farm for British Columbia. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 389-425. For the year 1899. See p. 408.

• ***Summary:*** The section titled "Soja beans" (p. 408) states: Three plots were sown on May 1. The best yields per acre when cut green, 2 tons 1,680 pounds, were obtained from soja beans in drills (rather than hills) 35 inches apart. Height 30-34 inches. Pods fairly plentiful. Address: Superintendent, Experimental Farm, Agassiz, BC, Canada.

64. Shaw, Thomas. 1900. Soiling crops and the silo: How to cultivate and harvest the crops; How to build and fill the silo; and how to use the silage. New York: Orange Judd Company. xii + 366 p. Illust. 19 cm.

• ***Summary:*** This book is quite similar to another book written by the same author and published the same year by the same publisher, titled *Forage Crops Other than Grasses: How to Cultivate, Harvest and Use Them.*

The present book is divided into two parts: Part I is about soiling crops and Part II is about the silo and silage. In Part I, Chapter 6, titled "Leguminous plants other than clover" (p. 103-44) contains a long section on "The soy bean" (p. 118-28) with the following contents: Introduction. Distribution. Soil. Place in the rotation. Preparing the soil. Sowing. Cultivation. Feeding.

It begins: "The soy bean *(Glycine hispida)* has only been tested in this country during recent years. Its growth has been confined to comparatively limited areas, hence but a relatively small number of the agriculturists of the country have any knowledge of the plant, based upon practical experience."

The subsection on "Sowing" states (p. 125): "As a rule, what are known as the dwarf varieties are preferred for grain production in the north and the medium varieties are preferred in the south. Of the former the Early Dwarf is a favorite and of the latter the Medium Early Green. The last named variety has proved satisfactory when grown as soiling food as far north as Amherst, Massachusetts. The Medium Early Black is also in favor in many localities."

Full-page, black-and-white photos taken at the Minnesota University Experiment Farm show: (1) A man and a sheep standing in a field of soybeans. A sheep is pasturing on the plants (p. 120). (2) A farmer wearing a hat standing in a field of hip-high soybeans. The caption: "Soy beans for soiling" (p. 127).

In Part II, Chapter 1, titled "A history of siloing" (p. 245-57) states: "A silo is a structure designed for the preservation of food in the green and succulent form. The term is derived from the Greek word *siros* a pit for holding grain... Ensilage, or silage, as it is now more commonly called, is the green and succulent food preserved in a silo." It may be preserved in either uncut or cut forms. The early silos in Europe were large pits dug in the ground, with adequate drainage and covering to prevent the accumulation of liquids or water. Some early U.S. silos were patterned "after those built by Goffart, the great French siloist," whose silos were 39.4 feet long, 16.4 feet broad, and 16.4 feet deep. "But the laboriousness of the process made it irksome to those who adopted it, and, because of this American ingenuity, set to work to emancipate the siloist from the bondage of so much hard labor when curing green food."

The first modern silos were built in the form of largely above-ground structures, with walls of stone and at least part of the silo below ground level. "It is claimed that the first silo built in America on the modern plan was made in 1876 and that it was erected by F. Morris of Maryland." The period from 1880 to 1890 was marked by many trials, failures, and successes. Yet by the end of the 19th century some 100,000 successful silos had been constructed in the United States–the chief centers for silos being dairy centers such as New York, Pennsylvania, Wisconsin, and Illinois. The great success of the silo is due in large part to the "great extent to which Indian corn is grown in this country..." Ontario, Canada, played a major role in the evolution of the silo.

"It is now generally conceded that the first book ever written on the silo is from the pen of M. Auguste Goffart, an agriculturist of Sologne, near Orleans, in France. The manual of the Culture and Siloing of Maize is the title of the book in English." It appeared in 1877 and was translated into English in 1879 by J.W. Brown of New York City. "Because of M. Auguste Goffart's early, persistent and abundant labors in this work he has been frequently designated 'The father of modern silage.'"

"In 1875 'The French Mode of Curing Forage' was published in the annual report of the United States department of agriculture. This it is thought was the first discussion of the subject in the United States which treated it in a comprehensive and systematic manner, although previously various articles had appeared in the agricultural press. These related chiefly to European experience. Dr. J. M. Bailey published a work on the subject in 1880. Dr. Manly Miles of the Michigan Agricultural college wrote a work on silos, silage and ensilage which appeared in 1889. Prof. A.J. Cook then of the Michigan Agricultural college published in 1889 'The Silo and Silage' and in 1890 a revised edition of the same. This book treats of silos as then constructed and of silage, as then made, in a very practical

way. The 'Book on Silage' by Prof. F.W. Woll, of the Michigan Agricultural college, was published in 1899. It is by far the most comprehensive discussion of the question that has yet appeared from the pen of any American author."

In Part II, Chapter 5, titled "Crops suitable for the silo," the section on "Leguminous plants other than clover" (p. 327-28) discusses "the soy bean and the cowpea." The chapter on "Filling the silo" states (p. 338): "The soy bean should be harvested when the beans are more or less grown in the pods..."

The chapter on "Feeding silage" states (p. 359): "Attention should be given to the constituents of the meal fed so as to balance the ration. For instance, should the silage contain much of the seed of the soy bean, it would be proper to add corn, or some other carbonaceous meal, with much freedom."

Also discusses alfalfa (p. 86-98, 330), cowpea (128-38), lupines (p. 224), non-saccharine sorghums (kaffir corn, milo maize, dhourra, Jerusalem corn, teosinte; p. 51-67), prickly comfrey (p. 226), and spurry (p. 225). Thomas Shaw lived 1843-1918. Address: Prof. of Animal Husbandry, Univ. of Minnesota.

65. Zavitz, C.A. 1900. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 25:101-29. For the year 1899. See p. 121-22.

• ***Summary:*** The section titled "Soy, Japanese beans" (p. 121-22) begins: "The Soy beans, which are also called Soja beans, have been grown for a great length of time in Japan and in South-eastern Asia... About eighteen years ago Prof. Georgeson, then connected with the Agricultural College in the State of Kansas, imported from Japan fifteen varieties of the Soy beans, with which he conducted practical experiments on the Experiment Station grounds and found that five of the varieties gave good results. These five varieties were imported from Kansas some seven years ago [i.e. in about 1892] for growing in our experimental plots. The Yellow Soy bean has given decidedly the best results among the five varieties which we obtained from Kansas. A few years ago, the Agricultural College of Massachusetts also imported a number of varieties of the Soy beans from Japan, and three of these have now been tested in our experimental grounds here at the College.

"The *Yellow Soy* bean which was imported from Kansas has given an average of eight tons of green crop per acre, being two and one-quarter tons per acre more than that produced from the common beans, and three and one-quarter tons per acre more than that produced from the horse beans. In each of the past three years the *Medium Green* Soy bean has given the largest yield of green crop per acre among the three varieties imported from Massachusetts, but each of these years the Yellow Soy variety has given better satisfaction than the Medium Green in yield of crop per acre, although the results in 1898 were practically equal. We hope to grow these two varieties in larger lots, in order that we can compare them thoroughly in regard to their qualities for green fodder and for hay.

"In the production of grain the Yellow Soy variety has produced the greatest yield of each of the tests made at the College. Of the different varieties tested during the past three years, the Extra Early Dwarf is the earliest, the Yellow Soy the second earliest, the American Coffee Berry the third earliest, and the Medium Green is the latest to reach maturity. In many of the localities in Ontario the Medium Green variety of Soy beans would be too slow in maturing to produce seed.

"In the spring of 1899 three varieties were sent out over Ontario in connection with the co-operative work, to find out how these varieties would succeed over the Province. The varieties distributed were the Medium Green Soy beans, American Coffee Berry and the Extra Early Dwarf Soy beans. The Medium Green and the American Coffee Berry gave upwards of twenty bushels of seed per acre, and the Extra Early Dwarf an average of about thirteen bushels per acre. The Yellow Soy bean was not included in the experiment, as the seed of that variety was not available at the time. Arrangements have been made, however, to secure seed of this variety from the Kansas Experiment Station, for 1900. We feel justified in making somewhat extensive experiments with the Soy beans on account of the strong claims made for these beans in a few places where they have been grown. The following is taken from the bulletin issued by the United States Department of Agriculture on the Soy bean as a forage crop:"

"The Experiment Station at Kansas is growing the Soy beans very extensively; they had no less than sixty acres in Soy beans this year."

"We understand that at least five complex food products are prepared from the Soy beans in Japan, although the beans are seldom used alone as a vegetable. They are also frequently dried and roasted, and used as a substitute for coffee."

Note 1. This is the earliest document seen (June 2005) concerning co-operative research on soy beans (one of two documents). This research was initiated and organized in 1899 by C.A. Zavitz of Ontario Agricultural College in Canada; he also recorded and compiled the results.

Note 2. This is the earliest English-language document seen (June 2005) that uses the word "co-operative" (or "co-operatives" or "co-op" or "co-ops" spelled with a hyphen) in connection with soy beans. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

66. Zavitz, C.A. 1900. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union*,

*Annual Report* 21:6-37. For the year 1899. See p. 9, 16, 31-32.

• ***Summary:*** A table (p. 7) shows the number of distinct experiments in agriculture, number of experimenters, and number of satisfactory reports each year for 1886, 1888, and 1891-99. For 1886 these numbers were 1, 12, and 8. For 1888 they were 1, 90, and 40. For 1891 they were 12, 203, and 126. For 1895 they were 15, 1699, and 513. For 1899 they were 23, 3485, and 739. Thus, during these 14 years the Union made remarkable progress.

A table titled "List of experiments for 1899" (p. 9), under "Grain crops" includes "Testing three varieties of Japanese beans–3 plots."

In a long "List of experimenters" we read (p. 16) that the Japanese beans were grown by: (1) F.B. Doud, Branchton, Brant Co. (2) Simon Miller, Unionville, York Co. (3) Jno. D. Neilson, Thedford, Lambton Co. (4) O.A.C., Guelph, Wellington Co.

In the section titled "Conclusions" (p. 31-32), table 15 shows the results (based on 4 tests) of testing three leading varieties of Japan [soy] beans: Medium Green (estimated value 72), yielded 2.6 tons/acre of straw and 22.4 bu/acre of grain. American Coffee Berry (estimated value 100), 1.4 tons/acre of straw and 21.3 bu/acre of grain. Extra Early Dwarf (estimated value 86), 1.1 tons/acre of straw and 12.7 bu/acre of grain.

The text immediately below the table explains: "The Soy beans [sic] (Glycine hispida) is a leguminous plant native of Japan and China, and ranks very high from a chemical point of view. The plant is an annual, erect in growth and branches profusely. There are a large number of varieties, nearly all of which are too late for the conditions of Ontario. The different varieties are distinguished largely by the time required for the plants to mature and by the color of the seed; the yellow, the green, and the black, being the most common. The Soy beans are used for green fodder, silage, hay, pasture, and as a soil renovator, and the grain is used as a feed for live stock. These beans have been used as a food for man from the earliest times in Japan and China, and more recently in the European countries. They are not used as a food by themselves, but are made into different complex forms, of which five are quite common among Japanese, namely: natto, tofu, miso, yuba, shoyu.

"Conclusions.

"1. The Soy beans gave very good results in the Union experiments in 1899.

"2. The medium green Soy beans which gave the largest yield of grain per acre of the three varieties tested over Ontario in 1899, is the latest of the three varieties.

"3. The American Coffee Berry was the most popular variety with the experimenters when yield, time of maturity, etc., were all taken into consideration."

Note: This is the earliest report seen (Aug. 2002) in this periodical concerning soy beans. C.A. Zavitz is also secretary of the Ontario Agricultural and Experimental Union, and a member of its Committee on Agriculture (appointed at the last annual meeting). Address: B.S.A., Director of Co-operative Experiments in Agriculture, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

67. *Otago Witness (New Zealand).*1901. Notes on rural topics: The soja bean. Sept. 18. p. 8.

• ***Summary:*** From *Agricola:* "The soja bean is a fodder plant that is thought very highly of in Canada and the United States, where it has been in cultivation for about five to seven years [sic, 135 years]. This leguminous fodder plant is a native of China and Japan, and though I have not seen it growing I gather from various reports that it has many good points to recommend it. Mr. Kinsella referred to it recently in his paper upon ensilage, and mentioned it as one of the substitutes for maize when a heavy green crop is desired in a climate unsuitable for maize. It was said a year or two ago that the soja bean plant had gained much favor with farmers in America, not as the result of a boom, but entirely upon account of its merits, and it was strongly recommended a few years ago as a suitable crop for the dry climate of Australia, but I cannot say whether it has caught on there or not. So many flattering things have been said about it that one is inclined to think it may prove to be no better than some other wonderful plants that have been boomed with disastrous results.

"A few years ago the Massachusetts Experiment Station gave the bean a trial, and reported it to be the richest known vegetable substance, being four times richer than maize corn. A hundred pounds of the latter contains 4½ lb of fat, while the same weight of soja beans contains nearly 19 1b of fat. An American farmer says that he has threshed 100 bushels per acre on a rich river flat. Another says it is certainly a grand forage plant, and withstands drought or excessive moisture. It is said to be well adapted for making ensilage, or silage, because it gives a heavy bulk of growth and being of such an oily nature is difficult to make into hay as it cures–that is, dries into hay, very slowly. It appears there are two varieties–the mammoth [Mammoth] and the dwarf [Dwarf]–and both are said to be so hardy as to be able to hold their own against flood, frosts, drought, grass and weeds. The bean itself is small, no larger than the vetch seed, smooth skinned, but not so hard as the horse bean. This bean, ground fine, is largely used in China and Japan in making the sauce called 'soy.'"

Note: This article is largely compiled from other articles previously published in New Zealand.

• ***Summary:*** The section titled "Experiments with soja beans and horse beans" (p. 361) states: "Both of these were sown on May 19, and germinated at once; but the Soja Beans were completely destroyed by the frost of June 8, and the Horse Beans were uninjured." Address: Superintendent, Experimental Farm, Brandon, Manitoba, Canada.

69. MacKay, Angus. 1901. Experimental Farm for the North-West Territories. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 391-434. For the year 1900. See p. 404.
• ***Summary:*** The section titled "Experiments with soja beans" (p. 404) states that three plots of Soja beans were sown in rows in 1/20th acre plots on May 18. The highest yield, 8 tons 1,000 pounds per acre, was achieved from rows 21 inches apart. Length of straw: 32 inches. Address: Superintendent, Experimental Farm, Indian Head, Assiniboia, North-West Territories, Canada.

70. Robertson, R. 1901. Experimental Farm for the Maritime Provinces. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 279-311. For the year 1900.. See p. 297.
• ***Summary:*** The section titled "Experiments with soja and horse beans sown at different distances apart" (p. 297) states that the best yield of soja beans, 4 tons 1,900 pounds per acre, came from plants sowed in rows 28 inches apart, rather than 21 or 35 inches apart. Fertilizer was applied at the rate of 400 pounds per acre. Address: Nappan, Nova Scotia, Canada.

71. Saunders, Wm. 1901. Report of the director. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 5-66. For the year 1900. See p. 24.
• ***Summary:*** The section titled "Experiments with Soja beans *(Soja hispida)"* (p. 24) states: "Three plots of one-fortieth acre each were sown in rows, at different distances, viz.: 21, 28, and 35 inches apart, to gain information on the best distance for sowing to secure heaviest crops." The 28-inch distance was best, yielding 12 tons 400 pounds per acre of green fodder. Address: LL.D., Director, Dominion Experimental Farms, Ottawa, ONT, Canada.

72. Sharpe, Thomas A. 1901. Experimental Farm for British Columbia. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 435-75. For the year 1900. See p. 450-51.
• ***Summary:*** The section titled "Experiments with fodder plants" has a subsection (p. 450-51) which reads: "Soja beans. Three plots of this bean were sown in drills, one at 21 inches apart, one at 28 inches, and one at 35 inches. The medium distance, or 28 inches [yielding 3 tons 1,440 pounds per acre], appears to be about right here, unless the land is very fertile, when it would be better drilled in at 35 inches apart." Being very leafy, if sown to suit the conditions of the soil, it soon shades the ground. Address: Superintendent, Experimental Farm, Agassiz, BC, Canada.

73. Zavitz, C.A. 1901. Report of the experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 26:96-125. For the year 1900. See p. 108-09, 116-17, 120.
• ***Summary:*** The section titled "Soy, soja or Japanese beans" (p. 108-09) states: "About eighteen years ago, Prof. Georgeson, then connected with the Agricultural College in the State of Kansas, imported from Japan 15 varieties of the Soy Beans, with which he conducted practical experiments on the Experiment Station grounds, and found that five of the varieties gave good results. Seed of these five varieties was imported from Kansas some eight years ago for growing in our experimental plots; and the Yellow Soy Bean has given decidedly the best results among the five varieties which we obtained from Kansas. A few years ago, the Agricultural College of Massachusetts also imported a number of varieties of the Soy Beans from Japan, and three of these have been tested in our experimental grounds. For four years in succession we have tested the Yellow Soy variety which we obtained from Kansas, and the Medium Green, Extra Early Dwarf, and American Coffee Berry, which we obtained originally from Massachusetts. In the production of grain, the Yellow Soy variety has produced 19.2 bushels of grain per acre in the tests of 1900. Of the different varieties under experiment in recent years, the Extra Early Dwarf has been the earliest, the Yellow Soy the second earliest, the American Coffee Berry the third earliest, and the Medium Green the latest to reach maturity. In many of the localities in Ontario, the Medium Green variety of Soy Beans would be too slow in maturing to produce seed, except in very favorable seasons. We believe that the Yellow Soy variety will give good results in Ontario."

The section titled "Annual crops for pasture" (p. 116-17) states that 21 different crops were tested, including "yellow Soy beans," buckwheat, millet, Kafir corn, grass peas, cow peas, and rape. A table (p. 117) shows the results: As a pasture crop, Yellow Soy beans yielded 3.3 tons per acre in five cuttings, compared with 10 tons for hairy vetches (the highest yielders) and 7.2 tons for grass peas (the second highest).

The section titled "Some fodder crops" (p. 120) notes that for five years in succession, six fodder crops were carefully tested. Yellow Soy Beans gave the second highest average yield (8.0 tons of green crop per acre), behind Egyptian Peas (8.6 tons)–ahead of Grass peas and Crimson Clover. Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

74. Zavitz, C.A. 1901. Report of the co-operative experiments in agriculture. *Ontario Agricultural and*

*Experimental Union, Annual Report* 22:12-23. For the year 1900. See p. 13, 16, 17-18.
• ***Summary:*** "Although the Ontario Agricultural and Experimental Union was started in 1880 there appears to have been no definite system of experimental work until 1884, when Dr. Hare arranged a plan of action and nine or ten ex-students volunteered to assist in conducting experiments. By the end of 1885 not many results of the co-operative experiments had yet been obtained, as only three complete reports of one year's work had been received..." (p. 12).

A table titled "List of experiments for 1900" (p. 13), under "Grain crops" includes "Testing three varieties of Soy or Japanese beans–3 plots."

In the section on "Grain crops" a table (p. 16) shows that nine tests were conducted on "Soja, or Japanese beans." Medium Green (estimated value 89), yielded 1.9 tons/acre of straw and 26.9 bu/acre of grain. American Coffee Berry (E.V. 100), 1.1 tons/acre of straw and 23.3 bu/acre of grain. Extra Early Dwarf (E.V. 63), 0.7 tons/acre of straw and 15.0 bu/acre of grain.

The subsection titled "Soy, soja, or Japanese beans" (p. 17-18) includes a summary and notes that the yields for each variety are slightly higher than in the previous year. Address: B.S.A., Agricultural College, Guelph, Ontario [Canada].

75. MacKay, Angus. 1902. Experimental Farm for the North-West Territories. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 457-512. For the year 1901. Se p. 475.
• ***Summary:*** The section titled "Experiment with Soja beans" (p. 475) states: "Sown on May 22, on 1/20th acre plots of land manured and fall-ploughed. Cut September 14. No pods formed." The best yield from 3 plots (7 tons 1,550 pounds per acre, green) was from beans planted in rows 21 inches (rather than 28 or 25 inches) apart. Address: Superintendent, Experimental Farm, Indian Head, North-West Territories, Canada.

76. Saunders, Wm. 1902. Experimental work at the Central Experimental Farm, Ottawa, Ontario. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 7-86. For the year 1901. See p. 34.
• ***Summary:*** The section titled "Experiments with Soja beans" (p. 34) begins: "Three plots of one-fortieth acre each were sown in rows at different distances apart, viz.: 21, 28, and 35 inches to gain information as to the best distance for sowing to secure the heaviest crops. The soil was a light sandy loam which received a dressing of barn-yard manure during the winter of 1899 and 1900 of about 12 tons per acre. The previous crop was potatoes."

The soybeans sown in rows 28 inches apart gave the best yields: 16 tons 400 pounds per acre of green crop, including 16 bushels per acre of beans. The growth was strong and even, very leafy. Average height: 40-45 inches. The pods were well formed, the beans were full grown and beginning to harden at time of cutting. Address: LL.D., F.R.S.C., F.L.S, Director, Dominion Experimental Farms, Ottawa, ONT, Canada.

77. Sharpe, Thomas A. 1902. Experimental Farm for British Columbia. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 513-58. For the year 1901. See p. 532.
• ***Summary:*** Page 532 states that Soja beans were sown on April 30 in plots 8-10. Those sown in rows 28 inches (rather than 21 or 35 inches) apart gave the best yields: 2 tons 920 pounds per acre when cut green. Length of stalks: 24-26 inches. Not so many pods formed. Address: Superintendent, Experimental Farm, Agassiz, BC, Canada.

78. Zavitz, C.A. 1902. Report of experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 27:82-111. For the year 1901. See p. 92-93.
• ***Summary:*** The section titled "Soy, soja or Japanese beans" (p. 92-93) states: "About twenty years ago, Prof. Georgeson, then connected with the Agricultural College in the State of Kansas, imported from Japan fifteen varieties of the Soy beans, with which he conducted practical experiments on the Experimental Station grounds and found that five of the varieties gave good results. These five varieties were imported from Kansas some ten years ago for growing in our experimental plots.

"The Early Yellow Soy Bean has given decidedly the best results among the five varieties which we obtained from Kansas. [Note: It seems that Zavitz has renamed the Yellow Soy Bean to Early Yellow Soy Bean within the past year. The names of the other four varieties are not given here]. The record of this variety has been satisfactory throughout, and the yield of grain per acre in 1901 was 25.3 bushels. When we realize that this grain when ground furnished a meal about equal in composition to cotton seed meal, we cannot help but acknowledge that this variety furnishes a large amount of valuable food constituents. It has given good results in the co-operative experiments throughout Ontario, as well as in the trials at the College." Address: B.S.A., Experimentalist, Ontario Agricultural College [Guelph, Ontario, Canada].

79. Zavitz, C.A. 1902. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 23:9-24. For the year 1901. See p. 10, 12, 14-15, 21-22.
• ***Summary:*** A table titled "List of experiments for 1901" (p. 10), under "Grain crops" includes "Testing cow peas and two varieties of Soja or Japanese beans–3 plots."

In the section on "Reports of the experiments" a table titled "Grain crops" (p. 12) shows that 13 tests were conducted on "Soy beans." Early Yellow (estimated value 100), yielded 1.5 tons/acre of straw and 21.4 bu/acre of grain. Medium Green (E.V. 86), 2.2 tons/acre of straw and 18.1 bu/acre of grain.

The subsection titled "Soy, soja, or Japanese beans" (p. 14-15) includes a summary and notes: The Early Yellow variety usually ripens well, and is one of the very best varieties of the Soy beans for the production of grain. For the production of green fodder or for silage, however, the Medium Green is likely to give better satisfaction, owing to its more luxuriant growth and greater development of leaf. In those parts of Ontario where the pea weevil is becoming so abundant as to practically ruin the pea crop, the Soy bean might be grown to great advantage."

In the question and answer session (p. 21-22): "Q: At what time do you plant the Soy beans? C.A. Zavitz: We usually plant the Soy beans about the 5th of May.

"Q: How are the Soy beans usually planted? Zavitz: The seed should be sown in rows and the crop cultivated. The soy bean is being used considerably in some of the Eastern States by dairymen who wish to secure very rich food for their animals. It is also beginning to be grown quite extensively in some of the Western States, particularly Kansas. The crop will serve admirably as a substitute for peas in those sections where the pea weevil is doing so much damage." Address: B.S.A., Director of Experiments, Agricultural College, Guelph [Ontario, Canada], and Secretary of the Union.

80. Department of Agriculture, Commissioner's Branch. 1903. Growing forage crops: Feeders of live stock should prepare for the summer droughts. *Daily Sun (Saint John, New Brunswick, Canada).* June 12. p. 3.

• ***Summary:*** "Nearly every summer we hear the same old story of midsummer droughts and consequently scanty pastures. Many of our best farmers have learned to guard against loss by having a supply of succulent feed to fall back upon. A small silo, filled especially for summer use, will go a long way to meet the difficulty, and a partial system of soiling has also found favor among progressive stockmen."

"Soja or soy beans are also likely to prove valuable in the southern districts. They produce a large amount of forage of excellent character if sown on land prepared as for corn at the rate of two to four pecks per acre. The Yellow Soy is the best variety for Canada and is worthy of trial." Address: Ottawa [Ontario, Canada].

81. *J. of Agriculture and Horticulture (Quebec).*1903. Forage crops to supplement summer pasture and winter hay. Aug. 15. p. 79.

• ***Summary:*** This is a reprint of the following English-language document: Woods, Charles D. 1903. "Forage crops to supplement summer pasture and winter hay." *Maine Agric. Exp. Station, Newspaper Bulletin.* June. 1 p.

Note that Maine is on about the same latitude as southern Quebec. The Bulletin states: "Because of the long continued drouth the prospects are very unfavorable for the hay crop." Many farmers will "need to grow special forage crops to supplement the summer pasturage or the winter's hay. While Indian corn is the best forage plant for Maine, if a sufficient acreage has not been planted the season is so far advanced that other quicker growing plants can now be more advantageously used.

"The millets–Hungarian, German, Pearl and Japanese, Rape, and on light warm soils early soy beans–are the more desirable... Rape is valuable as a summer and fall feed for cattle, sheep, hogs and poultry. The soy bean is highly nitrogenous, but Maine is so far north as to make it a somewhat uncertain crop."

82. Fletcher, James. 1903. Report of the Entomologist and Botanist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 169-201. For the year 1901. See p. 177, 185.

• ***Summary:*** In the section titled "The pea weevil or 'pea bug' *(Bruchus pisorum,* Linn.) (p. 175), a table (p. 177) shows those companies and individuals "who have taken an active part in the discussion of the best means of remedying the existing injury to the pea crop by the weevil." One of these is "Bruce, J.A., & Co., Hamilton, Ontario."

The subsection titled "Substitute crops" (p. 185) states that "Messrs. John A. Bruce & Co. of Hamilton, Ontario" have handled leguminous crops... Early varieties of Soja Bean have also given good results,..." Address: LL.D., F.R.S.C., F.L.S., Entomologist and Botanist, Central Experimental Farm, Ottawa, Ontario.

83. Silver Manufacturing Co. 1903. Modern silage methods: An entirely new and practical work on silos... [1st ed.]. Salem, Ohio: The Silver Manufacturing Co. 212 p. Illust. Index. 19 cm.

• ***Summary:*** The Introduction (p. 9) begins: "Twenty years ago few farmers knew what a silo was, and fewer still had ever seen a silo or fed silage to their stock. Today silos are as common as barn buildings in many farming districts of this country, and thousands of farmers would want to quit farming if they could not have silage to feed to their stock during the larger portion of the year. Twenty years ago it would have been necessary to begin a book describing the siloing system with definitions, what is meant by silos and silage: now all farmers who read agricultural papers or attend agricultural or dairy conventions are at least familiar with these words..."

The section on "History of the silo" (p. 9-10) states: "In 1882 the United States Department of Agriculture could find only ninety-one farmers in this country who used silos. During the last twenty-five years, however, silos have gradually become general in all sections of the country where dairying and stock-raising are important industries; it is likely, if a census were taken of the number of silos in this country today, that we would find between a third and a half million of them [333,000 to 500,000].

Chapter 3, titled "Silage crops," notes that Indian corn is America's major silage crop, followed by clover, alfalfa (lucerne–"the great coarse forage plant of the West"), cow peas (they "are to the South what alfalfa is to the West..."), Robertson Ensilage Mixture (in Canada, corn, sunflower seed heads, and horse beans), soja beans (soy beans), sorghum, and miscellaneous silage crops.

Concerning soja beans (p. 116-17): "According to the U.S. Department of Agriculture the soy bean is highly nutritive, gives a heavy yield, and is easily cultivated. The vigorous late varieties are well adapted for silage. The crop is frequently siloed with corn (2 parts of the latter to 1 of the former), and like other legumes it improves the silage by tending to counteract the acid reactions of the corn silage. Of other Southern crops that are used for silage crops may be mentioned Kaffir corn, chicken corn and teosinte."

Chapter 6, "A feeder's guide," gives additional statistics, definitions, and other practical information. A table titled "Classification of cattle foods" (p. 168), shows that among the coarse feeds of medium protein content are pea and bean fodder. High in protein content (25-40 per ct.) are Soja bean, gluten meal, and Grano-gluten. And gluten feed contains 12-25 per ct. protein. A table showing "Average composition of silage crops of different kinds, in per cent" (p. 178) gives water, ash, crude protein, crude fiber, nitrogen free extract, and ether extract for 19 crops or mixtures including: Soja bean silage, corn-soja bean silage, millet-soja bean silage, and cow-pea and soja bean mixed. A third table titled "Analyses of feeding stuffs" gives the dry matter in 100 lb and the three digestible nutrients in 100 lb for: Green fodders–Soja bean. Silage–Soja bean. Grain and by-products–Atlas gluten meal, gluten meal, and gluten feed. Additional information on soja beans from earlier publications is given on p. 183, and on Chicago gluten meal, Cream gluten meal, Buffalo gluten feed, and Atlas gluten meal on p. 189. Interesting terms in the Glossary (p. 192-95) include: Albuminoids, ether extract, legumes ("Plants bearing seeds in pods and capable of fixing the gaseous nitrogen of the air, so that it becomes of value to the farmer... Examples: The different kinds of clover, peas, beans, vetches, etc."), nitrogen-free extract, nutritive ratio, organic matter, and soiling. At the back are many illustrated advertisements of mechanical silage cutters and conveyors made by Silver Mfg. Co., plus an aerial view of its new factory in Ohio. Address: Salem, Ohio.

84. Zavitz, C.A. 1903. The experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 28:105-38. For the year 1902. See p. 124-25.
• ***Summary:*** The section titled "Soy beans" (p. 124-25) states: "The Soy bean *(Glycine hispida)* also known under the names of Soja Bean, Coffee Bean, Idaho Pea, etc., has been cultivated in Japan and China for a great length of time. The Soy bean is an annual legume, and the plants have an upright growth, and are almost completely covered with short hairs. The seed is generally sown at the rate of about one-half bushel per acre, and in drills from two to three feet apart, which are cultivated in a manner similar to that of our Canadian beans. The crop is used for green fodder, or is allowed to ripen for the production of grain, which is exceedingly rich, and, when ground into meal, is considered about as valuable as cotton seed meal for stock feeding.

"About twenty years ago, the Kansas Experiment Station imported from Japan fifteen varieties of Soy beans, carefully tested them at the Experiment Station grounds, and found that five of the varieties gave good results. About ten years ago, seed of these five varieties was grown in our own experimental plots.

"Eight varieties of Soy beans have been imported and grown in our Experimental Department. Some of the varieties proved to be entirely unsuited for Ontario, owing to the long season required to reach maturity. The Early Yellow variety, however, has given good results as a grain producer, the Medium Green variety for the production of green fodder. In the average results from growing the Early Yellow Soy beans for a period of seven years, 17 bushels of seed per acre have been obtained. In the production of green fodder, the Early Yellow variety produced an average of 8 and the Medium Green variety an average of 9.3 tons per acre for the same length of time.

"The Early Yellow Soy beans were distributed over Ontario last year for co-operative experiments, and the average yield of grain produced on thirteen Ontario farms was 21.4 bushels.

"We believe it would be a decided advantage to Ontario farmers to grow Early Yellow Soy beans more generally for the production of grain for feeding purposes, and the Medium Green Soy beans for putting into the silo with corn."

The section titled "Some leguminous crops for green fodder" (p. 135) contains a table showing 16 varieties of leguminous crops that have been tested for at least two years in succession; four of these are soy beans. The ranking, length (height) of the plants and the yield in tons of green crop per acre (average for 2 years) are as follows: 2. Medium Green Soy Beans: 33 inches, 11.68 tons. 6. Early Yellow Soy Beans: 25 inches, 8.15 tons. 12. American Coffee Berry: 22 inches, 6.68 tons. 16. Extra Early Dwarf Soy Beans: 20 inches, 2.53 tons. Note: Hairy Vetches gave

the highest yield, 13.90 tons. "The Medium Green Soy Beans, which stand second on the list, are an exceptionally fine variety, and we believe will be a valuable crop to grow for fodder, either for feeding in the autumn or for mixing with corn for the silo in order to increase the quality of the silage."

In the introduction (p. 105) outlines his work in connection with Field Agriculture, or Agronomy" under six heads. These include: "2. Carrying on scientific work, especially in the hybridization of farm plants, along the lines of the discoveries of Mendel and the investigations of De Vries, Correns, Bateson, and others. 3. Directing the co-operative experiments on 3,135 farms throughout the Province" (See *Annual Report of the Ontario Agricultural and Experimental Union,* bound at the end of this volume). "4. Delivering lectures to College students and agricultural conventions–about 100 in number." He lists how many lectures were delivered to which kinds of groups.

The section titled "Acknowledgments" (p. 138) mentions "Mr. L.S. Klinck, a senior student, in assisting with the farmers' excursions which came to the College in the month of June." Note: Leonard S. Klinck later became an important soybean breeder and university president. Address: B.S.A., Director of Field Experiments, Ontario Agricultural College [Guelph, Ontario, Canada].

85. Zavitz, C.A. 1903. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 24:10-24. For the year 1902. See p. 11, 13, 15-16, 22-23.

• ***Summary:*** A table titled "List of experiments for 1902" (p. 11), under "Grain crops" includes "Testing cow peas and two varieties of Soy, Soja, or Japanese beans–3 plots."

In the section on "Reports of Co-operative experiments" a table titled "Grain crops" (p. 13) shows that 2 tests were conducted on "Soy beans." Medium Green (estimated value 80), yielded 1.4 tons/acre of straw and 1,210 lb/acre of grain. Early Yellow (E.V. 100), 1.7 tons/acre of straw and 860 lb/acre of grain.

The subsection titled "Soy, soja, or Japanese beans" (p. 15-16) includes a summary and notes: As a rule the Early Yellow variety seems to be best suited for most parts of Ontario for the production of grain, and the Medium Green for the production of green fodder, either to be fed by itself or to be placed in the silo along with the corn to improve the nutritive value of the silage."

In the question and answer session (p. 22-23): "Q: Do you sow the Soy beans in rows? A: Yes.

"Q: How far apart? A: Twenty-five to twenty-eight inches." Address: Director of Experiments, Agricultural College, Guelph [Ontario, Canada].

86. *Daily Sun (Saint John, New Brunswick, Canada).*1904. Fighting Jap a worthy foe: Army built on French and German models. Cavalry a weak point–Rapidity and efficiency of the column already proven–Perfection in administration details. Jan. 27. p. 7.

• ***Summary:*** The section titled "Artillery officers" states: "A good soldier is twice as valuable if he has good care, and this, among other things military, the Japanese have learned. Everything which goes to make for the efficiency of the troops is scrupulously attended to. The rations are of the simplest–rice, dried fish, soy, and sometimes meat–but they are always ample and always the best of their kind."

87. Henderson (Peter) & Co. 1904. American farmers' manual (Mail-order catalog). New York, NY. 45 p. March. 28 cm.

• ***Summary:*** In the section titled "Farm seeds," page 34 is devoted entirely to soja beans–by far the largest coverage yet in a Henderson catalog. In the top half of the page, a photo shows a man, wearing a suit and hat, standing in a tall "Field of Early Soja Beans at Central Experimental Farm. Ottawa, Canada." In the lower right corner of this photo is an illustration (which first appeared in the 1899 issue of this manual) of a soja bean plant with a cluster of pods in the upper left corner. On a banner is written "Henderson's Early Soja Bean."

The bottom half of the page, titled "Early Green Soja or soy beans" sing's the plant's praises. "Soja beans have attracted much attention in recent years on account of their high feeding qualities, but all were too late to be of value in the Northern States. This early green variety has proved its earliness and value in the Northern States by not only producing large fodder crops, but ripening the seed as far north as Massachusetts. It is worthy of a place on every farm, either as a grain crop or fodder crop to feed green, or for the silo. The grain is the richest known vegetable substance, and when ground and fed to cattle gives a milk richer and better than cotton seed or other meal. For ensilage it forms a complete, balanced feed ration. While corn is the most serviceable crop for ensilage, though ever so well preserved as to succulence, odor and flavor, it is incomplete feed for cattle, being deficient in albuminoids or protein (the flesh formers), as well as fat. This deficiency has hitherto been supplied by feeding, in addition to the corn silage, such grain as oats, wheat, etc. or concentrated feeds, such as meal, oil cake, or some other commodity, rich in the elements in which corn silage is grown on his own farm, at small cost, a combination which fournishes a wholesome, economical and completely balanced feed for milch cows. This combination should be composed of two parts millet or corn to one part Soja Beans, grown separately, but mixed thoroughly, at the time of cutting and filling of the silo. This combination ensilage develops a most agreeable aromatic odor and is greedily relished by cattle

both dairy cows and fattening stock. It certainly will be generally used by all up-to-date farmers and dairymen and will revolutionize the dairy industry of the United States. We do not recommend the feeding of this combination to the entire exclusion of grains or other concentrated feed. We recommend that grain be fed occasionally as a change, but four-fifths of the grain bill can be saved. We recommend all farmers to plant this year at least an acre or two of our Early Green Soja Beans and an equal area of Japanese millet, to test and prove for themselves the value of the combination, and we are confident that, thereafter, all who try it will each year grow a larger acreage. Planted the latter part of May, in latitude of New York, the Beans are ready for harvesting in about 100 days. Japanese Millet comes quicker to maturity than Soja Beans, and on the authority of Prof. W.P. Brooks, of Hatch Experiment Station, Mass. [Massachusetts], should be sown from four to five weeks later, so as to be in the best condition for the silo, along with the Soja Beans. Sow the beans from the middle to end of May, and the Millet from the last week in June till the first week in July; both will then be ready for the silo about the end of August.

"Planted in rows 2½ feet apart, 6 to 8 plants to the foot of row, requiring three pecks per acre, they yield 15 or 20 tons per acre of fodder very rich in flesh formers. For green feed, use from time of blossoming till pods are well filled; for the silo, cut as soon as most of the pods are well filled, and cut into ½-inch to 2½-inch lengths. They are soil enrichers, gathering nitrogen from the air same as clover, the roots being crowded with tubercles, which give them this power. *(See cut.)* 10 c. lb., $1.10 peck, $3.86 bushel of 60 lbs.; 10-bushel lots, $3.75 bushel.

"Late Soja Beans.–A month later than the early variety; should not be used north of Virginia. $1.00 peck, $3.00 bushel."

A sidebar to the right of the text proclaims in large letters: "Valuable for either fodder or grain. Produces enormous crops as far north as Canada, ripening seed as far north as Massachusetts. Especially valuable (in combination with Japanese Millet and fodder corn) for ensilage, supplying the albuminoids or flesh-forming food. A great soil enricher, gathering nitrogen from the air."

Note: This catalog contains both black-and-white photographs as well as some black-and-white text engravings.

This catalog is owned by Special Collections, USDA National Agricultural Library, Beltsville, Maryland. Address: 35 & 37 Cortlandt St., New York.

88. *Toronto Daily Star (Canada).*1904. Madge Merton's page for women. July 16. p. 16.
• ***Summary:*** "Aunt. B.: The following recipe for homemade Worcestershire sauce sounds well. Pound once ounce of garlic, two ounces of small onions, and half an ounce of cayenne pepper. Put them in an earthen jug with half a pint of vinegar, stand in water, and simmer for three hours. Strain, add a pint of hot vinegar, and half a pint of Indian soy. Perhaps you can't get Indian soy, but at the shops where Chinese food is sold, you may get the Chinese article of the same name. Bottle your sauce and seal tightly, using a mixture of equal parts beeswax and resin."

89. Douglas (J.M.) & Co. 1904. Just a dash of the genuine: Lea & Perrins' Worcestershire Sauce (Ad)... *Toronto Daily Star (Canada).* Nov. 8. p. 9.
• ***Summary:*** "... is as necessary as salt to bring put the true flavor of Consomme, Bouillon, Sauce, Meats, Game, Fowl, etc. Without an equal for 60 years [i.e., since about 1844]. Ask any good cook." Address: Montreal [Quebec, Canada].

90. Evans Seed Co., Inc. 1904. 1904 retail price list: Northern grown legume, forage plant, grain and grass seeds (Mail-order catalog). West Branch, Michigan. 24 p. 23 cm.
• ***Summary:*** A black-and-white photo on the cover shows a man, a woman, and a child (little girl) standing in a "Field of soys and pearl millet at West Branch, Michigan." Below that is written in large letters: "Our northern grown seeds are unequalled for hardiness, earliness, vigor, high germinating power and purity." Printed by Herald-Times Print., West Branch, Mich. At the top of the cover in small letters: "44º12' North Latitude."

Contents: Note to the American Farmer and Stockman. Our terms. Legume seed department. Soy beans. Cow peas. Field peas. Garden peas. Beans *(Phaseolus vulgaris).* Spanish field pea *(Lathyrus sativus).* The vetches *(Vicia villosa* and *V. sativa).* Velvet beans *(Mucuna utilis).* Lupines (Blue and Large White). Faba or Broad Beans *(Vicia faba).* Lentils *(Lens esculenta).* Pea nuts *(Arachis hypogœa).* The clovers. Northern Grown Grain and Forage Plant Department: Field corn, Russian emmer *(Triticum spelta).* Spring wheat. Oats. Barley *(Hordeum vulgare).* Japanese barnyard millet *(P. [Panicum] Crus Galli).* East India pearl millet *(Pennisetum spicatum).* Teosinte *(Reana luxurians).* New legumes for 1905 (the Japanese Muroran bean is a forage crop that is earlier than the earliest soy or cow pea). Grass seeds: Timothy *(Phleum pratense)* and Orchard grass *(Dactylis glomerata).* Meadow fescue *(Fescuta pratensis).* Awnless brome *(Bromus inermis).* Red top *(Argostis vulgaris).* Kentucky blue grass *(Poa pratensis).* Root seeds. Seed potatoes. Bacteriated soil ("sand containing the bacteria adapted to peas, soys, cow peas, vetches, lentils, broad beans, lupins, etc. Sold in new 16-oz. cotton bags at $1.50 per 100 pounds. Not less than 100 pounds will be sold). A paradise for pork (Also called "hog heaven," it is a "combination crop." "Some plant corn, soys and mangels or sugar beets in alternate rows"). Chemical analysis vs. cow analysis [of feeds] ("All authorities, chemists and cows included, agree that the soy bean is the most digestible of all concentrated foods. And palatability–convince yourself.

Plant an acre of soys and when they are ripening turn in your stock, your cows, horses, hogs, sheep, turkeys, ducks and chickens. They will tell you all about the palatability of the soy bean).” Standard of weights in Michigan: Beans, soy: 8-16 quarts of seed required per acre. Weight per bushel: 60 lb.

The note (p. 2) “To the American Farmer and Stockman” begins: “Greeting: It has always been our aim to be something more than seed sellers–or merchants.” It states in detail the company’s strong commitment to quality seeds. “Our terms are invariably net cash with order.” The first section (p. 3+), titled “Legume seed department” begins: “From ancient times down to the present certain plants have been used for the purpose of renovating and maintaining the fertility of soils... It was not until 1888 that a German scientist discovered by which process these plants enrich the soil. Briefly, legumes are plants having the power, by aid of certain bacteria, of converting atmospheric nitrogen into nitrates available for plant food, and of storing it up in root nodules, or tubercles. We do not yet know whether this process is a mechanical or chemical one.”

However, we do know that nitrogen, one of the vital elements of plant food, is the most elusive, the most expensive to buy and the most difficult to retain of all the elements that go into the production of any crop. We know that a crop of soys, peas, clover, or vetches enriches the soil by adding to the available nitrogen. It is absolutely true that the nitrogen removed from an acre of land by a crop of oats, corn, wheat or timothy often exceeds in value the entire cost of producing a crop of legumes. There can be no greater folly in farming than the continued production of cereals without a rotation in which legumes form a part, and the shorter the rotation the better for the land and the bank account... The *Leguminosæ* includes beans, peas, vetches, clover, lentils, cow peas, soys, faba, lupins, etc.”

The subsection titled “Soy beans *(Glycine hispida)”* (p. 4-7) gives the most information about this crop to be found in any American seed catalog up to this time. “German, Soja. Japanese, daidzu [daizu]. Next to wheat this is probably the oldest of cultivated plants. It is mentioned in Chinese writings prior to 500 B.C., and remains to this day one of the staple crops of China and Japan. It was originally introduced into America about 1925-30, but failed to attract attention to its merits. It was not until the researches and experiments of Profs. Brooks [Massachusetts] and Georgeson [Kansas], within the past fifteen years, that the true value of soys became known. Since 1896 they have grown more rapidly in popularity than any crop ever introduced into America. Soys contain a higher percentage of protein in more digestible form, than any other farm product, and at a fraction of the cost of the so-called ‘concentrated feeds.’” A table shows a nutritional analysis of five varieties of soys made by the Michigan Experiment Station [published in Bulletin No. 199, April 1902]. Ito San and Medium Early Yellow contain the most crude protein (41.04% and 41.52%). A photo shows two uprooted soybean plants, each covered with pods.

Page 5 continues: “Soya are as easy of culture as common beans, cow peas, or corn. They succeed on any soil that will produce corn. They will withstand drouth and wet weather that would ruin most of our staple crops, and will pass uninjured through frost that kills corn to the ground. This has been demonstrated hundreds of times here in Michigan. Scores of seedsmen catalogue soys with southern seed, generally the Mammoth Yellow. Such seed can be bought for $1.00 to $1.25 a bushel, but is absolutely worthless north of the Ohio river. We are the pioneers of the soy seed business at the north; have grown and sold them for the past 8 years [since about 1896]. We have not a bushel of soys grown outside of Michigan.” “Evans’ soys are known the world over. We sold them last year in England, Germany, Guiana [incl. British Guiana?], West Indies, Hawaii, Mexico and Canada.

Page 6 continues: “Plant soys in drills 28 to 30 inches apart, using 8 to 16 quarts seed per acre, according to variety and use. For ensilage, they may be planted with corn, but we believe it is more satisfactory to grow the two crops separately and mix them as they go through the cutter.” The subsection titled “Varieties” gives details on each of the following: Ito San (named by Mr. Evans in honor of Marquis Ito, the Japanese statesman), Early Black or No. 6 (originated by Mr. Evans), Ogema, or Evans No. 9, Medium Early Green, Olive Medium (created and introduced by Evans), Medium Early Black.

Concerning: “Ogema, or Evans No. 9. Originated by Edw. E. Evans and offered for the first time last season. It is a cross of Dwarf Brown and No. 6 and is unquestionably the earliest of all soys. It can be planted later and farther north than any other variety. Beans dark chocolate color. Season 65 to 75 days. Stock limited.” Ogema is the company’s most expensive variety, selling for $7.50 per bushel, vs. $3.50 per bushel for most other varieties.

A table titled “Prices of soy beans” (p. 7) gives the prices of 12 varieties. The first seven are sold in quantities of one packet, quart, 4 quarts, peck, ½ bushel, and bushel. Most sell for $3.50/bu, but the price ranges from $3.00/bu for Ito San and Medium Early Yellow to $7.50/bu for Ogema. These seven are: Ito San, Ogema (earliest), Medium Early Green (general favorite), Olive Medium, Medium Early Black, Early Black (Evans No. 6), Medium Early Yellow. The last five varieties sold (all new) are: Dwarf Brown, Gosha, Rokugetsu [Rokugatsu?], Bakaziro [Bakajiro], and Hankow. Each is available only in the packet size at $0.15 per packet. On the last page of the catalog is a full-page order sheet.

Note 1. This is the earliest document seen (Aug. 2002) which mentions that turkeys eat or are fed soybeans.

Note 2. This is the earliest document seen (Sept. 2004) that mentions the following soybean varieties: Dwarf Brown, Hankow, Ogemaw, and Mammoth Yellow (one of three documents).

Note 3. This is the earliest English-language document seen (May 2003) that uses the word "bacteriated" to refer to soil containing nitrogen-fixing bacteria.

This catalog is owned by Special Collections, USDA National Agricultural Library, Beltsville, Maryland. Address: West Branch, Ogemaw Co., Michigan.

91. Zavitz, C.A. 1904. The experimentalist. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 29:113-151. For the year 1903. See p. 135, 147.

• ***Summary:*** The section titled "Varieties of soy, soja or Japanese beans" (p. 135) states: "The interest which is being taken in the Soy beans is created from the fact that some of these varieties can be grown successfully in Ontario, and that the crop is exceedingly rich in valuable constituents as a feed for farm stock. The whole plants are richer in flesh-forming constituents than Common Red Clover, and the grain is richer than any other grains which are grown in Ontario as feed for live stock. Many of the varieties of Soy beans require too long a season to give satisfactory results in Ontario. After experiments for a number of years, however, the Early Yellow variety has given good satisfaction as a grain producer, and the Medium Green variety as a fodder crop... We believe that the addition of the Medium Green variety to fodder corn when filling the silo would increase the quality of the latter greatly, would make a much better balanced ration than the corn alone, and would require less meal in order to secure satisfactory results."

The section titled "Green fodder crops" (p. 147) states: "For three years in succession [1901 to 1903], fifteen varieties of fodder crops have been grown in competition in the experimental grounds. Some of these have been grown for a very much longer period..." A table shows that during these 3 years, Medium Green Soy Beans gave an average yield of 11.50 tons of green fodder per acre, second only to hairy vetches (11.95) among 15 crops tested. Early Yellow soy beans gave 8.65 tons/acre, American Coffee Berry gave 6.55, and Extra Early Dwarf Soy Beans gave the lowest yield, only 2.16 tons/acre. "The Medium Green Soy Beans... are an exceptionally fine variety, and we believe will be grown more and more for the production of fodder either for feeding in the autumn or for mixing with corn when filling the silo, in order to increase the quality of the silage. If the Medium Green Soy beans are sown in rows about 30 inches apart with the beans about 8 inches apart in the row, about the time that the corn is planted, the crop would generally be ready for mixing with the corn and putting in the silo when the corn is in the best condition. The Early Yellow Soy beans are more specially adapted to the production of grain than of green fodder." Address: B.S.A., Director of Field Experiments, Ontario Agricultural College [Guelph, Ontario, Canada].

92. Zavitz, C.A. 1904. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 25:10-29. For the year 1903. See p. 12, 20, 22, 27.

• ***Summary:*** Zavitz is now "Director of the co-operative experiments in agriculture throughout Ontario"–a huge job. "As many of you know, the Ontario Agricultural College and Experimental Farm was established in 1874 by the Government of the Province of Ontario. Experimental work was commenced in the spring of 1876... Experiments and investigations are now conducted at the college along different lines of practical and scientific agriculture. In the experiments with farm crops, upwards of 2,000 plots are used annually..." "In 1879 the officers, ex-students, and students of the Ontario Agricultural College formed themselves into an association under the name of the 'Ontario Agricultural and Experimental Union.'" The objects of the association are given (p. 10-11).

A table titled "List of experiments for 1903" (p. 12-13), under "Grain crops" includes "Testing cow peas and two varieties of Soy, Soja, or Japanese beans–3 plots."

A table titled "Grain crops" (p. 20) shows that 3 tests were conducted on "Soy beans." Early Yellow (estimated value 100), yielded 1.28 tons/acre of straw and 906 lb/acre (15.11 bu/acre) of grain. Medium Green (E.V. 67), yielded 1.69 tons/acre of straw and 766 lb/acre (12.77 bu/acre) of grain.

The section titled "Soy beans" (p. 22) includes a summary and notes: "The yield in each case was unusually small, owing probably to the unfavorable weather conditions... The Early Yellow is considerably earlier in maturing than the Medium Green variety." This generally makes the former better for grain production and the latter better for fodder.

In the question and answer session (p. 27): "Mr. T.H. Mason: The later Mr. Tillson grew great quantities of Soy beans and put them in the silo, mixed with corn silage, and was well satisfied with the result."

"Q: It was difficult to get them dry enough to keep well last year, was it not?

"A: Mr. Zavitz: It was an exceptional year. We matured the crop here, however, and we find by taking the average of eight years' experiments, that the Early Yellow variety usually ripens well." Address: Director of Experiments, Agricultural College, Guelph [Ontario, Canada].

93. Moore, George T. 1905. Soil inoculation for legumes; with reports upon the successful use of artificial cultures by practical farmers. *USDA Bureau of Plant Industry, Bulletin*

No. 71. 72 p. Jan. 23. See p. 1-46, 67-68, 71-72 + 10 plates. [65 ref]

• ***Summary:*** From the earliest days of agriculture it has been recognized that all plants belonging to the Leguminosae had a decidedly beneficial effect upon the soil. Pliny (A.D. 23-79), the Roman scholar, wrote: "The bean ranks first among the legumes. It fertilizes the ground in which it has been sown as well as any manure" (p. 12). From the early 1800s on there was a great diversity of opinion concerning both the cause and the effect of root nodules of legumes.

Nobbe in Germany isolated a pure culture of nodule forming bacteria from the nodules and grew them in tubes or bottles containing nutrient agar. This culture was given the trade name Nitragin. Seventeen different kinds of Nitragin were prepared from the nodules of as many different plants, and marketed by a well known German firm of manufacturing chemists. Experiments with Nitragin in Germany met with varying degrees of success. In this country the results obtained by Prof. J.F. Duggar using hairy vetch at the Alabama Experiment Station in 1896 and 1897 were very satisfactory, but certain other investigators were not able to secure inoculation.

W.M. Munson at the Maine Agricultural Experiment Station reported in 1897 and 1898 of having fair success in inoculating soybeans with Nitragin, but he failed to get satisfactory results with other legumes. His results did not warrant the recommendation of the use of Nitragin for a leguminous crop. A major problem with Nitragin was that it lost its viability quickly (p. 21). "The percentage of failures in its usage was so great that its manufacture was given up, and it is no longer for sale under that name... For this reason the Laboratory of Plant Physiology of the [U.S.] Department of Agriculture undertook a scientific investigation of the root-nodule organism, and as a result it is believed that a thoroughly practical and satisfactory method of bringing about artificial inoculation has been devised" (p. 22).

Table 1, titled "Number of packages of inoculating material (or inoculated seed) distributed from November, 1902, to November, 1904..." (p. 42-43), lists the following under "Bean, Soy": Alabama 10, Alaska 0, Arizona 0, Arkansas 2, California 3, Colorado 0, Connecticut 4, Delaware 0, District of Columbia 0, Florida 1, Georgia 4, Hawaii 2, Idaho 1, Illinois 36, Indiana 16, Indian Territory 0, Iowa 9, Kansas 10, Kentucky 9, Louisiana 0, Maine 1, Maryland 7, Massachusetts 11, Michigan 10, Minnesota 1, Mississippi 1, Missouri 13, Montana 0, Nebraska 3, Nevada 0, New Hampshire 2, New Jersey 2, New Mexico 0, New York 30, North Carolina 11, North Dakota 0, Ohio 25, Oklahoma 4, Oregon 3, Pennsylvania 17, Philippine Islands 0, Porto Rico 1, Rhode Island 3, South Carolina 1, South Dakota 2, Tennessee 5, Texas 2, Utah 0, Vermont 2, Virginia 48, Washington (state) 3, West Virginia 6, Wisconsin 11, Wyoming 0. Foreign countries: Australia 2, British Guiana 0, Canada 1, Costa Rica 1, Cuba 2,... South Africa 2. Total: 391.

The next section, titled "Reports" (p. 44), begins: "While it has been impossible to receive reports from all experimenters, the percentage of replies has been unusually large and is quite sufficient to enable the formation of a fair opinion as to the value of the cultures distributed. Table II, "Reports of experiments with principal crops" (p. 45), shows the following for soy bean: Total reports: 129. Inoculation resulting in definite increase of crop: 54. Failures definitely ascribed to bad season, poor seed, weed growth, etc.: 22. No increase in crop; organisms already present in the soil: 11. No evident advantage from inoculation; nodules not formed: 42. Percentage of failure: 43%.

After discussing the nature of the organism, the author lists farmers in the following areas who have used the "artificial culture" successfully to inoculate soybeans: Rash, Alabama; Gainesville, Georgia; Napoopoo, Hawaii (Gordon Glore–Inoculation successful. Increased growth of plant and abundance of root nodules); Winchester, Kentucky; Bynum, Maryland; Marionville, Missouri; Dome, North Carolina; Guys Mills, Pennsylvania; Spring City, Tennessee; and seven towns in Virginia (p. 67).

The author states that alkaline nitrates in the proportion of 1 to 10,000 are sufficient to prevent the formation of nodules. Photos show: (I) Package of inoculating material for sufficient for four acres of alfalfa, with a letter titled "Directions for using inoculating material," from the U.S. Department of Agriculture, Bureau of Plant Industry. (II) Effect of rich nitrogenous soil upon formation of nodules of soy beans; few nodules. Same culture and seed used as in Plates III and IV. (III) Effect of poor sandy soil upon formation of nodules of soy beans; more nodules. (IV) Effect of poor clay soil upon formation of nodules of soy beans; many nodules. Conclusion: Soybeans grown in a poor sandy soil or in a poor clay soil have a greater number of nodules than plants grown in a rich nitrogenous soil. He states also that fully as striking differences might be shown in a soil in which the moisture or the acidity or the air supply varies, and that the application of calcium or magnesium will act differently on nodule production depending on whether the plant grows under acid or alkaline conditions.

Note 1. This is the earliest document seen (June 2007) that clearly refers to the cultivation of soybeans in Hawaii. They may have been grown there in 1900, at which time one variety was introduced to the USA from Hawaii.

Note: 2. This is the earliest document seen (June 2007) concerning soybeans in connection with West Virginia. Since 6 packages of soybean inoculating material (or inoculated seed) were sent to West Virginia from November, 1902, to November, 1904, its seems likely that soybeans

were in West Virginia and being cultivated there by 1905–but we cannot be sure.

Note: 3. This is the earliest document seen (June 2007) concerning soybeans in connection with Oregon. Since 3 packages of soybean inoculating material (or inoculated seed) were sent to Oregon from November, 1902, to November, 1904, its seems likely that soybeans were in Oregon and being cultivated there by 1905–but we cannot be sure.

Note: 4. This is the earliest document seen (Dec. 2008) concerning soybeans in connection with Cuba. Since 2 packages of soybean inoculating material (or inoculated seed) were sent to Cuba from November, 1902, to November, 1904, its seems likely that soybeans were in Cuba and being cultivated there by 1905–but we cannot be sure.

Note: 5. This is the earliest document seen (Feb. 2009) concerning soybeans in connection with Costa Rica, or with Central America. Since 1 package of soybean inoculating material (or inoculated seed) was sent to Costa Rica from November, 1902, to November, 1904, its seems likely that soybeans were in Costa Rica and being cultivated there by 1905–but we cannot be sure. Address: Physiologist in Charge of Lab. of Plant Physiology.

94. *Ottawa Free Trader (Ontario, Canada).*1905. Soil inoculation: A fad not all that it is painted. Some country papers booming it. Like other things warranted to cure all the farmers' ills it has decided limitations. Jan. 27. p. 16.
• ***Summary:*** "For instance, in 1903 I had one acre of soy beans with roots free from these nodules. The adjoining acre had applied to it a few bushels of soil from a field growing soy beans the year before with roots loaded with these nodules. The two acres were treated in every way alike except in the matter of this inoculation; yet when the harvest came and we had dug up the roots to go with the stems and leaves and pods, it was found that the acre inoculated gave up 152 pounds of nitrogen, while the uninoculated acre gave up but 67 pounds. It seems therefore that not only does the inoculated plant get its nitrogen from the air, but it takes into its body much more nitrogen than it is capable of taking with roots uninoculated.

"It remained for Dr. George T. Moore of the department of agriculture, Washington, D. C., to invent a method of sending out those little parts to farmers, so that if their fields lacked the proper inoculation, they could supply it. He will send one kind of germs for clover, another kind for alfalfa, still another for white beans, and another for each kind of other legumes. These germs are sent out in little packages looking like yeast cakes, which are dissolved in water."

95. Zavitz, C.A. 1905. The results of field crop experiments with farm crops–1904: Soy, soja, or Japanese beans. *Ontario Agricultural College and Experimental Farm (Guelph), Bulletin* No. 140. 63 p. Feb. See p. 26.
• ***Summary:*** The Early Yellow Variety has given good satisfaction as a grain producer, and the Medium Green variety as a fodder crop. "We believe that as the Medium Green variety becomes better known, it will be grown for the purpose of cutting green and mixing with corn when filling the soil. We also believe that the Early Yellow variety can be grown quite successfully for grain production on many farms of Ontario. A small quantity of the Soy beans, ground and mixed with other meal, will increase the quality of the meal considerably... We generally get about 1,200 pounds of grain per acre..."

Yields of grain per acre (pounds), average of the last 4 years, is: Medium Green Soy Beans 1,031, Ito San Soy Beans 932, Early Yellow Soy Beans 915, Grass Peas 634.

Note: This is the earliest English-language document seen (Sept. 2006) with the term "Japanese beans" in the title, used to refer to soybeans. Address: Prof. of Field Husbandry, Ontario Agricultural College.

96. Douglas (J.M.) & Co. 1905. Lea & Perrins': The genuine Worcestershire Sauce (Ad). *Toronto Daily Star (Canada).* June 24. p. 65.
• ***Summary:*** A large illustration shows a dignified man wearing glasses seated at a dining table with a steaming bowl of something in front of him. Behind him stands an attentive waiter.

"'James, haven't you forgotten something.'

"'Forgotten–me! Sir.'\ "'What about my cold roast beef?'

"'Beg pardon, Sir. Of course, Sir. Lea & Perrin' Sauce, Sir.

"'Ad it for you hevery day, these thirty years, Sir.

"Couldn't heat cold meats without Lea & Perrins' Sauce, could you, Sir?'" Address: Canadian agents, Montreal [Quebec, Canada].

97. Douglas (J.M.) & Co. 1905. Lea & Perrins': The genuine Worcestershire Sauce (Ad). *Toronto Daily Star (Canada).* July 15. p. 19.
• ***Summary:*** A large illustration shows a waiter carrying to steaming bowl of soup to the table.

"'Beg pardon, Sir.

"Alphonse says as 'ow the grocer didn't send 'im Lea & Perrins' Sauce, Sir.

"The bottle looked the same, Sir–hand 'e didn't notice the label. Sir.

"Sorry, Sir, that the soup hisn't seasoned just right, Sir.

"'Alphonese, Sir, says has 'ow hit wont 'appen hagain, Sir.'" Address: Canadian agents, Montreal [Quebec, Canada].

98. Eaton (T.) Co., Ltd. 1905. Eaton's July sale news (Ad). *Toronto Daily Star (Canada).* July 28. p. 12.
• ***Summary:*** The section titled "You're the doctor" states: "Pure, fresh, clean foods go a long way toward keeping you right, and that's the kind of food we offer every day."

"Lee and Langley's imported Worcestershire Sauce, special per bottle 10¢." Address: 190 Yonge St., Toronto.

99. Holbrook's Sauce. 1905. The soup recipe which won the Holbrook's prize (Ad). *Toronto Daily Star (Canada).* Dec. 23. p. 16.
• ***Summary:*** A large illustration shows a bottle of "Holbrook's Worcestershire Sauce" which savour's soup. "It helps make poor soups palatable and makes good soups better than they could be without it.

"Many recipe for soups using Holbrook's Sauce were submitted in competition for 18 prizes offered by the manufacturer. The awards were made after careful test by Miss Ida M. Hunter, the Superintendent of Domestic Science Department of the Public School of Toronto."

The first prize recipe, titled "Curl vegetable soup," is given. Address: 23 Scott St., Toronto.

100. MacKay, Angus. 1905. Experimental Farm for the North-West Territories. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 411-52. For the year 1904. See p. 430. Sessional Paper No. 16.
• ***Summary:*** The section titled "Experiments with Soja beans" (p. 430) states: "Sown May 17, in rows 21, 28, and 35 inches apart. These were killed by frost, and did not mature or even form pods." Address: Superintendent, Experimental Farm, Indian Head, North-West Territories, Canada.

101. Robertson, R. 1905. Experimental Farm for the Maritime Provinces. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 313-51. For the year 1904. See p. 334. Sessional Paper No. 16.
• ***Summary:*** The section titled "Experiments with soja and horse beans" (p. 334) states: "Experiments were again conducted with Soja beans and Horse beans to test their relative value as forage crops, and also the yield per acre when grown in rows at different distances apart. The plots were 1-10 [probably 1/10] acre each... The seed was sown June 13. Many of the plants of both these plots were destroyed by cutworms." A "frost on September 1 killed the Soja Beans, making it impossible to obtain reliable data from either of these plots." Also discusses alfalfa and six varieties of millet. Address: Superintendent, Experimental Farm, Nappan, Nova Scotia, Canada.

102. Sharpe, Thomas A. 1905. Experimental Farm for British Columbia. Report of Superintendent. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 453-85. For the year 1904. See p. 466. Sessional Paper No. 16.
• ***Summary:*** In the section titled "Horse beans" (p. 466) we read: "Soja Beans:–These make a better growth on our warm sandy soil than the horse bean and as they branch freely, and have a great deal of foliage, as well as many pods, the cattle, horses, pigs and sheep are very fond of them, and on rich land fairly heavy crops can be raised, but clover can be grown so much more cheaply and more feed per acre can be got from clover, that it does not pay except under exceptional conditions to raise Soja beans, especially as the seed seldom ripens sufficiently to be of use.

"Three plots were sown April 25 and harvested October 10, at which time a fair percentage of the pods contained seeds in a nearly matured state."

The beans sown at 28 inches apart in the drills gave the highest yield (4 tons 1,160 pounds). "Well podded; very leafy and well branched; pods more matured than where closer together in the drills." Address: Superintendent, Experimental Farm, Agassiz, BC, Canada.

103. Shutt, Frank T. 1905. Report of the chemist. *Annual Report of the Experimental Farms (Ottawa, Canada).* p. 143-203. For the year 1904. See p. 160-61. Sessional Paper No. 16.
• ***Summary:*** Tests were conducted to ascertain the relative degree to which certain crops reduced the soil's moisture by their growth, and further to gain information regarding the soil's moisture content when the same crop was sown broadcast or in drills. Soja Beans, in drills and cultivated, did not have a heavy growth. The loss of moisture was only 0.39 per cent, or 9 tons per acre. This was considered an insignificant loss. (p. 161).

A table titled "Conservation of soil moisture–C.E.F., Ottawa, Ont. 1904" (p. 160) shows detailed results of the trials for Soja beans in drills, water measurements being taken 8 times from July 4 to Oct. 10. Address: M.A., F.I.C., F.S.C., F.R.S.C., Chemist, Ottawa, ONT, Canada.

104. Zavitz, C.A. 1905. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 26:13-31. For the year 1904. See p. 16.
• ***Summary:*** A table titled "List of experiments for 1904" (p. 16), under "Grain crops" includes "Testing Cow Peas and two varieties of Soy, Soja, or Japanese beans–3 plots." No further information is given. Address: Prof., Agricultural College, Guelph [Ontario, Canada].

105. Harrison, F.C.; Barlow, B. 1906. Co-operative experiments with nodule-forming bacteria. *Ontario Department of Agriculture, Bulletin* No. 148. 19 p. March. [1 ref]

• ***Summary:*** Contents: Introduction. The importance of nitrogen to the farmer. The discovery of the nodule bacteria. Distribution of cultures in Canada. Methods of inoculating: By transfer of soil, by treating the soil, by treating the seed. Directions for the use of nitro-cultures supplied by the bacteriological department of Ontario Agricultural College (8 steps; they begin: "The culture is sent to you with the understanding that it is to be used for experimental purposes and that you will use it as directed and report to us your success or failure"). Announcement.

The bulletin begins: "The issue of a number of bulletins by the United States Department of Agriculture on 'Beneficial Bacteria for Leguminous Crops,' 'Inoculation of Soil with Nitrogen-Fixing Bacteria,' and the publication of articles on this subject in some of the popular magazines, has called the attention of the Canadian farming community to the maintenance of soil fertility by the growth of legumes which have been treated with beneficial bacteria, and has resulted in the many requests for information to the Bacteriological Department of the College with demands for samples of the necessary bacteria for the purpose of treating various crops such as clovers, peas, beans, etc.

A table (p. 4) shows how many samples of nitrogen-fixing bacteria ("nitro-cultures) were sent to 10 provinces of Canada. For example, Ontario was sent 76 samples, Nova Scotia 66 samples, and Quebec 10 samples. A 2nd table (p. 5) shows the total number of reports received for each of 9 different crops; the soybean had 1 report only [in response to culture samples sent, but we are not told in which province those soy beans were grown]. Some 38 samples of the 134 reports received are printed in this bulletin; of those, the four for "Beans" (the type of beans is not stated) are from Ontario (3) and New Brunswick (1).

A full-page photo (p. 13) shows two uprooted soy bean plants. The one on the right has many more leaves and larger roots than the one on the left. The caption states: The one on the left is from untreated seed, that on the right from seed treated with nitro-culture."

Another full-page photo (p. 15) shows the roots of four separate soy bean plants, upside down. The caption states that the two largest root systems with the most nodules are from seed treated with nitro-culture, whereas the other two are from untreated seed.

Page 16: "Inoculation is also desirable if a farmer wishes to grow a new kind of legume on land even though it has previously grown excellent crops of a different species of legume. This, although red clover may have been successfully grown, with a large number of nodules on the roots, the bacteria from those roots may not infect alfalfa or lucerne if it were planted in the clover soil, and hence, inoculation with bacteria taken from the alfalfa nodules, would be desirable. So also when introducing the culture of vetches, of field beans, and soy beans, it would be necessary to treat the seed with bacteria taken from these plants... It seems especially desirable in Ontario to inoculate the field bean and soy bean, as experiments have shown that Ontario soils are not so generally infected with bacteria for these plants as for the other legumes,...

The "Announcement" (p. 19) states: "For the spring of 1906 the Bacteriological Department is preparing to send out a *limited* number of cultures for the inoculation of the following legumes: Red Clover, Alsike Clover, Alfalfa or Lucerne, Field Peas, Vetches, Field Beans and Soy Beans. Those desiring cultures will please make application according to the following blank form.

"Application for nitro-culture." "This sheet when filled out should be addressed to the Bacteriological Department, Agricultural College, Guelph, Ontario,..."

Note: Unfortunately, there is no indication in this paper from where the soy bean seeds (or photos) were obtained or where they were they were grown. Address: 1. Bacteriological Laboratories, The Macdonald College, Ste Anne de Bellevue, Quebec; 2. Bacteriological Department, Ontario Agricultural College, Guelph. Both: Canada.

106. Harrison, F.C.; Barlow, B. 1906. XII–The nodule organism of the Leguminosae–Its isolation, cultivation. identification, and commercial application. *Transactions of the Royal Society of Canada. Section 4: Geological and Biological Sciences. Series 2.* 12(1906-1907):157-237.
• ***Summary:*** Harrison and Barlow read this paper at a meeting of the Royal Society of Canada on 23 May 1906. The soybean is mentioned several times: "Large nodules like those from the Soy bean may remain in the solution for half an hour" (p. 165).

"Growth in ash-maltose-water media–In January, 1905, a series of liquid media were inoculated with pure cultures isolated from nodules of red clover, alfalfa, vetch, and soy bean" (p. 168).

"Seed were thus obtained in the summer of 1905 and 1906 from pea, vetch, bean and soy bean. The seeds were examined for bacteria by plating some of them in ordinary gelatin or agar media and in ash-maltose-agar and by dropping some into tubes of sterile bouillon. The seeds so treated imbibed moisture and in some instances germinated" (p. 173).

A table lists the distribution of samples of nitrogen-fixing bacteria ("nitro-cultures") sent to 10 provinces of Canada: Quebec was sent 10 culture samples (p. 184). An untitled table shows the total number of reports received according to crop–the soybean had 1 report only [in response to culture samples sent] (p. 184, but we are not told in which province those soy beans were grown).

Note 1. Unfortunately, there is no indication in this paper from where the soy beans were obtained or where they were they were grown. Address: 1. Bacteriological Laboratories, The Macdonald College, Ste Anne de

Bellevue, Quebec; 2. Bacteriological Department, Ontario Agricultural College, Guelph. Both: Canada.

107. Eaton (T.) Co. 1906. Eaton's Friday bargain list (Ad). *Toronto Daily Star (Canada)*. May 31. p. 14.
• ***Summary:*** The section titled "Friday's pure food economy" includes: "Baird's Imported Worcestershire Sauce, 5 bottles, 25¢." Address: Toronto.

108. Henderson (Peter) & Co. 1906. Everything for the garden (Mail-order catalog). New York, NY. 186 p. 28 cm.
• ***Summary:*** In the section titled "Farm seeds (p. 64), in the center of the page, is an illustration of a soja bean plant with a cluster of pods in the upper left corner. On a banner is written "Henderson's Early Soja Bean."

To its left is expanded coverage of the soja bean and a new variety for this catalog: "Early Green Soja Bean. This variety produces enormous crops as far north as Canada, and will ripen its seeds even in Massachusetts. It grows about 4 ft. high and yields ten to twenty tons of green fodder per acre, or 20 to 40 bushels of Beans.

"It is a valuable leguminous plant for the farmer and dairyman for either green or cured fodder or grain. It is especially valuable for ensilage in combination with fodder corn or Japanese Millet, thus furnishing a complete balanced ration with an agreeable aromatic flavor, and is greedily relished by cattle. It increases the milk and butter and fattens the stock. The grain is also exceedingly nutritious, ranking, when ground, even higher than cotton seed or linseed meal for feeding cattle, hogs, or other stock. 3 lbs. of Soja Bean meal added to the grain ration of milch cows produces a rich milk.

"Soja Beans are great soil enrichers, adding humus and fixing nitrogen from the air. The seed may be planted as soon as the soil is warm–a little later than corn–in rows 30 inches apart, 6 to 8 seeds to the foot, requiring 3 pecks per acre. *(See cut).*

"Price, 10¢ lb., $1.25 pk. [peck], $4.00 bushel (of 60 lbs.); 10-bush. @ $3.90 per bush."

This catalog is owned by Special Collections, USDA National Agricultural Library, Beltsville, Maryland.

Note: This is the earliest English-language document seen (March 2003) that uses the term "fixing nitrogen" (or "fix nitrogen") or "fixing nitrogen from the air" in connection with soybeans. Address: 35 & 37 Cortlandt St., New York.

109. Zavitz, C.A. 1906. Co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 27:12-33. For the year 1905. See p. 15-16, 19, 29-30.
• ***Summary:*** A table titled "Co-operative experiments in agriculture in 1905" (p. 15), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

A table titled "Grain crops, 1905" (p. 16) shows that 2 tests were conducted on "Soy beans." Early Yellow (estimated value 100), yielded 1.85 tons/acre of straw and 1,100 lb/acre (18.33 bu/acre) of grain. Medium Green (E.V. 85), yielded 4.30 tons/acre of straw and 1,040 lb/acre (17.33 bu/acre) of grain.

The section titled "Soy beans" (p. 19) includes a summary and notes: "Meal made from Soy beans is not very different in composition from that of cotton seed meal. A small quantity of this meal added to that of oats and barley would add considerably to the nutritive properties of mixed feed." Note: This meal is probably ground whole soy beans. Address: Prof., Agricultural College, Guelph [Ontario, Canada].

110. Piper, C.V. 1907. Leguminous crops for green manuring: Soy beans. *USDA Farmers' Bulletin* No. 278. 27 p. April 3. See p. 19-21.
• ***Summary:*** Largely a favorable comparison with cow peas. "Soy beans are adapted to a much wider range of climate than cowpeas, being grown successfully even in Ontario [Canada] and Massachusetts. As a forage crop soy beans have some points of superiority over cowpeas, the hay being somewhat easier to cure and richer in protein. The seed is also cheaper than that of cowpeas, usually costing only two-thirds as much." Illustrations show (p. 19-20): (1) A soy bean plant with an inset of enlarged pods (non-original; from Carrière 1880). (2) Roots of soy bean plant with nodules (not original). Address: Agrostologist in Charge of Forage Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

111. Harrington, -. 1908. Japan: Report for the year 1907 on the trade of the consular district of Yokohama. *Diplomatic and Consular Reports, Annual Series (Foreign Office, Great Britain)*. No. 4165. p. 1-47.
• ***Summary:*** Yokohama is Japan's leading port, accounting in 1907 for about 40% of all imports. Germany exported £13,000 in oil and bean cake to Japan (perhaps transshipped from China; p. 13). Japan's main imports from China via Yokohama included raw cotton £362,000, oil and bean cake £296,000, and soja beans £73,000 (p. 14). There was a small increase in the export of soy [sauce] to Canada (p. 16; no amounts are given).

A ten-page table (p. 22-32) titled "Imports into the Port of Yokohama during the Years 1905-07" shows the import of "oil cake" used as manure rose from 61,830 tons worth £281,870 in 1905 to 88,520 tons worth £461,460 in 1907 (p. 32).

A table (p. 34) titled "Exports from the Port of Yokohama during the Years 1905-07" shows the value of the export of "soy" [sauce] (mostly to the United States and

Hawaii) rose from £42,007 in 1905 to £59,900 in 1907; no quantities are given. Groundnuts, rice, seaweed, and Bêche-de-mer (sea slug, trepang) were also exported from Yokohama. Address: Acting British Vice Consul, Yokohama.

112. Zavitz, C.A. 1908. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 33:165-226. For the year 1907. See p. 198-99, 219, 223.
• ***Summary:*** The section titled "Varieties of soy, soja or Japanese beans" (p. 198-99) begins: "Although a large number of varieties of this class of beans have been tested for some years on our trial grounds, most of them have proven to be quite unsuited for growing in Ontario, as they require a long season in which to mature. A few varieties, however, ripen quite early and produce grain which is very high in feeding value, being even richer in this respect than our common field peas. Among the varieties which mature their seed at the College, the Early Yellow is worthy of special mention. This variety has been grown at the College in each of 12 years and yields per acre have varied from 6.9 bushels in 1893 to 30.4 bushels in 1906. The average for the 12 years is 15.3 bushels of seed per acre.

"The Medium Green variety of soy beans is a strong vigorous grower and usually produces a good yield of seed when it has time to mature before the nipping frosts occur in the autumn. It is, however, rather later than the Early Yellow variety and is rather unsafe to sow for grain production in Ontario, except on warm soils in the southern part of the Province. Soy beans are usually sown in rows from twenty-five to thirty inches apart, and about one-half bushel of seed is used per acre."

The section titled "Leguminous crops for green fodder" (p. 219) states: "Eighteen varieties of leguminous crops were grown in the Experimental department in 1907 for the production of green fodder. They include vetches, soy beans, cow peas, lupines, etc... The greatest yields of green crop in 1907 were produced as follows: Medium Green soy beans, 6.9 tons [per acre]; Ito San soy beans, 5.6 tons; Grass peas, 5.4 tons... The following table gives the average height and average yield of green fodder per acre for each of the six varieties of leguminous crops grown for seven years in succession." Medium Green soy beans, 34 inches, 9.4 tons (highest average yield). Early Yellow soy beans, 26 inches, 7.2 tons (4th highest average yield).

The section titled "Annual pasture crops" (p. 222-23) states: "The amount of pasture crop produced by the various varieties when grown separately, was according to the following order, starting with the highest and finishing with the lowest yielders: Oats, Common Red Clover, Hairy Vetches, Sugar Cane, Dwarf Essex Rape, Crimson Clover, Rye, Barley, Hungarian Grass, Common Vetches, Corn, Spring Wheat and Soy Beans."

A photo (p. 226) shows a large group of farmers, dressed in hats, coats, and ties, walking beside the test plots. The caption reads: "A few of the 33,000 farmers who visited the College in the month of June, 1907."

Note: This document contains the 2nd earliest date seen (Feb. 2001) for soybeans in Ontario province, Canada, or the cultivation of soybeans Canada, or in Ontario province, Canada (1893). The source of these soybeans was Prof. Georgeson, at the Kansas Agricultural Experiment Station, in the United States (for information on the source, see Marketing and Development in Ontario Agriculture. 1983. Sept. p. 4-6). Address: Guelph, Ontario, Canada.

113. Zavitz, C.A. 1908. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 29:14-32. For the year 1907. See p. 15.
• ***Summary:*** A table titled "Co-operative experiments in agriculture in 1907" (p. 15), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots." No additional information on soy is given. Address: Prof., Agricultural College, Guelph [Ontario, Canada].

114. Douglas (J.M.) & Co. 1909. What the grocers say, about Lea & Perrins' Worcestershire Sauce (Ad). *Toronto Daily Star (Canada).* May 4. p. 12.
• ***Summary:*** "Fraser, Viger & Co., Limited, of Montreal, have the reputation throughout Canada of catering to the highest class of the trade. This well known house also believes in telling their patrons about their best goods.

"In an advertisement which appeared in 'The Montreal Daily Star' of February 13th, Fraser" etc. said: "Among the various sauces that flood the market, Lea & Perrins', the 'Genuine Worcestershire,' is still in the lead by a big margin Its flavor is unique and most appetizing, different from all others."

Illustrations show: (1) A grocer, wearing muttonchops [sideburns] and a white apron, holding a bottle of Worcestershire sauce. (2) A large upright bottle of Lea & Perrins' Worcestershire Sauce. Address: Agents for Canada, Established 1857, Montreal [Quebec, Canada].

115. *Milling (Liverpool).*1909. Soya beans. 33(9):288-89. Aug. 28.
• ***Summary:*** This article, which precedes by 2 pages a larger article on the subject, is published under seven equal-sized heads: Soya beans. A new trade. Empire production. Buyers of soya beans. Food purposes. Brown bread. Wheat gluten. "There is a probability of the import of Soya beans becoming a trade of great importance in this country. For some years a cake, made from the residue left by crushing them for the sake of the oil they contain, has been imported into this country. The first really commercial import of these beans was, we believe, made by a Liverpool firm last year.

Their great value, both for oil production and for other purposes, has been known for many years, but it was not until after the Russo-Japanese War that the development of the crops in Manchuria was commenced with a view to an export trade... Since the Spring of this year the import [of Soya beans to England] has been several hundred thousand tons."

Sir Alfred Jones is seeing if soybeans can be grown on the west coast of Africa. An influential commission appointed by the Canadian government visited England and other European countries to find out why Canada had lost a portion of her trade in bacon. It is thought that if farmers in Canada had soya bean meal they would be able to produce a much larger quantity of bacon.

"We mentioned in a recent issue of *Milling* how the beans were being finely desiccated and sold for admixture with wheaten flour. Since that time we have obtained baking samples of the flour which is far superior to that first seen. A loaf of bread was made from four parts of English patent [flour] and one part of Soya flour. The loaf produced was of a very pleasant flavour. It cut quite clean and there was an absence of crumbs... The colour of the loaf was a rich brown and the flavour was very good." The quality of brown bread could probably be greatly improved by the addition of soya flour.

"The albuminoids of wheat are of a very different order from those of most other cereals. They provide the baker with a substance which holds in the gas produced by the yeast and so cause the light loaf of bread in which bakers delight in producing... If we could make the albuminoids of other cereals as elastic and tough as those of wheat, light bread could be made from such as barley, maize, oats and Soya flours."

Note 1. This is the earliest English-language document seen (Dec. 2005) that uses the term "soya bean meal" to refer to ground, defatted soybeans.

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term "soya flour" (one of two documents). Address: England.

116. *Manchester Guardian (England).*1909. The Manchurian soya bean: New industries projected. Sept. 10. p. 10.

• ***Summary:*** "Considerable interest has been awakened in commercial quarters by the statements recently published as to the immense possibilities of the Manchurian Soya bean and there is a probability that at Liverpool, if not also on the banks of the Ship Canal, an important new industry will spring up."

Note: The Manchester Ship Canal, opened in May 1894, transformed Manchester from a landlocked city into a major sea port, known as the Port of Manchester.

"The value of the bean has already been recognised in various parts of the world, but it was only in the recent opening of the Manchurian Railway for other than military purposes that revealed the immense trade possibilities connected with it."

"The uses of the bean are manifold. It is said to be excellent in bread; it yields a rich oil, is a capital food for cattle and pigs; and in Japan even milk has been derived from it, and from that milk cheese of various sorts has been made. It forms such a rich food for pigs that it requires to be mixed with plainer fare before being offered to them. Its advantages in this direction were quickly grasped by the enterprising Danish pig-breeders; they bought heavily on the Hamburg market, and the subsequent decline in the imports of Canadian hog products into this country has been attributed, in part at any rate, to the advantages gained by the Danish breeders as a result of the extensive use of the bean.

"The first cargo of the beans to reach this country came in the Myrtledene to Bristol and was consigned to a well-known Liverpool firm of cattle food manufacturers. The bean is now used also for soap-making at Port Sunlight. The Myrtledene's cargo arrived in February last, and since then 200,000 tons have been imported.

"Although firms at Hull and Newcastle-on-Tyne are also moving, a serious attempt is to be made to centre the imports of the bean at Liverpool, with the intention not merely of increasing the shipping trade of the port, but also with a view to establishing a new local industry. The exportable surplus of this year's crop will, it is said, probably exceed a million tons, so that the magnitude and value of the trade is readily appreciated. Several of the most prominent commercial men of Liverpool are interested in the scheme, amongst them Sir Alfred Jones, who contemplates attempting its cultivation in West Africa. He is also interested in the question of its shipment from Vladivostok, and particularly in the erection of special mills at Liverpool to deal with the bean. Efforts are now being made to promote a company to take the matter up, and in a few weeks it will be seen whether these efforts have been successful.

"In the meantime the British Vice Consul at Vladivostok reports that the condition of the coming crop is very favourable,..."

117. *Toronto Daily Star (Canada).*1909. Beef-eating in Japan: Is on the increase–abandoning rice which is cause of beri-beri, Sept. 10. p. 7.

• ***Summary:*** London, Sept. 11. "The Japanese peasant does not eat much rice; it is too dear. Barley, vegetables, and fish are his staple foods. The upper and middle classes, however, who have hitherto eaten large quantities of rice, are now slowly beginning to add meat to their dietary. Beef is the favourite dish. It is cut up small, boiled with a native bean sauce [soy sauce] and vegetables, and eaten with the hashi or chopsticks."

118. Piper, Charles V.; Nielsen, H.T. 1909. Soy beans. *USDA Farmers' Bulletin* No. 372. 26 p. Oct. 7. Revised in 1916. [10 ref]

• ***Summary:*** Contents: Introduction. Climatic and soil requirements of soy beans. Varieties of soy beans (12): Mammoth (yellow); Hollybrook (yellow); Ito San (yellow); Guelph (green); Buckshot (black); Ogemaw (brown); Wisconsin Black; Wilson (black); Meyer (mottled black and brown); Austin (greenish yellow); Haberlandt (yellow); Riceland (black). The culture and planting of soy beans. The inoculation of soy beans. Soy beans for hay: Curing the hay. Soy beans for pasturage. Soy beans in mixture: Soy beans and cowpeas, soy beans and sorgo, soy beans and millet, soy beans and corn. Soy beans for ensilage. Soy beans for grain. Soy beans in rotations. Feeding value of soy beans: Feeding value for sheep, feeding value for dairy cows, feeding value for hogs. Storing soy-bean seed. Comparison of soy-bean grain and cotton-seed meal. Comparison of soy beans and cowpeas. Summary.

The bulletin begins: "The soy bean, also called the 'soja bean' (fig. 1), is a native of southeastern Asia, and has been extensively cultivated in Japan, China, and India since ancient times. Upward of two hundred varieties are grown in these countries, practically every district of which has its own distinct varieties. The beans are there grown almost entirely for human food, being prepared for consumption in many different ways. Their flavor, however, does not commend them to Caucasian appetites and thus far they have found but small favor as human food in either Europe or America.

"As a forage crop, however, soy beans have become of increasing importance in parts of the United States, especially southward. They have been tested at most of the State agricultural experiment stations, and it is clear that their region of maximum importance will be south of the red clover area and in sections where alfalfa can not be grown successfully. They thus compete principally with cowpeas, but as cultivation is usually required they fill a somewhat different agricultural need. Their culture has greatly increased in recent years, especially in Tennessee, North Carolina, Virginia, Maryland, Kentucky, and the southern parts of Illinois and Indiana [though no statistics are given]. It seems certain that the crop will become one of great importance in the regions mentioned and probably over a much wider area. The earlier varieties mature even in Minnesota, Ontario [Canada], and Massachusetts."

"Soy beans are also decidedly drought resistant, much more so than cowpeas, and but for the depredations of rabbits would be a valuable crop for the semiarid West. Rabbits are exceedingly fond of the foliage, and where they are numerous it is nearly useless to plant soy beans unless the field can be inclosed with rabbit-proof fencing."

At the present time seven varieties of soy beans are handled by American seedsmen: Mammoth (yellow seeds), Hollybrook (yellow), Ito San (yellow), Guelph (also called Medium Green, Medium Early Green, Large Medium Green), Buckshot (black; a very early variety handled by northern seedsmen), Ogemaw (brown), and Wisconsin Black. A detailed description, with a photo showing the seeds and pods, is given of each. The best of the new varieties, most of which will be available in 1910, are: Wilson (black), Meyer (mottled black and brown), Austin (yellowish green), Haberlandt (yellow; the seed is considerably larger than that of any of the other yellow-seeded varieties), and Riceland (black).

"During the past three years more than two hundred additional varieties have been introduced from China, Japan, and India, most of which have already been sufficiently tested to give some idea of their value. Many of the new varieties are so superior in various respects that they are certain to replace all of the above-named varieties except Mammoth and, perhaps, Ito San."

A table (p. 23) gives a nutritional analysis of seven varieties of soy beans: Austin, Ito San, Kingston, Mammoth, Guelph, Medium Yellow, Samarow.

Illustrations (line drawings) show: (1) A typical soy-bean plant with leaves, pods, roots and nodules (p. 5, by Boetcher). (2) A bunching attachment on an ordinary mower for bean harvesting (p. 19). Photos show: (1) A plant of the Mammoth variety of soy bean (p. 6). (2) Seeds and pods of seven varieties of soy beans (full size; p. 8). (3) A man standing in a field of the Mammoth variety of soy bean in North Carolina (p. 9). (4) Roots of a Mammoth variety of soy bean with characteristic nodules (p. 13).

Note: This is the earliest document seen (March 2002) stating that the USDA has tested more than 200 varieties of soy beans. Address: 1. Agrostologist in Charge; 2. Scientific Asst. Both: Forage Crop Investigations, USDA Bureau of Plant Industry, Washington, DC.

119. Carson, John M. 1909. Soya bean and products. *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. 35 p. Erroneously numbered Special Consular Reports, Vol. XL.

• ***Summary:*** Contents: Introduction. I. Countries of production. China: Newchang (Varieties of beans and amount produced {in centals [hundredweights; 1 cental = 112 pounds]}, methods of cultivating and harvesting, prices and exports, shipments to Europe–use by natives), Dalny (Manufacture of bean cake and oil, preparing the cake, expressing the oil and wages paid, freight charges to Dalny, exports, stock on hand, and prices), Chefoo (Beans imported for cake manufacture, quantity and value of output, bean vermicelli made by a peculiar process [from the small green bean lü tou {mung bean}], preparation of beans, drying of product and prices [for vermicelli]),

Shanghai (Extent of export trade in beans), Shantung (manufacture of bean oil and cake, harvesting and pressing, shipping and prices), Swatow, Tientsin (Exports of raw beans, shipments of bean cake, extent of trade at Tientsin). Tables (p. 5) show prices and exports of soya beans, bean cake and bean oil at Newchang for the years 1905-1908. Japan: Cost of production and prices (of soya beans, quite detailed), imports of beans and cakes, use of the bean as food (shoyu, miso, tofu, koya-tofu, natto, flour), Kobe (Beans as human food {eaten boiled with a little soy [sauce], "made into bean curd, and a kind of sauce made of wheat, beans, and salt"}–small exports {"The total exports of beans, pease, and pulse [incl. soy] in 1908 were valued at $25,971, of which about $24,000 worth went to Hawaii, the United States, and Canada for use by the Japanese residents in those countries as an article of food"}, manufacture of cake), Nagasaki (Production of beans, imports of beans–market prices). Shipments from Vladivostok * [Russia, of soybeans probably grown in Manchuria] (Fluctuations in prices, shipments during present season, immense shipments planned next season (by Mitsui)).

"It is the intention of Mitsui Bussan Kaisha, the largest exporter from this port, to ship about 200,000 tons of beans via Vladivostok during 1909 and about double that quantity via Dalny. Many large contracts have been made for next season, and from present indications a strong effort will be made against the control of Mitsui Bussan Kaisha as the Chinese are making arrangements to deal direct with the European market without the aid of the Japanese" (p. 18).

Tables show: The quantities and value of soya beans, soya-bean cake, and bean oil imported into Japan during the year 1908 (p. 15). The soya bean harvests (in bushels) reported in various Japanese districts (p. 16).

II. Markets. Denmark: Experimental imports made, views of an importer. France: High duties prevent importation of soya beans, soya-bean flour bread used by diabetics, unknown in Calais district. Germany: Danger of feeding cattle on soya-bean products, oil value–prices at Hamburg, comparative food value of the bean. Italy: Beans imported and cultivated in limited quantities, prices of soya products–American cotton-seed oil, not imported into Catania, home products supply Piedmont district. Netherlands: A great future for the soya-bean trade predicted, prices of the bean and bean cake, soya cake as cattle feed, manufacture of soya-bean products begun, English soya-bean cake defective. Norway: Imports of soya-bean meal and cotton-seed meal. Russia: Beans and products unsatisfactory as feeding stuffs. Spain: Soya bean unknown in Valencia district [They are neither cultivated nor imported in this district]. Straits Settlements [Singapore and Malaya]. Sweden: Soya-bean products introduced through England. Comparative value of cattle feed [work by Nils Hansson of Sweden], comparative prices of feed stuffs. Turkey. England: Liverpool (Conversion of the soya bean into cake and meal), Plymouth (Soya cake and meal extensively consumed), Southampton (The bean appreciated as a fattener and as a dairy ration, the soya bean as human food [for use in diabetic diets]). Ireland: Chinese bean products are favorably received, soya bean introduced in Belfast, small imports at Cork. Scotland: Statistics as to use in Dunfermline not available, test of feeding value of soya cake [by Prof. Douglas A. Gilchrist], Edinburgh mills making experiments (based on 1909 report 1909 of U.S. Consul Rufus Fleming from Edinburgh).

III. Competitive American exports. Tables (p. 35) show exports for 1907, 1908, and 1909 of cotton-seed meal, cotton-seed oil, and cottolene, lardine [not defined: presumably shortening made from cottonseed oil], etc. to major countries, especially in Europe.

The Introduction notes: "In compliance with requests from manufacturers of cotton-seed products in the United States, who desired that an investigation be made of the production and use of the soya bean and its manufacturers in the Far East and of the extent to which they compete with American cotton-seed products in the European markets, the reports following have been submitted by consular officers in the various countries concerned...

"The reports of the consular officers have been placed in two groups, the first having to do with the countries that produce the soya bean and the second with the countries that are sought as markets. Statistics as to the imports of soya-bean products in many European countries were not available at the time the reports were submitted, but inasmuch as the prices quoted were generally lower than for other seed products, emphasis has been laid on the relative merits of the two classes of goods as shown by experiments and analyses in these countries. These manufacturers will have to work in meeting this new competition."

Note 1. This is the earliest document seen (Dec. 2007) concerning soybean products (oil or meal) in Turkey, Denmark, Ireland, the Middle East, or Sweden (one of two documents); soybeans as such have not yet been reported in any of these countries. This document contains the earliest date seen for soybean products in the Middle East or Turkey (1909).

Note 2. This is the earliest English-language document seen (Oct. 2001) that uses the term "soya-bean flour." Address: Chief of Dep.

120. Carson, John M. 1909. Soya bean and products: Japan (Document part). *Special Consular Report (U.S. Bureau of Manufactures, Department of Commerce and Labor)* No. 41. Part 5. p. 13-16. Erroneously numbered Special Consular Reports, Vol. XL.

• ***Summary:*** Vice-Consul-General E.G. Babbitt of Yokohama writes: "The soya bean, or soja bean, as it is known here (Common Japanese name 'daidzu' [daizu]), is cultivated throughout the Empire of Japan. The total area of

cultivation is in the neighborhood of 1,200,000 acres, or about 3.8 per cent of the total area devoted to the cultivation of rice and other cereals and grains. The soya bean is often cultivated, not in fields by itself, but in rows along the edges of rice or wheat fields. These edges are, as a rule, very soft, for they have been previously plowed, and little labor is required in planting... In harvesting the plants are uprooted, and, after being dried in the sun for several days, flails are used to separate the beans from the pods. The flails are of a very primitive type, with bamboo handle and of light weight. Female and child labor is invariably employed in flailing.

"The kinds of fertilizers used differ by districts. In the prefecture of Miyagi, for example, straw ashes and superphosphate of lime are commonly employed, while in the prefecture of Akita wood ashes, superphosphate of lime, and horse dung are used."

The average yield of soybeans in Japan over the past 10 years is 15.30 bushels per acre. For the year 1907 the highest yield is from Ishikawa prefecture, 21.62 bushels/acre, whereas the lowest yield is from Okinawa prefecture (Loochoo Islands, south of Kiushu), 8.48 bushels/acre. During 1908 huge amounts of soya beans (3.3 million piculs; 1 picul = 132.277 pounds weight) were imported to Japan from China, Kwantung, and Korea, with small amounts coming from Asiatic Russia. Large amounts of soya-bean cake (7.760 million piculs) were imported from China and Kwantung, with small amounts coming from Asiatic Russia and none from Korea. "The total imports of bean oil in 1908 amounted to only 49,993 pounds, valued at $1,325."

"The soya bean is one of the most important articles of food in Japan. The beans are cooked in various ways, while in brewing soy (shoyu), in the manufacture of miso (pea or bean cheese), tofu (bean curd), koya-tofu (frozen bean curd), and natto (steamed beans) they are the chief ingredient. They are also manufactured into flour and make up the principal part of many Japanese sweetmeats. All these foodstuffs are daily used in Japanese homes.

"To a limited extent soya beans are used as horse or cattle food, being sometimes boiled and mixed with straw, barley, bran, etc."

The vice consul of Kobe states that in 1908 Japan produced 18,812,228 bushels of soya beans. Small amounts are exported "to Hawaii, the United States and Canada for use by the Japanese resident in those countries as an article of food." Three factories in the Kobe district make bean cake, largely from imported, lower-cost soya beans. "The beans are first crushed flat, then put into a big container and steamed, after which they are put into a steam press to extract the oil and to be made into cakes. The cakes come in circular pieces, a yard in diameter and an inch thick, each weighing about 50 pounds. The oil is used for lubricating machinery. The cake is used only as a fertilizer and is not fed to animals as it causes their hair to fall off."

Note 1. This is the earliest document seen stating that soya bean oil can be used as a lubricant.

Note 2. This is the earliest English-language document seen (Feb. 2004) that uses the term "koya-tofu" (or "koya-dofu" or "kôya-dôfu") to refer to dried-frozen tofu.
Address: Chief of Dep.

121. Zavitz, C.A. 1909. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 34:170-230. For the year 1908. See p. 205, 222, 230.
• ***Summary:*** The section titled "Grass peas and soy beans" (p. 205) states that the best yielding soy bean varieties are Medium Green (1,031 lb/acre), Ito San (932), and Early Yellow (915), based on average of 4 years grain yield. The Early Yellow variety "has proven to be one of the best for most parts of the Province, as it yields very well and matures early. In the average results of growing the Early Yellow soy beans at the College for 13 years, we find the production to be 15 bushels of the threshed seed per acre."

The section titled "The leguminous crops for green fodder" (p. 222) gives the average results for 5 years for height and tons of fresh cut crop per acre, including: Medium Green soy beans, 32 inches, 8.1 tons (the best yield among 8 legumes). Ito San soy beans, 26 inches, 7.1 tons (#3 best yield). Early Yellow soy beans, 26 inches, 6.2 tons (#4 best yield).

A photo (p. 230) shows a "Nursery plot of Soy Beans."
Address: B.S.A., Prof. of Field Husbandry, Guelph, Ontario.

122. Zavitz, C.A. 1909. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 30:13-37. For the year 1908. See p. 15.
• ***Summary:*** The cooperative work in Agriculture, conducted through the Experimental Union, "has been more extensive during the past year than at any previous time... During the past year, no less than 5,159 applications for experimental material were received. Of this number, 4,420 ex-students of the College and other farmers were supplied with everything necessary for conducting the co-operative experimental work. Owing to lack of help, finances, and material, we were unable to supply 739 applicants..." (p. 13) Since the experiments "have been conducted in every county and probably every township in the Province," they should be of widespread interest and value.

A table titled "Co-operative experiments for 1908" (p. 15), under "Spring grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots." No additional information about soy is given.

"Most of the plots were one rod [5.50 yards or 16.5 feet] wide by two rods long, being exactly one-eightieth of

an acre in size. In former years some plots consisted of one-tenth acre and a few of one-half acre in size, but for most experiments these were found less satisfactory than the small plots." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

123. *Daily Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor).*1910. Soya-bean crushing: Factories planned in both Europe and American Pacific Coast. No. 3681. p. 5. Jan. 10.
• ***Summary:*** "Consul Walter C. Hamm, at Hull, England, writes that it is reported that there are projects on foot in connection with the soyabean industry which may have far-reaching effects both on the industry in Hull and on the Pacific coast of America.

"As stated, one scheme is to erect large seed-crushing mills at Vancouver, British Columbia, and Seattle, State of Washington, where the bean can be crushed and the oil extracted. The Canadian Pacific and lines of steamers running from Vancouver and Seattle to Japan and China are said to be aiding this scheme.

"Another project proposed is to erect large factories in Copenhagen for the production of soya-bean oil and cake. It is hoped that the annual turnover of the new company will at first be not less than $1,100,000 and that 30,000 tons of soya beans will be shipped each year by the East Asiatic Company from Manchuria to Denmark. At present oil cake of various kinds to the value of $7,000,000 is consumed annually in Denmark, of which a large proportion is shipped from Hull. The Manchurian beans are the subject of comment in the report of the P. and O. Company, which speaks of the absorption of a very large amount of tonnage for their export. The report adds:

"'This is a new business in Europe, and whether it may prove a permanent factor in the commerce of this country it is at present impossible to say. Meanwhile the result is that Eastern freights have risen to a moderate extent for the first time for two or three years.'"

Note: This is the earliest document seen (Aug. 2001) that uses the word "crushing" or any of its cognates ("crushers," "crushed," etc.) in the title in connection with soybeans. Address: Washington, DC.

124. Lipman, Jacob G. 1910. Tests of commercial cultures for soil inoculation. *New Jersey Agric. Exp. Station, Bulletin* No. 227. 23 p. Jan. 28. [2 ref]
• ***Summary:*** The products tested were Farmogerm lupine culture (Earp-Thomas Co., Bloomfield, New Jersey); Nitragin (Dr. Reiche Nitragin Co., Milwaukee, Wisconsin); Nitro-Culture / Nitro Culture for Soy Bean (Ontario Agric. College, Canada). Three separate photos (p. 6-7) show a bottle, with legible label, of each culture.

In 1886 a solid foundation was first established for the old practice of soil inoculation. "In that year it was definitively demonstrated by German investigators why the clovers, vetches, lupines, and alfalfa and other legumes were so highly esteemed by the ancients as soil-improving crops." In 1887 "a number of investigators and farmers in Germany began to use old legume earth in establishing new fields of lupines, seradella [serradella], alfalfa, clover and... soy beans" (p. 3-5).

"The commercial possibilities of pure cultures for the inoculation of legumes were first appreciated in Germany about 15 years ago. Under the name of 'Nitragin' such cultures were placed on the market in 1895 and 1896. The practical tests of these cultures soon demonstrated their unreliability and their preparation was therefore abandoned for a time. Another method for preparing and distributing cultures was elaborated by the [U.S.] Department of Agriculture in Washington [DC] in 1904. Also this method was shown to be entirely unsatisfactory and their commercial preparation was discontinued. More recently two other commercial preparations for the inoculation of legumes have appeared in this country:" Farmogerm and Nitragin (p. 6).

Pot and plot experiments in 1909 showed that Farmogerm and Nitragin cultures contain large numbers of vigorous bacteria. However Farmogerm lupine culture failed to inoculate soy beans. Nitragin was not tested on soy beans. Tests of Nitragin cultures for cowpeas on different soils in different parts of New Jersey gave positive results in three out of four cases.

"The experiments recorded here show that on soils properly supplied with moisture, lime, phosphates and potash, the commercial cultures, Farmogerm and Nitragin, are capable of increasing the yields of such leguminous crops as had not been previously grown on the land."

Note: This is the earliest document seen (June 2007) that mentions "Farmogerm"; by 1915 it was used successfully to inoculate soy beans. Address: Ph.D., Soil Chemist and Bacteriologist [New Brunswick, New Jersey].

125. *Monthly Consular and Trade Reports (U.S. Bureau of Manufactures, Department of Commerce and Labor).*1910. Oil-seed products. No. 353. p. 68-79. Feb. See p. 68-70, 76-79.
• ***Summary:*** In the section on "Germany" the following subsections discuss soya-bean meal: (1) "Hamburg market for oil-cake meal and vegetable oils." "The Germans are not taking very kindly to the soya-bean meal. It is thought that possibly 25,000 tons of the meal have been bought, but most of it will go to the extreme northern section around the port of Esbjerg" which is near England. "The English mills are sending out bullish letters concerning this product, stating they are sold far ahead, but all seem to be willing to sell small quantities of a hundred tons or so for prompt shipment."

(2) “Prices and qualities of soya bean and peanut meal.” “Present prices of the soya bean meal are from $32.40 to $33.40 per long ton c.i.f. Hamburg.” Peanut meal is popular in Germany with many of the farmers, and is used in rations for dairy cows. Large peanut crops are expected from the Coromandel (India) and the Gambia (West Africa). The peanut oil and cake is made from Rufisque peanuts; the price of this cake is now $38.40 per ton, but lower grades can be bought for $33.50 per ton.

(3) “Various seed cakes compared.” “Soya bean meal, it is thought, will not influence the feedstuff situation to any great extent in Germany, and unless the peanut meal comes on the market in great quantities high prices of oil meals will continue to rule throughout the season.”

Under “Cocoanut Products,” page 76 notes: “A cotton seed oil crushing mill, the largest in the world, has recently been built in Harburg, which is across the river from Hamburg, by F. Thoerls Vereinigte Harburger Oelfabriken, A.G.”

In the section titled “Sweden: The fodder value of soya meal and cake,” is a lengthy English-language translation of an article on this subject prepared by Nils Hansson, of the Central Institute of Agricultural Experiments.

In the section on the United Kingdom, U.S. Consul Rufus Fleming of Edinburgh [Scotland] gives information already presented in the 21 Dec. 1909 issue of *Daily Consular and Trade Reports* (U.S. Dept. of Commerce, No. 3666, p. 9).

“Hull [England]: Factories planned in both Europe and America Pacific Coast.” It is stated that one scheme is to erect large seed-crushing mills at Vancouver, British Columbia [Canada], and Seattle, State of Washington, where soya beans can be crushed and the oil extracted. The Canadian Pacific and lines of steamers running from Vancouver and Seattle to Japan and China are said to be aiding this scheme. Another project proposed is to erect large mills in Copenhagen [Denmark] for the production of soya-bean oil and cake. An estimated 30,000 tons of soya beans will be shipped each year by the East Asiatic Company from Manchuria to Denmark. Address: Washington, DC.

126. Grisdale, J.H. 1910. The growing of profitable crops for dairy cattle. *Macdonald College Magazine (Quebec, Canada)* 1(1):21-24. Feb/March. See p. 22.
• ***Summary:*** On page 22 is a photo whose caption reads: “A field of soy beans on Macdonald College farm, the farm stables in the background.” A man is shown standing in this large field, which looks to be at least 60 by 200 feet.

Note 1. This is the earliest document seen (Jan. 2010) concerning soybeans in Quebec province, Canada, or the cultivation of soybeans in Quebec province. This document contains the earliest date seen for soybeans in Quebec province, or the cultivation of soybeans in Quebec province (Feb/March 1910).

Note 2. Soybeans are not mentioned in part II of this article. Address: Dominion Agriculturalist, Central Experimental Farm, Ottawa, Canada.

• ***Summary:*** This is a market report from Mr. Yada at the Japanese consulate in Vancouver, to Mr. Yoshitaro Komura at the Japanese Ministry of Foreign Affairs.

In 1909 1,390 koku (250,200 liters) of shoyu were imported to Vancouver, where about 8,000 Japanese lived. Address: Japanese Consulate, Vancouver, BC, Canada.

128. Higeta Shoyu Jozosho (The “Higeta” brand soy brewery.) Main office: Choshi, Chiba Prefecture (Document part). 1910. In: Japan’s Industries: And Who’s Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 152-53. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]
• ***Summary:*** History: The ‘Higeta’ is one of the brands of soy made in Choshi. The concentrated kind of soy from which it is derived was first brewed in the second year of Genna (1616) by a brewer named Gemba Tanaka. After the quality had been greatly improved, a new variety of the brand was made in the second year of Bunsei (1819), known as ‘Horai.’ When the metropolis was moved from Kyoto to Tokyo in 1868, the firm was honoured by being appointed supplier of soy to the Imperial Household. Since then the business has greatly increased. In 1898 the firm, in conjunction with the Iwasaki and Hamaguchi concerns, started an experimental laboratory, under superintendence of Dr. Ryojun Tawara, and a staff of experts, in which a study was made of soy fermentation. As a result of the investigations, much improvement was effected in the quality of soy generally. In that year, 1898, the Imperial Household ordered a special supply of the ‘Higeta’ brand, and this fact, coupled with the improved methods of salt refining, greatly extended its sale. When the grand military manoeuvres were held in the vicinity of Kumamoto in 1902, attended by His Majesty the Emperor, an order was placed with the firm to supply the army with bottled soy; to commemorate this honour the brewer has sold bottled soy ever since.

“During the Russo-Japanese war, ‘Higeta’ soy was used by the Army Department for seasoning canned foods sent to the front. In 1905 a new kind of soy bottle, with a screw stopper, was made for the troops. Soy was afterwards sold to the public in this form. Since then the firm has gone on flourishing, nothing being left undone to maintain the quality of the brand, and improve it if possible.

"The firm possesses two breweries, fitted up with steam engines, and employing altogether 320 workmen. The 'Higeta' brand soy is used all over the country, especially at Tokyo and Yokohama. It goes also to the United States, Canada, Siberia, China, Korea, Hawaii, the Philippine Islands and the Straits Settlements [later Singapore], being much appreciated in all these markets.

"In addition to being suppliers to the Imperial Household, the brewer has been honoured in other ways. At the Milan Exhibition of 1906, the 'Higeta' brand, which was selected by the Japanese Department of Agriculture and Commerce as a typical soy, was awarded the highest order of the Grand Prix; besides this, the soy was presented to Their Italian Majesties by the Japanese Commissioner for the Exhibition, and they are reported to have expressed to him their high appreciation of its flavour. The following are the principal honours conferred upon the firm by various exhibitions:

"A First Prize at each of the five National Exhibitions.

"The Grand Prize at the Chicago [Illinois] Exhibition, 1890.

"A Gold Medal at the Asian Exhibition (Hanoi, French Indo-China), 1903.

"The highest Grand Prize at the St. Louis [Missouri] Exposition, 1904.

"The Grand Prize of Honour at the Seattle Exposition, 1909.

"Mr. Gemba Tanaka, the proprietor, who was born in 1871, studied political economy at Keio University. On succeeding to the business of his ancestors, he entered into his work with enthusiasm, and by his strenuous exertions did much to extend the sale of the 'Higeta' brand. Owing to the esteem in which he is held in the district, Mr. Tanaka has been elected to represent the highest taxpayers of his prefecture in the House of Peers."

A large photo shows "the interior of a Choshi soy brewery."

Note: This is the earliest document seen (April 2001) concerning Higeta Shoyu. Address: Japan.

129. Kushigata Shoyu Jozosho (The "Kushigata" brand soy brewery.) Main office: Noda, Chiba Prefecture (Document part). 1910. In: Japan's Industries: And Who's Who in Japan. 1910. Osaka, Japan: Industrial Japan. vi, iii, 687 p., iv p. See p. 165-67. Undated. Translated from unpublished Japanese manuscripts. 29 cm. [Eng]

• ***Summary:*** "History: As will be seen by the accompanying articles, most of the soy brewers of Noda are distinguished by the surname of Mogi, and the family of Mr. Hichizayemon [Shichizaemon, Hichizaemon] Mogi, proprietor of the firm of 'Kushigata' brand soy is, in fact, the head and originator of all these distinguished so brewing firms of the same name. One of the ancestors of the Mogi family was a distinguished Samurai in the service of the celebrated warrior and statesman–Toyotomi Hideyoshi–and his daring and deeds of valour are matters of history. With the overthrow of the Toyotomi family he laid aside his sword and entered the field of business. It was 290 years ago that the founder of the firm, the ancestor of Mr. Hichizayemon Mogi settled in Noda as a soy brewer. His distinguished personality and lineage gained for him the deep respect of the inhabitants and he was appointed the headman of the place, thus being called upon to engage in public business as well as his own. At this period, soy was brought over from Osaka to Tokyo, the capital of the Tokugawa Shoguns. The quality of this sauce, however, was very inferior and in view of this Mr. Mogi instructed a member of this branch of the family–Mr. Saheiji Mogi–to brew the 'Kikkôman' soy as an experiment. The results having proved very satisfactory, that brand was brewed on a large scale, and Mr. Mogi subsequently inaugurated the brewing of the 'Kihaku' brand, the two firms being allowed to engage in the brewing of so-called Noda Soy on an extensive scale. These two brands of soy having proved very well suited to the tastes of the citizens of Yedo, the demand increased to such an extent that the output was hardly sufficient to meet the demand. Such being the case, Mr. Hichizayemon Mogi himself engaged in the brewing of soy also. The ripe experience gained by supervising the work of the branch firms in brewing superior varieties of soy proved very valuable to him, and his business also proved a very great success, the name of the new brand of soy 'Ichiyama' becoming quite celebrated within a comparatively short period of time. However, another new branch of the Mogi family's firm being inaugurated under the proprietor-ship of Mr. Yuyemon Mogi, the brand 'Ichiyama' was transferred to the new firm so as to ensure its prosperity and the brand 'Kushigata,' at present in use, was then adopted. Such proceeding may appear somewhat strange, but it was in compliance with the legacy left by the ancestors of the Mogi family that the various branches should unite for the general sharing of profits in their business undertakings. At the time when the fame of the 'Kushigata' brand was at its height, in 1871, the whole premises of firm were unfortunately destroyed by fire. This proved a great blow to the fortunes of the firm but the present proprietor, by dint of sheer energy and perseverance, succeeded in retrieving the lost fortunes of the firm, the yearly output at present far exceeding the former production. Although the yearly output of the main house of Mogi ('Kushigata' brand soy) is below that of the branches, namely the 'Kihaku' and other brands, it has been entirely owing to the good will of the former that the latter firms have been enabled to attain their present prosperous state, the outcome of the traditional legacy of the Mogi family having been carried out by the head of the house

"Present conditions: The firm has at present two factories, the number of hands employed being 600. The

factories are provided with two sets of boilers and steam engines for motive power. The firm produced about 5,270,000 gallons of soy per year, of which about 336,000 gallons are exported to foreign countries, the places of destination being Hawaii, Australia, China, Korea, Canada, British Columbia, the United States, the Philippine Islands, and the Straits Settlements [today's Singapore]. The export trade shows a tendency to increase year by year.

"Honours Awarded: The following are some of the principal prizes and medals awarded to the 'Kushigata' brand soy at the various exhibitions where the firm's products have been shown:–The National Industrial Exhibition from the First to the Fifth. First Prize on each occasion. International [Columbian] Exposition held in Chicago [Illinois], 1893. Gold Medal. International Exhibition held in Paris, 1899. Gold Medal. St. Louis International Exposition [Missouri], 1904. Grand Prix. Alaska-Yukon International Exposition at Seattle, 1908. Grand Prix.

"Proprietor: The present proprietor of the famous firm of the 'Kushigata' brand is Mr. Hichizayemon Mogi, who is the eleventh of the line. Although he is yet young, he places business before pleasure, strictly adhering to the precepts of his ancestors and is devoting his entire energy to the development of his business and the improvement of the particular brand for which the firm is responsible. Having selected a most favourable locality he is, at present, constructing a new factory with the producing capacity of 2,000,000 gallons per year, which promises to be the best equipped factory of its kind in Japan. The machinery employed is to be of the latest pattern, and it is intended that electricity be used as the motive power."

A photo (p. 166) shows "The pumping machinery of soy." Around the pump are many brick walls. Address: Japan.

130. Piper, Charles V.; Morse, W.J. 1910. The soy bean: History, varieties, and field studies: Early agricultural history in the United States (Document part). *USDA Bureau of Plant Industry, Bulletin* No. 197. p. 26-27. Dec. 31. [14 ref]

• ***Summary:*** "The first mention of the soy bean in American literature is by Thomas Nuttall, in the New England Farmer, October 23, 1829. Nuttall grew a variety with red flowers and chocolate-brown seeds in the botanic garden at Cambridge, Massachusetts.

"In the same journal two years later, November 23, 1831, is an account of the successful culture of the plant at Milton, Massachusetts, the seed having been obtained from Nuttall. No further mention of the plant in American literature appears until 1853, when a brief account appeared under the name 'Japan pea,' by A.H. Ernst, Cincinnati, Ohio...

"In the following year, 1854, the Perry expedition brought back two varieties of 'soja bean' from Japan, one 'white' seeded, the other 'red' seeded. These, together with the Japan pea, were distributed by the Commissioner of Patents in 1854, and, thereafter, frequent references to the plant occur in agricultural literature under such names as Japan pea, Japan bean, and Japanese fodder plant. Most of these articles speak of the plant as the Japan pea, none of them as the soy or soja bean. It is apparent from the early accounts that there were at least two Japan peas, one early enough to mature in Connecticut (Patent Office Report, 1854, p. 194), the other very late (American Agriculturist, 1857, vol. 16, p. 10). Judging from all the accounts, we suspect that the early Japan pea may be the Ito San variety, which, however, has red flowers, while the late variety may be the Mammoth. The Ito San is still occasionally called the Japan pea, while the introduction and source of the Mammoth has never been definitely determined. From these early accounts the Mammoth may well be the 'white-seeded' soja bean obtained by the Perry expedition. The 'red-seeded soja bean' was perhaps, the Adsuki [azuki] bean *(Phaseolus angularis),* as no red-seeded soy bean is known.

"Prof. G.H. Cook, of New Brunswick, New Jersey, obtained seed of the soy bean at the Bavarian Agricultural Station in 1878. In the same year Mr. James Neilson obtained seeds of several varieties at Vienna, Austria. Both of these gentlemen planted the seeds and gathered crops of the different varieties in 1879. These varieties were without doubt those grown and distributed through Europe by Professor Haberlandt, of Vienna.

"A yellow-seeded soy bean was grown at the North Carolina Agricultural Experiment Station in 1882 and reported on in some detail. The source of the variety is not given, but by implication it is the same as the variety stated to be grown by a number of persons in the State, and is probably the Mammoth.

"Two varieties, one black seeded, the other with white seeds, were grown at the Massachusetts Agricultural Experiment Station in 1888. In 1890 Prof. C.C. Georgeson secured three lots of soy beans from Japan which were grown at the Kansas Agricultural Experiment Station in 1890 and subsequently. Prof. W.P. Brooks, of Amherst, Massachusetts, brought with him from Japan in 1889 a number of soy-bean varieties, including the Medium Green or Guelph, and the Ito San. It is quite certain that other importations of soy beans from Asia were made by others, but no definite records have been found. [Note: The Guelph variety was NOT developed in Canada.]

"Since 1890 most of the agricultural experiment stations have experimented with soy beans and many bulletins have been published dealing wholly or partly with the crop." Address: 1. Agrostologist; 2. Scientific Asst., Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

131. Piper, Charles V.; Morse, W.J. 1910. The soy bean: History, varieties, and field studies: Varieties introduced into the United States independently of the Department of Agriculture or previous to 1898 (Document part). *USDA Bureau of Plant Industry, Bulletin* No. 197. p. 27-31. Dec. 31. [14 ref]

• ***Summary:*** "Enumeration: Previous to the numerous introductions by the United States Department of Agriculture beginning in 1898, there were not more than eight varieties of soy beans grown in the United States, namely, Ito San, Mammoth, and Butterball, with yellow seeds; Buckshot and Kingston, with black seeds; Guelph or Medium Green, with green seeds; and Eda and Ogemaw, with brown seeds." The history of and information about each of these eight soybean varieties is given in great detail.

U.S. seedsmen or seed companies which have carried these soybeans include: Mr. E.E. Evans, West Branch, Michigan (1901); J.M. Thorburn & Co. (1901); W.A. Burpee (1902); Hammond Seed Co. (1903); Johnson & Stokes (1902); W.T. Wood & Sons, Richmond, Virginia (1889).

Foreign seedsmen include: Vilmorin-Andrieux & Co., Paris, France (1901); Haage & Schmidt, Erfurt, Germany (1908); Dammann & Co., Naples, Italy (1908).

Note: This is the earliest document seen (June 2003) stating that soybeans were being sold by W.A. Burpee (1902). Address: 1. Agrostologist; 2. Scientific Asst., Forage-Crop Investigations, Bureau of Plant Industry, USDA, Washington, DC.

132. Itie, G. 1910. Le soja: Sa culture, son avenir [Soya: Its cultivation, its future]. *Agriculture Pratique des Pays Chauds (Bulletin du Jardin Colonial)* 10(93):485-93. Dec. [23 ref. Fre]

• ***Summary:*** Contents: Mixed cultures (growing soybean with other crops, such as corn). Rotations. Yields of soybeans (grain/seeds). A table (p. 490) gives the yield (in hectoliters/hectos per hectare) of 20 soybean varieties at many different locations, mostly in the USA, with one in Canada; the highest yields range from 33 to 36.3. Eight more small tables (p. 492-93) give additional information on soybean seed yields from China, Manchuria, Hungary, Germany, Italy, and Algeria. Note 1. The author is presently a professor at the School of Agriculture in Mexico.

Note 2. This document contains 10 tables, mostly from other sources. Address: Ingenieur d'Agriculture coloniale, Professeur à l'École d'Agriculture de Mexico.

133. **Product Name:** Tofu.
**Manufacturer's Name:** Un-named Japanese tofu makers (two).
**Manufacturer's Address:** Vancouver, BC, Canada.
**Date of Introduction:** 1910.
**New Product–Documentation:** Nichibei Shinbun-sha. 1910. *Nichi-Bei Nenkan [Japanese-American Yearbook]*. Census entry p. 224. Two tofu shops in Vancouver, British Columbia, Canada. Two male owners and no employees.

134. Henderson (Peter) & Co. 1910. Henderson's farmer's manual (Mail-order catalog). New York, NY: Printed by John C. Rankin Co. 48 p.

• ***Summary:*** A photo on the cover shows farmers with pitchforks piling hay onto a wagon pulled by horses. Page 34 is devoted to Soy Beans. Across the top of the page is written "Farm Seeds... Henderson's High Grade. The top one-third of the page shows a photo titled "Early Soja Beans," with a man standing in a field of chest-high soybeans. The caption reads: "Field of Early Soja Beans at Central Experimental Farm, Ottawa, Canada." Inset in the lower right corner of the photo is an illustration (line drawing) of a soybean plant with the words "Henderson's Early Soja Bean" written on a scroll.

Below the photo in large letters is written: "Early Green Soja or Soy Beans." Below that in smaller letters: "Valuable for either fodder or grain. Produces enormous crops as far north as Canada. Ripening seed as far north as Massachusetts. A great soil enricher: Gathering nitrogen from the air. Especially valuable (in combination with Japanese millet and fodder corn) for ensilage. Supplying albuminoids for flesh-forming food."

The text begins: "Soja beans have attracted much attention in recent years on account of their high feeding qualities, but all were too late to be of value in the Northern States. This early green variety has proved its earliness and value in the Northern States by not only producing large fodder crops, but ripening the seed as far north as Massachusetts."

"We recommend all farmers to plant this year at least an acre or two of our early Green Soja Beans and an equal area of Japanese Millet, to test and prove for themselves the value of the combination..." According to Prof. W.P. Brooks, of the Hatch Experiment Station, Massachusetts, the Soja Beans should be sown four to five weeks after the millet. "Price, 15c. lb.; $1.75 peck; $5.00 bushel, 60 lbs.; 10-bushel lots, $4.85 bushel."

Across the bottom of the page is written: "Henderson's Superior Seeds are procurable only from us direct–we do not supply through Dealers."

An Index lists all plants that appear in the catalog. The last page in the catalog (p. 48), titled "Garden and Farm Books," lists the author and title of about 50 such books, under six categories, with a brief description of each and the price. Includes books or booklets titled *Forage Plants Other Than Grasses, Ginseng, Hemp,* and the *Peanut Plant: Its Cultivation and Uses.* The most expensive book, postpaid, costs $2.00. Address: 35 and 37 Cortland St., New York, New York.

135. Hutchinson, H.P. 1910. The soya-bean as an English crop. *J. of the South-Eastern Agricultural College (Wye, Kent)* No. 19. p. 318-21.

• ***Summary:*** "In May, 1909, twelve Soya-beans (variety unknown) taken from a sample supplied by a seedsman, were planted singly in twelve inch pots and kept throughout the experiment under glass at a temperature of about 65º F." The plants grew well but developed few pods and failed to produce a satisfactory yield. No nodules were present on the roots.

"By request, Professor Klinck of Macdonald College, Quebec [Canada], kindly sent, in March 1910, a few ounces of soil in which soya beans had been grown the previous year. Enclosed were two samples of Soya-beans–Early Tennessee (Brown) and Early Yellow." Again the yield was poor and there were no nodules.

Next, three soya-bean "plants of each variety were inoculated with the soil sent from the Macdonald College. The other six plants were not inoculated. The twelve plants were grown under the same conditions in the open air. No difference was noticeable until the first week in August, when flowering commenced. From this time a striking difference began to show itself between the two sets of plants. The inoculated plants, in all cases, continued to grow vigorously. The leaves retained their green colour, and the pods were large and well-filled." By contrast, the leaves of the uninoculated plants turned yellow and dropped off, and the pods which developed were smaller and fewer in number. Nodules were present on the roots of every inoculated plant, "varying in size from small shot to a pea."

It was concluded that inoculation is essential, that soybeans could probably be cultivated profitably in England, and that "Early Tennessee" is probably a suitable variety.

Note: This is the 2nd earliest document seen (Jan. 2010) concerning soybeans in Quebec province, Canada, or the cultivation of soybeans in Quebec province. This document may contain the 2nd earliest date seen for soybeans in Quebec province, or the cultivation of soybeans in Quebec province (spring 1909). However, we cannot be certain that the "soil in which soya beans had been grown the previous year" was from Quebec; Prof. Klinck may have obtained the soil from outside Quebec in order to use it in the spring of 1910 in his experiments with soya beans. Moreover, we cannot be sure that Prof. Klinck grew soybeans at Macdonald College in 1910. In fact, the *Report of the Minister of Agriculture of the Province of Quebec* (Harrison 1915) seems to indicate that soybeans were first grown at Macdonald College in the spring of 1911. It is not known from where Prof. Leonard Silvanus Klinck, who was in charge of agronomy work at Macdonald College, obtained these soybeans.

136. Nichibei Shinbun-sha (Nichi-Bei Shinbunsha). 1910. Nichi-Bei nenkan [Japanese-American yearbook. No. 6]. 650 Ellis St., San Francisco, California. 278 p. Reprinted in 2001-02 in Tokyo by Nihon Tosho Senta. Series: Nikkei Imin Shiryôshû. Dai 5-kai [Collected Documents on Japanese Emigration. No. 5]. [Jap; eng]

• ***Summary:*** This book is read and numbered from "back to front" compared with typical English books; it is mostly (99%) in Japanese. The English-language title page reads: *The Japanese American Year Book.*

The book is divided into 10 parts, each numbered separately. Contents: (1) Front matter, incl. 1 ad (5 p.) (2) Table of contents (3 p.). (3) Map of California agriculture (fold out, in Japanese, 1 p.). (4) Black and white photos on unnumbered pages (6 p., single sided). (5) Front part of Nichibei Nenkan No. 6 (p. 1-237), including general information about America, Japanese in America, U.S. and agricultural census data, etc. (6) Ads (9 p.). (7) Nichibei Nenkan continued (p. 238-50). (8) Original printing and publication dates and data (1 p.) (9) Ads (2 p.). (10) New printing and publication dates (2001), data, and ISBN (1 p.).

A table (p. 39) shows Japanese population by states. For each state the population is subdivided by men, women, and children. For Japanese, the 8 most populous states are: California 55,901, Washington 16,930, Colorado 4,557, Oregon 3,873, Utah 2,529, Idaho 2,399, New York 2,260, and Wyoming 1,409. The totals are: Adult men 87,170. Women 7,323. Children 4,222. Total 98,715.

A table (p. 42) compiled from census data, shows that there were 2 shoyu makers in the USA, with 2 male owners and 4 male employees. There were 42 tofu makers with 47 male owners, 10 male employees, and 1 female employee.

Note: Unlike other volumes, this relatively slender 1910 volume has no directory to give us the names the names and addresses of these Japanese tofu and shoyu makers in the USA.

A table (p. 54-55) shows the general population (not only Japanese) each decade in California from 1850 to 1910: It grew from 92,597 in 1850, to 379,994 in 1860, to 1,208,130 in 1890, to 1,484,053 in 1900, to 2,564,363 in 1910.

A table (p. 56) shows the Japanese population of California: 120 in 1878, 270 in 1880, 420 in 1884, 500 in 1885, 1,000 in 1887, 2,300 in 1890, 4,500 in 1892. 6,000 in 1895, 13,000 in 1897, 25,000 in 1900, 30,000 in 1902, 35,000 in 1903.

A table (p. 56-60) shows the 1910 Japanese population in various counties and cities in California. For each it subdivided into men, women, boys, and girls. In 1910 the Japanese population of California was 55,901, which was about 2.2% of California's total population.

A table (p. 62) shows the total value in 1900 of various crops in the USA and California. The soybean crop was worth $7,634,262 in the USA and $1,022,586 in California.

A table (p. 172) gives the population of Japanese in California by occupation; there is 1 shoyu maker (in Oakland) and 32 tofu makers.

The Directory shows Japanese companies making soyfoods in California, Oregon, Washington, Utah, Colorado, New York City, and Vancouver, British Columbia, Canada. Address: San Francisco, California.

137. Zavitz, C.A. 1910. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 35:163-230. For the year 1909. See p. 206, 228.
• ***Summary:*** The section titled "Soy beans" (p. 206) states: "The Soy beans, also known as Soja beans, are grown extensively in Japan, but they never received very general cultivation in America, except possibly in a few places in the United States. The crop furnishes exceedingly rich feed for farm stock and the plants may be cut and converted into silage or they may be allowed to ripen for the production of grain. Although there are a large number of varieties of Soy beans, the most of them require a long season to reach maturity and are quite unsuited for cultivation in Ontario. Although varieties have been obtained by the Agricultural College on various occasions, extending back for fully sixteen years, only two kinds have become at all prominent in our experimental work, viz., the Early Yellow and the Medium Green. The Early Yellow variety has proven to be one of the best for most parts of the Province as it yields very well and matures early. In the average results of growing the Early Yellow Soy beans at the College in each of fourteen years, we have obtained 14.8 or practically 15 bushels of threshed seed per acre. In 1909, no less than sixteen varieties of Soy beans were grown in the Experimental department."

The section titled "Leguminous crops for green fodder" (p. 228) states: "In 1909, twenty different varieties of Soy beans, Cow peas, vetches and grass peas were grown for the production of fodder... The greatest yields in tons per acre in 1909 were produced by the following varieties: Habara [Habaro] soybeans, 9.2 tons; Grass peas, 8.0 tons; Amherst soy beans, 7.6 tons; Shingto soy beans, 7.5 tons; Cloud soy beans, 7.4 tons; Hairy vetches, 6.8 tons; Tsurunoko soy beans, 6.5 tons; Chernie soy beans [black-seeded], 6.1; and Nuttall soy beans, 6.1 tons.

"Six varieties of leguminous crops have now been grown for five years in succession for the production of green fodder. The greatest yields have been obtained from the Grass peas, 6.9 tons; Ito San soy beans, 6.8 tons; Early Yellow soy beans, 5.5 tons; and Wonderful Cow peas, 5.2 tons per acre."

A long section titled "Alfalfa or lucerne" (p. 228-30) begins: "A bulletin on Alfalfa or Lucerne was issued in the spring of 1908. The bulletin referred to results of experiments conducted at the Ontario Agricultural College and referred to the reports of co-operative experiments in Alfalfa growing throughout Ontario." A large table (p. 228) shows yields of alfalfa each year from 1896 to 1909 for the green crop and for hay, for the first, second, and third cuttings of each. Three cuttings sometimes yield more than 25 tons of the green crop and more than 6.9 tons of hay.

Also discusses: Flax seed, buckwheat, field peas, field beans, millet, winter emmer, sunflowers for seed, sorghums for seed, cap yellow dent corn, mangels, sorghums for fodder, sunflowers for fodder, millets for green fodder and for hay. Address: B.S.A., Prof. of Field Husbandry, Guelph, Ontario, Canada.

138. Zavitz, C.A. 1910. The relation between the size of seed and the yield of plants of farm crops. *Proceedings of the American Society of Agronomy* 1:98-104. For the years 1907-1909. Presented at the meeting in Ithaca, New York, July 1908.
• ***Summary:*** During the past 14 years, experiments at OAC with grains crops (including field peas), root crops, field rape, and Irish potatoes have shown that large seeds will give a greater yield than an equal number of smaller seeds. Soy is not mentioned.

Note: This is the earliest article see by C.A. Zavitz published in these proceedings. Address: Ontario Agricultural College, Guelph, Canada.

139. Zavitz, C.A. 1910. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 31:13-38. For the year 1909. See p. 15, 22.
• ***Summary:*** A table titled "Co-operative experiments for 1909" (p. 15), under "Spring grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on "Grain crops," the subsection titled "Soy beans" (p. 22) states: "The past season has been very unfavorable for the growth of soy beans in Ontario. Although seed of each of two varieties was distributed in the spring, no reports have been received which could be properly summarized for presentation in tabular form. One man in Lambton County had a yield of 20 bushels of grain per acre of the Early Yellow variety in the past season, which was about five bushels per acre more than the yield obtained from the same variety at the College." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

140. Prof. Charles Ambrose Zavitz seated at his disk (Photograph). 1910? Undated.
• ***Summary:*** This black-and-white undated photograph of Prof. Zavitz (lived 1863-1942) is 7 by 5½ inches. Behind him are many books in shelves. At the bottom is printed: "Professor Zavitz. Department of Field Husbandry." Talk with James R. Zavitz. 2001. Dec. 6. The photo (dating from

about 1910) was taken in Prof. Zavitz's office in the southwest corner of the Field Husbandry Building, on the first floor. The desk was positioned so he could look out a window in the end of the building over his experimental plots, or he could turn to the left and look out window over the stone cottage where he resided.

141. Shaw, Norman. 1911. The soya bean of Manchuria: Beginnings of the European trade, 1904-1910 (Document part). *Shanghai, Statistical Department, Inspectorate General of Customs. China Imperial Maritime Customs. II. Special Series* No. 31. 32 p. See p. 20-21. Also published by P.S. King & Son, 2 Great Smith St., Westminster, London SW, England. [6 ref. Eng]
• ***Summary:*** "During the Russo-Japanese war [Feb. 1904-1905] the vast armies which occupied the whole of South and Central Manchuria depended for their cereal food largely upon the local supplies, and a great impulse was given to Manchurian agriculture at that time. But after the withdrawal of the troops the cessation of local demand called, in the natural course of events, for the discovery of a fresh market, and especially so for the money crops of wheat and beans. The market for these crops seemed at first to be the neighbouring one of Japan, and the trade *via* Vladivostock [Vladivostok] received the earliest benefit from the new development; but when the *post-bellum* wave of depression swept over Japan the demand ceased there, and it became necessary to find a new field for the consumption of the surplus supplies. Before the creation of this new situation farmers had been content to plant small areas with but slight annual increase, merely adjusting the supply to the restricted demand; but the time was now ripe for a great development of the trade.

"It was in November 1908 that Messrs. Mitsui & Co. made the first considerable trial shipment to England. The result was so satisfactory that an order for a large consignment followed, and in March 1909 the first large cargo–5,200 tons–was landed in Hull. Contracts were at once made, as the suitability of the new oil seeds for many purposes became known and the good condition in which they arrived. During the season 400,000 tons were exported, almost all to England, and 'many of the large oil crushing mills set their entire plant to work on the crushing of the beans, to the exclusion of cotton seed, linseed, and other oleaginous seeds; the supposed shortage of the flax and cotton crops in the United States and the anticipated shortage of linseed in the Argentine, with the resultant scarcity of cotton seed and linseed products, found the English market comparatively unperturbed, for the reason that soya oil and cake can supply most of the requirements as well.' Messrs. Lever Brothers, of Port Sunlight, were the first soap manufacturers to use bean oil on an extensive scale, and were followed shortly by others, so that the demand increased to such an extent that for the new season (1909-10) 50 steamers were chartered to load beans at Dairen and Vladivostock, 300,000 tons, worth £2,000,000, being contracted for in December alone."

"The removal of the duty which had until this year (1910) been imposed on beans in Germany, followed by similar action on the part of the Canadian Government (which is said to be desirous of obtaining soya beans as feed for hogs, in order to revive the bacon trade), has opened fresh channels for export and stimulated competition for the raw material. But apart from this, the bean oil trade seems likely to receive the most rapid development: the first steamer to carry away a cargo of the oil in tanks has recently visited Newchwang. At present bean oil is carried in old kerosene oil tins or drums; but the method is not very satisfactory, complaints being made of loss by leakage. The tins cannot be returned to Manchuria, for freight is too high, and casks are not so suitable for stowing as tins in cases, so that the solution of the problem of conveying the oil to Europe seems to lie in the tank steamer, which would take the oil as a return cargo." Address: 4th Asst., Custom House, Dairen.

142. *Daily Colonist (Victoria, BC, Canada).*1911. On the waterfront: Panama Maru from Far East. Osaka Shosen Kaisha liner reached the outer wharf yesterday from Yokohama and other Oriental ports. 103(412):14. April 6.
• ***Summary:*** "The steamer Panama Maru of the O.S.K. line reached the outer wharf yesterday after a fair passage from Yokohama with 31 passengers and a good cargo including 444 bales of silk worth a quarter of a million dollars. In the cargo for Victoria was a shipment of 500 tubs of soya bean oil, the product of the soya bean grown in Manchuria in which a profitable trade has been worked up during the past few years, 450 bags of peanuts, 251 cases of rattan furniture, 150 mats of rice, 140 tubs of sake,... 100 tubs of soy [sauce] and some general merchandise."

There is a famine in the interior of China. A new Japanese tariff, which goes into effect July 1st, has caused a rush of shipments to ports in that country.

143. *Gazette (The) (Montreal, Quebec, Canada).*1911. Trade & finance: Markets steady to higher. May 22. p. 20.
• ***Summary:*** "Wheat futures rose within fractions of the recently established 12-month peaks at Chicago and closed 3/8 to 5/8 cent higher on the day on scattered buying by mills and professionals with the more pronounced gains in corn and soy beans helping to buoy the market."

144. *Ottawa Free Trader (Ontario, Canada).*1911. Soy beans rich food for live stock: Now is the time for planting–Adapted to any soil. Harvest not difficult. Peas that furnish their own sticks–Feeding value exceptionally high–Better than clover hay–Excellent feed. June 23. p. 11.

• ***Summary:*** "'I'm Captain Jinks of the "Hoss" Marines, I fed my "hoss" good corn and beans.' This old ditty has a familiar sound to almost everyone. Maybe 'even though we are grown ups,' we sometimes have this song run through our minds. How few of us stop to think, however, that the last line of the couplet expresses a truth that we are just beginning to recognize."

Corn and beans "form an almost ideal balanced ration for, not only horses, but all livestock as well.

"Most people think of navy beans, string beans, or lima beans when the word 'beans' is spoken, but this is not the sort of beans we wish to speak about, and it is doubtful if it is the sort referred to in the couplet used as a heading."

Now "is the time to try some soy beans.

What are soy beans? Soy beans, or soys as they are most commonly called, are not beans at all. They are actually peas. True beans send up cotyledons as their first pair of leaves, but, like peas, the soy bean sends up a pair of seed leaves [sic].

"The Soy bean is a native of Asia, but unlike the Asiatics it is not only admitted to the United States but is welcomed as well." "Soys are best planted only after the soil is thoroughly warm." "Soys are not difficult to harvest... since they may be harvested with the regular grain binder and shocked not unlike wheat or oats."

Seven advantages of soys over any of the legumes commonly grown are given. "Why not try a patch this year? Prove for yourself that Captain Jinks knew what he was talking about."

145. *Gazette (The) (Montreal, Quebec, Canada).*1911. Grain markets. Aug. 1. p. 21.
• ***Summary:*** Chicago: Cash prices... Soy beans, 2 yellow, 1.48½.

Range of futures: Soy beans: (old): For Oct., Nov., and Dec. gives High, Low, Close, and Changes.

Soy beans: (new): For Oct. gives High: 139 5/8. Low: 138 3/8, Close: 139½. Changes: 3/8.

146. *Wall Street Journal.*1911. World's crop of linseed the largest since 1904. Oct. 30. p. 3.
• ***Summary:*** Flaxseed production in the USA is expected to be 18 million bushels, up from 14 million bushels in 1910. This increase in supply is expected to bring prices down sharply. The price will also be affected by increased production "of the Soya bean in China [Manchuria] and the cottonseed crop in the United States." These three large crops of vegetable oil are expected to make the supply of raw material for seed-crushing one of the largest since 1904. A correspondent of Dornbusch in Brussels, Belgium estimates the linseed crops available for export for 1911-1912 in tons as follows: (1) Argentina 1,220,000. (2) India 550,000. (3) Canada 150,000. (4) Russia 130,000. Total: 2,050,000 tons exportable.

147. *Stanstead Journal (Rock Island, Stanstead, Quebec, Canada).*1911. Farm and field: Export of soy beans from Japan. New industries are created. Nov. 2. p. 4.
• ***Summary:*** "Since the war between Japan and Russia, the export of soy beans from the East to Europe has largely increased. At one German port alone, we are told, 4,823 tons of these were imported in one shipment. The oil from these beans is said to be one-third cheaper than linseed and can be used for making soap and many other products including food. The bean meal is used for cattle feeding and also mixed with flour for human food [sic]. In fact, few agricultural products have made such changes in both farm and manufacturing industries as the soy bean promises to do in Europe.

"The soy bean has been grown in a comparatively small way in Ontario. It is not only a soil improver, but a very rich food, ranking with linseed."

148. *J. of the New Zealand Department of Agriculture.*1911. The soya bean. Its possibilities in commerce. 3(6):487-88. Dec. 15. [1 ref]
• ***Summary:*** "In a recent communication to the Department, the High Commissioner in London conveys much interesting information of the soya-bean industry. This bean, which is taking a commanding position in the Old World [Europe] as a food for stock, has not yet been tested on a commercial scale in this part of the world; but added interest is being attached to it with the growing appreciation of the need of better feeding of our live-stock. The department is testing a number of varieties of soya bean received from the United States Department of Agriculture at the Tauranga Experimental Farm..."

The report notes that from Dalny (in Manchuria) and Vladivostok (in Russia) large quantities of soya beans are shipped to the United Kingdom. Small consignments of the bean and oil are received from Japan. "'These beans contain from 17 to 18 per cent. of oil, which is pressed out by ordinary crushers or extracted by the solvent extraction process. Originally the oil was used for soap-making but now it is used not only for this purpose, but much more largely for replacing linseed-oil. It is also used for lubricating, burning, and for edible The residue, after the oil has been extracted, is now well recognized as being one of the best foodstuffs for cattle. It is exceedingly rich in albuminoids in a readily digestible form. The opinion is expressed that in time this residue will come to be used as human food. Note: This is the earliest English-language document seen (March 2003) that uses the term "solvent extraction" in connection with the commercial crushing of soybeans to give oil and meal.

"'The greater quantity of the soya-bean supply is shipped direct to this country, is crushed either in Hull or Liverpool, and large quantities of the oil are shipped to the

[European] Continent. I am informed that bean-oil, without the aid of driers of some kind, will not dry hard...

"'Experiments have been made in many countries to grow soya beans and apparently some of these experiments have been perfectly successful, as the Hull Oil-manufacturing Company have received samples grown within 200 miles of Calcutta, and the bean is now offered in small quantities from South Russia. Experiments are being made in Rhodesia, Canada, South America, and other places within the wheat and cotton belts.'" Address: New Zealand.

149. Mexico. Ministerio de Fomento, Colonización e Industria. 1911. La soya: Traduccion de varias publicaciones extranjeras sobre la explotación de esta planta [Soya: Translations of various foreign publications on the development and cultivation of this plant]. Mexico: Secretaria de Fomento. 57 p. [3 ref. Spa]

• ***Summary:*** The *Ministerio de Fomento* is the Ministry of Public Works. The first three-fourths of this publication contains Spanish-language translations of the following three articles: (1) "The soybean: A valuable fodder plant" by H.J. Choles (p. 3-26). Contents: Introduction. Botany and history of the soybean *(de la Soya).* Varieties. Cultivation: Conditions of growth, methods of culture. Harvesting: When to harvest, curing, harvesting for seed, yield of forage, yield of seed. Chemical composition. Digestibility. Value and uses of the crop: For green forage, as a silage crop, as a hay crop, as a pasture plant, as manure, value of the soybean as human food.

(2) "Utilization of soybeans" by E.S. Edic [sic, Edie] from *Estación Agrícola Central–San Jacinto.* Jan. 1911 (p. 26-36). Contents: Introduction. Uses of the soyabean: As a forage plant, hay, ensilage, soy oil *(El aceite de soya),* soymilk *(leche de soya),* a type of cheese *(una especie de queso)* [tofu], soy flour *(harina de soya),* use of soybean oil for margarine *(margarina),* for soap, illumination, paints and other industrial products, soy bean meal used as a fertilizer on Chinese sugar plantations, soybeans as a legume for enriching the soil with nitrogen. The cultivation of soybeans. Varieties of soybeans.

(3) "Importance of the Soybean: Products which can be obtained from the soybean. Its marvelous value as food." reprinted from *Milling* magazine, Aug. 1909 (p. 36-42).

The last one fourth of this publication (p. 42-57) discusses the following: The soybean (possibilities for importation to Mexico). The new world trade in soybeans. Soybean production in the British empire (Sir Alfred Jones, soya in Africa, trials in British Columbia). Consumers of soybeans (Countries that import the seeds, especially for their oil to make margarine, soap, and paints; Canadian research commission). As a food. Dark bread. Wheat gluten. The latest news about soya: Products that can be obtained (oil and meal), the soybean (vegetable casein), experiments making bread with soy flour, opportunity for the manufacture of biscuits or crackers *(galletas).* Summary.

Note 1. This is the earliest Spanish-language document seen (Sept. 2006) that mentions soy oil, which it calls *El aceite de soya.*

Note 2. This is the earliest Spanish-language document seen (Oct. 2003) that uses the term *leche de soya* to refer to soymilk. As of Oct. 2003 *leche de soya* is the modern Spanish term for soymilk. Address: Mexico.

150. Zavitz, C.A. 1911. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 36:169-247. For the year 1910. See p. 217-18.

• ***Summary:*** The section titled "Varieties of soy beans" (p. 217-18) states: "Soy beans or Japanese beans have been advertised in seed catalogues under the name of Soja beans. During recent years, a considerable interest has been taken in this crop in England, the United States, and in Canada... Probably thirty varieties in all have been under experiment in our college, but only a few of these ripen their seed. The two varieties that have become the most prominent in our experiments at Guelph are Early Yellow and Medium Yellow. [Note: The Guelph variety was not developed in Canada.] The Early Yellow variety has proven to be one of the best for most parts of the Province as it yields very well and matures early. In the average results of growing the Early Yellow Soy Beans at the College in each of fifteen years we have obtained exactly 15 bushels of threshed seed per acre.

"In 1909 and again in 1910, no less than sixteen varieties of Soy Beans were grown in the Experimental Department. A number of these were tested in 1909 for the first time, several of them being obtained from Dr. Piper, Department of Agriculture, Washington [DC]."

In 1910 soybean trials, the greatest yields were obtained by the following varieties: Chernie 23.5 bushels/acre, Habara [Habaro] 21.6 bu, Buckshot 21 bu, Tsurunoko 19.6 bu, Akasaya 17.5 bu, and Early Yellow 17.2 bu. All other varieties gave 15 or less bushels per acre. Address: Guelph, Ontario.

151. Zavitz, C.A.; Squirrell, W.J. 1911. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 32:14-44. For the year 1910. See p. 16, 19, 24.

• ***Summary:*** This volume begins with a list of the name and address of all members of the Ontario Agricultural and Experimental Union. A table titled "Co-operative experiments for 1910" (p. 16), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on "Grain crops," a full-page table titled "Grain crops, 1910" (p. 19) shows that 2 tests were

conducted on "Soy beans." Brown (comparative value 100), yielded 0.16 tons/acre of straw and 9.00 bu/acre (540 lb/acre) of grain. Early Yellow (C.V. 100), yielded 0.40 tons/acre of straw and 8.00 bu/acre (480 lb/acre) of grain. (Note: Since the weather and rainfall were normal, it is not clear why the yields were so low.)

The subsection titled "Soy beans" (p. 24) states: "About twenty varieties of soy, soja, or Japanese beans have been grown in an experimental way at the College. Most of these varieties require too long a season to give satisfactory results in this Province. From this list, however, two of the earliest varieties have been selected and have been sent out for experiments in the Province. The results are very meagre for 1910, and show the yields to be comparatively low. It should be remembered, however, that the soy beans are exceedingly rich in digestible nutrients, comparing favorably with cotton seed meal when ground and used for feeding purposes. The Early Yellow variety, which has been grown at the College in each of the past fifteen years, have given an average of 15 bushels, or 900 lb/acre of grain. The yield of the Early Yellow variety at the College in 1910 was 17.2 bushels, which was very much higher than the average yield of the experiments conducted on two Ontario farms." Address: 1. Prof. of Field Husbandry; 2. Lecturer in Field Husbandry. Both: O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

152. Yada, Naganosuke. 1912. Honpô shôyu shôkyô hôkoku no ken [The Japanese shoyu market in Vancouver, British Columbia, Canada]. Vancouver, BC, Canada. 10 p. Nov. 22. Handwritten unpublished manuscript. Requested by Mogi Shichirouemon of Noda, Chiba-ken. [Jap; eng]

• ***Summary:*** This is a market report from Mr. Yada at the Japanese consulate in Vancouver, BC, Canada, to Mr. Yasunari Uchida at the Japanese Ministry of Foreign Affairs.

There are about 9,000 Japanese living in Canada. Japanese shoyu imports were about 15,400 taru (249,500 liters) a year, and it was used almost entirely by Japanese. The best selling brand is Kikkoman. Address: Japanese Consulate, Vancouver, BC, Canada.

153. Bradbury, Frederick. 1912. History of Old Sheffield Plate: Being an account of the origin, growth, and decay of the industry... London: Macmillan and Co., Ltd. xiii + 539 p. See ix, p. 197, 271. Illust. General index. Index to marks. 30 cm. [25* ref]

• ***Summary:*** This is a very interesting and original book, with much new information about and photos of early soy cruets and soy frames. In the 1740s craftsmen in Sheffield, England (long known for its cutlery and metalwork), invented the process for making articles from silver plated on copper by fusion; this process is much older than electro-plating. Before that all such articles were made from pure silver. Two early products were metal "soy frames" and cruet frames," used for holding cruets–which are cut glass bottles that usually hold oil, vinegar, soy [sauce], liquor, etc. for use at the dining table.

The section titled "Sale room values of Old Sheffield Plate" states (p. 184) that as of 1912: "Cruet and liquor frames are not in request, but small soy frames from the Adam period [ca. 1770-1790] are much sought after."

A complete list of Old Sheffield plated wares manufactured by the firm of Watson & Bradbury between the years 1788 and 1815, with original descriptions taken from the company's pattern book, includes (p. 196-97): "Cruet frames"–485 different patterns. Note: this is the single most popular type of pattern / item. "Soy frames"–84 different patterns." This one firm made a total of 570 different patterns of soy frames and glass cruets."

The section titled "Cruet frames and soy frames" (p. 271-73), which contains various superb illustrations, states: "The soy frames and cruet frames–with their many combinations and varieties of patterns, are sufficiently illustrated here to give a very fair general idea of the different fashions and requirements of this branch of the industry. The name soy is borrowed from the French, and signifies sauce." (p. 271).

Black-and-white illustrations show: (1) A punching and piercing machine, with a "soy frame base" after piercing (p. 119; various spaces were pierced on its edge). (2) "Small 2-bottle Soy Frame, by D. Holy, Wilkinson & Co. Date 1787." (3) "Small 3-bottle Soy Frame, with green bottles ornamented with gold, by N. Smith & Co. Date 1803." (4) "Round 6-bottle Soy Frame, by Richard Morton. Date 1776." Note: This is the earliest date seen (Sept. 2003) for a soy frame or soy cruets. (5) "7-bottle Oval Soy or Cruet Frame, by T. Law & Co. Date 1792." (6) "3-bottle Cruet or Soy Frame Combination, with plated Mustard Pot, by N. Smith & Co. Date 1789." (p. 271-73). (7) "Illustrated designs [two] from catalogues, about 1778. The Soy Frames. The property of T. Bradbury & Sons" (p. 404). Address: Sheffield, England.

154. Day, G.E. 1912. The professor of animal husbandry and farm superintendent. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 37:141-50. For the year 1911. See p. 145-46.

• ***Summary:*** The section titled "Soya bean meal vs. bran" (p. 145-46) states: "In this test [using 11 dairy cows] we find that Soya Bean Meal gave a result almost identical with Cottonseed Meal, and demonstrated the fact that Soya Bean Meal is equal in feeding value to at least twice its weight of bran." A previous article states that this is defatted soy bean meal, containing 2.1% crude fat. Address: B.S.A., Prof. of Animal Husbandry, Guelph, Ontario, Canada.

155. Harcourt, R. 1912. Professor of chemistry. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 37:67-86. For the year 1911. See p. 69-71.
• ***Summary:*** In the section titled "Cattle feeds," a table titled "Composition of various kinds of cattle feed analysed" (p. 70) lists 16 different feeds, including two soy products: Soya Bean, coarse (41.5% crude protein, 2.17% crude fat, 8.98% moisture, etc.). Soya Bean, fine (41.07% crude protein, 2.15% crude fat, 10.41% moisture, etc.). The text continues: "The Soy Bean meal is a comparatively new feed in this country, and it is interesting to note that it contains a very high percentage of crude protein, in fact if we except Cotton Seed meal we have not other food that is comparable with it in this respect."

Note: The above table shows cotton seed meal to contain 35.5–38.2% crude protein, and 7.04 -8.09% moisture. Thus it contains less protein than soy bean meal. Address: Guelph, Ontario.

156. Kawakami, Kiyoshi Karl. 1912. American-Japanese relations: An inside view of Japan's policies and purposes (Continued–Document part II). New York, Chicago, Toronto, London and Edinburgh: Fleming H. Revell Co. 370 p.
• ***Summary:*** Continued: Book III (p. 285+): The immigration question. 18. Japanese immigration before the exclusion agreement. 19. Denis Kearnyism once more–I. 20. Denis Kearnyism once more–II. 21. Japanese immigration after the exclusion agreement. 22. The Japanese in California. 23. The naturalization of Japanese.

Chronology of Japanese in California, and anti-Japanese activities. Most of this chronology is summarized from Kawakami (1912), but key events after 1912 have been added from other reliable sources.

1790 March 26–Naturalization Act of 1790 provides the first rules to be followed by the U.S. in granting citizenship. It limits naturalization to aliens who are "free white persons" and thus leaves out slaves, native Americans, indentured servants, free African-Americans, and later Asians.

1866–The first Japanese immigrants enter the USA, 7 in number vs. 278,916 European immigrants the same year. From 1866 and 1885 the peak number of Japanese immigrants to the USA is 78 in 1871, compared with 648,000 European immigrants in 1882.

1882 May 6–Chinese Exclusion Act, barring Chinese immigration, is passed by Congress.

1884–Amendments to the 1882 Exclusion Act tightened the provisions that allowed previous immigrants to leave and return, and clarified that the law applied to ethnic Chinese regardless of their country of origin. This facilitated the introduction of Japanese labor into California. Large landowners in California tried to encourage Japanese immigration by offering alluring terms.

1886–Japanese immigration to the USA begins to rise. From 1886 to 1898 the number of Japanese immigrants rose from 194 to 2,230.

1890–The U.S. census reports 2,039 Japanese residents in the U.S., including 1,147 in California, mostly student-laborers in San Francisco.

1892 May–The first anti-Japanese movement on American begins in San Francisco, led by local three newspapers: *Morning Call, San Francisco Examiner,* and *San Francisco Bulletin.* It culminated on 10 June 1893 in the San Francisco Board of Education resolution relegating Japanese students to the segregated Chinese school. After intervention by the Japanese consul, the resolution was soon rescinded, ending this early chapter of anti-Japanese agitation.

1899–Japanese immigration figures jump to 12,635 (still insignificant compared with 297,000 European immigrants) for two reasons: (1) This is the first year that Japanese immigration to Hawaii is included in immigration statistics to the USA. In fact, more than half of the total Japanese immigrants stayed in Hawaii. (2) Western U.S. railroads, finding that Japanese made excellent section workers, used every possible means to attract them to the USA.

1900 April 30–The Organic Act is signed by President McKinley, incorporating Hawaii as a territory of the United States. The act went into effect on June 14, after which date contract labor was no longer legal. As a result, more than 8,000 laborers took part in 20 strikes within a month, calling for higher wages, reduced working hours, and hiring of Japanese overseers.

1900–The U.S. census reports 24,326 Japanese / Nikkei in the U.S., with 10,151 living in California and 1,781 in San Francisco.

1900–The first anti-Japanese protest rally in California takes place in San Francisco, instigated by local labor groups and led by Mayor James D. Phelan, who later became State Senator. In response, the Japanese Deliberative Council of America is formed.

1905 May 14–The Asiatic Exclusion League is formed in San Francisco, marking the official beginning of the organized anti-Japanese movement. Among those attending the first meeting were labor leaders (and European immigrants) Patrick Henry McCarthy and Olaf A. Tveitmoe of the Building Trades Council of San Francisco and Andrew Furuseth and Walter McCarthy of the Sailor's Union. Tveitmoe was named the first president of the organization.

1906 April 18–The Great Earthquake and Fire devastates San Francisco. Japanese enclaves in Chinatown and South of Market are devastated but South Park and Western Addition survives and thrives. The Japanese government contributes $246,000 to the City of San Francisco for earthquake relief, more than all other foreign

nations combined. The Japanese community relocates to the present Japantown *(Nihonjin Machi, Nihonmachi)*–which celebrated its 100th anniversary in 2006 as the first and oldest Japanese community in the continental United States.

1906–The Japanese population of the United States (incl. Hawaii) first tops 75,000.

1906 Dec. 23–A mass meeting is held in Walton Hall, San Francisco, to demonstrate the animosity of the laboring class against the Japanese. It is presided over by Olaf A. Tveitmoe.

1907–Japanese immigration to the USA (Hawaii and mainland) peaks at 30,226 (compared with 1.199 million European immigrants). Of this total, 20,865 (69%) went to Hawaii, 3,691 to California, 3,226 to Washington state, and 447 to Oregon. Statistics show that less than one-tenth of 1% of these Japanese immigrants ever became paupers or public charges. They worked hard in the following fields (1906): Professional, skilled, farmers, farm laborers, merchants, household servants. This large immigration took place when Japanese immigrated *en masse* from the sugar plantations of Hawaii, where the wages were less than half those paid to farm laborers on the Pacific Coast. The great sugar interests of Hawaii tried every means to slow the migration without, of course, increasing wages (p. 301).

1907 Feb. 18–U.S. Congress approves amending existing immigration laws–to go into effect in Sept. 1907; this enables the president to take action. 1907 March 14–President Theodore Roosevelt issues an executive order stopping the migration of Japanese laborers from Hawaii and Mexico.

1907 summer–Governments of Japan and the USA enter into an understanding ("Gentleman's Agreement) to prohibit the immigration of Japanese laborers to the USA–called "the exclusion agreement of 1907." The various actions of 1907 ended Japanese labor immigration to the USA and put labor contractors out of business. This measure was forced upon the administration of Theodore Roosevelt; in his message to Congress in 1906 he "eulogized the Japanese in the most glowing terms, and went so far as to urge that the Japanese should be naturalized" (p. 300). But the united pressure from the Hawaiian sugar growers, Pacific Coast labor unions and newspapers "proved so successful that the government at Washington was obliged to meet their demands" (p. 301).

1907–Frequent riots in San Francisco protest the presence of Japanese. Anti-Japanese riots and demonstrations are also reported in nearby Berkeley and Oakland and in Vancouver, BC, Canada–where Japanese laborers were "mobbed and their houses and stores attacked and burned on 'British soil.'" Note: As early as 1907, the word "unassimilable" was being applied to both Japanese and Chinese immigrants on the west coast of the United States by Caucasian writers (see *The Chautauquan*, Nov. 1907, p. 317).

1908–The Japanese population of the United States first tops 100,000. But by 1910 it had fallen to less than 90,000.

1908 Feb. 4–The Japanese Association of America is organized in San Francisco. It replaces the disbanded United Japanese Deliberative Council of America (founded in 1900), which had been plagued by financial and other problems.

1909 early–The California legislature approves an appropriation of $10,000 to be utilized for investigating the conditions of the Japanese in that state. The duty of directing the investigation naturally devolved upon the State Commissioner of Labor Statistics, Mr. John D. Mackenzie. The work was begun on April 15, 1909, with the appointment of 9 special agents," 8 men and one women, all white Americans. "There were no Japanese or other aliens employed in any capacity. To this force were added for the office work two expert statisticians and two stenographers." In early 1910, Mr. Mackenzie submitted to the governor of California (Gov. James Gillett, 1907-1911) a 78-page report (p. 343-44). Mackenzie recommends that Japanese should be admitted to California. He even contends that Japanese laborers are, in some respects, more desirable than their white counterparts. He sets forth this proposition deliberately, systematically, logically and in detail, supporting it with a wealth of statistical evidence (p. 343-47).

1913–The California State Legislature enacts the Heney-Webb Alien Land Act. This Act forbids property ownership by "aliens ineligible for citizenship" (at the time, immigrants from Asia were not permitted to become naturalized citizens). This restriction applies almost exclusively to Japanese immigrants and remains in effect until 1952.

1915–The Hearst newspaper launches its "Yellow Peril" campaign with sensational headlines and editorial series fueling anti-Japanese hostility.

1916–*The Passing of the Great Race*, by Madison Grant is published and becomes very influential. He is a eugenicist and advocates the racial hygiene theory. He data purports to show the superiority of Northern European races.

1921–Emergency Quota Act restricts Asian immigration to a trickle.

1922 Nov. 13–Supreme Court decision in Takao Ozawa v. United States finds that Ozawa, a Japanese man, is ineligible for U.S. naturalization and citizenship because he is not "white." Only Caucasians are considered white. Japanese are considered members of an "unassimilable race" [not capable of being assimilated].

1924–Immigration of Act of 1924 is passed by Congress. It includes the Asian Exclusion Act, which prevents Asians (who are deemed to be of an "undesirable race") from immigrating to the U.S.

1952–Immigration and Nationality Act (also known as McCarran-Walter Act) abolishes all previous racial restrictions but retains a quota system.

1965–Immigration and Nationality Services Act greatly opens U.S. doors to immigration by abolishing the national origin quotas that had been in place since 1924

Also discusses: Number and occupations of Japanese in California on 1 Jan. 1910. The annual report of the Commissioner-General of Immigration (p. 359). The four Japanese consular districts and the "consular census" in the USA: Seattle [Washington], San Francisco [California], Chicago [Illinois], New York (p. 359-61). Dr. Takamine (p. 357). It is time that the United States grant citizenship to qualified Japanese (the book's main point, p. 366). Address: Japan.

157. Nitragin Co. (The). 1912. Nitrogen made on the farm. Milwaukee, Wisconsin. 12 p. [1 ref]
• ***Summary:*** Nobbe and Hiltner registered the name Nitragene (pronounced NAI-tra-gene) all over the world as a trademark. It was registered in the United States Dec. 6, 1898, as No. 32,212. Initially Nitragin was sold mostly in Europe. It "was not for a few years marketed in the United States and Canada, but these governments undertook the introduction of the pure culture method of soil inoculation on their own account, in order to encourage this safer, easier, and more practical method. The United States Department of Agriculture distributed these organisms in the dry or dormant form on bits of cotton. Thus practically the whole world accepted, endorsed and adopted the Nobbe-Hiltner inoculation method. However many disappointments followed these early experiments... The cultures sent out by the USDA were found practically useless." There were basic problems with the original product and many farmers lost confidence in artificial cultures. Then the so-called "new Nitragin" was introduced to America in about 1909 by the German-American Nitragin Co. of Milwaukee, Wisconsin, under the direct supervision of Dr. M.O. Reiche, soil expert, bacteriologist, and former student and assistant to Dr. Hiltner. The new product was more effective. Photos show: "Healthy roots of beans showing germ clusters or 'nodules.'" Roots of sickly bean plants. Soy is not mentioned. Address: Milwaukee, Wisconsin.

158. Zavitz, C.A. 1912. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 37:171-248. For the year 1911. See p. 214-15.
• ***Summary:*** This report is written "To the President of the Ontario Agricultural College." The section titled "Varieties of soy beans" (p. 214-15) states: "During recent years a considerable interest has been taken in this crop in England, in the United States, and in Canada... Fully thirty varieties have been under experiment at the College, but only a few of these ripened their seed.

"In 1911, there were in all nine varieties and two selections of Soy beans under experiment at the College. Owing to the very unfavorable season, however, the results were comparatively low. The highest yields in pounds of grain per acre were produced by the Habara [Habaro], 1005; Chernie, 961; and Buckshot, 675... The Early Yellow Soy bean... has proven to be one of the best in a series of experiments at the College when maturity and yield per acre are taken into consideration. The Early Yellow Soy bean has given an average yield of 14.5 bushels per acre for the sixteen years during which it has been grown." Address: B.S.A., Prof. of Field Husbandry, Guelph, Ontario.

159. Zavitz, C.A. 1912. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 33:13-42. For the year 1911. See p. 15, 23, 40.
• ***Summary:*** A table titled "List of experiments for 1911" (p. 15), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on Grain crops, the subsection titled "Soy beans" (p. 23) notes that nearly all of the soy beans tested at the O.A.C. "have required too long a season of growth to prove satisfactory in this climate. A few of the varieties, however, usually mature the seed and have proven worthy of further investigation. Two of the earliest varieties were distributed for co-operative experiments in 1911. The demand, however, for this experiment was light, and the meagre results obtained do not furnish sufficient material for presentation in a tabulated form. The Early Yellow variety made the best record in Ontario in 1911. This variety has proven the best at the College over a series of years. A selection from the Early Yellow variety, however, which has been made at the College, is promising and may be introduced in the co-operative work in the near future." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

160. Craick, W.A. 1913. Prof. Zavitz and his work. *Farmer's Magazine (Toronto, Canada)* 5(6):19-22. April.
• ***Summary:*** A few years ago, when the customary program of lectures before farmer's institutes was being organized, Prof. Zavitz of the Ontario Agricultural College, asked to have scheduled in his part of the program an opportunity for the farmers to ask him questions about crop production. "It was an innovation, but it caught on. At meeting after meeting the set addresses were passed over in favor of the novelty and the farmers got the Professor going on all sorts of practical subjects..." Prof. Zavitz trusted farmers. "This direct questioning became extremely popular among the farmers, who gained by this means a great deal of

information and advice which would not otherwise have come out."

This example gives a good introduction to the Professor of Farm Husbandry at Guelph. His knowledge is practical. "He sheds the character of the lecturer when he gets among his good friends the farmers, and adopts that if the conversational and friendly adviser. In the summer they follow him out to his experimental plots like a flock of sheep, listen eagerly to his explanation..., and even forget that it is raining, so entertaining is his subject."

"This little bright-eyed man with his pointed beard, whose smile is so contagious, has been doing things at Guelph for a good many years." He was born in the summer of 1863 at Locust Grove Farm, Coldstream, Middlesex County. Discusses his work with barley and oats, and the co-operative experimental work he has been instrumental in organizing.

His work has been sufficiently successful to bring him to the attention of the agricultural authorities in the United States. Several years ago the USDA invited him to conduct similar work near Washington, DC, but "he declined because he felt that to forsake his experiments at Guelph and start all over again would be to undo his lifework. At the same time he has not hesitated to assist various state departments to establish co-operative schemes similar to that in Ontario.

"Much travel, a great deal of talking, and an endless stream of correspondence are all incidental to the Professor's duties. During the winter months he jumps around from convention to convention, exhibition to exhibition and meeting to meeting, and everywhere he is made heartily welcome. In summer he has his hands full with visitors at the College and summer courses." His "correspondence would appal even a hardened business man. True he has four excellent assistants and three stenographers to help him, but none the less the burden of attending to the requests for information and advice which pour in on him from day to day, especially in the spring, is a heavy one."

161. Holbrooks Limited. 1913. Holbrooks Worcestershire Sauce (Ad). *Toronto Daily Star (Canada)*. June 9. p. 8.
• ***Summary:*** "It's made in the largest Worcestershire Sauce factory. Imported–Absolutely!! Business founded 1798." Address: Birmingham and Stourport, Worcestershire, England.

162. Coville, Frederick V. 1913. The agricultural utilization of acid lands by means of acid tolerant crops. *USDA Bulletin* No. 6. 13 p. Sept. 19. p. See p. 9-11. [3 ref]
• ***Summary:*** The section titled "Leguminous plants for acid soils" states that these plants "supply the nitrogenous green manures which are necessary for the maintenance of soil fertility under most agricultural conditions... It is admitted that in acid-land agricultural red clover, the ordinary green-manure crop, is not available for this purpose. What, then, are the leguminous plants which will produce in an acid soil a heavy growth of tops equal in value to red clover for plowing under as green manure? The answer is, cowpea and hairy vetch. Crimson clover, soy bean, lupine, and serradella are also useful under certain conditions."

The following subsection titled "Soy bean" states: The soy bean is of much more recent introduction into the United States than the cowpea. In its tolerance of acidity the soy bean probably equals the cowpea, and it has two points of superiority. It grows farther north and its yield of seed is much greater, often being as high as 30 bushels per acre. Some of the varieties have been grown with success as far north as New Hampshire, Ontario [Canada], and Wisconsin. The seed of the soy bean has one remarkable characteristic. It contains no starch, but about 35 per cent of nitrogenous matter."

The writer suggests that under certain economic conditions a complete system of acid land agriculture is practicable and desirable. He points out that soil acidity may be beneficial in the control of certain fungus diseases of some of the cultivated plants.

Note: Liming the soil used to be called (1780-1800 in England) "chalking" the land. Address: Botanist in Charge of Economic and Systematic Botany, Bureau of Plant Industry.

163. Clark, George Harold; Malte, M. Oscar. 1913. Fodder and pasture plants. Ottawa, Canada: Minister of Agriculture. 143 p. + 27 unpaginated color plates. See p. 134-35. Illust. Index. 26 cm.
• ***Summary:*** The section titled "Soy or soja bean *(Glycine hispida* Maxim.)" (p. 134-35) has the following contents: Botanical description. Geographical description. Agricultural value. Cultural conditions. Varieties. Fodder Seed growing. Quality of seed.

The soy bean variety Medium Green, which gives a high yield of both hay and seeds, is best suited to Canada. "The plant got its name from Soy, a product obtained by a long and complicated fermentation of a mixture of cooked Soy Beans, ground wheat and steamed rice or barley, to which later is added water and salt. Soy is the principal constituent of Worcester and other sharp sauces." Concerning fodder: "The hay is of high nutritional value if the crop is cut at the proper stage. This is when the pods begin to develop. If they are advanced, the hay will be woody and unpalatable and the leaves, which constitute the most nutritious part, will be shattered. From one and a half to two bushels of seed to the acre are required when intended for hay."

The Preface notes that the authors are greatly indebted to Leonard S. Klinck, B.S.A., Professor of Field Husbandry at Macdonald College, Quebec, who gave valuable

comments, and to C.A. Zavitz, B.S.A., Professor of Field Husbandry at the Ontario Agricultural College at Guelph, who has given the authors much valuable information on fodder and pasture plants that are of interest in Ontario province.

George Clark was born in 1872. Malte Oscar Malte lived 1880-1933. Address: 1. B.S.A.; 2. Ph.D. Both: Canada.

164. Zavitz, C.A. 1913. Care and management of land used for experiments with farm crops. *Proceedings of the American Society of Agronomy* 4:122-26. For the year 1912. Presented at the Fifth Annual Meeting, Atlanta, Georgia, Nov. 1912.

• ***Summary:*** When carrying out field experiments, proper care and management of the land is very important. The following issues are discussed: Underdraining the land, cultivation of the soil, rotation of crops, and manuring the land. In Ontario a four-year rotation is recommended with a leguminous pasture crop in the fourth year. This pasture is produced by sowing in the spring a mixture of oats, Early Amber sorghum, and common red clover. Soy is not mentioned. Commercial [chemical] fertilizers are not used. "We manure the land once every four years with farmyard manure, at the rate of twenty tons per acre, which would be equivalent to about twelve good-sized loads.

The last section, titled "The value of the coöperation of the farmers in the application of the results of experiments" begins: "It will be seen that I have strongly emphasized the conducting of experiments in such a way that they will appeal directly to the people for whom they have been conducted." In June of each year, some 25,000 farmers visit the college. On various days throughout the month many interesting talks and discussions take place. "This close sympathy between the experiment station and the farmer is also shown through the system of coöperative experiments which are conducted throughout Ontario. This work was started in 1886, in which year there were twelve experimenters. In the following year the number increased to sixty, and in the next year to ninety. This number has gradually increased until at present there are upwards of five thousand (5,000) Ontario farmers conducting experiments on their own farms. These coöperative experiments are all conducted with material and according to instructions, furnished by the college through the medium of the Ontario Agricultural and Experimental Union. Through these and other agencies the principal farm crops of Ontario have actually been increasing in yields per acre during recent years."

Note: Page 2 of these proceedings, titled "Officers," shows that C.A. Zavitz was second vice-president of the society in 1910, moving up to first vice-president in 1911. Address: Ontario Agricultural College, Guelph, Canada.

165. Zavitz, C.A. 1913. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 34:13-38. For the year 1912. See p. 15, 18, 22.

• ***Summary:*** Prof. Zavitz begins: "As Director of the committee on agricultural experiments... I wish to express my appreciation of the work and the assistance given by the other members of the committee, viz., W.J. Squirrell, A.W. Mason, C.R. Klinck, and A.E. Whiteside. Not many people realize the large amount of work necessary in successfully conducting an extensive system of co-operative work..." (p. 13).

A table listing the co-operative experiments in Agriculture conducted throughout Ontario in 1912 (p. 15), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on Grain crops, a large table (p. 18) shows that 2 tests were conducted on "Soy beans." Early Yellow (comparative value 100), yielded 1.33 tons/acre of straw and 18.13 bu/acre (1,088 lb/acre) of grain. Brown (C.V. 76), yielded 0.84 tons/acre of straw and 13.49 bu/acre (810 lb/acre) of grain.

The subsection titled "Soy beans" (p. 22) states: "Of the named varieties which have been grown the Early Yellow has proven to be one of the best... A selection from the Early Yellow variety, which has been made at the College, is giving promising results, and is likely to be superior to the original variety." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

166. Douglas (J.M.) & Co. 1914. Even if you had never tasted it, you could know that Lea & Perrins' is the best Worcestershire sauce in the world (Ad). *Toronto Daily Star (Canada).* May 2. p. 4.

• ***Summary:*** The upper illustration shows a black maid looking in on a group of diners seated around a table. The lower illustration shows a bottle of Lea & Perrins' Worcestershire Sauce. To the right of the bottle, the following is written in a rectangle: The white writing on the red label indicates the Original and Genuine Worcestershire Sauce. In the middle of the rectangle is the "Lea & Perrins" signature. Address: Canadian agents, Montreal [Quebec, Canada].

• ***Summary:*** Contents: 1. Introduction. 2. Preservation of forage. 3. Choice of forage crops... [chapters an various grasses (incl. Velvet grass *{Holcus lunatus}),* sorghums, and millets]... 6. The statistics of forage crops ("In the same way as the straw of cowpeas, Canada and garden peas, soybeans

and other leguminous seed crops has also a considerable value as forage," p. 114)... 15. Alfalfa. 16. Red clover. 17. Other clovers–Alsike, Hungarian, White and Sweet. 18. Crimson clover and other annuals. 19. Peas and pea-like plants (incl. Chick-pea *{Cicer arietinum}* and Grass-pea, vetchling or chickling vetch *{Lathyrus sativus}).* 20. Vetches and vetch-like plants: Common vetch *(Vicia sativa),* hairy vetch *(Vicia villosa),* narrow-leaved vetch *(Vicia angustifolia),* purple vetch *(Vicia atropurpurea),* wooly-pod vetch *(Vicia dasycarpa),* scarlet vetch *(Vicia fulgens),* ervil or black bitter vetch *(Vicia ervilia),* narbonne vetch *(Vicia narbonnensis),* horse bean *(Vicia faba),* bird or tufted vetch *(Vicia cracca),* tangier pea *(Lathyrus tingitanus),* flat-podded vetchling *(Lathyrus cicera),* ochrus *(Lathyrus ochrus),* fenugreek *(Trigonella foenum-græcum),* lupines *(Lupinus* spp.), serradella *(Ornithopus sativus),* square podded pea *(Lotus tetragonolobus).*

21. Cowpeas. 22. Soybeans. 23. Other hot-season annual legumes: Lespedeza or Japan clover, Florida velvet bean *(Stizolobium deeringianum)* [later renamed simply "Velvet bean" *(Mucuna pruriens)],* peanut *(Arachis hypogæa),* Florida beggarweed, the jack bean *(Canavalia ensiformis.* "Owing to confusion with the similar species cultivated in Japan, China, and India, it has also been called the sword bean and the knife bean, but those names properly belong to the Asiatic species *{Canavalia gladiata},* used principally as a vegetable), mung bean *(Phaseolus aureus),* urd *(Phaseolus mungo),* moth bean *(Phaseolus aconitifolius),* adzuki bean *(Phaseolus angularis),* bonavist or hyacinth bean *(Dolichos lablab),* guar *(Cyamopsis tetragonoloba).*

Note 1. This is the earliest English-language document seen (Aug. 2007) that uses the term "jack bean" to refer to *Canavalia ensiformis.* Note 2. This is the earliest English-language document seen (Aug. 2007) that uses the term "sword bean" or the term "knife bean" to refer to *Canavalia gladiata.*

24. Miscellaneous perennial legumes: Sainfoin *(Onobrychis cicioefolia),* sulla or Spanish sainfoin *(Hedysarum coronarium),* kudzu *(Pueraria thunbergiana),* flat pea *(Lathyrus silvestris* var. *wagneri),* kidney vetch *(Anthyllis vulneraria),* goat's rue *(Galega officinalis),* bird's foot trefoil *(Lotus corniculatus), Astragalus falcatus,* furze *(Ulex europoeus).*

25. Miscellaneous herbs used as a forage (incl. Sunflower *{Helianthus annuus}).* 26. Root crops and other comparable forages (incl. rape *{Brassica napus},* Jerusalem artichoke, chufa *{Cyperus esculentus},* and cassava).

Contents of Chap. 22–Soybeans (p. 513-538): Introduction. Agricultural history. Botany. Description. Soil adaptations. Climatic adaptations. Importance. Desirable characters in soybean varieties. Commercial varieties. Preparation of soil and cultivation. Rate of seeding. Time of seeding. Method of seeding. Depth of planting. Inoculation. Life period. Time to cut for hay. Hay yields. Fertilizers. Soybean mixtures: Soybeans and corn, soybeans and cowpeas, soybeans and sorghums, soybeans and Johnson-grass, soybeans and millet. Silage. Rotations. Feeding value of soybean hay. Seed-production. Pollination. Seed yield. Seeds. Pests. Breeding. Soybeans and cowpeas compared.

"The soybean is the most productive as regards seed of any legume adapted to temperate climates... The soybean was first cultivated in the United States in 1829, but it apparently attracted but little attention until 1854, when two varieties were brought back from Japan by the Perry expedition. Other varieties were introduced from time to time, among them the Mammoth, which was introduced previous to 1882. It is largely due to the introduction of this variety that the soybean has become an important crop in the United States, as a very large percentage of the acreage is still planted to this variety. Between the years 1900 and 1910, the United States Department of Agriculture introduced about 250 varieties from all portions of the Orient" (p. 513-14).

"At the present time about fifteen varieties of soybeans are handled commercially by seedsmen, the most important of which are Mammoth, Hollybrook, Haberlandt, Medium Yellow, Guelph, Ito San, Wilson and Peking." A fairly detailed description of each variety is given (p. 519).

Pollination (p. 533): "The soybean flower is completely self-fertile, bagged plants setting pods as perfectly as those exposed. The flowers are much visited by bees, which seek principally the pollen, as the soybean flower secretes but little nectar. Pollination occurs even before the flower opens, but nevertheless occasional cross-pollinations occur where different varieties are grown in close proximity. Such natural hybrids can often be detected by the fact that the seeds of heterozygote plants present queer combinations of color, such as smoky green, smoky yellow, brown and yellow and black banded. In the course of varietal trials at Arlington Farm, Virginia, extending over five years, many such natural hybrids were secured, and similar crosses occurred at the Kansas Experiment Station."

Concerning seed yield (p. 533): "When grown for seed, the best varieties under proper culture yield from 30 to 40 bushels of seed to the acre. A maximum yield of 50 bushels to the acre has been reported from North Carolina." A table (p. 534) shows the yields reported for 10 varieties from Arlington Farm, 7 other U.S. states, and Guelph, Ontario, Canada. The varieties are: Mammoth, Hollybrook, Guelph, Ito San, Haberlandt, Medium Yellow, Wilson, Peking, Ebony, and Chernie. The states are Tennessee, Kentucky, Delaware, Indiana, Ohio, Arkansas, and Virginia.

The section titled seeds (p. 534-35) notes: "Soybean seeds do not retain their viability well, and it is not advisable to sow seed two years old without previously testing. Unless care is exercised in properly curing and storing, soybean seeds are apt to heat and thus quickly have

their viability destroyed. A small percentage of the seed will under favorable conditions retain its viability four or five years, and this has been found to vary according to variety, as shown in the table:"

This table gives the viability of the seeds of 12 soybean varieties, grouped by color, in approximately descending order of viability after 4 years. Those with the highest percentage viability are all black in color: Shanghai, Chernie, Baird, Fairchild, Jet, Ebony (these first 6 are black-seeded), Tashing, Guelph (green), Brownie, Ito San, Haberlandt, and Mammoth (these last 3 are straw yellow). For the variety Shanghai, 99.0% of the seeds are viable after 1 year, 93.0% after 2 years, and 43.5% after 4 years. After 1 year, the viability was greater than 90% for most varieties. After 4 years, black-seeded soybeans had by far the best viability, ranging from 4.0% to 46.5%.

Note 3. This is the earliest English-language document seen (March 2003) that uses the term "viability" to refer to germinability or germination rate.

"Pests.–Soybeans are troubled by few serious enemies. On the whole, rabbits are most troublesome, as they are extravagantly fond of the herbage, and where they are abundant soybean culture is practically impossible. At the Tennessee Experimental Substation at Jackson, rabbit injury was much reduced by using scarecrows, to each of which a lantern was hung at night.

"Rootknot caused by a nematode *(Heterodera radicicola)* often injures soybean considerably, but more damage is caused by cowpea wilt, due to *Fusarium.*

"Caterpillars sometimes eat the leaves, but the loss from such insects is seldom serious.

"On the whole it may be said that no insect or fungus pest [disease] has yet assumed any great economic importance in connection with the culture of the soybean." Illustrations (line drawings, both non-original) show: A typical soy bean plant, with a close-up of a cluster of pods (p. 514). Roots of a soybean plant, showing nodules (p. 525). A black-and-white photo (Plate VIII, facing p. 510) shows the seeds of ten soybean varieties. Address: Agrostologist in Charge of Forage Crop Investigations, Bureau of Plant Industry, USDA [Washington, DC].

168. Takamine, Jokichi. 1914. Enzymes of *Aspergillus oryzae* and the application of its amyloclastic enzyme to the fermentation industry. *Chemical News* 110:215-18. Oct. 30. [11 ref]

• ***Summary:*** Originally published in *Journal of Industrial and Engineering Chemistry* 6:824-28 (Oct., 1914).

169. Takamine, Jokichi. 1914. Enzymes of *Aspergillus oryzae* and the application of its amyloclastic enzyme to the fermentation industry. *J. of Industrial and Engineering Chemistry* 6(10):824-28. Oct. [11 ref]

• ***Summary:*** This is the first review of the early history of the application of East Asian fungal fermentations to modern industrial processing, which began in the 1880s. A principal impetus for the development of the fungal enzyme industry was the discovery that *Aspergillus oryzae*, the fungus involved in the shoyu, miso, and saké industries, produced amylases that could be used to saccharify starch in place of barley malt in the production of distilled spirits. The first commercial enzyme was Takadiastase (a white to yellowish powder rich in amylases) produced by precipitating an aqueous extract of *Aspergillus oryzae* koji with 70% v/v ethanol. The precipitate was then dehydrated with strong alcohol and pulverized.

Though *Aspergillus oryzae* plays an important role in the national economy of Japan, "its utilization in Occidental countries is singularly lacking. Calmette and Bodin's investigation on amylomyces with a view of utilizing it in the spirit industry is an isolated instance in Europe, and their process, known as the amylo-process, has been in operation in France since 1891.

"In 1891, I made an arrangement with the Distilling and Cattle Feeding Co. [popularly known as the "Whiskey Trust"], of Peoria, Illinois, and carried out on a practical scale the application of the *Aspergillus oryzae* to the American Distillery. My experiments, which ran for a couple of months on a 2,000 bushel scale at the Manhattan Distillery, were partially successful, but unfortunately the process did not attain general recognition of its merit..."

*Aspergillus oryzae* has been used in Japan for many centuries to make products such as Sake or rice beer, Soy [sauce], and Miso. In 1912 the tax on fermented sake in Japan contributed the $41,974,630 to the national treasury. "The tax on the production of Soy (Bean sauce) amounted to $2,048,141" [only about 5% as much as sake]. The total cost of all articles produced with the aid of the *Aspergillus oryzae* fungus is put at roughly $200 million.

"To the growth of *Aspergillus oryzae* on wheat bran as a culture medium I gave the convenient name of Taka-Koji and have employed it for a number of years to distinguish it from that known in Japan as Koji which is a culture on steamed rice.

"Taka-Koji is designed for a substitute for malt as an amyloclastic agent in varied fermentation and other allied industries. Its proposed use is encouraged by the fact that the cost of malt is subject to fluctuations according to the crop conditions of barley while bran is exempt from similar market conditions. Besides, the transformation of bran into Taka-Koji can be accomplished in 48 hours, while malting needs three or four times as long for completion of the process."

The author made his Taka-Koji in a revolving drum with up to 70 kg capacity. Then he ordered a drum of about 4,800 pounds capacity–the size of an 8-ton malt drum. The cylinder turned at 1 revolution per minute. This resulted in

an 83% saving in labor costs as well as a considerable saving in space. The "process promises well for furnishing a substitute for malt in alcoholic fermentation and other industries where amyloclastic enzyme is required." The process was tested by Dr. Niels Ortved, Chief Chemist of Hiram Walker & Sons of Walkerville, Ontario, Canada. In his results, which were presented in a paper at the last Congress of Applied Chemistry (held in New York), and published, he noted: "Takamine was the first to introduce the Koji process to America. As far back as 1899 he advocated the use of Koji in the distilling industry... Lately, I understand, he has succeeded in adapting a modification of the Galland-Henning malt drum system to his process. This should be a great improvement over the old floor system..."

"Taka-Diastase: An aqueous extract from the Taka-Koji can be easily made by percolation and an enzyme can be precipitated by adding alcohol to such an extent as to contain 70 per cent by volume of same in the mixture. The precipitate is dehydrated by means of strong alcohol, dried and powdered. It is a white or yellowish white powder or hygroscopic nature. It is marketed in this form for medical use under the name Taka-Diastase. Though known as an amyloclastic agent, it contains various enzymes; nevertheless, amyloclastic and proteolytic enzymes predominate." Taka-Diastase is a Koji extract whose function is to transform starch directly into glucose.

The paper closes: "The author extends his thanks to Mr. Wooyenaka for his untiring and valuable assistance and to Parke, Davis & Co. for affording every facility for carrying out the 'Drum Experiments." Address: 552 West 173rd St., New York.

170. *Guelph Daily Herald (Canada).*1914. Removal of Prof. Zavitz asked by Guelph deputation: Recent difficulty at the O.A.C. over students forming an engineering corps results in request to the government–Premier promised consideration. Nov. 5. p. 1.

• ***Summary:*** World War I is now a major issue on the OAC campus. Student activities have resulted in the formation at the college of a military organization named the engineering corps. A "great deal of sympathy for the students, who are sincere in their desire to perform their patriotic duty to their country, has been expressed in all classes of the community.

Prof. C.A. Zavitz, acting head of the college in the absence of President Creelman, is opposed to military activity and organizations because of his pacifist Quaker principles. The Liberal-Conservative Association held a meeting and drafted a resolution (whose text is given in full) asking that "the Government of the Province of Ontario be respectfully, but definitely asked to forthwith accept the resignation of Professor Zavitz as Acting President, and in the interest of patriotism and personal duty of those of service age attending the Agricultural College at Guelph as students, and the most effective evidence on the part of the Government of its loyalty and sympathy with the Empire in its present struggle. Professor Zavitz's resignation as a member of the staff of the College be at once demanded, and that not being offered that he be forthwith dismissed..."

A copy was sent to Premier Hurst, to Hon. James S. Duff (Minister of Agriculture), and to H.C. Scholfield (an ex-M.P.P.), who arranged for the deputation to meet the Premier and present their views. At the meeting, the Premier said that the students' views would be carefully considered.

Note: Many other articles on this subject appeared in this newspaper and in the *Guelph Daily Mercury* during 1914. In the end, Prof. Zavitz–who was widely admired and respected–was not asked to resign.

171. *Farmer's Advocate (Ontario, Canada).*1914. An unwarranted attack. 49(1156):1973. Nov. 19.

• ***Summary:*** It begins: "Readers who have been following the daily press, and who are familiar with the facts of the case, are very indignant over the unfair and downright mean attacks on Prof. C.A. Zavitz, of the Ontario Agricultural College.

During World War I, Charles Zavitz, a Quaker and a pacifist, was named acting president of the Ontario Agricultural College. He was sharply criticized by the local press for his pacifism during World War I. He promptly resigned, but his resignation was not accepted.

This magazine, published in London, Ontario, adds: "There is no better known Field Husbandman in America than Prof. Zavitz, who has done more for field crops in Canada than any other living experimenter. Farmers know his real value if a few of the citizens of Guelph do not." Address: London, Ontario.

172. Bosse, Sara; Watanna, Onoto. 1914. Chinese-Japanese cook book. Chicago and New York: Rand, McNally & Co. 120 p. Index. 17 cm.

• ***Summary:*** A remarkable and pioneering East-Asian cookbook. It may well be the earliest Japanese cookbook seen published in America. It is one of the earliest Chinese cookbooks published in America. The cover illustration shows a well dressed Japanese woman in a Japanese room kneeling and cooking over a brazier. Contents: Preface. Part I: Chinese recipes (12 sections, p. 9-64). Part II: Japanese recipes (7 sections, p. 74-110). List of Chinese and Japanese groceries.

The Preface begins (p. 1): "Chinese cooking in recent years has become very popular in America, and certain Japanese dishes are also in high favor. The restaurants are no longer the resort of curious idlers, intent upon studying types peculiar to Chinatown, for the Chinese restaurants have pushed their way out of Chinatown and are now found in all parts of the large cities of America." "There is no

reason why these same dishes should not be cooked and served in any American home."

Concerning shoyu, or Japanese-style soy sauce (p. 2-3): "Syou, sometimes called Soye, is similar to Worcestershire and similar European sauces. In fact, the latter are all said to be adaptations of the original Chinese syou, and most of the European sauces contain syou in their makeup. It lends a flavor to any meat dish, and is greatly esteemed by the Oriental peoples."

Note 1. This is the earliest English-language document seen (Jan. 2006) that uses the word "syou" to refer to shoyu.

Syou (soy sauce) is an ingredient in at least 55 recipes in this book, both Chinese and Japanese–starting with Chinese soups (p. 12-17). When first mentioned here it is called "syou (Chinese sauce)," but thereafter simply "syou."

"Miso paste" appears in 5 Japanese recipes: Satsuma soup ("one quarter pound of aburage {oil-fried Tofu}; one quarter pound of miso paste {soy bean and rice cheese}," p. 71-72). Uwo shiru (Fish soup) ("one pound of miso paste {bean and rice paste}; one half cupful of syou sauce," p. 73-74). Shika shiro (Pot-roasted venison) ("one cupful of syou sauce;... one quarter pound of miso paste," p. 80). Tamago bolan (Peony eggs) ("finely mashed miso," p. 91-92). Shiro uri (Stewed squash) ("syou sauce... two tablespoons of miso," p. 95).

"Aburage (oil-fried Tofu)" and regular tofu appears in Satsuma soup (p. 71, see above). Yaki zakana (Fried fish) (with "oil-fried Tofu... Note: Tofu is made from a mixture of syou bean [soy bean] and rice. It is mashed and rolled into a thin cake, and fried in oil, very much like pancakes," p. 77-78). Note 2. A poorer definition of tofu would be hard to find. Yaki udzura (Broiled quail or pigeons) ("aburage {bean cheese paste}" and "Tofu cakes," p. 79). Fried squab (with "fried Tofu," p. 81). Tamago tofu (a tofu-like custard made with eggs and syoyu sauce, but no real tofu, p. 89-90).

Bean sprouts are used in many recipes, but we are never told what type of beans are sprouted [probably mung beans]; a recipe for homemade bean sprouts (p. 109) calls for "ordinary white beans, or dried lima beans." Other interesting ingredients include: "Adzuki (purple beans)" (mentioned once in Yohan candy). Goma seeds [sesame] or goma-seed oil (mentioned 15 times). Kudzu starch (6 times, misspelled once as "kudze"). Peanut oil (at least 10 times). Seaweed (1 can of seaweed; small piece of seaweed), seaweed jelly or gelatine, or Kanton [kanten, agar] (15 times). Sweet rice [mochigome].

The authors, "Winnifred and Sara Eaton were sisters, daughters of a Chinese-born mother and an English-born father, and grew up in a large family in Montreal, Canada. Winnifred Eaton was a very successful fiction writer who, by taking on a Japanese identity, both exploited the public's craze for 'Japonica' at the time, and obscured her Chinese heritage during an age of anti-Chinese sentiment and policies. This cook book was her first collaboration with Sarah, who may have done very little of the writing. A painter, Sarah (1868-1940) lived out her life with her German artist husband, Karl Bosse, in New York. Winnifred (whose Japanese pseudonym was Onoto Watanna) lived 1879-1954, knew almost nothing about Japanese cooking. Winifred's biographer and granddaughter, Diane Birchall, says that the authors' claim in the Preface that the Chinese recipes are "... secret recipes handed down from Vo Ling, worthy descendant of a long line of noted Chinese cooks...' is just a hoax. "According to Birchall, Eaton was awful at cooking Chinese dishes" (MSU introduction and biography).

Note 3. This is the earliest document seen (Jan. 2009) concerning soy ingredients used in Japanese-style recipes, food products, or dishes outside Japan.

173. O.A.C. No. 81: New Canadian domestic soybean variety. 1914.

• ***Summary:*** Sources: Zavitz, C.A. 1914. "The professor of field husbandry and director of field experiments." *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 39:115-88. For the year 1913. See p. 162. In the section titled "Varieties of soy or soja beans," a table (p. 162) shows the average yield of nine varieties in pounds of grain per acre. In descending order of yield, they are: is O.A.C., No. 81 (831 lb/acre; it has 57.9 lb/bushel or 14.4 bu/acre), Chernie, No. 18227 (808 lb/acre)," etc. "It will be seen that one of our own selections, started from a single plant, has given the highest average yield of seed per acre. This variety has also ripened more satisfactorily than many of the other varieties. It will be seen that the weight per measured bushel of the O.A.C. No. 81 is slightly higher than that of any other variety.

Zavitz, C.A. 1917. "Results of co-operative experiments in agriculture." *Ontario Agricultural and Experimental Union, Annual Report* 38:9-33. For the year 1916. See p. 13, 18-19. Last year: "The Brown variety gave exactly one bushel per acre more than the O.A.C. No. 81. This was the first year in which the O.A.C. No. 81 was distributed for co-operative experiments. It has surpassed the Brown Soy bean in yield per acre at the College but is a little later in reaching maturity." Address: Ontario, Canada.

174. Quebec No. 537: New Canadian domestic soybean variety. 1914.

• ***Summary:*** Sources: Zavitz, C.A. 1914. "The professor of field husbandry and director of field experiments." *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 39:115-88. For the year 1913. See p. 162-63. "In 1913 seed of each of two varieties of soy beans were obtained from Professor [Leonard S.] Klinck, of the Macdonald College, Quebec. These were special strains resulting from selection at that institution, and one of them

is known as Quebec No. 92, and the other as Quebec No. 537."

Jenkins, E.H.; Hayes, H.K. 1915. "Field tests of soy beans, 1914." *Connecticut Agric. Exp. Station, Bulletin* No. 185. 17 p. Jan. See p. Table I, titled "Analyses of soy bean forage grown at Mt. Carmel field, 1914" (p. 6-7), lists 18 varieties in ascending order of days to maturity: Quebec No. 92 (104 days), Quebec No. 537 (110 days)... Page 5 states that these two early varieties are both "selections from Professor Klinck, Macdonald College, Quebec. Quebec 537 looks like an early maturing strain of Ito San."

Ladd, Culver. 1919. "Soya bean investigation." *North Dakota Agric. Exp. Station, Food Department, Paint Bulletin* 1(7):130-38. Oct. See p. 138. Table III shows that the soybean variety Quebec No. 537 was grown in 1913 and 1914 at Macdonald College, Quebec, and in 1915 and 1916 at New Jersey. The fat content (%), moisture content (%), refractive index at 25ºC, specific gravity at 15.5ºC, iodine number, and saponification number are given. Address: Quebec, Canada.

175. Quebec No. 92: New Canadian domestic soybean variety. 1914. Seed color: Yellow, hilum dark.
• ***Summary:*** Sources: Zavitz, C.A. 1914. "The professor of field husbandry and director of field experiments." *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 39:115-88. For the year 1913. See p. 162-63. "In 1913 seed of each of two varieties of soy beans were obtained from Professor [Leonard S.] Klinck, of the Macdonald College, Quebec. These were special strains resulting from selection at that institution, and one of them is known as Quebec No. 92, and the other as Quebec No. 537. The Quebec No. 92 gave 648 pounds of grain per acre which was surpassed only by two other varieties in the past year, viz., the Brown Soy bean, which gave 720 pounds, and the O.A.C. No. 81, which gave 664 pounds per acre."

Jenkins, E.H.; Hayes, H.K. 1915. "Field tests of soy beans, 1914." *Connecticut Agric. Exp. Station, Bulletin* No. 185. 17 p. Jan. See p. Table I, titled "Analyses of soy bean forage grown at Mt. Carmel field, 1914" (p. 6-7), lists 18 varieties in ascending order of days to maturity: Quebec No. 92 (104 days), Quebec No. 537 (110 days)... The fat content (%), moisture content (%), refractive index at 25ºC, specific gravity at 15.5ºC, iodine number, and saponification number are given.

McRostie, G.P.; Laughland, J. 1940. "Soybeans in Ontario." *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb. See p. 11. Description of varieties: "Quebec No. 92. A selection at Macdonald College by Dr. L.S. Klinck. Seed yellow, large; hilum dark; plant bushy, short. An early variety adapted to shorter growing seasons of Ontario." Address: Quebec, Canada.

176. Zavitz, C.A. 1914. The professor of field husbandry and director of field experiments. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report* 39:115-88. For the year 1913. See p. 162-63, 184-85.
• ***Summary:*** In the section titled "Varieties of soy or soja beans," a table (p. 162) shows the average yield of nine varieties in pounds of grain per acre. In descending order of yield, they are: is O.A.C., No. 81 (831 lb/acre; it has 57.9 lb/bushel or 14.4 bu/acre), Chernie, No. 18227 (808 lb/acre), Buckshot, No. 17251 (732), Habara [Habaro], No. 20405 (707), Early Yellow (691), Brown (662), Ito San (629), Tsurunoko (615), Akasaya (576).

"It will be seen that one of our own selections, started from a single plant, has given the highest average yield of seed per acre. This variety has also ripened more satisfactorily than many of the other varieties. It will be seen that the weight per measured bushel of the O.A.C. No. 81 is slightly higher than that of any other variety.

"In 1913 seed of each of two varieties of soy beans were obtained from Professor [Leonard S.] Klinck, of the Macdonald College, Quebec. These were special strains resulting from selection at that institution, and one of them is known as Quebec No. 92, and the other as Quebec No. 537. The Quebec No. 92 gave 648 pounds of grain per acre which was surpassed only by two other varieties in the past year, viz., the Brown Soy bean, which gave 720 pounds, and the O.A.C. No. 81, which gave 664 pounds per acre."

The section titled "Miscellaneous leguminous crops for green fodder" (p. 184-85) begins: "In 1913, twenty-one leguminous crops were grown in the experimental department for the production of green fodder... The highest yield in tons of green crop per acre produced in 1913 were obtained from the following varieties: Grass Peas, 7.9; Ito San Soja Beans, 7.6; Hairy Vetches, 7.3; and Chernie Soy Beans, 6.9."

"Each of twelve varieties of leguminous crops have been under experiment in each of five years, and the accumulated results add to the value of the information." A table (p. 184) shows the average returns for the five year period: Habara Soy Beans, No. 20405 (Wash) 26 inches, 7.59 tons (the best yield among 12 legumes). Ito San Soja Beans, 24 inches, 6.8 tons (#2 best yield). Chernie Soy Beans, No. 18227 (Wash) 23 inches, 6.77 tons (#3 best yield). Early Yellow Soy Beans, No. 81, 24 inches, 6.15 tons (#6 best yield). Early Yellow Soy Beans, 23 inches, 5.53 tons (#7 best yield). Buckshot Soy Beans, No. 17251

(Wash) 23 inches, 5.08 tons (#8 best yield). Tsurunoko Soy Beans, 23 inches, 4.93 tons (#9 best yield). Akasaya Soy Beans, 24 inches, 4.72 tons (#10 best yield). Brown Soy Beans, 22 inches, 4.26 tons (#11 best yield).

Note 1. This is the earliest document seen (Jan. 2010) that mentions an "O.A.C." soybean variety–O.A.C. No. 81; it was developed at the Ontario Agricultural College in Guelph, Ontario, Canada.

Note 2. This is the earliest document seen (Feb. 2010) that mentions a "Quebec" soybean variety–Quebec No. 92 or Quebec No. 537; they were developed by Professor Leonard S. Klinck, at Macdonald College, McGill University, Ste.-Anne-de-Bellevue, Quebec, Canada. Address: B.S.A., Prof. of Field Husbandry, Guelph, Ontario.

177. Zavitz, C.A. 1914. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 35:12-38. For the year 1913. See p. 14, 22.

• ***Summary:*** A table listing the co-operative experiments in Agriculture conducted throughout Ontario in 1913 (p. 14), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on Grain crops, the subsection titled "Soy beans" (p. 22) states: "As usual an experiment was conducted over Ontario with different varieties of Soy beans in 1913. No satisfactory reports, however, were received. The Early Yellow variety is the one which has made the best all-round record at Guelph, although we have now a selection from this variety which promises to be better than any of the varieties which we have previously had under experiment." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

178. Zavitz, Charles A. 1914? Military training in public schools (Leaflet). Ontario, Canada: Genesee Yearly Meeting of Friends. 1 p. Undated. 21 cm. Single sided.

• ***Summary:*** "We believe it is in the spirit of true patriotism as well as the true christianity [sic] that we protest against the introduction of 'Military Training' in our public schools. We believe it is against the wish of a vast majority of our people and, if forced upon them, will add fuel to the great unrest of these troublous times. We want physical culture for the youth and we believe such a system far better adapted to the promotion of a good physique and good health than 'Military Training' and at the same time does not incite to warlike thoughts and acts.

"We feel we are urging this matter from a pure motive, from a true patriotism, and from a duty we owe our children and our God. May it receive your earnest consideration."

Note: This was written during World War I when Charles Zavitz, as Acting dean of the Ontario Agricultural College, refused to authorize military training on campus. He offered to resign if others believed his views to be unreasonable. His resignation was not accepted. This leaflet was "Printed by direction of Genesee Yearly Meeting of Friends." Address: Clerk [Recording Secretary] of the Genessee Yearly Meeting of Friends [Ontario, Canada].

179. Jenkins, E.H.; Hayes, H.K. 1915. Field tests of soy beans, 1914. *Connecticut Agric. Exp. Station, Bulletin* No. 185. 17 p. Jan.

• ***Summary:*** Contents: Uses of soy beans: Catch crop, nitrogen-gathering green manure crop in orchards, seed crop, silage crop, for hay, as a forage and pasture for hogs. Tests made in 1914. Yield of fresh forage. Yield of dry matter. Yield of food ingredients. Period of growth. The seed. The seed yield. Feeding value. Resistance to frost and time of planting. When to plant. How to plant. Varieties to plant.

Page 3 states: "The field work connected with these tests was planned and carried out by Mr. H.K. Hayes and his assistant, Mr. Hubbell. The chemical analyses were made under the direction of the chief chemist, Mr. J.P. Street. The results have been prepared for publication by the director [E.H. Jenkins]."

The soy bean is a valuable catch crop, which can be planted if winter grain, fall or spring sown clover, or grass seed fails. It is an excellent nitrogen-gathering green manure crop in orchards. As a seed crop it is sometimes profitable, depending on the state of the market.

Varieties to plant. Hollybrook is recommended. A summary of a single year's observations of 19 varieties tested, all of which on the 28th and 29th of May, begins: "The earliest varieties–Manhattan, Medium Yellow, Quebec [two varieties] and Ito San bloomed in from 55 to 60 days and could be cut for soiling. Their average yield when the foliage was mature was 2.35 tons of dry matter."

Tables show: (1) "Analyses of soy bean forage grown at Mt. Carmel field, 1914" (p. 6-7). It lists 18 varieties in ascending order of days to maturity: Quebec No. 92 (104 days), Quebec No. 537 (110 days; both "selections from Professor [Leonard S.] Klinck, Macdonald College, Quebec. Quebec 537 looks like an early maturing strain of Ito San"), Medium Yellow, Ito San (2 entries), Kentucky, Manhattan, Ebony, Medium Green, Mongol, Mikado, Peking, O'Kute [Okute], Wilson, Arlington, Hollybrook, Swan, Morse, Cloud.

(2) "Average yield of crops named in pounds per acre" (p. 10). The crops are soy beans, fodder corn, and alfalfa. III. "Composition and yield of soy bean seed, grown at Mt. Carmel field, 1914" (p. 12, for 14 varieties. Includes weight of 100 seeds, and seed color. The variety Mongol has olive green seeds (p. 13). The highest yield was from Medium Green, 32.5 bushels/acre at 12% moisture). IV. "Composition and digestible nutrients of soy beans, cotton seed meal and linseed meal" (p. 14). A photo (front cover) shows a soy bean plant with roots. Address: 1. Ph.D.,

Director of the Station and Treasurer, New Haven, Connecticut.

180. Street, J.P.; Bailey, E.M. 1915. The carbohydrates and the enzymes of the soy bean. *J. of Industrial and Engineering Chemistry* 7(10):853-58. Oct. (Chem. Abst. 10:646). See also Zeitschrift fuer Untersuchung der Nahrungs- und Genussmittel 45:225 (1923). [12 ref]
• ***Summary:*** Contents: Introduction: "The scheme of analysis was to treat the finely ground [soy bean] meal successively with boiling 95 per cent alcohol, cold water, malt extract, 1 per cent hydrochloric acid, and 1.25 per cent sodium hydroxide, and to determine the kind and amount of carbohydrate removed by each of these solvents." Alcohol extract: Osazone formation (simple hexose sugars & sucrose. "According to Tollens, raffinose yields an osazine after about two hours"), invertin test (the enzyme invertin hydrolyzes sucrose into reducing sugars), emulsin test (emulsin hydrolyzes raffinose but without action on sucrose). Cold water extract (mucic acid). Malt extract digestion (Fehling's solution, hydrochloric acid, starch). Cell wall constituents: One per cent hydrochloric acid extract (hydrolysis of hemicelluloses, arabinose, galactose), galactan, pentosan, 1.25 per cent sodium hydroxide extract, crude cellulose, true cellulose. Distribution of pentosans and galactans. Organic acids. Undetermined substances. Summary. The enzymes of the soy bean: Introduction, amylase, sucrose, protease, oxidases, lipase, conclusions.

"In recent years various soy bean preparations have come into quite extensive use as special foods for the diabetic... as far as the writers are aware no complete separation of the different carbohydrates existing in the soy bean has been published. The form of these carbohydrates is vital to the claims of the soy bean as a valuable food for the diabetic, for starch is by no means the only carbohydrate objectionable to those afflicted with diabetes. The purpose of the present study, therefore, was to attempt a rather complete quantitative separation of these carbohydrates in the material in question."

Table I gives 19 compositional analyses of 17 different soybean varieties grown at the Connecticut Agricultural Experiment Farm over the past 2 years, calculated to a uniform moisture content of 10%. The varieties are: Ito San, Quebec, Kentucky, Medium Yellow, Manhattan, Ebony, Peking, Medium Green, Okute, Wilson, Arlington, Swan, Morse, Cloud, Mikado, Wing's Mongol, and Hollybrook. The averages are: ash 5.54%, protein (N x 6.25) 38.29%, fiber 4.64%, nitrogen-free extract (carbohydrates) 26.64%, and fat 14.89%.

The same table gives compositional analyses (conducted in the experiment station laboratory) of 7 commercial soy bean flours. The averages are: moisture 5.1%, ash 4.5%, protein 42.5%, fiber 3.7%, nitrogen-free extract (carbohydrates) 24.3%, and fat 19.9%. Note that the flour contains much more protein and fat, and considerably less of the other constituents than whole soybeans, probably due to dehulling and perhaps sifting or bolting.

Soybeans of the Hollybrook variety, grown at the station farm, were finely ground. Table II shows (and the summary states) that the nitrogen-free extract therefrom was found to contain: 4.51% total sugars, 0.50% starch, 3.14% dextrin, 4.94% pentosan, 4.86% galactan (less 0.24% due to raffinose), 3.29% cellulose, 1.44% organic acids (as citric), and 8.60% waxes, color principles, etc. "Of these constituents only the first three, *viz.*, the sugars, starch and dextrin, amounting to 8.15 per cent may be considered objectionable to a strict diabetic diet."

"Conclusion: In addition to the urease, amylase, and glucoside-splitting enzyme reported by other workers, the soy bean contains also a protease of the peptoclastic type, a peroxidase and a lipase. Negative results have been obtained for sucrase and protease of the peptonizing type. It was thought unnecessary to examine the material for urease and no attempt was made to corroborate the presence of the glucoside-splitting enzyme. The presence of an active amylase has been corroborated.

Note 1. This is the most complete quantitative separation to date of the carbohydrates in soybean seeds.

Note 2. This is the earliest document seen (July 2003) that mentions "peroxidase" (or "peroxidases") in connection with enzymes in soybeans. It is also the earliest English-language document seen (July 2003) that contains the word "peroxidase." Address: Analytical Lab., Connecticut Agric. Exp. Station, New Haven.

181. Harrison, Francis Charles. 1915. Macdonald College (McGill University). *Report of the Minister of Agriculture of the Province of Quebec* p. 45-72. For the year 1914. See p. 53. [Eng]
• ***Summary:*** The subsection titled "Cereal Husbandry Department" (p. 52-53) states: "The Cereal Husbandry Department was organized in the summer of 1905 and in the spring of the following year the first experimental plots were sown."

"The success of the department in improvement work, however, has not been confided to the isolation of improved strains of small grains. In soy beans, two exceptionally early, high-yielding pedigreed strains have been isolated and grown in tenth acre blocks for four years with gratifying results. So great has been the demand for these new strains from experiment stations, oil manufacturers and private individuals, that it has been impossible to comply with all the requests made for seed during the past year."

Note: This report was submitted on 1 July 1914 for the session 1913-14. If the soy beans have been grown *and* given good results for four years, they were probably first planted in the spring of 1910. This conclusion is confirmed by H.P. Hutchinson (1910, p. 319) who states: "By request,

Professor [Leonard S.] Klinck of Macdonald College, Quebec [Canada], kindly sent, in March 1910, a few ounces of soil in which soya beans had been grown the previous year." Other documents show that the names of the two main varieties developed by Leonard S. Klinck were Quebec No. 92 and Quebec No. 537. In the section titled "List of officers of instruction" under "School of Agriculture" (p. 69) are listed: "Leonard S. Klinck, M.S.A., Professor of Cereal Husbandry." F.C. Harrison, D.Sc., F.R.S.C., Principal and Professor of Bacteriology. Harrison's name also appears as the author on p. 72; his full name was Dr. Francis Charles St. Barbe Harrison. Address: Principal, Macdonald College [Ste-Anne-de-Bellevue, Québec, Canada].

182. Porter, Robert Percival. 1915. Japan, the new world-power: Being a detailed account of the progress and rise of the Japanese empire. London, New York, Toronto, Melbourne and Bombay: Humphrey Milford, Oxford University Press. xxiv + 789 p. Illust. Seven colored maps. Index. 23 cm. [ soy ref]

• ***Summary:*** Japan (regardless of race and colour) intervened in the Great War on the side of her ally Great Britain. They worked together successfully against Germany in the siege of Tsing-Tau in 1914 from Oct. 31 to Nov. 7.

Near the front of the book is a table of "Weights, measures and moneys, for Japan, Great Britain, and the USA."

Page 149-50: "The annual average number of immigrants from Japan is about 20,000. Roughly, half go to China and the United States of America... Since 1907 two batches of Japanese emigrants, under 2,000 in all, have gone to Brazil, the majority of which have been under contract with the Sao Paulo Government to work in the coffee plantations." There are now about 155,000 Japanese in the United States. Since a 1907 agreement between Japan and the USA, immigration of Japanese labour to the USA has been restricted. Some Japanese have tried to enter the USA by going first to Mexico. There are not more than 2,000 Japanese in Canada at present.

Page 232: In Japan: "The necessity for increased military and naval expenditure, which rose in connection with Korea in 1881, called for considerable additional revenue. Fresh military taxes were therefore levied; income-tax was introduced along with indirect imposts [taxes] on soy [sauce], tobacco, confectionery, and stamps, and the tax on *sake* was raised, augmenting the receipts to such an extent that the Government was able in 1886 to reduce the land-tax again. But following the war with China [1894-95] it became necessary to establish occupation and registration taxes, to raise again the *sake* tax, and to create a Government monopoly of leaf tobacco."

A table (p. 233) shows how the ordinary State revenue of Japan was derived in the financial years 1898-99 and 1909-10. The two main sources of revenue were: Land tax (38.4 and 85.7 million yen respectively) and liquor tax (33.0 and 91.5 million yen). By comparison, the soy tax was relatively small: 1.54 and 4.73 million yen.

Page 235-36: "The tax on liquors is levied upon (a) brewers of *shurui* (alcoholic liquor), which is divided into five classes, viz. *seishu,* or refined *sake, dakushu,* or unrefined *sake, shirozake,* or white *sake, mirin,* or sweet sake, and *shochu,* or distilled sake; (b) brewers of beer; and (c) wine and alcohol and alcoholic liquors other than sake or beer."

"Soy tax: The soy tax is levied upon manufacturers of this sauce at the rate of about 1 3/4 yen per *koku.* A tax on soy for household use was introduced in 1900, and ranges from 50 sen to 4 yen per *koku,* according to the amount manufactured. No more than 5 *koku* of soy per annum may be made for household use."

Page 240: A full-page table shows the "Budget for financial year 1911-12." The main sources of "Ordinary revenue" are liquors tax (88.7 million yen), land tax (75.1 million), customs duties (50.5 million), and tobacco monopoly (50.5 million yen). Revenue from the soy [sauce] tax is 4.6 million yen. The sugar excise is 14.7 million yen.

Page 261-62: "The upland fields, being for all intents and purposes unirrigable, are only to a very limited extent utilized for the cultivation of rice. Rotation crops are, however, raised twice a year, usually barley, 'naked barley,' and wheat as winter crops, and soya (more properly soja), sweet potatoes, and millets as summer crops." A key unit of area in agriculture is one *tan* = 0.245 acre. On [lowland] paddy fields, nationwide over the past 10 years, the average yield per *tan* is 7.913 bushels of rice and 6.668 bushels of barley, which may be considered a representative winter crop. "Upland fields, upon the same basis, produce 6.638 bushels of barley as a summer crop and 3.756 bushels of soya bean."

Another key (larger) unit of area in agriculture is one *cho* = 2.45 acre.

A table (p. 263) shows the total area, production, and yield of 17 major crops in Japan in 1897 and in 1910. Both years, the leading crop (by far) in area was rice, followed (in 1897) by barley, naked barley, wheat, and soya bean. For 1897 the three figures for soya beans were: 1,067,000 acres under cultivation, 15,381,000 bushels total production, and 14.41 bushels per acre yield. For 1910 the three figures for soya beans were: 1,137,000 acres, 18,834,000 bushels total production, and 16.56 bushels per acre yield.

Statistics for "small red bean" [azuki] are also given: For 1897 268,000 acres under cultivation, 3,069,000 bushels total production, and 11.45 bushels per acre yield. Thus, in 1897 and 1910 the production of soybeans was roughly 5 times the production of azuki beans.

Chapter 15, "Agriculture," contains a section titled "Soya bean" (p. 264-65): The soya, or soja, bean is well enough known in England as a cattle-food, but in Japan its application is by no means limited to this use. It is the basis of the Japanese sauce, soy, of which enormous quantities are brewed; of *miso,* or bean cheese [sic], used extensively for soup and in cookery in general; and of *topu* [sic, tofu], or bean curd, a cheap, highly nutritious and very popular article of diet. The residue from these manufactures is used both as fertilizer and as cattle food, or, alternatively, an oil of some value may be obtained from it. It is the principal summer crop of the upland fields, and its cultivation, which requires less fertilizer and less labour than other products, is general throughout Japan and particularly in Hokkaido. But the supply is far from equal to the demand, and a large quantity of beans and bean cake is imported from Chosen and Manchuria, the value of the present importation amounting to £3,000,000 annually.

"Among other beans the small red bean is largely cultivated, especially in Hokkaido, and is used for cakes and confectionery, and boiled with rice on occasions of ceremony. The Japanese are very fond of peas, horse-beans, and kidney-beans, which are grown as a stolen crop after rice in the paddies and just before it in the upland fields."

Page 269: "A comparison of the relative positions of human and animal labour in paddy fields and upland farms for the years 1903 and 1908 (the latest year for which figures are available) shows that the area tilled exclusively by human labour still forms a very large proportion of the total, though it tends steadily to decrease." "Manual labour is plentiful and it is chiefly by reason of its abundance that the intensive system can be carried on. Rice-growing requires, for instance, the labour of 17 men and 9 women per *cho* (2.45 acres), barley and wheat 11 men and 6 women, tobacco 25 men and 23 women, soya bean 7 men and 5 women, and so on. Farmers, in the vast majority of cases, are their own labourers, and those who may be distinguished as 'professional labourers' are a very small class."

Page 292: Sea-weeds: "Chief among the sea-weeds used as food is that known as 'Kombu' *(Laminaria).* It grows mostly on the shores of Hokkaido and the south-east of Honshiu [Honshu], and is eaten sliced into very thin shreds. ' Kanten ' is made by dissolving the weed Tengusa in water and exposing the resulting gelatinous infusion to the action of cold by night and the sun by day. Only the Chinese use it as food, however; in the West it is a substitute for gelatine, isinglass, starch, and the like. Other sea-weeds are used as paste." Address: Queen Anne's Mansions, London, England.

183. Zavitz, C.A. 1915. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 36:10-38. For the year 1914. See p. 11, 14, 19.

• ***Summary:*** Again this year, Prof. Zavitz, Director of the Committee on co-operative experiments in agriculture, has been ably assisted by Mr. A.W. Mason, Prof. W.J. Squirrell, Mr. A.E. Whiteside, and Mr. C.R. Klinck. A table listing the co-operative experiments in agriculture conducted throughout Ontario in 1914 (p. 11), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on "Varieties of grain crops," a large table (p. 14) shows that 3 tests were conducted on "Soy beans." Early Yellow (comparative value 100), yielded 0.49 tons/acre of straw and 30.44 bu/acre (1,826 lb/acre) of grain. Brown (C.V. 88), yielded 0.33 tons/acre of straw and 18.44 bu/acre (1,106 lb/acre) of grain.

The subsection titled "Soy beans" (p. 19) states: "The Early Yellow soy bean has proven to be one of the very best varieties which has been tested by the College, and an average of 30 bushels per acre [in three co-operative experiments] is certainly a fine yield." Address: Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

184. *J. of the Board of Agriculture (London).*1916. The soya bean. 22(12):1286-87. March. Summarized in the Bulletin of the Imperial Institute. 1916. 14:293-95. [1 ref]

• ***Summary:*** "Experiments with soya bean cake tend to show that, when fed in moderation, it is a useful feeding stuff; otherwise it is apt to prove distinctly laxative. For this reason it is usually given along with undecorticated cotton cake. At present prices it is one of the cheapest feeding stuffs on the market. (See also p. 1277 of this *Journal).*" In 1912, some 188,760 tons of soya beans were imported to England, worth £1,567,960. Imports were 76,452 tons in 1913, then 71,161 tons in 1914, and 175,136 tons in 1915.

Discusses early attempts to grow soybeans in Great Britain. "Previous to 1909 a few attempts had been made to grow the crop in England, but without any success; at best, the plants grew up to flowering stage but formed no seed. About this time, with the object of securing the hardiest sorts in cultivation, the Board obtained from an experiment station in North Japan, seed of 16 varieties, together with a small quantity of soil in which the crop had been grown. These were sown at the Midland Agricultural and Dairy College and on the Cambridge University Farm. At both centres the results were similar–many of the varieties grew well, but none formed flowers. Where the Japanese soil had been applied the nodule formation was all that could be desired, but where no inoculation had taken place, no nodules were formed.

"In 1910 the Board obtained seed of several varieties from Manchuria. These were grown at the same centres as before. At the Midland College the crop grew vigorously,

but formed no seed, while at Cambridge the plants ripened a small quantity of seed. This seed was sown in 1911, but the crop made little growth, and in spite of the hot season no seed was produced.

"These results prove conclusively that the Japanese and Manchurian varieties hitherto tested cannot be relied upon to produce seed in this country. As the plant appears to be a very variable one, however, it is not impossible that a variety suited to conditions in this country may yet be produced.

"In some experiments at Wye College, Kent, with seed supplied by the Macdonald College, Quebec [Canada], well-filled pods were produced in 1910, from a variety known as "Early Tennessee," when the soil was inoculated.

"Apart from seed production the plant might have some value in this country as a forage crop. It appears to resist drought well, and is largely grown in the United States for green fodder, which appears to be liked by all classes of farm stock. In general composition the green plant resembles clover." Address: London, England.

185. Nemzek, L.P. 1916. The soya bean and soya oil. *Paint Manufacturers' Association of the U.S., Educational Bureau, Scientific Section, Circular* No. 37. 8 p. June 10. [1 ref]

• ***Summary:*** This address was presented on May 18, 1916 (during World War I) at the meeting of the Mississippi Cotton Seed Crushers' Association, New Orleans, Louisiana. Accompanied by three exhibits, it states: "As early as 1907 the Bureau interested itself in a campaign to promote the increased production of flaxseed in the United States. The rapidly increasing demand for linseed oil, by the industries in this country, indicated that we should soon face a shortage of his commodity. It remained for the 1910 flaxseed crop failure to demonstrate what a menace to the pain trade such a shortage meant. Due almost entirely to the resultant scarcity of linseed oil, the price commenced to soar during the latter part of 1910. Linseed oil reached the high price of $1.00 per gallon during 1911 and high prices prevailed throughout most of the year 1912. This condition forcibly showed the necessity for a more profound investigation of oils which might find application as substitutes for linseed in the different industries which use the oil in large quantities. In view of the fact that the work which was done toward promoting an increased production of flaxseed had been so marvelously effective, it was decided to do work of similar magnitude with miscellaneous oils."

"A series of practical paint exposure tests were begun on test fences located at Washington, D.C., in connection with the Institute of Industrial Research. The paints were exposed in May, 1911. The repainting tests were made during the latter part of 1914. This series of tests is referred to in Circular No. 30, 'Repainting Tests on Paint Oils,' issued by the Educational Bureau during December, 1914.

"Soya oil was one of the oils decided upon for the experiments largely because it was already available in quantities and could readily be imported. After looking into the matter it was found that the production of it might be developed on a satisfactory basis in this country. Soya beans were already being grown in considerable quantities, but up to that time domestic oil on a commercial scale had not been produced.

"Soya oil is crushed from the bean bearing that name. The bean is commonly referred to by the agriculturists in this country as 'Soy,' but the oil, ever since it was first imported, has been known as 'Soya Bean Oil' or 'Soya Oil.' Largely for the sake of convenience the title 'Soya Oil' has been adopted and is coming into general use. The title 'Soya' was, very likely, introduced from Manchuria, where the bean is grown in enormous quantities, and is a derivation from the Japanese 'Shoyu' or 'Soja.' 'Soya' is replacing 'Soy' when used in reference to the bean as such, even in the language of the agriculturist, and it is only a question of time when the word 'Soya' will be adopted generally."

"The first step in connection with the Bureau's endeavor consisted of the importation of soya beans from Manchuria for oil-extraction tests and the distribution of this seed, together with seed from a number of varieties already grown in this country, and the soliciting of the assistance of the State Agricultural Experiment Stations and other interested persons to urge the farmer to grow more soya beans for seed. While soya beans had been grown in this country for a good many years, this was done as a forage crop and for fertilization purposes. Only enough seed was being harvested to take care of the succeeding year's planting. The far-reaching propaganda, through the active co-operation of the State Agricultural Experiment Stations and the different Bureaus of the U.S. Department of Agriculture, was solely for the purpose of inducing the farmer to increase his population."

The Bureau reached farmers through the State Agricultural Experiment Stations. "While growing tests during 1911 and 1912 were limited to North Dakota, Minnesota, Missouri, New Jersey and Kentucky, they were extended in 1913 to every State, with the exception of a few where conditions are unfavorable from an agricultural standpoint.

"The tests were also extended to the Philippine Islands and to several places in Canada. It is noteworthy in this connection that there are at least two varieties which can be successfully matured as far north as the southern portions of Quebec.

"During 1912, forty-eight varieties were experimented with, including four imported from Manchuria. This number

was greatly increased in 1913, so that all available types would be included."

By 1916 the number of varieties had been reduced to about fifteen (see Exhibit No. 1), which were already popular: "Mammoth, Medium Yellow, Ito San, Holly Brooks [Hollybrook], Haberlandt, Peking, Wilson, Auburn, Black Eye Brow [Black Eyebrow]. Arlington, Tokio, Mikado, Virginia, Chiquita, Sable and the Yellow Manchurian bean...

"No sooner were the farmers interested in the larger growth of soya beans than they began to ask for information as to how and where the beans could be disposed of to be converted into oil.

"It was soon evident that the cotton seed mills in the South were best situated for crushing the beans. The location of the hundreds of these mills is fortunate, inasmuch as the South is naturally adapted to become the great soya bean-producing section of the country. Definite plans have not been evolved in sections where the cotton seed mills are not located, but in the northern section of the country the linseed oil mills will, very likely, crush the beans as soon as the production is large enough to warrant their going into the matter. In some sections, notably Tennessee, it was suggested that the farmers in a certain locality club together and conduct their own mill, disposing of the oil in the regular manner, and each farmer to use the cake from his crop for feeding purposes. In this way there would be returned to the land the full fertilizing values of the crop. The promoters of successful agriculture see in this a means to increase the production of soya beans, mainly because of the value which the farmer obtains by the improvement of his soil.

"During August and September, 1913, I made a trip of nearly twenty-four thousand miles, visiting most of the Agricultural Experiment Stations, to discuss matters relating to the increased production of beans for oil-crushing purposes and to determine whether or not the cotton seed mills were in a position to handle the crop without materially altering the machinery they use for the crushing of cotton seed or going to the expense of installing new equipment. Most of my time was spent in the States growing cotton and where cotton seed mills were already established."

Also discusses the oil-bearing properties of different varieties of soya beans (the oil content averages 19% and ranges from 16 to 25%), and the drying properties (see Exhibit No. 2). "During the past six or seven months there has been produced in this country in the neighborhood of one hundred thousand gallons of soya oil. The largest part of this quantity has been produced by the Elizabeth City Oil & Fertilizer Co., Winterville Cotton Oil Co. and the New Bern Cotton Oil & Fertilizer Mills."

Discusses prices at which soybeans should be purchased for profit in the oil industry, and opportunities for disposing of the oil and meal. The author points out the limited uses of soy bean oil in paints; in 1916 some 98,171,275 lb of soy bean oil were imported into the United States. The five samples of soybeans analyzed had an average iodine number of 125.8. But iodine value and drying power do not necessarily go hand in hand, although such is often the case.

"In those sections of the South where the cotton fields are infested by the boil weevil, the growers may find it to their advantage to produce soya beans on a large scale. The Alabama Cotton Seed Crushers' Association has the matter under careful consideration at the present time. The cotton crop of certain sections of that State has been seriously affected by the disastrous results which accompany the boil weevil.

"It is at once apparent that it is to the advantage of the cotton seed mills to take up the crushing of soya beans. In the first place it will help to give the mills a longer season and thereby shorten the period of idleness. This period generally varies from four to six months every year with different mills.

"The crushing of soya oil has advantages over cotton seed; it is a cleaner and easier material to handle preparatory to crushing, and the bean releases its oil as freely, at least, as cotton seed.

"Soya oil can be disposed of just as readily, at least, as cotton seed. The A.M. Parks Company, Philadelphia, commencing with the May issue of 'The Oil Miller,' advertise for domestic soya oil. This is the first ad to appear, and opens up what is likely to prove the most satisfactory outlet for the product of so many mills... In some cases the consumers who could handle it in tank cars would be able to deal direct with the crushers. The A.M. Parks Company was one of the first to import soya oil, and still imports it in large quantities. Two or three years ago the Company distributed an interesting pamphlet entitled 'Soya,' in which the commercial possibilities of the oil are referred to in some detail."

"While practical tests started in 1911 have not yet been completed, and the Bureau, in line with its adopted policy, does not intend to make a definite report until the investigation has been finished, the writer feels safe in stating that large quantities of soya oil will eventually be consumed in the manufacture of paint and varnish. Because of the inferior drying properties of soya oil as compared with linseed oil it cannot entirely displace linseed, and its use in connection with linseed oil will be limited to from 25 to 50 per cent., depending on the product in which it is used."

Note 1. This is the earliest English-language document seen (Nov. 1999) with the term "soya oil" in the title.

Note 2. This is the earliest document seen (Aug. 2004) that mentions the soybean variety Chiquita. Address: Special Technical Representative, Educational Bureau, Paint

Manufacturers' Assoc. of the United States, Philadelphia, Pennsylvania.

186. Washburn, W.F. 1916. Soya bean oil. *North Dakota Agric. Exp. Station, Bulletin* No. 118. p. 35-42. Sept.
• ***Summary:*** "At the request of the Paint Manufacturers Association this department has determined the moisture and oil content of many samples of soya beans and in addition has determined some of the constants of the oils exprest [expressed] from the different samples. These samples, representing some 45 varieties, were grown in a number of states under various climatic conditions and include the crops of 1912, 1913, and 1914."

Table 1 (p. 36-42) shows the results. The varieties are: Black Beauty or Ebony, Ito San, Mammoth, Guelph or Medium Green–Medium Early, Haberlandt, Peking, Mikado, Wilson, Sable, Holly Brook [Hollybrook] "Early," Medium Yellow, Amherst, Elton, Jet, Early Black, Sooty, Arlington, White Eye Brow [White Eyebrow], Tohas, Auburn, Brown, White Beans, Morse, Manchurian, Mercko, Ogema, Fairchild, O'Kute [Okute], Habero [Habaro], Lowrie, Austin, Chestnut, Columbia, Brindle, Meyer, Tashing, Samarow, Chernie, Manhattan, Tokio, Swan, Cloud, Virginia, Flat King, Sherwood, Early Brown, Edward, Black Eye-Brow [Black Eyebrow], Mauchu [Manchu], Green, Quebec No. 92, Quebec No. 537 [both "Quebec" varieties grown at Macdonald College, Quebec], Brownies [Brownie]. States in which the soybeans were grown include Idaho, Michigan, Montana, New Mexico, South Dakota, Utah, Wisconsin, and Quebec (Canada). It is not stated that soybeans were cultivated in North Dakota.

In West Virginia, the varieties Mammouth (Mammoth), Wilson, Holly Brook "Early," and Manchurian were cultivated. In New Mexico, the varieties Guelph or Medium Green–Medium Early, Wilson, and Manchurian were cultivated.

Note 1. This is the earliest document seen (June 2007) concerning soybeans in Montana, or the cultivation of soybeans in Montana. Ito San, Manchurian, and Quebec varieties were grown. A careful examination of the Montana Agric. Exp. Station Annual Reports from the 16th Annual Report (for the year ending June 30, 1909) to the 24th Annual Report (for the year ending June 30, 1917; published 1918) found no mention of soybeans.

Note 2. This is also the earliest document seen (Dec. 2005) concerning soybeans in Utah, or the cultivation of soybeans in Utah. This document contains the earliest date seen for soybeans in Utah, or the cultivation of soybeans in Utah (Sept. 1916). The varieties grown in Utah were Ito San and Manchurian.

Note 3. This is the earliest document seen (Aug. 2004) that mentions the soybean variety White Eyebrow. Address: M.S., Chemistry of Paints, Fargo.

187. Zavitz, C.A. 1916. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 37:12-43. For the year 1915. See p. 13, 21.
• ***Summary:*** In the section on "Spring crops, 1915," a table titled "List of experiments for 1915" (p. 13), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on grain crops," the subsection titled "Soy beans" (p. 21) states: "No good reports on Soy beans were received from the experimenters in the past year. The Early Yellow variety of soy bean has proved to be one of the very best. Address: Dr., Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

188. Stoddard, William Leavitt. 1917. Soy: The coming bean. *Good Housekeeping* 65:77, 126-28. Sept. [4 ref]
• ***Summary:*** *"Good Housekeeping* asked the Department of Agriculture to tell its readers the truth about the soy bean. This article is the department's answer. In the [Good Housekeeping] Institute Kitchen new recipes and methods of using the soy bean were evolved and tested. These recipes will be found at the end of this article. A list of dealers in various sections of the country who carry a supply of soy beans will be mailed upon request accompanied by a stamped addressed envelope.

"'The soy bean, also called the soja bean, is a native of southeastern Asia, and has been extensively cultivated in Japan, China, and India since ancient times... The beans are there grown almost entirely for human food, being prepared for consumption in many different ways. Their flavor, however, does not commend them to Caucasian appetites and thus far they have found but small favor as human food in either Europe or America.' Thus declared a bulletin of the Department of Agriculture [Piper and Nielsen. 1909. Farmers' Bulletin 372] before the war. Less than three months after our entrance into the war–and the entrance of the United States as a nation for the first time into a food moderation and conservation campaign–this same authority stated that 'the soy bean has already reached a place of high economic importance in America and Europe as a foodstuff... During the past season the demand for seed by food manufacturers has resulted in greatly increased prices.' The soy is a coming bean if not *the* coming bean."

Sold in some American markets under the name Togo bean, the soy bean "now flourishes in an increasingly large acreage in Tennessee, North Carolina, Virginia, Maryland, Kentucky, and the southern parts of Illinois and Indiana. The earlier varieties even mature in Ontario [Canada] and our Northern states."

The American housewife probably does not care "that there is a factory in New York is making a 'vegetable milk' of soy beans; the "flour or meal [okara] which remains after the milk is manufactured is valuable both as a stock for feed

and for human consumption; that soap manufacturers and paint manufacturers are using the oil of soy beans to replace more expensive oils; and that the substitute butter makers are using the fat of the soy bean in products which thousands of consumers are using all unwitting of its true nature.

"The thing that the American housewife wants to know today is where soy beans can be bought and what are the simplest uses of them... Probably the easiest and commonest method of cooking soy beans is to use them either for soup or to bake them."

Eight recipes are given; all but two call for "soy beans." Soy-bean bread (containing 20% of the flour in the form of "soy-bean meal" [a full-fat soy flour]), Soy beans and rice (with "1 tablespoonful Worcestershire sauce"), Soy-bean loaf with tomato sauce, Vegetable roast (baked), Savory baked soy beans, Soy-bean soup, Soy-bean muffins (with "1 cupful cold baked soy-bean pulp"), and Salted soy beans (deep fried).

Photos show: (1) Muffins made with soy-bean meal. (2) Soy-bean meal ground at the Good Housekeeping Institute; the hand-turned mill and two small piles of soy beans are shown. (3) A dish of soy beans and rice. (4) A soy bean plant. (5) A vegetable roast with soy beans as an ingredient.

Note 1. Theodore Hymowitz writes (12 Feb. 1990): "I have no idea if William Leavitt Stoddard was related to Illinois soybean pioneer William Hoyt Stoddard. William Hoyt had one brother named Charles Lumas Stoddard."

Note 2. This is the 2nd earliest document seen concerning soybeans in connection with (but not yet in) Togo.

Note 3. This is the earliest English-language document seen that uses the term "Salted soy beans" to refer to soynuts. It is also the earliest document seen in any language describing the frying or deep-frying of whole soybeans to make soynuts. Previously soynuts had always been dry roasted.

Note 4. This is the earliest article on soy seen (Aug. 2002) in *Good Housekeeping* magazine.

189. Zavitz, C.A. 1917. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 38:9-33. For the year 1916. See p. 10, 13, 18-19.

• ***Summary:*** In the section on "Spring crops, 1916," a table titled "List of experiments for 1916" (p. 10), under "Grain crops" includes "Testing two varieties of Soy, Soja, or Japanese beans–2 plots."

In the section on "Varieties of farm crops," a large table (p. 13) shows that 2 tests were conducted on "Soy beans." Brown (comparative value 100), yielded 0.40 tons/acre of straw and 14.67 bu/acre (880 lb/acre) of grain. O.A.C. No. 81 (C.V. 100), yielded 0.28 tons/acre of straw and 13.67 bu/acre (820 lb/acre) of grain.

The subsection titled "Soy beans" (p. 18-19) states: "Only two good reports of experiments with Soy beans were received from the experimenters in the past year. The Brown variety gave exactly one bushel more than the O.A.C. No. 81. This was the first year in which the O.A.C. No. 81 [apparently a selection from the Early Yellow variety] was distributed for co-operative experiments. It has surpassed the Brown Soy bean in yield per acre at the College but is a little later in reaching maturity." Address: Dr., Prof. of Field Husbandry, O.A.C. [Ontario Agricultural College], Guelph [Ontario, Canada].

190. Cromer, C.O. 1918. Re: Mr. Thomas Myers of London, Ontario, Canada. Soybean production in Indiana. Letter to W.J. Morse, Scientific Assistant, Forage-Crop Investigations, Bureau of Plant Industry, Washington, DC, April 13. 2 p. Typed, with signature on letterhead.

• ***Summary:*** "I have been in communication with Mr. Thomas Myers of London, Ontario, Canada, who wrote you relative to the soybean products which he is attempting to manufacture. I might say that he and his assistant are here at the present time relative to a site for a factory for the manufacture of these products.

"Our production for seed in this state [Indiana], of course, at present is quite low. Mr. Bryant, the Field Crop Estimates Agent places the seed acreage at 545 acres and the hay acreage at 4630 acres. I feel, myself, that he is too low on the seed acreage. I also believe that with an outlet for the seed, soybeans will be more generally grown. In fact I think the acreage will increase by leaps and bounds. Up until this year seed has been selling for something like $2.50 per bushel. These gentlemen promise 5¢ a pound and can use all the seed than can be produced. I feel quite optimistic over the proposition and will be quite glad when the soybean in Indiana becomes one of the leading crops. Any information you can give me will be gratefully received."

Location: National Archives, College Park, Maryland. Record group 54–Bureau of Plant Industry, Soils and Agricultural Engineering. Subgroup–Div. of Forage Crops and Diseases. Series–Correspondence with State Agric. Exp. Stations, 1899-1923. Box 12–Illinois-Indiana. Folder–Indiana Experiment Station–#7. Address: Associate in Crops, Purdue Univ., Lafayette, Indiana.

191. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce).*1918. Vegetable oils from the Orient to Canada. 21(112):577-78. May 13.

• ***Summary:*** "The War Trade Board announce that applications for licenses authorizing the exportation to Canada of vegetable oils imported from the Orient entering the United States at Pacific coast ports and passing through, in bond, on through export bills of lading, will be favorably

considered, provided the shipments have been purchased by Canadian concerns for consumption in Canada and they are routed to pass into Canada at Duluth, Minnesota, or at a border point west thereof."

"Applications for licenses to export such shipments should be sent to the nearest branch office of the War Trade Board or to the Bureau of Exports, War Trade Board, Washington, D.C."

Note: Although soy bean oil is not mentioned, it is clearly implied. The U.S. was importing huge amounts from "the Orient" by this date during World War I.

192. Murray, James. 1918. The farm and farm crops: Soy beans for Quebec. *J. of Agriculture and Horticulture (Quebec, Canada).* June 1. p. 3.
• ***Summary:*** "The Soy Bean (Glycine soja) has not been generally recognized as adapted to climates as cool as that of Quebec and as most of the varieties on the market are only suitable for growing in warmer climates this is as it should be... we now have at least one variety which we can confidently recommend as suitable for the climate of Montreal..."

"The Soy Bean is an exceedingly important crop in Manchuria, Japan and Korea and is exported in large quantities from these countries."

"Like the ordinary bean, the soy bean is an annual that cannot be planted until danger of frost is over,–about the first of June [in southern Quebec].

"In the countries where soy beans are grown extensively they are used largely for human food... In this country where the production is likely to be on a small scale for some years their principal use will be for human food either as baked beans or in a ground condition [as flour] for making muffins, biscuits, etc. In using them as baked beans they may be used without pork as the large percentage of fat which they contain makes the use of additional fat unnecessary.

"In preparing them it is important that they be soaked over night *in a large quantity of water,* and this water poured off before they are boiled. The large quantity of water is necessary to dissolve out of them a disagreeable flavor which they possess naturally. Otherwise they are cooked in exactly the same way as ordinary beans." Note: No; they must be cooked much longer than ordinary beans.

"In the Cereal Department of Macdonald College considerable work has been done in selecting varieties for earliness and yield, and seed of one variety that will mature here every year is now available in limited quantities. This variety is known as Quebec No. 92. To those who wish to try them the Department is willing to send samples of one pound as long as the available supply lasts."

Photos show: (1) Mature plants of Quebec No. 92 soy beans. (2) A field of soy beans in midsummer.

193. Vanderleck, J. 1918. Nitrocultures for soy beans. *J. of Agriculture and Horticulture (Quebec)* 21:180. June.
• ***Summary:*** "... there exists a bacterial culture for soy beans, which will enable the plants to obtain the nitrogen from the air. Inoculated soy beans can be grown on a poor soil, but the culture mentioned is never present in the soil and it is necessary each year to inoculate the seed beans afresh. The Bacteriological Department of Macdonald College can supply soy bean cultures at the nominal price of twenty-five cents a bottle, sufficient to inoculate one bushel of seed beans." Address: Canada.

194. *Toronto Daily Star (Canada).*1918. News briefs. July 18. p. 5.
• ***Summary:*** "Canadian food officials have become very impressed with the value of the soya bean."

195. Fellers, C.R. 1918. Report on the examination of commercial cultures of legume-infecting bacteria. *Soil Science* 6(1):53-61. July. [10 ref]
• ***Summary:*** The author concluded: "Soybeans seem to be harder to inoculate than most of the common legumes. Many of the cultures failed to give satisfactory results with this plant. The soil-transfer method is recommended for soybean inoculations except when commercial cultures are known to be of good quality."

"Harrison and Barlow, of the Ontario Agricultural College, did pioneer work in North America and originated the method of growing *Bacillus radicicola* on a nitrogen-free medium. This was soon copied by others until, at the present time, most of the cultures on the market are pure cultures of definite varieties of the nitrogen-gathering bacillus, grown on a nitrogen-free or, rather, a nitrogen-poor agar medium." Address: New Jersey Agric. Exp. Station.

196. *J. of Agriculture and Horticulture (Quebec).*1918. Soy beans as food. 22:48. Sept. 1.
• ***Summary:*** "The housewife of to-day who desires to patriotically conserve needed foods for overseas and at the same time provide adequately for her own household is naturally on the lookout for new articles to add to her dietary list. Such a one which has much to recommend it is soy beans...

"Most varieties require a longer season for maturity than our northern climate provides but there are one or two that appear to thrive in Quebec and a number of people are trying them this year. They are said to produce abundantly so it is probable that many housewives will be giving them a trial this season for the first time, and a few suggestions as to their treatment may be welcome.

"In Japan and China soy bean milk is prepared and used extensively. This milk is also sold in a condensed form and as curd [tofu]. Other preparations are vegetable butter and

cheese, and the extracted oil is sold for table use and for cookery.

"The Food Preservation Demonstrations of the Canada Food Board form an interesting feature of the fall fairs this year."

Describes the preparation of: (1) Green soybeans. "If cooked when about three-fourths grown as green beans the water should be changed once during cooking". (2) Dry soybeans. Long soaking in a large quantity of water improves the flavor by assisting "in the removal of any disagreeable principle." To serve as baked beans, in a crock, add to 2 cups cooked beans, ¼ teaspoon mustard, salt, a few grains of cayenne pepper, ½ cup tomato catsup, or if desired a few drops of onion juice, or 2-3 tablespoons molasses, or a teaspoonful of Worcestershire sauce. (3) Soy flour. "The raw soy beans may be ground into meal and combined with flour for bread, biscuits, or muffins. In the bread 1/3 soy bean meal may be used, in the biscuits and muffins a larger proportion." The meal tastes best if slightly browned.

Note: This is the 2nd earliest document seen (Jan. 2010) concerning soybeans in Quebec province, Canada, or the cultivation of soybeans in Quebec province (one of two documents). Address: Canada.

197. Jordan, Sam. 1918. Soy beans from soup to nuts: A new crop with many uses both on farms and in factories. *Country Gentleman* 83(39):7, 34. Sept. 28.

• ***Summary:*** Begins by discussing: The possibilities of soy beans "as a substitute for meat." The rising demand for "soy oil" which started a few years ago when the flax crop was little better than a total failure. "Industrial uses" of soy oil in soap, paint, and varnish. "Several packing houses were experimenting with the oil as a possibility in oleomargarine manufacture." "Soys fix soils for cotton." "Varieties of soy beans have been matured as far north as Quebec" [Canada]. The "development of the soy in the cotton sections will no doubt be swifter from an industrial standpoint because of the already existing facilities for oil extraction."

Concerning food uses, the author believes that "the soy bean as human food is destined to play a leading part in the way of a substitute for meat. From studies made of soy beans as food, the use of flour seems to be one form in which their use will suit the American taste and palate best."

"I have heard that the soy-bean milkman comes around before breakfast each morning in the Orient and leaves soy-bean milk." A Chinese student recently verified this story and said that in his family's household "it was customary to drink a glass of the milk upon arising." The student added that fried bean curd was often served for breakfast, and with soy sauce for dinner. "This soy sauce is something more or less familiar to Americans, the acquaintance being contingent upon the frequency with which our Chinese restaurants are patronized. It is the dark-brown liquid usually on the tables in the vinegar bottles. It is also the base of our Worcestershire sauces.

"For supper a favorite dish is sprouted beans in salad form, mixed with small pieces of meat or egg. They usually have also some form of bean cheese or fermented boiled beans. Next to baked and boiled beans, the preparation of soy-bean milk is a thing which should be more widely known."

"The author gives a brief description of how this milk is made, noting that it can be used in "cream sauces, puddings, custards, and even ice cream when some high flavoring is added to kill the beany taste. Much of the strong taste can be eliminated by boiling the milk slowly and stirring to prevent scalding.

"The residue [okara] obtained by straining the milk makes an excellent base for muffins and even bread, when it is used in the proportion of one part to three or four parts of wheat flour."

"In regard to fresh bean curd or 'tofu,' as the Chinese call it, it is hardly probable that we shall use it generally at an early date. The process of making it will no doubt come through the activities of our increasing number of women home-demonstration agents and, also, it is being made commercially by several Chinese firms in this country. When it does become more widely known, however, it is destined to be used extensively. It has very little taste of its own, and takes the flavor of everything with which it is used, generally as a base. It is also highly nutritious.

"Soy sauce is likewise destined for greater use, but the process of its manufacture is too complicated for domestic preparation. It can be purchased at Chinese groceries in this country, and probably from the majority of Chinese restaurants.

"Another dish which tastes as good as it looks or sounds is soy-bean sprouts. The smaller beans, of some yellow or green variety, are usually used." They are excellent because of "their use in the winter, acting as a green vegetable, and the fact that the vegetable can be had whenever wanted."

"And here is one for vegetarians–a 'vegetarian roast.' This is made by using equal parts of soy beans and peanuts, with the peanuts roasted and the beans boiled until soft before both are mixed and treated as an ordinary meat loaf. Such a roast as this is now being prepared by several food-manufacturing firms in the South, where both peanuts and soy beans are plentiful. It is being placed on the market in one and two pound containers."

"The beans served as a green vegetable are treated after hulling in much the same manner as Lima beans or peas. To hull, however, they should be boiled in the pods for about five minutes, then dipped into cold water, after which they shell easily. They can also be canned in this way, treating them after hulling the same as Lima beans. It is often desirable to serve them with rice or potatoes."

"So here we have a small glimpse of what their [soy beans'] future really is. A crop with a great industrial importance, a crop with known forage and manurial possibilities, and a crop holding forth a beneficent promise as an essential food, soy beans will soon be giving corn and wheat a close race for the more prominent places on our agricultural map."

Photos show: (1) Soy beans after being soaked but before boiling. (2) Piles of hay, used for forage. (3) Side view of a soy-bean harvester (with a man on top, pulled by two horses) used in the South, showing the bags filled. (4) A rear view of the same separating and bagging soy-bean harvester.

Note 1. This is the earliest document seen that uses the term "from soup to nuts" in connection with soybeans. Note 2. This is the earliest English-language document seen (Feb. 2000) that uses the term "soy-bean sprouts" to refer to these sprouts. Address: Columbia, Missouri.

198. *J. of Agriculture and Horticulture (Quebec, Canada).*1918. Soy beans, used like navy kind, make valuable food: Ancient China's product can be serve in numerous ways. Oct. 1. p. 67.

• ***Summary:*** From Weekly News Letter, U.S. Dept. of Agriculture [22 May 1918, p. 3]: "When prepared like the ordinary field or navy beans, soy beans should be soaked for 10 or 12 hours or more, if necessary, and boiled slowly. The boiled soy beans,... may be seasoned and used as a principal part of a meal as they are or may be made into bean loaf, bean croquettes, or other dishes.

When soy beans are three-fourths or more grown, the seed make a palatable and nutritious green vegetable.

Also discusses "soy-bean milk" ("a milky emulsion is obtained which is similar in appearance and properties to cow's milk"), "tofu or bean curd" (the addition of either magnesium chlorid [chloride] or calcium sulphate to soy-bean milk precipitates some of the proteid substances, forming a grayish-white curd).

"Soy or shoyu sauce is a dark-brown liquid prepared from a mixture of cooked and ground soy beans, roasted and pulverized wheat or barley, salt, and water, inoculated with a culture known as rice ferment and left in casks to ferment for six months to a year or longer. The liquid obtained is used in many countries, including the United States, as a sauce for meat or vegetables."

199. *International Institute of Agriculture, Bureau of Statistics (Rome), Review.*1918. International trade in concentrated cattle foods. No. 4. 72 p. Nov. [1 ref]

• ***Summary:*** This is the IIA's fourth review on concentrated cattle foods. "The first three reviews were published in the *International Review of the Science and Practice of Agriculture,* in the numbers of April 1915, 1916, and 1917." This publication is divided into six chapters. In Chapter 4, titled "Oil seeds and oilcake" the section on "Soya beans and soya cake" contains statistics on three subjects: Production, trade, and prices. Tables show: (1) "Produce in soya cake in the importing countries (estimated on the basis of the quantities of soya beans available) (p. 51). Figures are given in quintals for the years 1913-1917 for the following countries: Denmark, Great Britain and Ireland, Netherlands, Russia (including Asiatic provinces), China, Formosa, Japan, Dutch India (Java and Madura), and New Zealand. The top 3 countries in 1917 are: Japan 727,418. Denmark 284,000, and Great Britain and Ireland 223,969. However in 1915 Great Britain and Ireland produced 1,513,059. Note: 1 quintal = 100 kg.

(2) "Foreign trade in soya cake" (p. 51). Statistics are given in quintals for the years 1913-1917. Import figures are given for Denmark, Canada (incl. soya beans), Formosa, and Japan. Japan was by far the biggest importer, with 9,912,850 quintals in 1917. Export figures are given for Denmark, Great Britain, and China. China was by far the biggest exporter with 7,034,459 quintals in 1916.

Canadian imports of soya cake (including soya beans) was as follows (in quintals) for each financial year (p. 51): 2.345 in 1913. 2.412 in 1914. 1.121 in 1915. 1.358 in 1916. 4.730 in 1917. Note: This is the earliest document seen (Jan. 2010) that gives Canadian trade statistics for soybeans or soy products. This document contains the earliest date seen (1913) for trade of such products to or from Canada.

(3) "Foreign trade in soya beans" (p. 51). Statistics are given in quintals for the years 1913-1917. Import figures are given for Denmark, Great Britain and Ireland, Netherlands, Russia (incl. Asiatic provinces), Sweden, Formosa, Japan, and Dutch India (both Java and Madura, and Other possessions). The biggest importers in 1917 were: Japan 841,942, and Great Britain and Ireland 254,510. Export figures are given for Netherlands, China, Formosa, and Japan. China was by far the biggest exporter with 5,315,324 quintals in 1916.

(4) Foreign trade in sundry and unspecified oilcakes (p. 62). Gives imports statistics for soya cake by Roumania [Romania]: 79,378 quintals in 1913, 36,650 quintals in 1914, 5,554 quintals in 1915. Gives export statistics for soya cake by Russia: 54 quintals in 1913.

(5) "Prices of sundry oilcakes at the close of each week" (p. 55-56). For soya cake, the prices are given at Copenhagen, Denmark, for 1917 and 1918 in gold francs. The price rose by about 41% between Jan. 1917 and Jan. 1918 from 46.47 to 62.16 gold francs.

(6) "Other vegetable products" (p. 71). In 1913 Denmark exported 1,390 quintals of soya meal.

This document also contains extensive information on groundnuts and groundnut cake, sesamum and sesamum cake, etc.

Note 1. This is the earliest English-language document seen (Aug. 2000) that contains the word "oilcakes." Note 2.

This is the earliest English-language document seen (Jan. 2001) that uses the word "quintals" (or "quintal") in connection with soybeans. Address: Rome, Italy.

200. Bell, Archie. 1918. Sunset Canada: British Columbia and beyond. Boston, Massachusetts: The Page Company. xii + 320 p. Illust. Index. Series: See America First.
• ***Summary:*** Chapter 10, titled "The Royal City," is about New Westminster in British Columbia, Canada. In 1859, New Westminster was selected as the first capital of the new Colony of British Columbia by Queen Victoria, who named the city after part of London. It soon became known as "The Royal City." Located on the north bank of the Fraser River, 12 miles southeast of Vancouver City, it was the only freshwater harbor of any consequence in Western Canada.

Yet the Canadian Pacific Railroad bypassed New Westminster (a crushing disappointment to the city's people) and went instead to Vancouver. Still its location "is strikingly similar to that of New Orleans on the Mississippi river or Shanghai above the mouth of the Yangtzu-Kiang. Both of the latter compelled the commerce of the world to come up the river to them.

Across the Fraser river one soon arrives at Steveston, which is almost an Oriental City; most of the inhabitants are Japanese fisherman, and they live much as if they were still in Japan. On Lulu Island at Steveston, "the native instinct for beauty and love for the picturesque has prompted the planting of shrubs and flowering plants. Sometimes they are in painted tin cans, in [wooden] soy kegs or in China urns; the idea is the same, the beautification of the dooryard, which is as noticeable among Nippon's very poor, where the dooryard may not be more than two square yards in area, as among the rich and noble who can build extensive parks and landscape gardens." Address: Author, Cleveland, Ohio.

201. O.A.C. No. 111: New Canadian domestic soybean variety. 1919. Seed color: Yellow (straw), hilum pale.
• ***Summary:*** Sources: Zavitz, C.A. 1919. "Farm crops: Results of experiments at the Ontario Agricultural College." *Ontario Department of Agriculture, Bulletin* No. 268. 80 p. Jan. See p. 44. The section titled "Varieties of soy or soja beans" (p. 43-44) states that twelve soybean varieties have been grown in competition in each of the past five years in succession. A table (p. 44) shows the average weight in pounds per bushel volume and the average number of pounds of grain per acre for the following varieties, listed in descending order of pounds of grain per acre: O.A.C. No. 111 (946 lb/acre), Buckshot (945 lb/acre), Habara (940), Chernie (927), etc. "All varieties, however, were surpassed by a selection [O.A.C. No. 111 = Ontario Agricultural College] made at the College which was started from an individual plant selected from the Early Yellow variety." Note: In the USA, Early Yellow was renamed Ito San by about 1902.

Zavitz, C.A. 1927. "Forty years' experiments with grain crops." *Ontario Department of Agriculture, Bulletin* No. 332. p. 36-87. Oct. See p. 84-85, 87. A table (p. 85) lists eight soybean varieties that have been grown under similar conditions at the Ontario Agricultural College in each of the past 14 years. O.A.C. No. 111 has the second highest seed yield (19.92 bu/acre) after Habaro No. 20405 (20.38 bu/acre). A second table (p. 85) lists 13 soybean varieties that have been grown at the College in the last five years. O.A.C. No. 111 has the fourth highest seed yield (25.95 bu/acre) after O.A.C. 211 (28.10 bu/acre), Manchu (27.38), and Tsurunoko (26.42). A third table (p. 87) lists 26 soybean varieties that have been grown at the College in the last three years. O.A.C. No. 111 has the eighth highest seed yield (1,618 lb/acre); O.A.C. 211 has the highest seed yield (1,821 lb/acre). Address: Ontario, Canada.

202. Zavitz, C.A. 1919. Farm crops: Results of experiments at the Ontario Agricultural College. *Ontario Department of Agriculture, Bulletin* No. 268. 80 p. Jan. See p. 43-44, 77.
• ***Summary:*** The section titled "Varieties of soy or soja beans" (p. 43-44) states that twelve soybean varieties have been grown in competition in each of the past five years in succession. A table (p. 44) shows the average weight in pounds per bushel volume and the average number of pounds of grain per acre for the following varieties, listed in descending order of pounds of grain per acre: O.A.C. No. 111 (946 lb/acre), Buckshot (No. 17251, Wash.; 945 lb/acre), Habara (No. 20405, Wash.; 940), Chernie (No. 18227, Wash.; 927), Brown (918), Quebec No. 92 (886), Early Yellow (851), Tsurunoko (839), Quebec No. 537 (815), O.A.C. No. 81 (805), Ito San (800), Medium Green (370 lb/acre).

"Three varieties were obtained through the Department of Agriculture at Washington [DC] and these [Buckshot, Habara, and Chernie] occupy second, third and fourth places in the list in average yield per acre for five years. All varieties, however, were surpassed by a selection [O.A.C. No. 111 = Ontario Agricultural College] made at the College which was started from an individual plant selected from the Early Yellow variety. We obtained two selected varieties from the Macdonald College, Quebec, under the name of Quebec No. 92 and Quebec No. 537. The former occupies sixth and the latter ninth place in average yield of grain per acre. In 1918, the highest yield in the duplicate experiment was obtained from the Habara [Habaro].

"In each of the past few years two varieties have been distributed for co-operative experiments. The Brown variety has proven early and in some seasons and under certain conditions has given a little higher results that the O.A.C. No. 81. In normal years the O.A.C. No. 81 has surpassed the Brown variety."

In the section titled "Summary regarding good seed" (p. 76-77) we read: "Soy or Soja Beans. O.A.C. No. 111.–

Medium early, vigorous grower, yellow beans, heavy yielder of fodder. O.A.C. No. 81.–Early, yellow beans, heavy yielder of grain."

Note: This is the earliest document seen (Jan. 2010) that mentions the soybean variety O.A.C. 111; it was developed at the Ontario Agricultural College in Guelph, Ontario, Canada. Address: Ontario, Canada.

203. Ladd, Culver. 1919. Soya bean investigation. *North Dakota Agric. Exp. Station, Food Department, Paint Bulletin* 1(7):130-38. Oct.

• ***Summary:*** "At the request of the Paint Manufacturers Association the chemical department carried on an investigation with soya beans grown by the Paint Manufacturers Association. The beans represented some 30 or 40 varieties and covered those grown from 1912 to 1916 inclusive. The beans were grown in several states under various climatic conditions but principally in New Jersey.

"The object of the investigation was to determine what varieties were best suited to the various growing conditions and to obtain, at the same time, an oil suitable for use in the paint industry. The need for such an investigation was the demand for a suitable substitute for linseed oil which is becoming scarce with its rapidly increasing use."

The results tabulated for samples including the crops of 1912, 1913, and 1914 were published in September 1916 in Bulletin No. 118. The following table gives results for the 1915 crop." Table I shows the variety name of 73 soybean varieties, and for each is given the percentage of moisture and fat, specific gravity at 15.5ºC, Refractive Index at 25ºC, Iodine Number, and Saponification Number. Average values for the 73 varieties are: Moisture 7.77%, fat 18.36%, specific gravity 0.9250, Refractive Index 1.4728, Iodine Number 128.7, and Saponification Number 193.1. The varieties are: Black Beauty or Ebony, Ito San, Juelph [Guelph] (Medium Early), Haberlandt, Peking, Wilson, Hollybrook (early), Medium Yellow, Tahas, Brown, Morse, Manchurian, Mercko / Mercks, Ogema, O'Kute [Okute], Habers [?], Lowrie, Austin, Chestnut, Columbia, Meyer, Tokio, Swan, Cloud, Virginia, Flat King, Sherwood, Early Brown, Edward, Black Eye Brow [Black Eyebrow], Manchu, Green, Quebec No. 92, Quebec No. 537, Brownies [Brownie], Sooty, Arlington, White Eye Brow [White Eyebrow], Barchet.

Table II, which has the same structure, gives the same information for 65 soybean varieties grown in 1916. No new varieties were grown, but Mercko was written "Mercks." At the top of the table it is noted that "This summer, 1918, there were grown at this institution [in Fargo, North Dakota] soya beans, the seed for which came from the 1916 crop and the investigation will be continued another year at least."

Note: This document contains the third earliest date seen (Jan. 2004) for the cultivation of soybeans in North Dakota (summer 1918). The source of these soybeans was probably the Paint Manufacturers Association of New Jersey.

Table III, whose structure is partly different from that of the first two tables, shows the values for each variety from year to year and in different locations of growth. It also includes: A description of the bean color, size, shape, and color inside. The years grown range from 1913 to 1916. The locations include New Jersey (the most common), South Dakota (Ito San in 1914), West Virginia (Mammouth [Mammoth]), Rhode Island (Wilson in 1913), Kansas (Hollybrook, early), Tennessee (Tokio in 1913), Maryland (Virginia in 1913), Indiana (Sherwood and Early Brown in 1913), Alabama (Edward in 1913), Bureau of Plant Industry (Black Eye Brow in 1917, plus Manchu and Green), McD. [Macdonald College], Quebec, Canada (Quebec No. 92 and No. 537 in 1913), and Kentucky (Brownies). Address: Commissioner, Fargo, North Dakota.

204. Baker, E. Carleton. 1919. Marketing the Far Eastern bean crop. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 22(279):1170-73. Nov. 28.

• ***Summary:*** Contents: Introduction. Shipments of beans and bean oil. Marketing methods. Packing for export. Chinese weights employed in the bean trade. Method of buying bean oil from Chinese mills. American purchasing organization method.

By George H. Scidmore, Consul General, Yokohama: Statistics of bean crop in the Hokkaido. Exports of beans for two years [from Hokkaido]. Total exports of chief varieties [species] of 1918 crop. Speculation a strong factor in bean trade.

"Manchuria is essentially an agricultural country, about 70 per cent of the people being directly or indirectly dependent upon the land. Soy beans form the staple crop of Manchuria, and upon them the prosperity of the people depends."

"The Mukden consular district comprises the greater part of South Manchuria and produces an enormous quantity of soy beans. This crop is given preference to others because it yields the surest and greatest profit." I 1918, the following shipments were made from the principal bean markets along the South Manchuria Railway. A table (p. 1170) gives, for each station, the tons of soy beans and bean oil shipped: Liaoyang, Fushen, Mukden, Tiehling, Kaiyuan (178,050 #2 for beans), Changtu, Shuang Miaotzu, Szuping Kai, Kuochiatien, Kungchuling, Fanchiatun, Changchun (706,000 #1 for beans).

Hokkaido, Japan: "Practically all of the beans destined for export from Japan are grown in the Hokkaido. The total crop for 1919 it is estimated will amount to 318,000 long tons, of which about 277,000 long tons [87%] will be obtainable for export." The beans are sold in bags of 100

*kin* (132 pounds) each. Varieties of beans produced in Hokkaido: Shozu [azuki], Dainagon shozu, Other shozu. Daizu (soybeans; with number of bags produced in Hokkaido in 1916) 615,114, Akita daizu 754,996, Tsurunoko daizu 52,970, Sodefuri daizu 77,673, Kuro daizu [black] 143,152, Other daizu (No data until 1919). Daifuku, Chufuku, etc.

Another table (p. 1172) shows which foreign countries imported the exportable surplus of the Hokkaido bean crop in 1916 and 1917. The biggest customer for soy beans by far, in both years, was the USA, followed by Canada. Canada's imports from Hokkaido, Japan, were as follows: In 1916: 131,421 *kin* (173,476 pounds weight or 77.44 long tons of 2,240 pounds per ton). In 1917: 256,042 *kin* (337,974 pounds weight or 150.88 long tons). Note: These two years were during World War I, when Japan and Canada were allies. Canada probably used these soybeans as a source of both oil (for soap) and meal (probably fed mostly to hogs to increase bacon production).

The USA also imported large amounts of small red [azuki] or white beans *(Phaseolus subtrilobata).* Address: Consul General, Mukden, China.

205. **Product Name:** Milqo (Soy Milk).
**Manufacturer's Name:** Milqo Ltd. Later renamed Milquo Ltd., then Vi-Tone, then Milk-Ko.
**Manufacturer's Address:** Milqo Ltd., Hamilton, ONT, Canada.
**Date of Introduction:** 1919.
**New Product–Documentation:** W.L. Burlison and O.L. Whalin. 1932. *Journal of the American Society of Agronomy* Aug. p. 594-609. "The production and utilization of soybeans and soybean products in the United States." See p. 608. In a table under "Canadian Products" "Milqo (soy milk)" is listed.

H.W. Lohse. 1936. *Canadian Chemistry and Metallurgy.* July. p. 224-25. "The soya bean as a food product and industrial raw material." The author, who is from Milqo Ltd., Hamilton, Ontario, Canada, states in this paper presented at the Canadian Chemical Convention: "Soya bean milk has been manufactured here in Canada by Milqo Limited in Hamilton since 1919. This firm erected one of the first, if not the first, plants for the purpose of this manufacture on a large scale in the Western world."

American Soy Bean Association. 1938. "16th annual meeting." This leaflet lists the stores from which the soy products were purchased, incl. Milqo Limited, Vi-Tone Company, Hamilton, Ontario, Canada.

*Soybean Digest.* 1948. "Grits and flakes... from the world of soy: Milquo Ltd. is now Vi-Tone." Jan. p. 34. "Milquo Limited has changed its firm name to Vi-Tone Products Limited, 198 Gage Ave. S., Hamilton, Ontario. Ray H. Bissell is president."

*Soybean Blue Book.* 1954. p. 102. Milk-Ko Products in Hamilton is probably the same company that was previously named Milqo Ltd.

Note: This is the earliest known commercial soy product made in Canada, or in the province of Ontario.

206. Smith, Joseph Russell. 1919. The world's food resources. New York, NY: Henry Holt and Company. 634 p. See pages 326-27, 360-65. [1 ref]
• ***Summary:*** Contains a brief overview of the soybean, soybean production, and soybeans as a food product, with several long excerpts from Dr. J.H. Kellogg, and the *USDA Year Book of Agriculture* (about food uses, including shoyu or soy sauce).

A photo shows "Soy bean curds and cheeses in a Japanese factory," in large earthenware containers (p. 362). Note: This photo of "curds and cheeses," taken by Frank N. Meyer, shows the production of fermented tofu, probably in a Chinese factory (See: (1) Morse 1918. "The Soy-bean Industry in the United States." Plate IV, fig. 2; (2) Piper & Morse. 1923. *The Soybean.* p. 242).

Concerning use of food resources, in the USA and Canada, the chief goal of agriculture is not to feed humans but to feed animals. This was true even in the food crisis of 1918 [at the end of World War I]. About 5,191 million bushels of grain are now grown in the USA; in descending order of importance (in million bushels) they are corn (2,863), oats (1,422), wheat (643), barley (195), rye (54), and buckwheat (14). Of this total of 5,191 million, the American people eat less than 550 million (14.1%). Adding the 340 million bu exported, the total amount used for human food was 900 million bu (17.3%). "The rest, 4,300 million, went to our four-footed brethren, who outnumber us and whose food requirements, because of their greater size, are several times our own.

"In addition to the grain, they get all of the 85,360,000 tons of hay grown on 54,618,500 acres. (More than ten per cent of the half billion acres under cultivation in the United States). They also roam over millions of acres eating all the grass. It is therefore plain that more than four-fifths [80%] of the produce of American agriculture, even in 1918 [a war year], went to feed beasts." Address: Prof. of Geography, Columbia Univ., New York.

207. Burnett, L.C. 1920. Soybeans in the cornbelt: A crop that demonstrated its worth. *Successful Farming* 19(3):18, 46. March.
• ***Summary:*** "Last year the farmers of Iowa bought, from outside the state, $16,000,000 worth of high protein concentrates... Feeders are now using all of the available supply and our only solution of the protein problem lies in our ability to produce more protein on cornbelt farms.

"The soybean is the crop best adapted for measuring the production of protein in this section. It is an annual

legume; it will grow anywhere that corn grows, and with about the same degree of success. The ways in which it may be utilized are numerous and varied."

The best known of the early soybean varieties are Ito San and Chestnut. "These have been grown successfully as far north as Minnesota, Ontario [Canada], and the New England states. In the central parts of the cornbelt they are advised for late planting. In the northern parts they are chiefly used to plant with corn. The common medium maturing varieties are Medium Early Yellow, Perley's Mongol, Medium Green, Manchu and Black Eyebrow." The most common late variety is Manchu. For silage the best varieties are Manchu, Black Eyebrow, Medium Green, and Medium Early Yellow. A photo shows a field of harvested soybeans, with a barn in the background. Address: Iowa.

208. Kline, Charles E. 1920. Oil-bearing seeds and nuts in the Shanghai District of China. *Commerce Reports [USA] (Daily Consular and Trade Reports, Bureau of Foreign and Domestic Commerce, Department of Commerce)* 23(98):519-22. April 26.

• ***Summary:*** The chief plants yielding vegetable oils in China are [soy] beans, cotton seed, peanuts, rapeseed, sesamum seed, tea seed, and woodnuts (filberts).

The number of oil mills in China is increasing, and those in northern China treat mainly soya beans, while those in central China produce the other varieties of oil mentioned. The oil mills do not work year round, since there is not sufficient seed available, and also since the high summer temperatures cause the oil to become rancid.

The total capacity of oil mills in Shanghai is 5,400 piculs/day (321 tons/day).

Tables show: (1, p. 520) The quantities of oil, oilseeds, and oil cake exported from the port of Shanghai during the years 1917 and 1918. 1 picul = 133.33 lb. For [soy] bean oil: In 1917–2,351 piculs worth $26,482. In 1918–5,771 piculs worth $71,601. For [soy] bean cake: In 1917–11,213 piculs worth $27,246. In 1918–282 piculs worth $800.

(2, p. 520) The quantities of oil and cake exported from China to the countries of destination; the year (or years) is not given. Both the weight (in piculs; 1 picul = 133.33 lb) and value (in dollars) are given for each destination. In descending order of weight exported:

[Soy] bean oil–United States (incl. Hawaii) 2,136,746 piculs. Japan (incl. Formosa [Taiwan]) 87,673. Korea 23,611, Russia 19,802. Canada 4,001. France 2,132.

[Soy] bean cake: Japan (incl. Formosa) 15,150,706 piculs worth $33,383,750. Korea 635,362 piculs worth $1,292,174. Russia 578,960 piculs worth $968,829. Siam 1,412 piculs worth $4,625. United States (incl. Hawaii) 27 piculs worth $54. Canada 9 piculs worth $17.

(3, p. 521) Ocean freight rates from Shanghai to various ports. Figures are given for bean oil and bean cake in 1917, 1918, and 1919 shipped to San Francisco [California], London, and Marseille, Naples & Venice. Present prices (total) are about five times as great as those at the beginning of the war. Address: Vice Consul, Shanghai [China].

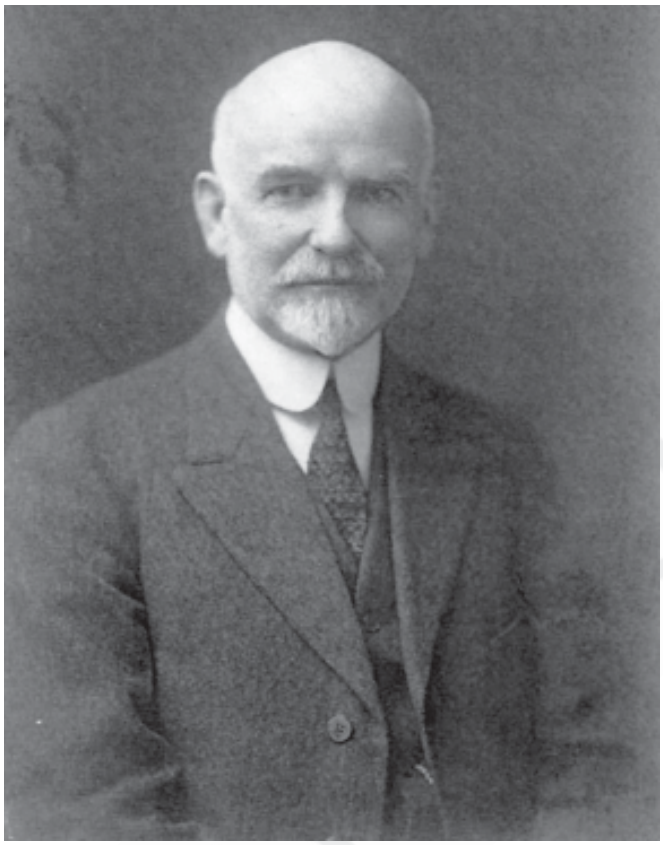
209. Page, Thomas Walker; Lewis, D.J.; Culbertson, W.S.; Costigan, E.P. 1920. Survey of the American soya-bean oil industry. Washington, DC: U.S. Government Printing Office. Prepared by the United States Tariff Commission and printed for use of Committee on Ways and Means, House of Representatives. 22 p. 24 cm.

• ***Summary:*** Contents: Summary. Summary table. General information: Description, uses, methods of production (domestic production and consumption), domestic exports, foreign production and international trade, imports, prices, competitive conditions, and tariff history. Production in the United States (alternative). Imports by country. Imports for consumption (soya bean oil cake). Domestic exports. Prices: Soya bean oil (Dairen, Manchuria), soya bean oil (New York), soya bean oil cake (Dairen). Rates of duty. Miscellaneous.

Tables show: (1) Domestic soya-bean oil production, imports for consumption, domestic exports and value of imports for consumption for the calendar years 1910-1920 (p. 8). (2) Soya-bean oil production in the United States in pounds, 1914, 1916-1919 (p. 16). (3) Soya-bean oil imports by countries 1912-1920. Statistics on quantity and value of imports to the USA from Belgium, England, China, Japan, Canada, Manchuria, all others (p. 16). (4) Revenue on soya-bean oil imports for consumption, 1910-1920 (p. 17). (5) Revenue on soya bean oil cake imports for consumption, 1912-1919. (6) Quantity and value of domestic exports of soya bean oil for 6 months ending Dec. 31, 1919. Exported to: Austria-Hungary, Belgium, Denmark, France, Germany, Italy, Netherlands, Sweden, United Kingdom, Canada, all other (p. 17). The largest amount was exported to the United Kingdom. (7) Spot prices of wholesale soya-bean oil at Dairen, Manchuria, 1918 and 1919. (8) Prices of Manchurian soya-bean oil in New York, 1913-1919. Data from *War Industries Price Bulletin* No. 49. (9) Prices of soya-bean cake in Dairen, 1918-1919. Data from *Manchuria Daily News.* (10) Rates of duty on soya-bean oil, 1883-1913 (p. 18). (11) Consumption of fats and oils by the lard-substitute industry, 1912, 1914, 1916, 1917. Includes soya-bean oil and peanut oil. (12) Consumption of fats and oils by the soap industry, 1912, 1914, 1916, 1917. Includes soya-bean oil and peanut oil (p. 19-20). (13) Consumption of fats and oils by the oleomargarine industry, 1912, 1914, 1916-1918. Includes soya-bean oil and peanut oil (p. 20). (14) Approximate net import and crush of soya beans in Europe, 1908-1913. Incl. United Kingdom, Germany, Netherlands, Denmark. (15) Exports of soya beans (international trade), 1911-1918. (16) Imports of soya beans (international trade), 1911-1919. (17) Exports of soya bean oil (international trade) 1911-1919. (18) Imports of soya

bean oil (international trade), 1911-1919 (p. 21). (19) Foreign exports of soya bean oil from the United States, 1912-1919. Gives quantity and value exported to Canada, Mexico, British West Indies, Belgium, Netherlands, Sweden, France, England, Austria-Hungary (p. 22). In 1919, 2,060 pounds worth $258 were exported to Mexico. Note: This is the earliest document seen (Feb. 2009) that gives statistics for trade (imports or exports) of soybeans, soy oil, or soybean meal to Mexico or Central America. Address: Chairman, U.S. Tariff Commission, Washington, DC.

210. Portrait of Prof. Charles Ambrose Zavitz (Photograph). 1920. Undated.



• ***Summary:*** This black-and-white undated photograph of Prof. Zavitz (lived 1863-1942) is 4 by 6 inches. He is wearing a double-breasted suit and necktie. His head is nearly bald and he has a white mustache and a white pointed beard. He looks serious (not smiling) and is facing slightly to the right.

211. Zavitz, C.A. 1920. Results of co-operative experiments in agriculture. *Ontario Agricultural and Experimental Union, Annual Report* 41:9-32. For the year 1919. See p. 11, 14-15, 21.

• ***Summary:*** In the section on "Spring crops, 1919," a table titled "List of experiments for 1919" (p. 11), under "Grain crops" includes "Testing three varieties of Soy, Soja, or Japanese beans–3 plots." Note: Soy is never listed under "Forage, fodder, silage and hay crops," nor under "Culinary [edible/food] crops" in this table.

The subsection titled "Soy beans" (p. 21) states: "The past season has been more favorable for growing the Soy beans than any one of the three previous years. Three varieties of Soy beans have been distributed in each of the past two years. The following gives the average yield of threshed beans in bushels per acre per annum: Habara [Habaro] 14.7; O.A.C. No. 81, 11.9; and Brown 10.7. The Soy beans, when ground, are about equal for feeding purposes to cotton seed meal. They are richer than any other grain grown in Ontario and a small amount greatly helps the meal ration, especially for dairy animals." Address: Dr., Prof. of Field Husbandry, O.A. [Ontario Agricultural] College, Guelph [Ontario, Canada].

212. Loehnis, F.; Hansen, Roy. 1921. Nodule bacteria of leguminous plants. *J. of Agricultural Research* 20(7):543-56. Jan. 3. Plus 3 unnumbered pages of plates at end. [19 ref]

• ***Summary:*** This article begins: "Despite the fact that the nodule bacteria of the leguminous plants have been made the subject of numerous publications, it is not to be disputed that their true morphological and physiological character, as well as their correct systematic position, are by no means sufficiently known. This is especially clearly demonstrated by the fact that they are still proclaimed by several writers to be the representatives of a special genus *Rhizobium...*" Note: This is the earliest English-language document seen (March 2003) that uses the word "Rhizobium" in connection with the root nodule bacteria.

Nodule bacteria from 11 different leguminous plant species were studied. It was concluded that these can all be "divided into two groups, differing morphologically as well as physiologically. The first group shows all features characteristic of *Bacillus radicicola* Beijerinck." It produces nodules on the roots of many legumes, not including soybeans or cowpeas.

"The second group is characterized by monotrichic flagellation, comparatively very slow growth on agar plates, and inability to cause a marked change in milk. It has been isolated from cowpea, soybean, peanut, beggarweed, Acacia, Genista, and Cassia.

"According to the customary manner of classifying bacteria, this second group of nodule bacteria would have to be considered to be a new species, and according to the rules of priority, it would have to be named *Pseudomonas japonica* or *Bacterium japonicum* (Kirchner). But we do not advocate such a procedure, because only a complete study of the life history of these two groups of organisms would make it possible to say definitely whether they are, indeed, two distinct species or merely different types of growth of the same organism."

"*Bacillus radiobacter* seems to be regularly present in the root nodules of leguminous plants, stimulating development and activity of the nodule bacteria. On account of its similarity to *B. radicicola*, it has been repeatedly mistaken for the nodule-producing organism in the cowpea-soybean group, whose bacteria it outranks very considerably in the development on the plates made from the nodules. By its brown growth on potato, *B. radiobacter* can be easily differentiated from *B. radicicola."* Address: 1. Soil Biologist, Bureau of Plant Industry, USDA; 2. Prof. of Soils, Univ. of Saskatchewan, Sasaktoon, Sask., Canada.

213. Evans, Arthur T.; Fowlds, Matthew. 1921. Soybeans in South Dakota. *South Dakota Agric. Exp. Station, Bulletin* No. 193. p. 317-24. March.
• ***Summary:*** Contents: Introduction. The plant. Adaptations. Varieties: Manchuria, Manchu, White Eyebrow, Ito San, Black Eyebrow, Bopp, Saskatoon, Ogemaw, Mandarin, Chestnut, Early Brown. Additional varieties tested for hay in 1919 (Table 4): Mammoth Yellow, Swan, Haberlandt, Hollybrook, Mongol, Mikado, Morse, Medium Green, Sable, and Ebony. Note: All of these varieties failed to mature seed. Commercial varieties from O.M. Scott & Sons, Marysville, Ohio.

Culture: Seed bed, time of seeding, method of seeding, inoculation, rate of seeding, cultivation, harvesting. Annual rainfall at the Brookings, Cottonwood, Eureka, Highmore, and Vivian stations.

Tables show yields of soybean varieties for seed, 1914-1920, and yields of soybeans for hay, 1915-1920. "Within recent years the soybean has become increasingly popular in South Dakota. This is probably in part due to a demand for a plant high in protein to be used as a hogging-off crop in corn. Rape may supply this but it lacks one feature which the soybean supplies, namely that of fixing nitrogen."

"The soybean is a relatively new crop in South Dakota... About 30 varieties have been tested at the station at Brookings for one or more years. Those which failed to mature were discarded after the first year." The variety with the highest average yield was Manchuria, introduced from northern Manchuria. Its 7-year average yield was 22.5 bu/acre. Mandarin had 2-year average yield (1919-20) of 28.0 bu/acre, but Manchuria had an average yield of 36 bu/acre for these 2 years.

Note: This is the earliest document seen (Sept. 2004) that mentions the soybean variety Saskatoon–apparently named after the capital of Saskatchewan province in Canada. Address: Brookings, SD.

214. Saskatoon: New Canadian soybean variety. 1921. Seed color: Yellow.
• ***Summary:*** Sources: Evans, Arthur T.; Fowlds, Matthew. 1921. "Soybeans in South Dakota." *South Dakota Agric. Exp. Station, Bulletin.* No. 193. p. 317-24. March. See p. 320 "Table 2: Soybeans for seed." Saskatoon: S.D. No. 888. This variety was planted each year from 1914 (yield: 17.3 bu/acre) to 1918 (19.0 bu/acre). Its 7-year average yield: 13.7 bushels/acre. "Table 3: Soybeans for hay." Saskatoon was planted each year from 1915 to 1918. The best yield, in 1917, was 1.44 tons/acre of hay. Its 4-year average yield: 1.01 tons/acre.

Robertson, D.W.; Kezer, A.; Deming, G.W. 1932. "Soybeans under irrigation in Colorado." *Colorado Agric. Exp. Station, Bulletin* No. 392. 24 p. July. See p. 8, 10. "From tests conducted at Fort Collins, Colorado, it was found that good yields of soybeans could be obtained under irrigation. The following varieties gave the highest yields: Yellow-seeded varieties–Minsoy, Wea, Saskatoon.

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. See p. 7. "Saskatoon–Farmer selection (Canada)."

Bernard, Richard L.; Juvik, Gail A.; Hartwig, Edgar E.; Edwards, Calton J., Jr. 1988. "Origins and pedigrees of public soybean varieties in the United States and Canada." *USDA Technical Bulletin* No. 1746. 68 p. Oct. See p. 30. "Lost old domestic soybean varieties." "Saskatoon–Farmer selection, Canada." Address: USA.

215. Rouest, Leon. 1921. La culture du soja [Soybean culture]. *Bulletin des Matieres Grasses de l'Institut Colonial de Marseille* No. 5&6. p. 73-86. [1 ref. Fre]
• ***Summary:*** Contents: Introduction and about the author (autobiographical). Varieties of soya tested in France (1. Yellow Soy, Early Medium Green, Manchu. 2. Etampes Soy. 3. Black Soy. 4. Very early black soy. 5. Wilson Five {black}, Manchu, Early Medium Green, Virginia. 6. Extra early from Podolia. 7. Very early brown). Soya in the Experimental Farms of Neoculture (Varieties tested: Manchu (yellow seeded), Wilson Five (black), Haberlandt (yellow, but its progeny were green or brown or with a brownish red hilum), Tokio (green; progeny brown or yellow), Virginia (brown; progeny reddish brown, yellow with black hilum, black and yellow, yellow, or green), Hahto (green; progeny black round, brown flat, yellow round with black hilum, reddish brown), Early Medium Green (green; progeny; white or almond)). Planting soya (incl. Mammoth Yellow). Number of heat units required *(degré thermique)* for the germination of soya. Importance of the spacing between plants. Quantity of seed necessary for planting 1 hectare. Soya during its vegetative stage (incl. Buckshot, Ito San, Medium, Meyer, Medium Early Yellow, Mammoth Yellow; the soybean also grows in Tunisia if irrigated). Comparison of the vegetation of soya and of haricot at high altitudes. Rolling the planted seeds and

methods of management. Growth of the soybean plant, and its acclimatization. Enemies of the soybean.

Note: This is the earliest document seen (Oct. 2004) that mentions the soybean variety Early Medium Green. The name is written in English, with no French equivalent. It is mentioned in only 4 documents, three of them by Rouest, all in French and published in France in 1921 and 1922.

In the section titled "Importance of the spacing between plants" is a table (p. 80) showing the spacing (in meters) between plants at locations in Canada for the three years. The earliest years and spacings are as follows: Maritime Provinces, 1899, 0.70 meters. British Columbia, 1899, 0.88. Ottawa [Ontario], 1900, 0.71. Manitoba, 1900, 0.88. Northwest Territories [actually Saskatchewan] 1900 0.88.

The section titled "Rolling the planted seeds and methods of management" (p. 83) states that it is very important to roll the ground with a roller after planting the seeds in order to create contact between the soil and the seeds, so all seeds mature at the same time. The capillarity will be broken by the tongue of the seeding machine.

The section titled "Acclimatization" states (p. 84) that in the Tarn, at the Genetic Institute of Nages, abbot Vieules tested soybeans successfully at 800 meters elevation. In the Montagne-Noire (Aude), Dr. Valette successfully tested the soybean variety Manchu at 600 meters. Address: Directeur des Fermes Expérimentales de Néoculture de France.

216. Larue, Pierre. 1921. La fabrication du lait végetal au Canada [Production of vegetable milk {soymilk} in Canada]. *Vie Agricole et Rurale (La) (Paris)* 19(28):33. July. [Fre]

• ***Summary:*** "In certain countries, vegetable milk has long been used in preference to animal milk. In China, for example, the milk of cows and other animals is never consumed. The people use only soybeans for the preparation of their milk. And this is exactly what some people in Canada propose to do. For the time being, they will import their soybean seeds from China, but they hope that, in the future, soya will be cultivated in Canada. Grown in a rotation on alternate years with wheat, soya will increase wheat yields by 5-7 quintals/hectare. The normal yield of soya in 13-17 quintals/ha. Note: 1 quintal = 100 kg.

Soymilk *(Le lait de fèves de soja)* has been submitted to the most rigorous tests by chefs, bakers, pastry makers, makes of frozen desserts, etc., and they have unanimously recognized that this product (when containing an equal proportion of water) would be superior to cow's milk when considered from every point of view: vitamins, lipids, casein, albumin, carbohydrates, sugar and salts.

"The soymilk will be significantly less expensive than cow's milk."

217. Moderwell, Hiram K. 1921. Milk, flour, bread from a bean, new "manna" found in Vienna: Inventor claims it will do for starving Europe what was done for the Children of Israel in Biblical times. *Toronto Daily Star (Canada).* Sept. 29. p. 13.

• ***Summary:*** London, Sept. 29. This is basically a rewritten version of the following article: *Times* (London). 1921. "'Manna' for the hungry." Sept. 28. p. 11, col. 3.

Reports from Vienna, Austria, describe experiments [by Laszlo Berczeller and colleagues] in which flour, bread and milk are made from the soya bean. "Soya milk costs only one-sixth as much as cow's milk and soya bread is 40 per cent. cheaper than wheat bread." The soya bean, which will be extensively cultivated in eastern and southeastern Europe, is "the only real solution to the problem of reconstruction" of Europe after World War I. Address: Special cable to The Toronto Star and the Chicago Daily News.

218. Grinenco, Ivan; Capone, Giorgio. eds. 1921. Produits oléagineux et huiles végétales: Etude statistique sur leur production et leur movement commercial [Oleaginous products and vegetable oils: Statistical study on their production and trade]. Rome, Italy: Institute Internationale d'Agriculture, Service de la Statistique Générale. xxxii + 421p. See p. XX-XXI, 140-41, 144-47, 442-43, 480-81. Sept. 15. Index in front. [Fre]

• ***Summary:*** In Sept. 1921 the IIA *(Institute Internationale d'Agriculture)* published this monograph in French. Two years later, by popular demand, an updated English-language edition was published. Contents: Introduction. Northern hemisphere: Europe, America, Asia, Africa, Oceania (Hawaii, Guam). Southern hemisphere: America, Asia, Africa, Oceania. Recapitulative tables of commerce, 1910-19. Note 1. All import and export statistics are given in quintals. 1 quintal = 100 kg.

The soybean (introductory information, p. xxii-xxiii, xxxii). Northern hemisphere–Europe. Germany (imports of soybean and soy oil 1910-14, p. 4). Denmark (production of soy oil in 1917, p. 17; imports and exports of soybeans and soy oil 1910-19, p. 18-20). France (imports and exports of soybeans and soy oil 1910-19, p. 28-31). Great Britain and Ireland (treated as one country; imports, exports, and reexports of soybeans and soy oil 1910-19, p. 32-35). Norway (imports of soybeans 1910-19, p. 47). Netherlands (Pays-Bas, imports and exports of soybeans and soy oil 1910-19, p. 49-52). Romania (In 1915 production of soybeans on 3 hectares was 3,600 liters). Russia (in Europe and Asia, imports of soy oil 1909-17, p. 70-71). Sweden (imports and exports of soybeans and soy oil 1910-19, p. 74-76).

Note 2. This is the earliest document seen (Jan. 2009) that gives soybean production or area statistics for Eastern Europe.

America: Canada (imports of coconut, palm, and soy oil {combined} for the production of soap {in hectoliters}

1915-19, p. 88-89). Cuba (various attempts have been made to introduce the soybean, p. 94).

United States (area and production in 1909 {659 ha}, then from 1917-1920, p. 97-98). An overview of soybeans in the USA (p. 103, 105) states that the soybean, known in the USA since 1804, has become of great economic importance during the past few years. It is becoming popular mainly as a forage plant, but also for its seeds, for extraction of oil, and for making other products. Statistics have been published regularly since 1917. The census for 1909 showed 659 hectares cultivated in soybeans. During the years from 1917 to 1919 the cultivated area surpassed 60,000 ha. The three main states for soybean cultivation are North Carolina, Virginia, and Mississippi, which in 1919 cultivated respectively 33,185, 12,141, and 3,238 hectares; this was almost 75% of the total cultivated to soybeans in the USA. In 1910, the seeds were used for the extraction of oil in the USA, and for the first time the seeds were imported from Manchuria. In 1915, domestically grown soybean were used as a source of oil. This industry is developing rapidly, because the extraction of the oil is easily adapted to existing facilities that press oil from cottonseed and linseed. A table (p. 106) shows production of 16 vegetable oils in the USA from 1912 to 1917. Soybean oil production (in quintals) has increased from 12,537 in 1914, to 44,996 in 1916, to 190,843 in 1917. Figures are also given for peanut oil, sesame oil, etc. Other tables (p. 108-10) show imports, exports, and reexports of soybeans and soy oil from 1910 to 1919.

Asia: China (exports of soybeans and soy oil 1910-19, p. 161-62). French Indo-China (overview, esp. Cambodia and Tonkin, p. 187). Japan (area planted and production of soybeans 1877-1919, p. 190; overview, p. 191; production of soy oil 1909-18, p. 192; imports and exports of soybeans and soy oil 1910-19, p. 192-93). Korea (area planted and production of soybeans 1909-1918, p. 194; imports and exports of soybeans and soy oil 1909-11, p. 195). Formosa [Taiwan] (area planted and production of soybeans 1901-06, p. 196; imports and exports of soybeans and soy oil 1909-17, p. 197. In 1901 10,888 ha produced 8,056,400 liters of soybeans. In 1904 21,960 ha produced 24,401,700 liters of soybeans). Note 3. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Formosa (Taiwan; ceded to Japan in 1895 after Japan won the Sino-Japanese War).

Kwantung [Kwantung Leased Territory in Manchuria] (area planted and production of soybeans 1911-17, p. 198. In 1911 14,627 ha of soybeans produced 102,112 quintals. In 1916 29,902 ha produced 153,995 quintals of soybeans).

Africa: Algeria (in recent years, trials have been made to introduce soybean culture to Algeria, p. 238). Egypt (imports of soy oil 1919, p. 244-47).

Southern hemisphere–America: (Note 4. Soy is not mentioned at Argentina, Brazil, or any other South American country). Asia: Netherlands Indies. (A) In Java and Madura, the area planted to soybeans was 162,800 ha in 1916, 175,696 ha in 1917, and 157,844 ha in 1918. Gives imports of soy oil (1,085 quintals in 1914) and exports of soybeans (46 quintals in 1913) (p. 297-98). (B) In outlying territories, gives imports of soybeans from 1913 to 1919 (p. 299). Africa: Southern Rhodesia (attempts have been made to introduce soybeans and several other oil plants from temperate climates, p. 317). Oceania: Soy is not mentioned at Australia, New Zealand, British New Guinea, former German New Guinea [later Papua New Guinea], or any other country in southern Oceania. (p. 297). Recapitulative tables–Imports and exports from 1910-1919. Soybeans, p. 368-69. Peanuts, p. 370-75. Sesame seeds, p. 376-79. Palm fruits *(Amandes de palme,* from which palm oil is obtained), p. 392-93. Peanut oil, p. 414-17. Corn oil, p. 416-17. Sesame oil, p. 418-19. Soy oil, p. 420-21. Other oils covered in detail by this book are: Cottonseed, hempseed, linseed, rapeseed *(colza* and *navette),* poppy *(pavot* or *oeilette),* castor, olive, coconut, palm, and other–non-specified. Address: 1. Doctor of Agronomics; 2. Doctor of Economics. Both: IIA, Rome, Italy.

219. Kellogg, John Harvey. 1921. The soy bean. Composition of the soy bean (Document part). In: J.H. Kellogg. 1921. The New Dietetics: What to Eat and How... Battle Creek, Michigan: The Modern Medicine Publishing Co. 950 p. See p. 299-302. 24 cm.

• ***Summary:*** In the chapter on "Legumes," the section titled "The Soy Bean" (p. 315-21) has the following contents: Introduction and history (incl. a long extract from a publication by W.J. Morse, and discussion of soy beans and diabetic diets). Composition of the soy bean (according to Bailey and Street 1915). Soy bean milk. To fu (tofu). Soy sauce. Soy bean sprouts. Composition of soy bean sprouts compared with mung bean sprouts.

The section begins: "The soy bean has been used in China since 2838 B.C. It was introduced into France in 1740, England 1790, and this country not until a century later. This bean requires a long season and does best in the Southern states on this account. It is quite hardy, however, and some varieties have been found which mature as far north as Canada.

"The soy is the best of all beans. It differs decidedly from other beans in its composition. It contains 40% protein, practically no starch, and nearly 20 per cent fat, giving it characteristics approaching those of the peanut more closely than those of ordinary beans.

"More than one thousand varieties have now been tested by the U.S. Department of Agriculture. Twenty varieties are at the present time being handled by growers and seedsmen in this country. The green and yellow varieties are best adapted for food. The black and brown are chiefly for forage.

"In China, the soy bean is very little used in the manner in which beans are used in this country. Instead, according to W.J. Morse [1918], of the U.S. Department of Agriculture, 'the beans are soaked in water and roasted, the product being eaten after the manner of roasted peanuts.'" Dr. Kellogg then quotes two passages from Morse about the use of roasted soybeans, and of soy beans which, when three-fourths or more grown, can be used as "a most palatable and nutritious green vegetable."

"This bean not only contains a large amount of protein, more than is found in the same weight of beef, but its protein is of a particularly fine quality. Heretofore, the casein of milk has enjoyed a unique reputation as a protein of finest quality, but now 'the protein of the soy bean appears to be as valuable as the casein of milk.' In view of the shortage of milk, which is likely to increase, it is gratifying to know that a protein has been discovered equally valuable as casein, and one which may be produced in unlimited quantities.

"For promotion of growth, it is not only necessary for the food to contain 'complete' protein in proper amount, but it must also contain a sufficiency of the two vitamins, designated as fat-soluble A and water-soluble B. Osborne and Mendel demonstrated that the soy bean contains an adequate supply of both fat-soluble and of 'water-soluble vitamins,' in which respect it is superior to all seeds heretofore examined, with the possible exception of flaxseed and millet.

"The soy bean is destined to become one of the great food staples, not only of this country but of the world. It is capable not only of supplying the essentials for growth and maintenance, but may also act as a complement to other imperfect foods, such as corn for example, in combination with which it has shown most excellent experimental results.

Composition of the soybean: A table shows the composition of the soy bean, compiled from various sources. "The above analysis clearly shows the soy bean to be a most remarkable food product. Its composition is in some respects more like that of a nut than that of other legumes. In this respect it very much resembles the peanut. Its protein content, nearly 40 per cent, is higher than that of any other foodstuff. Even lean meat affords but half as much. Its high percentage of fat gives it a very high food value and makes it a rich source of oil for various industrial purposes as well as for food.

"The soy fills the place of meat as well as milk in the dietary of many millions of sturdy Orientals. Since the composition of the soy has been understood, it has been much used as a food for diabetics. It is evident from the above [table] that it contains little which can be objectionable in diabetes. The small amount of dextrin and sugar may be easily removed, when necessary, by parboiling.

"Experiments by Holmes [1920], of the office of Home Economics, U.S. Department of Agriculture, have shown that the well cooked soy bean (cooked for two hours under steam pressure) is very easily digestible, and is an exceptionally wholesome article of food, superior to most other legumes.

"The soy bean may not become really popular until the pressure cooker comes into general use, which may be some time. In the meantime, while the patent pressure cooker is coming, any resourceful housewife may improvise a perfectly good and satisfactory pressure cooker from inexpensive materials close at hand. Get a stone jug or jar that can be hermetically sealed. The little stone jars in which apple butter is sometimes sold are well adapted to the purpose. After soaking the beans over night put [them] in the jug with a little salt and enough water to cover, seal up tight and secure the cover well, remembering that the pressure will be from within. Set the jug in a saturated solution of common salt, place over a smart fire and boil for one to two hours. The salt solution boils at a temperature of 220ºF. and so the beans are exposed to a higher temperature than in ordinary boiling... Cooking at the higher temperature not only softens the cellulose and so renders the foodstuffs tender, but greatly improves the flavor.

Note: This is the earliest document seen (Sept. 1996) that uses the term "pressure cooker" in connection with soy beans. Address: Battle Creek, Michigan.

220. Rouest, Leon. 1921. Le soja et son lait végétal: Applications agricoles et industrielles [The soybean and its vegetable milk. Agricultural and industrial applications]. Carcassone (Aude), France: Lucie-Grazaille. 157 p. Illust. No index. 25 cm. [42 ref. Fre]

• ***Summary:*** Contents: Introduction–What is soya? 1. History of the dissemination of soya: In 1712 the naturalist Kaempfer introduced soya, introduction of soya to France and Europe, soya is cultivated in Austria in 1875 by Prof. Haberlandt, soya is the object of many trials in France from 1876 to 1881, the study and acclimatization of soya becomes widespread, the causes of setbacks in the cultivation of soya.

2. Cultivation of soya: Botanical characteristics of soya, the varieties of soya, Chinese varieties and soya in China, Japanese varieties and soya in Japan, American varieties and soya in America (varieties: Mammoth, Hollybrook, Ito San, Guelph, Haberlandt, Medium Yellow, Wilson, Peking, Tokio, Mandchu [Manchu], Black Eyebrow, Barchet), soya in Europe–France and Italy, seven varieties of soya tested in France, soya in the experimental farms for new crops *(les Fermes Expérimentales de Néoculture;* Many varieties from the USA were tested, including Manchu, Wilson Five, Haberlandt, Tokio, Virginia, Hato [Hahto], Early Medium Green), the cultural and geographical appearance of soya, its production worldwide, planting soybeans, heat units

*(degré thermique)* and the germination of soya, the importance of spacing between plants, number of seeds per hectare, soya during its vegetative stage, the vegetation of soya compared with that of the haricot at high altitudes, rolling the seeds and types of crop maintenance, growth of the plant, acclimatization, the enemies of soya.

3. Composition of the soybean plant. 4. Soya forage: Green soya forage, soya hay, soya as a plant for soil improvement. 5. Harvesting soybean seeds: Maturity of the seed, harvesting soya, the food value and composition of soya seeds. 6. Soya as an oil plant: Richness in oil, defatted soybean cake, imports and exports of soya cake from 1915 to 1919 (Imports to: Sweden, Canada, Korea, Japan, Formosa. Exports from: England, China, Korea), production of soya cake from 1915 to 1919 (Denmark, Great Britain and Ireland, Netherlands, Sweden, USA, Japan, Formosa, Korea, Java and Madura).

7. Soymilk: Its manufacture (in 1910-1913 Li Yu-ying installed a factory named "La Caséo-Sojaïne" at Valées {Asnière-Seine} near Paris. Rouest visited this factory and saw them make soymilk, which was filtered using a filter-press resembling those used in sugar refineries), its properties and composition, composition compared to other types of milk, powdered soymilk, soymilk in the nursing and feeding of animals, soymilk related to tuberculosis in animals and in humans, soymilk would allow the milk and butter from animals to be reserved exclusively for human foods and could be used for raising many piglets, manufacture of non-dairy milk in Canada (a factory is now under construction). 8. Soya in Industry: Soymilk and soy casein, Sojalithe (like Galalithe).

9. Soya in human nutrition: Soy flour and its applications (incl. Li Yu-ying's usine de la Caséo-Sojaïne, and bread made of soya and wheat), soya compared to dry legumes (such as lentils, haricots, peas, beans), soya used as a legume (whole soybeans), the food value of soy sprouts, preserves and confections made from soya, soya chocolate and coffee, the amount of nutrients produced by soya and other crops from a unit of land, a meal of soya served in France (prepared and served some years ago by Li Yu-ying's soyfoods plant La Caséo-Sojaïne for the major print media, the medical press, the National Society for Acclimatization, etc.; it consisted of 2 soups {one with 'soya meat' and one with soymilk}, 2 entrees {an omelet with smoked soya ham, and fritters stuffed with soy meat}, soy [actually mung bean, *lüdou]* sprouts in a salad and sauteed, 3 desserts {soya cake, biscuits, and confection}, and soy coffee; a recipe for each is given; soya meat is smoked tofu).

10. Use of soya in East Asia: Tofu *(fromage végétal),* soy-based condiments (such as natto {Ping ming Natto and Tokio-Natto}, miso, Chinese miso or tao-tjiung [doujiang], and shoyu {Soyou or Schozou}), making soy sauce in Kwantung, China (from Groff).

11. The opinions of several authors concerning soya (from the French medical and hygienic press): Introduction–E. Maurel. Soya and soy bread in diabetic diets–Dr. Dujardin-Beaumetz, Dr. Bloch, Dr. J. Le Goff, L. Beille, M. Gautier. Soya used as a bean–M. Gautier. Soy sauce used in place of meat extracts. The state of cheese. The popularization of soya in Europe–A. Paillieux.

Conclusions: The influence of cultural technology on variation. Appendix: Advice to experimenters on the acclimatization of soya in France. Other methods of obtaining early-maturing soybeans.

The author concludes (p. 140): We must make every effort to acclimatize soya in France. We must develop the will and learn from past mistakes. Most soybean varieties now available in France are too late. We must get varieties from Manchuria, whose climate is similar to that of southeastern France, and from the northeastern USA. It is urgent that, in the near future, we start a Soybean Experiment Station to take responsibility for this work. The setbacks since 1830 can be overcome by present science and genetics. The first step is to introduce better varieties.

On the last page is a full-page advertisement for various seeds sold by Mr. Rouest, including 30 varieties of soybeans *(Soja hispida);* the names of the individual varieties are not given.

Illustrations show: (1) A soy bean plant with many pods (title page). (2) Flowers and pods of the soy bean plant (p. 29). (3) Soy pods and beans (p. 30). (4) A soy bean plant drawn by a Chinese artist (p. 32, from Li Yu-ying). (5) Pods of the Hato [Hahto] variety of soy bean (p. 51). (6) Germinating soy bean seeds (p. 54, from Li Yu-ying). (7) Soy bean roots with nodules (from a photo by Dr. Le Goff; p. 73). (8) Soy bean pods, opened to show 3 beans in each (p. 82).

Tables show: (1) Production of soybeans by color in China in 1916 and 1917 (p. 35, in quintals, from the International Yearbook of Rome, Vol. 1, 1919): In 1917: Yellow 4,069,822. Other 953,012. Green 181,190. White 71,234. Black 40,066. Total: 5,315,324.

(2) Percentage composition of various oilseed cakes (p. 95, from Kellner). (3) Imports and exports of soybean cake, by country, from 1915 to 1919 (in quintals, p. 96). Imports are given for Sweden, Canada, Korea (from 1916), Japan, and Formosa [Taiwan]. Exports are given for England (6 quintals in 1915), China (including Manchuria, by far the biggest exporter, from 1916), and Korea (from 1916).

(4) Production of soybean cakes, by country, from 1915 to 1919 (p. 97, in quintals, based on statistics from the International Bureau of Agriculture, Rome, 1919). In descending order of production in 1915 (in quintals): Japan 5,439,337. Korea 3,209,238. Great Britain and Ireland: 1,513,059. Denmark 921,782. Java and Madura 503,025. Note that China is not listed. Netherlands 144,523. Formosa [Taiwan] 62,131. Sweden 1,733. USA 0, but 501,822 in

1916. Address: Directeur des Fermes Expérimentales de Néoculture, Carcassonne (Aude), France.

• ***Summary:*** In 1915, the Central Experimental Farm in Ottawa began the free distribution of nitro-cultures throughout the Dominion of Canada. All the legumes that grow in Canada, with the exception of the soy bean, live symbiotically with the soil bacterium named *Bacillus radicicola.* The soy bean, *Glycine hispida,* is inoculated by a different organism, probably a *Pseudomonas* (Lörnis and Hansen, Jan. 1921), still under observation. Address: B.A., Junior Botanist, Central Experimental Farm [Ottawa, Ontario, Canada].

222. Arnolds. 1922. The markets that set the pace (Ad). *Toronto Daily Star (Canada).* Aug. 24. p. 16.
• ***Summary:*** "Holbrook's Worcestershire Sauce. Imported bottle 25¢."

223. Campbell, J.T.; Squirrell, W.J. 1922. Soybeans in Ontario (Letter to the editor). *Breeder's Gazette* 82(20):641. Nov. 16.
• ***Summary:*** In this first of two letters to the editor, Campbell (of Illinois) writes: "It is only within the past ten years that the soybean has become a crop of importance in the United States, and about three years ago [i.e., about 1919] its cultivation began in Canada."' Jeffrey Bros., and the Broadfield Stock Farm, near Whitby, Ontario, Canada cultivated nearly 100 acres of soybeans this year. People are growing soybeans in a commercial way in Canada. Climatically soybeans have about the same adaptations as corn. They are more drought-resistant and less sensitive to an excess of moisture. They will thrive on soils too acid for the successful growth of red clover, and provided the seed has been inoculated, on poorer soil than corn requires.

Many appetizing dishes served in Chinese restaurants are made from soybeans. "Cooked as we cook navy beans, they are a failure. They must be prepared and served differently. Ground soybeans served as a loaf can scarcely be distinguished from meat loaf. As flour they make tasty and nutritious muffins, especially valuable for diabetics."

In this second letter, Squirrell (of Ontario Agricultural College) writes: "... soybeans have been grown for fodder and seed production at the Provincial Experiment Station at Guelph, Ontario, [Canada], since 1894, and been distributed through the Ontario Agricultural and Experimental Union to farmers in Ontario each year for the past twenty-three years... The most promising varieties which have been tested at Guelph are the O.A.C. No. 211, the Ito San, the Minnesota No. 167, the Early Brown and Early Yellow.

"The chief weakness in soybean growing in Ontario is the lack of varieties maturing early enough to produce seed, and at the same time, a sufficient quantity to make them profitable to grow. Recognizing this fact, we have carried on considerable plant breeding work with this crop. The O.A.C. No. 211, which was originated at Guelph, and which has been grown by a number of farmers, seems to be a variety which will reach maturity in many sections in Ontario, and at the same time is a large yielder."

Note 1. This is the earliest document seen (Feb. 2010) that gives soybean production or area statistics for Canada; nearly 100 acres of soybeans were cultivated this year on two farms. "People are growing soybeans in a commercial way in Canada."

Note 2. This is the earliest document seen (Jan. 2010) that mentions the soybean variety O.A.C. 211; it was developed at the Ontario Agricultural College in Guelph, Ontario, Canada. Address: 1. Cook County, Illinois; 2. Ontario Agricultural College [Guelph, Ontario, Canada].

224. O.A.C. No. 211: New Canadian domestic soybean variety. 1922. Seed color: Yellow.
• ***Summary:*** Sources: Campbell, J.T.; Squirrell, W.J. 1922. "Soybeans in Ontario." *Breeder's Gazette* 82(20):641. Nov. 16. Squirrell (of Ontario Agricultural College) writes: "The most promising varieties which have been tested at Guelph are the O.A.C. No. 211, the Ito San, the Minnesota No. 167, the Early Brown and Early Yellow.

"The chief weakness in soybean growing in Ontario is the lack of varieties maturing early enough to produce seed, and at the same time, a sufficient quantity to make them profitable to grow. Recognizing this fact, we have carried on considerable plant breeding work with this crop. The O.A.C. No. 211, which was originated at Guelph, and which has been grown by a number of farmers, seems to be a variety which will reach maturity in many sections in Ontario, and at the same time is a large yielder."

Zavitz, Charles A. 1924. "Soy beans." *Ontario Department of Agriculture, Circular* No. 43. 4 p. Jan. A table (p. 2) "gives the average results in yields of green crop and of threshed seed per acre for each of eleven varieties of soy beans for the years 1921 to 1923, inclusive." The varieties are listed in descending order of seed yield: O.A.C. No. 211 (23.84 bu/acre), Tsurunoko (23.59), Minnesota No. 167 (23.39), O.A.C. No. 111 (23.26),... "The O.A.C. No. 211, which stands highest in average yield of seed per acre [23.84 bu/acre] and in weight per measured bushel and second highest in yield of green crop per acre [7.92 tons] has been grown in the plots for five years, but in only the last three of these has it been included in the regular variety tests."

Zavitz, C.A. 1927. "Forty years' experiments with grain crops." *Ontario Department of Agriculture, Bulletin* No. 332. p. 36-87. Oct. See p. 84-86. The variety O.A.C. No.

211 has the highest average seed yield. "In 1918, thirty-four special plants were selected from about ten thousand plants of the Habaro No. 20405 variety. Of the thirty-four selected plants the progeny of twenty-two were carefully tested under uniform conditions in 1919 and in 1920. In the two years' results the progeny of one of the plants gave higher results than that of any of the other twenty-one plants in weight per measured bushel and in yield of both straw and of beans per acre. This outstanding performer was transferred to the regular test plots in the spring of 1921 and has since been grown with all other varieties under the name of O.A.C. No. 211. This variety has now been accepted as eligible for registration by the Canadian Seed Growers' Association. It is the only variety of soy beans which has been so honoured."

MacConkey, C.A. 1935. "Soybeans." Ottawa, Canada: Div. of Research Information, National Research Council, Ottawa. 93 p. March. See p. 59 of this report. "Varieties suitable for Canada: Besides O.A.C. 211 which is the one outstanding variety that has shown itself suitable for cultivation in Canada albeit only in southern Ontario, a number of other varieties have been tried and experimented with such Mandarin, Manchu, Wisconsin Black, Quebec 92, Quebec 537, Early Yellow, Early Brown, and Manitoba Brown, but none of these have been very satisfactory."

McRostie, G.P.; Laughland, J. 1940. "Soybeans in Ontario." *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb. See p. 11. Description of varieties: "O.A.C. No. 211. An O.A.C. selection from the Habaro variety. It is a popular variety in Ontario. Seed buff yellow, medium size; hilum yellow; plant erect, medium short, bushy; flower purple. A good yielder of both fodder and seed, suitable for grain production in the longer season sections and for fodder in most sections of Ontario."

Dimmock, F. 1941. "Canada includes many excellent soybean acres." *Soybean Digest.* May. p. 5. "An active soybean research program has already resulted in the development of the following varieties:... and O.A.C. 211 and Goldsoy by the Ontario Agricultural College, Guelph."

Tanner, J.W. 1973. "Where we are and how we got there: An historical review of soybean production in Ontario." "In 1924, Zavitz released OAC 211, the first variety of soybeans registered by the Canadian Seed Growers' Association. The variety continued as one of the recommended varieties until the mid 40's."

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 14-15. OAC 211 is in the USDA Germplasm Collection. Maturity group: I. Year named or released: by 1928. Developer or sponsor: Ontario Agricultural College, Guelph, Ontario, Canada. Literature: 13. Source and other information: Selected from 'Haboro.' Prior designation: None.

McEwen, Freeman; Morrison, Douglas; Rennie, Clare; Tanner, Jack. 1999. *125 Years of Achievements: OAC–A Proud Tradition, an Exciting Future, 1874-1999.* Guelph, Ontario, Canada: University of Guelph. 132 p. See p. 56, titled "OAC 211 Soybean." On August 26, 1925, OAC 211 became the first soybean variety registered in Canada. Address: Ontario, Canada.

225. *Quebec Daily Telegraph (Canada).*1923. Chop suey. Jan. 29. p. 4.
• ***Summary:*** This recipe, by Bertha E. Shapleigh, of Columbia University, calls for "2 tablespoons Soyu Sauce."

In the instructions is a section which reads: "Soy bean sauce: The Shoyu or Soyu Sauce is the Worcestershire of China. It is made from the soy bean and gives the characteristic flavor found in Chinese food. If it cannot be purchased, use Worcestershire, one tablespoon, and a little sauce. The Soyu sauce is salty and where used, no other salt is required."

226. Burkholder, Walter H.; Hawley, I.M. 1923. Diseases, and insect and animal pests, of the field bean in New York. *Cornell Extension Bulletin* No. 58. 38 p. Feb.
• ***Summary:*** Discusses *Plathypena scabra* (green clover worm), life history and habits, chemical control using acid lead arsenate. Pages 35-36 note that in mid-1919, for some reason that is not well understood, there was a severe outbreak of green clover worms, which were abundant "in the bean and soybean fields from Georgia to Canada. The bean foliage was often entirely destroyed by these pests, as they fed concealed from view, on the undersides of the leaves... In 1920, they did not injure beans in New York.

"The green clover worm, when it is a pest of beans, may be readily controlled by spraying the plants with 1 pound of arsenate of lead (powdered) to 50 gallons of water, of by dusting the foliage with a mixture of 1 part arsenate of lead (powdered) and 8 parts lime." Address: Ithaca, New York.

227. Piper, Charles V.; Morse, William J. 1923. The soybean. New York, NY: McGraw-Hill Book Company, Inc. xv + 329 p. Feb. Illust. Index. 24 cm. Reprinted unrevised in 1943 by Peter Smith Publishers, New York. [563 ref]
• ***Summary:*** This is the first comprehensive book about the soybean written in English, and the most important book on soybeans and soyfoods written in its time. Contains an excellent review of the world literature on soybeans and soyfoods with a bibliography on soy that is larger than any published prior to that time (563 references), a good

description of the present status of the soybean worldwide based on the authors' extensive contacts, and a great deal of original information. It quickly became a key source for people and organizations working with soybeans and soyfoods in all countries, and a major factor in the expansion of the soybean in the western world. Because of its scope and influence, Soyfoods Center considers the year of its publication to mark the end of the "Early Years" of the soybean worldwide. It remained in print until about 1986.

Contents: Preface. 1. Introduction: Name of the plant, origin, literature, use by the Chinese and Japanese, present importance, future prospects in the U.S., recognition of the possibilities. 2. The commercial status of the soybean: Manchuria and China, Japan, Europe, U.S., other countries, summary of imports and exports of soybeans and soybean oil. 3. Botanical history of the soybean: History prior to Linnaeus' "Species Plantarum" 1753, Linnaeus' misunderstandings of the soybean, Prain's elucidation, other and the correct botanical name.

4. Agricultural history of the soybean: Vernacular names of the soybean, China, Korea, and Japan, India and neighboring regions, Cochin China, Malayan region, early introduction into the United States, later U.S. introductions, the early introduced varieties (grown in the USA by 1898– Ito San, Mammoth, Buckshot, Guelph or Medium Green, Butterball, Kingston, Samarow, Eda, Ogemaw or Ogema), soybean in Europe, varieties grown in Europe and identification, Hawaiian Islands, Australia, Africa, Argentina (p. 50), Canada ("Soybeans are grown in very small quantities in Canada and then usually as a forage crop"), Philippines, Egypt, Cuba (p. 52), British Guiana, Mauritius (p. 53), present culture distribution. 5. Culture of the soybean: Climatic adaptations, soil preferences, water requirement, preparation of seed bed, time of planting, methods and rate of seeding, seeding for pasturage, depth of seeding, inoculation, fertilizer reactions, cultivation, soybeans in mixtures (with cowpeas, sorghums, Sudan grass, Johnson grass, millet, corn, or sunflowers and corn).

6. Harvesting and storage of soybeans: harvesting soybeans for hay, silage, for the seed, seed yields, proportion of straw to seed, storing seed, separation of cracked from whole soybean seed, viability of soybean seed, pedigreed, inspected, registered, and certified seed. 7. Composition of the soybean: Proportions of stems, leaves and pods, composition of plant and seed, nutritive and mineral constituents, forms of nitrogen in soybean nodules, factors affecting oil content of seed. 8. Utilization of the soybean: Diversity of uses (a chart, p. 129, shows 59 products that can be made from soybean seeds, and 6 more that can be made from soybean plants), soybeans for green manure, pasturage, soiling, ensilage, hay, straw.

9. Varieties: Japanese, Manchurian, botanical classifications, vital characteristics, descriptions of important varieties, key for identification, breeding and improvement, genetic behavior, oil content.

10. Structure of soybean seeds. 11. Soybean oil: Methods of extraction [Manchurian, and solvent], American oil mills, methods of shipping and marketing, prices, utilization in soap manufacture, food, paint manufacture, miscellaneous. 12. Soybean cake or meal: Feeding value, composition, use for feeding for dairy cows, cattle, swine, sheep, poultry, digestibility, injurious effects, fertilizer.

13. Soybean products for human food: Food value of the soybean, digestibility of the soybean and its products, mature or dry soybeans, immature or green soybeans (a "nutritious green vegetable"), soybean flour, digestibility of soybean flour, soybean bran (p. 225-26), soybean sprouts, soybean coffee, soybean or vegetable milk [soymilk] (preparation, composition, residue from the manufacture of vegetable milk [okara], utilization of soybean milk, condensed vegetable milk, vegetable milk powder, fermented vegetable milk), vegetable casein, tofu or soybean curd (names and brief history, method of manufacture, coagulating agents, manufacturing yields, digestibility, utilization of bean curd and manufactured products, bean curd brains or *tofu nao,* dry bean curd or *tofu khan,* thousand folds *{chien chang tofu},* fried bean curd *{tza tofu},* Fragrant dry bean curd *{hsiang khan},* frozen tofu *{kori tofu},* Chinese preparation, various dishes), natto, hamananatto [hamanatto], yuba, miso, shoyu [soy sauce], confections. 14. Table dishes of soybeans and soybean products: mature or dry beans, flour, tofu, sprouts (86 recipes). 15. Enemies of the soybean: bacterial, mosaic, fungous [fungus], and nematode diseases, insects, rodents. This last chapter is a comprehensive review of the literature on soybean diseases and insects published before 1922.

The Preface begins: "The soybean, also known as soya or soja bean, has assumed great importance in recent years and offers far-reaching possibilities of the future, particularly in the United States. It is, therefore, desirable to bring together in a single volume the accumulated information concerning this crop...

"The aim has been to present the information so as to make it useful from both agricultural and commercial standpoints, not omitting, however, much that is mainly of historical or botanical interest..."

The introduction begins: "There is a wide and growing belief that the soybean is destined to become one of the leading farm crops in the United States."

Note 1. C.V. Piper lived 1867-1926. Note 2. This is the earliest English-language document seen (July 2003) that uses the term "soybean bran" to refer to soy bran.

Note 3. This is the earliest document seen in which Piper or Morse describe natto, Hamananatto [Hamanatto], yuba, or miso.

Note 4. This book was published by March 1923 (See *Ohio Farmer,* 10 March 1923, p. 313). Address: 1.

Agrostologist; 2. Agronomist. Both: United States Dep. of Agriculture, Washington, DC.

228. Piper, Charles V.; Morse, William J. 1923. Soybeans in Canada (Document part). In: Piper and Morse. 1923. The Soybean. New York: McGraw-Hill. xv + 329 p. See p. 50.
• ***Summary:*** "Canada: Soybeans are grown in very small quantities in Canada and then usually as a forage crop. Experiments have been carried on by the Ontario Agricultural College for several years. About 20 varieties have been tried, but most require too long a season to mature. The very early maturing varieties and selections from these have been quite thoroughly tested in cooperative experiments as reported by Zavitz (1916). The Early Yellow (Ito San) variety has given an average of 15 bu to the acre for the past 15 years. The average yields of twelve varieties grown in competition for the past 5 years at the Ontario Agricultural College are: O.A.C. No. 111, 15.8 bu; Buckshot, 15.8 bu; Habaro, 15.7 bu; Chernie, 15.5 bu; Brown, 15.3 bu; Quebec No. 92, 14.8 bu; Early Yellow (Ito San), 14.2 bu; Quebec No. 537, 13.6 bu; O.A.C. No. 81, 13.4 bu; Ito San, 13.3 bu; and Medium Green (Guelph) 6.2 bu."

229. Loblaw Groceterias Co., Limited. 1923. Proof: That our modern system pleases the careful buyer is the large crowds that throng our 17 busy groceterias each week (Ad). *Toronto Daily Star (Canada).* Oct. 11. p. 6.
• ***Summary:*** "Harvey's Worcestershire Sauce bottle 11¢."

"We sell for less." The address of each of the 17 groceterias is given.

230. Ajax, -. 1923. People I have met: Dr. Charles A. Zavitz. *Canadian Countryman (The)* 12:6, 24. Oct. 13.
• ***Summary:*** An excellent biography of Dr. C.A. Zavitz. Dr. Charles A. Zavitz may be considered to be the "Father of the Ontario Agricultural College," for "he has the longest record of continuous service of any member of the present college staff. So long and so valuable have his services been to the College and to the country that you can hardly separate them... Mention the College and you think of Zavitz."

After graduating from OAC in 1888 he spent some time at the Ohio Summer School of Agriculture. In 1893 he became director of the Experimental Department of the OAC.

"Nearly twenty years ago one of Canada's leading dailies had this to say of Dr. Chas. A. Zavitz: 'One of Ontario's greatest benefactors, who, by the successful carrying out of a single experiment, has raised the product of Ontario farms over $1,000,000 in value.'

"What would be said of him to-day if the value of his work in experiment and investigation could be epitomized in one sentence as above?" He is not the kind of man who is content to rest on his laurels. "He has kept at it during the intervening years, increasing the value of his services and piling up the debt which we as a people and as a country owe him."

No one "in service for agriculture in this country has more to his credit in successful results achieved and in direct value in dollars and cents to the man on the land, than Dr. C.A. Zavitz."

"A leading authority on this subject stated some years ago that Dr. Zavitz has done more to pave the way for the practical nature study than any other man in Ontario. The real basis of nature study in schools is experiment or demonstration. The school garden is a miniature experimental plot...

A portrait photo shows Dr. Zavitz.

231. *Estestvoznanie i Geografia (Natural Sciences and Geography).*1923. [Soya milk]. 8(1-2):62-63. Sept/Oct. [Bul]*
• ***Summary:*** This editor's note discusses a soya milk production plant in Hamilton, Canada. Address: Bulgaria.

232. Kikkoman. 1923-1954. [Monthly and annual soy sauce exports from Japan (1923-54)]. Noda: Kikkoman. Statistical tables. 22 p. [Jap; eng+]
• ***Summary:*** In 1923, some 11,720 *koku* of shoyu [soy sauce], worth 799,022 yen, were exported from Japan. (Note: 1 koku = 180 liters or 47.6 gallons). Of this, 5,307 koku went to the USA and Hawaii (3,330 koku to the USA), 709 koku to Canada, 5,108 koku to Asia (incl. 2,311 koku to Canton and 1,447 koku to China), and 201 koku to Europe. In 1924 total exports increased to 13,149 koku.

A table shows Kikkoman's exports of shoyu by country from 1938 to 1944. In 1938 Kikkoman exported 80 tonnes (metric tons) of shoyu to Peru and Argentina. In 1939, the peak year, 10,658 tonnes were exported; of this 4,444 tonnes (41.7% of the total) went to the USA and Hawaii, 2,680 tonnes went to Manchuria, and 2,098 tonnes to China.

Another table shows total Japanese exports of shoyu by country from 1938 to 1944. In 1939, the peak year, 34,838 tonnes (metric tons) were exported; of this 4,351 tonnes (12% of the total) went to the USA and Hawaii, 293 tonnes went to Canada, 50 tonnes to South America (Peru and Argentina), 63 tonnes to Europe (Holland), and 30,081 tonnes to Asia (incl. 9,550 tonnes to Karafuto, 5,803 tonnes to Taiwan, 4,620 tonnes to Manchuria, 4,295 tonnes to China, and 1,336 tonnes to the Philippines).

Another table shows exports of shoyu from Japan after World War II (1949-1954) to various countries and regions by Kikkoman and by all Japanese shoyu makers. Roughly 85% of Japan's exports were by Kikkoman. The total increased from 6,066 koku in 1949 to 9,316 koku in 1954; of the 1954 figure, 7,009 koku went to the USA and 1,476 koku to Asia. Another table shows exports of shoyu from

Japan to major cities from 1949 to 1954 by Kikkoman and by all of Japan. In 1954, worldwide, the cities receiving the most shoyu were: San Francisco 2,033 koku, Honolulu 1,926 koku, Los Angeles 1,504 koku, Okinawa 1,376 koku, Guam 647 koku, Vancouver (BC, Canada) 414 koku, New York 381 koku, Seattle (Washington state) 290 koku. Address: Noda, Japan.

233. Campbell, Persia Crawford. 1923. Chinese coolie emigration to countries within the British Empire. London: P.S. King & Son, Ltd. xxiii + 240 p. Preface by the Hon. W. Pember Reeves. 22 cm.

• ***Summary:*** Discusses the background of the terrible coolie trade and the use of indentured coolie servants and the credit-ticket system. It was largely a veiled slave trade, and the traffic was greatest from 1845 to 1877. Most of the migration was from Kwangtung province in southern China, an area gripped by famine, feud, and economic hardship. The coolie trade was active in different countries at different times: British Malaysia (1877-1916), the USA (1850-1882), British Columbia, Canada (1880s), Australia (1855-1888), Cuba (1870s), British West Indies (1852-1860s), Transvaal, South Africa (1904-1909).

Note: Though soybeans are not discussed in this book, some of these Chinese may have taken soybeans with them to foreign countries.

The author was born in 1898. This is No. 72 in a series of monographs titled "Studies in Economics and Political Science" by writers connected with the London School of Economics and Political Science. Address: British Fellow Bryn Mawr College, Bryn Mawr, Pennsylvania.

234. Capone, Giorgio; Grinenco, Ivan; Costa, Mario. eds. 1923. Oleaginous products and vegetable oils: Production and trade. Rome, Italy: International Institute of Agriculture, Bureau of Statistics. 545 p. See p. XX-XXI, 140-41, 144-47, 442-43, 480-81. No index. 24 cm. [Eng]

• ***Summary:*** In Sept. 1921 the IIA published a monograph on this subject in French. By popular demand, this English edition was published 2 years later. Contents: Introduction (p. VII-XXXII): General scope, general survey of the 9 principal crops (including soya beans) plus others, final points of consideration. Part I (p. 1-402) is an analysis by region, and within each region by country, countries of vegetable oil production and trade. Regions are Europe, North and Central America, South America, Asia, Africa, and Oceania.

Major countries: Denmark (p. 20-23; oil production 1916-1921, oil imports 1910-1922). France (p. 26-34). Germany (p. 35-40). Great Britain and Ireland (p. 41-43). Netherlands (p. 65-68). Norway (p. 69-70). Russia–European and Asiatic (p. 84-93). Sweden (p. 100-03). Canada (p. 111-15). United States (p. 131-47). Argentina (p. 179-85; no soy). Brazil (p. 187-90; no soy). Ceylon (p. 218-21; no soy). China (p. 222-26). Dutch East Indies (Java & Madura, Other islands; p. 229-33). Formosa (p. 238-39; gives soybean production and acreage from 1900 to 1921). Japan (p. 259-64; gives Japanese soybean production and acreage from 1877 to 1921, and production of soya oil from 1909 to 1920. Japan's leading oil produced domestically from 1895 was rapeseed oil). Korea (Chosen, p. 265-67). Kwantung Leased Territory (p. 268). Hawaii (p. 388; Hawaii produced 17 long tons of soybeans on 20 acres in 1909, and 10 tons on 15 acres in 1919).

Part II (p. 403-506) is recapitulatory tables for both soya beans and soya bean oil: Area and production by crop (1909-1922), Trade by crop (1909-1921). Cottonseed (p. 410-11). Linseed (p. 414-15). Soya beans (p. 442-43, 480-81).

Pages XX-XXI state: "In the absence of data from China, the chief grower of soya beans, it is impossible to make even the roughest estimate of the world's yield of this product. Among the few countries of any moment as producers of soya beans, we may mention: Japan, where this crop increased rapidly between 1877 and 1887 and then became nearly stationary at about 500,000 long tons [2,240 lb per long ton] per annum, although in the last few years some further increase has been noticeable; Korea, with a continuous increase in area and yield, from 1910 onwards, (the crop of 1920 was about 600,000 long tons); and United States, where from 1909 to 1921, the area under soya beans increased from about 1,600 to 186,000 acres with a production of about 70 thousand long tons. It may be observed that the increase of this crop during the last twenty years is supplemented by attempts already made and in progress for its introduction into countries with a favourable climate, especially into Africa."

"Exports are exclusively from China and Korea. The Chinese exports have increased very greatly during the last thirty years. Before 1890 they were insignificant, in 1901 they had reached a total of more than 100 thousand tons, and during the decade from 1909 to 1918 they averaged about 600 thousand tons and reached their maximum in 1919 with about 1 million, declining in the two following years to 600 thousand long tons.

"With regard to Korea although we have not a complete series of data for the period 1909-1918, the ever-increasing importance of its exports of soya beans may be emphasized; during the last few years these have been double the average of the years 1909-1911, and in 1921 they already equalled one third of the Chinese exports."

"The chief importers, in Europe are Great Britain, Denmark, and Holland, and, in Asia, Japan, and the Dutch East Indies. To these must also be added Russia-in-Asia as the Chinese Customs register large exports destined for the Russian Pacific ports."

"England, which at one time constituted the greatest market for the soya bean, has continually reduced its

imports: these were 420 thousand long tons in 1910, 76 thousand in 1913, and about 60 thousand in the two years 1921-1922... In the Asiatic market, represented in this case by Japan and the Dutch East Indies, imports have continuously increased especially in the last few years of the period under consideration.

"The trade figures of *soya oil* (see tables on pages 480 and 481) indicate that China is the principal exporter, having quadrupled its shipment during the period from 1914 to 1919, attaining in the latter year a total of over 140 thousand long tons."

Other countries unrelated to soy (some no longer in existence): Europe: Esthonia [Estonia], Luxemburg [Luxembourg], Serb-Croat-Slovene State. North and Central America: British Honduras [named Belize after about 1975]. South America: Curaçao [Curacao], Falkland Islands, British Guiana, French Guiana. Asia: Aden [became part of independent Yemen in 1967], Andaman and Nicobar Islands, Bahrein Islands [Bahrain], Borneo (British Protectorates), Dutch East Indies, Federated Malay States, Formosa, French Settlements in India, Indo-China, Persia, Portuguese India [annexed in 1962 by India; became Union territory of Goa, Daman, and Diu], Protected Malay States, Russia, Japanese Saghalin (Karafuto), Siam [later Thailand], Straits Settlements [later Singapore], Timor and Cambing, Wei-Hai-Wei [Weihai, Wei-hai, or Weihaiwei; seaport in northeast Shandong province, northeast China]. Oceania: Australia, Fiji Islands, French Settlements in Oceania, Gilbert and Ellice Islands, Hawaii, Island of Guam, New Caledonia, New Hebrides, Papua, Samoan Islands (American Samoa), Solomon Islands, Territory of New Guinea *(Later German New Guinea)*, Tonga, Western Samoa *(Formerly German Samoa).*

Note: This document gives a clear definition of the geographical region named "Oceania." A "quintal" is probably 100 kg. Address: 1. Doctor of Economics; 2. Doctor of Agronomics. Both: IIA, Rome, Italy.

235. Capone, Giorgio; Grinenco, Ivan. 1923. Canada (Document part). In: G. Capone & I. Grinenco, eds. 1923. Oleaginous Products and Vegetable Oils: Production and Trade. Rome, Italy: International Institute of Agriculture, Bureau of Statistics. 545 p. See p. 111-15. [Eng]
• ***Summary:*** Crop production: Canada collects data on only one oil-yielding crop, flax. Before World War I it was cultivated only for its seed and oil, but during and shortly after the war (1915-1921), it was also grown for the fiber contained in its seed. All "tons" refer to long tons (1 long ton = 2,240 lb). Production of linseed for oil in Canada increased from 2,717 long tons in 1880, to 4,305 tons in 1900, to 106,000 tons on 572,326 acres in 1910, to a record 653,241 tons on 2,021,900 acres in 1912. In 1922 some 125,212 tons were grown on 565,479 acres. In 1922 the great majority of flax in Canada was grown in Saskatchewan (82.4% of the total). Manitoba (11.8%) and Alberta (3.9%) also grew significant amounts. In 1922 Saskatchewan began to grow significant amounts of sunflowers.

Imports of oleaginous products: During the period 1909-1922, from 2.9 million to 4.4 million in-tact coconuts were imported each year. Imports of desiccated coconuts (copra) grew from 108 tons in 1909 to 1,320 tons in 1921.

Exports of oleaginous products: The only product exported was linseed, which increased from 49,941 tons in 1909-10, to a record 516,183 tons in 1913-14, decreasing to 90,781 tons in 1921-22.

Imports of vegetable oils: In 1909-10 the leading vegetable oils imported were cottonseed oil (8,797 tons), castor oil (2,042 tons), and palm oil (1,279 tons). In 1921-22 the leading vegetable oils imported were cottonseed oil (20,651 tons) and palm oil (5,567 tons, including shea butter). Small amounts of coconut oil (included in the figure is soya bean oil for the manufacture of soap) were imported from 1913 (122 tons) to 1921 (263 tons). A small quantity of sesamum oil was among the unspecified oils imported.

Exports of vegetable oils: The only oil exported was negligible–40 tons of linseed oil in 1921-22. Address: 1. Doctor of Economics; 2. Doctor of Agronomics. Both: IIA, Rome, Italy.

236. Clark, George Harold; Malte, M. Oscar. 1923. Fodder and pasture plants. Ottawa, Canada: Department of Agriculture. 143 p. + 27 unpaginated color plates. See p. 134-35. Illust. Index. 26 cm.
• ***Summary:*** This is a reprint of the original 1913 edition. George Clark was born in 1872. Malte Oscar Malte lived 1880-1933. Address: 1. B.S.A.; 2. Ph.D. Both: Canada.

237. Campbell, James T. 1924. The growing popularity of soybeans. *Farmer's Advocate (Ontario, Canada)* 59(1633):43. Jan. 10.
• ***Summary:*** Briefly highlights the importance of soybeans in the United States. "At the recent International Live Stock Hay and Grain Show in Chicago, Minnesota made a wonderful exhibit of Soybeans, and what can be grown in Minnesota can be duplicated in Ontario; in fact, as far as soybeans are concerned, it is being done at the present time in Ontario both by the Ontario Agricultural College and by private growers throughout the Province." The growing importance of the crop for Ontario is emphasized. "Soybeans require from 95 to 115 days to mature, the times varying according to the variety grown. If desirous of seed crop, grow an early maturing soybean. If grown for hay or for ensiling with corn, use a later maturing variety, because the later the maturity, the greater the height and the foliage growth." Address: Ontario County, Ontario, Canada.

238. Zavitz, Charles A. 1924. Soy beans. *Ontario Department of Agriculture, Circular* No. 43. 4 p. Jan.
• ***Summary:*** "The growing of soy beans for seed production in Ontario is limited to a few sections bordering on the Lakes." "In our Experimental Department one variety of soy beans was grown as far back as 1893; seven varieties have been grown in each of the past fifteen years, and seventy-three varieties were under experiment in 1923. Soy beans have been distributed from the College in connection with the co-operative experiments throughout Ontario in each of the past twenty-five years, from two to three varieties being used each season."

A table (p. 2) "gives the average results in yields of green crop and of threshed seed per acre for each of eleven varieties of soy beans for the years 1921 to 1923, inclusive." The varieties are listed in descending order of seed yield: O.A.C. No. 211 (23.84 bu/acre), Tsurunoko (23.59), Minnesota No. 167 (23.39), O.A.C. No. 111 (23.26), Early Yellow (23.25), Habaro (22.89), O.A.C. No. 81 (22.20), Medium Green (21.80), Quebec No. 92 (21.08), Ito San (20.33), Brown (18.63).

"The O.A.C. No. 211, which stands highest in average yield of seed per acre [23.84 bu/acre] and in weight per measured bushel and second highest in yield of green crop per acre [7.92 tons] has been grown in the plots for five years, but in only the last three of these has it been included in the regular variety tests." A photo shows a field of "the O.A.C. No. 211 variety of Soy Beans grown at the Agricultural College, Guelph, in 1923." Address: B.S.A., D.Sc., Prof. of Field Husbandry and Director of Plant Breeding and of Field Experiments, Ontario Agricultural College, Guelph, Canada.

239. *Toronto Daily Star (Canada).*1924. Bean 'cream' winter food. April 3. p. 2.
• ***Summary:*** "Chinese priests dry the 'cream' [yuba] of soya beans after they have been boiled and store it for use as a winter food."

240. *Farmer's Advocate (Ontario, Canada).*1924. Soybeans in the farm cropping system. 59:585, 614. April 17.
• ***Summary:*** The soybean "is a new crop in Canada but it has 'taken' with remarkable rapidity." It "is only during the past two or three years that the crop has come into prominence. Last year it was grown quite extensively with corn for silage, and, to a limited extent, for hay and grain."

Seven farmers throughout Ontario province describe their generally positive experiences growing soybeans. At Weldwood Farm the Manchu and Ito San varieties were grown. J.E. Benner of Lambton County planted Ontario Black soybeans on 24 May 1923. Jeffrey Bros. of Ontario County have grown soybeans for the past five years, mostly for seed. They have grown 7-8 varieties, but the Ontario Early Black is earlier than any of the rest by two weeks. W.J. Dockstaeder of Dundas County has sowed soybeans with corn for silage, using the Black Eyebrow and Manchu varieties. I.L. Benn of Frontenac County grew soybeans last year for the first time, planting them with corn. F.A.C. Darling of Lanark County mixed one part soybeans with two parts corn for silage. Wm. Butterworth of Ontario County tried soybeans for the first time in 1923, mixing them with corn, which made a good feed for hens and pigs. "The crop has been experimented with considerably at the Ontario Agricultural College at Guelph, and Dr. C.A. Zavitz has recently issued a circular setting forth the results. The O.A.C. No. 211 is a variety which stands highest in yield of seed per acre and weight per measured bushel." "The Ontario Early Black is a variety which a number of our readers have been growing with success." Address: Canada.

241. Adams, J. 1924. The effect on tomato, soy bean, and other plants of altering the daily period of light. *American J. of Botany* 11(4):229-32. April. [4 ref]
• ***Summary:*** "Experiments were conducted at Ottawa, Canada, on the result of shortening the average period of daylight from about 15 hours (the natural length of day) to about 12 hours."

Three soy bean varieties were tested; the plants which were darkened bore flowers a little earlier than those which received more light. Address: Central Experimental Farm, Ottawa [Ontario, Canada].

242. Dickson, B.T. 1924. Mosaic studies. IV. (Abstract). *Phytopathology* 14(7):346. July.
• ***Summary:*** Soy bean mosaic was found for the first time in Quebec, Canada.

243. Zavitz, C.A. 1924. Soy beans. *O.A.C. Review* 36(5):148-51. *

244. Bark, Don H. 1924. Brooks Demonstration Farm. *Canadian Pacific Railway Company, Department of Natural Resources, Annual Report of Irrigation Investigation Branch.* For the season of 1924. See p. 128, 160.
• ***Summary:*** "In the following pages will be found a list of the crops produced on the Brooks Demonstration Farm during the season of 1924 together with cost statements, livestock data, improvements, etc... The soil on the farm is continually being built up and enriched by the growing of leguminous crops in rotation and by the pasturing of crops with live stock... The trees, lawns, shrubs and flowers on the farm now present a wonderful appearance and make an attractive showing for the large number of visitors to the farm during the summer months.

"Soy Beans: Four Varieties of Soy beans (Early Brown, Manchu Black, Eyebrow [probably Manchu, Black Eyebrow], and Wisconsin Early) were planted on May 21st in hills one foot apart, rows two feet apart. The germination

was good and a rapid growth was made until June when the growth was checked by rabbits. The plants were sprayed with Arsenate of Lead. Of the four varieties the Wisconsin Early was the only one that showed any indication of maturing and these were pulled on September 30th, but were not ripe."

Note 1. This is the earliest document seen (Jan. 2009) concerning soybeans in Alberta province, Canada, or the cultivation of soybeans in Alberta province, Canada. A 1927 photo shows Don Bark's son standing in a field of soybeans growing in Brooks, Alberta.

Note 2. This is the earliest document seen (Feb. 1998) that describes a railroad company promoting soybeans (by growing them at a demonstration farm) in Canada or North America.

Note 3. This typewritten document was found after a lengthy search by Susan Kooyman, archivist at the Glenbow Library and Archives (130–9th Avenue S.E., Calgary, Alberta, Canada T2G 0P3). She also found that Don Bark came to Canada in 1915, and was put in charge of the Irrigation Investigation Branch of the Department of Natural Resources of the Canadian Pacific Railway Company. The only report Susan has for Bark's Irrigation Investigation Branch is for 1924. She looked through 15 years of the annual reports of the Eastern Irrigation District in general and could find no mention of soybeans–though many other crops that were tested were discussed in great detail.

Note: This is the earliest (and only) document seen (Oct. 2004) that mentions the soybean variety Manchu Black. However, it is probably a typographical error. Address: Superintendent of Irrigation Investigation Branch, Alberta, Canada.

245. Early Korean / Korean: New Canadian soybean variety. 1924.

• ***Summary:*** Sources: Shutt, Frank T. 1931. "Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29." *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. See p. 55. Two tables list the varieties grown at Harrow in 1928 and 1299. One of these is "E. Korean" [Early Korean]. In 1928: 100 beans weighed 25.21 gm. Moisture: 5.91%. Protein: 39.69%. Oil: 18.30%. On a water-free basis–Protein: 42.19%. Oil: 19.45%.

Elliott, H.G. 1946. "The soybean. Its possibilities in W.A." [Western Australia]. *J. of Agriculture, Western Australia* 23(4):285-93. Dec. See p. 293. Canadian soybean varieties presently under trial in Australia include "Early Korean."

Cohn, Henry I. 1948. "The Rickard Koreans." *Soybean Digest.* Aug. 13, 28. Dimmock, F. 1948. "Korean soybeans." *Soybean Digest.* Oct. p. 7. This letter to the editor gives a detailed history of the "Early Korean" variety in Canada. It arrived, so labeled, at Harrow in 1924.

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 2. "Early Korean" [No source given].

USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 13. "Korean.–Selected from an introduction from China by the Dominion Agricultural Experiment Station, Harrow, Ontario. Pubescence, brown; flowers, white; shattering, little; seeds, yellow with black hilum, about 2,000 to the pound; cotyledons, yellow; oil, 20.5 percent; protein, 42.5 percent, iodine number, 130. Maturity, group II." Page 25 states that Early Korean is a synonym for Korean.

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 12-13. Korean is in the USDA Germplasm Collection. Maturity group: II. Year named or released: by 1928. Developer or sponsor: Department of Agriculture, ES (Experiment Station), Harrow, Ontario, Canada. Literature: 16. Source and other information: 'Early Korean' from China, to the Harrow ES (Experiment Station), Ontario, Canada, by 1923 [probably from North Korea]. Prior designation: Early Korean. Address: USA.

246. Cates, J. Sidney. 1925. The rising tide of soy beans: New light on inoculation speeds along the Gulf-to-Canada sweep of the crop. *Country Gentleman* 90(12):8, 31. March 21.

• ***Summary:*** "People everywhere are just beginning to realize that much more of the soy disappointment than previously thought to be the case has been due to improper inoculation." W.F. Oldenburg, extension agronomist at Maryland, has found that "bacteria strains best suited to the Mammoth Yellow will not give good results when applied to earlier varieties."

By 1925, *Country Gentleman* was America's most widely read and respected farm magazine. Sidney Cates was an influential agricultural writer of national reputation. It was Cates who broke the hugely important story on the success of the new hybrid-corn in the March 1929 issue of *Country Gentleman.*

247. Meharry, Charles L. 1925. Sixth annual field meeting: Washington, D.C.–September 1, 2 and 3, 1925. *Proceedings of the American Soybean Assoc.* 1:52-54.

• ***Summary:*** "Soybean growers, representing eighteen states and Canada, convened at the Arlington Experimental Farm,

Virginia, September 1, 1925, for their Sixth Annual Field Meeting." The "growers were welcomed to Arlington Experimental Farm by Dr. W.A. Taylor, Chief of the Bureau of Plant Industry." There followed two papers presented by Dr. C.V. Piper and Mr. E.C. Butterfield. After the meeting was adjourned for lunch, "the visitors had an opportunity of inspecting an extensive exhibit of soybean products, showing the numerous soybean products from the Orient and those manufactured in the United States. Charts were displayed illustrating the value of the soybean and its various products and enlarged pictures showed the manufacture of products in China and Japan, and the various ways in which the soybean is grown and harvested in the United States."

"After lunch, the growers were taken to the fields to inspect the variety tests, new introductions, inoculation plots, time of planting tests, breeding work and method of culture plots. Demonstrations were given of the various methods commonly used in the culture of the soybean."

"The evening meeting was called to order at 7:30 in the auditorium of the New National Museum..." The program included three motion pictures and seven papers. The second motion picture is titled "Four men and the soybean." The other two are "Uncle Sam, World Champion Farmer" and "Sheep in Psalm and Sage." Note: This is the earliest document seen (Nov. 2004) that mentions a motion picture about soybeans. Nothing is known about this movie except the title.

"On the second day, September 2, the growers assembled on Union Farm, near Mount Vernon, Virginia. This farm was originally part of George Washington's estate and played an important part in the early agricultural development of this country. It was on this farm that Washington carried on his experiments in soil improvement and practical methods of farming far in advance of his time. Union Farm is now owned by Mr. Harvey S. Clapp, a prominent breeder and grower of soybeans. The growers inspected Mr. Clapp's extensive variety, inoculation, and breeding plots, and fields of different varieties for seed production."

Five papers were then presented: Welcome to Virginia, by T.B. Hutcheson, Virginia. Soybeans in the Eastern states, by Nicholas Schmitz, Pennsylvania. Fertilizers for soybeans, by G.L. Schuster, Delaware. Relation between the grower and the oil mill, by F.A. Wand, Illinois. Seed frauds in soybean varieties, by R.W. Hamilton, South Carolina.

"The after noon was devoted to demonstrations of field machinery used by Mr. Clapp in the culture and harvest of the soybean. The broadcast soybean harvester, an invention of Mr. Clapp's proved an interesting feature of the demonstration. About 3:00 p.m. the growers adjourned to visit Mount Vernon, the home of George Washington.

On the third day, September 3, the growers met at the Maryland Experiment Station, College Park, Maryland. Dr. A.F. Woods, President of the Maryland State University, welcomed the visitors to Maryland."

Six papers were then presented: Community growing, handling and sale of soybean seed, by J.T. Smith, Illinois. Soybeans in Georgia, by W.J. Davis, Georgia. Soybeans in the Mississippi Delta, by W.E. Ayres, Mississippi. Small grains after soybeans, by W.E. Riegel, Illinois. Putting soybeans on the hoof, by Taylor Fouts, Indiana. The soybean mottling problem, J.B. Park, Ohio.

Long summaries of the welcome address by W.A. Taylor, and of the many papers presented are given on pages 54-129. Address: Secretary.

248. Morse, W.J. 1925. History of the American Soybean Association. *Proceedings of the American Soybean Assoc.* 1:9-11. Sixth annual field meeting. Held 1-3 Sept. at Washington, DC.

• ***Summary:*** The best early history of the association. "Introduced into the United States, as early as 1804, the soybean has met the difficulties with which a new crop has to contend in order to become part of an established farming system... About 1900, soybeans were beginning to attract more attention through the efforts of the United States Department of Agriculture, state experiment stations and a number of hopeful growers. Several varieties rather limited as to adaptation, as the Ogemaw, Ito San, Early Brown, U.S. No. 9414 (Ebony), No. 13399 (Midwest) and Mammoth Yellow were being grown at that time in a small way. By the dissemination of seed, and literature on cultural methods and utilization, the early growers enlisted new friends in increasing numbers for the crop. It became possible to interest counties in Soybean Days as early as 1910 and by 1912 in many sections of the Corn Belt states, through the efforts of growers and extension crops men of the state colleges, Soybean Days were becoming quite common.

"The meetings offered interesting programs and were generally well attended and the increasing number of soybean enthusiasts began expressing a desire for a representative organization worthy of the coming industry. By 1920, the possibilities of the soybean industry had become so well recognized through County and State Soybean Days that it seemed an opportune time to perfect such an organization. Experiment station workers and growers of the Corn Belt states responded freely to the idea.

"Under the auspices of Indiana Experiment Station Extension Service and the county agents of Indiana the first Soybean Day of a national character was celebrated September 3, 1920 on the Soyland Farms of the Fouts Brothers, Carroll County, Indiana, and was known as 'The First Corn Belt Soybean Field Day.' More than a thousand were in attendance at this first meeting, representing growers and experiment station men from six states and representatives from the United States Department of Agriculture.

Following the program the growers agreed that a definite organization seemed necessary and the name 'The National Soybean Growers' Association' was agreed upon. A motion was presented and carried that a business session and program be held during the coming International Hay and Grain Show in Chicago. A motion was also carried that a National Soybean Field Day be arranged for the fall of 1921.

"The second field meeting was held in Illinois in 1921 at the Illinois College of Agriculture and the Meharry Farm near Tolono. The third meeting was conducted in 1922 at Columbia, Missouri." The 1923 meeting was at Madison, Wisconsin, the 1924 one at Ames, Iowa, and the 1925 one at Washington, DC. At this latter meeting, "eighteen states and Canada were represented by growers, seedsmen, experiment station men, and others interested in the industrial uses of the soybean and its products.

"The organization founded in 1920 had performed the pioneer work and had been of incalculable service to the soybean industry in the United States, but by 1924 the leaders of the movement became aware of the enormous possibilities of a more highly organized association. The original organization required no dues, hence there were no funds to further the interests of the movement nor to take care of current obligations. Up to this period the little band represented the enthusiastic expression of interest on the part of experiment stations, colleges and several prominent soybean growers in an exceedingly promising experiment. The period of experiment was quite over, the soybean was beginning to receive the recognition it deserved, the time had come for a definite organization with definite aims and a clear cut policy.

"Accordingly the request was made that a committee be appointed and instructed to meet and draw up a constitution and by-laws to present at the annual business meeting to be held in Chicago, December 1, 1925. Four members of this committee, C.L. Meharry (Indiana), J.T. Smith (Illinois), Taylor Fouts (Indiana), and W.E. Ayres (Mississippi) prepared a tentative constitution and by-laws which was presented to and adopted by the Association at the 1925 winter meeting. The name was changed to 'American Soybean Association,' and the object of the Association was set forth in the constitution which may be found on page 15.

"The American Soybean Association met as a definite organization for the first time in the Mississippi Delta in 1926 where four days of meetings were thoroughly enjoyed by members. The 1927 meeting was held in eastern North Carolina, one of the oldest soybean producing sections in the country."

"With an increasing membership, a definite organization, and available funds [from $1 per year membership dues] the Association is now able to be of more value in presenting to the members through its annual reports the best available information relating to the practical and scientific phases of the soybean industry."

Note 1. This is the earliest document seen (Feb. 1999) which mentions that 'The National Soybean Growers' Association' was formed at this meeting in Sept. 1920.

Note 2. This is the earliest document seen (March 1999, one of three documents) that refers to the farm owned by the three Fouts brothers as "Soyland Farms." Address: USDA, Washington, DC.

249. Vi-Tone. 1925. Vi-Tone (A Canadian product) (Ad). *Toronto Daily Star (Canada)*. Oct. 25. p. 10.
• ***Summary:*** A very small ad for Vi-Tone. "A delicious Malted Milk Chocolate-flavored drink. Serve it hot or cold. Rich in proteins and vitamines of the Soya Bean.

"Look for our special demonstration in the Parkdale and Riverdale Markets this week-end."

250. **Product Name:** Vi-Tone. Renamed Soybean Malter Milk, and Chocolate Malter Milk by Sept. 1929 (Malt Chocolate Soymilk).
**Manufacturer's Name:** Vi-Tone Company (Renamed in Milk-Ko Products in 1954).
**Manufacturer's Address:** P.O. Box 356, Hamilton, Ontario, Canada.
**Date of Introduction:** 1925. October.
**New Product–Documentation:** Ad for Vi-Tone by Vi-Tone Company. 1925. *Toronto Daily Star* (Canada). Oct. 25. p. 10. "A delicious Malted Milk Chocolate-flavored drink. Serve it hot or cold. Rich in proteins and vitamines of the Soya Bean."

Ad for Vi-Tone by Vi-Tone Company. 1928. Proceedings of the American Soybean Assoc. p. 39. "Jack and Jill both love Vi-Ton" [sic, Vi-Tone]. The ad text mentions "Vi-Tone 3 times. "Vi-Tone is a scientific combination of the Soy Bean with malt extract and milk–rich in protein and vitamin content–and deliciously flavored with chocolate." An illustration shows a can of "Vi-Tone," described as a "food tonic beverage."

F. Dimmock. 1929. Proceedings of the American Soybean Assoc. p. 47-50. See p. 47. "The Soybean in Canada." "As far as the speaker is aware, only one firm in Canada uses the soybean in a commercial way. The Vi-tone Co., of Hamilton, Ontario, uses annually about 5,000 bu in the manufacture of a patent food." The product name is not given. It may have been Soybean Malter Milk and/or Chocolate Malter Milk. Note also that Milqo / Milquo (Soy Milk) had been launched in Hamilton, Ontario, by 1919 (Source: H.W. Lohse. 1936. *Canadian Chemistry and Metallurgy.* July. p. 224-25).

C.A. MacConkey. 1935. Soybeans. Ottawa, Ontario, Canada: National Research Council. p. 65. "Firms Engaged in the Soybean Industry in Canada." The Vitone Co., Hamilton, Ontario."

Gray. 1936. All About the Soya Bean. p. 124. Note: Hamilton is directly south of Toronto, at the western tip of Lake Ontario. This may be the product referred to by Dimmock in 1929.

Leon Lothrope. 1932. *Nor'-West Farmer and Farm & Home* (Canada). Oct. p. 8. "Soya beans." A photo titled "Products that contain soya bean oil or meal" shows a can of "Vi-Tone" Malt Chocolate Flavor. The front panel reads: "Hot or cold. A tonic food beverage. An extraction of malt and milk–rich in protein and vitamins of the soya bean."

L.B. Breedlove. 1936. *Chicago J. of Commerce and La Salle Street Journal.* June 25. p. 14. "Soy bean–The magic plant. Article XI." "Vi-Tone Company, Hamilton, Ontario, Canada: Soy bean malted milk, chocolate malted milk."

International Inst. of Agriculture. 1936. *Le Soja dans le Monde* [The Soybean in the World]. See: Manufacturers of edible soy products. p. 206. Malted soymilk and chocolate malted soymilk. Address: P.O. Box 358, Hamilton, Ont.

American Soy Bean Association. 1938. "16th annual meeting." This leaflet lists the stores from which the soy products were purchased, incl. Milqo Limited, Vi-Tone Company, Hamilton, Ontario, Canada.

*Soybean Digest.* 1948. "Grits and flakes... from the world of soy: Milquo Ltd. is now Vi-Tone." Jan. p. 34. "Milquo Limited has changed its firm name to Vi-Tone Products Limited, 198 Gage Ave. S., Hamilton, Ontario. Ray H. Bissell is president."

Note that according to the *Soybean Blue Book* (1948, p. 80) by that year "Vi-tone Products Ltd." was making a "tonic food beverage with soybean base." No brand name is given. According to *Soybean Blue Book* (1954, p. 102) this company either apparently changed its name at this time to Mil-Ko Products Ltd. or merged with Milqo Ltd. in Hamilton. Its address changed to P.O. Box 366. It continued to make "Tonic food beverages with soybean base." When Mil-Ko appeared, Vi-tone disappeared.

251. **Product Name:** Tofu.
**Manufacturer's Name:** Chiba Tofu-ten [Tofu Shop].
**Manufacturer's Address:** Cordova St. (between Main and Gore streets), Vancouver, BC, Canada.
**Date of Introduction:** 1925?
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 254. Chiba Tofu-ten [Tofu Shop], 206½ Main St., Vancouver, BC, Phone: Sey. 1278L. Owner: Mr. Inoshichi Chiba.

Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America.* Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. The map of the old Japanese district of Vancouver, British Columbia, Canada, at the front of the book (unnumbered pages) shows "Chiba Tofu." Page 780 states this map is from the 1920s.

Note: This is the earliest known commercial soy product made in British Columbia province, Canada (one of three tofu products made in Vancouver).

252. **Product Name:** Tofu.
**Manufacturer's Name:** Tanaka Tofu Mfg.
**Manufacturer's Address:** Between Dunlevy and Jackson streets, Vancouver, BC, Canada.
**Date of Introduction:** 1925?
**New Product–Documentation:** Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America.* Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. The map of the old Japanese district of Vancouver, British Columbia, Canada, at the front of the book (unnumbered pages) shows "Tanaka Tofu Mfg." Page 780 states this map is from the 1920s.

253. **Product Name:** Tofu.
**Manufacturer's Name:** Wakamatsu Tofu Mfg.
**Manufacturer's Address:** Between Dunlevy and Jackson streets, Vancouver, BC, Canada.
**Date of Introduction:** 1925?
**New Product–Documentation:** Ito, Kazuo. 1973. *Issei: A history of Japanese immigrants in North America.* Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. The map of the old Japanese district of Vancouver, British Columbia, Canada, at the front of the book (unnumbered pages) shows "Wakamatsu Tofu Mfg." Page 780 states this map is from the 1920s.

254. *Official Record of the U.S. Dept. of Agriculture (The).*1926. Dr. Charles V. Piper. 5(7):4. Feb. 17.
• ***Summary:*** Dr. Charles Vancouver Piper died Thursday evening, Feb. 11, at Emergency Hospital, Washington, DC. For some time he had been in poor health, but continued to carry on his work. He suffered a light stroke of paralysis at his office the previous Monday morning, was taken to his home, and then to the hospital the following day.

In charge of the Office of Forage Crop Investigations, Dr. Piper was connected with the USDA for 23 years, during which time he made a world-wide reputation as an authority on forage crops and grasses. Through his efforts, many plants and grasses of inestimable value to American agriculture were introduced from foreign countries and established in the United States.

Dr. Piper was probably best known to the general public through his work in developing the creeping bent

grasses for use on golf greens. In 1919 he discovered a clump of bent grass growing on a green at the Washington Golf and Country Club. By the vegetative method of propagation he secured a quantity of roots of this grass and in 1921 distributed the stolons or roots to various gold associations for trial. "The grass has since become known as the Washington creeping bent and is now found growing on thousands of golf greens throughout the northern section of the United States. At the time of his death Doctor Piper was chairman of the greens committee of the United States Golf Association, which he was largely instrumental in organizing, and editor of the monthly publication issued by the association. Through its columns he brought about the use of these improved grasses for greens and by his efforts created golfing conditions enjoyed by thousands of golfers everywhere. Through this medium he also found an outlet for his characteristic philosophy, which he expressed under a monthly contribution called 'Meditations of a Peripatetic Golfer.'

"The contributions which Doctor Piper made to the forage and grass industry of practical agriculture are so numerous that it is difficult to single out the most outstanding achievement. However, it was the work of Doctor Piper that secured the introduction and establishment of the now widely known Sudan grass, which is native to Africa. In a comparatively short time this grass has become one of the very valuable hay and pasture grasses over a large part of the United States. Likewise the rapid spread of soy beans in this country can be credited to his introductions and investigations.

"Doctor Piper is the author of more than a hundred papers and books on botany, agriculture, and allied subjects."

"In his search for new forage plants and other crops Doctor Piper has traveled widely, having spent much time in Japan, China, India, Java, Egypt, the Philippines, and Alaska." Doctor Piper was born on 16 June 1867 at Victoria, British Columbia, Canada. In 1885 he received his B.S. degree at the University of Washington, and his M.S. in 1892. He remained at that institution as professor of botany until 1903, when he received his appointment to the U.S. Department of Agriculture in Washington, DC.

He was a member of the American Society of Agronomy, of which he was president in 1913-14; the Botanical Society of Washington and its president in 1908-09; the Biological Society of Washington; and the Society for the Promotion of Agricultural Science.

255. Science Service. 1926. Good cows declared very hearty eaters. *Toronto Star (Ontario, Canada).* May 27. p. 26.
• ***Summary:*** "Urbana, Illinois, May 26.–Good cows eat about 5,800 pounds of silage, 1,900 pounds of hay, and 2,800 pounds of grain each year in addition to being on pasture about five and one-half months, according to figures compiled by Prof. C.S. Rhode, agricultural experiment extension specialist at the University of Illinois."

"'An adequate supply of good alfalfa, soybean, clover and cowpea hay is the backbone to a good dairy ration,' he claims." Dairymen should plan to grow large acreages of legumes.

256. Eaton (T.) Co., Limited. 1926. Eaton's family drug sale (Ad). *Toronto Daily Star (Canada).* Sept. 11. p. 34.
• ***Summary:*** Near the center of this full-page ad, under "Patents" [meaning patented products] we read: "Vi-Tone–29¢, 49¢."

Note: By Jan. 1927 this product was described in another Eaton's ad as: "Vi-Tone, a milk chocolate-soya bean beverage, ½, 1, 5-lb tins. Sale price–29¢, 49¢, $2.39." Its is not clear whether or not the product contained soya beans in Sept. 1926. Address: College St., Toronto. Phone: ADelaide 4941 or 5001.

257. *Purdue Alumnus (West Lafayette, Indiana).*1926. Prof. A.T. Wiancko heads new department. 14(1):7. Oct.
• ***Summary:*** "Announcement was made at Purdue University of consolidation of the department of soils and crops in the Agricultural Experiment Station and of the department of agronomy in the School of Agriculture, into one department of agronomy with Prof. A. T. Wiancko, head of the experimental and extension work in soils and crops, as chief of the combined department.

"The change became effective at the opening of school. Prof. M.L. Fisher, who became dean of men July 1, and who has headed the agronomy teaching work, will retain his title as professor of agronomy and continue what work he can in teaching and research. Prof. G.H. Cutler, who has been head of the department of agronomy in the University of Alberta, Canada, at Edmonton, will become professor of agronomy and assistant chief of the department.

"Prof. A.T. Wiancko, the head of the combined department, is perhaps the best known corn judge in America, and through his work as chairman of the Indiana corn score card committee twenty years ago, and subsequent judging and corn schools conducted since that time, has done as much as any one perhaps to bring the state to the top in corn production. He judges the corn each year at state, national and international shows. A native of Sparrow Lake, Ontario, he attended Ontario Agricultural College and is a graduate of that institution and the University of Toronto. For several years following, he worked on and was manager of large farms in Minnesota and Nebraska, joining the instruction staff at the University of Nebraska in 1901. On January 1, 1903, he came to Purdue as associate professor of agriculture, teaching soils and crops and farm mechanics."

258. Meharry, Charles L. 1926. Seventh annual business meeting. Chicago, Illinois–1926. *Proceedings of the American Soybean Assoc.* 1:29-34.
• ***Summary:*** The meeting was called to order at 10:30 a.m., November 30, 1926, by President W.E. Ayres. Members who were present outlined soybean experiments being conducted in the various states: Prof. G.M. Briggs of Wisconsin; Prof. John Buchanan of Guelph, Ontario, Canada; Mr. Munn and Mr. E.A. Hollowell of Illinois; Mr. M.O. Pence and Prof. K.E. Beeson of Indiana; Mr. E.S. Dyas of Iowa; Mr. E.L. Utterback of Missouri; President W.E. Ayres of the Mississippi Delta Experiment Station.

Prof. Buchanan noted that the province of Ontario extends as far south as the 42nd parallel. "It is therefore, quite possible to grow soybeans in Ontario. The Guelph Station has conducted extensive variety tests and one new variety, a selection from Habaro, was developed by this station. Experiments on time and methods of planting and cultivation are in progress. In 1926 about one thousand acres of soybeans were grown in Ontario, used principally as a substitute hay crop. The corn borer is rapidly forcing soybeans and other substitute crops to the attention of the farmers."

"Professor Beeson stated that soybeans are still considered by most Indiana farmers as a substitute crop and from 250,000 to 300,000 acres of soybeans are being grown in Indiana. Of this acreage from 10 to 12 percent are harvested for seed, about 25 percent for hay and the remainder grown in corn and for soil improvement. There is a marked tendency in Indiana to substitute soybeans for oats in the rotation. Professor Beeson reported that in harvesting demonstrations very satisfactory work had been done with the combine and that several Indiana growers have purchased combines. The new Dunfield variety was mentioned as giving the highest seed yield at the Indiana Station."

Three men spoke enthusiastically about the use of the "combine harvester-thresher" for soybeans: Mr. Taylor Fouts of Indiana, Mr. C.W. Tabaka of Illinois, and Mr. F.R. Shultz of the Case Company, Peoria, Illinois. Mr. Fouts noted: "If the European corn borer forces a reduction in corn acreage, soybeans are much more likely to become a useful substitute crop, because combine harvesting will simplify the greatest obstacle to soybean culture, that is, the difficulty of harvesting and threshing."

"It was moved, seconded, and carried that on and after November 30, 1926, the membership dues be fixed at one dollar per year."

Note: This is the earliest document seen (March 1999) that mentions a combine in connection with Taylor Fouts (or any other Fouts brother) of Indiana. Address: Secretary-Treasurer, American Soybean Assoc.

259. Zavitz, Charles A. 1926. College-bred varieties of farm crops. *Ontario Department of Agriculture, Circular* No. 49. 4 p. Nov.
• ***Summary:*** Contents: Introduction. Oats. Barley. Winter wheat. Spring wheat. Spring rye. Field peas. Soy beans. Millet. Mangels. Conclusion.

"Soy beans: The soy beans is a legume grown extensively in the eastern countries, especially in Japan, Manchuria and Siberia. According to a report issued by the United States Department of Agriculture, 'The feeding value of the soy bean has been found to be greater than that of any other forage plant except the peanut.

"O.A.C. No. 211–Matures in Southern Ontario, vigorous grower, beautiful yellow grain of fine quality well adapted for use as a grain producer, fodder producer, or a crop for plowing under for enriching the soil.

"In all, about one hundred varieties of soy beans have been under test at the Ontario Agricultural College. The O.A.C. No. 211 has given the highest yield of grain and, along with another variety, the highest yield of fodder of all varieties under test at Guelph for five years." Address: B.S.A., D.Sc., Prof. of Field Husbandry and Director of Plant Breeding and of Field Experiments, Ontario Agricultural College, Guelph, Canada.

260. Corbett, L.C.; Gould, H.P.; Robinson, T.R.; et al. 1926. Fruit and vegetable production. *Yearbook of Agriculture (USDA)* p. 151-452. For the year 1925. See p. 403-11.
• ***Summary:*** In the section titled "Leguminous vegetables," the subsection on beans (p. 308) states: "Two types of beans, the kidney, including field and garden varieties, and the Limas, are of great importance to New World horticulture. The broad beans are grown only in cooler sections of the country, chiefly Canada, while the soy bean *(Glycine hispida)* and the cowpea *(Vigna sinensis)* are of great importance, and though not, strictly speaking, horticulture crops, they are largely used as food and in truck-crop rotations."

The section on peanuts (p. 403-11) traces the history of the peanut and discusses the distribution of the industry in the United States, the importance of high-yielding seed, the uses of the nut, and the handling of the crop. Seven photos concern peanuts. Three maps of the USA show (using dots) areas of production of dry beans (navy, pinto, lima, etc.), green peas, and peanuts. Address: Bureau of Plant Industry, USDA.

• ***Summary:*** Reports the occurrence of 3 soybean diseases: Root rot *(Fusarium sp.)* found in Manitoba in 1924. Leaf Spot *(Bacterium glycenium F.C. Coerper)* found in

Manitoba in 1924, and in some of the variety plots at the Harrow Experimental Station, Ontario. Mosaic, found in Macdonald College, Quebec, in 1923 and 1924. Also at Harrow, Ontario, in 1924. Address: Plant Pathologist, Ottawa.

262. Eaton (T.) Co., Limited. 1927. Commencing a three day special selling in the drug section (Ad). *Toronto Daily Star (Canada).* Jan. 8. p. 32.
• ***Summary:*** In the upper left corner of this large ad, under "Patents" [meaning patented products] we read: "Vi-Tone, a milk chocolate-soya bean beverage, ½, 1, 5-lb tins. Sale price–29¢, 49¢, $2.39." Address: College St., Toronto. Phone: TR. 3311.

263. Parsons, T.R. 1927. The use of the soy bean in human nutrition. *Lancet* i(5396):267-68. Jan. 29. Reprinted in: L. Berczeller. 1928. Publications on Berczeller's Soy Flour. Vol. I. 4 p. [8 ref]
• ***Summary:*** The source and properties of the soybean, its uses as food and its relative cost are discussed. A large-scale investigation of the possibilities of the soybean as an article of diet is suggested. Address: Asst. Prof. for Medical Research, The McGill Univ. Clinic, Royal Victoria Hospital, Montreal, Canada.

264. *Toronto Daily Star (Canada).*1927. Zavitz superannuated: Health has been poor. Has long record of achievement in agriculture. May 4. p. 28.
• ***Summary:*** "Dr. C.A. Zavitz officially severs his connection with the Ontario Agricultural college at the end of June. Superannuation has been granted to him. His health has not been good.

"One phase of Dr. Zavitz's contribution to Ontario agriculture was the improvement of strains and varieties of seed, through the experimental plot system carried on at the college. O.A.C. No. 21 barley, O.A.C. No. 72 oats, Dawson's golden chaff and O.A.C. No. 104 winter wheat are a few of the leading improvements which have entered into the general farm practice throughout the province.

"In addition there have been many other improved strains of spring wheat, spring rye, field peas, soy beans, millet and mangels. The aggregate value of the increased yields resulting largely from these improved strains has, over a period of years, aggregated many millions of dollars."

265. *Proceedings of the American Soybean Assoc.*1927. Directory of the American Soybean Association. 1:191-92. Eighth annual field meeting. Held 9-12 Aug. in North Carolina.
• ***Summary:*** The 146 members are listed in alphabetical order by last name, with a city and state for each. There are members in the following states, listed here in descending order of number of members: North Carolina (27 members), Indiana 27 (incl. M.S. Blish, Seymour [probably of the Blish Milling Co.]), Mississippi 22, Illinois 14, Louisiana 11, Missouri 6, Ohio 5, Tennessee 5, Virginia 5, Georgia 4, Canada 3 (all in Ontario: John Buchanan, Guelph; Justus Miller, Essex; S.B. Strothers, Essex), Iowa 3, Arkansas 2 (incl. A.H. Hermance, Kingston; C.K. McClelland, Fayetteville), DC 2 (J.E. Barr and W.J. Morse), South Carolina 2 (T.O. Epps, Kingstree; G.J. Wilds, Hartsville [Note: Wilds was a soybean breeder with Coker Pedigreed Seed Co.]), Wisconsin 2 (G.M. Briggs, Madison; E.J. Delwiche, Green Bay), Alabama 1 (M.S. Pearson, Beatrice), Kentucky 1 (H.H. Givin, Napfor), Nebraska 1 (C.B. Turner, Grand Island), New York 1 (Margaret Simmons, Long Island City), New Jersey 1 (G.A. Mitchell, Vineland), and West Virginia (T.E. Odland, Morgantown).

Note: This is the earliest directory seen listing all members of the American Soybean Association. Membership dues are now $1 per year. It may also be the only such directory.

266. *Toronto Daily Star (Canada).*1927. Odd queries answered. Oct. 6. p. 33.
• ***Summary:*** "Q. How is plain chop suey made?

"A. Use 8 pork chops, 3 stalks celery, 2 cups of mushrooms and 2 large onions." Plus other ingredients. Chop, blend and fry "until brown, then add the mushrooms, onions and celery, 1 tablespoon of Worcestershire sauce, 3 of bean sauce [soy sauce] and 1 cup of wheat sprouts, if desired." Stirring constantly, cook until brown and thick.

267. Black Ontario: New Canadian domestic soybean variety. 1927. Seed color: Black.
• ***Summary:*** Sources: Zavitz, C.A. 1927. "Forty years' experiments with grain crops." *Ontario Department of Agriculture, Bulletin* No. 332. p. 36-87. Oct. A table (p. 87) shows 26 varieties that have been under test at the Ontario Agricultural College experimental grounds in the three years 1924, 1925, and 1926–in descending order of seed yield: Black Ontario has the fourth highest yield, 1,734 lb/acre; by comparison, O.A.C. No. 211 yielded 1,821 lb/acre.

Squirrell, W.J.; Laughland, J. 1932. "Soybeans in Ontario." *Ontario Department of Agriculture, Bulletin* No. 366. 16 p. April. Two tables (p. 6-7) show the average results for 6 years in testing 21 varieties of soybeans for fodder and for grain by the Department of Field Husbandry at the Ontario Agricultural College. For grain/seed production Black Ontario has the highest average yield over the 6 years at 28.47 bushels/acre, followed by North's (28.42), O.A.C. No. 211 (27.73), and Black Manchurian (Jeffrey; 27.12). The plants were cut for harvest between Sept. 23 and Oct. 9. The Black Ontario was received from a grower in the Manitoulin Island in 1924. It produces small, black grain and straw of medium length. "The O.A.C. No.

211 has proven to be the best general purpose soybean tested at the College." Address: Ontario, Canada.

268. Zavitz, C.A. 1927. Forty years' experiments with grain crops. *Ontario Department of Agriculture, Bulletin* No. 332. 98 p. Oct. See p. 36-37, 49-51, 84-87.

• ***Summary:*** The section titled "Dates of seeding soy beans" (p. 36-37) contains a table showing the results of sowing three varieties (Early Brown, Early Yellow, and O.A.C. No. 211) on four different dates from May 8 to May 28 during the three years 1924, 1925, and 1926. For each variety is given the date of maturing and the yield of grain. The highest yield came from O.A.C. No. 211, sown on May 14 and matured on Oct. 8; it yielded 27.91 bu/acre.

The section titled "Soy beans, Dent corn and sunflowers grown alone and in combination for grain and fodder" (p. 49-51) "The highest total yield of green crop per acre was obtained from the Soy beans, Dent corn and sunflowers when grown in combination, the average being 18.8 tons or 1.7 tons per acre more than sunflowers when grown alone." An interesting phase of this line of investigation is the value of a combination of Soy beans and Dent corn. The average 7 years for the following crops were: Soy beans, 7.9; Dent corn, 13.8; Soy beans and dent corn, 13.8. The average for the 7 years gives exactly the same total weight for corn alone as for corn and Soy beans combined. The Soy beans being rich in albuminoids will make a much richer and better balanced ration for feeding purposes when mixed with corn.

When everything is taken into consideration for grain production, it is preferable to grow Dent corn and Soy beans separately rather than in combination. Three acres of corn and 2 acres of Soy beans would give a greater total production of each crop than if 5 acres of the 2 crops were grown in combination.

The section on "Soy beans grown with millets, sorghums, etc., for fodder (p. 51) notes that in each of the past two years the O.A.C. 211 variety of Soy bean has been grown alone and with seven other fodder crops, whose names are given. The results are unclear.

The section titled "Varieties of Soy beans" (p. 84-87) states: "We have tested in all fully one hundred varieties of soy beans, most of them for five years or over. The Early Yellow variety has been under test for thirty-one years [i.e., since about 1896], during which time it gave an average annual yield of grain per acre of 16.78 bushels, or 1,006.8 pounds. In a twenty-two-year test the average annual yield of grain per acre was 1,055 pounds for the Early Yellow Soy, and 950 for the Ito San. In another test, running twenty-two years, the Early Yellow gave 5.9 and the Ito San 7.5 tons of green crop per acre per annum. It will be seen that... the Early Yellow was higher in production of grain and the Ito San in production of fodder.

"Eight varieties, which have been grown under similar conditions in each of the past fourteen years. The following table gives the average results for the fourteen-year period." For each variety is given the average height (inches), weight per measured bushel (lbs), yield per acre of green fodder (tons), and of grain (bushels by weight). The eight varieties are listed in descending order of grain [seed] yield: Habaro No. 20405 (20.38 bu/acre), O.A.C. No. 111 (19.92), Tsurunoko (19.91), Early Yellow (19.81), Quebec No. 92 (18.64), Brown (17.94), Ito San (17.30), Medium Green (13.51).

"The Habaro was imported from the United States Department of Agriculture at Washington. It was first introduced in 1906 from Khabarovsk, Siberia. The O.A.C. No. 111 was obtained through selection work from the Early Yellow variety, the latter being originally obtained from Dr. C.C. Georgeson, then connected with the Agricultural Experiment Station at Manhattan, Kansas. This was one of the leading varieties imported by Dr. Georgeson from Japan a few years previous.

"The Tsurunoko variety, third on the list, was started 19 years ago, from 4 ounces of seed obtained directly from the College of Agriculture, Sapporo, Japan. The Quebec No. 92 was originated by selection by Dr. Leonard S. Klinck, when in charge of the agronomy work at Macdonald College, Quebec. The Medium Green has been growing at the College for a long time, but owing to its late maturity does not give satisfactory results as a grain producer."

A second table (p. 85) gives the average yields of fodder and seed of thirteen varieties grown at the College in the last five years. These include the eight listed above plus (in descending order of seed yield): O.A.C. No. 211, Manchu, Habaro, Minnesota No. 167, Early Soja (Steele, Briggs), Early Soja (Bruce). The top six varieties in seed yield are: O.A.C. No. 211 (28.1 bu/acre), Manchu (27.38), Tsurunoko (26.43), O.A.C. No. 111 (25.97), Habaro (25.97), Early Yellow (25.82). Note that O.A.C. No. 211 has the highest average seed yield. "This variety has now been accepted as eligible for registration by the Canadian Seed Growers' Association. It is the only variety of soy beans which has been so honoured."

The Manchu was imported in the U.S. in 1913 from Niguta, Manchuria, and was entered into the College tests in 1922... The Manchu has a black, and the O.A.C. No. 211 what is usually termed a yellow eye. Other than the color of the eye, both of these varieties are of a beautiful yellow appearance."

A table (p. 87) shows 26 varieties of soy beans that have been under test at the Ontario Agricultural College experimental grounds in the three years 1924, 1925, and 1926. Those not mentioned above are (in descending order of seed yield): North's, Black Ontario, Mandarin, Black Eyebrow (Jeffrey), Black Manchurian (Jeffrey), Oyaji, Shiro Kotsubu, Kuro-otsubu aka, Argyle (Jeffrey), Ogemaw,

Hollybrook (Jeffrey), Chagara, Wasa-Otsura, Washe Otuku. The top eight varieties in seed yield are: O.A.C. No. 211 (1,821 lb/acre), Manchu (1,746), North's (1,737), Black Ontario (1734), Mandarin (1,699), Black Eyebrow (Jeffrey) (1,670), Habaro No. 20405 (1,629), O.A.C. No. 111 (1,618). "It will be seen that the O.A.C. No. 211 variety stands at the head of the list in yield of grain, and second highest in yield of green fodder."

Photos show: (1) The Field Husbandry Building at O.A.C. (cover). (2) Soy bean plants growing with Dent corn for fodder (p. 50). (3) A man standing in an acre plot of O.A.C. No. 211 Soy Beans grown for grain (p. 86).

Note: This is the earliest document seen (Sept. 2004) that mentions the soybean variety Black Ontario. Address: B.S.A., D.Sc., Prof. of Field Husbandry and Director of Plant-Breeding and Field Experiments, Ontario Agricultural College, Guelph.

269. Don Bark's son standing knee-deep in an experimental plot soybeans at the Canadian Pacific Railway's Brooks Demonstration Farm in Brooks, Alberta, Canada (Photograph). 1927. *

• ***Summary:*** This black-and-white photo (#B3120) is owned by the library and archives of the Eastern Irrigation District, P.O. Bag 8, 550 Industrial Road, Brooks, Alberta T1R 1B2, Canada. Phone: 403-362-1400. A sign in the foreground of the field says "Soy Beans." Note: See also Don H. Bark (1924). MacConkey (1936) states that Don Bark first grew soybeans at Brooks, Alberta, in 1922.

According to Gerry Bander, the archivist, the photo has no date written on it. On the index card in the cardfile, the date of the photo is given as 1920. However Jerry is quite sure that this date is incorrect, and that based on computer records concerning the origin of the series of photos, of which this one is a part, the correct date should be 1927.

She was unable to find any other early documents in her archives (including all Eastern Irrigation Section Annual Reports, Brooks, and Mr. Griffin's materials downstairs) concerning soybeans in Alberta. She found an article about Don Bark which gives his history but does not mention soybeans.

Note: This is the second earliest document seen (Jan. 2010) concerning soybeans in Alberta province, Canada, or the cultivation of soybeans in Alberta province, Canada. Yet the date is not firm.

270. Dorland, Arthur Garratt. 1927. A history of the Society of Friends (Quakers) in Canada. Toronto, Ontario, Canada: The Macmillan Co. of Canada Ltd. xiii + 360 p. See p. xi, 170-71, 342. Illust. Index. 22 cm. [141* ref]

• ***Summary:*** The section on Lobo and Arkona townships (p. 168-72) notes that the first Friends' families came to Lobo Township in about 1843. The first of the new meetings in Lobo Township was at Coldstream, which was located about 15 miles northwest of London, Ontario. By 1857 Lobo was established as a regular Preparative Meeting and by 1893 it became a Monthly Meeting. Daniel Zavitz came to Lobo in 1843, and purchased 100 acres of land for $4/acre; not one tree on it had been cut. During the first year he cleared 7 acres, which he planted to wheat, but his crop was ruined by late frost. Undaunted, he kept clearing the stubborn forest, adding new fields. After 4 years, he traveled to Western New York State "to secure the hand of a companion and helpmate in the person of Susan W. Vail, who returned with him to the home in the clearing which had been prepared during those four years of labour. The descendants of this pioneer Quaker home have been, and still are, among the leaders in this community"

(Footnote: See: Edgar M. Zavitz, *A History of Friends in Lobo Township,* London, Ontario, Canada, no date. Edgar M. Zavitz, a son of Daniel Zavitz, occupied the old homestead until his death.)

In the pioneer community of Lobo a flourishing Friends' Meeting was eventually established. In 1849 a meeting for Worship on First Days was granted to Lobo Friends, and in 1857 a regular Preparative Meeting was established by authority of Norwich Monthly Meeting. In 1850 property for a meeting house was first secured. Daniel Zavitz and Daniel H. Cornell were appointed the first trustees of the property. In 1859 a new brick meeting house (50 x 32 feet) was erected; it still stands at Coldstream.

Lobo Meeting soon became one of the most progressive centers of Quakerism in Canada. In 1886 a monthly periodical, *The Young Friends' Review,* began publication, with both S.P. Zavitz and Edgar M. Zavitz on its editorial board. It was published until 1899, when it was transferred to Friends in New York, then after a few years merged with the *'Friends' Intelligencer* of Philadelphia [Pennsylvania].

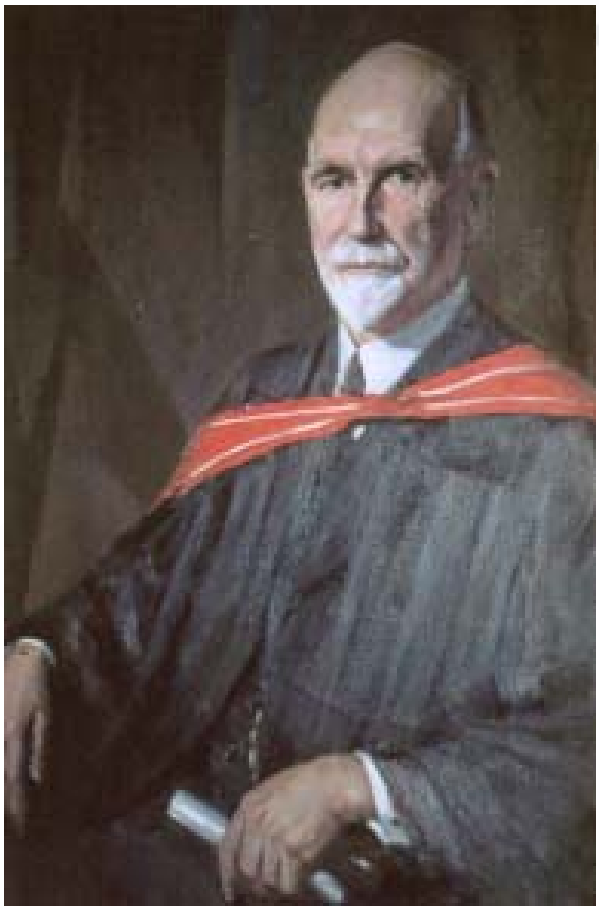
"No single meeting in the Society of Friends in Canada can show a more interesting record of achievement than this little group of Friends at Lobo. Moreover, out of this group came Charles A. Zavitz, Professor of Field Husbandry in the Agricultural College at Guelph, Ontario, who by his scientific attainments and skill in the field of agriculture contributed materially to the food production of Canada and of the world." (Footnote: "In 1916 the University of Toronto conferred on Charles A. Zavitz the degree of D.Sc. for his distinctive attainments in Field Husbandry. He also served for many years as Clerk of Genesee Yearly Meeting, and later as Chairman of the Canadian Friends Service Committee.")

In 1931 the Service Committee became the focal point of a united effort by Canadian Friends. That year the "three Yearly Meetings decided to appoint members to serve on a united Canadian Friends Service Committee. Charles A. Zavitz, a member of the Genesee Yearly Meeting (Hicksite) was appointed Chairman..."

A map (inside front covers) shows the townships in Upper Canada (Ontario), the Maritime Provinces, and along the U.S.-Canadian boundary where Friends principally settled. Two carts (inside rear covers) show: (1) Meetings established by the Society of Friends in Canada prior to the "Great Separation" of 1828. (2) Meetings belonging to "Orthodox" and "Hicksite" Friends in Canada after 1828. Key early dates of establishment: 1695–New York Yearly Meeting. 1841–Pelham Quarterly Meeting. 1848–Yonge St. Quarterly Meeting. 1867–Canada Yearly Meeting.

Chapter 1, titled "The organization, discipline, and distinctive testimonies of the Society of Friends" gives an excellent overview for those unfamiliar with the subject: Introduction (brief history, George Fox and Quakerism in England, different levels of meetings, ways of making decisions when the Clerk "takes the sense of the meeting" based on the "presence and fellowship of the Spirit" and the "deeper unity of love underlying all diversity and difference of idea," Ministers, Elders, and Overseers). Plain language and dress. Peace (against war). Oaths (not taking them). Marriage (by fellow Quakers). Ministry and worship. Itinerant Ministry. Address: PhD, Prof. of History, Univ. of Western Ontario, London, Canada.

271. Portrait of Prof. Charles Ambrose Zavitz (Photograph). 1927. Undated.



• ***Summary:*** This is a color photograph of a color oil painting of Prof. Zavitz (lived 1863-1942) was painted (oil on canvas) by Charles MacGregor in 1927. Prof. Zavitz is wearing academic robes and has a white pointed beard. The framed painting is about 4 feet high. In 1928 it was presented by the Class of 1927 to the Ontario Agricultural College. It hangs in the foyer of the Crop Science Building at the Ontario Agricultural College in Guelph, Ontario, Canada–on the right wall as you enter. It belongs to the University of Guelph collection. For permission to reproduce, we thank the Macdonald Stewart Art Centre, Univ. of Guelph.

Talk with James R. Zavitz. 2001. Dec. 6. Prof. Zavitz's wife did not like this portrait. It was taken when he was going through a stressful period because he and the then president, Dr. Reynolds, did not get along at all. An attempt was being made to force him out, and he was bucking that when the photo was taken. Office politics.

272. Howell, D.J. 1928. Replaced old varieties with new: Ontario fields made more productive through labors of Dr. C.A. Zavitz. *Family Herald and Weekly Star (Canada).* Jan. 4. p. 3, 7. *

273. Tompkins, P.W. 1928. The Pacific Coast oil industry: History, evolution and progress of the vegetable and fish oil trades. *Oil & Fat Industries* 5(2):48-57. Feb. See p. 51-52. Continued from January issue.

• ***Summary:*** "Soya bean oil importation originated on the Pacific Coast, commencing about 1908 and arriving in second-hand kerosene tins. At that time the oil was dutiable and the importers, seeing a large business opportunity if the duty was removed, were successful in having it placed on the free list. The early shipments of soya bean oil, packed in tins and cases, were sold to soap manufacturers.

"With the removal of the duty in 1909, the imports increased rapidly and the packing changed from tins to new American oak barrels. This oil found a ready market throughout the U.S., and the Pacific Coast importers as far back as 1910 started to ship it in tank cars across the American continent, which necessitated the installation of tanking facilities in San Francisco... With the European war, the imports of soya bean oil showed an enormous increase, shipments then being brought forward not only in new American oak barrels, but also in tins, as well as in bulk in the deep tanks of steamers. These heavy arrivals continued until the tariff of 1922, which removed soya bean oil from the free list and placed it on the dutiable list at the rate of 2½ cents per pound, thus reducing imports tremendously.

"Soya bean oil continues to be an article of import but only spasmodically. All shipments now come forward in bulk in steamers' deep tanks in quantities of approximately 500 to 800 tons at one time. Some of this oil is consumed in this country, while a large portion finds its way into Canada.

"Some of the early arrivals of soya bean oil originated at Shanghai, Hankow, Newchang and Dalny (Dairen), but the Manchurian product shipped from Dairen constitutes the entire present import. Most of the oil is pressed, and is consumed by the soap industry, though some is used in the manufacture of paint. During the World War considerable was used for edible purposes."

274. Goss, J. Fletcher. 1928. The combine in South Dakota. In: Present Status of "Combine" Harvesting: Papers, Discussion, and Reports Presented at the "Combine" Session of the Meeting of the Power and Machinery Division of the American Society of Agricultural Engineers [ASAE], at Chicago, November, 1927. St. Joseph, Michigan: ASAE. 38 p. See p. 5-6.
• ***Summary:*** "The combine is coming into South Dakota very rapidly, as in many other states in the central and central western part of the United States and Canada. The first combine was used in South Dakota in 1920. The next of which we have any record was purchased in 1922. In 1925 there were possibly two dozen combines in use... I know it is a conservative estimate to say that there are over 200 combines in South Dakota at the present time" (1927).

"Practically every kind of small grain has been harvested with a combine in this state. Wheat, of course, is the largest crop, but oats, barley, spelt, rye, and flax, as well as sweet clover and soybeans, have been harvested successfully."

"Very few horses are used on the combine or to haul grain. In fact, only 42 per cent of the combine owners visited owned any work horses and all the combines were pulled by tractors."

"Most of the machines do some custom work, and there are a few machines that do nothing but custom work. We have a record of one 16-foot machine doing 900 acres of custom work as well as 450 acres of the owner's. In most cases the man who furnishes the machine furnishes everything and charges by the acre. The prevailing charge is $2.50 per acre but a few charge $2.75 to $3.00." Address: Asst. Prof. of Agricultural Engineering, South Dakota State College.

275. Vi-Tone Company. 1928. George Young takes plenty of energy-producing food (Advertorial). *Toronto Daily Star (Canada).* Sept. 10. p. 2.
• ***Summary:*** George Young, a well-known swimmer, and Johnny Walker, a trainer of swimmers, both favor foods that are high in energy-producing powers, and "one of the most important of these is Vi-Tone, which many people use and most of us have seen in the stores.

"It is a food tonic beverage, with a delicious malt chocolate flavor and contains the rich proteins and vitamins of the soya bean.

"Taken hot or cold it produces energy almost instantly. In this way it is far better than mere stimulants. For Vi-Tone gives that staying power which can only be obtained from true nourishment." Address: [Hamilton, ONT, Canada].

276. McRostie, G.P.; Hamilton, R.I.; Dimmock, F.; Clark, S.E. 1928. Soybeans in Canada. *Canada Department of Agriculture (Ottawa), Pamphlet* No. 93. 11 p. New Series.
• ***Summary:*** In Canada the main areas of production are the central and southwestern portions of the province of Ontario. Small areas have been grown in every province in the Dominion. Canada has imported annually, during the last 7 years, an average of about 5,000,000 pounds of soybean oil for use in the manufacture of soaps and paints.

The cake or meal resulting from the extraction of oil from soybeans has a feeding value equal to that of linseed meal or cotton seed cake. It is being imported into Canada at present in considerable quantities for feeding purposes.

A description of 18 varieties grown in the tests at the Dominion Experimental Station, Harrow, Ontario are listed in a table. Address: Central Experimental Farm, Ottawa.

277. Vivenza, A. 1928. La coltivazione della soja in Italia e nelle sue Colonie [The cultivation of the soybean in Italy and in its colonies]. *Atti della Societa Italiana per il Progresso delle Scienze (Perugia)* 16:375-93. Oct. 30 to Nov. 5, 1927. [3 ref. Ita]
• ***Summary:*** Contents: Introduction. The soybean *(La soja).* Characteristics of the plant (and places where its cultivation is being tested). Varieties of soybeans. Ecological requirements. Cultural requirements. Current state of soybean cultivation in various countries: France, Spain, Central Europe, United States and Canada, Manchuria, Ceylon, New South Wales *(Nova Galles del Sud).* More recent soybean trials in Italy (Manvilli, Bottari, Marignoli in Spoleto, Ferrero in Sardegna, etc.). Experiments conducted at Perugia. Cultivation of soybeans in the Italian colonies (experiments in Italian Somalia, Libya (Tripoli), and potential in the Eritrean plateau *(l'Altipiano Eritreo)).* Ploughing under soybeans as green manure. Possibilities for cultivating soybeans on a vast scale in Italy. Conclusions.

Pages 388-89 discuss cultivation of soybeans in the Italian colonies. "The amazing ability of soya to benefit from intense sunlight, provided that the soil does not lack a certain level of humidity, makes one think of the potential of this crop on the fertile, well-watered soil of Italian Somalia. In this region, a legume very similar to the soybean has already been cultivated for several years and with excellent results–*Vigna sinensis*, called 'cowpea' by the Americans. This should be an indication of conditions favorable to the cultivation of soybeans, probably also as an intercrop.

"I understand that soybean experiments are being conducted by the large agencies of S.A.I.S. (Società Agricola Italo-Somala [Italo-Somalian Society of

Agriculture]) in the Scidle (under Uebi Scebeli) headed by the eminent S.A.R., the duke of Abruzzi.

"The agricultural director of these agencies, Dr. Giuseppi Scassellati-Sforzolini, who is handling the experiment with great skill and interest, relates however that the initial results are less than satisfying. But these tests do not rule out altogether the soybean crop's potential for success in our colony.

"In Libya, under the care of the Office of Experimental Agriculture in Tripoli, experimental cultivation of soybeans was carried out this year, but with negative results. In the autumn, the soybean plants demonstrated little resistance to the cold, and in the spring they showed a need for much irrigation.

"This information led me to the esteemed Prof. G. Leone, director of agricultural services of Tripolitania, who among other things, supports a repeat of the experiments next year." However the author apparently favors phasing out the planting of crops like the soybean in Libya.

"Further experimentation by the worthy *Istituto agrario sperimentale di Tripoli* [Experimental Agricultural Institute of Tripoli] will determine if soya resists normal minimum temperatures in the spring and the notorious *gibli* winds, and therefore will decide definitively on the possibility of spring crops in non-irrigated lands. If indeed possible, soya could then be planted in autumn, grow during the winter, and ripen in spring to either whole dry soybeans or green forage. Of course it would need to be provided with the introduction and diffusion of the specific nitrogen-fixing bacteria it requires.

"With regard to the Eritrean Colony, it can't be denied that on the Eritrean plateau, soya could become successfully cultivated. But this is also awaiting experimental resolution." In summary: Soya had been cultivated in Somalia and Libya by Oct. 1927.

"In Italy the soy bean cannot be grown as a second crop following a cereal, but only as a principal crop, partially replacing maize, beets or beans. Irrigation is needed for best results in the arid conditions of southern Italy... The early varieties of soy bean are the only ones which can be grown in Italy, and the yield of these is rather low, 5-20 bu. per acre, depending on soil fertility. While the culture of the soy bean in Italy may sometimes be usefully substituted for that of maize or beans, no great hopes should be built on it. Hitherto very few experiments have been made of soybean cultivation in the Italian colonies. The indications are that it would succeed in Somaliland and on the Eritrean plateau [Note that Eritrea is a province in northern Ethiopia; its capital is Asmara]. This is less probable for Libya, where the irrigated zone is limited and occupied by other more remunerative crops."

Note 1. This is the earliest document seen (Aug. 2009) concerning soybeans in Libya, or the cultivation of soybeans in Libya. This document contains the earliest date seen for soybeans in Libya, or the cultivation of soybeans in Libya (by Oct. 1927). The source of these soybeans is unknown.

Note 2. This is the earliest document seen (Aug. 2009) concerning soybeans in Somalia, or the cultivation of soybeans in Somalia. This document contains the earliest date seen for soybeans in Somalia, or the cultivation of soybeans in Somalia (by Oct. 1927). The source of these soybeans is unknown.

Note 3. This is the earliest document seen (Aug. 2009) concerning soybeans in connection with (but not yet in) Eritrea and Ethiopia.

Note 4. Libya was occupied by Italians in 1914. The provinces of Tripolitania (in northwestern Libya) and Cyrenaica (in northeastern Libya) were united in 1934. Tripoli is a region in north Africa (in today's Libya) and a seaport city on the Mediterranean in that region. Long the object of Italian aspirations, Tripoli was finally ceded to Italy by Turkey as a result of the Tripolitan War (1911-12); under Italians the entire western part of the colony of Libya (1912-19) became known as Tripolitania; it was separated from Cyrenaica in 1919 and reunited in 1929. In 1934 the settled portion in the north was divided into four provinces for administrative purposes; one of these was Tripoli. Address: Professor.

278. *Toronto Daily Star (Canada).*1929. Offices of new company. Feb. 15. p. 18.
• ***Summary:*** "A new company has been incorporated to be known as the Milton Oil Refineries Ltd., with a capital of $100,000 and will occupy the building near the C.P.R. station, formerly occupied by the Milton Textile Co."

Note: Milton is located about 20 miles east of Guelph, Ontario, Canada–just west of the western end of Lake Ontario. By March 1930 Milton Oil Refineries would start crushing soybeans.

279. *Toronto Daily Star (Canada).*1929. Milton's new industry. March 5. p. 18.
• ***Summary:*** "The Milton Oil Refineries Ltd... will start at once to get the building ready so as to begin operations on May 1."

281. Shutt, Frank T. 1929. Feeding stuffs: Miscellaneous, Lab'y No. 89629: Soyabean cake meal. *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 71, 74. For the year ending March 31, 1928.

• ***Summary:*** "A buff coloured meal, with a pleasant, sweetish odour. This concentrate is characterized by a high protein content and a notable percentage of fat; these features with its low fibre content combine to place soyabean cake meal among the most valuable of the concentrates."

Note: This is the earliest English-language document seen that uses the term "soyabean cake" or "soyabean cake meal" to refer to ground, defatted soybeans. Address: Dominion Chemist, Ottawa, Ontario.

282. *Toronto Daily Star (Canada).*1929. Offer preferred stock Toronto Elevators Ltd.: Issue underwritten by Dominion Securities–Convertible into three common. April 11. p. 17.

• ***Summary:*** To-day Dominion Securities is offering $1,500,000 7 per cent. cumulative convertible preference shares of Toronto Elevators Ltd. The company owns and operates "a 2,000,000 bushel grain elevator recently completed on the Toronto Harbor front, and own or control all the capital stock of the Sarnia Elevator Company Limited, which has a one million bushel elevator on Sarnia harbor.

Note 1. Sarnia is a natural harbor at the southern tip of Lake Huron.

Note 2. Soy is not mentioned.

283. North, J.L. 1929. Plant and weather notes. *Quarterly Summary and Meteorological Readings (Royal Botanic Society of London)* No. 40. p. 7-9. April.

• ***Summary:*** The first section, titled "The Soya Bean" begins: "The experiments to acclimatise the Manchurian Soya Bean begun in the R.B.S. [Royal Botanic Society] Gardens in 1914, have conclusively proved that there are certain varieties of Soya which can be depended upon to ripen seed and give a crop early enough to be harvested in September in this country.

"As regards one brown variety the experimental stage has already been passed. Messrs. Sutton & Sons, of Reading, this year are growing a good many acres of the bean to meet a demand from agriculturists which could not be supplied from last season's crop, and the National Institute of Agricultural Botany, at Cambridge, who tested it last season on a small scale, intend to plant three-quarters of an acre of the bean in 1929 for experimental purposes.

"Other varieties are still under test for earliness, cropping and oil production, and these are being added to this year by a number of new varieties received from Professor McRostie, of Ontario, Canada.

"The following article, which appeared in most of the agricultural papers last November, gives details of the first attempt in this country to grow the Soya Bean commercially for seed: -"

The article, titled "The Soya Bean Grown in England," states: "An agricultural feat of some importance to British farmers has now been successfully performed. This is the acclimatisation of the soya bean, and this year for the first time a fine crop has been grown for seed purposes in England.

"The variety is a hybrid received in 1922 from Professor W. Southworth, of Manitoba Agricultural College, Canada, and in the course of seven years' trials here proved to be not only the most reliable cropper, but the hardiest of any of the sixty varieties tested by me for growth in this country for the last fourteen years.

"Sent to Messrs. Sutton for trial at Reading, it was son on May 2nd, and harvested in the middle of September." Address: F.R. Met. Soc. [Fellow, Royal Meteorological Society], Curator R.B.S. [Royal Botanic Society, London].

284. Dimmock, F. 1929. The soybean in Canada. *Proceedings of the American Soybean Assoc.* 2:47-50. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.

• ***Summary:*** "It is doubtful if the acreage of soybeans in Canada at present exceeds 1,000 acres," and that is limited almost entirely to southwestern Ontario. "As far as the speaker is aware, only one firm in Canada uses the soybean in a commercial way. The Vi-tone Co., of Hamilton, Ontario, uses annually about 5,000 bu in the manufacture of a patent food." [The product name is not given. It may have been Soybean Malter Milk and/or Chocolate Malter Milk.] "During 1922-27 Canada imported annually an average of 5,000,000 lb of soybean oil for use in the manufacture of soaps and paints. This oil represents the product of at least 20,000 acres of soybeans." Some farmers have switched to growing soybeans because of the ravages of the European Corn Borer.

"Soybean work at the Dominion Experimental Station, Harrow, Ontario." The soybean is a comparatively new crop in Canada. It has been grown experimentally at Guelph, Ontario, for upwards of 30 years. At Harrow tests have been carried on for 7 years and have just emerged from a preliminary test stage. Upwards of 25 varieties have been tested; 18 of which have been tested for 4 years or more. The average maturity for the earliest variety tested (Ste Annes No. 92) has been 107 days with an average yield of 21.5 bushels per acre of seed. The average maturity of the latest variety tested (A.K.) has been 126 days with an average yield of approximately 40 bu/acre of seed.

Note 1. This is the 2nd earliest document seen (Jan. 2010) that gives soybean production or area statistics for Canada.

Note 2. This is the earliest document seen (Oct. 2004) that mentions the soybean variety Ste Annes No. 92. Address: Prof. and Agrostologist, The Harrow Experiment Station, Harrow, Ontario, Canada.

285. Edmondson, J.B. 1929. Tenth annual meeting of the American Soybean Association at Guelph, Canada. *Proceedings of the American Soybean Assoc.* 2:40-41. Aug.
• ***Summary:*** This meeting of the American Soybean Association in Canada, held 22 and 23 Aug. 1929, began with a tour of southwestern Ontario "under the leadership of Professor W.J. Squirrell, head of the field Husbandry department, and L. Laughland, crop extension specialist, of the Ontario Agricultural College. Starting at Chatham, the group visited the soybean plots at the Ridgetown Experimental Farm and was conducted over the farm by the superintendent, W.R. Reek."

"Other soybean plots which were inspected on the way to Guelph were located on the farm of D.R. McDiarmid and L.D. McLarty, near Ridgetown, and another stop was made on the Weldwood Farm near London [Ontario]. This farm is operated by the publishers of the *Farmer's Advocate*, one of Canada's oldest farm journals. Another stop was made near Stratford, where a beautiful field of soybeans was inspected.

"These plots which were visited represent part of the variety and field testing work that is being carried on by the College. The [soybean varieties] Manchu and O.A.C. No. 211, the standard variety of Ontario, were used chiefly in this work. The tour ended at Guelph where ample arrangements for the entertainment of the guests for the night had been made."

A comprehensive discussion of, "The Soybean in Canada," was given by Prof. F. Dimmock, Agrostologist at The Harrow Experiment Station at Harrow, Ontario. Prof. Squirrell followed with a discussion of the experimental work that has been carried on with the soybean by the Guelph Experiment Station during the past 20 years. President G.I. Christie [Guelph Agricultural College, Guelph, Canada] "then called on a number of soybean men from the audience for short talks, including Robert W. Knister, Northwood, Ontario, one of Canada's pioneer soybean growers," followed by for men from the United States (Indiana and Tennessee).

"At the business meeting which followed, Chas. L. Meharry, Attica, Indiana, chairman of the legislative committee, gave a report of the activities of his committee in securing adequate tariff protection against the importation of cheap soybean products from the Orient. It was felt that progress was being made and Mr. Meharry was continued as chairman of this committee."

A photo shows "A soybean field on the farm of Robert Knister of Kent County, Ontario. Mr. Knister is one of the pioneer growers and deeply interested in the crop."

Note 1. This is the first meeting of the American Soybean Association in Canada.

Note 2. This is the earliest document seen (Dec. 2004) concerning the legislative activities of the American Soybean Association. Address: Secretary, American Soybean Assoc., Clayton, Indiana.

286. Edmondson, J.B. 1929. Secretary's report to the American Soybean Association at Guelph, Ontario–August 23, 1929. *Proceedings of the American Soybean Assoc.* 2:42.
• ***Summary:*** "The American Soybean Association is closing its tenth year of activity. During this time, annual meetings have been held in various states throughout the soybean producing area. In coming to Ontario for the meeting this year, the Association has departed somewhat from custom by venturing into a territory where soybeans are scarcely recognized as a practical farm crop. The wonderful opportunity for soybean expansion in this Province, however, fully justifies this place for the meeting, as we believe the future will reveal to us.

"The development of soybeans in America during the past ten years has been phenomenal and this association, through the cooperation of the various experiment station and extension staffs, has been an important factor in bringing this about. It has recognized from the first that the surest means of establishing soybeans firmly on American farms is through the process of education."

"One of the serious problems that confronts the association is the difficulty of obtaining and maintaining an adequate list of members. Obviously the membership has a direct bearing not only on the scope of influence of the organization, but on its financial welfare as well."

"The lack of adequate funds in the treasury makes the publication of the Proceedings of the 1928 and 1929 meetings an impossible undertaking, unless some plan for financing the enterprise is adopted." Address: Sec'y-Treas [Secretary-Treasurer], American Soybean Assoc., Clayton, Indiana.

287. Morse, W.J. 1929. Letter from Dr. [sic] Morse. Tokyo, Japan, July 20, 1929. *Proceedings of the American Soybean Assoc.* 2:50-52. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.
• ***Summary:*** This letter from W.J. Morse was read before the 1929 convention of the American Soybean Association at Guelph, Ontario, Canada. This is the first annual ASA meeting he has missed. He begins with a brief description of the "Oriental Agricultural Exploration Expedition" headed by Mr. P.H. Dorsett and himself. They plan to study soybeans in Japan first. "The largest soybean section is the Island of Hokkaido which has an acreage of 215,212 [planted to soybeans] and produces 3,184,245 bushels of beans" [yield = 14.8 bushels/acre].

"On our arrival and after establishing headquarters in Tokyo, we first began to look up varieties which we might send back to the United States for the 1929 planting. We succeeded in packing up about 100 lots which are now growing in the variety plots at Arlington Farm [Virginia]. In hunting out this seed, we were very much surprised to find the soybeans listed with the garden beans and as garden beans. For the most part these are grown as green vegetable beans. These sorts are black, brown, greenish yellow, and yellow seeded varieties of early, medium, and late types. Some of the yellow seeded varieties are listed as most suitable for bean curd, soy sauce, miso, natto, and confectionery purposes, such as sweet bean paste, candied beans, roasted beans (like our peanuts), and sugared beans." Note: Azuki beans, rather than soybeans, are usually used to make "sweet bean paste" in Japan.

"It is amazing, the extent to which the soybean is used for food in Japan. Whether or not it can be used in the United States in all of the ways used here is extremely doubtful, that is for human food." There is no doubt that American soybeans will be used mostly to produce oil and oil meal. "It may interest you to know that the beans produced in Japan are used entirely for human food, green manure, and planting purposes. The grain varieties have seed of higher quality than those produced in Manchuria and are not used for oil and oil meal production as [are] the beans of Manchuria. The great soybean oil and meal production of the Orient is confined almost entirely to Manchuria.

"Another thing which surprised us greatly was the extent to which soybeans are used for green manure purposes in the rice paddies." The plants are turned under in the mud after water has been run into the paddies.

"Another extensive use of the soybean is for bean curd, or tofu, which is manufactured only... in small shops scattered about the cities and country villages. This curd is used in many ways, being the meat of the poorer classes. It is used, however, quite generally in making bean-curd soup [miso soup with tofu] which is sometimes served at breakfast and nearly always at supper. The bean curd is peddled about from house to house by men with two tubs suspended from a bamboo pole over their shoulders. The sound of the little horn of the bean curd man as he announces his coming has become quite a familiar sound to our ears as we go along the streets or hear him pass under our office windows.

"Soy sauce is manufactured on a very large scale and is universally used by the Japanese, rich and poor. We have had the pleasure of visiting the large experimental laboratory of an experiment station given wholly to soy sauce and saké experiments. In Hokkaido we visited a soy sauce factory, the buildings of which covered several acres. In one of the curing vat buildings where the mash is allowed to cure for about 18 months, we counted ninety large vats.

"Soybeans are used to a very considerable extent for confectionery purposes. The large black, brown, and green seeded varieties are used in making sweet bean paste which is put up in small thin slabs and then done up in very attractive packages. Roasted beans, similar to our roasted peanuts, may be found at nearly all confectionery stores. Roasted beans are also sugar coated and others are sprinkled with small pieces of sea-weed during the roasting, which gives an appearance of mottled beans (rather a familiar sight to our mid-west farmers). Then, there are the candied beans, that is, beans which have been boiled in syrup.

"Miso and natto are two forms of bean foods in which the beans are first cooked and then treated with certain bacteria [sic, microorganisms]. Miso is used largely in soups which are consumed at breakfast. Both of these foods are quite largely used.

"Other products used for food are roasted soybean flour, soybean vermicelli, pickled green beans in the pod, yuba–the film produced by boiling soybean milk, and dried frozen bean curd." Note 1. This is the earliest English-language document seen (Feb. 2004) that uses the term "dried frozen bean curd" to refer to dried-frozen tofu.

Note 2. This is the earliest English-language document seen (Dec. 2005) that contains the term "roasted soybean flour."

"Another surprising thing is the very extensive use of the soybean as a green vegetable bean. As early as May, small bundles of plants with full grown pods were seen on the market. At the present time the market is virtually flooded with bundles of plants with full grown pods, the seeds of which are also full grown. The pods are boiled in salt water and the beans eaten from the pods.

"During the past two weeks we have visited large sections near Tokyo where soybeans are grown for green vegetable purposes. The beans are grown in rows 2 feet apart and in 95 per cent of the cases there are other crops planted between the bean rows, such as early cabbage, onions, lilies (for the edible bulbs), late varieties of soybeans, late plantings of soybeans, and other early truck crops." Address: USDA, Washington, DC.

288. *Proceedings of the American Soybean Assoc.*1929. Preface. Officers of the Association. Special committees. 2:2-3.

• ***Summary:*** This is a preface to this volume of Proceedings, which covers the annual meetings held in 1928 and 1929. The main work of the Association has been to educate and to provide accurate information about soybeans. This has been a challenge "since many farmers have allowed their enthusiasm for this crop to out run their knowledge concerning it. To meet this situation, the Association has depended on two lines of endeavor; the holding of annual meetings in cooperation with the various experiment stations, for the study and discussion of soybean problems,

and the publishing of reports of these meetings that the information thus evolved may be given to the interested public in printed form. The first of these reports was published two years ago, in which the reports of the first seven meetings were printed..."

Officers of the Association–1929: President–G.I. Christie, Guelph Agricultural College, Guelph, Canada. Vice-President–C.K. McClelland, Fayetteville, Arkansas. Secretary-Treasurer–J.B. Edmondson, Clayton, Indiana. Directors–J.S. Cutler, Columbus, Ohio. Harvey Clapp, Accotink, Virginia. E.J. Delwiche, Green Bay, Wisconsin. J.B. Buchanan, Guelph, Canada.

Officers–1930: President–W.L. Burlison, Urbana, Illinois. Vice-President–F.S. Wilkins, Ames, Iowa. Secretary-Treasurer–J.B. Edmondson, Clayton, Indiana. Directors–Harvey Clapp, Accotink, Virginia. Roy Chasteen, Crothersville, Indiana. J.B. Buchanan, Guelph, Canada. W.C. Eldridge, Columbia, Missouri.

"Special committees: Legislative–Charles L. Meharry, Attica, Indiana. Walter Godchaux, New Orleans, Louisiana. Harvey Clay, Accotink, Virginia. Editing–Keller E. Beeson, Lafayette, Indiana. J.B. Edmondson, Clayton, Indiana."

289. Squirrell, W.J. 1929. Experience with soybeans in Ontario. *Proceedings of the American Soybean Assoc.* 2:43-44. Tenth annual field meeting. Held 22-23 Aug. at Guelph, Ontario, Canada.

• ***Summary:*** "The soybean crop has been grown experimentally at the Experiment Station at Guelph since 1894 and variety material has been distributed for co-operative experiments to farmers since 1900. In all over one hundred varieties of soybeans have been under test at this station, in addition to experiments in dates of seeding, rates of seeding, methods of cultivation and mixture experiments. The O.A.C. No. 211 variety, which is a plant selected strain of the Habaro variety which latter variety was imported direct from Japan by the Ontario Agricultural College, has been the outstanding variety under test... It is now grown to a limited extent in southwestern Ontario and is the only variety eligible for crop registration in Canada...

"In order to bring this crop into greater prominence and to convince farmers of the value of both the forage and the grain a number of demonstrations under the direction of Dr. G.I. Christie were planned in the spring of 1929. These demonstrations were placed in the principal counties of central and southwestern Ontario, in most cases three in each county. Each demonstration consisted of an area of two acres, one acre growing the O.A.C. 211 and the other acre the Manchu varieties. One-half of each variety was cut for forage and the other half cut for seed...

"One of the factors effecting the increase in area of the soybean crop in Ontario is the lack of machinery to remove the oil from the soybean. A greater appreciation of the value of this crop by farmers and industrialists will before many years undoubtedly result in a greatly increased acreage of soybeans in Ontario." Address: Prof., Dep. of Field Husbandry, Ontario Agricultural College [O.A.C.].

290. Ste. Annes No. 92 / Ste. Anne's / Sainte Anne: New Canadian domestic soybean variety. 1929.

• ***Summary:*** Sources: Dimmock, F. 1929. "The soybean in Canada." *Proceedings of the American Soybean Assoc.* 2:47-50. See p. 49. "Soybean work at the Dominion Experimental Station, Harrow, Ontario." The soybean is a comparatively new crop in Canada. It has been grown experimentally at Guelph, Ontario, for upwards of 30 years. At Harrow tests have been carried on for 7 years and have just emerged from a preliminary test stage. Upwards of 25 varieties have been tested; 18 of which have been tested for 4 years or more. The average maturity for the earliest variety tested (Ste Annes No. 92) has been 107 days with an average yield of 21.5 bushels per acre of seed.

Shutt, Frank T. 1931. "Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29." *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. See p. 55. Discusses the influence of heredity and environment on the content of protein and oil in about 18 varieties of soybeans grown at Harrow and Ottawa in 1928 and 1929. Two tables (p. 55) list the varieties grown at Harrow these two years: One of these, "Ste. Annes, 92" (also spelled "Ste. Anne's No. 92"–p. 56) is high in protein.

*Fifty years of progress on Dominion experimental farms, 1886-1936.* 1939. Ottawa, Ontario, Canada: J.O. Patenaude. 158 p. See p. 20. "Beginnings in Canada: In Canada a school of agriculture, now affiliated with the faculty of Arts of Laval University, was established at Ste. Anne de la Pocatière in 1859. Experimental work was carried on in connection with the Ontario Agricultural College, founded in 1873." A map (p. 6) shows that the "Ste. Anne" station is located in today's Quebec province, just south of the St. Lawrence River.

Black, M.A. 1939. "Soya beans." *New Zealand J. of Science and Technology* 21(1A):46a-60a. June. See p. 53A-54A. Tables 5 and 7 shows the average and range in the number of days to maturity, and the yields (1935-1938) for 14 soybean varieties tested in three seasons, two at Palmerston North, three at Ruakura, in New Zealand. One of these is "St. Annes." In table 7, they are listed in ascending order of days to maturity: St. Annes (141 days) is the fourth earliest; Manitoba Brown (128 days) is the earliest. However St. Annes had a very low yield (11.2 bu/acre).

Elliott, H.G. 1946. "The soybean. Its possibilities in W.A." [Western Australia]. *J. of Agriculture, Western Australia* 23(4):285-93. Dec. A table (p. 293) lists 18

soybean varieties obtained from Canada and tested in Western Australia. One of these, “Ste. Anne’s No. 92" was the earliest variety tested (108 days to maturity) but gave a low yield (21.68 bu/acre).

Morse, W.J. 1948. “Soybean varietal names used to date.” Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 7. “Sainte Anne. Canada station selection.”

Note: What is the source of the name of this variety? Macdonald College is part of McGill University, which is located at Ste-Anne-de-Bellevue, Quebec, Canada. The two previous soybean varieties developed in Quebec (Quebec No. 92 and Quebec No. 537) were both developed at Macdonald College by Leonard Silvanus Klinck by 1914.

291. Smith, W.L. 1929. Forty years of one man’s life [Charles Zavitz]. *Canadian Countryman (The)* 18:7, 36-37. Dec. 7.

• ***Summary:*** An excellent biography of Dr. C.A. Zavitz, covering the 41 years from June 1886 to June 1927.

The Ontario Agricultural College (OAC) was still a small organization when Zavitz, “having just finished the two-year course at the College, was asked to take a junior position on the staff of the struggling institution. Previous to his elevation from the status of student, the staff consisted of seven, with Dr. Mills at the head, and the number of students who had taken the regular and special courses was 105. The structural equipment was in keeping, consisting as it did of the old main building, a frame barn, a small green house, and a brick building that served as creamery.”

The students labored hard in the 1880s, “half of each day being spent on practical work on land or in buildings and half at lectures or studies... The members of the staff worked even harder than the students. Dr. Zavitz, for example, was required to assist both Prof. Brown in the agricultural and Prof. C.C. James in the chemistry department, the double duties covering such varied activities as field work, experiments in live stock feeding and dairying, as well as laboratory work in the chemistry building. Nor was that all. While carrying on these double duties he continued the studies which enabled him to take his degree in 1888, affiliation with Toronto University having meantime taken place. The examination for this degree brought honors in ten out of eleven subjects.

“Dr. Zavitz’s real work began, however, when he was made head of a department which began the field experiments and eventually included plant breeding as well. This department, like the College as a whole, commenced in a very modest way. A storage building back of the chemistry building served as an office. Space for seeds to be used in experimental work was found among bottles and utensils in the basement... For the first five or six years, Zavitz himself performed all the work of seeding the plots and he also fed the miniature machine used in threshing the grain grown thereon.

“There had been field experiments at the college before the student days of Dr. Zavitz. Even the Experimental Union which grew out of these experiments had its birth as far back as 1879, Lewis Toole, of Mount Albert being father of the Union. It was under Dr. Zavitz, however, that the work on the experimental plots at the college farm, and the extension of that work on privately owned farms all over the Province, attained full development. In the course of time nearly 3,000 varieties of seeds for farm crops were obtained, including many from abroad, and from first to last over 100,000 individual experiments were carried out for the purpose of determining which varieties were most suitable for reproduction on Ontario farms.”

Describes how the complex Experimental Union system works; its farmer members grew from 12 the first year to 3,000 or more later on. “Ultimately the work was not confined to testing existing varieties but extended to the creation of new ones, a much more difficult operation.” Dr. Zavitz consulted with Luther Burbank, the master plant breeder from California, when learning how to create new varieties.

The work of Dr. Zavitz has been widely recognized at home and abroad. “By special invitation he has lectured before the British Association for the Advancement of Agriculture; the American Association for the same; the International Congress on Hybridization and Plant Breeding at London, England; and the British Association on Agricultural Education at Glasgow, Scotland. He has also been elected to honorary fellowship in the American Association for the Advancement of Science; Canadian Society of Technical Agriculturists; American Society of Agronomy; Canadian Seed Growers’ Association; and has been made honorary president both of the Canadian Seed Growers’ Association and the Ontario Experimental Union.”

A large photo shows a painting of Dr. Zavitz in his academic robes by Charles MacGregor; it is hung in Memorial Hall, OAC, Guelph, Ontario.

292. **Product Name:** Maruten Miso.
**Manufacturer’s Name:** Amano Miso Seizo-sho (Amano Brothers).
**Manufacturer’s Address:** 2141 Powell St., Vancouver, BC, Canada. Phone: High. 5526 L.
**Date of Introduction:** 1929.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 254. Amano Miso Seizô-sho. Mr. Teiichi? (or Otokazu? or Kuniichi? or Chikakazu? or Tsugikazu?). 2141 Powell St., Vancouver, BC. Phone: High. 5526 L.

The New Canadian. 1941. Aug. 22. p. 8. “For 12 years Mr. [Teiichi] Amano has been in the business of making

Japanese miso."

Vancouver City Directories. 1952-66. The first listing is 1952: Amano, T. Co. (T. Amano). Soya sauce and rice paste manufacturers. 1139 E. Hastings St. In 1955 the occupation had changed to manufacturers, importers, and exporters." In 1966 it was: Amano, T., Co. Ltd. (T. Amano, president). Importers. 1139 E. Hastings.

Interview with George Tsuchiya, general manager of Amano. 1981. Nov. 24; Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. "There were several semi-commercial makers of miso and shoyu in Canada, in the Vancouver area, prior to World War I, and at least one commercial miso manufacturer was in the area prior to 1927. In that year [sic, in 1929] Mr. T. Amano started Amano Brothers. p. 255. Listed as T. Amano Co. Ltd., 1139 E. Hastings St. In 1982 the T. Amano Co. was making a red miso and a sweet white miso."

Talk with Michael Weiner. 1987. Dec. 16. Amano is presently the largest manufacturer of miso in Canada. They may soon break ground for a large, new miso and soy sauce plant.

Note: This is the earliest known commercial miso product made in Canada.

• ***Summary:*** "Of John A. Bruce & Co., Hamilton [Ontario], Canada, died in his home at the city on July 9th, 1928, after a lingering illness.

"Mr. Bruce was born in Pebbleshire, Scotland, 91 years ago. In 1858 he came to Hamilton and with his brother, Charles, founded the Bruce Seed Store, now known as John A. Bruce & Co., with a business extending..."

294. United States Tariff Commission. comp. 1929. Summary of tariff information, 1929 on Tariff Act of 1922. Schedule 1. Chemicals, oils, and paints. Washington, DC: U.S. Government Printing Office. 419 + xv p. Printed for the use of the Committee on Ways and Means, House of Representatives.

• ***Summary:*** The section titled "Soy-Bean Oil" (p. 283-84) briefly discusses: Description and uses. Production of soy bean oil in the United States (1922-1928). Imports into the United States (1919-1928). Exports (1922-28; They go mainly to Cuba, the Dominican Republic, British South Africa, and Canada–but we are not told how much was exported to individual countries or when those exports began). Cost of production. Prices (1923-1928). Competitive conditions (mainly for use as a soap oil, a drying oil, and as ensilage).

Note: This is the earliest document seen (Dec. 2008) concerning soybean products (soy oil) in the Dominican Republic. This document contains the earliest date seen for soybean products (soy oil) in the Dominican Republic (definitely by 1928, perhaps as early as 1922); soybeans as such had not yet been reported by that date. Address: Washington, DC.

295. Vi-Tone Company. 1929. Jack and Jill both love Vi-Ton [sic, Vi-Tone] (Ad). *Proceedings of the American Soybean Assoc.* 2:37.

• ***Summary:*** This half page black-and-white ad is for Vi-Tone, a food tonic beverage based on soy milk and dairy milk in malt chocolate flavor. "No matter whether the boy or girl is two or twenty-two, Vi-Tone will make instant friends.

"You know, as soon as you taste Vi-Tone, that it is different–better and more appetizing than ordinary beverages.

"Vi-Tone is a scientific combination of the Soy Bean with malt extract and milk–rich in protein and vitamin content–and deliciously flavored with chocolate."

An illustration shows a small can of Vi-Tone, which appears to be a powder. Near the top of the label: "Malt Chocolate Flavor." It can be served hot or cold. "A tonic food beverage."

Note: This is the earliest document seen (July 2001) that advertises or markets soymilk. Address: Hamilton [Ontario, Canada].

298. Dorsett, P.H.; Morse, W.J. 1930. Visit to the Noda Shoyu Company, Ltd. in Chiba, Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• ***Summary:*** Pages 3465-67 (7 Jan. 1930). "Today we really got started on our work of looking up and getting information about soybean products. In accordance with plans made yesterday, we left Tokyo this morning (Ueno Station) at 8:15 for Noda-Machi, Japan, where we arrived at 9:45. We went direct to the office of The Noda Shoyu Company, Ltd., of Noda-Machi, Prefecture of Chiba, Japan, makers of the famed Kikkoman Shoyu.

"This company embracing 19 plants, is one of, if not the largest plants in the world brewing shoyu sauce. According to their literature, Kikkoman Shoyu was first brewed by Mr. Saheiji Mogi, in the second year of Meiwa [sic, Hoei?] (corresponding to the year 1704) in Noda-Machi, Japan.

"We met Mr. Ota, one of the assistant directors, we also met Mr. Hichizaemon [Shichizaemon] Mogi, President and Director, also a Mr. Jutaro Namiki. We spent about 1½ hours with these gentlemen in the office. Then Mr. Ota and Mr. Namiki showed us over one of their large plants. It impressed us as an up-to-date modern institution. We were in the grading and mixing room. They have 30 incubating chambers or curing rooms where the germ on the 50-50 mixture of soybean and wheat mash is grown.

"The cement vats, or aging vats, of which there are 1,500 under one roof, are made of cement and are 12 feet square and about 8 feet in depth.

"In the manufacture of shoyu sauce, this concern uses annually about 20,000 bushels of soybeans, primarily from Manchuria, and also 20,000 bushels of wheat, Japanese grown when available. They import from Australia. This year, however, they are getting their supply of wheat from Canada.

"They have 200 square (about 4 ft. by 4 ft.) hydraulic presses and 200 oblong ones about 4 ft. by 6 ft. They age their shoyu sauce 1½ years in the curing vats."

Page 3466-68. Photos show: (1) Racks of small trays, outdoors, each about 2 inches deep, 18 inches long, and 10-12 inches wide, used to cure soybean and wheat mash [koji] for making shoyu sauce (negative #44709). (2) A nearby view of the interior of one of the small trays (#44710). (3) Many round bundles of cask stock of spruce, stored outdoors. The wood will be used to make kegs for storing shoyu sauce. A part of one warehouse of the Noda Shoyu Co. is in the background (#44711). (4) A horse pulling a cart on a railroad track. On the cart are bundles of spruce stock that will be used to make soy sauce casks (#44712). (5) A nearby view of portions of ricks or bundles of short pieces of spruce for staves, tops and bottoms of small casks for shoyu sauce (#44713).

Page 3474. A photo shows a bottle (with label) of soy sauce made by Noda Shoyu Co., and materials used in its manufacture, including salt from Formosa, wheat from Canada, and soybeans from Manchuria (negative #44734).

Page 3482. A photo shows three identical bottles of Kikkoman brand soy sauce, each from a different angle so that all parts of the label are visible. Each bottle is 7½ inches tall and 2 inches in diameter, and holds one-fifth liter of sauce. Obtained on Jan. 7 from the Noda Shoyu Co. D&M item #3074. This company is the largest in the Orient (negative #44742). Address: Agricultural Explorers, from USDA, Washington, DC.

299. Dorsett, P.H.; Morse, W.J. 1930. Miso in Japan (Document part). In: P.H. Dorsett and W.J. Morse. 1928-1932. Agricultural Explorations in Japan, Chosen (Korea), Northeastern China, Taiwan (Formosa), Singapore, Java, Sumatra and Ceylon. Washington, DC: USDA Bureau of Plant Industry, Foreign Plant Introduction and Forage Crop Investigations. 7,410 p. Unpublished log.

• ***Summary:*** * = Best photos. Page 3487 (8 Jan. 1930). Photos of the side and top of a small wooden tub (6 inches diameter, 4 inches high) of *Kairyo Hishio,* made by the Takagawa Co., Noda, Japan. "This form of miso is mixed with rice and eaten." The tub is bound with strips of bamboo and tied with three strands of rice straw rope. Note: Hishio is a seasoning with a consistency somewhat like that of applesauce–much softer than that of miso. Page 3488. Photos shows the same product in small jars 2½ inches in diameter and 3½ inches high.

Page 3596 (17 Jan. 1930, Tokyo). "Went to the Chikuma Miso Factory, one of the largest concerns of this kind we have seen. They use 200 bushels of dry soybeans and an equal amount of rice per day." Pages 3598-3601. Photos show: Catties or casks of miso in front of Chikuma Miso Factory. Same view showing paper covering cask. Loading casks of miso onto truck in front of factory. "Ricks of just recently returned empty catties in front of Chikuma Miso Factory ready for cleaning and refilling." Two Japanese men standing by empty and filled catties of miso. Inside Chikuma Miso Factory, two men standing by a tall vat of miso with four casks on the floor in front of them. One man is holding a long pole.*

Pages 3633-36 (21 Jan. 1930, Tokyo). Photos show: Miso ingredients on a bamboo sheathe/culm. Five different kinds of miso on a bamboo sheathe. Miso as sold wrapped in a bamboo sheathe plus the Japanese label measuring 4.6 by 7 inches. Pages 3733, 35, 38-39 (31 Jan. 1930, Tokyo). Photos show: (1) A cylinder of commercial miso (3 inches diameter, 8 inches long) with labels, side and top views. (2) Miso (which contains turtle blood) in a small eight-sided wooden box (3¼ inches across), with label. (3) Two glass jars containing miso, with labels; side and top views. (4) Two small square boxes (4 by 4 inches) containing miso, one closed the other with top off to show miso. Page 3818. Photo of miso wafers with package, purchased in a confectionary shop in Yokohama, Feb. 7. "These wafers are very good." Page 3820. Photo of two packages of Okazaki

Miso [Hatcho Miso], "said to be a famous brand." One is wrapped (apparently in bamboo sheath, showing label), one unwrapped. Package is 3½ inches wide and 8 inches long. Page 3895. Photo of glass jar of Rikyu miso with label, purchased in Tokyo Feb. 13 for 50 sen a jar. Page 3897. Photo of small jar of Kinzanji Miso (3 views with label). Sells in Tokyo for 30 sen each. Page 3902. Photo of small wooden box of "Tori [chicken] Miso." Sells in Tokyo for 35 sen each.

Page 3974-75 (Feb. 21). Visit Sendai Miso Jozo Jo, Sendaitenai, Oimachi, Tokyo. "Learned that much of their miso for local consumption is only aged for a week or ten days to two weeks, but that Miso for export trade to Canada, the United States and other countries is aged much longer, a year or more. This concern uses annually about 50,000 bushels of soybeans and an equal amount of rice for making Miso–plus 25,000 pounds of salt. Their yearly output is about 12,000,000 pounds. The wooden casks used to pack the Miso contain 200 pounds net weight and sell wholesale at Yen 10.00 to 13.00 per cask. For shipment abroad they use the standard 4½ gallon soy sauce wooden cask. It has a capacity of about 40 pounds and sells delivered at San Francisco at Yen 2.50 to 3.00 per cask."

Pages 3978-79. Photos taken at Sendai Miso Jozo in Tokyo show: (1) Steamed rice spread on out rice straw mats in a wave pattern covering the entire floor of a large room.* After cooling, rice bacteria (Koji [sic, koji starter]) is added, and after three days the malted rice is mixed with boiled or steamed soybeans in the making of soybean miso. (2) Miso mashing tubs *(usu)* used for mashing boiled soybeans when making miso.* Each tub is made from a hollowed tree trunk and first used by Lord Governor Date in the "Year of Kaiei" about 300 years before the start of the Meiji Period (in 1868). Note: Daté Masamune (DAH-tay Mah-sah-MU-nay; lived 1567-1636) of Sendai was the first Japanese to make miso in a factory, starting in the early 1600s.

Page 4022, 4024 (Feb. 23). Photos: A slice of large white Japanese radish *(daikon)* which has been preserved in soybean miso. Thin sugared cookies [rice crackers] named *Satou Miso Senbei,* in which soybean miso has been mixed.

Pages 4082-86. Photos of handsome boxes of miso with labels each purchased in the food department of a large department store in Tokyo. (1) Box (4½ by 6 inches) of Kinzanji Miso. "Kinzanji is the name of a temple in Kyoto and this miso was first concocted by a priest in this temple." (2) Box (4½ by 6 inches) of Saikyo Miso. "A form of white miso sweetened, and containing a large amount of rice." (3) Box of *Wasabi miso,* Japanese horseradish mixed with miso. (4) Box of *Tori miso,* which has chicken meat in it. (5) Box of *Goma miso,* which has sesame seeds mixed in.

Page 4140. Photo of rice bacteria (koji [sic, koji starter]) from T. Aseda Miso Factory, Tokyo, Feb. 28. Name: *Kuroban Moyashi.* Used in the production of miso malt [rice koji]. The contents of this package will inoculate 5 koku (25 bushels) of rice. Price: 0.35.

Pages 4313-22 (12 March 1930). Went to Shimbashi Station and took the electric tram for Oimachi, Tokyo, to visit the Sendai Miso Jozojo Miso factory. Photos: (1) Interior of miso mixing room. Bean crusher and mixer were invented by this company. (2) Shipping room, where casks of miso are weighed and loaded into trucks for delivery.* (3) Large soybean steamer with live steam. (4) 300 year old *usu* for crushing soybeans. (5) View of a room full of wooden miso tanks/casks [vats] curing from above the top of the vats.* The top of each vat is weighted with rocks. Each room contains more than 80 vats. Each cask is about 7 feet high and 8-10 feet in diameter. The miso is aged here for a year or more. The company has several such rooms. (6) Soybean steamer in operation. (7) A large pile of rice koji ready to mix with an equal amount of cooked soybeans. To the right is a portion of a small wooden mixing tub with bamboo hoops. (8) Two wooden casks [kegs] of miso, packed and ready to ship to San Francisco, California.* "They have considerable trade there for this product." (9) A cooper at the Sendai Miso Factory seated on the ground and making bamboo hoops for hooping miso casks.*

Page 4344-45 (March 10). Photos: (1) Small box and label of white miso *(Shiro miso)* made from polished rice and soybeans. Purchased from Mikonaya Miso Co., Tokyo. The three characters are written horizontally from right to left. White miso is not used as extensively as red miso. It is "used on special occasions in soups and eaten as cheese with other foods. White miso is much more expensive than red and has more rice in it." (2) Small circular box of rice koji from Mikawaya Miso Co. Can be used to make white miso or sake–rice wine.

Page 4390-91 (20 March 1930, Tokyo). Photos: (1) Boxes of the various ingredients used in making Sendai Miso. From left to right: Dry soybeans, soaked soybeans, polished rice, steamed rice, steamed rice with koji and salt, rice mould (koji), salt mixed with steamed soybeans and moulded rice, finely ground soybeans, coarse miso one week old, coarse miso one year old. "These were received from the Sendai Miso Factory, Tokyo, Japan, March 20, 1930." (2) Vegetables preserved in red soybean miso. The vegetables are Japanese white radish *(daikon)*, cucumber, burdock root, small vegetable melon *[uri]* and egg plant [eggplant].

Page 4444-45 (23 March 1930). Photos at the Sendai Miso Factory, Tokyo: (1) Steamed soybeans cooling on a floor in a wave pattern. "After the beans are cooled, they are mixed thoroughly with molded rice [koji] and salt (shown in the background in a mixing machine). The mixture is placed in large curing vats and allowed to cure for about three months." (2) A second view of the same room from a different angle. Address: Agricultural Explorers, from USDA, Washington, DC.

300. Colquette, R.D. 1930. Dr. Zavitz of the O.A.C.: The Dean of Canadian Field Husbandmen has had a distinguished career as a teacher, lecturer, and scientist. *Country Guide (The) (Winnipeg, Manitoba).* Feb. 1. p. 5, 33-35.

• ***Summary:*** A superb biography of Dr. Charles V. Zavitz–well researched, well written and detailed. Begins with a description of how, 140 years ago, when "United Empire Loyalists were flocking to Canada, three brothers named Zavitz [who were Quakers] left their home near Philadelphia, made their way through the primeval forest to the Niagara frontier, crossed over the river and settled within hearing of the thunder of the Falls."

Later one of the brothers pushed on westward, settled west of London, Ontario, in Middlesex County, and finally established a branch of the family at Poplar Hill. The young republic of America "had just won the revolutionary war and was little disposed to tolerate the peaceful doctrines of the Society of Friends."

Dr. Charles Zavitz is the great grandson of the man who settled west of London, Ontario. His achievements have made the name of Zavitz known "far beyond the community of Poplar Hill, where children of the fifth generation bearing the name have born; far indeed beyond the confines of Canada. For in the 40 years during which he was associated with the Ontario Agricultural College, his pioneer work in the realm of field husbandry has made his name familiar in most of the agricultural countries of the modern world."

Photos show: (1) The plots at OAC where Dr. Zavitz' research work was done. (2) Thirteen varieties of field crops, including soy beans, wheat, oats, barley, peas, rye, and mangels. In front of them is his grandson, seated crosslegged. (3) The Field Husbandry Building at OAC, built from plans made to the last detail by Dr. Zavitz and his staff.

301. *Toronto Daily Star (Canada).*1930. Milton: Soya bean plant in Milton is new Canadian industry. For the manufacture of meal which ranks high as cattle feed: Also edible oils. Governments to encourage the growth of soya beans in Dominion. March 1. p. 28.

• ***Summary:*** "Milton, March 1.–The first mill in Canada for the manufacture of meal and edible oils from the soya bean and cotton seed will be in operation here shortly." The new company, Milton Oil Refineries Ltd., has one complete crushing unit installed and ready to begin, and has a carload of cotton seed, imported from the United States, waiting to be crushed nearby. This is the first carload of seed imported into Canada for the purpose of milling [crushing].

The meal from both seeds, which remains after the oil is extracted, contains 41-45% protein and is an excellent cattle feed.

"The oil of the soya bean is termed by the enthusiasts as 'the oil of a thousand uses'"; it can be used to make anything from automobile parts to salad oil and oil for deep-frying fish and chips. Coat buttons, baby foods, and breakfast cereals can all contain some part of the soya bean. The little brown bean can be used in the treatment of diabetes. A bread containing 10% soya flour, it is claimed, will retain its freshness for 2-4 weeks. Domestic shortening is now largely made of soya bean oil or cotton seed oil.

Beans can be grown here: Although the company will import all the cotton seed and soya beans it needs from the United States, efforts are presently being made, by the Dominion and provincial departments of agriculture, to interest Ontario farmers in growing soya beans as a new cash crop. It is said that the beans can be cultivated on any land suitable for growing corn.

Describes how soya beans are crushed by [hydraulic] presses at Milton to make oil and meal. The crude oil is shipped away in tank cars. The meal may be finely ground to make flour.

The owners and officers of the new company foresee a large market for their products in and around Toronto. The factory is presently able to turn out one ton of product an hour, but there is room in the current quarters for adding nine more presses.

"While experiments have been conducted at the Ontario Agricultural college, Guelph, for the last 17 or 18 years [sic, since 1893 = last 37 years] on soya bean culture, and there are upwards of [more than] 500 acres grown in Essex county alone, the cultivation of the bean has reached its highest point in the United States. In 1909 there were 2,000 acres under cultivation there, while for 1929 the acreage is estimated at 3,000,000 acres. Last year Canada produced 30,000 bushels of the beans, which were largely sold in the United States, since there was no mill to handle them in Canada."

Ted Harop, who owns a 240-acre farm north of Milton, has been growing soya beans for the past 7-8 years; he has been planting them with his corn and ensiling the two crops together. He said he thought soya beans could be grown successfully in that district for use in a mill, such as the one at Milton.

Discusses how to cultivate and inoculate the soya bean; the inoculum is available from the various departments of agriculture. It costs only 25 cents to inoculate one bushel.

A long passage about the soya bean from the Encyclopaedia Britannica is quoted.

Note: This is the earliest document seen (Jan. 2010) concerning a soybean crushing company in Canada. Milton Oil Refineries Ltd. (Milton, Ontario) began crushing soybeans in March 1930. Address: Special to The Star by staff reporter.

302. **Product Name:** Soybean Oil, and Soybean Oil Meal.

**Manufacturer's Name:** Milton Oil Refineries, Ltd. Renamed Canadian Soyabeans Ltd. by March 1935.
**Manufacturer's Address:** Milton, ONT, Canada.
**Date of Introduction:** 1930. March.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** *Toronto Daily Star* (Canada). 1930. "Milton: Soya bean plant in Milton is new Canadian industry..." March 1. p. 28. "Milton, March 1.–The first mill in Canada for the manufacture of meal and edible oils from the soya bean and cotton seed will be in operation here shortly." The new company, Milton Oil Refineries Ltd., has one complete crushing unit installed and ready to begin, and has a carload of cotton seed, imported from the United States, waiting to be crushed nearby. Note: It is unclear exactly when this company started to crush soya beans.

*Agricultural and Industrial Progress in Canada.* 1935. "Linseed oil." 17(2):27-28. Feb. "The production of the Canadian linseed and soy bean oil industry in 1933, according to a report of the Dominion Bureau of Statistics, was valued at $2,086,000. The number of plants in operation was ten and the capital investment $3,022,000.

"Of these ten plants two used soy beans as their raw material, namely, The Canadian Soyabeans Limited of Milton, and the Soybean Oil and Meal Co-operative Company of Canada Limited of Chatham, both in southwestern Ontario." The value of soy-bean oil and meal was no more than $49,071.

F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-1 to B-2. "During the fall of 1929 the first oil mill for processing soybeans was established at Milton, Ontario, under the name of the Milton Oil Refineries, Limited. This mill got off to a poor start, and for various reasons such as poor management, poor machinery, and probably poor financing, has never operated with any degree of success. It has changed hands several times but is not operating at present. It uses the hydraulic press method of extraction."

C.A. MacConkey. 1935. Soybeans. Ottawa, Ontario, Canada: National Research Council. p. 65. "Firms Engaged in the Soybean Industry in Canada." Canadian Soyabeans Ltd., Milton, Ontario.

Note: Formerly named Milton Oil Refineries Ltd. This was the earliest soybean crusher in Canada. These are the earliest known commercial products made by a soybean crusher in Canada.

303. Tamblyn. 1930. Bargains for the entire week (Ad). *Toronto Daily Star (Canada)*. May 30. p. 10.
• ***Summary:*** In the upper right corner of this full-page ad is a small display ad: "Vi-Tone–is equal in nourishment to many times its bulk in ordinary food. A soya bean product. 49¢ and $1.99."

An illustration shows a person's hand holding a spoon, used to measure some Vi-Tone from a canister into a steaming cup.

Note: Tamblyn is a chain of drug stores which dates back to the early 1900s in Toronto. Address: Toronto.

304. Vi-Tone Company. 1930. Ask the man who trained the champion marathon swimmer about Vi-Tone (Ad). *Toronto Daily Star (Canada)*. Aug. 30. p. 10.
• ***Summary:*** "Johnny Walker knows his job. He's been training athletes for a great many years. He knows the importance of proper diet for healthy vigorous physical condition.

"That is why Johnny Walker specified Vi-Tone for the winner of the 1930 Marathon Swim, and Marvin Nelson agrees with him when he says 'Vi-Tone is the best tonic food beverage I have ever used.'"

Lists other outstanding swimmers who are Vi-Tone boosters.

"Vi-Tone is a scientific combination of health-giving food elements of the Soya Bean, plus Malt Extract and Milk–ingredients which are easily assimilated and provide extra nourishment in concentrated form. Vi-Tone has an appetizing flavor all its own.

"Obtainable at all good grocers and druggists throughout Canada–Ask for Vi-Tone by name.

"Vi-Tone for health." Address: [Hamilton, ONT, Canada].

305. *Toronto Daily Star (Canada).*1930. Toronto Elevators. Sept. 18. p. 21.
• ***Summary:*** "Earnings of Toronto Elevators, Limited, for the year which will be brought to a close on the thirtieth of this month are reported in circles close to the affairs of the company as likely to approximate $4 a share on the common."

This is not quite as good as shown in the first annual report when $4.85 was earned on the common for less than a full twelve month period. Officials are said to be satisfied with the results, given the economic conditions of the past year.

Note: Soy is not mentioned.

306. Meharry, Chas. L. 1930. Seeing soybeans on Illinois farms: Stop No. 3–A.P. Meharry Farm [American Soybean Assoc. annual meeting]. *Proceedings of the American Soybean Assoc.* 3:103-08. Eleventh annual field meeting. Held 10-12 Sept. 1930 in Illinois.
• ***Summary:*** Sept. 11, 1930. Thursday morning, 12:30–2:00. This farm is located one mile south and two miles east of

Tolono. Lunch was prepared by the Ladies' Aid of the Tolono M.E. [Methodist Episcopal] church. The tour shows large scale production of soybeans, illustrating farm practices and inoculation studies.

After lunch, at 2:00, the author begins: "Fellow soybean enthusiasts: This is the third time that our farms have had the privilege and pleasure of welcoming the American Soybean Association. I believe that considering its youth and small numerical strength, the Association has accomplished more than any other farm organization." He then lists the places where the American Soybean Association has held its annual meetings from 1920 to 1930. "If any of you can mention another field crop, the growers of which maintain an international association which has held a big field meeting like this each year for eleven consecutive years in nine different states, the District of Columbia, and one Canadian Province, you will prove yourselves better informed than I am."

"Soys at first were used merely as a clover substitute." Address: Meharry Farms near Tolono, Illinois.

307. Canadian Press (CP). 1930. Ontario Woman wins field bean laurels: Mary Maycock, [of] Milford, gets championship–Canadians in front at Chicago. *Toronto Daily Star (Canada).* Dec. 1. p. 38.

• ***Summary:*** Chicago, Dec. 1. "In soy beans, where competition is regional and by types, Robert W. Knister of Northwood, Ont. [Ontario], was second to Gust Guskalson of Columbus, Wisconsin, for the lake region in the greenish yellow type. M.A. Heckendorn of Breslau, Ont. was seventh in the same competition and J.R. Watson and Son of Guelph, Ont., eighth.

"In the same region, competition for other varieties was won by Hugh Jeffrey of Whitby, Ont., with James H. Cookson and Son of Whitby, second, and Campbell Bros. of Whitby, third. Jeffrey's sample was one of the two best of the show, taking the reserve championship."

308. Dimmock, F. 1930-1936 inclusive. Soybeans. *Division of Forage Plants [Dominion Experimental Farms], Annual Reports* *

• ***Summary:*** These "Annual Reports of the Division of Forage Plants" were not published. Address: Div. of Forage Plants, Dominion Experimental Farms, Canada.

309. *Alumni News (Ontario Agricultural College Alumni Association).*1930? Let's have one for old C.A. [Charles A. Zavitz]. p. 29-30.

• ***Summary:*** Contains a good biography of C.A. Zavitz and his many contributions. Also discusses Zavitz Hall (currently occupied by the Department of Fine Art) and Peter Clark Hall. Photos show: (1) A portrait of Charles A. Zavitz. (2) The five young men in the first graduating class in the Department of Agriculture.

Note: Talk with James Zavitz, the grandson of C.A. Zavitz. 2001. Dec. 6. He has a large copy of photo #2 hanging on his living room wall.

310. Chinaton Echo: New Canadian domestic soybean variety. 1931.

• ***Summary:*** Sources: Shutt, Frank T. 1931. "Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29." *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. See p. 55. Discusses the influence of heredity and environment on the content of protein and oil in about 18 varieties of soybeans grown at Harrow and Ottawa in 1928 and 1929. Two tables (p. 55) list the varieties grown at Harrow these two years: One of these varieties is "Chin Echo." Note: We cannot be sure that this "Chin Echo" is the same as "Chinaton Echo," especially since the variety name is not mentioned again until 1946.

Elliott, H.G. 1946. "The soybean. Its possibilities in W.A." [Western Australia]. *J. of Agriculture, Western Australia* 23(4):285-93. Dec. A table (p. 293) lists 18 soybean varieties obtained from Canada and tested in Western Australia. One of these, "Chinaton Echo," took an average length of time to mature (117 days) but gave a fairly low yield (17.64 bu/acre).

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 2. "Chinaton Echo–Harrow, Canada."

311. Golden: New Canadian domestic soybean variety. 1931.

• ***Summary:*** Sources: Shutt, Frank T. 1931. "Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29." *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. See p. 55. Discusses the influence of heredity and environment on the content of protein and oil in about 18 varieties of soybeans grown at Harrow and Ottawa in 1928 and 1929. Two tables (p. 55) list the varieties grown at Harrow these two years: One of these varieties is Golden.

Elliott, H.G. 1946. "The soybean. Its possibilities in W.A." [Western Australia]. *J. of Agriculture, Western Australia* 23(4):285-93. Dec. A table (p. 293) lists 18 soybean varieties obtained from Canada and tested in Western Australia. One of these, Golden, took a long time to mature (125 days) but gave a good yield (35.48 bu/acre).

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. 312. Shutt, Frank T. 1931. Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29. *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. (Chem. Abst. 25:5587).
• ***Summary:*** Discusses the influence of heredity and environment on the content of protein and oil in about 18 varieties of soybeans grown at Harrow and Ottawa in 1928 and 1929. Two tables (p. 55) list the varieties grown at Harrow these two years: Ste. Annes, 92 (Ste. Anne's No. 92), Early Brown, Mandarin, Yellow 210, Yellow 17, Chin Echo [Chinaton Echo], Italian, O.A.C. 211, O.A.C. 81, Summerland, Black China, E. Korean [Early Korean], Green, Manchu, Black Eyebrow, Ito San, Golden, A.K. For each variety is given: Weight of 100 beans, moisture (%), protein and oil content (%, as received, and water-free).

This research "was undertaken in response to inquiries from several firms interested in the manufacture of soybean oil and soybean meal on a commercial scale. It was desirable to ascertain, if possible, which varieties of soybean were richest in oil and also those with the highest protein content–the percentage of protein largely determining the value of soybean meal." On a moisture-free basis, the Summerland variety contained the highest percentage of protein both years (46/05% and 49.27%), while A.K. contained the most oil (20.18% and 18.79%).

Note 1. Harrow is an agricultural experiment station at Harrow, Ontario, Canada, at the very southernmost tip of Ontario province, south of Windsor and west of Leamington. Windsor, located on the Detroit River, opposite Detroit, Michigan, in southern Ontario, is the county seat of Essex County, and later the site of a major soybean crushing mill.

Note 2. The Summerland soybean variety was developed at the Summerland experimental station in south central British Columbia.

Note 3. This is the earliest document seen (Oct. 2004) that mentions the soybean varieties Black China or Black (China), or Chin Echo [Chinaton Echo], or E. Korean [Early Korean]. Address: Dominion Chemist, Ottawa, Ontario.

313. Summerland: New Canadian domestic soybean variety. 1931.
• ***Summary:*** Sources: Shutt, Frank T. 1931. "Soybeans: Influence of heredity and environment on the protein and oil contents of soybeans, as grown at Harrow and Ottawa, crops of 1928-29." *Canadian Department of Agriculture, Division of Chemistry, Report of the Dominion Chemist.* p. 54-57. For the year ending March 31, 1930. See p. 55. Discusses the influence of heredity and environment on the content of protein and oil in about 18 varieties of soybeans grown at Harrow and Ottawa in 1928 and 1929. Two tables (p. 55) list the varieties grown at Harrow these two years: One of these, Summerland, contained the highest percentage of protein for both years, and very low levels of oil. Note: Summerland was developed at the Summerland experimental station in south central British Columbia.

314. Kinney, C. 1931. The omnipotent bean. *Canadian Geographical Journal* 3(1):46-56. July.
• ***Summary:*** This is an excellent study, with many original photographs, of soya beans and soy products in Manchuria. The author, an American journalist, has been associated for some years with the South Manchuria Railway, and has made a study of economic conditions in Manchuria.

Manchuria, a huge region of about 382,000 square miles, includes 3 of China's wealthiest provinces: Mukden (Fengtien), Kirin, and Amur (Heilungkiang). Sometimes known as the "North-Eastern Provinces of China," Manchuria is ruled by Chang Hsueh-liang, popularly known as the "Young Marshal." He is progressive and wants to see the 3 provinces developed.

The original soya bean "producing centres are said to be Cochin China and Java. The beans were first grown in China Proper about 4,000 years ago and were used locally to feed the natives and animals. To-day the chief zones are Manchuria, China, Japan and Korea, but the amount of soya beans produced in Manchuria alone is much greater than the product of the three other countries combined."

After the Russo-Japanese was (1904-05), victorious Japan, through the Portsmouth Treaty, became the lessee of the Kwantung Leased Territory (1,337 square miles), the southernmost point of Manchuria. It contained the greater part of the southern branch of the Chinese Eastern Railway, which is now known as the South Manchuria Railway. Note: The key ports of Dairen (Dalian) and Port Arthur (Lüshun) are in this Leased Territory.

In about 1905 the last remnants of the Chinese ban on immigration of Chinese into Manchuria were removed. Few came, however, until the early 1920s, "when warfare broke out on a large scale in China proper, and hundreds of thousands of Chinese fled from the famine, war-stricken and bandit infested areas of that country into the peaceful and

undeveloped, yet fertile provinces of the Manchus." Today it is said that about 70% of Manchuria's population are working directly or indirectly on cultivation of soya beans. "There is no doubt in the minds of all that were it not for the soya bean, Manchuria would be an insignificant country."

The origin of soya bean cultivation in Manchuria is unclear, although most agricultural experts believe the soya beans were brought from districts of Central China. The question as to why they thrive in Manchuria, while in other parts of the world with similar climatic conditions, they fail to give good results, has never been fully answered.

European and U.S. buyers of Manchurian soya beans have long complained that they are not properly cleaned or graded. Soil, poor quality beans, and even large stones have been found mixed with Grade One beans. This problem must be fixed quickly if Manchurian dealers expect to continue to sell their beans to Occidental countries. In 1930 an association was formed, with inspectors placed at major centers to see that soya beans are graded correctly.

Genetic improvement of Manchurian soya beans began shortly after 1905 when the Japanese established the Agricultural and Experimental Station at Kungchuling. Soon Japanese scientists developed a larger soya bean with a much higher oil content. It was widely planted by farmers and prices rose accordingly. The Russians, followed by the Chinese, have founded several soya bean and agricultural stations, where material and advice can be obtained by local farmers. The Central Laboratory of the South Manchuria Railway Co. at Dairen is a leading scientific institution for studying soya beans; it has discovered many new uses for the beans, and developed a process for extracting the oil using alcohol as a solvent. The uses of the soya bean, its oil ("bean oil") and its cake ("bean cake") are discussed, as is its composition.

In Manchuria today there are 465 soya bean mills for extracting the oil and making bean cakes. They are located as follows: In Dairen 59, Yingkou 22, Antung 21, and Harbin 46. Along the South Manchuria Railway Line 252. Along the Chinese Eastern Railway Line 28. Along the Ssupingkai- Taonan- Anganchi Line 37.

"The latest statistics gathered by the South Manchuria Railway Co. for the year 1929 show that:–10,065,370 acres of land in Manchuria were planted to soya beans; 5,320,555 tons of soya bean were produced... 3,087,320 tons of soya beans, 133,854 tons of soya bean oil, and 1,568,552 tons of soya bean cakes were exported during 1929."

As "soon as the business depression that is sweeping the entire world is over," soya beans are expected by experts to be in great demand in Europe and America.

The captions to the various photos read as follows: "(1) An aerial view of the Port of Dairen, showing many ships at anchor awaiting their turn for berth space. The city of Dairen is in the background. (2) Soya beans in [osier] bins [12-15 feet high and cylindrical in form] at Kaiyuang, one of the produce centers of Manchuria. Many native carts carrying bags of soya beans are shown among the bins. (3) Bags of soya beans are brought on carts from the interior to the railway stations or marketing places. Due to bandits, Chinese guards are hired [one is shown standing on the cart with a rifle] to protect the beans from being stolen. (4) Coolies carrying bean cakes [that look like cartwheels about 2 feet in diameter and 3 inches thick, in high stacks] from the South Manchuria Railway Company warehouse to the freight steamers. (5) Open storage for soya beans near Dairen wharves [in shapes like houses, each covered with a tarpaulin]. During the busy season, beans are brought down from the interior in large quantities, and are placed in the open storage to await shipment. (6) Interior of a soya bean mill. Presses, or oil compressors, crush the beans, which have first been heated, and oil is extracted. The crude oil is pumped into a large vat where the impurities are removed. [The resulting cakes look like cartwheels] (7) Dumping soya beans into [osier] mat bins, North Manchuria. (8) Due to civil warfare, bandits, high taxation and famine, hundreds of thousands of Chinese immigrants have migrated to peaceful Manchuria. Most of the newcomers are farmers and the majority of them cultivate soya beans. (9) A section of the Kungchuling Agricultural Experimental Station, the largest in Manchuria. For years this organization has experimented on the bean and has succeeded in giving the world a larger and better oil producing bean. This station was established and is still financed by the South Manchuria Railway Company, for the betterment of agricultural products in Manchuria. (10) Primitive method of sorting soya beans [they are flailed on mats in a courtyard]. (11) Oil tanks [and barrels] where soya bean oil is placed prior to shipment. Over 133,000 tons of oil are manufactured annually by the various bean oil mills in Manchuria. (12) Hoisting bags of soya beans from Dairen wharves into the holds of the ships. (13) Soya beans in open storage, awaiting shipment at Ssupingkai station, one of the produce centres in Manchuria. (14) Modern railway tank cars bring bean oil to the wharves where it is deposited into large sea-going oil tankers. (15) Unloading soya beans [from railroad flatcars] at Dairen wharves. The bags of beans are brought from the interior of Manchuria to Dairen, the largest port in Manchuria, the beans are then transported by steamers to various parts of the world." Address: American journalist.

315. Eldred, Myrtle Meyer. 1931. Your baby and mine: Health and habit problems. *Toronto Daily Star (Canada).* Sept. 30. p. 25.

• ***Summary:*** A small percentage of babies are sensitive to cow's milk. "Soybean milk, obtainable in commercial form from your druggist, is a preparation designed for babies who develop eczema from cows' milk. This is a nourishing form of protein, and may have no bad effect on baby."

316. Cartter, J.L. 1931. Effect of latitude on growth and composition of the soybean. *J. of the American Society of Agronomy* 23(12):1066. Dec. Presented as part of Symposium on Soybeans. Leader: W.J. Morse.
• ***Summary:*** "With the rapid growth of the soybean industry in the United States has come the need of better varieties in each region where soybeans are grown. The Department of Agriculture recently introduced several thousand soybean varieties and selections from the Orient...

"Three varieties differing in their date of maturity have been grown cooperatively at experiment stations ranging in latitude from Florida to Canada. Data are presented showing the effect of change in latitude on the growth and on the oil and protein content of these varieties. The seasonal change in number of hours of daylight in different latitudes is charted and the relation of the daylight duration to date of blooming and date of ripening of soybeans is brought out. The effect of time of planting on the date of blooming is also discussed." Address: USDA.

317. **Product Name:** Soyex Malt-Cocoa Drink, and Soyex.
**Manufacturer's Name:** Soyex Co.
**Manufacturer's Address:** Nutley, New Jersey.
**Date of Introduction:** 1931. December.
**New Product–Documentation:** W.L. Burlison and O.L. Whalin. 1932. *Journal of the American Society of Agronomy* Aug. p. 594-609. "The production and utilization of soybeans and soybean products in the United States." See p. 608. "Soyex-Malt-Cocoa drink" and "Soyex" are listed as two Canadian soybean food products.

W.L. Burlison. 1936. *Industrial and Engineering Chemistry* 28(7):772-77. July. "The Soybean: A Plant Immigrant Makes Good." See Table II, p. 775. States that these products were on the market during the latter part of 1931. Note: This is the earliest commercial malted soymilk product seen.

318. Photographs of the Amano Brothers / T. Amano Co. soy sauce factory in Vancouver, British Columbia, Canada. 1931-1937. Vancouver, British Columbia, Canada.
• ***Summary:*** These four black-and-white photos were sent to Soyfoods Center in 1981 by T. Amano Co. of British Columbia. (1) Ca. 1928-31 showing the end and roof of a building with a sign that reads "Amano Brothers. Shoyu Bean Sauce." A street is in the foreground. (2) A sign about 12 feet long in the lower window of a building, ca. 1935. The three lines read: "T. Amano Co. Manufacturer of soya bean sauce. Bean & rice products." (3) The inside of the shoyu plant in 1937 showing many wooden vats and koji trays. A board walkway along the side of three tanks is used by the person stirring the moromi. A wooden ladder leans against a fourth vat. No people are present. (4) Five Japanese men working in the shoyu plant. Three are standing on top of or near the top of the vats, apparently stirring the moromi. A fourth, wearing suspenders, is standing on the floor. Address: Vancouver, British Columbia, Canada.

319. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Gluing materials together. *U.S. Patent* 1,851,950. March 29. 4 p. Application filed 26 May 1930.
• ***Summary:*** Soybean meal protein may be used as base material. Address: New Westminster, British Columbia, Canada.

320. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Gluing process. *U.S. Patent* 1,851,951. March 29. 4 p. Application filed 26 May 1930.
• ***Summary:*** The author has invented a process that makes use of a "penetration checking agent" which in turn makes possible the application of a highly dispersible adhesive without the typical difficulties of the wet adhesive penetrating into the glued wooden surface (often plywood) and lack of uniformity.

The "invention contemplates the provision of non-dispersible adhesive base material [e.g. a powder], as for instance casein, gluten, or other non-dispersed protein, such as the segregated or isolated protein from oil seed flours such as soya bean [isolated soy protein], hemp seed, castor, etc., or seed flours, particularly flour from the residue of oleaginous seeds from which the oil has been removed. Examples of this are flour or meal made from cake or residue of soya bean, cottonseed..." Heat and pressure are applied during the gluing process. Address: New Westminster, British Columbia, Canada.

321. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Process of gluing. *U.S. Patent* 1,851,952. March 29. 4 p. Application filed 28 May 1930.
• ***Summary:*** The author has invented powdered adhesive bases and means for using them, since a variety of difficulties attend the use of liquid glues, as in making plywoods. Not only must the water in the glue be eliminated, but it can also cause the wood to swell, warp, check, and sometimes stain. "As adhesive base material, I may employ the segregated proteins, such as casein, gluten, segregated or isolated protein from oil seed flours such as soya bean, hempseed, castor, etc., or I may employ a vegetable proteinous material in the form of a ground seed flour, for instance the residue of oleaginous seeds from which the oil has been removed being particularly advantageous. Examples of this are flour or meal made from cake or residue from soya bean, peanuts..." Pressure is applied during the gluing process. Address: New Westminster, British Columbia, Canada.

322. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Art of gluing. *U.S. Patent* 1,851,953. March 29. 4 p. Application filed 28 May 1930.
• ***Summary:*** The author has invented powdered adhesive bases and means for using them, since a variety of difficulties attend the use of liquid glues together with alkaline dispersing agents, as in making plywoods. "As adhesive base material, I may employ segregated proteins, such as gluten, segregated or isolated protein from oil seed flours such as soya bean, hempseed, castor, etc., or I may employ a vegetable proteinous material in the form of a ground seed flour, for instance the residue of oleaginous seeds from which the oil has been removed being particularly advantageous. Examples of this are flour or meal made from cake or residue from soya bean, peanuts..." Heat and pressure are applied during the gluing process. Address: New Westminster, British Columbia, Canada.

323. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Process of gluing. *U.S. Patent* 1,851,954. March 29. 3 p. Application filed 29 Sept. 1931. Application also filed in Canada on 3 March 1930.
• ***Summary:*** The author has invented powdered adhesive bases and means for using them, since a variety of difficulties attend the use of "liquid glues." Among the adhesive materials which may be utilized in these adhesives, either singly or in combination, are "casein, gluten, segregated or isolated protein from oil seeds such as soya bean,... flour or meal from the residue of oleaginous seeds, such as soya bean," etc. Pressure, but no heat, is typically applied during gluing. Address: New Westminster, British Columbia, Canada.

324. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Art of gluing. *U.S. Patent* 1,851,955. March 29. 6 p. Application filed 29 Sept. 1931.
• ***Summary:*** Plywood glue can be made from soya-bean flour (or casein) mixed with a solution of caustic soda or caustic potash.

Note: According to the *Oxford English Dictionary,* the term "ply wood" was first used in April 1907 in the *Timber Trades Journal.* The single term "plywood" was first used in 1922. Address: New Westminster, BC, Canada.

325. Laucks, Irving F.; Cone, Charles N.; Dike, Theodore W. Assignors to I.F. Laucks, Inc. (Seattle, Washington). 1932. Method of hot gluing. *U.S. Patent* 1,851,709. March 29. 6 p. Application filed 25 April 1930. 10 drawings. [10 ref]
• ***Summary:*** Improved method for using materials settable by heat (such as soya bean flours) to join pieces of wood. Address: 1-2. Seattle, Washington; 3. New Westminster, British Columbia, Canada.

326. Cutler, G.H. 1932. Germination tests in soybeans. *Purdue Agriculturist (Indiana)* 26(6):82, 96. March.
• ***Summary:*** Contents: Introduction (some 40 strains of Manchu variety soybeans were tested). Season an influential factor. Strains differ in germinability. Hard seeds and germination. Laboratory and field germination: Results differ. Soil influenced germination. Growth period, per cent germination and yield.

A sidebar titled "Twenty-five year with soybeans" contains a brief biography of Dr. Cutler, who started plant breeding and crop production experiments at Macdonald College in [Quebec] Canada as an undergraduate 25 years ago. In 1909 he received his bachelor's degree from the University of Ontario, Guelph, Canada. His master's and doctor's degrees were awarded by the University of Wisconsin in 1926 and 1928 respectively. "In September, 1926, he became connected with the agronomy department at Purdue, taking charge of the plant breeding. The greater part of his time is devoted to the breeding of wheat and soybeans..."

A photo shows a farmer seated on a "cultipacker" pulled by two horses. It "breaks the surface crust and aids the germinating beans in pushing their sprouts through the soil." Address: Agronomy Dep.

327. Squirrell, W.J.; Laughland, J. 1932. Soybeans in Ontario. *Ontario Department of Agriculture, Bulletin* No. 366. 16 p. April.
• ***Summary:*** Contents: Origin and importance. Description. Composition. Climatic adaptation. Rotation. Soil and soil preparation. Manures and fertilizers. Varieties. Seed selection. Inoculation. Harvesting. Threshing. Uses of the crop: Hay, as a soiling crop, ensilage, pasture, soil improvement, ripe seed, straw, soybean oil, meal, other products. What farmers think of soybeans (Extracts from reports by 21 men who have grown and fed the crop from the following places (mostly counties): Durham, Dundas, Brant, Elgin, Frontenac, Grenville, Halton, Hastings, Kent, Lambton, Middlesex, Oxford, Perth, Simcoe, Welland, Wellington).

"Soybeans were first tested in the experimental plots at the Ontario Agricultural College in 1893 and first distributed for co-operative tests from the College to farmers in 1901."

"More than one hundred varieties of soybean have been tested for fodder and grain production by the Field Husbandry Department of the Ontario Agricultural College. Some of these varieties matured sufficiently early to be successfully grown in Ontario. Many, however, are too late for the climatic conditions of the Province and do not even reach the best fodder conditions before the arrival of killing frost."

Two tables (p. 6-7) show the average results for 6 years in testing 21 varieties of soybeans for fodder and for grain

by the Department of Field Husbandry at the Ontario Agricultural College. In each table the varieties are sorted by descending yield of green fodder or grain [seed]. The varieties are: O.A.C. No. 211, Habaro No. 20405 (Wash. [Washington, DC]), Ito San Soja, Black Eyebrow (Jeffrey), North's, Minnesota No. 167 (Minnesota Exp. Station), Manchu, Early Yellow (O.A.C. No. 111), Elton, Medium Green (O.A.C.), Mandarin, Chestnut, Tsurunoko, Oyaji, Shiro Kotsubu, Early Yellow, Black Ontario, Quebec No. 92, Black Manchurian (Jeffrey), Brown, Ogema. For fodder, the "O.A.C. No. 211, which stands first with an average yield of 10.16 tons of green fodder per acre for the 6-year period, is a plant selected strain, developed by the Ontario Agricultural College, from the Habaro variety and is the only variety of soybeans eligible for registration in Canada." The plants were cut on Sept. 7. For grain/seed production Black Ontario has the highest average yield over the 6 years at 28.47 bushels/acre, followed by North's (28.42), O.A.C. No. 211 (27.73), and Black Manchurian (Jeffrey; 27.12). The plants were cut for harvest between Sept. 23 and Oct. 9. The Black Ontario was received from a grower in the Manitoulin Island in 1924. It produces small, black grain and straw of medium length. "The O.A.C. No. 211 has proven to be the best general purpose soybean tested at the College."

Soybean oil "is used in the manufacture of soaps, paints, rubber substitutes, printers ink and other articles. It is also used as a salad oil and as a substitute for butter and lard."

"In China and Japan soybeans are used in many ways as human food. The green pods, dried seed cakes, soy sauce and soybean milk, all have their place. In America soybean flour is made into cakes, biscuits, muffins, and being low in starch it has a special place as a diabetic food."

The article contains 11 photos, including one of 2 horses pulling a rotary hoe, and fields of soybeans growing in Peel, Welland, Dundas, Kent, Middlesex, and Lincoln counties. Address: Dep. of Field Husbandry, Ontario Agricultural College, Guelph.

328. *Chatham Daily News (Ontario, Canada).*1932. Soya bean cooperative gets charter: Form of contract is to be submitted to the growers at once. Matters pertaining to organization of farmers cooperative discussed at meeting of special committee of Board of Trade. May 28. p. 3, 12.
• ***Summary:*** "A charter has been granted to 'The Soya Bean Oil and Meal Co-operative Company of Canada Limited,' and will be in the city in the course of a few days, according to an announcement made by Douglas G. Kerr at a meeting yesterday of the special committee of the Chatham Board of Trade empowered to attend to the details of organization of the farmers co-operative which will operate a crushing plant in the city.

"Another interesting announcement was that more than 6,000 acres have been pledged for soya bean cultivation so far, with promises for more, and that everything augurs well for the operating of a temporary crushing plant in the T.H. Taylor Mills in the fall.

D.E.R. Rispin, chairman of the special committee, presided at the meeting which was held in the agricultural offices. Those in attendance were Douglas G. Kerr, T.R. Jones, Ross Huff, Stewart Campbell, Mayor I.L. Davis, Alderman P.J. Chinnick, and city manager A.L. Thompson."

Restrictions:... Mr. Kerr explained that the co-operative is permitted to issue 2,000 shares at $50 each. The restrictions are that only one share be held by one person, and that shares may only be issued to those actively engaged in farming in Canada. Shares can be transferred only with the consent of the directors.

"The constitution calls for 18 directors. Twelve provisional directors have been named for the purpose of organization, and the permanent directors will be appointed at an early meeting of the shareholders. As soon as the bylaws already drafted are approved, the meeting will be called."

"Management contract: Some discussion was given to the question of a contract with the co-operative management, which will be the Archer-Daniels Midland Company, the opinion being held that details in connection with this could be completed at a meeting to be held next week."

Full details of the eight-point contract are given. First, the Grower agrees to plant, care for, and cultivate a specified number of acres of Soybeans during a specified season at a specified location.

"2. The Co-operative hereby agrees to purchase and the Grower hereby agrees to sell all Soybeans the Grower produces less such quantity to be reserved for seed requirements for the following season as agreed to by the Co-operative, subject to terms and conditions as herein set forth, at a price per bushel (60 lbs.) to be finally determined when the Soybean products have been manufactured and sold.

"3. The Grower agrees to deliver Soybeans when delivery is called for by the Co-operative to the Co-operative crushing plant at Chatham...

"4. The Co-operative will make an advance to the Grower on the price per bushel of Soybeans..."

Note 1. This is the earliest document seen concerning soybeans (or this cooperative crushing company) in Chatham, Ontario, Canada.

Note 2. This is the earliest published document seen (Jan. 2010) concerning a soybean crusher in Canada.

329. Robertson, D.W.; Kezer, A.; Deming, G.W. 1932. Soybeans under irrigation in Colorado. *Colorado Agric. Exp. Station, Bulletin* No. 392. 24 p. July. [4 ref]

• ***Summary:*** Contents: Introduction. Historical. Climatic requirements. Soybeans under irrigation. Preparation of seedbed. Method of seeding. Rate of seeding. Date of seeding. Irrigation. Inoculation of seed. Stage to harvest soybeans. Harvesting methods. Experimental results at Fort Collins (variety tests 1923-1926).

Historical: "In Colorado, soybeans were not extensively grown until about 1923 and for several years after that date. Due to the fact that other crops furnished protein feeds, their use on irrigated land has not increased.

"From tests conducted at Fort Collins, Colorado, it was found that good yields of soybeans could be obtained under irrigation. The following varieties gave the highest yields: Yellow-seeded varieties–Minsoy, Wea, Saskatoon. Dark-seeded varieties–Soysota and Black Eyebrow. The highest-yielding variety was Soysota, a brown-seeded bean. The best date to plant soybeans proved to be late April or early May. Twenty-inch rows gave the highest yield of grain per acre."

Table 1 (p. 8-9) shows: The following varieties were tested for yield in Colorado, most during the 4 years from 1923 to 1926. Yellow seeded (in descending order of yield): Wea, Minsoy, Saskatoon, Manchu, Pinpu, Elton Sel., A.K., Ito San, Mandarin, Elton, Habaro, Early Yellow, Dunfield, Midwest, Aksarben. Dark-seeded varieties: Soysota, Black Eyebrow, Early Brown, Chestnut, Wisconsin Black. Wea (F.C. No. 1017) gave the best average yields of any yellow-seeded variety grown at Fort Collins from 1923-1926. The average yield of Wea during this period was 25.3 bushels/acre. Range: 23.2 to 28.2.

330. Dike, Theodore Williams. Assignor to I.F. Laucks, Inc. (Seattle, Washington). 1932. Method and apparatus for the formation of plywood and the like. *U.S. Patent* 1,870,041. Aug. 2. 19 p. Application filed 21 May 1931. 11 drawings.

332. Burlison, W.L.; Whalin, O.L. 1932. The production and utilization of soybeans and soybean products in the United States. *J. of the American Society of Agronomy* 24(8):594-609. Aug.

• ***Summary:*** Contents: Introduction. Acreage. Yield per acre. Acreage harvested for beans. Acreage harvested for hay. Acreage harvested with livestock. Imports of certain soybean products. Production of important oils in the United States. Net imports of oils and fats into the United States. Import duties levied on soybeans and soybean products. Utilization of soybeans in United States. Soybean products. Summary.

"Soybean acreage harvested for beans has expanded rapidly in the United States since 1925, reaching an estimated production of approximately 18,000,000 bushels for 1931. More than half of the acreage grown each year has been cut for hay. The acreage harvested with livestock has not shown any increase since 1927.

"Imports of soybeans and soybean cake and meal have always been of minor importance. Soybean oil imports represented significant quantities at the close of the World War, however, but have since diminished to negligible amounts as import duties have become effective. The imports of such competing oils as cocoanut and linseed have been of greatest importance.

"Approximately one-fourth of the soybean oil being utilized in the United States is going into paints and varnishes, another one-fourth is finding its way to the soap kettle, nearly one-fifth is being used in edible products, and about one-eighth is being consumed in linoleum and water-proofing products. The number of commercial products being placed on the market that contain soybeans or soybean products is increasing rapidly. A most encouraging feature of soybean progress has been the research development in utilization of soybeans and soybean products within the last two years and the corresponding expansion in demand along commercial lines." Contains numerous statistical tables illustrating these facts. Tables show: (1) Production of soybeans harvested for beans, selected states and the United States, 1924-31, 1,000 bushels. (2) Total equivalent solid acreage of soybeans, selected states and the United States, 1922-30, 1,000 acres. (3) Yield in bushels per acre. (4) Acreage of soybeans harvested for beans, selected states and the United States, 1922-31, 1,000 acres. (5) Acreage of soybeans harvested for hay, selected states and the United States, 1922-30, 1,000 acres. (6) Acreage of soybeans harvested with livestock, selected states and the United States, 192230, 1,000 acres. (7) Imports into United States of soybean oil, soybean meal and cake, and soybeans, 1915-31. (8) Domestic production of soybean oil and other oils and fats from domestic materials, 1916-30, 1,000 pounds. (9) Net imports of animal and vegetable oils and fats, with special reference to soybean oil and five other kinds of vegetable oils, oil equivalent being used for imported materials, United States, 1916-30, 1,000 pounds. (10) Exports of soybean oil and other leading vegetable oils, United States, 1919-31, 1,000 pounds. (11) Duties levied on soybean oil, soybean cake

and meal, and soybeans by the tariffs of 1909, 1913, 1921, 1922, and 1930. (12) How the 1929 and 1930 crops of soybeans were utilized in the United States. (13) Utilization of soybeans and soybean products in the United States, 1930 crop. (14) List of soybean products produced in the United States.

Table 13 (p. 607) "Utilization of soybeans and soybean products in the United States, 1930 crop." The 13,323,000 bushels of soybeans were used as follows: Crushed 4,800,000 bu, seed 4,623,000, feed 3,500,000, ground 400,000 (half used for feed and half for food). The 37,200,000 lb of soybean oil was used as follows: Edible: Oleomargarine 750,000 lb, lard substitutes [shortening] 500,000, other food products 4,750,000. Industrial uses: Paint and varnish 9,000,000 lb, soap kettle 8,500,000, linoleum and oil cloth 4,000,000, other 3,500,000. Increased stocks including oil equivalent 5,700,000. The 110,000 tons of soybean meal was used as follows: Commercial feeds 89,100 tons, other feed 20,000, edible soy flour 850, diabetic foods 50. The 100,000 tons of soybean meal was very small compared to its competing products: Cotton seed meal 2,350,000 tons, and linseed oil meal 1,750,000.

Table 14 (p. 608) "List of soybean products produced in the United States." The accompanying text states that this list "does not pretend to be complete. Attention is called to the large number of food products actually being placed on the market in the United States from soybeans at the present time. This list has grown rapidly during this last year." The extensive list includes commercial food, feed, and industrial products derived from soybeans. Some products have brand names and others only generic names.

"Food products–USA: Soybean flour. Soybean meal flour. Refined edible soybean oil. Soybean salad oil. Chocolate bars (30% soybean flour). Cocoa (up to 60% soybean flour). Sausages (up to 50% soybean flour). Bread (7½% soybean flour). Rolls (10% soybean flour). Macaroni (20% soybean flour). Soybean muffins. Soybean cookies. Soybean doughnuts. Vegetable shortening. Infant foods. Diabetic foods. Oleomargarine. Lard substitutes. Filled sweets. Soybean sprouts. Soybean cheese. Soybean milk. Soybean buns. Soybean ice cream [perhaps that served in Sept. 1930 in Illinois at the American Soybean Association's annual meeting]. Soya cream biscuits. La Choy-soy sauce. Soyolk (flour). Soy biscuits. Soy flour. Vi-Zoy. Lektizoy. Zoy soup. Zoybeans (cooked beans). Bacon and Zoy beans. Zoy bouillon. Soy bean biscuit. Casein gluten flour. Non-fat mayonnaise. Fatless spread. Fluffo.

Canadian food products: Milqo (soy milk). Vi-Tone (chocolate). Soya flour. Soyex-Malt-Cocoa drink. Soyex. Macaroni

"Feed products: Cake or meal. Commercial feed. Dairy feed. Hog chow. Poultry chow. Dog chow. Chicken chowder. Steer fatena. Calf chow. Lay chow. Rabbit chow. 34% protein chow chow. 24% protein chow chow. Chick startena. Chicken fatena. Olelene. Grainola.

"Industrial uses: Paint. Varnish. Enamels. Oil cloth. Linoleum. Printers ink. Glycerine. Celluloid. Lauxtex plastic wall coat. Lauxein waterproof soybean glue. Lauxein emulsifier (all 3 made by I.F. Laucks, Inc., Seattle, Washington). Soap (liquid). Soap (potash). Core binders. Rubber substitutes."

Note 1. This is the earliest document seen that mentions the following commercial soy products: La Choy-soy sauce. Soyex-Malt-Cocoa drink. Zoybeans (cooked beans). Lauxtex plastic wall coat. Lauxein waterproof soybean glue. Lauxein emulsifier. All were on the market by late 1931.

Note 2. This is the earliest English-language document seen (Feb. 2008) that uses the term "vegetable shortening" to refer to shortening made without animal products. Address: Univ. of Illinois, Urbana.

333. Dike, Theodore Williams. Assignor, by mesne assignments, to Laminating Patents Corp. (Seattle, Washington; a corporation of Delaware). 1932. Method of making plywood. *U.S. Patent* 1,883,616. Oct. 18. 10 p. Application filed 29 Jan. 1929. Renewed 10 March 1931.
• ***Summary:*** "The cold press method of gluing using dry veneer is the most commonly used at present." "There is also in use a method of hot pressing using either dry or wet veneer." This patent concerns "the application of the adhesive in discrete-particle form, such, for example, as a dry powder or a suspension of discrete particles in a fluid." Soya bean flour is an example of a non-dispersible material. Address: New Westminster, British Columbia, Canada.

334. Dike, Theodore Williams; Laucks, I.F.; Cone, C.N. Assignors, by mesne assignments, to Laminating Patents Corp. (Seattle, Washington; a corporation of Delaware). 1932. Method of making plywood. *U.S. Patent* 1,883,617. Oct. 18. 5 p. Application filed 1 April 1929.
• ***Summary:*** This patent concerns "the application of the adhesive in discrete-particle form, such, for example, as a dry powder or a suspension of discrete particles in a fluid." "A particular feature of this invention is the control of the size of the particles of the adhesive-base material applied." Soya bean flour is an example of a non-dispersible material. Address: 1. New Westminster, British Columbia, Canada; 2-3. Seattle, Washington.

335. Lothrope, Leon. 1932. Soya beans. Alleged cause of war in Manchuria and soft pork in Ontario, interest in Western Canada now centres around growing them on prairies. Their strong points and weaknesses are recorded herein. *Nor'-West Farmer and Farm & Home (Canada)* 51(18):8-9, 29. Oct.
• ***Summary:*** Discusses the possibilities of the soybean crop in western Canada, the value and importance of soybeans in

various countries, their uses, amount of production in the United States, and the prices which might be expected if soybeans are grown in western Canada.

"There was something over a million pounds of soya bean oil imported into Western Canada last year which is about 35 tank carloads. It is largely used in the manufacture of soaps, shortening and salad oil. Contrary to popular opinion, only very small amounts are utilized in paints and varnishes, due to its slow drying qualities and lack of hardness...

"It is not surprising, then, that when the National Government in Great Britain imposed a ten per cent tariff on soya bean oil, cake and meal imported from foreign countries, and they are without duty from Empire countries, that the industries affected would look around for new sources of supply. Nor is it surprising that Canadian railroad officials and other business interests would evince some enthusiasm in the establishing of a new industry in Canada that has such potentialities as to cause a war in Manchuria and to be directly responsible for placing the Japanese Merchant Marine in third place among the nations. If Canada could 'horn in' on such an industry it should be all to the good.

"This accounts for the visit of a member of the Corn Exchange, of Liverpool, to Canada in recent months whose firm deals in soya beans and soya bean products, and owns large warehouses along the South Manchuria Railway. His visit was for the express purpose of seeing if Canada could supply soya beans for the European trade."

"The Manitoba Agricultural College commenced work with soya beans fifteen years ago [about 1917]. Professor Southworth, who is now in England, developed a strain of Ogema [Ogemaw], known as Manitoba Brown, that consistently ripens seed at the College and in several other parts of the West where they have been grown. The only other strain that has shown much promise in the Prairie Provinces are selections of Wisconsin Black. Some success has been obtained with this latter variety at the Dominion Experimental Farm, Brandon [Manitoba] and by Don Bark of the C.P.R. [Canadian Pacific Railway] Demonstration Farm at Brooks, Alta. [Alberta; Brooks is a town located 100 miles southeast of Calgary]. The three stations mentioned above are the only ones that report at all favorably on this crop and we have had communications from most government institutions in the West... The returns received from the three Dominion Experimental stations in British Columbia are neither more nor less encouraging than from the Prairie Provinces.

"Dr. McRostie of the Manitoba Agricultural College, who was formerly in charge of all the forage crop work for Dominion Experimental Farms system, has probably done as much on the growing of soya beans as anyone, states that 'fifteen bushels to the acre is a reasonably good yield to expect under field conditions in Manitoba with the early varieties so far developed.'"

"A World Crop: The best argument in favor of endeavoring to grow soya beans in Western Canada lies in the fact that it is a world crop and if we can grow it in competition with the world as we do wheat it is worth trying as it will give us greater diversification. The Agricultural Section of the Winnipeg Board of Trade is making arrangements to distribute small amount of soya bean seed to different districts in the Province of Manitoba. They hope to have in 100 acres next year for a trial. Mostly home grown seed of the black and brown types will be used."

A photo shows 5 products that contain soya bean oil or meal, including Vi-Tone Malt Chocolate Flavor, Domestic brand Shortening (purely vegetable), MacDowell's Soy Bean Flour (Brockville, Ontario), Pearl White Naptha [Naphtha] Soap, and Jif Flaked Soap.

Note 1. This is the earliest English-language document seen (March 2000) that uses the word "shortening" to refer to such a product made from soy oil.

Note 2. This is the earliest document seen (Sept. 2004) that mentions the soybean variety Manitoba Brown. Address: Canada.

336. **Product Name:** Soybean Flour (Specially Prepared for Diabetics).
**Manufacturer's Name:** MacDowell Brothers.
**Manufacturer's Address:** P.O. Box 141, Brockville, ONT, Canada. Plant also at Ogdensburg, New York.
**Date of Introduction:** 1932. October.
**Wt/Vol., Packaging, Price:** Paperboard box.
**How Stored:** Shelf stable.
**New Product–Documentation:** Leon Lothrope. 1932. *Nor'-West Farmer and Farm & Home* (Canada). Oct. p. 8. "Soya beans." A photo titled "Products that contain soya bean oil or meal" shows a box of "MacDowell's Soy Bean Flour. Specially prepared for Diabetic and other Carbohydrate Restricted Diets." Made by MacDowell Bros., Brockville, ONT.

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 14-15. Manitoba Brown is in the USDA Germplasm Collection. Maturity group: 00. Year named or released: by 1939. Developer or sponsor: Manitoba Agricultural College, Winnipeg, Manitoba, Canada. Literature: 13, 14. Source and other information: Obtained by the Manitoba Agricultural College, Canada, from the USDA about 1922. Prior designation: PI number lost. Address: Manitoba, Canada.

338. Stewart, C.L.; Burlison, W.L.; Norton, L.J.; Whalin, O.L. 1932. Supply and marketing of soybeans and soybean products. *Illinois Agric. Exp. Station, Bulletin* No. 386. p. 425-544. Dec. [34 ref]
• ***Summary:*** Loaded with statistics, graphs, tables, maps, and photos, this is one of the best reports on soybeans in America published to date. Contents: Introduction. The supply of soybeans and soybean products: Domestic production of soybeans, production of soybeans in Illinois, soybean varieties in Illinois, costs and returns in producing soybeans, imports of soybeans and soybean products (soybeans, soybean oil meal and cake, soybean oil, net imports, exports including reexports, export-import balance), import duties levied on soybeans and soybean products, supply of soybean oil and competing oils and fats. Consumption of soybeans and soybean products: Disposition of the domestic crop, utilization as beans, utilization of soybean oil meal, utilization of soybean oil (in food and industrial products), methods of processing soybeans for consumption (expeller, hydraulic press, solvent extraction), competition from other oils, distribution of gathered soybeans by uses. Practices in marketing soybeans and soybean products: Sources of market information, time of movement, varieties marketed in different sections of Illinois, selling soybeans for seed, selling soybeans for industrial uses (the Peoria Plan of 1928-29, Grange League Federation Exchange of Ithaca, New York, the Soybean Marketing Association of Illinois formed in Oct. 1929 {p. 490-91}), selling soybean oil and oil meal (National Soybean Oil Manufacturers Association of Chicago). Elements of cost in marketing soybeans: Marketing mill beans, processing beans, marketing seed beans, exporting beans. The inspection system and soybean grades. Special considerations applying to the valuation of soybeans and soybean products: Use-values of soybeans and soybean products in feeding, derivative products as factors in the market valuation of soybeans. Prices of soybeans and soybean products: Prices of seed beans, prices of soybean oil, prices of soybean oil meal, use as affected by prices. Meeting the price risks in marketing. International trade in soybeans and soybean products. Summary. Literature cited. Sources of data.

"In Manchuria in 1930 there were 13 districts in which over 40% of the crop land was devoted to soybeans, the highest proportion being 65%. The proportions for the three Manchurian provinces as units were as follows: Kirin (eastern) 33.2%; Hailungkiang [Heilungkiang] (northern) 30.7%; and Liaoning (southern) 22%." Some soybeans were grown in Inner Mongolia.

Illinois was the largest soybean producer in 1924, followed by North Carolina, Missouri, and Indiana. "Few soybeans were grown in Illinois previous to 1890, when J.C. Utter of Mt. Carmel, Wabash county, began production of this crop. Frank Hurrelbrink of Taylorville, Christian county, known because of his work with the Hurrelbrink variety of soybean, started his work in 1897. He has grown soybeans continuously since that time, experimenting with many varieties. C.A. Rowe and his father, of Jacksonville, Morgan county, grew soybeans about 1899. Somewhat earlier than this the late Ralph Allen of Delavan, Tazewell county, became interested in soybeans and furnished seed beans to Illinois farmers as well as to interested persons in other states, in Hawaii, and in Alaska. C.L. Meharry of Attica, Indiana, who owns a large tract of land near Tolono, Champaign county, Illinois, has been an active soybean grower since 1909. The year following the Meharry venture, John T. Smith, also near Tolono, began to grow soybeans on

a very limited scale, and in 1921 undertook active production. During the last decade soybeans have become an increasingly popular crop on Illinois farms."

Of the 1915 U.S. soybean crop, 52% of the entire crop acreage was used for hay, 15% was grazed, 4% was plowed under, and only 29% was harvested for beans; 18.2% was used for seed, 0.9% for human food, and 9.9% as beans for feed.

In 1930 some 11,975,000 bushels of soybeans were gathered or harvested in the U.S. Of these soybeans, 40.1% were crushed, 33.6% were used as seed, 23.0% were used whole directly as feed, 1.7% were ground and used as feed, and 1.7% were ground and used as food.

From the soybeans crushed in 1930, some 37,200,000 lb of soybean oil were produced. Its four main uses were: (1) Paint and other industries: Paint and varnish 24.2% of the total oil, linoleum and oil cloth 10.8%, other uses 9.4. (2) Soap kettle 22.8%. (3) Edible uses: Oleomargarine 2.0%, lard substitutes 1.3%, other food products 12.8%. (4) Increased stocks including oil equivalent 16.7%.

In 1930 some 110,000 tons of soybean meal resulted from crushing. Of this, 76.5% was used in commercial feeds, 13.6% in other feeds, 0.8% as soybean flour for food, 0.045% as infant and diabetic foods, and 9.0% as other uses including glue.

Page 460 lists the types and brand names of many commercial soybean food, feed, and industrial products. Consumption of soybeans as foods has increased appreciably since 1930. U.S. food products include chocolate bars (30% soybean flour), cocoa (up to 60% soybean flour), sausages (up to 50% soybean flour), bread (7½% soybean flour), soybean cheese, soybean milk, soybean ice cream, Soya Cream Biscuits, La Choy Soy Sauce, Soyolk (flour), V-Zoy, Lektizoy, Zoy Soup, Zoybeans (cooked soybeans), Bacon and Zoy Beans, Zoy Bouillon, Soy Bean Biscuit, etc. Canadian food products are: Milqo (soy milk), Vi-tone (chocolate), Soya Flour, Soyex-Malt-Cocoa Drink, Soyex, Macaroni.

"In the foreign trade of the United States imports of soybean oil have appeared since 1910 and of soybeans since 1914. The United States exported domestic soybeans to Europe in quantity for the first time during the fall of 1931, more than 2 million bushels being shipped from the 1931 crop." Address: 1, 3-4. Dep. of Agricultural Economics; 2. Dep. of Agronomy. All: Univ. of Illinois.

339. Stewart, C.L.; Burlison, W.L.; Norton, L.J.; Whalin, O.L. 1932. Supply and marketing of soybeans and soybean products: Tables 1-19 (Document part). *Illinois Agric. Exp. Station, Bulletin* No. 386. p. 425-544. Dec.

• ***Summary:*** Tables show: (1) Value of the soybean crop in Illinois, 1928-31. (2) Soybean production in selected countries, average 1909-13, annual 1920-31 (in tons of 2,000 lb). The countries: Manchuria, Korea, Dutch East Indies, Japan, United States, total for these 5 reporting countries. (3) Soybean production in the United States by geographic divisions, 1929. The greatest production was in the "East North Central" states; 4.977 million bushels comprising 57% of total U.S. production.

(4) Production of gathered soybeans in selected states and in the United States, 1922-1931 (thousand bushels). In 1922 the top six soybean producing states were North Carolina (1,600), Illinois (812), Ohio (465), Indiana (240), Virginia (208), and Missouri (165). Total USA: 4,333. In 1924, Illinois (1,380) passed North Carolina (1,160) to become the leading U.S. producer. In 1931 the top six states were Illinois (6,055), Indiana (3,062), North Carolina (1,498), Missouri (1,080), Iowa (578), and Ohio (560). Total USA: 14,917.

(5) Total equivalent solid acreage of soybeans grown in selected states and in the United States in 1922-1930 (thousands of acres). In 1922 the top 4 states were North Carolina (224), Illinois (169), Tennessee (154), and Indiana and Alabama (113, tie). Total USA: 1,226. In 1923 Illinois passed North Carolina to take first place. In 1930 the top 4 states were Illinois (719), North Carolina (478), Iowa (463), and Indiana (402). Total USA: 3,758. (6) Yield per acre of gathered soybeans in selected states and in the United States, 1922-1931 (bushels per acre). In 1922 the U.S. average was 13.8 bushels. Iowa had the highest: 22 bushels. In 1931 the U.S. average was 15.6 bushels. The top 4 states were Ohio (20), Indiana (17.8), Illinois (17.5), and Iowa (17).

(7) Proportion of soybean acreage gathered for beans, cut for hay, and interplanted with other crops, Illinois, 1922-1931. Gathered for beans rose from 32.1% in 1925 to 55.7% in 1930. Cut for hay rose from 41.4% in 1922 to 54.4% in 1931. Interplanted with other crops dropped from 20.1% in 1922 to 1.3% in 1931. (8) Production of soybeans in twelve leading Illinois counties, with rank by years, 1929-1931. The top four counties were Christian (692,200 bu in 1931), Champaign, Piatt, and Moultrie. (8A) Soybean varieties in Illinois: Varieties gaining favor: Illini, Manchu, Dunfield, Mansoy, Laredo. Holding their own: Ebony, Virginia, Ilsoy, Peking, Black Eyebrow, Wilson V [Wilson-Five], Hurrelbrink. Losing favor: Haberlandt, Mammoth Yellow, Hamilton (Ohio 9035), Ito San, A.K., Midwest.

(9) Varieties of soybean seed offered for sale by growers, in order of frequency of offers printed in Farm-Bureau publications, Illinois, 1921, 1925, and 1931. For each year the varieties are listed under nine crop reporting districts, and also for the entire state. In 1921 for the entire state, in descending order of frequency: Midwest, Ebony, A.K., Peking, Ohio, Ito San. In 1925: Manchu, Midwest, A.K., Ebony, Virginia, Ilsoy, Ohio, Black Eyebrow, Haberlandt, Peking, Wilson, Ito San. In 1931: Illini, Manchu, Virginia, Ilsoy, Ebony, A.K., Mansoy, Dunfield, Peking, Wilson, Midwest, Black Eyebrow, Haberlandt. (10)

Average cost of producing soybean in Illinois and Indiana for specified periods, 1921-1930. The highest return above computed cost per acre (profit) is from soybeans gathered for seed using a combine: $9.55/acre. When soybeans are cut for hay, a loss usually results.

(11) Imports of soybean oil, soybean oil meal and cake, and soybeans, United States, 1915-1931. (12) Duties levied on soybean oil, soybean oil meal and cake, and soybeans under recent tariff acts, United States, 1909-1930. In 1909 and 1913 all three commodities were on the "Free list." In 1921 oil the tariff on oil was 20 cents per gallon (2.67 cents per lb); the other two were free. In 1922 the tariff on oil was reduced to 18.75 cents per gallon (2.5 cents per lb), the tariff on soybeans was ½ cent per lb (30 cents per bushel), and meal was free. In 1930 the tariff on oil was increased to 26.25 cents per gallon (3.5 cents per lb, not less than 45% *ad valorem)*, the tariff on meal and cake was $6/ton, and the tariff on soybeans was increased fourfold to $1.20/bushel.

(13) Domestic production of soybean oil and other vegetable oils from domestic materials, United States, 1912-1931 (thousands of pounds). Statistics are given for cottonseed oil (the leader by far during the entire period), peanut oil, olive oil, corn oil, linseed oil, soybean oil, and total vegetable oil. Soybean oil rose from 751,000 lb in 1922 (the first year for which figures are given) to 39,129,000 lb in 1931. The ranking in 1931 was: Cottonseed oil (1,417,226 x 1,000 lb), linseed oil (203,613), corn oil (113,145), soybean oil (39,129), peanut oil (13,730), and olive oil (1,509).

(14) Imports of foreign vegetable oils, oil equivalent being used for oil-bearing materials, United States, 1910-1931 (thousands of pounds). Statistics are given for soybean oil, coconut oil and copra, peanut oil, olive oil (edible), olive oil (inedible, including olive oil foots), palm oil (incl. palm kernel), linseed oil and flaxseed, all other vegetable oils and materials, total vegetable oils and materials. For net soybean oil imports, the earliest figure is 24,784 in 1912; it peaked at 335,439 in 1918, and had fallen to 4,018 in 1931. Total vegetable oils and materials imported increased from 440,412 in 1910 to 1,525,114 in 1931.

(15) Exports of soybean oil and five other leading vegetable oils, United States, 1919-1931 (thousands of pounds). Statistics are given for soybean, cottonseed, coconut, linseed, corn, and peanut. The leading export throughout this period was cottonseed oil. For soybean oil exports, the figure for the last half of 1919 is 27,715 and fir 1920 it is 43,512. Thereafter the amount exported each year is very small, rising from 1,944 in 1921 to 5,448 in 1931.

(16) Total production, imports, exports, and net balance of vegetable oils and animal fats, exclusive of butterfat but inclusive of fish oils, United States, 1912-1931. (17) Use of soybeans, by acreage, United States, 1915, 1929, and 1930 crops. The percentages of the entire crop acreage in 1915 are: Hay 52%, grazed 15%, plowed under 4%, and gathered for beans 29% (of which: Seed 18.2%, human food 0.9%, and feed 9.9%). In 1930: Hay 56%, grazed 14%, plowed under 4%, and gathered for beans (11,975,000 bushels) 30% (of which: Seed 10.5%, crushed or ground 11.5%, and feed 8.0%).

(17A) Commodities in which soybeans or soybean products are used (p. 460): Food products (USA and Canadian), feed products, industrial products. (18) Soybean oil meal produced and imported into the United States, 1922-1930 (tons of 1,000 lb). Domestic production increased from 3,811 tons in 1922 to 110,000 tons in 1930. Imports increased from 15,612 tons in 1922 to 55,107 tons in 1930. Total of domestic production + imports increased from 19,423 tons in 1922 to 165,107 tons in 1930.

(19) Adaptability of soybean oil to use in various products (p. 464): The products are: Drying products (paint, varnish, linoleum and oil cloth, waterproof goods), soap products (hard and soft soaps), edible products (Lard compounds, cooking oils {if odor permanently eliminated}, salad oils, fountain drinks, candy, mayonnaise, margarin), miscellaneous (core oil, printer's ink). Four levels of adaptation and a maximum percentage are given for each use: Probable, inferior, satisfactory, and superior. The two superior adaptations are paint (to prevent yellowing), and soft soaps. Note: "The margarin industry was one of the first to use considerable amounts of soybean oil and at present it absorbs in the United States approximately 750,000 pounds annually."

Address: Ottawa, Canada.

341. **Product Name:** Biscuits (Containing Soybean Flour).
**Manufacturer's Name:** Christie, Brown & Company.
**Manufacturer's Address:** Toronto, ONT, Canada.
**Date of Introduction:** 1932.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3 to B-4. "The Christie Brown Company, biscuit manufacturers, Toronto, have been large buyers of soybean flour and have expressed a preference for the Dominion Linseed Oil Company's product over soybean flours which have been previously imported. The price of 6 cents per pound is considerably lower than 9 cents per pound, which was formerly paid for the imported flours."

Simpson's. 1936. "Pure food market–Adelaide 8411" (Ad). *Toronto Daily Star* (Canada). June 24. p. 19. "Biscuits–Christie's Soy-O-Wheat made from Soy Bean Flour, lb. 25¢."

342. **Product Name:** Soybean Oil, and Soybean Oil Meal (Named Blue Blossom Soybean Oil Meal by 1953).
**Manufacturer's Name:** Dominion Linseed Oil Company.
**Manufacturer's Address:** Baden, ONT, Canada.
**Date of Introduction:** 1932.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3. "The Dominion Linseed Oil Company plant at Baden, Ontario... is operating a press of the expeller type at this point and is said to have been processing soybeans for 4 to 5 years" [i.e. since about 1931 or 1932]. "Mr. Livingstone, president of the Dominion Linseed Company, was interviewed in Toronto and states that in addition to soybean oil and meal his company is producing soybean flour at its plant in Owen Sound. This flour has been made by a special process and retains the entire oil content of the bean."

Soybean Blue Book. 1947. p. 64. "Processors of soybeans in Canada. Toronto–Dominion Linseed Oil Co., 587 Fleet St." In the 1948 Soybean Blue Book the address is unchanged.

Soybean Blue Book. 1949. p. 90. "Montreal–The Dominion Linseed Oil Co., Ltd. General offices, 837 Mill St., Montreal 3, Quebec. Plants at Baden, Ontario; Owen Sound, Ontario; St. Boniface, Manitoba; and Montreal, Quebec." Note: It is not clear whether each of these plants crushes soybeans. Earlier information and the 1953 Blue Book entry (p. 96) seems to indicate that only the plant in Baden, Ontario, does. This is the earliest known commercial soy product made in Manitoba, Canada.

Soybean Blue Book. 1953. p. 96. "Baden, Ontario–Dominion Linseed Oil Co., Ltd. Ph. 14. Main office: Montreal, Quebec." 5 screw presses, capacity 75 tons. Storage capacity 95,000 bu. "Blue Blossom" soybean oil meal. Soybean operations 300,000 bu. Served by CN RR [Canadian National Railroad]. In the 1955 Blue Book neither this plant nor the parent company are mentioned.

343. **Product Name:** Full-Fat Soybean Flour.
**Manufacturer's Name:** Dominion Linseed Oil Company.
**Manufacturer's Address:** Owen Sound, ONT, Canada.
**Date of Introduction:** 1932.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3. "The Dominion Linseed Oil Company plant at Baden, Ontario... is operating a press of the expeller type at this point and is said to have been processing soybeans for 4 to 5 years" [i.e. since about 1931 or 1932]. "Mr. Livingstone, president of the Dominion Linseed Company, was interviewed in Toronto and states that in addition to soybean oil and meal his company is producing soybean flour at its plant in Owen Sound. This flour has been made by a special process and retains the entire oil content of the bean. It is of excellent quality, having been thoroughly tested at the University of Illinois in comparison with other soybean flours of United States origin and declared as equal or better than most of them for cooking purposes. This company is prepared to produce in addition a low oil content flour and plans to do so in the near future. The company is having considerable difficulty marketing its soybean flour. Mr. Livingston claims that the large wheat milling companies control the bakeries and are strongly opposed to an additional flour being placed on the market, especially when there is any possibility of such flour being used in bread-making. He also claims that before he can definitely establish the value of his flour, both from the standpoint of nutrition and use, it will be necessary to show results that have been obtained in baking tests conducted by an impartial authority, such as the Dominion Department of Agriculture. Mr. Livingston feels that the Department should conduct experiments in the use of soybean flour, particularly for bread-making. Many advantages are claimed for the soybean-wheat bread, such as, higher nutritive value, better keeping qualities, and greater appetite appeal. Judging from the results obtained in work of this nature carried on by the Food Research Division, U.S.D.A., such experiments would be well worth while and the results of much practical value. Mr. Livingston claims that his company could utilize a million bushels of soybeans for flour purposes alone if the flour could be marketed to advantage. This is undoubtedly a pretty big statement, but he has great faith in the value of soybean flour. He believes the opposition of the wheat milling companies will only be overcome by the publishing of the results of experiments, such as those mentioned above, carried on by some government department."

345. Zavitz, Charles A. 1932. Spiritual life: Personal thoughts. Ilderton, Ontario, Canada: Published by the author. 15 leaves. Unpaginated. 16 cm.
• ***Summary:*** The author was born and raised a Quaker. These thoughts, written when he was age 69, represent the

heart of his spiritual beliefs. For example: "To cooperate with the Divine Spirit completely is the supreme achievement of man."

"Love is the great cementing force of the human family. It was the predominating characteristic of Jesus Christ. He taught that God is a Loving Father and said to mankind 'Love one another.'"

"When people are in tune constantly with the Infinite God they can use to the best possible advantage all of their physical, mental, and spiritual powers."

"The real value of the human soul under the guidance of the Divine Spirit is much greater to the individual than all of the other things in the world combined."

"Why do so many professing Christians deprive themselves of so much Spiritual Power by adhering to so many non-essentials which divide into so many individual churches and sects which cause so much confusion and competition and sometimes strife and even bitterness? Jesus said 'Behold, the kingdom of God is within you.'"

"Human bodies are the holy temples of the Loving God and should not be destroyed by murder, war, capital punishment or lynch law. Moses said to the people through the Sixth Commandment 'Thou shalt not kill' and Jesus through the Sermon on the Mount 'Love your enemies.'"

"Being a Quaker with Quaker parents I learned early in life to listen in silence to the 'still small voice' of my Spiritual Father. During and since my forty-one years of very active service in college teaching and in scientific research in agriculture, the Christ Spirit within me has been the most precious thing in my life."

Note: One thought appears on the front side of each page of this little book. The first letter is a large, square, embellished red majuscule. The paper is beige with rough edges. Address: Ilderton, Ontario, Canada.

350. **Product Name:** Soybean Oil, and Soybean Oil Meal.
**Manufacturer's Name:** Soya Bean Oil and Meal Co-operative Company of Canada Ltd. (The).
**Manufacturer's Address:** 103 Colborne St. north, Chatham, ONT, Canada.
**Date of Introduction:** 1933. April.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** *The Chatham Daily News* 1932. May 28. p. 1, 12. "Soya Bean Cooperative Gets Charter." "A charter has been granted to 'The Soya Bean Oil and Meal Co-operative Company of Canada Limited'..." Note: This is the earliest document that the Chatham Library can find concerning this company (April 1997).

Vernon's City of Chatham (Ontario, Canada) Directory. 1933. Corrected to April 1933. p. 189. "Soybean Oil & Meal Co-operative Co. Ltd., G.E. Biles, mgr, Colborne n, w cor of Adelaide" (Company located at Colborne St. North, west corner of Adelaide).

*Agricultural and Industrial Progress in Canada.* 1935. "Linseed oil." 17(2):27-28. Feb. "The production of the Canadian linseed and soy bean oil industry in 1933, according to a report of the Dominion Bureau of Statistics,

was valued at $2,086,000. The number of plants in operation was ten and the capital investment $3,022,000.

"Of these ten plants two used soy beans as their raw material, namely, The Canadian Soyabeans Limited of Milton, and the Soybean Oil and Meal Co-operative Company of Canada Limited of Chatham, both in southwestern Ontario." The value of soy-bean oil and meal was no more than $49,071.

C.A. MacConkey. 1935. Soybeans. Ottawa, Ontario, Canada: National Research Council. p. 65. "Firms Engaged in the Soybean Industry in Canada." "The Soy Bean Oil and Meal Co-operative Company of Canada, Ltd., Chatham, Ontario."

Shepherd's City of Chatham (Ontario, Canada) Directory. 1936. Page B-162 states: The company name and address are exactly the same as in 1933, except that the word "Soybean" is now spelled "Soyabean." So the company name was spelled in three slightly different ways prior to 1936. The manager is now D.D. Gagner. Page C-4 gives the address as 103 Colborne, north side, from North William to Limits. Note: In the 1937-38 edition of this directory, this company is no longer listed. Rather, A.E. Brotherton is at 103 Colborne and Verne Mifflin is at 103½ Colborne. Then in the 1938-39 edition no-one is listed at this address. And in the 1939-40 edition, Ernest Lane is listed at 103 Colborne.

F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-2. Describes Canada's second soybean crusher: "The next effort to start a mill was made at Chatham, Ontario, in 1932 by a farmer's co-operative under the name of the Soybean Oil and Meal Co-operative Co. of Canada, Limited. Farmers secured membership in the company by the purchase of a share valued at $50 and this gave the purchaser prior rights to sell beans to the company. The number of members was said to have reached from 700 to 800 farmers. Under an agreement with the Archer-Daniels-Midland Company, Milwaukee, Wisconsin (one of the largest millers of soybeans in the United States), this company installed the machinery and provided a manager, Mr. B.E. Biles, to run the mill. In return for these services the Archer-Daniels -Midland Company was to receive 5 cents for every bushel of beans milled. The mill was of the Anderson expeller type and had a total capacity of about 20 tons of beans a day (24 hours)... The mill operated at intervals for a few months, but crushed only 22,000 bushels of beans. The first year's results were disappointing to the company and the growers alike. In 1933 the price of soybean products rose considerably," and the mill handled something over 50,000 bushels of beans. "The final blow came when Mr. Biles, the manager, disappeared with about $7,000 of the company's funds. The plant is now idle and did not open for the 1935 crop."

J.W. Tanner. 1973. "Where we are and how we got there: An historical review of soybean production in Ontario." In: Ontario Soya-Bean Growers' Marketing Board, ed. 1973. Ontario Soybean Symposium 1973. Ottawa: Agriculture Canada. p. 13, 18. "Two short-lived crushing plants were established in the south west part of Ontario in the mid-1930s, one of which was located at Shelbourne (or Colbourne/Colborne) Street in Chatham." Note: Founded in 1934 (see p. 18), this was apparently the first crushing plant in Canada.

351. Browns' Bread Limited. 1933. Enjoy its unequalled flavor: Marathon Meal health bread (Ad). *Toronto Daily Star (Canada).* May 30. p. 5.
• ***Summary:*** "The appetizing taste of Browns' Marathon Meal bread has made it Toronto's most popular health loaf. There's no need to sacrifice taste for health."

"Get it from Browns' bakerman at your door, or at your neighborhood health store or phone the bakery for special delivery [3 phone numbers in the east, north, and west are given].

A circular logo, surrounded by stylized heads of wheat, states: "Marathon health bread: A health loaf, recently perfected after much careful research work." Besides the regular ingredients, it contains rice polishings, wheat germ, and "4. Soyex–a product of the Soya bean, rich in Vitamin 'D'–the sunshine vitamin–as found natural food. Not produced artificially, with a strongly Alkaline ash."

A large photo shows the 24 oz. loaf–10 cents (wrapped). A 12-oz. loaf is also sold. Address: Toronto. Phone: GL. 1161.

• ***Summary:*** Includes use of soya-bean flour. Address: New Westminster, British Columbia, Canada.

354. *Toronto Daily Star (Canada).*1933. New companies. Oct. 7. p. 15.

• ***Summary:*** "Ottawa, Oct. 7–Incorporation has been granted to the following joint stock companies:... Dominion Soya Industry, Ltd., Montreal [Quebec], 50,000 shares without par value;..."

Note: This is the earliest document seen (Jan. 2010) that mentions Dominion Soya Industry, Ltd. (Montreal, Quebec, Canada).

355. Dominion Bureau of Statistics, Ottawa, Canada. 1933. Report on the linseed and soybean oil in Canada. *Trade of Canada.* *

• ***Summary:*** In 1933 in Canada there were 10 plants in operation in the linseed and soybean industry, with a total capital investment of $3,022,676. The value added to the raw materials used by manufacturers was $544,438 and they furnished employment to 201 persons. How this is divided between linseed and soybean oil is not stated. Address: Ottawa, Canada.

356. Laughland, Jas. 1934. Farm tests on soybeans: Farmers find soybeans useful for both hay and grain–Results best when grown in drills. *Farmer's Advocate (Ontario, Canada)* 69:176. March 15.

• ***Summary:*** "During the past few years soybean demonstrations have been conducted in every county of Ontario. The work was carried on by farmers in cooperation with the Field Husbandry Department, Ontario Agricultural College." The average yield of seed over a 3-year period as reported by 92 farmers was 19 bushels per acre, and that of hay, from 139 tests, was 2.2 tons per acre. The growers reported favorably, as evidenced by quotations from farmers in many different counties. The author gives 30-45 pounds as the amount of seed required per acre when the soy beans are grown for seed production in rows 28 inches apart, and 1½ to 2 bushels (90-120 lb) when drilled solid for hay. Address: Dep. of Field Husbandry, Ontario Agricultural College, Canada.

357. Torres Herrera, José M. 1934. El haba soya, su cultivo y beneficio [The soybean, its culture and benefits]. *Boletin Agricola (Medellin, Colombia)* 8(189):1180-92. April. [Spa]

• ***Summary:*** Contents: Introduction. Climatological conditions. Soils appropriate for this crop. Inoculation with bacteria. Preparation of the soil. Soya in crop rotations. Sowing the seeds. The work of cultivation. Calculation of the cost of production for 6,400 square meters (Data taken from the Palmira Agricultural Experiment Station, Bulletin No. 1; the cost is $0.45 per arroba = ca. 25 lb). Soybean varieties ("Agriculturists interested in planting this crop which has no equal, can obtain seeds free of charge from the Pamira [sic, Palmira] Agricultural Experiment Station or the Antioquia Agricultural Society [Sociedad Antioqueña de Agricultores, Colombia]"). Production of seeds. Yields of various varieties. Harvesting and threshing of the grain. The uses of soya *(la soya).*

Utilization of the plant and seeds of the soybean *(de las habas soyas):* I. The plants as hay, pasture, green forage, ensilage, green manure. II. The seeds as: 1. Whole dry soybeans *(habas secas,* for making infant foods, flour, soup, butter, diabetic foods and breads, cooked whole soybeans, confections, health foods *(alimentos para sano):* soymilk, soybean roasts or steaks, soy sprouts. Breakfast foods: Vegetable curd or cheese *(cuajada o queso vegetal),* soy sauce, malted milk, soy coffee cakes, flour, livestock feed). 2. Green vegetable soybeans *(habas verdes).* 3. Soy flour *(harina de habas).* 4. Soy oil *(aceite de habas).*

Soya as human food. The composition of various legumes. Soy flour. Soy oil. Soy milk *(leche de soya):* Nutritional comparison of soy milk and cow's milk, powdered soymilk, fermented soymilk, tofu *(queso soya),* soy casein *(Caseína).*

Whole dry soybeans: Roasted soybeans *(habas tostadas),* soy coffee *(café de soya),* soy chocolate *(chocolate de soya).* Green-seeded soybeans *(habas soyas verdes o legumbres):* Soy sprouts, soy sauces. Edelsoya (soy flour made by Berczeller).

The value of soy forage. Soybeans in mixtures with other crops. Green manure. The concept of Dr. Uribe Echeverri, minister in Brazil.

Page 1180 states: "Climatological conditions. The soybean is suited to the temperate zones but it can become acclimatized to warmer climates and it has succeeded at the agricultural experiment stations of Valle de Cuaca and of Tolima and in various regions of the Intendencia del Chocó. It is probable that some varieties from England and from the north of Canada can acclimatize themselves in good conditions in our cold lands.

Note 1. This is the earliest document seen (May 2009) concerning soybeans in Colombia, or the cultivation of soybeans in Colombia. Note 2. No mention is made of soya in Nicaragua.

Note 3. This is the earliest Spanish-language document seen that uses the term *habas tostados* to refer to soynuts.

Note 4 This is the earliest Spanish-language document seen (June 2009) that uses the term *habas verdes* to refer to green vegetable soybeans. Address: Agrónomo Nacional de la Intendencia del Chocó [Colombia].

359. *New York Times.*1934. Soy bean acreage in Canada rises: Crop is now on a commercial basis. June 10. Section

8. p. 18.
• ***Summary:*** "Soy beans are now being grown in Canada on a commercial scale... In 1929 some 1,000 acres were planted to this vegetable; in 1933 the total acreage rose to 15,000." In the United States about 4,000,000 acres are devoted to this crop.

360. *Toronto Daily Star (Canada).*1934. Questions and answers. June 11.
• ***Summary:*** The section titled "Soybean pamphlet" states: "O.F.: Soybean flour, on account of its extremely low starch content, is especially valuable for diabetic persons. The flour is being successfully used in making bread, biscuits, muffins, pastry, etc., and by reason of its composition increases the nutritive value of these products. The soybean is comparatively new as a farm crop in Canada, and the pamphlet on soybeans issued by the Dominion Department of Agriculture is intended to give information as to the characteristics of the soybean plant and seed; its adaptation to soil and climatic conditions; the various purposes for which soybeans are used; the most suitable varieties that are available; and general instructions on how the crop should be grown and handled.

"To obtain a copy, write to Publication Branch, Dept. of Agriculture, Ottawa" [Ontario, Canada].

361. Iliff, John W.; Robinson, Paul. Assignors to the Canadian Industries Ltd. 1934. Resin; coating composition. *Canadian Patent* 342,592. June 26. *

362. Phillips, J.B. 1934. The utilization of the soya bean. *J. of the Society of Chemical Industry–Chemistry & Industry Transactions and Abstracts (London)* 53(29):627-28. July 20.
• ***Summary:*** This article is based on a "Lecture delivered before the Montreal [Canada] Section of the Society of Feb. 21, 1934." It contains a short overview of soybean history, nutritional composition, and utilization (for feed, food, and industry), plus some statistics. In the USA some soybeans are "ground into flour and used in such articles as bread, macaroni, sausage, chocolate, baby food, etc. Most of the beans which are not used for forage are crushed and the oil separated... The annual consumption of soya bean oil in the United States is approximately as follows" (in million lb): For paints and lacquers 9.0; soaps and candles 9.0; cooking oil, mayonnaise, sardines, lecithin manufacture 5.0; linoleum and oilcloth 4.0; printing ink 3.5; oleomargarine and lard substitutes 1.5.

"In Manchuria, where the soya bean is a staple article of diet, little meat is eaten; the protein of the bean resembles that of meat and may very well be substituted for it."

"The uses of the oil cake are many and varied. When fermented, the meal produces a cheese which has a strong odour at first, but which decreases with age. The soya meal, after being heated with lime and then treated with caustic soda, produces an adhesive which is quite water-resistant and is used extensively on the Pacific Coast in the manufacture of plywood. It is also used as a cement in the manufacture of insulating boards intended for use in refrigerators. The soya meal may also be treated with salt solution and borax and the protein extracted. After precipitation, a pure casein is obtained which may be used as sizing for paper and as an adhesive."

"Macaroni may contain as much as 30% soya flour, which is also used in the manufacture of cocoa. Some chocolate bars are known to contain 60% of soya flour. A plastic may be made from soya bean casein by the use of formaldehyde as in the case of milk casein. The soya bean is unique among vegetables in containing a relatively large amount of lecithin." The commercial product is found to contain about 70% true lecithin and 30% oil or fat. Lecithin is used in the chocolate and baking industries. Address: Dr. [Canada?].

363. Don Avon Marketeria Limited. 1934. Toronto's show place of fine foods (Ad). *Toronto Daily Star (Canada).* Dec. 13. p. 7.
• ***Summary:*** In the upper right corner of the ad: "La Choy vegetables, tin–37¢. Chow mein noodles, tin–25¢. Bean sprouts, tin–28¢. "Soy Sauce, tin–15¢."

Note: This soy sauce was probably made by La Choy in the USA.

A similar ad appeared in the Dec. 20 (p. 36) issue of this newspaper. In the upper left corner of the ad we read: "Imported delicacies: Bean sprouts, tin–15¢. Soy Sauce, bottle–28¢... La Choy vegetables–37¢." Address: 837 Danforth Ave., Toronto.

364. The development of soya beans in the United States and Canada. 1934. Undergraduate thesis, Ontario Agricultural College, Canada. *

365. A.K. (Harrow): New Canadian domestic soybean variety. 1934. Seed color: Yellow, hilum brown.
• ***Summary:*** Sources: Dimmock, F.; Kirk, L.E. 1934. "Soybeans." *Canada Department of Agriculture (Ottawa), Pamphlet* No. 155. 18 p. New Series. See p. 11-17. "Based upon results of tests conducted by the Dominion Experimental Farms Branch, the following varieties are considered the best of those available at present for production in Canada." A table (p. 11) lists seven varieties; for each is given the maturity and colour of the seed. The last of these is: "A.K. (Harrow), very late, yellow (brown hilum)." This variety also appears in numerous other tables and in two photos. In most cases it gave good yields at Harrow of seeds, forage, and/or hay.

Dimmock, F. 1941. "Canada includes many excellent soybean acres." *Soybean Digest.* May. p. 5. "An active

soybean research program has already resulted in the development of the following varieties: Mandarin (Ottawa), A.K. (Harrow), Kabott and Pagoda by the Dominion Experimental Farms, Dominion Department of Agriculture,..."

Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 1. "A.K. Harrow–Dominion Experiment Station, Canada."

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 8-9. A.K. (Harrow) is in the USDA Germplasm Collection. Maturity group: III. Year named or released: by 1939. Developer or sponsor: F. Dimmock, Department of Agriculture, ES (Experiment Station), Harrow, Ontario, Canada. Literature: 13. Source and other information: Selected from 'A.K.' by 1928 (appears identical to 'Illini'). Prior designation: A.K. Address: USA.

366. Dimmock, F.; Kirk, L.E. 1934. Soybeans. *Canada Department of Agriculture (Ottawa), Pamphlet* No. 155. 18 p. New Series. Revised in 1939 as Farmers' Bulletin No. 80. [1 ref]

• ***Summary:*** Contents: Introduction. Description of the soybean plant. Soil and climatic adaptation. Uses of soybean seed: Soybean meal, soybean oil, soybean flour. Uses of the soybean for forage and soil improvement. Varieties: Yields, varietal adaptation, protein and oil content of seed, size of seed, colour of seed, registration. Culture: Soil preparation, time of seeding, inoculation of seed, method of seeding, depth of seeding, cultivation, harvesting, threshing. Storage and marketing of seed.

"The soybean gives every indication of becoming a valuable addition to the field crops of Canada. Its possibilities are being actively investigated in almost every province of the Dominion, although production is so far limited almost entirely to the Province of Ontario. The total acreage for the Dominion in 1933 is estimated at 15,000 acres. Since the total acreage in 1929 was probably less than 1,000 acres the increasing interest in the soybean as a field crop is fully evident.

"Present production of the soybean in Canada is chiefly for seed, which, being extremely rich in protein and oil has a high commercial value. The industrial uses for which it can be utilized are numerous. The seed also has considerable value on the farm for live stock feeding and, since the soybean plant itself possesses a high nutritive value for fodder, it is quite possible that as production increases the crop may find its greatest use on the farm, rather than in industry.

"The Dominion Department of Agriculture during the past ten years has introduced and tested hundreds of varieties and strains of soybeans from various parts of the world."

"Since the soybean is comparatively new as a farm crop in Canada this pamphlet is intended to give information as to the characteristics of the soybean plant and seed; its adaptation to soil and climatic conditions; the various purposes for which soybeans are used; the most suitable varieties that are available; and general instructions on how the crop should be grown and handled."

"Based upon results of tests conducted by the Dominion Experimental Farms Branch, the following varieties are considered the best of those available at present for production in Canada." A table (p. 11) lists seven varieties; for each is given the maturity and colour of the seed. Manitoba Brown, very early, brown. Wisconsin Black, early, black. Mandarin (Ottawa), medium early, yellow. Manchu (Hudson), medium late, yellow (black hilum). O.A.C. No. 211, medium late, yellow. Manchu, late, yellow (black hilum). A.K. (Harrow), very late, yellow (brown hilum).

Table 5 (p. 15) shows "Soybean hay and seed production, 1933" for the six of the seven varieties mentioned above in the following places: Nappan, Nova Scotia; Fredericton, New Brunswick; Lennoxville, Quebec; and Charlottetown, Prince Edward Island. At Fredericton, New Brunswick, the soybeans, grown for seed, were harvested from Sept. 21 to Oct. 12. The average plant height ranged from 29 to 42 inches. The yield (in bushels per acre) ranged from 29.8 for Mandarin (Ottawa) to 12.8 for Manchu. At Charlottetown, Prince Edward Island the soybeans, grown for seed, were all harvested on Oct. 31. The average plant height ranged from 18 to 28 inches. The yield (in bushels per acre) ranged from 24.7 for O.A.C. No. 211 to 19.2 for Manitoba Brown. Below this table we read: "Date of seeding: Nappan, May 25; Fredericton, May 26; Lennoxville, June 3; Charlottetown, June 6. Maturity of seed: Fredericton and Charlottetown–Manitoba Brown and Wisconsin Black–ripe; Mandarin–fairly mature; other varieties–immature.

Table 6 (p. 15) shows "Protein and oil content of soybean seed" at 12% moisture for the same six varieties in the following places: Ottawa, Ontario (averages, 4 years, 1929-1932); Harrow, Ontario (averages, 5 years, 1928-1932); Brandon, Manitoba; Calgary, Alberta; Avonport, Nova Scotia; and Sidney, British Columbia. The last four locations are for 1932 only. The highest protein content was 39.72% for Manitoba Brown at Harrow.

Size of seed: A table (p. 16) lists the average weight in grams of 1,000 seeds obtained from seed grown at Harrow during a period of several years: Manitoba Brown 199, Wisconsin Black 165, Mandarin 205, O.A.C. 211 225 (the largest seeds), Manchu 185, A.K. 162.

Note 1. This is the earliest document seen (Jan. 2010) concerning soybeans in New Brunswick province, Canada, or the cultivation of soybeans in New Brunswick. This document contains the earliest date seen for soybeans in New Brunswick, or the cultivation of soybeans in New Brunswick (26 May 1933). The source of these soybeans was probably the Central Experimental Farm, Ottawa, Ontario, Canada.

Note 2. This is also the earliest document seen (Jan. 2010) concerning soybeans in Prince Edward Island, Canada, or the cultivation of soybeans in Prince Edward Island. This document contains the earliest date seen for soybeans in Prince Edward Island, or the cultivation of soybeans in Prince Edward Island (6 June 1933). The source of these soybeans was probably the Central Experimental Farm, Ottawa, Ontario, Canada.

Note 3. This is the earliest document seen (Nov. 2004) that mentions the soybean variety Mandarin (Ottawa). Address: 1. Div. of Forage Plants, Dominion Experimental Farms; 2. Dominion Agrostologist, Ottawa, Canada.

367. Dominion Bureau of Statistics, Ottawa, Canada. 1934. Imports into Canada for consumption, years ended 31 March 1929 to 1933. *Trade of Canada.* Fiscal year ended March 31, 1933.

• ***Summary:*** Under Imports–Sauces–Soy, Soya (Table 36, p. 285), statistics are given from 1929-1932 for gallons and dollar value from United Kingdom, Hong Kong, China, Japan, Syria, United States. Japan was the leading supplier for all four years. In 1929, the peak year, 104,606 gallons were imported worth $45,359. The leading supplier by far was the Japan (67,541 gallons), followed by Hong Kong (33,396 gallons). No statistics are given for soy sauce imports from Syria for 1929, 1930, 1931, or 1932. However, for total imports and for general tariff, under *montant*, a figure of 132 gallons is given for Syria.

Imports of peanut oil and soya bean oil [grouped together as one, so we cannot tell how much was soya bean oil] (p. 300). The United Kingdom was the leading supplier for all four years. In 1931, the peak year, 197,753 gallons were imported worth $129,581. The leading supplier by far was the United Kingdom (118,480 gallons), followed by China (38,941 gallons).

Imports of soya beans, soya bean cake and soya bean meal, for use exclusively in the manufacture of cattle food and of fertilizers (p. 338, in cwt = hundredweights; 1 cwt = 112 lbs). China was the leading supplier for all four years. In 1933, the peak year, 46,129 cwt were imported worth $57,097. The leading supplier was China (25,491 cwt), followed by the United States (15,899 cwt).

Imports of peanut oil and soya bean oil for the manufacture of soap, and peanut oil for canning fish [grouped together as one, so we cannot tell how much was soya bean oil] (p. 342). The United States was the leading supplier for all four years. In 1929, the peak year, 941,072 gallons were imported worth $652,323. The leading supplier by far was the United States (743,866 gallons), followed by the UK (100,590 gallons) and China (96,616).

Note: This is the earliest document seen (Dec. 2007) concerning soybean products (soy sauce) in Syria. This document contains the earliest date seen for soybean products in Syria (1932); soybeans as such had not yet been reported by that date. Address: Ottawa, Canada.

368. Kirk, L.E. 1934. Division of Forage Plants. *Report of the Dominion Agrostologist* 44 p. For the years 1930 to 1933 inclusive. See p. 39-41.

• ***Summary:*** The section titled “Soybeans” (p. 39-41) begins: “During the past ten years the Division of Forage Plants has introduced and tested hundreds and varieties and strains of soybeans from various parts of the world. Based on these and other tests in practically all of the Branch Experimental Farms the following varieties are considered the best of those available at present for production in Canada.” A table (p. 39) shows the variety name, maturity, and colour of seed of these 7 best varieties: Manitoba Brown, very early, brown. Wisconsin Black, early, black. Mandarin (Ottawa), medium early, yellow. Manchu (Hudson), medium late, yellow (black hilum). O.A.C. No. 211, medium late, yellow. Manchu, late, yellow (black hilum). A.K. (Harrow), very late, yellow (brown hilum).

Each variety is described together with the conditions and areas best suited for its growth. “Manitoba Brown is a semi-dwarf variety. Harvesting of the seed is difficult due to its short length. It is essentially seed type... Mandarin is a seed type rather than a hay type,... In Quebec and the Maritime Provinces, Mandarin can be depended upon to mature only in those sections most favoured with regard to both soil and season... In Ontario, Mandarin, O.A.C. No. 211, Manchu and A.K. are being grown at present. Mandarin matures regularly at Ottawa and is therefore adapted for production over a fairly wide portion of Eastern Ontario... The Prairie Provinces are limited almost entirely to the early maturing varieties, Manitoba Brown and Wisconsin Black... Mandarin has been grown to maturity in southern Manitoba but only under favourable conditions can it be depended upon to produce seed. Both Mandarin and O.A.C. No. 211 have been matured in British Columbia, and it is probable that these varieties may be adapted for seed purposes to certain favoured sections of the province.”

Table 6 (p. 41) shows the yield of different soybean varieties at Ottawa (where Mandarin {Ottawa} gives the highest yield at 30.36 bu/acre with 12% moisture) and Harrow, Ontario, Canada (where Manchu gives the highest yield at 35.99 bu/acre). There is also a section on soybean breeding. Note: This is the earliest document seen (Oct. 2004) that mentions the Mandarin (Ottawa) soybean variety (one of two documents). Address: Ph.D., Dominion

Agrostologist, Canada Dep. of Agriculture, Div. of Forage Plants, Ottawa, Canada.

369. Manchu (Hudson) / Hudson Manchu: New Canadian soybean variety. 1934. Seed color: Yellow, hilum black.
• ***Summary:*** Sources: Dimmock, F.; Kirk, L.E. 1934. "Soybeans." *Canada Department of Agriculture (Ottawa), Pamphlet* No. 155. 18 p. New Series. See p. 11-17. "Based upon results of tests conducted by the Dominion Experimental Farms Branch, the following varieties are considered the best of those available at present for production in Canada." A table (p. 11) lists seven varieties; for each is given the maturity and colour of the seed. One of these is: "Manchu (Hudson), medium late, yellow (black hilum)." This variety also appears in numerous other tables.

MacConkey, C.A. 1935. "Soybeans." Ottawa, Canada: Div. of Research Information, National Research Council, Ottawa. 93 p. March. See p. 59 of this report. "The work being carried out at T.B. Macaulay's experiment farm at Hudson Heights, Quebec, is particularly worthy of mention. Here the testing of varieties has been in progress for 8 years. Mr. Macaulay's method of approaching the problem consists in obtaining samples of hitherto untried varieties from the most northerly regions where soybeans grow and the earliest varieties from Asia and elsewhere... Mr. Macaulay has a new variety which he calls Toyanaga. It matures 5 days to a week earlier than the variety called Manchu, which is being grown to a small extent in southern Ontario."

371. Canadian Pacific Railway Co., Dep. of Colonization and Development 1935. Linseed oil. *Agricultural and Industrial Progress in Canada.* 17(2):27-28. Feb.
• ***Summary:*** "The linseed oil industry of Canada has recently been strengthened by the addition of associated products derived from the soy bean. Two or three years ago

[i.e., in about 1932-33] experiments were undertaken in the growing of the soy bean in southwestern Ontario and there are now two plants engaged in the manufacture of soy bean products.

Flax has long been grown in Canada, mainly for the purpose of linseed oil, the largest production coming from the Prairie Provinces. Some flax grown in Canada is, however, of the fibre variety." Canada exports linseed oil but is a net importer of linseed oil cake and oil cake meal. "The Dominion both exports and imports flax seed.

"Soy beans and their products are imported but do not appear in the export returns.

"The production of the Canadian linseed and soy bean oil industry in 1933, according to a report of the Dominion Bureau of Statistics, was valued at $2,086,000. The number of plants in operation was ten and the capital investment $3,022,000.

"Of these ten plants two used soy beans as their raw material, namely, The Canadian Soyabeans Limited of Milton, and the Soybean Oil and Meal Co-operative Company of Canada Limited of Chatham, both in southwestern Ontario." The value of soy-bean oil and meal was no more than $49,071.

Argentina is the leading producer of flaxseed for world trade. "Canada has been one of the three other largest exporters of this product." The peak year for flaxseed acreage and production in Canada was 1912, when 2.021 million acres produced 26.130 million bushels.

"The areas on which soy beans have been grown in Canada are mainly in the southwestern part of the province of Ontario, where in recent years large crops of both tobacco and of sugar beets have also been produced."

372. *Good Health (Battle Creek, Michigan).*1935. The quintuplets are thriving on a biologic diet. 70(3):83. March.
• ***Summary:*** "Very soon after the babies began taking the cultures (soy acidophilus milk) the bowel trouble disappeared and they have since continued to thrive."

373. MacConkey, C.A. 1935. Soybeans. Ottawa, Canada: Div. of Research Information, National Research Council, Ottawa. 93 p. March. 28 cm. [152 ref]
• ***Summary:*** A very important and interesting book. In 1932 the first two sections of this report were prepared; in 1934 the third section was added in order to bring it up to date. Contents: Summary of Part I. Summary of Part II. Summary of Part III. Part I (p. 14): Cultivation, utilization and trade. Introduction. Cultivation: Varieties, differences, maturity, hardiness, color of bean, climate, soil, seeding, harvesting. Production of oil and cake. Applications: Introduction, the plant (forage, hay, pasturage, silage, soilage, straw, soil improvement and fertilizer), the bean (grain, flour, soy sauce, bean curd [tofu], vegetable beans, other uses), the cake (cattle feed, flour, fertilizer, other uses), the oil (general, the soap industry, the paint and varnish industry, the food industry). The soybean industry in the United States: Importance of the crop, history and development (incl. Henry Ford who is said to have 10,000 acres under cultivation), standards (classes of soybeans), production of oil and cake, consumption of soybean oil, export trade in soybeans. Statistics of world trade: Beans (production, exports, imports [statistics, pre-war average {1909-13} + 1926-1931 for Germany, Japan, Denmark, UK and British Empire countries, Dutch East Indies, Sweden, Italy, Formosa, and Holland], consumption [net imports], prices), oil (production, exports, imports, consumption, prices), cake (production, exports and imports). Statistics of the German oil seed industry: Oil seeds in Germany [by far the world's largest soybean importing country and largest European producer of soybean oil] (imports and exports), vegetable oils (production, consumption and value), oil cake and meal (production, imports, exports, consumption and relative values), soybean experiment stations in Germany.

Part II (p. 56): Development in Canada. The difference between growing soybeans for forage and for seed. Present status of soybean cultivation in Canada. The future for soybeans on the Prairies. Extent of Canadian Experimentation. Varieties suitable for Canada. The climates of Manchuria and Canada. Planning the development of soybeans in Canada. Consumption of vegetable oils in Canada by industries. Consumption of oil cakes in Canada. Firms engaged in the soybean industry in Canada. Casein in Canada.

Part III (p. 69): Survey of the Literature, 1931-34. Cultivation. Green manure. Breeding. Germination of seeds. Diseases and parasites. Soil. Manufacture of oil cake. Composition of the soybean. Properties and composition of soybean oil. Feedstuffs. Edible products. Detection in food (e.g. detection of soybeans in wheat flour, pasta, meat products, etc.). Inedible products. Economics. Table (p. 79-80)–Imports of soy products into Canada: Soy sauces (1931-1933), edible peanut and soyabean oil, peanut and soyabean oil for the manufacture of soap and peanut oil for canning fish, soybeans, soyabean cake and soyabean meal for use exclusively in the manufacture of cattle food and of fertilizers. References (102). Other references (Nos. 103-117). References not consulted (35).

The section titled "Development in Canada" (p. 56-62) states: "Soybeans are at present being grown for seed on a commercial scale in southern Ontario, chiefly in Kent and Essex Counties [the Niagara Peninsula]. Prior to 1931 the acreage under soybeans was about 1000 or 1500. The efforts of persons interested in establishing oil mills increased this to about 5000 in 1931 and to 6000 or 7000 in 1932. The average yield of seed has been about 23 bushels per acre, which is quite equal to yields in the U.S., while another variety, the A.K., has yielded at the rate of nearly 40 bushels per acre during a six-year test at Harrow, Ontario."

"T.B. Macaulay, President of the Sun Life Assurance Company of Canada has been experimenting for a number of years on the growing of soybeans in the hopes of being able to make the western farmer more free from his dependence on wheat, and believes that he is near to discovering suitable varieties...

"A statement appearing in the *Montreal Financial Times* (Nov. 18, 1932) reports that a number of varieties introduced from Urbana [Illinois] and tried in various parts of Alberta made an excellent growth of forage...

"The work being carried out at T.B. Macaulay's experiment farm at Hudson Heights, Quebec, is particularly worthy of mention. Here the testing of varieties has been in progress for 8 years. Mr. Macaulay's method of approaching the problem consists in obtaining samples of hitherto untried varieties from the most northerly regions where soybeans grow and the earliest varieties from Asia and elsewhere... Mr. Macaulay has a new variety which he calls Toyanaga. It matures 5 days to a week earlier than the variety called Manchu, which is being grown to a small extent in southern Ontario."

"Varieties suitable for Canada: Besides O.A.C. 211 which is the one outstanding variety that has shown itself suitable for cultivation in Canada albeit only in southern Ontario, a number of other varieties have been tried and experimented with such as Mandarin, Manchu, Wisconsin Black, Quebec 92, Quebec 537, Early Yellow, Early Brown, and Manitoba Brown, but none of these have been very satisfactory."

Table 29 (p. 60) gives a summary of current (1932) Canadian experiments with soybeans: Ontario Agricultural College (Guelph), grown for 39 years (i.e. since 1893), tested 125 varieties. Dominion Experimental Farms (Ottawa and Harrow, Ontario), 9 years, 100 varieties. Macdonald College (Quebec), 20 years, 16 varieties. Manitoba Agricultural College (Winnipeg), 10 years, 12 varieties. University of Alberta, Edmonton, 3 years, 7 varieties. Brooks (Canadian Pacific Railway Irrigation Experimental Station, Alberta), unknown number of years and varieties. Pointe Platin (Quebec, by J. deLothinière [deLothiniere]), unknown number of years and varieties. Hudson Heights (Quebec, by T.B. Macaulay), 8 years, 100 varieties. University of Saskatchewan, 10 years, 25 varieties.

Page 65 lists "Firms Engaged in the Soybean Industry in Canada." The Soy Bean Oil and Meal Co-operative Company of Canada, Ltd., Chatham, Ontario; Canadian Soyabeans Ltd., Milton, Ontario; The Vitone Co., Hamilton, Ontario; Dominion Soya Industries, 355, Place Royale, Montreal, Quebec.

Note 1. This is the earliest document seen (Jan. 2010) that mentions Dominion Soya Industry, Ltd. (Montreal, Quebec, Canada) in connection with soybeans.

Table 33 (p. 67) gives "Consumption of oilseed cake and meal in Canada" for the calendar years 1926 to 1931. Figures (taken from *Trade in Canada)* are given for cottonseed, linseed, palm nut, soya and total. Consumption of soya cake and meal (in tons) were: 200 in 1926 (0.6% of total); 680 in 1927; 560 in 1928; 1,560 in 1929 (5.0% of the total); 1,190 in 1930; and 2,500 in 1931. The value in dollars role from $8,000 in 1926 to about $50,000 in 1931. Apparently all of this soyabean cake and meal was imported.

Note 2. This is the earliest English-language document seen (Dec. 2005) that uses the term "soyabean meal" to refer to ground, defatted soybeans. Address: Div. of Research Information, National Research Council, Canada.

374. Eaton (T.) Co., Limited. 1935. Wake up your appetite! (Ad). *Toronto Daily Star (Canada).* April 23. p. 43.

• ***Summary:*** In the section titled "Eaton's for Empire Foods" is a subsection on "Variety for those on restricted diets" which includes: "Cellu Soy Bean Flour, 2-lb. tin 65¢.

"McDowell's Gluten Flour, 5-lb. bag $1.75." Address: College St., Toronto. Phone: TR. 3311.

376. Bowdidge, Elizabeth. 1935. The soya bean: Its history, cultivation (in England), and uses. London: Oxford University Press. xii + 83 p. Foreword by Sir John T. Davies (Director, Ford Motor Co., Ltd.). Illust. 20 cm.
• ***Summary:*** Contents: 1. Introduction. 2. The soya bean in the East: Europe, United States, Canada. 3. Description of the plant: Results of experiments in England, the 1934 experiment in Essex, yields from the four varieties, description of the four varieties, composition of English and other varieties. 4. Culture of the soya bean: Soil requirements, inoculation of the seed, preparation of soil, rates of seeding, sowing seed, cultivation, fertilizers, harvesting the crop, threshing, storage, yields in various countries, soya bean prices. 5. Soya bean hay: Feeding values, time of cutting, soya straw, soya in the mixed crop (in mixed cropping plans with sorghum, maize, etc.). 6. Soya beans for soil improvement. 7. By-products of the soya bean: Oil and its uses, notes on experiments in breeding for oil, methods of extraction, soya cake and meal, results of comparative feeding tests. 8. Food products of the soya bean.

This book describes the successful introduction and cultivation of soybeans in England. The Foreword notes (p.

v): “In past years no sustained effort has been made to grow the plant on a large scale in England. The Royal Agricultural Society devoted several years to experiment at Woburn, but in 1914 they reported that the plant was quite unsuitable for growth in this country as it required more warmth than could be obtained here. The British Board of Agriculture reported in 1916 that ‘the Japanese and Manchurian varieties hitherto tested cannot be relied upon to produce seed in this country.”

In the Preface (p. ix) Ms. Bowdidge acknowledges: “That very able and unique work *The Soybean*, by Messrs. Piper and Morse, has been my principal source of information.”

“Efforts to introduce the [soy] bean to English agriculture were begun in 1909 and given up in 1914, and except for the work of Mr. J.L. North nothing further has been done” (p. 9).

The section titled “Results of experiments in England” (p. 15-17) states: “One of the first attempts to acclimatize the soya bean in England began in 1914 at the Royal Botanic Gardens, Regents Park, when it was shown by Mr. North that certain varieties could be ‘advanced’ sufficiently to produce a mature crop towards the end of September. Many years devoted to careful selection of seed from the varieties in his collection had resulted in several early strains. In 1928, a hybrid was received from Canada which, on passing the experimental stage, was planted out on a number of small plots in various parts of the country. It proved to be a very reliable cropper and matured earlier than any of the sixty varieties previously under test. Planted in the first week in May it was harvested at the beginning of September, and reports of good results came from Middlesex, Essex, Berkshire, Oxfordshire, and Hampshire.

“The largest experimental test ever conducted in this country took place in 1933 at Boreham, Essex, when forty-seven different varieties of the soya bean originating from North America, Canada, Manchuria, and Japan were grown under observation. The selection included four varieties which had been acclimatized by Mr. North. Mr. North was engaged to supervise operations, and 50 lb. of his special seeds was purchased. The results obtained were most interesting.”

“There is no doubt at all that the four varieties acclimatized by Mr. North were a great success; two reached maturity on September 1st and two on September 6th. In many cases plants bearing between 300 and 400 seeds were harvested.”

“It has been found by Mr. North in the course of more than twenty years’ study of the subject, mainly with foreign beans grown in various parts of the country, that no variety of soya bean has any chance of success in England unless it matures in less than 100 days in America. Varieties requiring this length of time in America need nearly a month more in this country and, owing to our colder spring weather, no advantage is gained by earlier sowing. Mr. North’s seeds require 124 to 127 days to reach maturity in England but, if grown in America, they would only require 85 to 90 days.

The section on “The 1934 Experiment in Essex” (p. 17-23) notes: “The result of the 1933 experiment was so encouraging that it was determined that a further attempt should be made in 1934 to ascertain whether it would be possible to grow the plant profitably as a field crop and, with this in view, a field of nearly 20 acres was specially prepared for the acclimatized seeds from the 1933 crop.”

Joseph Bramah, an English engineer, invented the hydraulic press in 1796, leading to a “great advance in the oil-extraction industry.” All “old methods in the western world immediately gave place to the new appliance.” More recently the method of solvent extraction has been developed; it is now used throughout the world and removes nearly all the oil from the seeds (p. 69).

“There is plenty of evidence as to the efficiency of soya meal in live-stock feeding, yet it does not appear to be used in this country as widely as its feeding value merits. The prejudice formed when it was first introduced in England as dairy food seems still to exist. It was thought at that time that the use of the meal might affect the taste of milk and butter; but, although this was disproved later, England remains a small user” (p. 72).

Food products of the soya bean (p. 80-83): “It is unfortunate that the inherent conservatism of English people to anything new has been the cause of past failures to popularize soya bean food products for consumption in this country. The bean contains iron, magnesium, calcium, and other mineral salts; phosphorus in the form of lecithin makes it valuable in cases of nervous disorders...

“Soya ‘sprouts,’ which have been grown and used for centuries in the East, have recently been introduced as a green vegetable. The beans gathered before ripe and prepared in the same manner as green peas are a very satisfactory vegetable and the dried beans, if soaked for forty-eight hours, may be cooked like haricot or butter beans and make a most delicious and nutritious vegetable dish.”

There is no doubt that soybean products are gradually becoming established in Western countries. We sometimes eat soybeans without knowing it. “The bean, when properly prepared by roasting, makes an excellent cereal beverage which looks, smells, and tastes like coffee; a sauce, appropriately seasoned with spices, is the so-called ‘Worcester Sauce’, and soya soups made from the bean taste like beef extract. During the late war, when Germany found herself on the verge of starvation, glutamic acid, produced from the soya bean, was used in German hospitals to form the basis of beef-tea, and it is said that the ground bean also was used at that time for the making of bread. Soya bread,

made from properly prepared flour, is obtainable in England and is stated to be of high nutritive value" (p. 81).

Soya flour has long been used in foods for diabetic persons requiring a low starch diet. "The flour contains more protein and fat, and less carbohydrates than ordinary cereal flours, and a certain variety manufactured in England is stated by the proprietors to contain 42 per cent. protein and 20 per cent. fat, having good keeping qualities, 0.13 per cent lecithin phosphoric acid and the vitamins A, B, D, and E. There are many food products on the London market under the names that conceal their soya bean origin. Just before the late war [World War I] an enterprising English firm was making great strides with soya products. Vegetable butter, biscuits, cocoa, milk chocolates and other confectionery, cream, cakes, bread, &c., proved quite a success until a war-time embargo placed upon the importation of soya beans put a stop to the business; the organizers eventually went to America! (p. 82).

The author concludes (p. 83): "The soya bean is by far the most valuable of all known beans and our farmers ought to make a serious effort to grow it. It has already been shown that the acclimatized bean will grow in this country, and if crops can be raised profitably and on a commercial basis, a service will be rendered both to the farmer himself and to the country."

Excellent photos show (see p. xiii): (1) A typical example of the soya bean plant grown at Boreham, County of Essex, in 1933. (2) The soya bean plant in full maturity. (3) Bags of English acclimatized soya beans harvested on Fordson Estates, Boreham, Essex, in 1933. Left to right: Brown 'C,' yellow 'J,' black 'O,' and green 'Jap.' (4) A sturdy specimen of the 'Jap' soya bean plant grown at Boreham, Essex in 1934. (5) The 'J' variety. (6) The 'O' variety (for hay) at the seed stage. (7) Aerial view of the soya bean field as it appeared on 29 Aug. 1934. (8) Soya beans inoculated the previous day being fed into the horse-drawn drill prior to sowing. (9) A man seated on an ordinary horse-drawn grain-drill, planting soya beans in rows wide enough to enable cultivation later on. (10) Six men stooping in a field, planting small quantities of different varieties of soya beans by hand in 30-inch rows. (11) A man walking beside a horse pulling a cylindrical roller, which helps to give the seeds a better growth and even stand. (12) Harvesting soya beans with a reaper and binder pulled by a tractor. (17) Heated cakes of crushed soya beans ready for hydraulic pressing at Erith Oil Mills, Ltd. (18) Soya bean cakes, after leaving the press, are passed through a paring machine where the edges are trimmed at Erith Oil Mills. Address: England.

377. **Product Name:** Soybean Oil, Soybean Oil Meal, Dominion Soya Powder (Soybean Flour for Industrial Uses).
**Manufacturer's Name:** Dominion Soya Industries.
**Manufacturer's Address:** 355, Place Royale, Montreal, Quebec, Canada.
**Date of Introduction:** 1935. May.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** C.A. MacConkey. 1935. Soybeans. Ottawa, Ontario, Canada: National Research Council. p. 65. "Firms Engaged in the Soybean Industry in Canada." Dominion Soya Industries, 355, Place Royale, Montreal.

Note 1. This company was incorporated as Dominion Soya Industry Ltd. in Oct. 1935.

F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-2. "As the centre of soybean production [in Canada] is located in western Ontario, it is only natural that the mills for utilizing the crop should be located there also. The one exception is the plant of the Dominion Soya Industries, 2049 Harvard Avenue, Montreal, Quebec."

Note 2. The company apparently moved to Harvard Avenue from 355 Place Royale, or maybe the plant was in one place and the offices in another. "The plant of the Dominion Soya Industries, Montreal, P.Q. [Quebec], commenced operations in the spring of 1935. This mill uses the solvent process and has a single unit extractor built by the Ford Motor Company. Besides oil and meal, soybean flour is also produced... This plant is now operating and has a capacity of about 100 to 150 bushels of beans a day."

D.L. Calkin. 1936. "Report by Dr. Whitby of interview with Mr. Calkin." In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-1. This company, now named "Dominion Soya Products Company," originally intended to put in a German plant for the extraction of oil but ultimately decided to put in an inexpensive solvent extraction plant developed by the Ford Motor Co. Aviation gasoline is used as the solvent, but it is not entirely satisfactory, since it leaves an odor in the finished product.

Note 3. This is the earliest known commercial soy product made in Quebec province, Canada.

378. *Toronto Daily Star (Canada).*1935. Report Toronto led industrial program: Exceeded Montreal by $8,000,000–More factories. June 14. p. 18.

• ***Summary:*** "National Soyabean Products Ltd., a new concern, subsidiary of Dr. Jackson Foods Ltd., is installing machinery where it has taken space in the plant at 108 Vine St."

For the second successive year, Toronto has led all other Canadian cities in industrial production–according to the Toronto industrial commission.

379. Holmes, Marie. 1935. Cooking chat: Milk drinking health measure for all the family–Timely recipes. *Toronto Daily Star (Canada).* Aug. 31. p. 13.
• ***Summary:*** Includes: "Question: Would you be kind enough to tell me what is meant by 'anchovies' and 'soy'?"

"Answer: Soy sauce is made from cooked soy beans, roasted wheat flour and salt.

"Anchovies are small fish..."

A small portrait photo shows Marie Holmes.

380. Canadian Pacific Railway Co., Dep. of Colonization and Development 1935. Flaxseed. *Agricultural and Industrial Progress in Canada.* 17(8):121. Aug.
• ***Summary:*** Soybean "products are included in the figure of $91,014 for 'other products.'"

"Soybeans were imported to the amount of 112,460 pounds in 1934, appearing separately in the trade returns for the first time. Imports of edible soybean oil rose from 97,792 gallons in 1933 to 169,358 gallons in 1934; but imports of non-edible soybean oil declined from 148,867 to 20,596 gallons. Imports of soybean meals and cake, on the same comparison, increased from 2,899,200 to 3,799,700 pounds. The soybean trade returns are, it should be added, only roughly comparable as between 1933 and 1934, the basis having been revised in April, 1933."

381. *New York Times.*1935. Soy bean exports start. Cargo leaves Chicago in new rivalry with Orient. Oct. 27. p. 30.
• ***Summary:*** "The steamship Barrie cleared for Montreal yesterday with 47,000 bushels of soy beans–the first export shipment of that crop from Chicago in three years... The shipment, officials said, signalized the development of a new export field. Heretofore European markets have purchased soy beans from Manchukuo, Korea or Japan... American producers are making a bid for European business on the basis of quality, consignors of the first cargo said."

382. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics).*1935. Agriculture in the Canadian trade agreement. 31(22):733-59. Nov. 25. See p. 741, 749.
• ***Summary:*** In a table titled "Canada: Concessions granted to the United States on agricultural products. 1935" (p. 741), one row reads: Commodity: Soybeans. Unit of duty: ad valorum and per lb. Duty in 1929: 25¢ per bushel. Present duty to the United States: 25¢. New duty to the United States: free. Approximate reduction: 100%. Imports from United States, fiscal year ended March 31. 1930: -. 1935: $2,000.

The section titled "Other products" (p. 749) basically repeats the information given in the table.

383. Kellogg, John Harvey. 1935. Re: Growing and canning shell soy beans. Making condensed soy milk and soy acidophilus milk. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, Dec. 9. 3 p. Typed, without signature (carbon copy).
• ***Summary:*** "We have been doing some experimenting this year with growing and canning shell soy beans. I am having a couple of cans sent you so you can see what our product is like. We think it is very fine. The few thousand cans we put up went off like hot cakes.

"We are thinking of doing rather extensive planting this year. We shall not have any seed to sell but may need to buy some more seed.

"Here are some points on which I should like information: 1. Do you know of anyone in this country who is putting up shell soy beans? 2. Are shell soy beans canned in Japan and China, and if so can they be purchased there and brought to this country?..."

"I should also be glad to know if you have other varieties of shell beans of good quality with a growing period of about the same length.

"I am also having sent to you samples of our condensed soy milk. Diluted with two or three times its volume of water, it is, I think you will agree, a very palatable product. We supply this to people who are interested in soy acidophilus milk and willing to take the trouble to make it at home. We supply them with the culture. They simply put the condensed milk into a clean fruit jar, add hot water, let it cool to body temperature and then add the culture and wrap it up in a blanket and set it on the kitchen table and the next day the buttermilk is ready.

"Soy milk produces a much more vigorous growth of the bacillus acidophilus than does cow's milk. The organism is more than twice as large and it grows twice as fast and does not require the long training, 25 to 30 transfers, required when cow's milk is used for the culture medium. In other words, the bacillus acidophilus seems to like vegetable products for a culture medium better than animal.

"I shall be glad to know how you like the milk. If you would like to try making it at home, I will have some more cans and cultures sent to you. The process is so simple any housewife can do it. Slight contamination occurs, of course, but by using a large inoculum this does not matter for the first culture; but a fresh pure culture has to be used every time. If an attempt is made to make a culture from a home made culture it will be likely to fail because of the contamination likely to occur.

"Thanking you in advance for any information you may be able to give me, I remain, dear Sir, Very sincerely yours,

"P.S. Soy acidophilus milk has become so popular at my institution here that dairy milk rarely appears on the table. Everybody likes the soy milk better, and of course when people have been properly informed they want the soy acidophilus milk to change their flora and to get rid of intestinal putrefaction and to encourage bowel action. The effect of the soy acidophilus milk in this particular is very remarkable. In cases of very chronic constipation I have observed complete recovery with two or three normal bowel actions daily.

"The Canadian quintuplets are taking soy acidophilus milk at every feeding and have been doing so since last September when they had an attack of bowel trouble which disappeared as soon as they began taking the soy acidophilus milk which I sent them and have supplied to them ever since.

"I am accumulating evidence to the effect that the soy bean encourages the growth of the protective organisms in the human intestine to a very pronounced degree and by producing acids not only prevents putrefaction but encourages bowel action.

"I think every effort possible ought to be made to spread information among the people respecting the value of the soy bean, which I am sure is some time destined to become one of the most important staple foods in this country as well as in China and Japan.

"Here is another question: One of the difficulties in the way of the soy shell bean business is the expense of picking from the vines and shelling the pods. Do you know of any machinery that is used for either of these purposes?"

Note 1. This is the earliest English-language document seen (June 2009) that uses the term "shell soy beans" to refer to shelled green vegetable soybeans.

Note 2. This is the earliest document seen (June 2009) that mentions machinery or equipment for picking / harvesting or shelling green soybeans in the pods. However it only asks a question about this machinery.

Source: Bentley Historical Library, University of Michigan, Ann Arbor. J.H. Kellogg Collection, Box 2, Correspondence.

384. Dominion Bureau of Statistics, Ottawa, Canada. 1935. Imports of soy products into Canada. *Trade of Canada*. *
• ***Summary:*** Imports of soy sauce to Canada from 1931 to 1933 have increased as follows: 1931: 75,325 gallons worth $34,360; 1932: 78,311 gallons worth $34,625; 1933: 85,737 gallons worth $34,868.

See also imports of peanut and soyabean oil, edible.

Imports of soyabeans, soyabean cake and soyabean meal for use exclusively in the manufacture of cattle food and of fertilizers: 1931: 50,085 cwt [1 cwt = hundredweight = 112 pounds in Canada] worth $23,873 [Canadian dollars]. 1932: 38,393 cwt worth $52,296. 1933: 28,992 cwt worth $49,214. Address: Ottawa, Canada.

385. Sconce, Harvey J. 1936. The soy bean conquers industrial America. *Illinois J. of Commerce* 18(1):16-17, 26, 28, 30, 32. Jan. *
• ***Summary:*** Traces the history of the soybean, and discusses harvesting methods, extraction processes, industrial and food products derived from the beans, the utilization of the bean in the Ford plant, its invasion of the cotton lands, and its adaptability to Tennessee and Canada.

"This is the greatest conquest of territory by a plant in history. Ten years more and it will have revolutionized the industrial manufacturing of America. The soy bean had to come to the United States to get its chance, and it made good."

Note: The author supplied Henry Ford with his first soy beans. Address: Chicago, Illinois.

386. **Product Name:** Soybean Oil, and Soybean Oil Meal.
**Manufacturer's Name:** Soya Mills Limited.
**Manufacturer's Address:** Stratford, ONT, Canada.
**Date of Introduction:** 1936. January.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3. "A new mill was established in Stratford, Ontario, during the late fall of 1935 under the name of Soya Mills Limited. Mr. T.D. Bell, Toronto, is the president of this company and Mr. H.P. Trickey [Tricky], vice-president and plant manager. An entirely new and up-to-date mill of the hydraulic press type was brought from England and installed so as to be ready to handle the 1935 crop. About 30,000 bushels of Ontario beans were bought... the mill commenced operating at about the beginning of January 1936." Yet not a pound of product has yet been sold, because the meal contains 10-11% oil rather than the 5% which the feed companies demand. "Mr. Bell, the president, was interviewed in Toronto and stated that in all probability the present mill would have to be taken out and returned to England and the regular type of mill (as recommended in the first place by the manufacturers) installed in its place. It is the intention of the company to go right ahead as the management has every confidence of ultimate success."

387. *Good Health (Battle Creek, Michigan).*1936. Increasing use of the soy bean. 71(2):50-51. Feb.
• ***Summary:*** "Henry Ford has aided in the development of the soy bean industry, having urged the planting as a new opportunity for farmers.

"Manchukuo still produces the world's largest crop of soy beans. The culture of this bean is spreading as people come to know its value for food and many other purposes. Various attempts have been made to grow them in England, Germany, and other parts of Europe with poor success. But the *London Times* records the harvesting of twenty acres of soy beans on the Fordson estate, near Chelmsford [England]. Here Henry Ford has a farm of about two or three thousand acres. His direct interest is due to the fact that he uses this product in his automobile industry.

"Four years ago Dr. Kellogg discovered that milk made from the soy bean made a remarkable culture medium for protective bacteria or so-called 'friendly germs.' In soy milk more than twice the number of these germs can be made to grow than in cow's milk. Remarkable results have been obtained in cases of intestinal disorders through the use of this milk. The Canadian quintuplets are protected against bowel trouble by the constant use of soy acidophilus milk."

388. **Product Name:** "Sunsoy" Whole (Full-Fat) Soybean Flour.
**Manufacturer's Name:** Soy Bean (Sunsoy) Products Ltd. Renamed Sunsoy Products Ltd. in about 1939. Both were subsidiaries of Canadian Breweries Ltd.
**Manufacturer's Address:** Toronto, Ontario, Canada.
**Date of Introduction:** 1936. February.
**Ingredients:** -
**How Stored:** Shelf stable.
**New Product–Documentation:** *Might's Toronto City Directory* 1936. no listing for Sunsoy Products Ltd or Soy Bean (Sunsoy) Products Ltd.

Might's Toronto City Directory 1937. No listing for Sunsoy Products Ltd. BUT when checking the address 367 Sorauren Avenue, we found the following entry: "Murphy Phoenix Products Ltd.

"Park Pulverising Co.

"Soy Bean (Sunsoy) Products Ltd.

In the main section of Might's Toronto City Directory 1937 was the following entry: "Soy Bean (Sunsoy) Products Ltd, Jas M Forgie, pres, F A Park vice-pres, 367 Sorauren Ave. LO 7700" (page 1295).

Might's Toronto City Directory 1938. "Soy Bean (Sunsoy) Products Ltd. Jas M Forgie pres, Frank A Park vice-pres, Fredk E Forster sec-treas, cereals, 58 Fraser av LO 7700" (page 1350).

Might's Toronto City Directory 1939. "Sunsoy Products Ltd. E P Taylor pres, R G McMullen vice-pres, W C Butler sec, J W T Torrance asst sec, H A Taylor treas, W J Packer sales mgr soy bean products, 468 Queen e, EL 9413-5 and EL 7687.

Might's Toronto City Directory 1940. "Sunsoy Products Ltd. E P Taylor pres, R G McMullen vice-pres, W C Butler sec, J W T Torrance asst sec, H A Taylor treas, W J Packer sales mgr, Soy Bean Products, 468 Queen e, EL 9414-4 and EL 7687.

Might's Toronto City Directory 1943. "Sunsoy Products Limited. Edwd P Taylor pres, Robt Fleming vice-pres, W C Butler sec-treas, I McGregor sales mgr, Harold C Maedel mgr, soy bean products, EL 9414-4 and EL 7687."

Might's Toronto City Directory 1944. "Sunsoy Products Ltd. Edwd P Taylor pres, J F Cosgrave vice-pres, W C Butler sec, H A Taylor treas, H C Maedel mgr, soy bean products 468 Queen e EL 9414-5."

Might's Toronto City Directory 1945. "Sunsoy Products. See Victory Mills Limited."

"Victory Mills Limited. Edward P Taylor President, R W Finlayson Secretary, R G McMullen Treasurer, Main Office and Plant 385 Fleet St, Phone Adelaide 8771, Sunsoy Products Division, 468 Queen East, Phone Elgin 9414" (page 1510).

Note 1. Thanks for all of the above city directory information to Martin Ruddy (5 Jan. 2010) of Reference Services, Client Services Division, Library and Archives Canada, 395 Wellington Street, Ottawa, Ontario, Canada K1A 0N4.

Note 2. Victory Mills, a soybean crushing company, started operations in Nov. 1944 on the Toronto waterfront at 385 Fleet St.; in 1955 it was renamed Victory Soya Mills. It seems from the above that Sunsoy Products Ltd. was transformed into Victory Mills. Both of these soy companies were owned by Canadian Breweries Ltd.

Note 3. We see from the city directory listings above that Sunsoy Products moved within Toronto several times: (1) It was located at 367 Sorauren Avenue from about 1936 to 1937. (2) It was at 58 Fraser Ave. in the 1938 directory. (3) It was at 468 Queen St. East in the directories from 1939 to 1945. Was it simply shut down in 1945?

Note 4. What was Sunsoy's basic activity? Did it buy whole soybeans and crush them to make soybean oil and soybean cake? Or did it buy whole soybeans and grind / mill them to make whole (full-fat) soya flour. We may be able to make an educated guess by looking at a map. (1) 367 Sorauren is in western Toronto, near (but not on) a railway line and about 1,200 meters from the Lake Ontario waterfront. (2) 58 Fraser Ave. is between 367 Sorauren and the waterfront, but it is further from any railway. (3) 468 Queen St. is far to the east of 58 Fraser Ave; it is in Eastern

Toronto, not near any rail line or waterfront. (4) 385 Fleet St. is very near the Toronto Waterfront, just west of Toronto's Inner Harbor, in western Toronto, far to the west of 468 Queen St. The first three locations do not seem well suited for a soybean crusher; the fourth clearly does. Moreover, a soybean crusher, with large, heavy equipment, would be unlikely to move three times in 8-9 years. So we are still left with our basic question: What was Sunsoy's basic business?

389. Sunsoy Products. 1936. Jessie Marie DeBoth demonstrates soy beans at the Star Cooking School: Sunsoy, ready-made breakfast food (Ad). *Toronto Daily Star (Canada).* March 10. p. 26.
• ***Summary:*** In the lower left 1/3 of this large ad is a sort-of sidebar: "Read this: 1. Sunsoy has 3 times the nutritional value of cereals made from ordinary grains. 2. Sunsoy has a minimum Grade A protein content of 36% and is a good substitute for meat. 3. Sunsoy is low in carbohydrates. 4. Sunsoy is a non-starch food. 5. Sunsoy contains vitamins A, B1, B2, D and E. 6. Sunsoy is Definitely an Alkaline Food. 7. Sunsoy is mildly laxative and easily digested. 8. Sunsoy is rich in calcium, phosphorus and iron."

"As an economical source of valuable and wholesome food, Sunsoy has no equal as a cereal. This product combines more concentrated essential food elements than almost any other food known–without a doubt the Soy Bean is destined to become a universal article of food in our diet and in Sunsoy you have the Soy Bean in its purest form."

A large oval illustration shows Jessie Marie DeBoth. A smaller round silhouette illustration at the top of the ad shows a side view of a Chinese peasant with a conical hat and a shoulder pole supporting two baskets.

Note 1. This is the earliest document seen (Dec. 2009) that mentions Sunsoy in Toronto, Ontario, Canada.

Note 2. A similar ad appears on March 11 (the next day, p, 27) but without the illustration of Jessie DeBoth. Address: 367 Sorauren Ave., Toronto. Phone: Lombard 7700.

390. Sunsoy Products. 1936. Sunsoy–Ready-made breakfast food. 367 Sorauren Ave., Toronto, Ontario, Canada.
• ***Summary:*** Ad in *Toronto Daily Star* (Canada). 1936. March 10. p. 26. Jessie Marie DeBoth demonstrates soy beans at the Star Cooking School: Sunsoy, ready-made breakfast food (Ad). "1. 391. *Toronto Daily Star (Canada).*1936. Protest soya bean import. March 14. p. 13.
• ***Summary:*** "Owen Sound, March 14–The council in committee last night decided to protest against putting the soya bean on the free list from the United States. A local industry [company], the Dominion Linseed Co., would be affected."

Note: An ad in this newspaper dated 31 March 1933 (p. 28) shows that Livingston's Blue Highland Flaked Whole Wheat is: "Milled at Owen Sound, Ontario, by The Dominion Linseed Oil Co., Ltd."

392. Kellogg, John Harvey. 1936. Re: Soy Acidophilus Milk and the Dionne quintuplets. Letter to Mr. William J. Morse, Bureau of Plant Industry, USDA, Washington, DC, March 30. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** "We are having great success with our soy acidophilus milk. It cured the [Dionne] quintuplets of serious trouble and keeps them in good health. They have been using it regularly in their daily food for more than a year and a half. Dr. Dafoe writes me that he cannot get along without it. When he stops the use of it the bowels get bad and he has to resume its use at once. I shall be glad to have a liberal sample of this milk sent to you if you would like to try it."

"Sincerely yours,

"P.S. Dr. Miller of China is one of my old students. He sent me a sample of his soy milk powder. It was very fine in appearance, but had a rancid flavor...

"I shall be very glad indeed if you will let me have as much seed as you can of rapid growing vegetable varieties of soy beans. I am planting 150 acres this year, but will be glad to plant 50 more if I can get sufficient seed for the purpose."

Note: This is the earliest document seen (Nov. 2002) concerning the Dionne quintuplets and soy. They were born on 28 May 1934. Dr. Roy A. Dafoe was the attending physician. Address: Miami, Florida.

393. Holmes, Marie. 1936. Cooking chat: The unexpected characteristic of Chinese cookery–soy sauce, native vegetables. *Toronto Daily Star (Canada).* April 2. p. 35.
• ***Summary:*** In Chinese cookery, one finds "chopped meats and the smell everywhere of bean sauce" [soy sauce].

In the average Chinese home kitchen, "Chinese cookery owes much of its savoriness to the bean sauce and native vegetables."

"Soy or bean sauce should be used to flavor soups or main dishes."

One recipe calls for "1 tablespoon Chinese sauce"–apparently referring to soy sauce. A recipe for Chop suey calls for "1 tablespoon Worcestershire sauce." A small portrait photo shows Marie Holmes.

394. Holmes, Marie. 1936. Cooking chat: Luscious chocolate cake beyond dieter's resistance–Topped with frosting. *Toronto Daily Star (Canada).* April 8. p. 35.
• ***Summary:*** Includes a recipe for Chocolate soy cake (with ½ cup soy flour). "The substitution of soy flour changes the texture somewhat, but increases the keeping qualities." A portrait photo shows Marie Holmes.

395. Holmes, Marie. 1936. Cooking chat: Parts of motor car and baby foods made from soy bean. *Toronto Daily Star (Canada).* April 16. p. 34.
• ***Summary:*** A long article, with recipes, focusing on the rise of the soy bean in Canada's public awareness.

"What's all this talk about soy beans? Why are they bursting into headlines, causing heated debates in the House of Commons and revolutionizing the food and industrial world?

"When a product whose name is foreign to most of us becomes the subject of much discussion publicly or privately, we are anxious to know why."

"A small bean, known for thousands of years by the Chinese, is about to become the culture plant of the future. This ancient food with new importance is the soy bean."

The story of the soy bean is a romantic one, for its origin dates back thousands of years to Manchuria and Mongolia [sic], where it is still largely grown today. Henry Ford is discovering new uses for it in the automobile industry. It is used [in the form of fermented soymilk] in the scientific formulas fed to the Dionne quintuplets. As many as 595 products are now made from the soy bean. Several of the 500 varieties of soy beans are now grown in Ontario, and are of high quality.

The soy bean is a rich source of oil, from which many industrial products have been developed, such as soaps, paints, varnishes, printers' ink, linoleum, and artificial leather. This oil is also rich in lecithin, which can be added to dye baths and to finishing solutions for artificial silks and for cotton. Soy bean glue is used to make furniture and plywood from pine trees.

The soy bean is also an excellent source of food, feed, and ammunition. "Dr. A.A. Horvath, probably the greatest chemical authority on the subject of the soy bean says: 'As an economical source of valuable and wholesome dietary elements it probably has no peer."

Pediatricians have found "soy milk" beneficial for feeding infants when mother's milk is not available. Roasted soybeans [soynuts] can be used as a peanut substitute. Flour made from the soy bean can replace part of the wheat flour in cakes, puddings, and breads, and because of its high protein and low starch content, is suited for diabetic and reducing diets. Soy bean cereals are now on the market.

"The hardy Mongolians, giants of strength and stature, have, through the ages, been nourished by the soy bean, the growing of which is the greatest industry of Mongolia [sic, Manchuria].

The soy bean is widely used in Chinese cookery, in forms such as the famous soy sauce. And the soy bean is a rich source of high quality, low cost protein (and minerals)–rivaling that in milk, meat, fish and eggs.

Recipes: Vegetable casserole (with "1 cup soy bean cereal"). Raisin soy muffins (with "1 cup soy bean cereal"). Chocolate soy cake (with "½ cup soy flour"). Health pudding (with "2 tablespoons soy bean cereal"). Soy bean cookies (with "2 cup soy bean cereal").

A large photo, titled "Manufacture of new foods," shows a man (wearing a white lab coat) pouring a ladle of soy beans into the hopper of a mechanical mill.

A small portrait photo shows Marie Holmes.

396. **Product Name:** Soyota (High-Protein Bread Containing Full-Fat Soy Flour).
**Manufacturer's Name:** Moirs Ltd.
**Manufacturer's Address:** Halifax, Nova Scotia, Canada.
**Date of Introduction:** 1936. April.
**Ingredients:** Soybeans.
**New Product–Documentation:** D.L. Calkin. 1936. Report by Mr. F.C. Green of interviews with Mr. D.L. Calkin on April 23 and 24, 1936. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. "Moirs in Halifax [Nova Scotia] are attempting to sell a 10% bread [i.e., one containing 10% soya flour], but this sells at 10 cents and they find it difficult to compete with ordinary loaves selling at 6 cents."

Note 1. According to an ad in the *Toronto Daily Star* (12 Sept. 1927, p. 15) Moirs Ltd. was a well-known maker of chocolates and other candies, located in Halifax, Nova Scotia, Canada.

James L. Doig. 1946. *Soybean Digest.* Jan. p. 16. "Canadian Navy adopts high protein bread." Soyolk full-fat soya flour was made in Britain and sold "to practically every large baking unit between Halifax and Vancouver. From this soy flour Moirs Limited of Halifax, Canada, developed a commercial high-protein bread named Soyota. The ingredients were 98 lb wheat flour, 9 lb high-fat soy flour, 3 lb shortening, 2 lb each sugar and salt, 1 lb 12 oz shortening, 1.5 lb each skimmed milk powder and malt flour, 3 oz. mineral salt, and 62 lb water. Although practically unadvertised, Soyota soon became a good selling bread."

Note 2. This is the earliest known commercial soy product made in Nova Scotia, Canada.

397. National Research Council of Canada. 1936. Proceedings of the First Conference on Soybeans. Ottawa,

Canada. 4 p. Held on 29 April 1936 in the National Research Building, Ottawa, Ontario, Canada. Confidential.
• ***Summary:*** The following people were present: Major-General A.G.L. McNaughton (chairman), Dr. H.D. Chataway, Mr. F.G. Green, Dr. C.Y. Hopkins, Mr. F.E. Lathe, Dr. W. Newton, Dr. G.S. Whitby, Dr. C.A. MacConkey (secretary).

"The chairman explained that the Minister of Finance was desirous of finding alternate crops to wheat to grow in western Canada, and that he was not satisfied with the progress that had been made on the question of soybeans. The meeting had therefore been called to discuss the present situation in respect to the soybean industry in Canada, to consider possibilities for development and the requirements for research in relation to cultivation, to development of new species and to utilization."

Dr. Hopkins proposed that the Minister of Finance should be informed of four factors that mitigate against the economic success of soybean propagation in Canada: (1) Soybeans contain only about 16% of oil, while flaxseed and cottonseed contain 40%; (2) The climate of all but a very small part of Canada is unsuitable; (3) The primary product is the oil-cake or meal, with which Canada is already well supplied; (4) Soybean oil is at a disadvantage in being neither a drying nor a non-drying oil, but intermediate between the two.

The following subjects were also discussed: Potential use of soybean oil in making nonfood industrial products including paints (since it has an iodine number of 117-139), soaps, and foundry molds. Use of protein from soybean meal in plastics and water-proof glues. The results of soybean work by Dr. J.M. Swaine and the Dominion experimental stations/farms in various provinces, the Arlington Experimental Station at Washington, DC, and by Mr. T.B. Macaulay and Mr. de Lotbinière in Canada. The secretary, Dr. MacConkey, agreed to "bring the present list of literature references up to date, particularly in respect to the industrial uses of soybeans." No formal papers were presented. The meeting lasted only 1 hour and 5 minutes. Address: Ottawa, Ontario, Canada.

398. Russell, John. 1936. The culture of the soya bean in England. *J. of the Ministry of Agriculture (Great Britain)* 43(1):24-30. April. [4 ref]
• ***Summary:*** Cultivation of maize and the soya bean in England began at a relatively late date. "Much important work on selection and hybridization of these crops has been done by Professor W. Southworth, formerly of the Manitoba Agricultural College [in Canada], and now of the Rothamsted Experimental Station." Some 30 years ago [about 1906-10] Professor [James] Hendrick tried to grow the soya bean at "Aberdeen [Scotland], using Manchurian seed; in the greenhouse a few plants grew and even flowered, but they never produced seed, while in the open the seeds hardly germinated.

"Further south, at Kingston and Kegworth in the Midlands, Mr. Golding obtained better results with Japanese seed, and indeed he used the plant for some of his pioneering investigations on nitrogen fixation by leguminous plants, working with a culture supplied by Hiltner, then of Munich [Germany]. Although it was useful for laboratory investigations the crop held out little promise to the practical farmer. Similar negative results were obtained by Sir Rowland Biffen at Cambridge. A summary of these tests was given in this Journal in April, 1912 (p.33). A little later in the summer of 1912 and 1913, soya bean was tried at the Woburn experimental farm, but although the seed germinated satisfactorily and the plant grew, as in Mr. Golding's experiments, only a few pools were produced, and it was clear that the varieties tested were useless to this country. Still further south, in the old Royal Botanic Society's Gardens, Regent's Park, Mr. J. L. North, the Curator, was more successful than any of his predecessors: he began in 1914 and within a few years was growing a number of varieties and found some that ripened seed ready for harvesting in September. A brown variety seemed so promising that by 1929 it was taken up for further trial by the National Institute of Agricultural Botany and by Messrs. Sutton and Sons. Meanwhile Mr. North received other varieties from Professor McRostie, of Ontario [Canada], and these were included in his trials-but they all failed.

"This brown variety had been obtained by Professor Southworth about 1916 at the Manitoba Agricultural College, and was fully tested and ready for distribution by 1922. It was a selection from Ogemaw, a hybrid between an early black and a dwarf brown variety produced by E.E. Evans at West Branch, Michigan, in the opening years of the present century. Like all hybrids, it is variable, and Professor Southworth's selection differed in such important respects from the parent material that it was issued as a distinct variety under the name Manitoba Brown. This was sent to Mr. North and grown by him: he described it in the *Quarterly Summary* of the Royal Botanic Gardens, for April, 1929, as having 'in the course of seven years' trials here proved to be not only the most reliable cropper, but the earliest of any of the sixty varieties of soya tested by me for growth in this country for the last fourteen years.' Although Mr. North gives no estimate of yields he quotes Messrs. Chivers' estimate of 12 to 15 cwt. [1 cwt = hundredweight = 112 pounds] of grain per acre, and soya beans sold at that time at £13 per ton. Mr. North states also that the soya bean has been grown successfully in the Home Counties, Oxfordshire, Hampshire and the Channel Islands, but gives no figures of yields in any of these places. The National Institute of Agricultural Botany grew it in 1924, 1925, and 1926 from Mr. North's seed, and each year had a fair crop of seeds: in 1928 large plots were grown and the yield was

estimated at 900 lb. per acre without inoculation and 1,150 lb. per acre with inoculation. The results seemed so promising that half an acre was sown in 1929, but the plants ripened irregularly and produced little seed. The trial was then discontinued."

Mr. North continued his trials and "was fortunate in enlisting the sympathy of Mr. Henry Ford, who in 1932 had purchased some 2,000 acres of agricultural land at Boreham in Essex and proceeded to sow some Michigan varieties of soya bean. These failed, but in the meantime Mr. Ford discovered Mr. North, who furnished him with the above variety and three others, and these have been grown since 1933... Meanwhile in 1932 Professor Southworth, the originator of the most successful of these varieties, had retired from the Manitoba Agricultural College and joined the Rothamsted Staff. He started growing his best selection at the Woburn Experimental Farm... Professor Southworth himself has been growing the crop both at Rothamsted and at Woburn since 1934." Cultures for inoculating soya beans are obtainable from Messrs. Allen and Hanbury, 3 Colts Lane, Bethnal Green, London, E.2.

Note 1. This is the earliest document seen stating that the soya bean was grown at Rothamsted, the world's first agricultural experiment station, established in 1843.

Note 2. This document contains the earliest date seen for soybeans in Scotland, or the cultivation of soybeans in Scotland (About 1906-1910). The source of these soybeans is unknown (One of two documents).

Note 3. This is the earliest document seen (July 2007) concerning soybeans in the Channel Islands, or the cultivation of soybeans in the Channel Islands. This document contains the earliest date seen for soybeans in the Channel Islands, or the cultivation of soybeans in the Channel Islands (April 1936). The source of these soybeans may have been Mr. North. The Channel Islands (incl. Jersey, Guernsey, Alderney, and Stark) are in the English Channel, just west of the northwest tip of France (Manche dept.). Part of the United Kingdom, they were once part of the ancient Dukedom of Normandy (France); today they are domestically independent, not controlled by the British government. The inhabitants are of part Norman descent (French), part English. Here the well-known Jersey and Guernsey breeds of cattle originated. Address: Sir, D.Sc., F.R.S., Director, Rothamsted Experimental Station [England].

399. Barker's Bread Limited. 1936. Which do you prefer of these two popular favorites? (Ad). *Toronto Daily Star (Canada).* May 5. p. 5.
• ***Summary:*** The first of the two favorites is "'Sunsoy' soy bean loaf–An entirely new kind of bread that has won thousands of new customers on taste alone." "Brown 'Sunsoy' 24 oz. loaf 10¢." "Barker's blend of soy bean flour and the finest wheat flour is the secret. Besides assuring wonderful flavor, this blend gives Sunsoy Bread its *alkaline* reaction–its high protein and low starch content–its extra vitamins, lecithin, and mineral salts... and it stays fresh twice as long. Don't wait, try it to-day and see!"

A photo shows a hand holding a bread knife, cutting the loaf into slices. Right below the photo is a box titled "Health facts about Sunsoy Bread (Made only by Barker's)." Seven facts are given, summarizing what is already in the text above.

The second favorite is Barker's Creamy Way Bread, a type of white bread. For home service [delivery] Phone Midway 3511.

Note: This ad also appeared in the issue of May 11 (p. 6). Address: 555 Davenport Rd., Toronto. Phone: MIdway 3511.

400. Holmes, Marie. 1936. Cooking chat: Menus for reducing diets often require modified recipes. *Toronto Daily Star (Canada).* May 9. p. 25.
• ***Summary:*** A recipe for Soy bean and cornmeal muffins contains "½ cup soy bean flour." A small portrait photo shows Marie Holmes.

401. *Agricultor Venezolano (El) (Ministerio de Agricultura y Cria, Caracas).*1936. El cultivo de la "soya" [The cultivation the soybean]. 1(1):24. May. [1 ref. Spa]
• ***Summary:*** A short paragraph at the top of the article states: We have translated the monthly bulletin of the Royal Bank of Canada [actually The Royal Bank of Canada Monthly Letter, April 1936] which discusses the extraordinary importance acquired recently by the soybean, an agricultural product whose cultivation is being tested in Venezuela. The intensification of this crop in our country can come to signify a new and important source of national wealth.

The article begins: "To many people, the soybean has an oriental flavour; they know it as the basic ingredient in some of the most famous English meat sauces [Worcestershire, etc.] and have heard that it is an important Manchurian export. Against this background it is something of a surprise to learn from the *Wall Street Journal* of February 17, 1936, that in the previous year it had become, from the viewpoint of cash return to the farmers, the fourth most important cereal crop in the United States. The crop of 1934 was about 50 per cent larger than that of 1933 and the crop of 1935 was doubled that of 1934."

The many uses of the soybean are discussed, including soybean flour (with and without the original oil content of the seed), soybean milk, butter, cheese [tofu], and coffee. Among industrial uses, in 1934, 10 million lb of soybean oil were used by the paint industry in the USA. "In varnish and lacquers soybean oil is the principal base. The Ford car is finished with a soybean lacquer and the Ford Company is erecting a $5,000,000 plant in Detroit [Michigan] to make

soybean products. In soaps, glues, linoleums and rubber substitutes, the ingredients of the soybean have come to be of predominant importance."

402. **Product Name:** Barker's "Sunsoy" Soy Bean Loaf.
**Manufacturer's Name:** Barker's Bread Limited.
**Manufacturer's Address:** 555 Davenport Rd., Toronto, Ontario, Canada. Phone: Midway 3511.
**Date of Introduction:** 1936. May.
**Ingredients:** Incl. soy bean flour and wheat flour.
**Wt/Vol., Packaging, Price:** 24 oz. loaf retails for 10¢ (Canadian).
**How Stored:** Shelf stable.
**New Product–Documentation:** Ad in *Toronto Daily Star* (Canada). 1936. May 5. p. 5. "Which do you prefer of these two popular favorites?" The first of the two favorites is "'Sunsoy' soy bean loaf–An entirely new kind of bread that has won thousands of new customers on taste alone." "Brown 'Sunsoy' 24 oz. loaf 10¢." "Barker's blend of soy bean flour and the finest wheat flour is the secret. Besides assuring wonderful flavor, this blend gives Sunsoy Bread its *alkaline* reaction–its high protein and low starch content–its extra vitamins, lecithin, and mineral salts... and it stays fresh twice as long. Don't wait, try it to-day and see!"

403. Dimmock, F. 1936. Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario. In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. 18 p. See Appendix B, p. B1-B6. Held on 4 May 1936 in the National Research Building, Ottawa, Ontario, Canada. [4 ref]
• ***Summary:*** An excellent insight into early soybean crushing operations in Canada. "During the year 1935 it has been estimated that approximately 10,000 acres were devoted to soybeans in Canada. This acreage was located almost entirely in western Ontario where the comparatively long, warm season provides excellent conditions for the production of this crop.

"Of the 10,000 acres it is unlikely that more than half of 5,000 acres was harvested for seed. At an average of 20 bushels per acre this would mean a total seed production of about 100,000 bushels. Possibly 50 percent of this quantity will be used for feed and to supply seed for the present season's crop, leaving approximately 50,000 bushels of beans available for disposal for commercial purposes...

"As the centre of soybean production is located in western Ontario, it is only natural that the mills for utilizing the crop should be located there also. The one exception is the plant of the Dominion Soya Industries, 2049 Harvard Avenue, Montreal, Quebec.

"During the fall of 1929 the first oil mill for processing soybeans was established at Milton, Ontario, under the name of the Milton Oil Refineries, Limited. This mill got off to a poor start, and for various reasons such as poor management, poor machinery, and probably poor financing, has never operated with any degree of success. It has changed hands several times but is not operating at present. It uses the hydraulic press method of extraction.

"The next effort to start a mill was made at Chatham, Ontario, in 1932 by a farmer's co-operative under the name of the Soybean Oil and Meal Co-operative Co. of Canada, Limited. Farmers secured membership in the company by the purchase of a share valued at $50 and this gave the purchaser prior rights to sell beans to the company. The number of members was said to have reached from 700 to 800 farmers. Under an agreement with the Archer-Daniels-Midland Company, Milwaukee, Wisconsin, (one of the largest millers of soybeans in the United States), this company installed the machinery and provided a manager, Mr. B.E. Biles, to run the mill. In return for these services the Archer-Daniels-Midland Company was to receive 5 cents for every bushel of beans milled. The mill was of the Anderson expeller type and had a total capacity of about 20 tons of beans a day (24 hours). Unfortunately during the first year of operation the prices of soybean oil and meal dropped to their lowest point, and as a result the price paid for beans was only about 50 cents per bushel. The mill operated at intervals for a few months, but crushed only 22,000 bushels of beans. The first year's results were disappointing to the company and the growers alike.

"In 1933 the price of soybean products rose considerably (meal from $21 to $36.50 per ton) but while the mill handled something over 50,000 bushels of beans the price paid the farmer averaged only 65 to 70 cents per bushel. This continued low price had a very discouraging effect upon the growers and while they continued to produce soybeans they preferred to use them for feeding to livestock rather than sell them to the mill. Much difficulty was encountered in purchasing beans for the mill from the 1934 crop–farmers were beginning to appreciate the value of soybeans for feeding purposes. The price offered, 70 to 75 cents per bushel, brought in very few beans. The final blow came when Mr. Biles, the manager, disappeared with about $7,000 of the company's funds. The plant is now idle and did not open for the 1935 crop.

"The plant of the Dominion Soya Industries, Montreal, P.Q. [Quebec], commenced operations in the spring of 1935. This mill uses the solvent process and has a single unit extractor built by the Ford Motor Company. Besides oil and meal, soybean flour is also produced... This plant is now operating and has a capacity of about 100 to 150 bushels of beans a day. Only about 25 percent of the beans processed during the past year have been of Canadian origin, the remainder having been imported from the United States.

"A new mill was established in Stratford, Ontario, during the late fall of 1935 under the name of Soya Mills Limited. Mr. T.D. Bell, Toronto, is the president of this

company and Mr. H.P. Trickey, vice-president and plant manager. An entirely new and up-to-date mill of the hydraulic press type was brought from England and installed so as to be ready to handle the 1935 crop. About 30,000 bushels of Ontario beans were bought and paid for at 95 cents per bushel f.o.b. Stratford. Additional beans were purchased in the United States. The beans were stored in the plant elevators and the plant commenced operating at about the beginning of January 1936. After the mill had run for some time and several thousand bags of meal had been produced, analysis showed that the press was incapable of extracting the oil below 10 to 11 percent. The feed companies demanded that the meal not carry more than 5 percent of oil. This unfortunate experience has given the company a serious setback. Orders are on hand for every pound of oil and meal that can be produced–oil at 7 to 8 cents per pound and meal at $30.00 per ton by carlots, at the mill–and not a single pound has been sold due to the unsatisfactory nature of the product. Mr. Bell, the president, was interviewed in Toronto and stated that in all probability the present mill would have to be taken out and returned to England and the regular type of mill (as recommended in the first place by the manufacturers) installed in its place. It is the intention of the company to go right ahead as the management has every confidence of ultimate success.

"At Belle River, Ontario, an entirely new mill is now in the course of construction. Mr. James Edgar, of Edgar Sugar House, Detroit, Michigan, is building this plant under the name of the Edgar Soya Products, Limited. The intention is to produce oil, meal and flour. The mill is to consist of two Ford solvent extractors manufactured by the Ford Motor Company... This company intends to contract with growers for acreage. Although no attempt has been made to canvas the farmers contracts for more than 400 acres have already been secured. It is expected that this mill will have no difficulty in obtaining sufficient acreage to provide for its requirements."

"The Dominion Linseed Oil Company plant at Baden, Ontario... is operating a press of the expeller type at this point and is said to have been processing soybeans for 4 to 5 years" [i.e. since about 1931 or 1932]. "Mr. Livingstone, president of the Dominion Linseed Company, was interviewed in Toronto and states that in addition to soybean oil and meal his company is producing soybean flour at its plant in Owen Sound. This flour has been made by a special process and retains the entire oil content of the bean. It is of excellent quality, having been thoroughly tested at the University of Illinois in comparison with other soybean flours of United States origin and declared as equal or better than most of them for cooking purposes. This company is prepared to produce in addition a low oil content flour and plans to do so in the near future. The company is having considerable difficulty in marketing its soybean flour. Mr. Livingston claims that the large wheat milling companies control the bakeries and are strongly opposed to an additional flour being placed on the market, especially when there is any possibility of such flour being used in bread-making. He also claims that before he can definitely establish the value of this flour, both from the standpoint of nutrition and use, it will be necessary to show results that have been obtained in baking tests conducted by an impartial authority, such as the Dominion Department of Agriculture...

"The Christie Brown Company, biscuit manufacturers, Toronto, have been large buyers of soybean flour and have expressed a preference for the Dominion Linseed Oil Company's product over soybean flours which have been previously imported. The price of 6 cents per pound is considerably lower than 9 cents per pound, which was formerly paid for the imported flours."

Tables on page B-5 show that the amount and value of soybeans, soybean oil, and soybean cake or meal imported to Canada have increased dramatically during the past 2 years. For example, during the one year from 1 April 1934 to 31 March 1935 some 4,325 bu of soybeans worth $7,822 were imported. 64% of these soybeans were subject to a tariff totaling $2,488.80. Yet during the 10 months from 1 April 1935 to 31 Jan. 1936 some 12,416 bu of soybeans worth $13,918 were imported. Only 19% of these soybeans were subject to a tariff totaling $2,242.74. "The imports of the last 10 months period represent the product of about 10,000 acres which might easily have been produced in Canada." Note: This is the earliest document seen (Jan. 2005) that gives soybean production statistics for Canada. Address: Div. of Forage Plants, Dominion Experimental Farms.

404. Goldsoy: New Canadian soybean variety. 1936. Seed color: Yellow (buff), hilum yellow.

• ***Summary:*** Sources: National Research Council of Canada. 1936. *Proceedings of the Second Conference on Soybeans.* Ottawa, Canada. 18 p. Held on 4 May 1936 in the National Research Building, Ottawa, Ontario, Canada. See p. 2. Dr. L.E. Kirk talked about the potential for growing soybeans various parts of Canada, including Guelph, where the Ontario Agricultural College has developed and popularized a new variety named Goldsoy.

405. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Canada (Document part). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(5):175T-80T. May.

• ***Summary:*** "2. Canada. Cultivation of soya is limited almost entirely to the province of Ontario though it is also found in small quantities in New Scotland [Nova Scotia], New Brunswick, the province of Quebec, Manitoba and British Columbia.

"The principal centres of research are: the Central Experiment Farm of the Department of Agriculture of Ottawa; the Experiment Station of Harrow [Ontario]; the Department of Agriculture of the provinces of Ontario and Manitoba.

"During the last ten years, the Forage Plant Service has introduced and tested hundreds of species and varieties of soya from different parts of the world. On the bases of these trials, and others carried out in almost all the Experiment Farms, it may be said that the best varieties now available for cultivation in Canada are the following: -

"Manitoba Brown (Matures very early, brown, obtained by breeding from Ogemaw, semi-dwarf). Wisconsin Black (Matures early, black, much taller than Manitoba Brown, may be grown for both hay and seed). Mandarin (Ottawa; Matures medium early, yellow, grown mainly for seed). Manchu (Hudson; Matures medium late, yellow, hilum black, obtained by breeding from Manchu, very tall, grown for seed and for hay). O.A.C. No. 211 (Matures medium late, yellow, obtained by breeding from Habaro, medium habit of growth, grown for both hay and seed). Manchu (Matures late, yellow, hilum black). A.K. (Harrow; Matures very late, yellow, hilum brown).

"Improvement of varieties has received much attention for some years at Ottawa and Harrow. At Ottawa, in 1931, 460 plants were chosen from among those obtained from several lots of mixed seed harvested in the neighbourhood of Harbin (Manchuria). The descendants of these selected plants were tested in 1932 and 1933...

"The same selection work is carried out at the Harrow Station as at Ottawa, but with varieties which ripen a little later than Mandarin." Address: Rome, Italy.

406. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries. *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(5):165T-89T. May.

• ***Summary:*** Contents: Part 2. IV. Varieties cultivated in the different countries. A. America (continued): United States (conclusion). Principal states of the Union where soya is grown (conclusion: Gives a little history and lists the most popular varieties and how/where grown): Massachusetts, Ohio, Mississippi, Iowa, Maryland, New York, Wisconsin. Canada. Argentina. Bermuda. Brazil. Chile. Colombia. Costa Rica. Cuba. Dominican Republic. Equator [Ecuador], Guadeloupe, Guatemala, British Guiana, Dutch Guiana [Suriname], Mexico, Peru, Porto Rico [Puerto Rico], Salvador, Uruguay.

Varieties grown in Massachusetts (p. 166T): Minsoy, Mandarin, Wisconsin Black, Soysota, Chestnut, Habato, Ito San, Pinpu, Wea, Manchu, Black Eyebrow, Dunfield, Illini, Mansoy, Harbinsoy, Medium Green, Wilson 5 [Wilson-Five], Ilsoy, Peking, Virginia.

Varieties grown in Ohio (p. 167T): Dunfield, Illini, Kingwa, Manchu, Peking, Pekwa, Manchuria, Manchuria 13177, Mukden, Muksen, Mandell.

Varieties grown in Mississippi (p. 169T-172T): Table IV (p. 170T) shows "Production (in bushels per acre) of soya varieties, studied at the Experiment Station of Delta, Stoneville, compared with 5 standard varieties (in 1934). Biloxi, White Biloxi, Coker's 31-15, Coker's 31-9, Delnoshat, Delsta, Dixie, Ebony, Goshen, Kingwa, Laredo (Southern), Lexington, Looney No. 1, Looney No. 2, Looney No. 3, Loxitan, Mamloxi, Mammoth Brown, Mammoth Yellow, Mammoth 01, Mamotan, Mamredo, Manchu, Matthews J.P., Midwest, Otootan, Peking, Sable,

Sable Selection, Tanloxi, Tarheel Black, Tokio, Virginia, George Washington, Wilson.

Varieties grown in Iowa (p. 172T): Hamilton, Black Eyebrow, Dunfield, Midwest, Mansoy, Wilson, Manchu, Illini, Mukden.

Varieties grown in New York (p. 173T): Hamilton, Black Eyebrow, Dunfield, Midwest, Mansoy, Wilson, Ito San, Haberlandt, Illinois 13-19.

Varieties grown in Wisconsin (p. 173T-174T): Black Eyebrow, Early Green, Ito San, Manchu, Midwest. Address: Rome, Italy.

407. Kirk, L.E. 1936. Memorandum on soybeans: Varieties, introduction, selection, breeding, variety testing and other experimental work–of the Division of Forage Plants, Central Experimental Farm, Ottawa. In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. 18 p. See Appendix A, p. A1-A5. Held on 4 May 1936 at the National Research Building, Ottawa. [4 ref]

• ***Summary:*** Contents: Varieties. Introduction. Selection. Breeding. Variety testing. Other experimental work.

Details (including seed color, maturity, and yield) are given on the following soybean varieties produced in Canada in commercial quantities: O.A.C. 211 (by the Ontario Agricultural College), A.K. (Harrow strain), Mandarin (Ottawa strain), Manitoba Brown (or Ogema [Ogemaw]; introduced many years ago from the USA), Wisconsin Black (introduced from Wisconsin), Manchu (Hudson).

"Introduction: Large numbers of soybean introductions have been tested at Harrow since 1923, and at Ottawa since 1928. These have come mainly from Manchuria either directly or indirectly through the United States Department of Agriculture, or Mr. J.L. North, Royal Botanic Gardens, London, England. Others were sent to us by Mr. R.R. Kabalkin of London, England. In some cases we were able to obtain seed samples from districts well to the north of Harbin. Nearly all of our best selections have been made from material introduced directly from Manchuria or that obtained from Mr. J.L. North."

"As the result of an extended trip through Manchuria, occupying two years, Dr. [sic] W.J. Morse, in charge of soybean investigations for the United States Department of Agriculture, brought back about 8,000 seed samples of soybeans. These were grown and classified according to maturity. We were supplied with a complete set comprising the earliest maturity group. Not one of these lots matured as early as our own strains and the great majority did not ripen at all. Nearly all developed a bad attack of Mosaic, which was introduced with the seed. None of the U.S. strains proved to be of any value."

Breeding: "In 1936, about 30 of the best strains will be subjected to a thorough strain test at Ottawa, and at six branch farms, namely, Nappan [Nova Scotia], Fredericton [New Brunswick], Lennoxville [Quebec], Harrow [Ontario], Brandon [Manitoba] and Lethbridge [Alberta]. One very early strain is being increased at Lennoxville, and a majority of them are being multiplied in a small way at Ottawa."

"Variety testing: A standardized test of soybean varieties for seed production, and also for hay production, is conducted each year at Ottawa," at the six branch farms listed above, and at Kentville (Nova Scotia), Morden (Manitoba), Summerland (BC), and Agassiz (BC). "The results of these tests have shown that, with the exception of Ontario, all other provinces require varieties for seed production that are earlier than Mandarin in maturity. The Mandarin variety, however, has produced excellent crops of mature seed in some years in Quebec and the Maritime Provinces; at Brandon, Manitoba, and at Summerland, B.C. Generally speaking, however, there is no yellow seed variety available commercially with a sufficient margin of safety under practical farm conditions to enable the beans to fully mature with reasonable certainty at any of the above places."

Other Experimental Work: "Valuable information on varietal adaptation has been obtained each year from farmers, especially in Quebec and the Maritime Provinces, to whom we have supplied seed for small tests."

Note 2. This is the earliest document seen (June 2009) that contains the term "maturity group." However the meaning is not the same as that which emerged after about 1946. Address: Dominion Agrostologist, Canadian Dep. of Agriculture, Ottawa, Canada.

408. National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. 18 p. Held on 4 May 1936 in the National Research Building, Ottawa, Ontario, Canada. Confidential.

• ***Summary:*** Contents: Minutes. Appendixes: A. Memorandum on soybeans: Varieties, introduction, selection, breeding, variety testing and other experimental work–of the Division of Forage Plants, Central Experimental Farm, Ottawa, by L.E. Kirk (A1-5).

B. A report on the present status of the soybean industry, particularly in western Ontario, by F. Dimmock (B1-6).

C. The soybean (The Royal Bank of Canada, Monthly Letter, April 1936) (C1-2).

In addition to the people present at the first conference on April 29, the following were also present: Dr. L.E. Kirk, Mr. C.H. Robinson, and Dr. J.M. Swaine.

The following subjects were discussed: Dr. Kirk talked about the potential for growing soybeans in Manitoba, Saskatchewan (and the central and northern parts of the other prairie provinces), Nova Scotia, Quebec, the Maritimes, Guelph (where O.A.C. had developed and popularized a new variety named Goldsoy), and the area

around Medicine Hat (in southeast Alberta). "Southern Ontario was the only suitable place in Canada for the industrial growth of soybeans. There was no future for soybeans in Summerland [BC], which had other feed crops. The British Columbia coast, he said, was too wet." Work on soybeans had once been conducted at Macdonald College [Quebec], but had been discontinued. During the last 7 years, the average soybean yield in Canada had been about 25 bushels/acre (range 18 to 30 bu/acre). Dr. Kirk reported that soybeans grown in Ottawa [in northeastern Ontario] had shown consistently higher oil content than those grown at Harrow [at the southwestern tip of Ontario], while the latter had a consistently higher protein content.

"Mr. Robinson stated that fairly complete analyses of the O.A.C. and Mandarin varieties over a period of two years were available and that a chemical study of the oil content of soybeans had been made, but that no report on this had been prepared yet."

Concerning the use of soybean flour to extend wheat flour in foods (such as baked goods): "Dr. Kirk pointed out that a good deal of soybean flour was already being used and that its use was likely to increase..." Dr. Whitby referred to Henry Ford's plant for making plastics from soybeans and the research on industrial utilization being carried out at Urbana, Illinois [by the U.S. Regional Soybean Laboratory]; "industrial outlets looked as though they would be very important." "Dr. Kirk mentioned the recent application of soybeans in the manufacture of ice cream, chocolates, sausages and peanut products." Use of soybeans in feeding animals. Dr. Hopkins was appointed to attend the Second Dearborn Conference of Agriculture, Industry and Science, soon to be held in Michigan; one session was scheduled to be devoted to soybeans. The National Research Council might consider investigations on industrial development of soybeans, being careful not to duplicate the work of Dr. Swaine at the Experimental Farm. The meeting lasted 1 hour and 40 minutes. It was agreed that all discussions and research would be treated as confidential.

See separate entries for each of the 3 Appendixes. Address: Ottawa, Ontario, Canada.

409. The Royal Bank of Canada Monthly Letter, April 1936. 1936. In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. 18 p. See Appendix C, p. C1-C2. Held on 4 May 1936 in the National Research Building, Ottawa, Ontario, Canada. [1 ref]

• ***Summary:*** An overview of the rapid growth of soybeans in the United States, and their potential as a crop in Canada. "To many people, the soybean has an oriental flavour; they know it as the basic ingredient in some of the most famous English meat sauces [Worcestershire, etc.] and have heard that it is an important Manchurian export. Against this background it is something of a surprise to learn from the *Wall Street Journal* of February 17, 1936, that in the previous year it had become, from the viewpoint of cash return to the farmers, the fourth most important cereal crop in the United States. The crop of 1934 was about 50 per cent larger than that of 1933 and the crop of 1935 was doubled that of 1934."

The many uses of the soybean are discussed, including soybean flour (with and without the original oil content of the seed), soybean milk, butter, cheese [tofu], and coffee. Among industrial uses, in 1934, 10 million lb of soybean oil were used by the paint industry in the USA. "In varnish and lacquers soybean oil is the principal base. The Ford car is finished with a soybean lacquer and the Ford Company is erecting a $5,000,000 plant in Detroit [Michigan] to make soybean products. In soaps, glues, linoleums and rubber substitutes, the ingredients of the soybean have come to be of predominant importance."

410. Hokubei Jiji-sha. comp. 1936/10. Hokubei nenkan [The North American Times year book]. Shiatoru [Seattle], Washington: Hokubei Jijisha. [84] + 113 + 324 + 12 p. June 10. Illust. Index. 23 cm. [Jap]

• ***Summary:*** Contents: Black-and-white photographs of Japanese in America with captions on glossy paper, back to back (84 unnumbered pages = 42 unnumbered leaves.). The yearbook (113 p.). The directory (324 p.). Large advertisements (12 unnumbered pages).

This book has the best coverage of companies in Seattle, the rest of Washington state, and Vancouver, BC, Canada.

In the directory, most entries consists of: Company name in English, then in Japanese characters. The address and phone number in English. Address: 215 5th St., Seattle, Washington.

411. **Product Name:** Tofu.
**Manufacturer's Name:** Miyazaki Tofu-ten.
**Manufacturer's Address:** 216 Gore Ave., Vancouver, BC, Canada. Phone: Doug. 4673 L.
**Date of Introduction:** 1936. June.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 254. Mr. Haruobei (or Jirobei?) Miyazaki.

412. **Product Name:** Tofu.
**Manufacturer's Name:** Murakami Hatsu Tofu-ten.
**Manufacturer's Address:** 1662 2nd Ave. W., Vancouver, BC, Canada. Phone: Bay. 4575 L.
**Date of Introduction:** 1936. June.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 254. Mr. Hatsutaro Murakami.

413. **Product Name:** Tofu.

**Manufacturer's Name:** Murakami Tofu-ten.
**Manufacturer's Address:** 343 5th Ave. W., Vancouver, BC, Canada. Phone: Fair. 3465 L.
**Date of Introduction:** 1936. June.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 254. Mr. Ikutaro Murakami.

414. **Product Name:** Tofu.
**Manufacturer's Name:** Tanaka Tofu-ten.
**Manufacturer's Address:** 451 Powell St., Vancouver, BC, Canada. Phone: High 453 R.
**Date of Introduction:** 1936. June.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 255. Mr. Ichijiro Tanaka. Note: Another Tanaka Tofu Co. was started in Vancouver at a different address in about 1925. Could the two be related?

415. **Product Name:** Tofu.
**Manufacturer's Name:** Wakabayashi Tofu-ten.
**Manufacturer's Address:** 439½ Powell St., Vancouver, BC, Canada. Phone: High 4067.
**Date of Introduction:** 1936. June.
**New Product–Documentation:** Hokubei Nenkan–The North American Times Year Book. 1936, p. 255. Mr. Chûgorô (or Tadagorô) Wakabayashi.

416. I.D.A. Drug Stores. 1936. Independent Druggists Allied for advertising (Ad). *Toronto Daily Star (Canada).* June 24. p. 10.
• ***Summary:*** At the top middle of this large ad is a sidebar titled "Facts about soap." "The housewife of a hundred years ago learned that by boiling fats with wood ashes a soft yellow soap could be made that greatly aided in the removal of dirt... The Chemist defines soap as a 'Salt of an organic acid.' It is the product of a chemical reaction that may be indicated by this equation: Fats and oils + alkalis -> Soap + glycerin. This represents a process known as 'Saponification."

"Palm oil, cocoanut oil and peanut oil from Africa, Fish oils from Japan, Soya bean oil from China, Cottonseed and corn oil from South America and the United States... each is a variety of oil used in soap making."

Near the top left of the ad we read: "Vi-Tone Food Beverage, 25¢, 45¢, 81¢.

Note: This is the earliest document seen in the *Toronto Star* (Dec. 2009) that mentions "Soya bean oil" (or "Soyabean oil"). Address: Toronto.

418. Breeding soybeans at Hudson Heights, P.Q. [Quebec]. 1936. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix F, p. F1-F2. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada.
• ***Summary:*** Mr. Macaulay presently has about 3 acres devoted to the breeding of soybeans in Quebec. The most promising varieties have come from Russia, Siberia, Washington, DC, and Manchuria. Mr. Macaulay believes that some of his soybeans came from a Russian government experiment station in Siberia, at Blagoveshchensk (latitude 50º); it has a reputation of being very fine. Using strains derived from the Moscow seed (106-110 days), from those believed to come from Blagoveshchensk (perhaps 103 days), and from Mr. William Morse in Washington, DC (112-115 days), he hopes to develop varieties that will mature in about 100 days.

"Hybridization of soybeans is difficult because of the very small size of the flowers, and Mr. Macaulay has done no artificial hybridizing. The soybean is naturally self-fertilizing to the extent of 98 or 98½ per cent; 1½ to 2 per cent of seeds grown naturally are crossed from adjoining plants. Just how this happens is not known definitely, but it is believed to be due to the action of thrips. A number of natural hybrids have been discovered in his rows and some of these are very promising. The best are believed to be hybrids between Manitoba Brown (100 days) and the Moscow strains."

"Mr. Macaulay paid emphatic and generous tribute to the work of Mr. Dimmock at the Central Experimental Farm at Ottawa [in Ontario province, Canada]. Beginning with artificial hybrids made between the Manitoba Brown and Mandarin, Mr. Dimmock has now developed from these hybrids strains of yellow beans that are highly promising."

"Mr. Macaulay is not hopeful at present of the possibility that either at Ottawa or at his farm strains earlier than Manitoba Brown will be developed. Present indications are that a growth period of about 100 days is the minimum necessary for the plant.

"The soy bean plant also has a great future for use as hay, the more vigorous types being preferred for this purpose. The soybean may thus have a value considerably further north than the area in which it will be able to be successfully grown for grain purposes."

419. Calkin, D.L. 1936. Report by Dr. Whitby of interview with Mr. D.L. Calkin of the Dominion Soya Products Company, Montreal. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix B, p. B1-

B10. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. [2 ref]

• ***Summary:*** Note: In several subsequent interviews in this report, the company name is given as Dominion Soya Industries Limited. Based on a phone conversation of 24 April 1936. Dominion Soya Products Co. uses an inexpensive solvent extraction plant developed by the Ford Motor Co. Aviation gasoline is used as the solvent, but it is not entirely satisfactory, since it leaves an odor in the finished product. Most of the plants processing soya beans in Canada are apparently using solvent extraction. Exceptions are (1) Soya Mills Co. (Mr. Tricky) [sic, Trickey; at Stratford, Ontario], using English-built oil expeller equipment, and (2) Dominion Linseed Oil Company, making whole-oil flour.

Soybean oil: The chief outlets for soya bean oil are to the paint manufacturers and the packers (including Canada Packers), which use it for the production of shortening, or of a refined, bland salad or cooking oil. "It is understood that the Ford Motor Company is now using soya bean oil exclusively for its car enamels."

Soybean flour: The Ford Motor Co., in co-operation with the Bakelite Co., has developed a successful plastic from soya bean meal. Soya bean flour is being used in England for making sausages; it is claimed to have the advantage of holding the meat juices and of acting as an antioxidant (preventing rancidity). Dr. Rabinovitch of Montreal is in favor of using soy "flour in sausages, especially in the low-grade type known as 'hot dogs.' Dr. Rabinovitch on his trip to the north last summer took considerable quantities of soya bean flour and oil for use of the Eskimo. Canada Packers think well of its use in sausages... Brown of Bradley Foulds in England used soya flour for finishing light textiles with good results, but found that in the case of heavy goods and finishes the flour tends to produce a slimy feel on the goods. Experiments on the use of soya flour in water paints were made by the Sherwin-Williams Co., Montreal. The objection was raised, however, that the solutions stank. In experiments in England in this connection the chief point stressed was the difficulty of getting the flour into solution... Experiments are in progress in Canada on the use of soya flour in the manufacture of explosives, presumably after nitration. Soya bean flour used as a glue in the manufacture of plywood from soft wood has the advantage of being more waterproof than any other glue known. On account of this property it was used for all walls and floors exposed to the weather at the Century of Progress Exhibition in Chicago [Illinois]. Soya bean glue is being made in Canada by the Hercules Glue Company and a small quantity by the Bulldog Grip Cement Co."

"Mr. Calkin's experience with Ontario beans has been that they have often been contaminated with shells, small stones, clay, etc. Furthermore, U.S. beans could be bought for 90¢–$1.00 a bushel at a time when $1.50 was being asked for Ontario Beans.

"The Co-operative Soya Bean plant in Ontario (at Milton) in which the Archer Daniels Midland Company is also interested is not now apparently operating. It appears that the secretary of the Co-operative decamped with the funds."

Also describes (p. B5-10) several experiments conducted by J.B. Phillips, MSc, PhD (July 1933 in Montreal) on "beating experiments with sulphite pulp and soya flour" using Dominion Soya Powder as a filler and size for paper. And "Utilization of Dominion Soya in coatings for papers." Address: Dominion Soya Products Company, Montreal, Quebec, Canada.

420. Calkin, D.L. 1936. Report by Mr. F.C. Green of interviews with Mr. D.L. Calkin on April 23 and 24, 1936. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix C, p. C1-C2. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada.

• ***Summary:*** Dominion Soya Industries Ltd. [called Dominion Soya Products Co. in another interview in this document] operates a Ford-type solvent extraction plant with a capacity of 2½ tons of soybean per day. The solvent is high test or aviation gas. The company originally imported soya flour from Germany.

"Soya flour with wheat flour: One company in the West failed to market a health bread containing about 10% or more of Soya flour. Moirs in Halifax [Nova Scotia] are attempting to sell a 10% bread, but this sells at 10 cents and they find it difficult to compete with ordinary loaves selling at 6 cents.

"Using about 2% soya flour is a different matter. While there is added cost, this is overcome by ability of soya flour to carry extra moisture through oven and 4% water (or twice weight of soya flour may be added). These loaves do not stale as rapidly. Some bakers are quite won over to this use of the flour–others are not impressed. In cakes, the use of soya flour may cut down eggs required, but this is of greater interest to commercial bakers than to housewives. Recipes would require some modification with probable larger amounts of liquids and baking powder.

"Mr. Calkin did not believe that much sale could be found for packaged flour until there was greater common knowledge of its uses and value. Eatons in Montreal sell some at 65 cents per lb. in their special diet section. Some uses for flour are in bread, cakes, pancakes, muffins, soup and sauce thickening, etc." Address: Dominion Soya Industries Ltd., 2049 Harvard Ave., Montreal, Quebec, Canada.

421. Calkin, D.L. 1936. Statement by Mr. Calkin. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix G, p. G1-G4. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. [2 ref]

• ***Summary:*** Mr. Calkin has done considerable pioneering work in an attempt to introduce soya flour to industrial concerns in Great Britain, especially for use as a sizing in making paper, in adhesives, and in plastics. The product is named Dominion Soya Powder (oil and starch freed, technical). The results were mixed. Address: Dominion Soya Industries Ltd., 2049 Harvard Ave., Montreal, Quebec, Canada.

422. Green, F.G. 1936. Meeting with Mr. Calkin of Dominion Soya Industries Limited, July 24, 1936. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix H, p. H1-H3. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. [2 ref]

• ***Summary:*** Dr. Chataway, Dr. Hopkins, and Dr. Malloch met with Mr. Malkin in Mr. Green's office. Mr. Calkin's plant in Montreal had not resumed operation, but the company's "sales of soya flour were increasing to a very gratifying extent. One firm alone in Montreal is taking one ton weekly and may double this amount while a sale of about one hundred tons had been arranged in Great Britain. They had just taken on a master baker–a Mr. Doig–who had previously worked on the introduction of Best Yeast. With a thorough understanding of the baking trade and problems, Mr. Doig had, in the week or so he had been with them, been able to secure trial orders from many firms. At first a general discussion of milling equipment took place."

Although soya flour costs more than wheat flour, Mr. Calkin feels that it more than "this was almost entirely made up for by the extra amount of water which the soya flour carries through the oven. The slower staling attained was a decided advantage and would, he believed, result in increased bread consumption. While there was very little positive proof of this to date, he referred to one baker in Vankleek Hill whose bread sales had increased by 20%. In loaves of the French type, soya flour gave a crust that was of better flavor and less rubbery. "Some whole meal [soya] flour was being sold at 9 cents, but not by his firm. The chief selling point of this latter flour was that less shortening was required." Another use for flour was in cake icing.

"Oil so far produced in Canada has not been refined prior to sale. It is easy to decolourize the oil but more difficult to deodorize it. For paint use it is decoloured. Sherwin-Williams do this at their own plant using Frankonite sold by Chapman of Toronto [Ontario province]. Crude oil can be sold for paint or shortening for 6½–7½ cents per lb. Canada Linseed had investigated the possibility of putting in a soya bean extraction plant but decided against it because, while their interest lay primarily in oil production, it would be necessary for them to market the 75% residue besides making allowance for the 10% processing loss. Dominion Linseed is putting whole meal [soya] flour on the market."

"Mr. Calkin did not think that the recovery of lecithin was of immediate importance to the industry although it might well become so later."

Some soya flour had been sent to Erinoid Limited of England. Standards and solvents were also discussed. The aviation spirits in solvents were unsatisfactory and could be detected by consumers in cooked products. Mr. Calkin "mentioned that they were required to charge sales tax on the flour sold to bakers whereas no sales tax is charged on wheat flour sold to them." Address: Dominion Soya Industries Ltd., 2049 Harvard Ave., Montreal, Quebec, Canada.

423. Hopkins, C.Y. 1936. Report on Dearborn Conference of Agriculture, Industry & Science, Detroit, May 12-14, 1936. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix D, p. D1-D4. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada.

• ***Summary:*** In this Report (No. C35-368) the author gives his general impressions of the conference (which hindsight shows to be quite inaccurate or short-sighted), summarizes papers that were presented, and describes in detail his visit to the Soybean Extraction Plant at the Edison Institute in Greenfield Village [Dearborn, Michigan]. Address: National Research Laboratories, Div. of Chemistry, Canada.

424. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Western Europe (Document part). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(6):216T-28T. June.

• ***Summary:*** "1. Germany. In spite of numerous attempts extending over a long period of time, and particularly since 1920, soya cultivation in Germany has remained in the experimental stage. From a practical standpoint it cannot be said that economic cultivation of soya exists...

"All the varieties introduced for trial have failed as they were not adaptable to the climatic conditions of the country. Certain growers, however, (Schurig at Stedten; Brandt at Gierdorf; Heinemann; Winkler, etc.) and several professors of State Institutions (Professor Riede of the Bonn University; Professor Sessous of the Giessen University; Professor Berkner of the Breslau University; Dr. Heinze of the Chamber of Agriculture of Halle) have carried out

breeding work and have obtained lines superior to the varieties which were used as the point of departure. These lines are at present being tested in various regions in Germany.

"Several varieties have been obtained by the botanical station of the Higher School of Agriculture of Bonn-Poppelsdorf:

"Yield per hectare of Bonn 373 is 20.9, and yield per hectare of Bonn 456 is 19.1.

"2. Austria. Soya cultivation was introduced in 1870 by F. Haberlandt. Since that time breeding work and tests in acclimatisation have been carried out at various times. The most important work of this kind was started in 1923 by Dr. Fritz Drahorad and his assistant M.F. Brillmayr [Brillmayer]. Trials were made with 28 varieties in various parts of the country and the results centralized at Platt (Lower Austria) at the Leguminous Plant Breeding Station dependent from the Federal Station of Plant Cultivation and Seed Selection. In this way early varieties were bred at Platt with a growth period of 110-125 days.

"The principal varieties bred are: Platter Schwarze Soja, Platter Kleine Gelbe Soja, Platter Gelbe Riesen.

"In Austria the only varieties that may be cultivated with success are those selected in the country which have a growth period of from 130 to 145 days at the most.

"3. France. Soya was introduced into the Botanical Garden at Versailles in 1740. Several trials in cultivation have been made since 1855. L. Rouest in Aude and Charles de Carbonnières, in Tarn, carried out test of some importance from 1918 to 1925. But it was not until 1932 that the first scientific investigations were made on the possibilities of acclimatising soya in France. These researches were carried out chiefly by M.H. de Guerpel, in Basse-Normandie. The results obtained in the first year were so encouraging that it was decided to sow 5 hectares of soya in ten communes in Normandy, the principal being: Cagny, Saint-André-sur-Orne, Vieux-Fumé, Percy-en-Auge, Villons-le-Buissons, Saint-Contest, Beny-sur-Mer. The seed was taken both from the harvest of the previous year and also from seed from Poland... Yields varied from 1400 to 1800 kg per hectare.

"Another trial was made with a variety with yellow seed from Manchuria.

"In 1934 trials were made in the Department of Eure with the variety Tokio with black seeds.

"4. Great Britain (and Colonies). One of the first tests in acclimatisation of soya in Great Britain took place at the Royal Botanical Garden, Regents Park, in 1914. During these tests Mr. North found that certain varieties were sufficiently early to mature at the end of September. By careful selection with these varieties for several years lines were obtained which were particularly early. In 1928, a hybrid was introduced from Canada which proved to be earlier than any of the 60 varieties tested up to that time. By sowing the seed the first week in May it was possible to harvest the beginning of September. Good results were obtained in Middlesex, Essex, Berkshire, Oxfordshire and Hampshire.

"The most important researches were made at Boreham in Essex in 1933 where 47 varieties were grown originating from North America, Canada, Manchuria and Japan. Trials were also made with the varieties already bred by Mr. North. Interesting results were obtained.

"The investigations were continued in 1934 with the 4 best varieties acclimatised, known as Jap, 'C,' 'O,' and 'J.'

"6. Italy. Sporadic trials in soya growing were made in Italy from 1740 to 1880, but it was chiefly at the beginning of this century that an attempt was made to introduce this crop into the national economy. Soya has been the object of patient and continuous research at the Bonafous Institute in Turin, where two varieties were selected, well adapted to the region, one with yellow and the other with green seeds, large and spherical in shape. In the district of Spoleto, the Marquis G. Marignoli obtained good results, in 1926, with this plant and is of the opinion that soya cultivation for seed production would be completely successful in Puglia and the South. He found that the American variety Mammoth Yellow is easily acclimatised in Central Italy and he has undertaken mass selection of this variety which is of great importance on account of its precocity and yields. In respect of forage production, he has successfully experimented with a variety with green seeds which, owing to its great development, is doubtless the same as the variety that gave good results in Piedmont. According to information received from the Director of the Travelling Chair of Agriculture of Cagliari, similar trials have been made in the Sanluri farm and certain other private farms. In 1928, a Yellow Japanese variety gave 3.3 quintals of seed per hectare at Sanluri. This same variety, grown at Santa Margherita di Pula, only gave 2.3 quintals. At Simacis, in 1919, a light coloured variety of soya yielded 3 quintals per hectare. In the experimental plots of the Faculty of Agriculture of the Perugia University, small trials have been made with 4 varieties of soya which had already been tried and selected before the war by Professor Bottari at the Bonafous Agricultural Institute. Note: 1 quintal = 100 kg.

"Soya was grown for the first time at the Agricultural Station of Bari in 1921. Seeds obtained from Professor Borzi were used. This variety proved to be very productive, but rather late. In the following years Professor Pantanelli, Director of the Station, procured 45 varieties from the United States and India.

"7. Netherlands. Soya growing is not widespread in the Netherlands and only small trials in acclimatisation are carried out. It is not yet known whether soya can be grown on a remunerative basis in the humid climatic conditions of this country.

"10. Switzerland. The first trials in soya growing in Switzerland date back to the time of the Universal Exhibition of Vienna in 1873, in fact, a great quantity of soya seeds belonging to different Manchu varieties were shown. In 1878, Professor Haberlandt, who had carried out cultivation trials in various countries in Europe, made a few tests in the town of Coire [Chur]. A little later, Professor Kraemer made a few trials in Zurich for three years and published a pamphlet in 1880 giving the results obtained. In practice, soya growing had not developed and it is only recently that further efforts in soya cultivation have been made.

"At present trials are carried out solely by the Establishment of Agricultural Research of Oerlikon-Zurich, foreign varieties being the principal object of study. There are no native Swiss varieties. The first varieties tried were those obtained by the German breeder Dieckmann at Hamburg. Late an Austrian variety was introduced: Platter Gelbe Riesen, and a whole series of American varieties obtained from Professor Wiggans of the Cornell University, Ithaca. Finally, 3 Polish varieties from Vilna were introduced which, it appears, came from the Botanical Garden of Basle [Basel, Switzerland]...

"*Soya grown for seed:* There are also wide variations in seed yields. With the 22 varieties tested in 1935, they varied from 1.5 to 16.5 quintals per hectare.

"In Switzerland, forage production is the principal object of soya growing. There are, however, factories which are interested in soya for the production of foods for persons suffering from diabetes. Local production of soya cannot compete with the present imports from abroad." Address: Rome, Italy.

425. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Eastern Europe (Document part). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(6):221T-33T. June.
• ***Summary:*** "5. Hungary. Since 1870-1880 several attempts have been made to introduce soya cultivation into Hungary, but, although climatic conditions and particularly the temperature are more favourable than in Germany, it has not been possible, up to the present, to develop this cultivation. Soya is only grown to supply the forage requirements in farms and is used solely for feeding live-stock (pigs, dairy cows). This check on soya growing on a commercial scale is due partly to the fact that up to the last few years, no early varieties with a high yield were available and partly owing to the fact that soya could not be sold at a price remunerative to the producer. [Note 1. The source of this 1870 date is unknown].

"Trials in cultivation are carried out at the Royal Hungarian Station for Plant Cultivation at Magyarovar and questions relative to feeding live-stock are studied at the Station of Animal Physiology at Budapest.

"8. Poland. The first attempts to introduce soya into Poland date back to the end of the 19th century. These attempts were not crowned with success and were abandoned until 1923... Varieties grown in the Trial Garden of the Vilna University (U.S.B.): Brown Vilna soya, brown Szlotenice soya, brown Dublany soya, yellow C.S.S. soya, yellow Canadian soya from Montreal, yellow Canadian soya (Quebec 92), yellow Podolia soya, black soya (Granum 4041), black soya.

"It may be concluded that the soya varieties of Vilna, Szlztenice and Dublany may be grown in the whole of Poland as they are early and can mature even in the province of Vilna.

"9. Rumania [Romania]. Soya growing was introduced in 1910-13. The principal research centrés are the Phytotechnical Station of the Institute of Agronomical Research of Rumania, Budapest, and the various regional experiment Stations of the Institute: Baraganul (district of Ilomutsa); Valul lui Traian (district of Constantsa); Cenad (district of Timis); Tighina (district of Tighina); Agricultural School of Medias (district of Tarnava-Mare).

"At present the following varieties are cultivated: Platter gelbe–Braun gelbe I and II–Platter Riesen–Black Eyebrow–R.E.A.Z.–Ossyek. Varieties rich in oil are sought for. Harvesting takes place in August and September. Yields in seeds vary from 7 to 18 quintals per hectare. Note 2. 1 quintal = 100 kg.

"11. Czechoslovakia. "Trials in acclimatisation of soya in Czechoslovakia are carried out with non-improved foreign varieties and varieties improved in the country. Results show that the most suitable varieties are those with yellow seeds obtained from M. Frankel at Siarovicia and, for Moravia, the selected Austrian Platt varieties.

"The improved varieties of Czechoslovakia were bred by F.A. Brillmayr of the Osterreichisch Bundesanstalt für Pflanzenbau and Pflanzenzuechtung (Federal Plant Cultivation and Selection Station, Platt, South Austria). They are known under the general name of 'Plattske.' The cultivation of selected Austrian varieties was introduced into Czechoslovakia by Dr. Hanreich at Vlasatici, near Pohorelic (Moravia)... These varieties came from the State Agricultural Trial Station at Roudnice.

"13. U.S.S.R. It is only a few years ago that the U.S.S.R. contemplated soya growing from an economic standpoint. Up to 1927, this plant was of little importance in the economy of the country. Just before the Revolution, soya crops occupied 4,000 hectares. The best regions for this cultivation are the northern parts of the Caucases [Caucasus]: Transcaucasia, the Ukrain [Ukraine] and districts on the Pacific Ocean (province of Primorskaja). These are the best seed producing regions. In addition, soya

may be grown for forage also in the northern regions where maturation is not always regular or sure...

"All the land suitable for soya growing is distributed into 5 zones and subzones according to the possibility of successful cultivation...

"Varieties: Amour 01, Besentchuk No. 8, Chestnut, Dronsag soja No. 905, Dronsag soja No. 907, Dunfield, Ebony, Gounciulin, Habarovsk (Habaro) No. 109, Harbin No. 19, Harbin No. 118, Harbin No. 199, Harbin No. 199-b, Harbin No. 231-a, Hollybrook, Illini, Krouchoula No. 9/3, Krouchoula No. 10/10, Manchu, Mandarin, Mansoy, Minsoy, Peking, Stavropol Local, Transcaucasian, Old Ukrain [sic, Ukraine], Virginia, Wilson, Wisconsin Black." Address: Rome, Italy.

426. MacConkey, C.A. 1936. Experimental cultivation of soybeans: Information obtained through inquiries. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix E, p. E1-E2. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada.
• ***Summary:*** The author sent a letter of inquiry to 5 universities or colleges, and to several individuals and organizations in Canada, and visited Mr. T.B. Macaulay, Hudson Heights, Quebec. "At Edmonton [Univ. of Alberta] a few varieties have been grown each year since 1930, with nothing of promise resulting.

"In Manitoba [Univ. of Manitoba, Winnipeg] soybeans have been grown for 15 years [i.e. since 1921]. By hybridization a yellow-seeded variety suitable for southern sections of western Canada has been obtained and it is believed that by large-scale operations on inexpensive land, a profitable crop may soon be grown."

"At Saskatoon [Univ. of Saskatchewan] a few varieties were grown in 1925 and 1926 and a dark-seeded variety is at present being tried. No results of promise are reported.

"At Guelph [Ontario] over a hundred varieties have been tested in the last 43 years [i.e. since 1893]. Selected varieties have been successfully established in this part of Canada. In 1929 an extensive soybean demonstration including every county in the province was organized. Co-operative tests have been carried out on hundreds of farms and information obtained regarding times and rates of seeding, methods of planting, harvesting and so forth. This work is being continued.

"At Platon, Quebec, Mr. A.J. de Lotbinière has grown a few varieties during the last 4 or 5 years. Strains satisfactory for fodder purposes have been developed by selection and a great future is foreseen for the soybean here.

"At Brooks, Alberta, a few varieties have been grown by Mr. Don. H. Bark, of the C.P.R. [Canadian Pacific Railway], since 1922. Earliness was considerably increased by selection but little of promise resulted. Mr. Bark died in 1935 and no information is available as to what has been done since then.

"At Hudson Heights, Quebec, Mr. T.B. Macaulay has been breeding soybeans for a number of years. This work is of considerable importance and a report is given in Appendix F.

"At Macdonald College [Quebec] a few varieties have been grown since 1906. Two varieties have been selected and named, one is suitable for the production of grain, the other is more suitable for fodder."

Note 1. This document contains the earliest date seen for soybeans in Alberta province, Canada, or the cultivation of soybeans in Alberta province (1922, by Mr. Don H. Bark of the C.P.R. at Brooks). The source of these soybeans is unknown; it may have been the Ottawa Research Station, Ontario, Canada. Note 2. As of Feb. 1993 the archives of the Canadian Pacific Railway are located at: Canadian Pacific Ltd., Windsor Station, P.O. Box 6042–Station A, Montreal, QUE H3C 3E4, Canada. Phone: 514-395-5146. However a careful search by the archivists uncovered no early documents related to soybeans in Alberta. They did find a 1919 publication by Don H. Bark titled "Profitable Irrigation Crops," which mentions alfalfa and field peas, but not soybeans.

427. Malloch, J.G. 1936. Soybean milling and baking. In: National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. See Appendix A, p. A1-A2. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. [2 ref]
• ***Summary:*** The author is in the early stages of learning how to crush soybeans. "The soybean flour has not yet been received from Dr. Kirk, so no baking experiments have been undertaken." Address: Canada.

428. National Research Council of Canada. 1936. Proceedings of the Third Conference on Soybeans. Ottawa, Canada. 34 p. Held on 30 June 1936 in the National Research Building, Ottawa, Ontario, Canada. Confidential.
• ***Summary:*** Contents: Minutes. In addition to the people present at the second conference on May 4, Mr. F. Dimmock was also present. Dr. E.S. Archibald and Dr. G.S. Whitby were unable to be present. Summary of six reports that were presented, followed by a general discussion, including the following subjects: Relative prices of soybean and linseed oil cake. Construction of central extractors to which the farmers could bring their soybeans, then take away their own oil cake for feeding purposes. Use of soybeans for hay and silage. Resistance of soybeans to drought; "It was not believed, however, that they could be profitably grown in southern Saskatchewan." Carbohydrate content of soybeans. Development of early soybean varieties by the Dominion Experimental Farms especially adapted to Canadian

conditions. “Mr. Dimmock stated that testing was in progress at six different farms this year and that substantially increased supplies of seed from selected varieties should be available for next year. It was felt, however, that Manitoba Brown represented about the limit of earliness attainable. The acreage in western Ontario had increased considerably owing to the good price (90-95 cents) paid by the mills in 1935. A new mill [Edgar Soya] had been erected at Belle River, which had contracted for the produce from 3000 acres.” Could the National Research Council help the Department of Agriculture in developmental work and cytological studies. There was agreement that there was no likelihood of the large scale development of soybeans in the prairie provinces of western Canada except perhaps in the Red River Valley [in southern Manitoba province]. However “farmers in a large area might find it profitable to grow a few acres of soybeans each year in a program of mixed farming.” Use of abundant soybean lecithin to inhibit rancidity in other food products. The making of plastics from soybeans should be studied.

The meeting lasted 1 hour and 4 minutes–from 2:30 to 4:10 p.m. Appendixes contain the 6 reports, plus 2 submitted after the meeting. All are cited separately. Address: Ottawa, Canada.

429. Burlison, W.L. 1936. The soybean. A plant immigrant makes good. *Industrial and Engineering Chemistry* 28(7):772-77. July. [23 ref]

• ***Summary:*** Contents: Introduction and brief history. Description of the bean. Soybean culture. Industrial uses. Imports. Composition of soybean seed. Composition of soybean oil. Composition of soybean-oil meal. Methods of processing soybeans for consumption: Expeller method, hydraulic-press method, solvent extraction process. Disposition of the domestic crop. Products derived from soybeans. Industrial use of soybean oil. Soybean oil in the paint industry. Soybean oil as a core binder. Other uses for soybean oil: Lecithin, sulphonated oil. Plastic industry. Soybean glue. Further investigation needed.

This article begins: “The soybean is one of the oldest crops grown. It was described in a Chinese book on Materia Medica, *Ben Tsao Gang Mu,* written by Emperor Shen-Nung about 4800 years ago... Soybeans were introduced into the United States in 1804, yet a hundred years there were very few grown outside the southern states.”

The section titled “Products derived from soybeans” (p. 775) contains an extensive list of commercial food, feed, and industrial products derived from soybeans and compiled from letters received by the University of Illinois during the latter part of 1931. “This list is increasing from month to month.” Some products have brand names and others only generic names. The following products were on the market in the USA and Canada at that time.

“Food products: Soybean flour. Soybean-meal flour. Refined edible soybean oil. Soybean salad oil. Chocolate bars (30% soybean flour). Cocoa (up to 60% soybean flour). Sausages (up to 50% soybean flour). Bread (7½% soybean flour). Rolls (10% soybean flour). Macaroni (20% soybean flour). Soybean muffins. Soybean cookies. Soybean doughnuts. Vegetable shortening. Infant foods. Diabetic foods. Oleomargarine. Lard substitutes. Filled sweets. Soybean sprouts. Soybean cheese. Soya cream biscuits. La Choy soy sauce. Zoybeans (cooked beans). Bacon and Zoybeans. Zoy bouillon. Casein gluten flour. Non-fat mayonnaise. Fatless spread. Soyex-malt-cocoa drink. Soybean milk. Soybean ice cream.

“Feed products: Cake or meal. Commercial feed. Dairy feed. Hog chow. Poultry chow. Dog chow. Calf chow. Rabbit chow. 34% protein chow chow. Chick Startena.

“Industrial products: Paint. Varnish. Enamels. Oilcloth. Linoleum. Printers’ ink. Glycerol. Celluloid. Lauxtex plastic wall coat. Lauxtein waterproof soybean glue. Lauxein emulsifier. Soap. Core binders. Rubber substitutes. Plastics.”

Photos show: (1) “A beautiful field of Illini soybeans, a variety extensively used for industrial purposes.” (2) “A soybean plant loaded with pods and ready for harvest.

Tables show: (1) “Utilization of soybeans and soybean products in 1930” For example: Soybeans ground for food: 200,000 bu (bushels). Soybean oil used in various edible products: Oleomargarine: 750,000 lb. Lard substitutes: 500,000 lb. Other food products: 4,750,000 lb. Soybean oil used in industrial products: Paint and varnish: 9,000,000 lb. Linoleum and oilcloth: 4,000,000 lb. Soap kettle: 8,500,000 lb. Soybean meal used in: Commercial feed: 84,100 tons. Other 15,000 tons. Soy flour for food: 850 tons. Infant and diabetic foods: 50 tons. Other uses, including glue: 10,000 tons.

Table 2: “Adaptability of soybean oil to various products.” Drying products: Paint, varnish, linoleum and oilcloth, waterproof goods. Soap products: Hard soaps (toilet, household, laundry), soft soaps (shampoos, automobile soaps). Edible products: Lard compounds, cooking oils, salad oils, fountain drinks, candy, mayonnaise, margarine. Miscellaneous: Foundry core oil, printers’ ink.

Note: A revised and considerably expanded version of this article, with the same title and author but a somewhat different format, was published two months later as *Illinois Agric. Exp. Station, Circular,* No. 461. 15 p. Sept. Address: Univ. of Illinois, Urbana, Illinois.

430. Lohse, H.W. 1936. The soya bean as a food product and industrial raw material. *Canadian Chemistry and Metallurgy* 20(7):224-25. July. (Chem. Abst. 30:6505).

• ***Summary:*** Contents: Introduction (incl. nutritive value of soybeans). Proteins and fats. Vitamins of soya bean. Soya bean as a food product. Soya bean milk. Soya bean flour.

Soya bean oil (obtained by solvent extraction process, hydraulic press process, or expeller process; food and industrial uses). Uses for extracted meal (food and industrial; including lecithin).

According to statistics from the Dominion Bureau of Statistics, consumption of soya bean oil in Canadian manufacturing industries was as follows: Miscellaneous food industries 499,451 lb, slaughtering and packing 169,916 lb, bakeries 112,693 lb, and biscuits & confectionery 20,200 lb. Total: 802,260 lb worth $48,062.

Concerning soya bean milk, the author states in this paper presented at the Canadian Chemical Convention: "Soya bean milk has been manufactured here in Canada by Milqo Limited in Hamilton since 1919. This firm erected one of the first, if not the first, plants for the purpose of this manufacture on a large scale in the Western world." Milqo Ltd. (which may be related to Vi-tone or Vitone in Hamilton) is probably the same company in Hamilton that was named Milk-Ko Products in 1954 (Soybean Blue Book p. 102). Address: Milqo Ltd., Hamilton, ONT, Canada.

431. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Africa (Document part). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(8):291T-95T. Aug.

• ***Summary:*** "1. French West Africa: Trials were carried out in 1923 and 1926 at the Experiment Station of Soninkoura [probably Soninnkoura in the Segou region of Mali] with very little success; hence soya growing is not extensively practised. In 1935, trials were started again at the Banankoro Station (probably in Mali), but the results are not yet known. The only variety cultivated is Soja Hispida, the crops being used as green manure for the rice fields and for fuel oil production." Note: This document contains the earliest date seen for soybeans in Mali, or the cultivation of soybeans in Mali (1923; one of two documents). The source of these soybeans is unknown.

"2. Algeria: Soya is not cultivated in this country though a few trials were carried out which showed that it would be possible to grow this crop in easily worked soils if kept sufficiently cool in spring. Following large scale trials at the Agricultural Institute of Algeria, near Algiers, it was noted that only small harvests were obtained in a dry year. This plant cannot be grown on the coast where similar crops, such as haricot beans, chick peas and lentils are grown. A few soya plants may be found in the collections of the Botanical Garden, the Botanical Station and the Agricultural Institute. In the future soya may perhaps be grown to a certain extent among the irrigated crops of the Chelif.

"3. Belgian Congo: Observed about 30 years ago [i.e. about 1906] at Stanleyville by Commandant Lemaire, soya is found in the collections of the Eala Botanical Garden and was the object of experiments made at Sankuru in 1914-1915. It may appear strange that the cultivation of this leguminous plant has not developed to a greater extent in the Belgian Congo, all the more in that it has been introduced into West Africa, especially into Southern Nigeria, the Gold Coast [later Ghana] and Sierra-Leone.

"The oil content is as follows: Nigeria: 19.62%–Gold-Coast: 21.29%–Sierra Leone: 23.2%–Gambia: 17.5%.

"Among varieties grown in the Eala Botanical Garden mention may be made of a yellow variety, a purple, and the variety Otootan. Analysis has shown that they are as rich in total nitrogenous substances and oil as the soyas of West Africa and Cambodia. Note 1. This document contains the earliest date seen for soybeans in the Belgian Congo (renamed Zaire in 1971), or the cultivation of soybeans in the Belgian Congo (about 1906). It is not absolutely certain that the soybeans were being cultivated at Stanleyville. The source of these soybeans is unknown.

"4. Egypt: Soya growing was introduced into Egypt in 1910. This plant is cultivated at present only on a small scale and chiefly for experimental purposes. Trials have been made of different varieties principally at the Higher School of Agriculture and Agronomical Sections of the Ministry of Agriculture. Cultivation is confined to a small district of the province of Giza.

"There are no native varieties. Among introduced varieties, the following have given certain positive results: Mammoth Yellow, Virginia, Manchu, Biloxi, Tokio and Hispida. Note 2. This document contains the second earliest date seen (April 2004) for soybeans in Egypt, or the cultivation of soybeans in Egypt (1910). However Egyptian documents from 1912 and 1913 state clearly that soybeans were cultivated in Egypt in June 1911.

"Soya is a summer crop. When grown for forage it is cut in August when flowering has begun; when grown for seed, harvesting takes place in September or October. The average yields obtained per acre are: 6 tons of green forage and 400 to 600 kg. of seed. Note 3. This document contains the earliest reference seen for the cultivation of soybeans in Egypt.

Madagascar: Soybean culture was introduced in 1911 and various trials have been carried out. Note 4. This document contains the earliest date seen for soybeans in Madagascar, or the cultivation of soybeans in Madagascar (1911) (one of two documents). The source of these soybeans is unknown.

"5. Morocco: Soya growing is still in the experimental stage in Morocco where trials have been carried out for about 15 years [i.e., from about 1921]. Cultivating has not developed owing to the low yields obtained and also to a tendency to shedding shown by the majority of varieties so far tried out–a tendency which appears to be somewhat increased by the climatic conditions of Morocco.

"Trials in acclimatisation with new varieties have been carried out in Morocco by the Agricultural Service, the Central Station of Rabat and other Experiment Stations of the Protectorate.

"There are no native varieties. The foreign varieties were obtained chiefly from Canada and Manchuria. Qualities required are: (1) pods which do not shed the seed; (2) adequate productivity." Note 5. This is the earliest document seen (Aug. 2009) concerning soybeans in Morocco, or the cultivation of soybeans in Morocco (one of two documents). This document contains the earliest date seen for soybeans in Morocco, or the cultivation of soybeans in Morocco (about 1921). The source of these soybeans was chiefly Canada and Manchuria.

"6. Rhodesia: Trials in acclimatisation have been carried out for a certain number of years at the Experiment Station of Salisbury and all the best known varieties have been tested. Several of these varieties, such as Otootan, Otoxi and Bilton [sic, Biltan], give excellent results as forage crops. The two best lines have been obtained by breeding from Otootan. They are rather more productive than their parent, but, on account of their black seeds, are not suitable for industrial purposes. The only variety recommended for export is Hermann, with yellow seeds.

"Several crossings have been made between lines with pods which do not shed but which are otherwise inferior in quality, with a view to obtaining varieties suitable for Southern Rhodesia where, owing to drought or reasons yet unknown, the pods have a marked tendency to open." Continued. Address: Rome, Italy.

432. Kaltenbach, D.; Legros, J. 1936. Soya: Selection, classification of varieties, varieties cultivated in various countries: Africa (Continued–Document part II). *Monthly Bulletin of Science and Practical Agriculture (International Institute of Agriculture, Rome)* 27(8):293T-95T. Aug. • ***Summary:*** Continued from page 293T. "7. Anglo-Egyptian Sudan: Trials in acclimatisation are carried out chiefly at the Experiment Station of Gezira and by the Agricultural Research Service of Wad-Medani.

"Trials carried out at Gezira: Soya growing was first introduced at the Gezira Station in 1931-1932. No native varieties are grown, all have been introduced either from the United States, the Union of South Africa or India...

"In general, the following observations may be made: The Indian types of soya grow better than the American or South African. The variety Poona Black is the best, followed by Kalimpong Brown Small. The variety Barberton showed very poor growth. Among American varieties Otootan was the best, then Biloxi and Virginia. The varieties Mammoth Yellow, Mammoth Brown, Illini and Haberlandt gave fairly good results. Mansoy and Easycook 17 failed completely. The others gave very mediocre results.

"Trials carried out by the Agricultural Research Service of Wad-Medani [a city located in East Central Sudan on the Blue Nile River, as of Aug. 2009]: Trials carried out since 1912 have shown that the climate of the central region of the Anglo Egyptian Sudan is completely unfavourable to soya cultivation.

"The following varieties were introduced during the course of trials: In 1912 varieties were introduced from India and South Africa... In 1916 varieties were introduced from the United States:... In 1931 varieties were again obtained from America:... As has already been said, all the trials showed that this region was not at all suitable for soya cultivation.

Note 1. This document contains the earliest date seen for the cultivation of soybeans in the Sudan (1912). The source of these soybeans was India and South Africa.

"8. Tripolitania [later part of Libya]: Soya growing has not yet emerged from the experimental stage. Investigations have been made at the Royal Experimental Agricultural Institute of Sidi Mesri. It may be said, however, that soya growing for seed production will not be practised generally, as this is only possible in irrigated regions involving high costs." Note 2. This is the second earliest document seen (Aug. 2009) concerning soybeans in Libya, or the cultivation of soybeans in Libya. The earliest is by Vivenza (1928).

"9. Tunisia: Trials with varieties of soya have only been made with a view to cultivation for forage. At present soya growing is of no practical importance in Tunisia.

"10. Union of South Africa: The various Agricultural Experiment Stations in the Union of South Africa have tested about 50 varieties of soya introduced from the East and United States. The differences between these varieties lie chiefly in the following characters: Colour of the seed coat, colour of the flower, existence or absence of pubescence, colour of the cotyledons, shape of the seeds, size and colour of the hilum, characters of the pods, duration of growth period (varying from 100 to 150 days), height and growth habit of the plant, size and shape of leaves.

"It was observed that two varieties gave entirely different results and that, consequently, there was a possibility of obtaining a variety adapted to the particular climatic conditions and to the utilisation required. Table XXVIII, taken from the publication of F.M. Du Toit, on soya growing in the Union of South Africa *(Soy Beans in the Union,* Pretoria, 1932) gives the characteristics of the 8 most important varieties in the Union." Address: Rome, Italy.

433. Dominion Linseed Oil Co., Food Division. 1936. CFRB tonight at 8 o'clock (Ad). *Toronto Daily Star (Canada).* Sept. 2. p. 12.

• ***Summary:*** On CFRB tonight listen to "'Blue Mountain Mill' directed by Donald Heins and Harvey Robb,... Presented by The Food Division, The Dominion Linseed Oil Co., Ltd., makers of Livingston's Soy Flour, used under our approved formulas in Ful-Soy Bread."

Note: This ad also appeared in this newspaper on Sept. 9 (p. 22).

434. Battle Creek Food Co. 1936. Re: The Dionne quintuplets and soy acidophilus milk. Letter to Hon. David Croll, Minister of Public Affairs, Parliament Buildings, Toronto, Ontario, Canada, Sept. 17. 2 p. Typed, without signature (carbon copy).

• ***Summary:*** "On inquiry of Dr. Allan Roy Dafoe you will learn that under his advice the quintuplets make daily use of soy acidophilus milk, a preparation which has cured them of bowel trouble and keeps them free from this distressing ailment. For many months, under instruction from Dr. John Harvey Kellogg, who gave us the formula for making soy acidophilus milk, we supplied the quintuplets with this preparation without charge and even paid the expense of transportation by parcel post. For several months we have been supplying it at a nominal cost. Dr. Dafoe has mentioned the use of acidophilus in papers published in medical journals and the same fact has been broadcast through the newspaper press."

"We are anxious that other infants, thousands of whom are dying of this same trouble every year, should have the benefit of this most efficient and practically unfailing remedy for this very common affection from which all bottle-fed babies are likely to suffer and with a mortality rate of ten times that of breast-fed infants.

"We are preparing to introduce this preparation to both the profession and the public end desire to refer to the experience of the quintuplets as evidence that the claims made for the preparation are valid.

"Will you kindly write us whether we will be expected to pay a royalty for mentioning the fact that soy acidophilus milk is used by the quintuplets and, if so, how much." Address: Battle Creek, Michigan.

435. Kellogg, John Harvey. 1936. Re: Soy acidophilus milk and the Dionne quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, Sept. 21. 2 p. Typed, without signature (carbon copy).

• ***Summary:*** "We are seeing such wonderful results from the soy acidophilus milk that I feel the time has come when it should be placed before the public so that a larger number of people may benefit by it... this business of making soy acidophilus milk is a purely philanthropic effort. No one will make any money out of it. The patents have been turned over to the Race Betterment Foundation and any profit will be used for educational work along health lines, chiefly the support of Battle Creek College... The manufacture of soy acidophilus milk will never be a large business, but the manufacturers will, I am sure, be glad to pay a modest royalty for use of the pictures of the quints in selling the ideas to the public... There are parties waiting to undertake the manufacture and distribution of soy acidophilus here in the South. P.S. Admiral Byrd has been using this milk with great benefit. During his lecture tour..." Address: Miami, Florida.

436. Burlison, W.L. 1936. The soybean. A plant immigrant makes good. *Illinois Agric. Exp. Station, Circular* No. 461. 15 p. Sept. First printed in Industrial and Engineering Chemistry. 1936. 28(7):772-77. July. [24 ref]

• ***Summary:*** A shorter version of this article, with the same title and author but a somewhat different format, was published two months earlier in *Industrial and Engineering Chemistry* 28(7):772-77. July.

Contents: Introduction and brief history. Description of the soybean. Soybean culture. Industrial uses. Disposition of the domestic crop. Products derived from soybeans: Food, feed, and industrial products. Imports. Chemical composition: Soybeans, soybean oil, soybean oil meal. Methods of processing soybeans: Expeller, hydraulic-press, solvent extraction. Industrial use of soybean oil. Use of soybean oil in the paint industry. Soybean oil as a core binder. Other uses for soybean oil: Lecithin, sulphonated oil. Plastic industry uses soybean oil meal. Glue from soybean oil meal. Soybean oil meal for fertilizers. Further investigation needed.

The section titled "Products derived from soybeans" (p. 6-7) gives is an extensive list of commercial food, feed, and industrial products derived from soybeans. This list is almost identical to that published two months earlier. Address: Chief in Crop Production.

437. **Product Name:** Livingston's Soy Flour.
**Manufacturer's Name:** Dominion Linseed Oil Company.
**Manufacturer's Address:** Owen Sound, ONT, Canada.
**Date of Introduction:** 1936. September.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3. "The Dominion Linseed Oil Company plant at Baden, Ontario... is operating a press of the expeller type at this point and is said to have been processing soybeans for 4 to 5 years" [i.e. since about 1931 or 1932]. "Mr. Livingstone, president of the Dominion Linseed Company, was interviewed in Toronto and states that in addition to soybean oil and meal his company is

producing soybean flour at its plant in Owen Sound. This flour has been made by a special process and retains the entire oil content of the bean."

Ad in *Toronto Daily Star* (Canada). 1936. Sept. 9. p. 22. "CFRB 8 o'clock to-night." Listen to "'Blue Mountain Mill' directed by Donald Heins and Harvey Robb,... Presented by The Food Division, The Dominion Linseed Oil Co., Ltd., makers of Livingston's Soy Flour, used under our approved formulas in Ful-Soy Bread."

438. **Product Name:** Ful-Soy Bread.
**Manufacturer's Name:** Dominion Linseed Oil Company.
**Manufacturer's Address:** Owen Sound, ONT, Canada.
**Date of Introduction:** 1936. September.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** Ad in *Toronto Daily Star* (Canada). 1936. Sept. 9. p. 22. "CFRB 8 o'clock to-night." Listen to "'Blue Mountain Mill' directed by Donald Heins and Harvey Robb,... Presented by The Food Division, The Dominion Linseed Oil Co., Ltd., makers of Livingston's Soy Flour, used under our approved formulas in Ful-Soy Bread."

Ad in *Toronto Daily Star* (Canada). 1937. March 23. p. 30. "You'll love this new bread."

439. Glidden Company (The). 1936. The famous Glidden Laboratories are one of the largest factors in the industrial promotion of soybeans (Ad). *Proceedings of the American Soybean Assoc.* p. 7.
• ***Summary:*** "Always on the alert for new industrial uses for soybeans–always creating new outlets for the ever increasing soybean crop–The Glidden Company is recognized as one of the largest buyers of soybeans.

"The Glidden Soya Division, operating at capacity, will next year pay the American farmer between $3-4 million for his soybeans.

"The Glidden laboratories' research work has shown the value of soybeans in many diversified industries. The products of the Soya Division are used by the paint industry, the shortening industry, the paper industry, the confectionery industry, the bakery industry, the dog food industry, the brewery industry, the cosmetic industry, the automobile industry, the packing industry and plastic manufacturers.

"With constant and tireless effort the Glidden laboratories are ever adding to these outlets... helping to increase soybean consumption."

Factories in Reading, Pennsylvania; Chicago, Illinois; St. Louis, Missouri; Minneapolis, Minnesota; New Orleans, Louisiana; Long Island City, New York; Los Angeles and San Francisco, California; Toronto (Canada). A large illustration shows a chemist in a laboratory, dressed in a white lab-coat, standing behind a bench and various flasks, retorts, and burners. Address: National Headquarters: Cleveland, Ohio.

440. Morse, W.J. 1936. Soybeans in the United States: In relation to world production and trade. *Proceedings of the American Soybean Assoc.* p. 55-64. 16th annual meeting. Held 14-16 Sept. in Iowa. [2 ref]
• ***Summary:*** The slow advance of soybean "cultivation in Western Countries was undoubtedly due to the lack of adapted varieties for various soil and climatic conditions. Increase of acreage and production in the United States is closely correlated with the introduction of varieties from the Orient. In less than thirty years the acreage of soybeans in the United States has increased a hundred fold–from about 50,000 acres in 1907 to nearly 5½ million acres in 1935. During this period the United States Department of Agriculture has brought about 10,000 introductions of soybeans from the soybean regions of the Far East and the culture of the crop has spread from a few states in the early days to twenty-seven states at the present time.

"In Manchuria, often called 'the land of beans,' the soybean is grown to a greater extent than in any other country. It occupies about 25 per cent of the cultivated area and is relied on by the Manchurian farmer as a cash crop. With its rise as an international trade commodity, it is truly the 'Wealth of Manchuria.' Chosen [Korea] and Japan are large producers and southward from China the soybean is cultivated to some extent in India, Siam [later renamed Thailand], the Philippines, Cochin China, and during the past decade the production has nearly doubled in the Dutch East Indies. In Siberia extensive experiments have been under way to extend the cultivation of the crop but progress has been slow and Siberian beans have not yet been a factor in international trade.

"The production of soybeans in the Western World is concentrated largely in the Corn Belt States of the United States. Beginning with the experiments of Haberlandt in Austria in 1877, the soybean has been grown experimentally in most of the European countries but in general the climatic conditions are not well suited to its culture with the possible exception of certain regions, such as the Ukraine in the U.S.S.R. Varying degrees of success have been obtained in different regions of Africa, especially South Africa where yields of 25 to 35 bushels per acre have been obtained. Experiments in nearly all South American countries and Mexico have shown some successful results [as] in Argentina and Cuba but acreage is not extensive. In Canada, considerable interest had been shown in the crop but its culture–about 15,000 acres–is confined chiefly at present to the Province of Ontario. The future trend of the crop for commercial purposes undoubtedly will be concentrated largely in the United States, Canada, and certain regions of the U.S.S.R."

A table (p. 56) shows the increase in production of soybeans (in million bushels) during the 10-year period from 1925 to 1935 in the world's top five producing countries: Manchuria 92.67 -> 140.4. United States 5.190 -> 39.64. Chosen (Korea) 18.72 -> 21.96. Japan 18.31 -> 13.31 (1933). Netherland India [later Indonesia] 3.536 -> 6.676 (1934).

"Bean trade was an ancient and flourishing institution when the ports of China were first opened to the commerce of the Western World. In 1835, Newchwang (Yingkow, Yingkou), in South Manchuria, was an important port of shipment for the great coastal trade in beans, bean cake, and bean oil to the ports of southern Chinese provinces and other oriental regions. Manchuria is still the chief source of world trade in soybeans and from here the beans and bean products oil and cake move principally to other provinces of China, Japan, the Philippines, the East Indies, and to other countries of Northwest Europe. In 1908, about 7,000,000 bushels of beans were shipped out through the port of Dairen, chiefly to Chinese and Japanese ports. For the period 1925-1929, the average annual shipments to China, Japan, and European countries were 62,353,566 bushels. The first successful shipment from Manchuria to Europe was made to an English oil mill in 1907, and as an important source of vegetable oil and animal feed the beans soon found a market not only in English oil mills but in other European countries and America. Since 1931, when American-grown soybeans were first exported to European markets, chiefly to the oil mills of Germany, there has been an open European market to the American farmer. With economical methods of production and high quality beans, America is in a position to compete for the 50,000,000-bushel trade in European markets."

Two tables (p. 58) show international imports and exports of soybeans by major trading countries for an average 5-year period (1925-29) and for 1934. The leading importers in 1934 (preliminary, with imports in million bushels) are: Germany 33.57. Japan 20.29. Denmark 9.910. United Kingdom 6.615. Netherlands 4.695. Sweden 3.426. Italy 0.739. United States 0.006. The leading exporters in 1934 are: Manchuria 44.21 (down from 62.35 in 1925-29). Japan 0.025. Netherlands 0.0009.

"In recent years, the oil milling industry of Manchuria has declined quite markedly. During the height of processing beans for oil and cake, more than 90 mills were in operation, while late in 1930 not more than 25 mills were crushing beans. The decline in this industry has been due chiefly to a decreased demand for bean cake as fertilizer, the low price of silver, and almost the entire suspension of bean oil export due to the development of the oil extraction industry in Europe. In European countries it has become more profitable to import soybeans than to import bean oil."

Two tables (p. 59) show international imports and exports of soybean oil by major trading countries for an average 5-year period (1925-29) and for 1934. The leading importers in 1934 (preliminary, with imports in million lb) are: Netherlands 44.00. Belgium 27.60. United Kingdom 24.13. Austria 22.07. Morocco 20.28. Sweden 12.55. Also listed are: Norway 8.701. Algeria 0.004. The leading exporters of soybeans in 1934 (preliminary, with imports in million lb) are: Manchuria 122.6. Denmark 41.80. Netherlands 26.05. Germany 24.99. Sweden 8.98. Japan 7.95 United States 2.040.

"Practically all exports of soybean cake and meal have originated in Manchuria and average about 1,375,000 tons for the five-year period 1926-31. About 70 per cent of this exportation went mainly to Japan, Chosen, and China. Cake and meal shipments to European countries went chiefly to Germany, although considerable quantities were exported to Denmark, Sweden, the Netherlands, and Finland. The average importation of soybean meal and cake into the United States for the five-year period 1930-1935 was 31,726 tons."

"The rise of the soybean to a crop of special importance in the world's commerce and in the industry of the United States is one of the most remarkable agricultural developments of recent times." Address: Bureau of Plant Industry, USDA, Washington, DC.

441. Slawson, H.H. 1936. Agriculture's Jack of all trades: Introducing the versatile soybean with which you may either build automobiles or run them and in which many people see possibilities for farm relief without benefit of subsidy. *Nation's Business* 24(9):24-26, 94. Sept.

• ***Summary:*** Contents: Introduction. A program for soybeans (Regional Soybean Laboratory, Urbana, Illinois). Wood glue from soybeans (I.F. Laucks). Helps bread stay fresh. A twenty-year development.

Five years ago at the Univ. of Illinois soybean researchers searched the USA and Canada for commercial soy products; they collected about 100. "Today that list numbers more than 300 and the ball seems just beginning to roll."

On 1 July 1936 a systematic research program on soybeans was started at the University of Illinois at Urbana. Funded by the federal government, with 12 midwestern state agricultural colleges cooperating, an industrial research laboratory as been established in Urbana. Dr. O.E. May of USDA's Bureau of Chemistry has been placed in charge, with the "help of Dr. W.J. Morse, government scientist, who has made the study of soybeans his life work." The program will have three objectives: "1. Improvement of present industrial uses and development of new industrial uses for soybeans." 2. Research on the effects of different processes on the quality and quantity of soybean processes. "3. Facilities for testing different varieties as to adaptability for industrial use."

In 1930 a research chemist in a private laboratory developed a new method for improving the head of foam on beer–using soy flakes. "Today soybean beer flakes are being made on a commercial scale in Chicago and from there they are pouring into many of the country's biggest breweries."

In the Pacific Northwest, five new fir plywood factories (making a total of 23) have been constructed this year–because glue made from soybeans is less expensive than and superior to (incl. more water resistant) traditional plywood glues. Together with several pine plywood factories in California and British Columbia, they are using tons of the new soybean glue each day.

The initial impulse for this new industry came from automobile manufactures who complained that the plywood they were buying was not sufficiently water resistant. So the Pacific Coast Plywood Manufacturers Association sponsored a contest to find a new glue. A newcomer, I.F. Laucks, Inc., of Seattle, won with some soupy stuff that did not look like glue at all. And "today this soybean glue–its formula a trade secret–is the standard glue of the plywood industry. Mr. Laucks discusses the reasons for the success of this new glue: (1) Most important is its low cost. (2) Since soybeans are an annual crop, "production can be increased as the demand grows. This is not true of casein or blood, which are by-products of other industries more or less fixed in their production." (3) It is more uniform. (4) It is more "foolproof" than other water-resistant bases.

At Iowa State College, Dr. O.R. Sweeney is producing gasoline from soybean oil; he cracks it by heating to 350ºC using animal charcoal as a catalyst. He then distils one of the fractions. The first person to make petroleum from soybean oil was the Japanese scientist Satow, who made a calcium soap from the oil then subjected it to destructive distillation to get light, middle, and heavy grades of petroleum. Forty gallons of soybean oil yielded about 25 gallons of soybean petroleum, 33 pounds of glycerine (for use in explosives), and 480 cubic feet of combustible gas.

The U.S. paint industry was one of the first to make large use of soybeans–especially in Illinois. Soybean flour helps bread to stay fresh longer. Soybean lecithin is used by confectioners. Tanners use soybeans to increase the grease-absorbing properties of chrome leather. Textile manufacturers use it to make their fabrics soft, supple, and lustrous. It is also used by rubber makers, linoleum makers, soap makers, and sausage and wiener makers. Doctors prescribe soybean 'milk' (which is practically free of starch) for some babies and many diabetics. Even the family dog now consumes soybeans, which are less expensive than meat and make his [or her] coat sleek and shiny.

"Not half the story of this amazing development has been told here. U.S. soybean production jumped from around 5 million bushels in 1925, to 18.6 million in 1934 and 39.6 million in 1935. Illinois is the leading sate.

"Almost two decades ago, when the first president of the American Farm Bureau Federation, James R. Howard, was beginning that organization's constructive efforts to aid agriculture by other means than politics, he made a remark which is just beginning to be appreciated at its full significance.

"'The surest relief for agriculture,' Mr. Howard said, 'will come from the production of new agricultural output that will go to industry rather than to the human stomach.'

"The response to that, so far as soybeans are involved, is seen in a recent government statement that at present more than 120 industrial concerns are making soybean products. They include about 35 soybean mills in ten states and a number of cottonseed mills which crush soybeans for oil and meal; 15 soybean flour mills; 20 soybean food products factories and more than 50 plants where various industrial commodities are fabricated from the magic soybean.

"It looks as if industry is beginning to know its beans."

Photos show: (1) A tractor in a field of piles of soybean hay pushing a device designed to speed the job of getting the hay to the baler. (2) A warehouse in Manchukuo filled with piles of round soybean cakes. Two men are carrying 3-4 each on one shoulder up a wooden ramp. (3) A workman standing by a vat filled with a thick white liquid. "The first step in making auto parts is to feed the [soy] bean fibers into the rills that mix them." (4) Black auto parts grown on the farm, with a pile of some soybean powder that has not yet gone to the press. (5) "Powdered soybean fibers fed into this press come out in the form of distributor terminal plates for automobiles."

442. Watson, C.J.; Woodward, J.C.; Davidson, W.M.; Muir, G.W.; Robinson, C.H. 1936. The digestibility of Canadian feeding stuffs–Soybean oil meal. *Scientific Agriculture (Ottawa)* 17(1):22-30. Sept. [7 ref. Eng; fre]
• ***Summary:*** Grade Shorthorn Steers were fed soybean oil meal, hydraulic or expeller processed. Compared with linseed oil meal (per 100 lb of dry matter), the soybean oil meal contained more digestible protein and more total digestible nutrients. Based on their digestible nutrients content, soybean oil meal was estimated to be worth $4-5 more per ton than linseed oil meal. Address: Central Experimental Farm, Ottawa, Ontario.

450. **Product Name:** Soybean Oil, Soybean Oil Meal, Soybean Flour.
**Manufacturer's Name:** Edgar Soya Products, Limited.
**Manufacturer's Address:** Belle River, ONT, Canada.
**Date of Introduction:** 1936.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** F. Dimmock. 1936. "Division of Forage Plants: A report on the present status of the soybean industry, particularly in western Ontario." In: National Research Council of Canada. 1936. Proceedings of the Second Conference on Soybeans. Ottawa, Canada. Appendix "B." p. B-3. "At Belle River, Ontario, an entirely new mill is now in the course of construction. Mr. James Edgar, of Edgar Sugar House, Detroit, Michigan, is building this plant under the name of the Edgar Soya Products, Limited. The intention is to produce oil, meal and flour. The mill is to consist of two Ford solvent extractors manufactured by the Ford Motor Company... This company intends to contract with growers for acreage. The contract, a

copy of which was secured and is attached herewith, calls for a minimum price of 80 cents per bushel of beans, on the farm. Although no attempt has been made to canvas the farmers, contracts for more than 400 acres have already been secured. It is expected that this mill will have no difficulty in obtaining sufficient acreage to provide for its requirements."

452. Fordson Estates Ltd. 1936. English acclimatized soya beans. Boreham House, Boreham, Essex, England. 4 p. [2 ref]
• ***Summary:*** Fordson Estates in Boreham, Essex, England, began to grow soya beans in 1932. The first attempt was a failure since the varieties matured too late, but a second attempt in 1933 met with more success, as 47 different varieties from Manchuria, Japan, Canada, and North America were tested. Among these varieties were four that had been acclimatized by Mr. J.L. North, late Curator of the Royal Botanic Gardens, Regents Park. The only plants to reach full maturity in September were Mr. North's four varieties. Many of the foreign varieties, though not suitable for seed production, could be grown quite satisfactorily for hay which is cut about 4-6 weeks before the seed stage is reached. In 1934, a successful attempt was made to grow soya beans for seed on a field scale; the acclimatized seem of the 1933 crop was used. The plants were sown during the first week in May and harvested during the first 2 weeks in September. A illustrated article appeared in the *Times* of London on 29 Aug. 1934 showing the field at maturity. "This was the first time in agricultural history that soya beans had been grown as a field crop in Great Britain. The seeds were judged to be as good as any grown in other parts of the world... The successful harvesting of the 1934 crop was followed by an enormous demand for English seed from all parts of the United Kingdom, Europe and the Colonies. Most of the seed was sold for trial purposes in different localities and, in 1935, soya beans were grown in practically every county in England." There follows a description of available seed varieties, recommended cultural practices, and references to several books on the subject.

Note: Much of the information in this booklet first appeared in Elizabeth Bowdidge's *The Soya Bean* (1935). At the end of page 3 is a statement: "Soya Foods, Ltd., Rickmansworth, Herts, have arranged to buy available supplies of soya beans grown in England and the Empire at market prices, if in dry and sound condition. Supplies not exceeding 1,000 pounds may be sent freight paid without notification." On the last page is a price list for four varieties of soya beans that have been acclimatized to England by Mr. North. Named Green "Jap," Yellow "J," Black "O," and Brown "C," they are sold in weights of 75 lb. or less. Prepaid orders are to be sent to Fordson Estates Limited, Boreham House, Boreham, Essex.

453. Gray, George Douglas. 1936. All about the soya bean: In agriculture, industry and commerce. London: John Bale, Sons & Danielsson Ltd. ix + 144 p. Introduction by James L. North. Late curator, Royal Botanic Gardens, Regent's Park, London. Index. 28 cm. [19 ref]
• ***Summary:*** A comprehensive, early work on the soybean. Gray was a Scotch physician. Contents: 1. Introducing the soya bean. 2. The soya bean plant and its cultivation. 3. The soya bean as food: Dietetics, immature green beans, mature dried beans, soya bean coffee, soya bean chocolate, soya bean sprouts, soya bean milk, soya bean flour (incl. Berczeller flour, Soyvita bread made by Messrs. Wm. Beattie, Ltd., Glasgow), bean curd [tofu], soy (also called soya bean sauce, Chinese bean sauce, or shoyu), miso, fermented bean curd (p. 66-67). 4. Soya bean oil. 5. Soya bean trade. 6. The soya bean in agriculture.

Addenda: Soya bean products in the USA. Dieting and recipes. Statistics. India. Bibliography.

In the chapter on "Soya bean oil" we read (p. 75): "In England, the bean oil trade is carried on by the following firms:–The British Oil and Cake Mills Ltd., the ordinary shares of which are held by Lever Bros., Ltd., so that they are a branch of Unilever, Ltd.

"The Hull Oil Manufacturing Co., Ltd., Hull, now merged in the foregoing concern.

"The Premier Oil Extracting Mills, Ltd., Hull.

"Messrs. Wray Sanderson & Co., Hull.

"The Medina Refinery Ltd., Deptford, London.

"Messrs. J. Bibby & Sons Ltd., Liverpool.

"The Erith Oil Works Ltd., Erith" [Kent].

The first addendum, titled "Soybean products exhibited by the American Soybean Association" (at Washington, DC, p. 120-24) lists the following companies and each of the soy products that they manufacture: American Lecithin Corp. (Atlanta, Georgia), Archer-Daniels-Midland Co. (Milwaukee, Wisconsin), Armstrong Paint and Varnish Works (Chicago, Illinois), Battle Creek [Food] Factory (Battle Creek, Michigan), The Blanton Co. (St. Louis, Missouri), Cereo Co. (Tappan, New York), The Davies-Young Soap Co. (Dayton, Ohio), Detroit Graphite Co. (Detroit, Michigan), Eastern Health Food Stores Association (Washington, DC), Funk Brothers Seed Company (Bloomington, Illinois), Harshaw Essential Foods, Inc. (Cleveland, Ohio), Keystone Macaroni Mfg. Co. (Lebanon, Pennsylvania), Kloss, Jethro (Takoma Park, Maryland: Fresh [soybean] milk. Pumpkin pie [soybean milk and soybean flour]. Soybean cheese. Soybean bread [20% soybean flour]. Soybean buns. Soybean sprouts. Soybean cake), Laucks, I.F., Inc. (Bloomington, Illinois–home office,

Seattle, Washington), Madison Food Company (Madison, Tennessee; Vigorost, Cheese [Tofu], Soybeans canned with Tomato, Soybeans canned plain, Dixie Fruit Crackers), Mead Johnson and Co. (Evansville, Indiana; Makes Sobee [Infant Formula]), Oriental Show-You Co. (Columbia City, Indiana), Paintcraft Co. (Galesburg, Illinois), Prince Macaroni Mfg. Co. (Boston, Massachusetts), Purina Mills (St. Louis, Missouri; makes Cresol disinfectant, Purina turkey and growing fattening chow, Purina lay chow, Purina egg chowder, Purina breeder egg chowder, Purina fitting chow, Purina rabbit chow, Purina chick Growena chow, Purina 34% cow chow, Purina chowder, Purina bulky cow chow, Purina 24% cow chow, Purina pig and hog chow, Protena all mash starting and growing food), Shellabarger Grain Products Company (Decatur, Illinois), Soyex Company, Inc. (Nutley, New Jersey), Staley Sales Corporation (Decatur, Illinois), The Stamford Rubber Supply Company (Stamford, Connecticut), Dr. Roy Monier, President, Board of Managers, State Hospitals (Jefferson City, Missouri), United Drug Company (Boston, Massachusetts), Vi-tone Company (Hamilton, Canada), Woolsey Paint and Color Co., C.A. (Jersey City, New Jersey), Bureau of Chemistry and Soils, Department of Agriculture (Washington, D.C.). Page 120 adds: "The exhibit also contained some 200 soybean products, mostly foods, brought from the Orient by Mr. W.J. Morse, Senior Agronomist, Department of Agriculture, Washington, DC, U.S.A." Note: Morse and P.H. Dorsett were in East Asia from 1929 to 1931, when they collected many samples of soybeans and soyfoods.

In the second addendum, recipes, the author notes that soy flour is widely used in diabetic diets. Two leading firms who make soy flour in England and who also incorporate it in various products are: Soya Foods, Ltd., Rickmansworth, Herts, and Dietetic Foods Ltd. 124 Victoria St., London, S.W. 1. "The former specialize in Soyolk which is flour prepared on the principles laid down by Professor Berczeller; it is a mealy powder, fatty to the touch. The latter firm are the sole distributors in Great Britain of the well-known 'Heudebert' Dietetic Food products, a French concern which makes different kinds of diabetic breads." The following recipes are then given; * = Calls for Soyolk soy flour: Soybeans, southern style. Soybean salad. Roasted soybeans [like dry-roasted peanuts]. Soybean croquettes. Soybean soufflé. Stuffing for baked fish*. White sponge pudding*. Shortbread*. Madeira cake*. Soya soup à la Reine (uses Heudebert soya flour). Soya chocolate (with soya flour). Soya vegetable soup (with soya flour). Soya bean sprout salad.

Note: This is the earliest English-language document seen (Feb. 2000) that uses the term "soya bean sprouts" to refer to these sprouts. Address: M.D. (Scotch physician) England. Late medical officer to H.B.M. Legation, Peking, China. Lieut.-Colonel, Retired.

454. Institut International d'Agriculture (International Institute of Agriculture). 1936. Le soja dans le monde [The soybean in the world]. Rome, Italy: Imprimerie de la Chambre des Deputes, Charles Colombo. viii + 282 p. Bibliography, p. 276-82. No index. 25 cm. [90 ref. Fre]

• ***Summary:*** A superb early work, containing extensive original information, looking at developments with soybeans and soyfoods country by country, worldwide. Contents. Preface (p. 1). A. Culture of soy *(soja;* p. 4): 1. Botanical description, selection, classification of the varieties. 2. Culture properly said. 3. Enemies and illnesses.

4. Culture in the various countries: 4a. The Americas (p. 38): Antigua, Argentina, Bermuda, Brazil, Canada, Chile, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, USA (gives details on all varieties grown, and describes production, history, varieties, and cultural practices in North Carolina, Illinois, Indiana, Iowa, Maryland, Massachusetts, Mississippi, Missouri, New York, Ohio, West Virginia, Wisconsin, Conclusion), Guadeloupe, Guatemala, British Guiana, Dutch Guiana, British Honduras [Belize], Jamaica, Barbados, Martinique, Mexico, Montserrat, Peru, Puerto Rico, El Salvador, Trinidad and Tobago, Uruguay.

4b. Europe (p. 101): Germany, the Danubian countries, Austria, Spain, France, Great Britain, Hungary, Italy, Netherlands, Poland, Romania, Switzerland, Czechoslovakia, Turkey, USSR.

4c. Asia (p. 128): Ceylon, China and Manchuria, Cyprus, Federated States of Malaysia, British India (incl. Punjab, Bihar and Orissa, Burma, Berar, Madras Presidency, Bombay Presidency, Bengal (incl. Nepal, Bhutan, Sikkim, and the district of Darjeeling), Assam, North-West Frontier Province, United Provinces), Netherlands Indies, Indochina (incl. Tonkin, Annam, Laos, Cambodia, and Cochinchine), Japan, Palestine, Siam.

4d. Africa (p. 146): French West Africa, Algeria, Belgian Congo, Cyrenaica, Egypt, Eritrea, Madagascar, Morocco, Mauritius (Ile Maurice), Reunion (Réunion), Rhodesia, Anglo-Egyptian Sudan, Tripolitania, Tunisia, Union of South Africa.

4e. Oceania (p. 153): Australia, Fiji Islands, Hawaii, New Caledonia, New Zealand, Philippines.

B. Utilization of soya (p. 158): 1. The soybean in human nutrition and in industry: Whole soybeans, chart of the uses of whole soybeans, use of soya in the green state (green vegetable soybeans), soy sauce *(dau-tuong* of the Annamites, or *toyo,* named shoyu by the Japanese, or *chau-yau* or *chiang yoo* by the Chinese), condiments and sauces based on soya in the Netherlands Indies *(tempe, ontjom, tempemori* and *tempe kedele* [various types of tempeh and onchom, p. 168-70]), *tao tjo* [Indonesian-style miso], *tao dji* [soy nuggets], *ketjap, ketiap benteng* [Indonesian-style soy sauce], soymilk *(le lait de soja),* yuba *(crème de lait de*

*soja),* tofu *(le fromage de soja)* and fermented tofu *(des fromages fermentés,* made by Li Yu-ying near Paris), soymilk casein *(caséine du lait de soja,* for industrial use, including vegetable albumin, or galalithe [galalith]" [isolated soy protein], and artificial wool), soy lecithin *(lécithine de soja),* soy flour *(la farine de soja,* incl. soy bread, soy pastries, and soy cocoa).

2. Soy oil (p. 194): Food uses, industrial uses (including soaps, products resembling petroleum, paints, varnishes, linoleum, and artificial rubber), extraction, directory of U.S. manufacturers of materials and equipment for soybean processing, directory of U.S. and Canadian manufacturers of food products based on soya *(produits alimentaires à base de soja,* p. 205-06), directory of U.S. manufacturers of industrial soy products (p. 206-07).

3. Soybean in the feeding of domestic animals (p. 207): Forage, hay, silage, pasture, soybean seeds, the minerals in soybeans, soya as a feed for dairy cows, cattle, buffaloes, sheep, hogs, horses and mules, poultry.

4. Use of soya as fertilizer (p. 257). C. The trade of soya and of its by-products (p. 363): Production of soybeans in the principal countries, economic importance of soybean culture in the USA, soybean trade/commerce including tables of the major importers and exporters, and amounts traded annually in 1931-1934, price of soybeans, cost of production.

List by region and country of people and organizations that responded to a questionnaire sent by IIA (p. 273-76). Bibliography of main publications consulted, listed by region and country of publication.

Reunion *(Ile de la Réunion):* "The soybean (Le Soja) is only cultivated as an experimental crop, on a few square meters at the agronomic station" (p. 148).

Fiji *(Iles Fidji):* Soybean cultivation is not yet practiced in this colony; however soybean seeds are currently being imported in order to conduct a trial.

New Caledonia: In 1928 soybean cultivation was introduced to New Caledonia.

Note 1. This is the earliest document seen (Dec. 2007) concerning soybeans in Bhutan, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Morocco, New Caledonia, Palestine, Peru, or Réunion, or the cultivation of soybeans in Bhutan, Costa Rica, Dominican Republic, Ecuador, El Salvador, Guatemala, Israel, Jamaica, Madagascar, Mexico, the Middle East. Morocco, New Caledonia, Palestine, Peru, or Réunion. It is also the earliest document seen (Dec. 2007) concerning soybeans in connection with (but not yet in) Cyprus; it is stated that soybeans are not grown on the island of Cyprus. Soybean culture is not practiced in the Italian colonies of Eritrea (Erythrée, now part of Ethiopia) or Cyrenaica (Cyrénaïque, now part of Libya).

Note 2. This document contains the earliest date seen (June 2007) for soybeans in Bhutan, New Caledonia, or Réunion, or the cultivation of soybeans in New Caledonia (1928), or Bhutan or Réunion (1936) (One of two documents).

Note 3. This is the earliest French-language document seen (Jun. 2000) that mentions tempeh, which it calls "tempe" (p. 168). It notes that, in general, the indigenous people of the Netherlands Indies use soybeans mainly to make *tempe,* a product which, throughout central and eastern Java, takes the place reserved for *ontjom* in western Java. Tempeh is found in two forms: either in large flat cakes which are cut at the time of sale into small square morsels, or wrapped in folded banana leaves. A detailed description of the preparation of each of these two types of tempeh is given as well as another type of tempe, called *tempemori,* which is made with soybeans and coconut presscake.

Soybean culture is not known to be practiced in the following countries or colonies: Antigua, Barbados, British Honduras (renamed Belize in about 1975), Trinidad and Tobago. Address: Rome, Italy.

455. *Journal of the Toronto Dental Association.*1936. Directory–Sunsoy. 11:43. *

• ***Summary:*** On page 43 the listing states: "Soy Bean (Sunsoy) Products Ltd.–Toronto."

Note: This periodical is published by the Ontario Dental Association.

456. North, James L. 1936. Introductory chapter. In: G.D. Gray. 1936. All About the Soya Bean: In Agriculture, Industry and Commerce. London: John Bale, Sons & Danielsson Ltd. 144 p. See p. 1-9.

• ***Summary:*** This is the story of early attempts by Dr. North and others to grow soybeans in England. "In 1913 chance put in my hands thirteen small seeds of a variety of soya bean said to have come from North China in 1910 and to have ripened pods in Germany for two successive years. Sown by me the following May the plants grew to a height of 1½ feet and ripened seed in October. This took place at the Gardens of the Royal Botanic Society, of which I was then Curator. I was aware that of the many attempts to grow soya which had taken place in this country, all had failed, also that no others were being attempted, since it was the considered opinion of the Ministry of Agriculture and the Royal Agricultural Society that the soya bean was quite unsuited for growth here, as it required heat that would ripen maize.

"The podded beans were brought to the notice of Professor Bottomley, of King's College, and Professor Greenish, of the Pharmaceutical Society, and both considered the matter to be important. They pointed out that this country possessed no oil plant and was importing soya from Manchuria to the extent of half a million tons per

annum... They advised me to increase my stock as rapidly as I could.

"The result of the first year's crop was four hundred seeds from the original thirteen seeds; the second year four thousand and the third twelve thousand. In 1917 it became a question of finding space to grow them and it was decided to have part grown by a firm of market growers at Uxbridge, Middlesex and the rest on a farm at Manningtree, Essex, belonging to Mr. C.P. Ogilvie. Both were failures." The first crop failed because the land had been too heavily manured and the seeds were sown too far apart. The second crop, sown in the middle of a field of wheat, had been eaten by rabbits. Rabbits are still a major pest for soya beans.

Since little was known about the soya bean, Mr. North tried to gain experience by sending seeds to the Chelsea Botanic Gardens, the Horticultural Society at Wisley, the Cambridge Botanic Gardens, Messrs. Sutton and Sons, Reading, and to a friend in Hampshire. But the reports received were not encouraging. "That same year I got in touch with the United States Department of Agriculture at Washington [DC], I received from it not only soya bulletins and seeds of a number of American soya varieties for trial in England, but the promise of further assistance. I owe a very great debt of gratitude to that department and to Dr. W.J. Morse, its agronomist and soybean expert, the man who, more than any other, has made the United States the soya bean centre of the world and now a growing competitor with Manchuria as world exporter.

"The results of 1917 were better than those of the previous year and in 1918 I had sufficient seed of my one variety to plant half an acre on land lent by Mr. Clark at Virginia Water. These were sown in company with 12 American varieties, half being inoculated with a nodule culture supplied by Professor Bottomley."

Following some poor years, 1921, a drought year, was the best year to date. "Accounts of my success appeared in the Press and I wrote an article which came out in the *Illustrated London News* in October. As a result many applications for seed reached me and I sent samples to over one hundred places, among others to Professor Southworth of Manitoba College, Winnipeg [Canada]. He found my variety better than anything he had had there, both for fodder and seed, but not early enough in seasons with early frost. In return he sent me seed of a brown variety 'Manitoba Brown,' a selection from a well-known American variety 'Ogemaw.'"

1922 was a wet year and at his plot and not one person to whom North had sent seed reported success. On his own plot at Chiswick, where he had twenty varieties under test, only one, "Manitoba Brown," succeeded.

"In 1923 appeared Messrs. Piper and Morse's encyclopædic work, 'The Soybean,' in America; it solved a good many of my problems and I determined to follow American practice in future. From it I learned that two-thirds of the American crop was consumed as fodder upon the farm; that every variety had a fixed time ranging from 80 to 160 days for maturing; that in industry the chief value of the bean rested upon its oil content; and that the plant possessed what is now called 'local limitations,' meaning that a variety that grew well in one place could not be depended upon at another and that in American agricultural practice it was usual to test two or more varieties before growing it as a crop. This last was particularly interesting to me because it explained the erratic behaviour of some of my varieties when sent to other places.

"Convinced by the failure of my 1922 trials that soya was not yet ready to put forward as a crop plant, I extended my search to new sorts and with the help of friends abroad obtained many varieties from China, Manchuria, Japan, South Africa and India." North then began to specialize in short season varieties. "My friend Dr. Morse approved the plan and from then onward sent me only varieties which in America took less than one hundred days to mature... Using Manitoba Brown Soya as a standard I was able to select several varieties as early or even earlier than it." In 1930 Messrs. Sutton and Sons of Reading [seedsmen] decided to put the variety Brown C in their catalogue.

"In 1931, Mr. A.F. Secrett, a Twickenham market grower, offered the use of a piece of land at Brentford, Middlesex; it enabled me to grow on a larger scale than had been possible previously. In September the same year a photograph of the crop appeared in the *Evening News.* By chance it was seen by Sir John Davis, a Director of the Ford Motor Co. and manger of the Ford Estate at Boreham, Essex, who at the request of Henry Ford had tried to grow soya with American seed and had failed. At his request I agreed to supply acclimatized seed and to superintend its growing. All my four varieties of soya were used and under field conditions the crop was a success. From 2 acres the first year it was increased to 12 acres in 1934 and to 20 in 1935, the last two crops being grown without assistance. The Boreham trials were visited by farmers from every part of the United Kingdom and visitors from America pronounced the crops to be as good as any grown in that country. The seed was distributed in 1935 and that year saw it being grown in quantity in some hundreds of places throughout the British Isles."

A photo facing page 1 shows Mr. J.L. North standing in a field with soya bean plants which he has grown. Address: 60, Grove Park Terrace, Chiswick, London, W.4, Engalnd. Late curator, Royal Botanic Gardens, Regent's Park, London.

457. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report.*1936. Department of field husbandry. 61:74-81. For the year 1935. See p. 80.
• ***Summary:*** In the section on "Extension work" is a subsection (p. 80) titled "Soybean demonstrations" which

begins: “Nearly three hundred farmers have co-operated with the Field Husbandry Department in conducting soybean demonstrations since this work was undertaken a few years ago. In 1935 there were forty-seven acre-plots, of which twenty-nine were for seed production and eighteen for hay. They covered thirty-six counties. Reports from farmers who made the tests show an average seed yield of over 20 bushels per acre, and an average hay yield of 2 3/4 tons per acre.”

Note: W.J. Squirell, B.S.A. is professor and head of the department. O. McConkey, B.S.A., M.S., Ph.D., is associate professor. Address: Guelph, Ontario.

458. Dafoe, Allan Roy. 1937. Re: The Dionne quintuplets, dried soy bean milk, and soy acidophilus milk. Letter to Dr. John H. Kellogg, Miami-Battle Creek, Miami Springs, Florida, Jan. 4. 1 p. Typed, with signature on letterhead.
• ***Summary:*** Dr. Dafoe is the attending physician for the Dionne quintuplets. He thanks Dr. Kellogg for the shipment of fruit which arrived today. “Since writing you last you have also favored us with the dried soy bean milk and the gallon shipment of acidophilus, both of which, you may be sure, are appreciated.”

Note: On the letterhead is a photo of the five babies with their names printed under each: Yvonne, Cecile, Marie, Annette, and Emilie [spelled Emelie by Feb. 23].

On Jan. 27 Dr. Dafoe writes Dr. Kellogg requesting that he double the amount of acidophilus sent each week. On the letter is written by hand: “1 case been shipped weekly for 6 months.” Next to it is a stamp: “Approved–Jan. 29 1937. Credit Dept.”

On Jan. 29 Dr. Kellogg writes that he is sending a number of special foods especially designed for infants, made by his Battle Creek Food Company in Michigan. One of these is made from the soy bean. “It may interest you to know that the specimen of soy acidophilus milk which I sent you is particularly rich in vitamins B and G, containing 50 units per 10 grams of vitamin B and 90 units of vitamin G.” He then raises the idea of using a picture or pictures of the quintuplets in connection with the sale of these infant foods if is agreeable to the trustees of the Guardianship to do so.

In another letter of 29 Jan. 1937 to Hon. David Croll, Minister of Public Affairs, Parliament Buildings, Toronto, Ontario, Canada, he proposes the same idea, but now with a royalty payment: “We have an application from two other milk companies who desire to manufacture and distribute our soy acidophilus milk. We will be greatly pleased if you can see your way clear to quote us terms for a royalty arrangement.” Address: The Dionne Quintuplet Guardianship, Callander, Ontario, Canada.

459. Clay, Hilton. 1937. Pathfinder to plenty: Much of Ontario’s wealth of field crops comes from immigrants found and tested by Dr. Zavitz, and distributed through the Experimental Union. *Farmer Magazine (The): Eastern Canada’s Rural Magazine (Toronto)* 34(1):5, 16. Jan.
• ***Summary:*** This article focuses on Dr. Zavitz’s work with barley and alfalfa. “There is scarcely a farm in the more settled areas of that province [Ontario] which will not bear for decades to come green and living monuments to the deeds of Dr. Zavitz, O.A.C. varieties of wheat, of oats, of barley, of peas, of soy beans, now so extensively grown are largely the fruits of his scientific work.” “Today he lives in peaceful retirement in a rural home close to the place where he was born.”

Photos show: (1) A portrait of Dr. Charles A. Zavitz which hangs in War Memorial Hall at the Ontario Agricultural College. (2) A view of the field experimental plots at the College, the scene of most of Dr. Zavitz’s life work.

460. Kellogg, John Harvey. 1937. Re: Soy acidophilus milk, cottage cheese, and the Dionne Quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, Feb. 11. 2 p. Typed, without signature (carbon copy).
• ***Summary:*** Dr. Kellogg is sending Dr. Dafoe a box of oranges and other fruits, plus a new table showing the vitamin content of different foods. “I am also sending you a package of soy acidophilus cheese which resembles cottage cheese in appearance. It is made from soy acidophilus milk in essentially the same manner in which cottage cheese is prepared. With the addition of thick cream, sweet or sour, and if desired, a little salt, it becomes as palatable as ordinary cottage cheese and has the advantage that it contains a high percentage of *Lactobacillus acidophilus.* A count made today (February 11) shows 250 billion to the gram. I thought the quintuplets might like this for a change.

“If you will consult the table you will see that the soy bean is a good source for vitamin B and also one of the best of all known vegetable sources for vitamin G. This gives an additional value to soy acidophilus milk and other soy bean preparations.” Address: M.D., Battle Creek, Michigan.

461. Dominion Linseed Oil Co., Food Division. 1937. You’ll love this new bread! Acclaimed by scientists as the greatest nutritional advance in a generation (Ad). *Toronto Daily Star (Canada).* March 23. p. 30.
• ***Summary:*** A large ad for “Ful-Soy Bread.” “Every loaf guaranteed fully by this pioneer Canadian milling company whose products have set an unwavering standard of high quality for 75 years.”

“For centuries the world’s food scientists have recognized that Soy products could provide the greatest nutrition proportionately of any known foodstuff.” This bread is especially good for children, and fine for lunches–in part because it keeps fresh so much longer. As your baker

or grocer tomorrow for Ful-Soy Bread. Address: 587 Fleet St., Toronto. Phone: Elgin 9494.

462. Kellogg, John Harvey. 1937. Re: Vitamin content of soy acidophilus milk, and the Dionne quintuplets. Letter to Dr. Allan Roy Dafoe, The Dionne Quintuplet Guardianship, Callander, ONT, Canada, March 26. 2 p.
• ***Summary:*** "I received a letter a few weeks ago from the secretary of the Nutrition Department of the American Public Health Association of which I have been a member for more than 50 years, asking me to prepare a paper for the next meeting which is to be held in October. I have chosen as my subject 'Some of the Health Values of the Soy Bean.' Thinking you might be interested in some of the facts which I have embodied in the paper in relation to soy acidophilus milk, I am enclosing a few sheets from a manuscript which I am preparing which will be published later.

"I was much gratified to learn from the unpublished data recently sent me by Dr. Munsell of the U.S. Department of Agriculture that soy acidophilus milk contains six times as much vitamin G (anti-pellagra) and more than twenty times as much vitamin B as does cow's milk. The addition of a thousand vitamin A units of plant origin to each half pint gives it greater potency in vitamin A than the best dairy milk, fully double, in fact. The addition of B-Lac or lactose gives it a very close resemblance to mother's milk in every particular with a few points of slight superiority."

463. Kellogg, John Harvey. 1937. Re: Soy acidophilus milk. Letter to Dr. G. Efremoff, Totleben 2, Sofia VI, Bulgaria, April 8. 4 p. Typed, without signature (carbon copy).
• ***Summary:*** "I spend my winters now here in Florida on account of the more favorable weather. Here I do not take cold as I do at Battle Creek and consequently am able to do much more work. I do not stand the cold winters well because of weak lungs on account of tuberculosis which destroyed my left lung before I was 20 and left my respiratory organs in a susceptible state.

"I assure you I am most happy to know of the success which has attended your efforts to promulgate the ideals of biologic living in your country [Bulgaria]. You have certainly done a noble work. You will some time find yourself at the head of a great sanitarium.

"... Have you become acquainted with soy acidophilus milk and with methods of changing the intestinal flora? I am sending you with this a copy of a paper which you may publish in your journal if you wish. I am also sending you a couple of tubes of *Lactobacillus acidophilus* which I call soy acidophilus. You can make cultures of this and get a start in this same line if you wish. I have patented the product in this country,... It is really a wonderful product and proves of immense service in the treatment of all kinds of intestinal disease, particularly colitis, in which it is used by mouth and by enema. It needs to be taken in liberal doses two or three times a day and by enema, a half pint or so along with warm water and the juice of one or two lemons or a teaspoonful of lactic acid to each pint of water. It stimulates the colon to act and is wonderfully efficacious, clearing out the colon at once and planting the protective aciduric flora."

Dr. Dafoe is now feeding the Dionne quintuplets [in Callander, Ontario, Canada] about one pint each per day of soy acidophilus milk; Dr. Kellogg sends him 36 pints a week. "The Doctor sends me specimens for examination. We are keeping their acidophilus at 85 per cent of the intestinal flora." Address: Florida.

464. Holmes, Marie. 1937. Cooking chat: Artistic dishes delight Occidental when dining in Japanese manner. *Toronto Daily Star (Canada).* May 20. p. 36.
• ***Summary:*** Several weeks ago, the writer was served a complete, authentic Japanese meal at a Japanese restaurant in New York City. Sukiyaki was cooked at her table. Over the simmering vegetables, the waiter poured "some soy or shoyu sauce,..." Floating in her delicious soup was "a little flower of pink bean curd, and a slice or two of white mushroom." She finds that Japanese food is the most artistic in the world, and artistically served. "Since modern hostesses are turning more and more to dishes of other countries and, in fact, placing before their guests whole foreign menus," now is a good time to start learning about the dishes of Japan. The recipes for a Japanese menu are given, including: Beef sukiyaki (with "¼ cup soy sauce" and "1 square piece bean curd") prepared in a frying pan. Japanese directions for Miyako sukiyaki (seasoned with "shoyu sauce").

A small portrait photo shows Marie Holmes.

465. Libby, McNeill & Libby of Canada, Limited. 1937. Safer feedings for your baby with Libby's homogenized baby foods (Ad). *Toronto Daily Star (Canada).* May 20. p. 12.
• ***Summary:*** Near the lower right of this large ad is a section titled "6 balanced combinations (Ask for them by number). Homogenized Foods for Infants–Put up in the following combinations." No. 4 of 6 is: "Cereal Combination: Whole milk, whole wheat, soya flour."

"Libby's homogenized baby foods may be fed months earlier." "Fewer digestive upsets with Libby's homogenized baby foods." "Baby gets more nourishment with Libby's homogenized baby foods." Address: Toronto.

466. Megee, C.R. 1937. Soybean production in Michigan. *Michigan Agric. Exp. Station, Circular Bulletin* No. 161. 14 p. June.
• ***Summary:*** Contents: History, adaptation, and uses. A high protein emergency or annual hay crop. Digestible nutrients

and feeding value per acre of soybeans and other Michigan crops. Soybean oil meal. A supplementary protein feed. Soybeans for silage. A cash crop. Soybeans as a soil improving crop. Cultural practices: Varieties, time of planting, rate and methods of planting, inoculation. cultivation, harvesting for hay, harvesting for seed, threshing, storage of soybean seed. Industrial and commercial uses of soybeans: Soybean oil, soybean oil meal, dried beans, for human food.

"As early as 1902 and for 20 years afterwards, E.E. Evans of West Branch, Michigan, took an active part in introducing, breeding, and distributing varieties of soybeans. The Ogemaw is an introduction of Mr. Evans and is the result of a cross between his No. 6 Early Black and Dwarf Brown. Since 1918 the Michigan Agricultural Experiment Station has conducted numerous variety tests for both hay and seed production at East Lansing and at various points over the state" (p. 3).

Table 4, titled "Soybean variety adaptation" (p. 10) lists the following: Manchu, Ito San, Mandarin (Canada), OAC 211 (Ontario), Dunfield, Illini (Illinois), Mandell (Indiana), Sciota (Ohio), Cayuga (New York), Ogemaw (Early Michigan), Wisconsin Early Black, Virginia, Wilson, and Mammoth Yellow. For each variety is given the name, maturity, seed color, and adaptation. "The Manchu is the leading general-purpose variety for hay, seed, and commercial uses in Michigan."

Under "Industrial and commercial uses of soybeans," a table shows 10 industrial and food uses of soybean oil, 15 industrial and food uses of soybean oil meal (incl. diabetic foods, flour, crackers, soy milk, bean curd [tofu], soy sauce), and 12 industrial and food uses of dried beans (incl. roasted beans, coffee substitutes, soups, baked beans, boiled beans). "When soybeans are to be used as a green vegetable, the Easycook and Hahto are preferred because of their milder flavor." Address: Section of Farm Crops, East Lansing.

467. Bailey, C.F. 1937. Dominion Experimental Station, Fredericton, N.B. [New Brunswick]: Results of experiments 1931-1936 inclusive. In: Experimental Farms Reports 1930-1938, Branch Farm Reports (Eastern Edition). Ottawa, Canada: Canada Department of Agriculture, Dominion Experimental Farms. See p. 38-40.

• ***Summary:*** In the section on forage crops, the subsection titled "Annual Hays" (p. 38-39) notes that 90 lb of Mandarin soybeans yielded 2.02 tons/acre of hay and 90 lb of Wisconsin Black soybeans yielded 2.01 tons of hay. These soybeans were tested for 3 years, from 1934 to 1936. "The yields were not as large as those from either oats alone, the oat mixtures, or the millets. The hay, however, was of superior quality, as it had a high percentage of protein. By using straddles, this crop was readily made into hay... Oats, oat mixtures and soybeans were sown with an ordinary grain drill."

The next subsection, titled "Soybean," states: "While the widespread interest shown by farmers in New Brunswick in the soybean is largely due to the good results obtained in other provinces of Canada, and the United States, where the growing season is longer, results obtained at this station indicate that fair yields can be obtained in this section of New Brunswick. When the high percentage of protein in the soybean is taken into consideration, the possibilities of this crop seem well worthy of consideration.

"Early maturing soybeans have ripened satisfactorily every year. Medium early varieties usually ripen seed and they have produced the largest yields in favourable seasons... The late maturing varieties such as Manchu, Disco and O.A.C. 211 have not been suitable as a seed crop even in favourable years.

"For the three years 1933, 1934 and 1935, Manchu (Hudson) and Mandarin, two medium early varieties, yielded an average of 26.61 and 26.6 bushels seed per acre respectively. In the same period Wisconsin Black and Manitoba Brown, two early varieties, yielded 24.69 and 23.11 bushels per acre respectively...

"Manitoba Brown, which is the earliest variety tested, required 117 days to mature in 1933 and 1934, and 130 days in 1935. Also discusses varietal tests in 1935 and 1936, effect of inoculation on yield, effect of superphosphate on maturity, and the use of soybeans for hay.

Note: This document contains the earliest date seen for soybeans in New Brunswick, or the cultivation of soybeans in New Brunswick (1933). The source of these soybeans was probably other research stations in Canada. Address: B.S.A., Superintendent (of this station).

468. Baird, W.W. 1937. Dominion Experimental Farm, Nappan, N.S. [Nova Scotia]: Results of experiments 1932-1936. In: Experimental Farms Reports 1930-1938, Branch Farm Reports (Eastern Edition). Ottawa, Canada: Canada Department of Agriculture, Dominion Experimental Farms. See p. 36, 39-40.

• ***Summary:*** In the section titled "Forage Crops," soybeans are first discussed in the subsection titled "Annual Crops for Hay." Wisconsin Black soybeans were one of a number of crops tested; 90 lb were seeded. They "produced a crop of hay which was only fairly satisfactory, but further tests may show these to have some value as an annual hay crop."

The subsection titled "Soybeans for Seed" states: "Soybeans are a comparatively new crop in this province. They have been compared with other crops for annual hay purposes in another section of this report... Only the earlier varieties can be matured with certainty under conditions as they exist in this locality. Manitoba Brown, the earliest variety tested, has matured every year during the past four years, but it has not yielded quite so well as some of the

later maturing varieties, even though the later varieties had not entirely reached maturity when killed by frost. Wisconsin Black, which is about a week later in maturing than Manitoba Brown, has been successfully ripened.

"Mandarin is about as late a variety as is likely to mature and it cannot be depended upon every year. O.A.C. 211 is later than Mandarin and has ripened in favourable years only. Manchu has not matured in any year of the test.

"Manitoba Brown and Wisconsin Black are likely to be most satisfactory when full maturity is desired, although Mandarin has given a higher yield.

"Substantial increases in yield have been secured by inoculation of the seed, which indicates that the seed should always be inoculated unless the organism is known to be present in the soil." Address: Superintendent (of this station).

469. Clark, J.A. 1937. Experimental Station, Charlottetown, P.E.I. [Prince Edward Island]: Results of experiments 1932-36 inclusive. In: Experimental Farms Reports 1930-1938, Branch Farm Reports (Eastern Edition). Ottawa, Canada: Canada Department of Agriculture, Dominion Experimental Farms. See p. 31-32.

• ***Summary:*** Soybeans are discussed in the section titled "Forage Crops." "Soybeans and millet: Soybeans have been grown experimentally to determine their usefulness as a seed and hay crop. As these experiments have been conducted for the past few years only, definite conclusions cannot be drawn.

"A number of the varieties tested have never matured owing to the shortness of the growing season. Manitoba Brown and Wisconsin Black have matured every year, with yields of ripe beans varying from 10 to 21 bushels and 13 to 23 bushels per acre respectively. The yields were governed chiefly by the season and the fertility of the land. When cut before maturity, Manitoba Brown gave a yield of 4 to 6 tons of green material per acre, and Wisconsin Black, 6 to 8 tons. Mandarin matured seed in 1934 with a yield of 22 bushels per acre, and over a four-year period produced from 7 to 10 tons of green material per acre. In rod row trials, Manchu (Hudson) and O.A.C. 211 gave a larger green yield than Mandarin. In 1936, a field crop of Mandarin, O.A.C. 211 and Manchu (Hudson), seeded May 23, in rows 28 inches apart, were ensiled with the field crop of corn. The yields of soybeans were 9 tons, 1,882 pounds, 14 tons, 1,603 pounds, and 14 tons per acre respectively." Address: D.Sc., Superintendent (of this station).

470. Dominion Bureau of Statistics, Ottawa, Canada. 1937. Imports for consumption: Agricultural and vegetable products. *Trade of Canada.* Fiscal year ended March 31, 1936. See p. 283, 289, 299, 335, 340. [Eng; Fre]

• ***Summary:*** Table No. 37 (p. 283) gives figures (gallons and dollar value) for imports of soy sauce to Canada each year from 1932 to 1935 from United Kingdom, Hong Kong, China, Japan, Syria, and the United States. Total soy sauce imports (in gallons) were as follows: 1932 = 78,581. 1933 = 72,389. 1934 = 89,249. 1935 = 79,321.

Page 289 shows imports of soya beans in 1935 only from United Kingdom, Hong Kong, Japan, and United States. Some 259,460 lb of soybeans were imported worth $7,822. The main source country was Japan, followed by the USA.

Page 299 gives import figures for soybean oil in 1934 and 1935 from United Kingdom, China, Germany, Japan, Netherlands, and the USA.

Page 335 shows imports of soya bean cake and meal from 1932 to 1935 from United Kingdom, China, and USA.

Page 340 shows imports of soya bean oil (and peanut oil) for the manufacture of soap in 1934 and 1935 from the United Kingdom, China, Denmark, Germany, Netherlands, and United States. Address: Ottawa, Canada.

471. McClary, J.A. 1937. Experimental Station, Lennoxville, P.Q. [Quebec]: Results of experiments 1931-1935. In: Experimental Farms Reports 1930-1938, Branch Farm Reports (Eastern Edition). Ottawa, Canada: Canada Department of Agriculture, Dominion Experimental Farms. See p. 23-24.

• ***Summary:*** In the section titled "Forage Plants" there is a subsection titled "Soybeans." "The first experiments with soybeans at this station were conducted in 1924 and 1925. At that time the varieties of which seed was readily available were rather late in maturing, and, in the climate of this district, were of value only as a source of forage...

"With the introduction of early high-yielding varieties, of which the seed can be ripened in the average season at Lennoxville, experiments with soybeans were started in 1933. Results in the growing of the crop for hay were again unsatisfactory, but for grain or seed production excellent crops have been obtained.

"Under average conditions and with suitable varieties it would seem that yields of from 20 to 25 bushels may be expected in a normal season. Moreover, as the grain is an excellent high protein feed, and as the crop is suitable on a wide range of soil types, it is one that farmers throughout the district served by this station could grow to advantage.

"Variety Tests.–Of 4 varieties that have been tested for seed production, 3 have consistently ripened satisfactory crops. Manitoba Brown, which is the earliest, ripens usually about the 1st of September. The plants are about 18 inches high and seed is of a dark brown colour. Its average yield for the past 3 years was 24.67 bushels per acre."

Wisconsin Black has given a 3-year average yield of 29.40 bushels/acre and Mandarin has given an average yield of 28.03 bu/acre. "Of the 3 varieties, Mandarin is the most desirable, in that the seed is of value commercially for processing as well as for feeding purposes. It is too late,

however, for average conditions throughout this district." Dates of seeding are also discussed. Address: Superintendent (of this station).

472. Morse, W.J.; Cartter, J.L. 1937. Improvement in soybeans. *Yearbook of Agriculture (USDA)* p. 1154-89. For the year 1937. [67 ref]

• ***Summary:*** Contents: History of the soybean. World distribution and production. Utilization of the soybean (with chart). Improvement of soybean varieties. Methods in breeding: Natural and artificial crossing, mutations. Inheritance studies and cytology: Plant characters (flower, stem, pubescence, and foliage; height of plant and maturity; pod-bearing habit and pod characters; sterility, growth habit), seed characters (color of seed coat, hilum, and cotyledon; other seed characters), yield of seed. Disease resistance. Identification of genes and chromosomes. Selected references on genetics of the soybean. Appendix: 1. Workers identified with soybean improvement: United, States, foreign countries. 2. List of soybean genes (table). 3. Linkage of soybean characters (table). 4. Soybean varieties: Origin and varietal characteristics (table listing 101 named soybean varieties; for each is given the place and date of introduction or origin, days to mature, flower color, pubescence color, and seed characters {coat color, germ color, hilum color, seeds per pod, seeds per pound}, uses {dry-edible beans, forage, green-vegetable beans, grain}).

The section titled "History of the Soybean" states: "The early history of the soybean is lost in obscurity. Ancient Chinese literature, however, reveals, that it was extensively cultivated and highly valued as a food for centuries before written records were kept. It was one of the grains planted by Hou Tsi, a god of agriculture. The first record of the plant is contained in a materia medica describing the plants of China, written by Emperor Sheng Nung [sic, Shen Nung] in 2838 B.C. The crop is repeatedly mentioned in later records and it was considered the most important cultivated legume and one of the five sacred grains essential to the existence of Chinese civilization. Seed of the plant was sown yearly with great ceremony by the Emperors of China, and poets extolled its virtues. The records of methods of culture, varieties for different purposes, and numerous uses indicate that the soybean was perhaps one of the oldest crops grown by man."

Note 1. This is the earliest English-language document seen (June 2003) which states that: (1) The soybean was one of the "five sacred grains." (2) "The early history of the soybean is lost in obscurity." (3) The soybean was planted at an early date by "Hou Tsi, a god of agriculture." (4) The "soybean was perhaps one of the oldest crops grown by man." It is also the earliest document seen (June 209) in which William Morse mentions the mythical Chinese emperor "Sheng Nung" in connection with soybeans.

More broadly, this entire story linking Shen Nung with the earliest written record of the soybean, is completely incorrect. Yet because the story was written by Morse (highly regarded as America's leading authority on the soybean) in a USDA publication, it has unfortunately been repeated, and this source cited, again and again down to the present day (see Hymowitz 1970; Hymowitz and Shurtleff 2005).

Note 2. This is the earliest document seen (June 2003) in which the emperor's name is spelled "Sheng Nung."

Note 3. This is the earliest document seen (July 2007) in which William Morse tries to write an early history of the soybean in China. Unfortunately, he does not cite his sources.

The section titled "Improvement of soybean varieties" states: "In the United States, more than 50 percent of the acreage devoted to soybeans is used for forage and pasture; breeding work, therefore, has tended largely toward the development of varieties for hay, silage, and pasture. The development of such varieties as Virginia, Laredo, Otootan, Wisconsin Black, Manchu, Wilson-Five, Kingwa, Peking, and Ebony by selection from introductions has been the principal factor in the increased use and acreage.

"Beginning with 1929, the use of soybean seed by oil mills has led to a demand for yellow-seeded varieties of high oil content. Agronomists and plant breeders have attempted to meet this demand by making large numbers of selections from foreign introductions and locally grown varieties and by analyzing these for oil content. This has brought about the development of several superior oil varieties and has resulted in a large increase in production of beans for milling purposes. The most popular of these varieties are Illini, Dunfield, Mukden, Mandell, Scioto, Mansoy, Manchu, Mamredo, Delsta, and Mandarin. Results of analyses with more than 1,000 selections and varieties have shown a range of from 12 to 26 percent in oil content. From studies of the oil content of varieties grown in a given locality, it seems possible, from the breeding standpoint, to produce varieties high or low in oil, at least within the known ranges of variation exhibited by common varieties." (p. 1161-62).

Soybean varieties that have excellent flavor and become soft in less than 2 hours of cooking include Easycook, Bansei, Rokusun, Jogun, Chusei, and Sousei. These are "now in the hands of growers and seedsmen. Experiments by commercial firms have shown that these varieties are superior to commercial varieties for the manufacture of food products, such as bean flour, roasted beans, bean milk, and bean curd [tofu].

"In Japan, certain varieties of soybeans were found that were used solely as green shelled beans. Ranging in maturity from 75 to 170 days, many of these introductions, and selections from them, have been found especially promising for the various sections of the United States. The

vegetable soybean offers an excellent food of high nutritional value, especially in the fall when other green beans are lacking and in sections where the Mexican bean beetle prohibits the growing of garden beans. As a result of selection, cooking tests, and adaptation studies, eight green vegetable varieties–Hahto, Kura, Kanro, Hokkaido, Higan, Chusei, Sousei, and Jogun–have been introduced in various sections of the country" (p. 1163).

Photos show: (1) "The late Charles Vancouver Piper, agronomist, United States Department of Agriculture, 1902-26. Pioneer in the introduction and development of soybean varieties for United States conditions." (2) "Storage yard of a Chinese grain merchant near Kungchuling, Manchuria. More than 80 osier bins, each holding four cartloads of soybeans, were in this yard." (3) A Manchurian farmer and how he harvests, threshes and cleans soybeans by methods learned from his ancestors; comparison with modern U.S. machine harvesting. (4) "Millions of soybean oil cakes are stored in warehouses in Manchuria awaiting shipment to Japan, Chosen, China, and the East Indies, where they are used for fertilizing purposes and for cattle feed." A person looks up at the towering stacks. (5) Coolies loading large sacks of soybeans on a freighter for shipment to the oil mills of Europe. One man has hoisted a huge sack onto his back. (6) Five Manchurian farmers who have been awarded certificates and prizes for producing high-quality soybeans. (7) Twenty seeds of a natural soybean hybrid showing peculiar types of coloration. (8) Illustration (line drawing) of a soybean flower and its parts enlarged. Front view, side view, parts of the corolla (standard, wing, one of the keel petals), stamens, pistil. (9) A. Stems and pods of fasciated soybean plants; B. Determinate pod-bearing type; C. Indeterminate pod-bearing type. 10. Chromosome chart showing four groups of linked genes in soybeans.

A table (p. 1157) shows: "Increase in production of soybeans over an 11-year period, 1924-25 to 1935-36, inclusive, in the principal producing countries of the world" (Manchuria, Chosen [Korea], Japan, United States, Netherland India).

Soybean seed size (p. 1177): "The range in size of soybean seed varies according to the variety, each variety having its own typical seed size. Varieties and introductions tested at the Arlington Experiment Farm ranged in average weight of 100 seeds from about 4 grams for the smallest to about 40 grams for the largest." Address: 1. Senior Agronomist; 2. Assoc. Agronomist. Both: Div. of Forage Crops and Diseases, Bureau of Plant Industry [USDA, Washington, DC].

Rome, Italy: International Institute of Agriculture. 84 p. Index. 24 cm. Imprimerie de la Chambre des députés. [Fre; Eng]

• ***Summary:*** This book, written equally in French and English, won the Oberly Award for Bibliography in Agricultural Sciences in 1937. The author was born in 1906. The bibliographies are arranged by country, and within country alphabetically by title. Each work cited is accompanied by a summary/abstract, 3-17 lines long, in both French and English. The countries represented are listed alphabetically in French: Allemagne–Germany (52 citations), Argentina (2), Austria (1), Belgium (3), Bulgaria (1), Canada (1), China (1), Denmark (2), Egypt (2), Etats-Unis–United States (24), Finland (1), France and Colonies (24), Great Britain and Colonies (26), Hungary (2), India (2), Italy (8), Lithuania (1), Norway (1), Pays-Bas et Colonies–Netherlands and Colonies (6), Peru (1), Poland (4), Romania (3), Sweden (5), Tchécoslovaquie–Czechoslovakia (5), U.S.S.R. (15), Yugoslavia (2), International Institutions (16).

The top 6 countries in terms of the number of citations listed are: Germany 52, Great Britain and colonies 26, France and colonies 24, United States 24, International institutions 16, USSR 15. Address: USA.

475. Dominion Bureau of Statistics, Canada Dep. of Trade and Commerce. 1938. Directory of Chemical Industries in Canada. Ottawa, Ontario, Canada. See p. 28.

• ***Summary:*** Page 28: "Dominion Soya Industries, 2049 Harvard Ave., Montreal, PQ [Quebec]. Product: Soya bean flour."

Note: E-mail from Anne Marie Ford, Research Librarian, Statistics Canada. 2010. Jan. 27. This was the earliest listing she could find for this company in this directory. She also looked in the 1919, 1921, 1932, and 1938 directories. The entries in this volume of the periodical are as of Jan. 1, 1938.

476. *Toronto Daily Star (Canada).*1938. Toronto Chinese welcome W.C. Liu, Nanking emissary: Nationalist flag flies over Elizabeth St. while Orientals celebrate–Are informed Japanese is not cause of worry. Feb. 7. p. 9.

• ***Summary:*** More than 150 Chinese attended a dinner given by the patriotic league in the Asia Cafe. The men were in their western clothing, but the women wore gorgeous Chinese gowns. "It was a real Chines meal, not the chop-suey feast so familiar to Occidentals.

"Beside each guest was placed his soup bowl, his chop-sticks, his China spoon, his rice bowl, tea bowl and soya sauce, while the food was placed one dish at a time in the centre of the table..." A large photo shows Liu.

Note: Elizabeth Street was one of the main streets in Toronto's Chinatown until the late 1950s.

477. Stegman, Henry M. 1938. Lessons from the quintuplets. *Good Health (Battle Creek, Michigan)* 73(2):57. Feb.

• ***Summary:*** "No other children, not even of royalty, have excited so much attention as the little Dionnes of Callander, Ontario. There are recorded sixty other instances of quintuplet births but in none of these did all the infants survive." They speak French.

"The quintuplets have been taking soy acidophilus milk since their fourth month, when they were attacked by a very severe form of bowel trouble, to which they were highly susceptible. Because they were not being breast-fed by their mother, they had never received the protective germ which infants normally receive in the act of nursing. They had been fed with mother's milk from their fourth day, but mother's milk does not contain the protective germ. This is derived from the outer surface of the breast in the act of nursing."

478. Stoa, T.E. 1938. Soybeans–Have they a place in N. Dak. [North Dakota]? Suggestions to growers who may be wanting to try soybeans on their farms for the first time. *North Dakota Agric. Exp. Station, Agronomy Mimeo. Circular* No. 67. 3 p. April.

• ***Summary:*** Contents: Introduction. Soybeans for hay. How to grow soybeans. This short circular discusses the place of the crop and furnishes cultural directions. "Soybean production on farms in North Dakota is relatively new. Experiment Station tests which have been made show that in order to produce ripe beans for market only the earliest varieties can be used, and these may not always fully ripen before fall frost. Growing season temperatures, length of frost free period, and seasonal rainfall are factors that have an important bearing on production of this crop in North Dakota. Climatic conditions that favor corn production will

be favorable to soybeans, which means that soybeans will have a better opportunity to do well and ripen in the south-eastern counties than elsewhere in the state.

"Minsoy is the earliest yellow variety commercially available, yields relatively good but grows rather short and bears pods near the ground, making it a little more difficult to harvest efficiently. At Fargo, Minsoy usually blossoms in late July or early August. From 6 to 8 weeks more, depending upon the ripening temperature, are usually required after blossoming to bring the crop to maturity. Manitoba Brown is a few days earlier than Minsoy but shatters readily. Wisconsin Black blossoms a few days later than Minsoy and grows taller. Yellow beans have preference on the market. Habaro and Mandarin, yellow beans, are from a few to several days later than Minsoy, grow taller and are satisfactory when they can ripen completely. Varieties like Manchu and Illini are usually too late to ripen here." Address: Agronomist, Fargo.

479. Page, Nancy. 1938. Timely topics for housewives. *Toronto Daily Star (Canada).* Nov. 11. p. 31.
• ***Summary:*** Gives a recipe for fried canned shrimps seasoned with "one teaspoon soy sauce."

480. *Toronto Daily Star (Canada).*1938. See rise in beef demand due to cold weather. Dec. 31. p. 15.
• ***Summary:*** In the section titled "Feeds and grains" (with statistics supplied by the United Farmers Cooperative Co., Ltd. on the basis of yesterday's closing prices; Carlots delivered Ontario points), in the subsection on "Feeds" we read: "Cotton seed meal–$33.00 per ton.

"Soya bean oil meal–$32.50 per ton.

"Linseed oilcake meal–$40.00 per ton.

A little below this entry is another entry titled "Feeds" (f.o.b. warehouse, Toronto)."

"Soya bean meal–$32.00 per ton.

This is the earliest document seen in the *Toronto Star* (Dec. 2009) that mentions "Soya bean oil meal" (or "Soyabean oil meal"), or that mentions it as a commodity with a price. Address: Toronto.

481. Larose, P. 1938. The new textile fibres. *Manual of the Textile Industry of Canada (Montreal)* 10:85-88. (Chem. Abst. 33:7118). *

482. American Soy Bean Association. 1938. 16th annual meeting (leaflet). 1 p. Single sided. Undated.
• ***Summary:*** This leaflet indicates the location and menu for the 16th annual meeting of the American Soy Bean Association. The meeting was held in the Crystal Ballroom of Hotel Montrose, Cedar Rapids, Iowa. The menu included: "Salted soy nuts, cream of tomato soup, fruit cocktail, beef tenderloin steak, browned potatoes, string beans, soy Parkerhouse rolls, butter, apple, celery and egg salad, Vi-Tone ice cream, cake." The leaflet also lists the stores from which the soy products were purchased: "La Sierra Industries, Ontario, California; Madison Foods, Madison College, Tennessee; Petersen Bakery, Cedar Rapids, Iowa; Milqo Limited, Vi-Tone Company, Hamilton, Ontario, Canada; Hutchinson Ice Cream Company, Cedar Rapids, Iowa."

Note: The Vi-Tone Company of Canada made soymilk in malted and chocolate flavors. Ice cream was probably made from that soymilk for this occasion. We have no evidence that Vi-Tone ever made a commercial ice cream from their soymilk.

483. Dominion Bureau of Statistics, Ottawa, Canada. 1938. Imports into Canada for consumption, years ended March 31, 1933 to 1937: Agricultural and vegetable products. *Trade of Canada.* Fiscal year ended March 31, 1937.
• ***Summary:*** Table No. 37, titled "Imports into Canada for consumption, Years ended March 31, 1933 to 1937, shows: Imports of soy sauce–from United Kingdom, Hong Kong, China, Japan, Syria, United States (p. 287). It shows that 133 gallons of soy sauce with a value of $15 were imported from Syria in 1933, but none in 1934, 1935, or 1936.

Imports of soya beans *(Fèves de soja,* p. 288). Imports of peanut oil *(Huile d'arachide,* p. 303). Imports of soya bean oil *(Huile de soja,* p. 300).

Imports of soya bean cake and soya bean meal, for use exclusively in the manufacture of cattle food and of fertilizers (Included "Soya Beans" prior to April 1, 1934; to April 1936, p. 339.7).

Imports of soya bean oil meal, for use exclusively in the manufacture of cattle food and of fertilizers (From May 1, 1936, p. 339.8).

Imports of soya bean oil meal *(Tourteaux d'huile de fèves de soja)* and soya bean flour *(Farine de fèves de soja),* when imported by manufacturers of glues or adhesives for use exclusively in the manufacture of such glues or adhesives (From May 1, 1936, p. 339.9; Note: 5,600 cwt was imported from the USA only) [1 cwt = hundredweight = 112 pounds].

Imports of peanut oil and soya bean oil for the manufacture of soap, and peanut oil for canning fish (p. 344.1). Imports of soya bean oil for the manufacturing of soap (p. 344.5). Address: Ottawa, Canada.

484. Montreuil, J.E. 1938. Experimental Station, l'Assomption, Que [Quebec]: Results of experiments 1930-1936 inclusive. In: Experimental Farms Reports 1930-1938, Branch Farm Reports (Eastern Edition). Ottawa, Canada: Canada Department of Agriculture, Dominion Experimental Farms. See p. 17-18.
• ***Summary:*** Soybeans are discussed in the section on forage plants. "Soybeans: Soybeans for grain.–At the request of numerous farmers, commercial organizations and

agricultural county agents, the growing of soybeans was commenced in 1934 and continued in 1935 and 1936 with varying results. The two varieties grown in 1934 and 1935 were Manitoba Brown and Mandarin... Manitoba Brown produced 22.77 bushels and Mandarin 25.95 bushels of the beans per acre. In the case of both varieties the beans were of excellent quality... In this district Manitoba Brown would probably reach maturity in every normal year. Mandarin, however, cannot be depended upon to mature seed unless planted very early and on a warm soil. To make a success of soybean growing in this district, a variety having yellow seed and about as early in maturity as Manitoba Brown is necessary."

"Soybeans for hay.–In 1935, five varieties of soybeans were grown as a hay crop on a light sandy loam soil, fertilized with about 400 pounds of a 3-12-10 chemical fertilizer per acre. The beans were planted with a disk drill May 21 and were harvested a little too ripe for best quality fodder. The crop obtained was quite heavy but much more difficult to cure than clover or alfalfa without a great loss of leaves."

A photo shows Mandarin and Manitoba Brown soybeans varieties growing in rows in a field. Address: Superintendent (of this station).

485. **Product Name:** Soybean Oil, and Soybean Oil Meal (Named Double Diamond Soybean Oil Meal by 1952).
**Manufacturer's Name:** Toronto Elevators Ltd. Renamed Maple Leaf Mills in 1964.
**Manufacturer's Address:** Queens Quay, Toronto, ONT, Canada.
**Date of Introduction:** 1938. January.
**Ingredients:** Soybeans.
**How Stored:** Shelf stable.
**New Product–Documentation:** Ontario Retail Feed Dealers' Association. 1946. Year Book, 1944-45. On page 11 is a full-page ad for Toronto Elevators Limited, stating that they make soy bean meal.

Soybean Blue Book. 1947. p. 64. "Processors of soybeans–Canada: Toronto–Toronto Elevators Ltd., Queen's Quay."

*Soybean Digest.* 1951. Oct. p. 35. Canada's pioneer in the soybean crushing industry, Toronto Elevators Ltd. has been actively engaged in this field since 1938.

Soybean Blue Book. 1952. p. 94. 8 expellers, capacity 150 tons. N. Hexane solvent, capacity 150 tons. Storage capacity: 2,000,000 bushels. "Master" mixed feeds and pellets. Served by CN, CP RR [Canadian Pacific Railroad].

Soybean Blue Book. 1964. p. 94. The entry now reads: "Toronto, Ont.–Maple Leaf Mills, Ltd., vegetable oil division, 417 Queens Quay W. Phone 362-7131. Chairman of board, J.D. Leitch; asst. chairman of board, C.E. Soward... 8 expellers, capacity 150 tons; hexane solvent, capacity 150 tons. Storage capacity 4,000,000 bushels. "Double Diamond" soybean meal; "Master" mixed feeds and pellets. Note: This is the earliest document seen that mentions Maple Leaf Mills, Ltd.

Soybean Blue Book. 1968. p. 96.

Soybean Digest Blue Book. 1978. June. p. 118. Address: 365 Evans Ave., Toronto M82 5W7, Ontario.

Talk with Dave Buttenham, executive V.P. of Ontario Grain & Feed Assoc. 1997. Feb. 20. His association began publishing a trade directory/yearbook in 1944-45. In the first issue is an ad from Toronto Elevators Ltd. stating that they make linseed oil and meal and soybean oil and meal. He has a history from the Canadian Feed Industry Association that may discuss the early history of Toronto Elevators Ltd. The two main newspapers in Toronto in the late 1930s were the *Toronto Telegram* (probably the main newspaper then but no longer in existence; the University of Toronto library may have back issues) and the *Globe and Mail* (very active today). He will try to talk with several elderly men who were active in the Association in the early days. He also knows some people who were top people in Maple Leaf Mills. He thinks Maple Leaf Monarch was the oilseed division of Maple Leaf Mills.

Note: This is the earliest document seen (Sept. 2000) concerning ADM Agri-Industries or its ancestors in Canada.

486. Towle, R.S. 1938. Soybeans. *University of Wyoming, Sheridan Research and Extension Center, Annual Report.*
• ***Summary:*** "The same varieties of this crop were planted as last year. The stand was much better and there was a fair growth generally. Several varieties were ready to cut for forage between August 25 and September 1. Ogemaw and Manitoba Brown were harvested for seed August 29, Cayuga September 1, Macauley Manchu [sic, Macaulay Manchu] September 8, and New York Manchu September 28. New York Manchu yielded the most total forage 2,490 pounds per acre, cured weight, but yielded only 389 pounds per acre of grain. No. 65334 yielded the most grain, 587 pounds per acre, but only 1,660 pounds total forage... Varieties grown as a green vegetable produced well and matured the latter part of August." Address: Superintendent, Sheridan Field Station, Sheridan, Wyoming.

487. DeBoth, Jessie Marie. 1939. Advises planning to obtain well-balanced meals. *Toronto Daily Star (Canada).* March 16. p. 28.
• ***Summary:*** Miss DeBoth includes a recipe for Sub kum chop suey (with "1 tablespoon soy sauce").

488. DeBoth, Jessie Marie. 1939. Shows how meal may be 'whipped up' on little. *Toronto Daily Star (Canada).* March 17. p. 28.

• ***Summary:*** Contents: Introduction. Trials with soya beans in Ireland. Experiments in 1935. Experiments in 1936. County variety experiments with soya beans [in 1936]. Experiments in 1937. Experiments in 1938. Summary.

"Trials with soya beans in Ireland: Experiments in the growing of soya beans in this country were commenced at the Botanic Gardens, Glasnevin [suburb of Dublin], in 1923. A number of varieties were included in these trials, one being a variety acclimatised in England by the Curator of the Royal Botanic Society, London [J.L. North], and kindly supplied by him. From 1923 to 1928 the varieties tested gave poor results. In some instances the number of seeds harvested were less than the actual number sown.

"In 1929, small samples of seven varieties were obtained from the Curator, Royal Botanic Society. Of the seven varieties, four had been grown in England the previous year and the remaining three were obtained from Canada. The seed was sown in the Botanic Gardens, Glasnevin, and about 40 per cent. germinated. All varieties produced seed. Two of the Canadian varieties produced about the same number of seeds as were sown, while the third one produced only about one-eighth of the quantity of seed sown. The English varieties did better, but even the best of these produced only four times the quantity of seed sown.

"Seed selected from each variety of the 1929 crop was sown at the Botanic Gardens in 1930. The results were disappointing; none of the Canadian and only two of the English varieties produced seed... This result might be attributed to the season which was wet and unfavourable.

"In 1931 two varieties were obtained from the Curator, Royal Botanic Society. These were grown at the Munster Institute, Cork [about 200 miles to the south], and at the Botanic Gardens, Glasnevin. At the latter centre, one of the varieties produced about 50 per cent. more seed than was sown. The other variety was a failure and produced only a few ripened seeds. At the Munster Institute, although both varieties grew vigorously no seeds ripened.

"In 1932 a number of different varieties were sown at the Botanic Gardens, Glasnevein, but only two produced seeds, the others being complete failures.

"Trials were again conducted at the Botanic Gardens in 1933, but owing to the prolonged drought experienced that year the plants made little progress and failed to produce seeds.

"Experiments in 1935. In 1935, seed of four varieties acclimatised in England, was obtained through the courtesy of Fordson Estates Ltd., London. The four varieties, Black 'O,' Brown, 'C,' Green 'Jap' and Yellow 'J' were grown at each of the following centres:–The Agricultural School, Athenry, The Agricultural School, Clonakilty, The Cereal Station, Ballinacura, The Munster Institute, Cork, and at two centres selected by the County Dublin Committee of Agriculture.

"Half of the area under each variety was sown with seed inoculated with a culture of nitrogen-fixing bacteria. Note 1. Is this the first year that the soya beans grown in Ireland were inoculated?

The varieties were sown on May 2 at all centres. Details of planting and fertilizer use are given. All varieties germinated well. A frost in late May, just as some of the seedlings were breaking ground, checked the growth in some centres and killed the young plants in County Dublin. Cold weather in May and June led to slow growth.

"All varieties were harvested between 18th September and 19th October. The varieties Brown 'C' and Green 'Jap' ripened earlier than Black 'O' or Yellow 'J.' No difference was apparent at any centre with inoculated seed and those which were sown with untreated seed.

"The yields from all varieties were very low and showed considerable variation at the different centres. The variety Brown 'C' gave the highest average yield, 2 3/4 cwt per statute acre." Note 2. 1 cwt is a hundredweight, usually 112 lb. Thus Brown 'C' yielded 308 lb/acre.

"Experiments in 1936." The varieties Green 'Jap' and Brown 'C' were tested at most of the same centres as in 1935 so as "to provide information as to the effect on time of ripening and yield of seed of:–1. Dates of sowing. 2. Manurial [fertilizer] treatments. 3. Distance between rows. Details are given. "The yields obtained at all centres and from all plots were again very low; the highest average yield obtained did not exceed 5 cwts. per statute acre. The variety Green 'Jap' gave a higher average yield than Brown 'C' at all centres. The early sowings of both varieties gave the better result."

County variety experiments in 1936 with the basic four varieties in Counties Dublin and Wexford gave very poor results. The "highest average yield did not exceed 1 cwt. per statute acre at any centre."

"Experiments in 1937." The variety Green 'Jap' was tested at the same four centres as in 1936. "The object of the experiments was to ascertain the effect on time of ripening and the yield of seed of:–1. Dates of sowing. 2. Inoculation of the4 seed. 3. Manurial treatments." Details are given. "The returns from all plots were again very low; the highest got [gotten] at any centre was slightly under 3 cwts. per statute acre... The sowings from May 10th to May 20th were the most successful." Inoculation seemed to increase foliage which appeared to delay pod formation and harvesting, "with consequent damage to the produce" [soya bean production]. "The manurial treatments showed no material difference at any centre,..."

Experiments in 1938. Details are given "Yields from all plots were very low; the average yield was equivalent to about 1½ cwts. per statute acre."

"Summary. Trial with soya beans have been in progress in this country during the past sixteen years. During the course of the trials a number of acclimatized varieties were tested under varying conditions of soil and climate and with different manurial and cultural conditions. None of the varieties produced anything approaching an economic yield of beans, and the results of the experiments, in which the average yield was under 2 cwt. per statute acre, clearly indicate that the growing of soya beans in this country must be regarded as very far removed from being a profitable undertaking, and as offering no commercial possibilities in the future.

Note 3. This is best and most detailed document seen (May 2007) on the cultivation of soya beans in Ireland.

Note 4. This document contains the earliest date seen for the cultivation of soybeans in Ireland (1923, at the Botanic Gardens, Glasnevin, Dublin, 3.5 km / 2.2 miles north of Dublin's city center). The source of these soybeans was the Royal Botanic Society, London.

490. Black, M.A. 1939. Soya beans. *New Zealand J. of Science and Technology* 21(1A):46a-60a. June. [23 ref]
• ***Summary:*** Contents: Introduction. Description. Chemical composition. Utilization: Human food, stock food, industrial uses (paint, soap, glue, plastics). Production: General, agriculture, effect of temperature on yield, vernalization, acclimatization, soils and manures, inoculation, seeding, cultivation, harvesting, storage, conclusion. Appendices: A. Soya-bean oil. B. Soya-bean varieties tested in New Zealand. C. Prices. D. Average analysis of soya beans grown in new Zealand.

"Summary: Under existing conditions the growing of soya beans in New Zealand cannot be recommended because–(1) The climate is generally unsuitable. (2) The potential market for human food is negligible. (3) There is no internal commercial market, and no possible export market in competition with the main soya-bean growing countries. (4) For stock feed other cheaper and more certain supplies of forage and concentrates are available."

"Widespread interest has been aroused from time to time in New Zealand by reports of the amazing variety of products derived from soya beans... As long ago as 1915 the Department of Agriculture conducted successful experiments on the growing of soya beans, but the crop has not found favour with New Zealand farmers... In Western countries the chief food use of soya-oil is in the manufacture of margarine... In New Zealand some 27,000 gallons of decoloured and deodorized oil are used annually by bakers for shortening, and for greasing baking tins. For the latter purpose it is of value because it does not change colour under baking temperatures... Curiously enough, there is a soya-milk factory in Denmark, a great dairying country. Note 1. This is the earliest English-language document seen (Oct. 2003) that contains the term "soya-milk."

Industrial uses: "The chief industrial uses of soya-bean oil are in paint, varnish, soaps, linoleum and oilcloth, and printing ink. In paints the essential disadvantage of soya-oil is that it is a poor-drying oil, especially in comparison with linseed, perilla, and tung oils. This drawback can to a large extent be overcome by the use of cobalt driers, which, however, considerably increase the cost of the paint. Promising blends are being obtained with blends of perilla and soya oil..."

Tables 5 and 7 shows the average and range in the number of days to maturity, and the yields (1935-1938) for 14 soybean varieties tested in three seasons, two at Palmerston North, three at Ruakura, in New Zealand. In table 7, they are listed in ascending order of days to maturity: Manitoba Brown (128 days), Wisconsin Black (128), Cayuga (133), St. Annes (141), Mandarin, Manchu, O.A.C. 211, Black Eyebrow, Early Yellow, A.K. (Harrow), Henry Ford (a selection of A.K. grown at Ford's estate in England), Black Ontario, Laredo, Virginia (186 days). For each variety is given the days to maturity (average and range), yield in bushels per acre (average and range), and number of trials.

Appendix B lists the following 34 soya-bean varieties tested in New Zealand: A.K., Auburn, Biloxi, Bilton, Black Beauty, Black Eyebrow, Black Ontario, Cayuga, Chernie, Dixie, Early Brown, Early Yellow, Harbinsoy, Herman, Hollybrook, Illini, Ito San Laredo, Mammoth Yellow, Manchu, Mandarin, Manitoba Brown, Mikado, Morse, O.A.C. 211, Ogemaw, Otoxi, Sable, St. Annes, Tashing, Tokio, Virginia, White Non-shatter, Wisconsin Black. Of these, 13 selections were sent by Mr. N.P. Neal of Wisconsin, as being likely to suit New Zealand conditions. Also four English acclimatized varieties, known as Jap, C, J, and O, have been grown.

Note 2. This is the earliest English-language document seen (Sept. 2006) that contains the term "soya-oil." Address: Agronomy Div., Plant Research Bureau, Dep. of Scientific and Industrial Research, New Zealand.

492. Morse, W.J. 1939. Soybeans–The world around. *Proceedings of the American Soybean Assoc.* p. 39-44. 19th annual meeting. Held 11-12 Sept. at Madison, Wisconsin.
• ***Summary:*** Contents: Introduction. Asia: China, Manchoukuo [Manchuria], Chosen (Korea), Japan, Netherlands Indies [Indonesia], Philippine Islands. Europe. Rumania. North and South America. Africa. Australia.

In Europe, production is presently "confined largely to European Russia, Bulgaria, Yugoslavia, Czechoslovakia, and Rumania. In Europe as a whole, slightly more than 3 million bushels of seed were produced in 1938, 80 per cent of which was produced in Bulgaria, Rumania, and Yugoslavia. The largest increase has been in Rumania, due chiefly to the fact that Germany, by guaranteeing purchases, has given a certain stability to cultivation... Russian scientists have for the past several years carried on extensive experiments with the soybean. At the present time the principal areas of cultivation are the Ukraine and certain regions in northern Caucasus.

"Previous to the World War, Europe absorbed about 50 per cent of the exports of soybeans from Asiatic countries, the largest of the imports being taken by the United Kingdom, with Denmark and the Netherlands taking the remainder. In the post-war period [after World War I] important changes took place, Germany taking first place as an importer and other nations entering into the international trade in the bean and its products. At present Germany still holds first place as an importer of soybeans, followed by Denmark, England, Sweden, and the Netherlands. Among other countries that have increased their imports are France, Norway, Latvia, and Italy...

In South America, soybeans are at the experimental stage. "Successful results have been obtained in Cuba, Argentina, Brazil, Chile, and in some parts of Mexico."

"Africa: Extensive experiments have been conducted with the soybean in various parts of Africa for many years but as yet it is an unfamiliar crop to the majority of African farmers. It has been successfully cultivated in the upland, midland, and coast districts of Natal and throughout Gambia, Sierra Leone, Nigeria, and the Gold Coast Colony. In the cotton and corn growing districts of Belgian Congo the soybean has been grown successfully for forage and food purposes. Results in all cases, however, indicate that more and better varieties, and improved methods of culture and harvesting are essential before the soybean becomes a factor of much economic importance in African agriculture. The crop is advised more as a crop for domestic use than the European market. It is of interest to note that in 1938 nearly 4 million pounds of soybean meal were used in native rations in the mine compounds of South Africa.

"Australia: Successful results have been obtained with a few American varieties in Victoria and Queensland, but thus far efforts to establish the soybean as a commercial crop have been disappointing. At the present time, however, more extensive tests are being conducted to obtain adapted varieties in order to produce beans on a commercial scale."

A table (p. 43) gives "Acreage, production, and imports of soybeans by countries (Compiled from official sources)," based largely on 1938 statistics. The countries are: Austria, Belgo-Luxembourg [Belgium], British Malaya, Bulgaria, Canada, China, Chosen (Korea), Czechoslovakia, Denmark, Estonia, France, Germany, Hongkong, Italy, Japan, Kwantung, Latvia, Manchoukuo, Netherlands, Netherlands Indies, Norway, Poland-Danzig, Rumania, Sweden, Taiwan (Formosa), United Kingdom, United States, U.S.S.R. (Russia), Yugoslavia.

Leading soybean producers are: China 217,192,000 bushels (1936), Manchoukuo 170,269,000 bushels, United States 57,665,000 bushels, Chosen 18,480,000 bushels, Japan 13,473,000 bushels (1937), Netherlands Indies 9,873,000 bushels (production minus seed for planting), U.S.S.R. 2,502,000 bushels, Rumania 1,804,000 bushels.

Leading soybean importers include: Germany 28,766,356 bushels (the world's largest soybean importer), Japan 27,796,787 bushels (#2 worldwide), Estonia 195,475 bushels, Latvia 86,347 bushels, and Poland-Danzig 19,106 bushels.

Note: This is the earliest document seen (Feb. 2005) concerning soybeans in Estonia. This document contains the earliest date seen for soybeans in Estonia (1938). Address: USDA Bureau of Plant Industry, Washington, DC.

493. Holmes, Marie. 1939. Cooking chat: Keep staff of life from becoming bore by making bread at home occasionally–Varieties include whole wheat, oatmeal, fruit and cheese. *Toronto Daily Star (Canada).* Nov. 4. p. 22.
• ***Summary:*** "To begin with, if you want light bread, you have to use some wheat flour in the mixture, either white wheat flour or whole wheat flour... Along with wheat flour, however, you can use part rye flour or oatmeal or soybean flour, whichever is preferred. These various flours offer a great deal of variety in both flavor and food value."

"To make soybean bread, use about half as much soybean flour as wheat flour, that is, four cups of soybean flour to eight cups of wheat flour. Here again the rule is to mix the flours well at the start and then proceed exactly as in making plain white bread."

"Many persons prefer whole wheat bread to white because it has more flavor and more of the food values of the wheat grain."

494. Hennefrund, Helen E. comp. 1939. The peanut industry: A selected list of references on the economic aspects of the industry, 1920-1939. *USDA Bureau of Agricultural Economics, Agricultural Economics Bibliography* No. 80. viii + 238 p. Nov. 28 cm. [641 ref]
• ***Summary:*** This bibliography was compiled under the direction of Mary G. Lacy, librarian at the Bureau of Agricultural Economics. Contents: Foreword, by Mary Lacy. Sources consulted. General. United States: General, Agricultural Adjustment Program, cost of production and labor requirements, grading and standardization, legislation, markets and marketing, mechanization, periodicals, Philippine Islands, statistics, storage, utilization (general, feed and its nutritive value, peanut butter, peanut oil).

Foreign countries: General, Algeria, Argentina, Australia, Belgium and Belgian Congo, Brazil, British Empire, British East Africa, British West Africa, Bulgaria, Canada, Ceylon, China, Colombia, Cuba, Denmark, Egypt, France, French West Africa (incl. Senegal, French Guinea), Germany, India, Indo-China, Italy, Japan and Manchuria, Malaya, Mexico, Morocco, Netherlands and Dutch East Indies, Palestine, Poland, Portugal and Colonies, Rhodesia, South Africa, Spain, Sudan, Sweden, Thailand (Siam), Tunis [Tunisia], Turkey, Union of Soviet Socialist Republics, Uruguay, West Indies (British), Yugoslavia.

Pages 1-145 contain 641 bibliographic references (partially annotated), arranged by subject as shown above. Pages 146-238 are indexes.

The Foreword notes: "This bibliography supersedes and brings up to date a typewritten list by Vajen E. Hitz issued in 1931 entitled 'The peanut industry: Selected references on the economic aspects of the industry... 1920 to date.' It contains references to books, pamphlets, and periodical articles relating to the economic aspects of the peanut industry in the United States and in foreign countries from 1920 through the first five months of 1939... Call numbers following the citations are those of the U.S. Department of Agriculture Library, unless otherwise noted. 'Libr. Congr.' preceding a call number indicates that the publication is in the Library of Congress." Address: USDA Bureau of Agricultural Economics.

495. Morse, W.J.; Cartter, J.L. 1939. Soybeans: Culture and varieties. *USDA Farmers' Bulletin* No. 1520 (Revised ed.). 39 p. Nov. Revision of April 1927 edition, further revised in 1949.

• ***Summary:*** Contents: History. Description. Distribution and production. Climatic adaptations. Soil preferences, Varieties (classified by length of growing season into 7 groups, and divided within each group into "Seed, forage, green vegetable, and dry edible" types). Description of varieties (describes 125 varieties). Preparation of the seedbed. Fertilizers and lime. Inoculation. Time of seeding. Methods of seeding. Rate of seeding. Depth of seeding. Cultivation. Soybeans in rotations. Soybeans in mixtures. Soybeans drilled in small grains. Cost of production. Insect enemies of soybeans. Soybean diseases. Other enemies of soybeans.

"History: Ancient Chinese literature reveals that the soybean was extensively cultivated and highly valued as a food centuries before written records were kept. The first record of the plant is contained in a materia medica describing the plants of China, written by Emperor Sheng Nung in 2838 B.C. Methods of culture, varieties for different purposes, and numerous uses are repeatedly mentioned in later records, indicating the soybean to be of very ancient cultivation and perhaps one of the oldest crops grown by man. It was considered the most important cultivated legume and one of the five sacred grains essential to the existence of Chinese civilization. Soybean seed was sown yearly with great ceremony by the emperors of China, and poets through the ages have extolled the virtues of the plant in its services to humanity.

"The soybean was first made known to Europeans by Engelbert Kaempfer, a German botanist, who spent 2 years, 1691-92, in Japan. Seed sent by Chinese missionaries was planted as early as 1740 in botanic gardens in France..."

"Distribution and production: The soybean is grown to a greater extent in Manchuria than in any other country in the world. It occupies about 25 percent of the total cultivated area and is relied upon by the Manchurian farmer as a cash crop. China, Japan, and Chosen [Korea] are large producers and the soybean is cultivated more or less also in the Philippines, Siam, Cochin China, Netherland India [later Indonesia], and India. In other parts of the world, particularly Germany, England, Soviet Union, France, Italy, Czechoslovakia, Rumania, Mexico, Argentina, Cuba, Canada, New South Wales, New Zealand, Algeria, Egypt, British East Africa, South Africa, and Spain, various degrees of success have been obtained."

The section on diseases discusses the following: Purple spot of seeds, bacterial blight, bacterial pustule, mosaic, wilt, brown spot, sunburn or aphid injury, downy mildew, pod and stem blight, anthracnose, sclerotial stem rot, frog-eye spots, and *Pythium* root rot.

A table (p. 6-7) shows different varieties of soybeans recommended for four different uses (seed, forage, green vegetable, or dry edible), classified by the length of the growing season. Green vegetable–Very early (100 days or less): Agate, Sioux. Early (101 to 110 days): Bansei, Chusei, Goku, Kanro, Waseda. Medium early (111 to 120 days): Fuji, Hakote, Hiro, Hokkaido, Jogun, Kura, Osaya, Sato, Shiro, Sousei, Suru, Toku, Willomi. Medium (121 to 130 days): Chame, Funk Delicious, Imperial. Medium late (131 to 140 days): Aoda, Hahto, Higan, Rokusun. Late (141 to 160 days): Nanda.

Dry edible–Early (101 to 110 days): Bansei, Chusei, Goku, Kanro, Waseda. Medium early (111 to 120 days): Hokkaido, Jogun, Osaya, Sousei, Suru, Toku, Willomi. Medium (121 to 130 days): Funk Delicious, Imperial. Medium late (131 to 140 days): Easycook*, Haberlandt*, Higan, Rokusun, Tokyo*. Late (141 to 160 days): Nanda. Note: All dry edible varieties except three (Easycook, Haberlandt, and Tokyo–which are followed by an asterisk (*)) are also included in the green vegetable group. But many in the green vegetable group are not included in the dry edible group.

Detailed descriptions of the following 125 varieties are given (p. 7-17): Agate, A.K., Aksarben, Aoda, Arksoy, Avoyelles, Bansei, Barchet, Biloxi, Black Beauty (same as Ebony), Black Eyebrow, Cayuga, Chame, Charlee, Chernie, Chestnut, Chiquita, Chusei, Clemson, Columbia, Creole,

Delnoshat, Delsta, Dixie, Dunfield, Early Green (same as Medium Green), Early Virginia Brown (same as Virginia), Early Wilson (same as Wilson), Early Wisconsin Black (same as Wisconsin Black), Early Yellow (same as Ito San), Easycook, Ebony, Elton, Fuji, Funk Delicious, George Washington, Georgian, Goku, Guelph (same as Medium Green), Habaro, Haberlandt, Hahto, Hakote, Harbinsoy, Hayseed, Herman, Higan, Hiro, Hokkaido, Hollybrook, Hongkong, Hoosier, Hurrelbrink, Illini, Ilsoy, Imperial, Indiana Hollybrook (same as Midwest), Ito San, Jogun, Kanro, Kingwa, Kura, Laredo, Large Brown (same as Mammoth Brown), Large Yellow (same as Mammoth Yellow), Late Yellow (same as Mammoth Yellow), Lexington, Macoupin, Mamloxi, Mammoth Brown, Mammoth Yellow, Mamredo, Manchu, Mandarin, Mandell, Mansoy, Medium Early Green (same as Medium Green), Medium Early Yellow (same as Ito San), Medium Green, Medium Yellow (same as Midwest), Midwest, Minsoy, Missoy, Monetta, Morse, Mukden, Nanda, Nanking, Norredo, Northern Hollybrook (same as Midwest), Ogemaw, Old Dominion, Oloxi (formerly Coker's Black Beauty), Osaya, Otootan, Ozark, Palmetto, Pee Dee (Coker's 31-15), Peking, Pine Dell Perfection, Pinpu, Richland, Rokusun, Sato, Scioto, Shiro, Sioux, Sooty, Sousei, Southern Green, Southern Prolific, Soysota, Suru, Tarheel Black, Toku, Tokyo, Virginia (selection {19186-D} from the Morse variety at Arlington Experiment Farm in 1907), Waseda, Wea, White Biloxi, Willomi, Wilson, Wilson-Five, Wisconsin Black, Woods' Yellow, Yelredo (a nonshattering selection, Coker's 319), Yokoten. Address: 1. Senior Agronomist; 2. Assoc. Agronomist, Div. of Forage Crops and Diseases; Both: USDA Bureau of Plant Industry, Washington, DC.

496. *O.A.C. Review.*1939. "When shall we three meet again?" 52(2):100-101. Nov. Alumni News section.
• ***Summary:*** "In this issue we are pleased to present a picture of the first O.A.C. graduating class at the time of their graduation. The degree of B.S.A. was conferred on these five men by the University of Toronto in 1888, and all five lived to distinguish themselves in later life." The five are: J.F. Fee, B.E. Paterson, John A. Craig, George C. Creelman, and C.A. Zavitz.

"C.A. Zavitz, on graduation, was immediately appointed experimentalist at the O.A.C., his work having to do with the improvement of field crops. He continued in this position until 1904, doing excellent work and getting wide recognition. His department was then christened the Department of Field Husbandry. It became a department of instruction as well as of investigation, and Mr. Zavitz was appointed Professor and head of department. He continued in this work and gave his whole active life to the service of the College and the Province. For his great accomplishments he was given honorary degrees by both Toronto University and the University of Western Ontario. After forty years of intensive work he retired in 1928. He spends his summers at his home at Poplar Hill, Ontario, and his winters at St. Petersburg, Florida. Of Dr. Zavitz it may be said that his hobby became his life's work and his life work his hobby, and he still spends many happy hours pursuing his hobby of experimentation with plants in a beautiful garden plot surrounding his home at Poplar Hill.

"A few weeks ago Mr. Paterson decided to visit once more his alma mater at Guelph, and, while there, conceived the idea of having a class reunion. He phoned his old classmate, John Fee, of Toronto, arranging for him to come to Guelph and for the two of them to go on to Poplar Hill and pay a surprise visit to Dr. Zavitz. Our photographer, Mr. Tolton, accompanied them so that we might have an up-to-the-minute photograph of the three old friends..."

Photos show: (1) The five young men in the first graduating class of O.A.C. (2) C.A. Zavitz seated at his desk showing his two friends, Fee and Patterson (standing behind him), a bunch of ripened carrot tops of a new strain which he has been developing in his garden; he has shaken out some of the seed on a piece of paper for their closer inspection. Address: Guelph, Ontario, Canada.

497. Dimmock, F. 1939. Soybeans. *Canada. Department of Agriculture, Farmers' Bulletin* No. 80. 22 p. Dec. Also called Canada. Dept. of Agriculture, Publication No. 660. Revision Pamphlet 155. Also in Plant Science Literature 11:06 (1940). [1 ref]
• ***Summary:*** Contents: Description of the soybean plant. Soil and climatic adaptation. Uses of soybean seed: Soybean oil, soybean meal, soybean flour. Uses of the soybean for forage and soil improvement. Varieties: Yields, varietal adaptation, protein and oil content of seed, size of seed, colour of seed, registration. Culture: Soil preparation, time of seeding, inoculation of seed, method of seeding, depth of seeding, cultivation, harvesting, threshing. Storage and marketing of seed.

In Canada, the "area devoted to the crop in 1938 probably did not exceed 20,000 acres, nearly all of which was in the province of Ontario. Small patches were being grown in Nova Scotia, Quebec, southern Manitoba and British Columbia. At the present time, investigations are under way in practically all provinces to determine the possibilities of the soybean in various parts of the Dominion." Address: Div. of Forage Plants, Experimental Farms Service, ONT, Canada.

498. Laughland, J.; Laughland, D.H. 1939. The effect of age on the vitality of soybean seed. *Scientific Agriculture (Ottawa, Canada)* 20:236-37. Dec. Also in Plant Science Literature 11(2):19 (1940).
• ***Summary:*** "Conclusions: If soybean seed is not more than three years old it will germinate satisfactorily although there

is a slight advantage in favour of new seed." You should not conclude that seed will germinate well because it looks good.

A table titled "The average germination of soybean seed in all tests over the three year period 1936-38" has 3 columns: Seed used, 3 field tests germination percent, and 7 indoor tests germination percent. The age of seed tested ranges from 1 to 8 years old. For seed one year old (previous year's crop) the numbers are 89.6% and 98.0%.

For seed two years old: 63.3% and 93.7%.

For seed three years old: 65.6% and 96.0%.

For seed four years old: 36.6% and 76.8%.

For seed five years old: 8.0% and 61.4%.

For seed eight years old: 0% and 0%. Address: 1. Crop extension specialist; 2. Undergraduate student. Both: Field Husbandry Div., Ontario Agricultural College, Guelph, Ontario, Canada.

499. **Product Name:** Tofu, and Fried Tofu.
**Manufacturer's Name:** Paris Tofu.
**Manufacturer's Address:** 237 Powell St., Vancouver, BC, Canada.
**Date of Introduction:** 1939.
**New Product–Documentation:** Talk with Peter Joe, owner of Sunrise Market Ltd., Vancouver. 1993. March 18. He has just talked with Joe Kwok Dong, whose father, Joe Gon Fung, started this tofu company at 237 Powell St. in Vancouver in 1939. Joe Kwok Dong, who is now in his late '70s and lives in Vancouver, went to college in the USA and speaks fairly good English (Phone: 604-327-8037). Peter Joe now runs this same company, which is presently named Sunrise Market Ltd. Concerning the company name: Joe Gong Fung went to Montreal, Quebec, and was taken by the fact that many French-speaking people he met there liked tofu. So he decided to give the company a French name. At that time there were very few Chinese in Vancouver, or in Canada. So he wanted to give the company a non-Chinese name. The company made both firm Chinese-style tofu and deep-fried tofu. Initially, the company got its soybeans from the Seattle area; its calcium sulfate coagulant was imported from China. When World War II started, the company was no longer able to import from China, so it purchased Plaster of Paris locally and burned it to make food grade calcium sulfate. One of the company's early employees was named Joe Lai Nam. The company was apparently not well managed as a business in the early years and was not making much money, so Joe Lai Nam took over as owner and manager. He moved the company to 378 Powell St. in about 1954-55. He ran the company for about a year, but his health began to fail. So in about 1955 Peter Joe's father, Leslie Joe, took over the company at 378 Powell St.

Note: This is the earliest known commercial soy product made by the company that became Sunrise Market Ltd. (later Sunrise Soya Foods).

500. *World Trade Notes on Chemicals and Allied Products (U.S. Dept. Commerce).*1939. Linseed and soybean oil production lower in 1938–Canada. 13(43):747-48. *

501. Fifty years of progress on Dominion experimental farms, 1886-1936. 1939. Ottawa, Ontario, Canada: J.O. Patenaude. 158 p. See p. 19-20, 80-81.
• ***Summary:*** The Dominion Experimental Farms System was inaugurated in 1886. Credit for the inception of the system goes largely to two men from London, Ontario, Hon. (afterwards Sir) John Carling, Minister of Agriculture (whose photo is shown), and Prof. (afterwards Dr.) William Saunders, the first Director. In 1884 Canada was facing the need of recasting her agriculture.

Institutions for agricultural service were already in existence. One at Rothamsted, England, called the "Mother of Experimental Stations," had been founded by Sir John B. Lawes as a private enterprise. [Note: It still exists in 1990 as Rothamsted Experimental Station, AFRC (Agriculture and Food Research Council) Inst. of Arable Crops Research, Harpenden, Herts. AL5 2JQ, England.] Field experiments commenced there in 1843. In Germany, "experimental farms began in Saxony in 1852 through the banding together of farmers to have plants and animals tested on a particular farm at less expense of time and money than by individual trial. They engaged a manager and when the work grew extensive asked for government aid. The German government investigated, approved and furnished aid not only for that enterprise but for others of a like nature. Within 30 years there were more than 80 German stations, nearly all of them more or less supported by government funds. France investigated the German system, reported favourably, and by 1878 had established 43 subsidized stations of her own."

The personnel has grown to some 1,400 employees.

"The United States had a system of land-grant agricultural colleges (some with experiment stations), established under the Morrill Act passed in 1862, though the Hatch Act, providing specifically for land grants to a system of state experiment stations, was not passed until 1887. Several states had acted before the passing of the Morrill Act, Michigan having the oldest agricultural college, dating from 1857.

"An institution built at Cirencester, England, in 1845, was in 1880 named by Her Majesty, Queen Victoria, 'The Royal Agricultural College.' The Downton Agricultural College, near Salisbury, was established in 1880."

"Beginnings in Canada: In Canada a school of agriculture, now affiliated with the faculty of Arts of Laval University, was established at Ste. Anne de la Pocatière in 1859. Experimental work was carried on in connection with the Ontario Agricultural College, founded in 1873."

An early strain of Mandarin soybeans is yellow-seeded and very productive. "More than 500 bushels of registered seed were produced in the Ottawa valley in 1935 and about 1,600 bushels in 1936. Numerous tests in Quebec and the Maritime Provinces have been conducted, many of which were successful, but still earlier varieties are required to provide a margin of safety. A new Ottawa selection ten days earlier than Mandarin, will soon be ready for distribution.

"Large numbers of soybean introductions have been tested at Harrow (Ontario) since 1923 and at Ottawa (Ontario) since 1928. Approximately 600 hybrid strains are grown at Ottawa annually... All are yellow-seeded."

An excellent map (p. 6), shows all the farms, stations, sub-stations, etc. in Canada. These include: In British Columbia–Saanichton, Smithers, Windermere, Agassiz, and Summerland. In Alberta–Lethbridge, Manyberries, Lacombe, Beaverlodge, Fort Vermillion. In Saskatchewan–Regina, Indian Head, Swift Current, Scott, Rosthern, Melfort. In Manitoba–Brandon, Morden. In Ontario-Harrow (very far south), Ottawa, Kapuskasing. In Quebec–Ste. Anne, Lennoxville, Normandin, Cap Rouge. In Nova Scotia–Nappan, Kentville. In New Brunswick: Fredericton. In Prince Edward Island: Charlottetown. Address: Ottawa, ONT, Canada.

502. *Toronto Daily Star (Canada).*1940. The beans which sank a ship. Jan. 22. p. 6.

• ***Summary:*** One of the most unusual stories to come out of the present [World War II] is told in a dispatch from San Francisco, California, about a ship which burst open because its cargo became wet.

A Danish liner, named the *Canada,* struck a mine then sank off the coast of England. "But it could have limped to port if its cargo of 8,000 tons of soya beans had not begun to swell with the inrush of water. They burst open the steel plates and the ship went down.

"The soya, or soya, or soja bean is one of the most remarkable plants known to man..."

In 1893 the soybean was first tested in Ontario at the Ontario Agricultural College (O.A.C.); in 1901 it was first distributed to Ontario farmers for co-operative tests. But only recently has it become an important crop in Ontario.

A soaked soybean weighs about 2.25 times as much as a dry one.

Note: The article mentions "Q-boats" used during the Great War [World War I]. Q-boats, also known as Q-ships, Decoy Vessels, Special Service Ships or Mystery Ships, were heavily armed merchant ships with concealed weaponry, designed to lure submarines into making surface attacks. This gave Q-boats the chance to open fire and sink them. The basic ethos of every Q-boat was to be a wolf in sheep's clothing.

503. Associated Seed Growers, Inc. 1940. A descriptive catalog of vegetables (No. 8): Asgrow. New Haven, Connecticut. 96 p. Jan. 23 cm.

• ***Summary:*** The Foreword (p. 1), dated 1 Jan. 1940, states: "Since the last general edition of our Descriptive Catalog of Vegetables was published three years ago, continued progress has been made in raising the standards of quality and appearance in vegetables for critical growers. Many changes from previous editions will accordingly be found in the following pages.

"The present catalogue introduces a species new to American growers: the edible soybean. Whether this will find general acceptance remains to be seen. Our own experience with the different varieties, however, has warranted us in making available seed of the soybeans listed on page 17." The section titled "Edible Soybeans *(Soja max)*" (p. 17) lists eight varieties of edible soybeans sold by the company, with a brief description of each and the number of days to green shelled beans: Bansei (90 days), Emperor (108), Higan (112), Hokkaido (98), Imperial (107), Jogun (95), Toku (85), Willomi (95). The text states: "In recent years many varieties of edible soybeans have been imported from the Orient by the U.S. Dept. of Agriculture and detailed studies on their adaptation to North American growing conditions have been made, mainly at the University of Illinois.

"As a result a number of varieties eminently suitable for table use in this country have been developed. The most promising of these, listed as follows, have been multiplied for seed on the Asgrow farms. They are very prolific, highly resistant to disease and insect pests, of attractive appearance and eating qualities when cooked and served similarly to Lima beans.

"The number of days refers to picking for use as green shelled beans; full maturity, for dry shelled beans, is reached about 30 days later."

At the bottom of this page is a wide photo of a "Seed field of Emperor Soybeans on one of the Asgrow farms."

Page 2 states: "Associated Seed Growers, Inc. Main office: New Haven, Connecticut. Breeders and growers. Consolidating: The Everett B. Clark Seed Co., Est. 1857. N.B. Keeney & Son, Inc., Est. 1860. John H. Allan Seed Co., Est. 1856. Cable address: Asgrow. Growing stations and principal warehouses at: Milford, Connecticut; LeRoy, New York; Sheboygan, Wisconsin; Green Bay, Wisconsin; St. Paul, Minnesota; Greeley, Colorado; Powell, Wyoming; Bozeman, Montana; Hamilton, Montana; Ronan, Montana; St. Anthony, Idaho; Rigby, Idaho; Filer, Idaho; Fairfield, Washington; Mt. Vernon, Washington; Salinas, California; Brooks, Alberta, Canada. Breeding stations at: Hamilton, Montana; Milford, Connecticut; Milpitas, California; Greeley, Colorado; Indianapolis, Indiana; Filer, Idaho; Alexandria, Louisiana.

The last page (p. 96) discusses: The Asgrow breeding and development program. Laboratory work. Research and service. Slogan: "Asgrow seeds are bred–Not just grown."

Note 1. This is the earliest document seen (March 1999, one of two documents) that mentions soybeans in connection with Associated Seed Growers, Inc., later renamed Asgrow Seed Co.

Note 2. This is the earliest document seen (March 1999) that uses the word "Asgrow" to refer to the name of a farm or a breeding and development program–in addition to a cable address.

Note 3. Soybeans are also offered in the company's May 1942 *Descriptive Catalogue of Vegetables* (No. 10). However soybeans are no longer offered in the March 1947 (No. 12) issue of this catalog.

Note 4. The L.H. Bailey Hortorium, Cornell University (Ithaca, New York) has an excellent collection of early catalogs and price lists from this seed company, including price lists from 1930 and 1931, *Descriptive Catalogue of Vegetables* (No. 1, 2 and 4), from January 1933, 1935, and 1937, and *Descriptive Catalogue of Vegetables for Canners* (No. 3), from January 1935, with a broken set extending to Jan. 1955 (No. 18). Address: New Haven, Connecticut.

504. Savarin Dutch Terrace. 1940. Where discriminating diners enjoy Sunday dinner (Ad). *Toronto Daily Star (Canada)*. Feb. 3. p. 27.

• ***Summary:*** Sunday's huge full menu, which is given, includes "Chicken chop suey with rice and soy sauce." The cost, with live music: $0.75. Address: Bay at Adelaide, Toronto.

505. Hudson Heights (Hudson): New Canadian soybean variety. 1940.

• ***Summary:*** Sources: McRostie, G.P.; Laughland, J. 1940. "Soybeans in Ontario." *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb. See p. 11. Description of varieties: "Hudson Heights (Hudson). A selection by T.B. Macaulay, Hudson Heights, Quebec. Seed yellow, small to medium size; hilum black; plant bunchy, medium height. A mid-seasonal variety, high yielder, suitable to localities having a medium to short growing season." Address: USA.

506. Kabott: New Canadian domestic soybean variety. 1940. Seed color: Yellow (straw), hilum pale.

• ***Summary:*** Sources: McRostie, G.P.; Laughland, J. 1940. "Soybeans in Ontario." *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb. See p. 9. Description of varieties: "Kabott. A selection from a Manchurian strain secured by the Central Experimental Farm, Ottawa, through Mr. R. R. Kabalkin. Recent tests of this variety at the Ontario Agricultural College show promising results. Seed yellow, medium large, hilum yellow; plant medium short, branchy; flower purple; suitable for seed and fodder in the shorter growing seasons in Ontario."

Dimmock, F. 1941. "Canada includes many excellent soybean acres." *Soybean Digest.* May. p. 5. "An active soybean research program has already resulted in the development of the following varieties: Mandarin (Ottawa), A.K. (Harrow), Kabott and Pagoda by the Dominion Experimental Farms, Dominion Department of Agriculture,..."

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 4. "Kabott–Canada Experiment Station."

USDA Production and Marketing Administration [Grain Branch]. 1948. "Soybean varieties: Descriptions, synonyms and names of obsolete or old and seldom grown varieties." Washington, DC. 25 p. Aug. See p. 9. "Kabott–Selection from a Manchurian introduction in 1933 by the Central Experiment Farm, Ottawa, Canada. Maturity, very early; pubescence, gray; flowers, purple; pods, two- to three-seeded; shattering, medium; seeds, straw yellow with pale hilum, about 2,300 to the pound; germ, yellow; oil, 18.2 percent; protein, 44.4 percent; iodine number, 132."

USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 13.

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 12-13. Kabott is in the USDA Germplasm Collection. Maturity group: 0. Year named or released: 1939. Developer or sponsor: F. Dimmock, Department of Agriculture, Central Experimental Farm, Ottawa, Ontario, Canada. Literature: 13, 14. Source and other information: From Ningan, Heilongjiang, China, by 1933. Prior designation: None.

Note from Dr. Richard Bernard, Univ. of Illinois. 1999. Sept. 9. The seeds of Kabott are quite large (27 gm per 100 seeds) and on that basis should probably be considered a vegetable type. Note: But 2,300 seeds per pound would be only 19.7 gm per 100 seeds. Address: USA.

507. McRostie, G.P.; Laughland, J. 1940. Soybeans in Ontario. *Ontario Department of Agriculture, Bulletin* No. 407. 12 p. Feb.

• ***Summary:*** Contents: Introduction. The plant. Uses: Hay, seed, straw, soybean meal, soiling crop, ensilage, soil improvement, soybean oil, other products. Feeding value. Climatic adaptation. Place in rotation. Culture: Soil, preparation of seed bed, manure and fertilizers, seed selection, inoculation, dates of seeding, methods and rates of seeding, depth of seeding, seasonal care, harvesting for

hay or seed, threshing, storing. Varieties. Description of varieties: Manitoba Brown (Brown, Ogemaw), Kabott (From Mr. R.R. Kabalkin in Manchuria), Mandarin, Cayuga, Minsoy, Hudson Heights (Hudson; a selection by T.B. Macaulay of Hudson Heights, Quebec), O.A.C. No. 211 (selected from the Habaro variety), Goldsoy, Quebec No. 92, Manchu, Illini. Soybeans in mixtures (with grains and grasses). Enemies of the soybean.

Concerning other food products (p. 3): "Soybean flour, which is made into bread, cakes and muffins, due to its very low percentage of starch, is of especial value as a diabetic food. Soybean milk, curd [tofu] and breakfast foods are products of this bean. Lecithin, a complex fatty material containing phosphorus and nitrogen, is also obtained from the soybean and is used in candy making. Green soybeans (probably green vegetable soybeans), dried beans and bean sprouts are used in many ways for the table."

Concerning varieties (p. 9): "Both Manitoba Brown and Brown are varieties which have been selected from Ogemaw which was introduced by E.E. Evans, West Branch, Michigan, 1902, as a supposed cross between Early Black and Dwarf Brown varieties. The Manitoba Brown is an early selection made at the University of Manitoba. All three are similar in appearance and may be described as follows: seed colour brown, medium to large in size, hilum chocolate; plant short, erect, bushy; flower purple. They are very early varieties suitable for seed and may be successfully grown in northern districts."

Concerning enemies (p. 12): "In Japan, according to reports, there are many destructive diseases which attack the soybean. In the United States, no pest has assumed any great economic importance, but there have been some losses due to rabbits, woodchucks, root rot, cowpea wilt and caterpillars. Forty-three years of experiments at the Ontario Agricultural College have shown little loss due to fungus and bacterial diseases, but some parts of Ontario have reported that groundhogs show a preference for this crop. This comparative freedom from plant enemies is a favourable factor in promotion of soybean culture in Ontario."

Note: This is the earliest document seen (Sept. 2004) that mentions the soybean variety Kabott. Address: 1. PhD, Prof. and Head of Dep.; 2. B.S.A., Extension specialist. Both: Dep. of Field Husbandry, Ontario Agricultural College, Guelph, Ontario, Canada.

508. *Madison Survey (Madison, Tennessee).*1940. Rapid growth of Madison health food production and consumption. 22(5):17-19. March 13.

• ***Summary:*** "When, the last of November in the year just past, a carload of health foods started for the Pacific Coast–the first shipment of that size–it seemed that a decided step had been taken in the advancement of the health food industry. Milo Frank, Los Angeles, is jobber distributor for the South Pacific. He services 250 health stores in California. The North Pacific region, Western Canada, and Alaska are served by Western Natural Foods, Seattle [Washington].

"Coming east, we find Health Food Jobbers, Chicago [Illinois], serving metropolitan Chicago; Sherman Foods, serving metropolitan New York; and Modern Foods, Wollaston, Massachusetts, serving metropolitan Boston."

Madison Foods' products mentioned in this issue are: Nutmeat, Soy Beans, Soyburger, Soy Cheese, Soy-Koff, Vigorost, Wheatasoy.

Periodicals mentioned include: (1) *Health News Reporter,* winter issue, 1939-1940. (2) *Health Foods Retailing* (Chicago), edited and published by Lelord Kordel; it is a bi-monthly trade journal for the health food industry.

509. Lloyd, J.W. 1940. The rise of edible soybeans. *Proceedings of the American Soybean Assoc.* p. 59-62. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan. [1 ref]

• ***Summary:*** "Although the field-type soybean was introduced into the United States from the Orient a number of years ago, the vegetable-type was unknown in America until after the exploration trip in China and Japan by Dr. [sic] W.J. Morse, which extended from February, 1929, to February, 1931. The seed samples of many varieties were sent back to Washington by Dr. Morse and were planted at the Arlington Experiment Station [Virginia] in 1930 and 1931. Seed developed from these plantings was distributed for trial to various State Experiment Stations in the spring of 1934. The Illinois station had its first contact with the vegetable-type soybeans that season, and started a series of field and palatability tests including many varieties... Other midwestern experiment stations that have been giving attention to the vegetable-type soybeans are Indiana, Ohio, and Iowa."

The results of the Illinois tests were first published in March 1939 in Illinois Bulletin No. 453. "In this bulletin and in press notices concerning it, the announcement was made that small packets of vegetable-type soybeans for trial planting would be furnished upon request, as long as the available seed supply lasted. The response was a perfect deluge of requests for seed... Special interest was manifested in the vegetable-type soybean as a food suitable for diabetics, and many stated that they wished to grow the crop for that purpose. By the end of May [1939] seed had been sent to 2,096 persons–all who had made requests up to that time. Requests were received from 46 of the 48 states, from Hawaii and the District of Columbia, from 5 provinces of Canada and from 6 other foreign countries.

"At the end of the 1939 season, reports were received from 810 persons to whom seed had been furnished that spring. Almost 80 percent of those persons reported success in the production of the crop, in spite of drouth,

grasshoppers, rabbits, and other hazards. Approximately 70 percent of those who succeeded in growing the crop were enthusiastic about its table quality as a green vegetable... While tests by correspondents were limited mostly to the use of the soybeans as a fresh vegetable, a number reported successful canning of the product for winter use, while others allowed the beans to mature and reported them as highly satisfactory when used like navy beans." One company "is reported to have canned eight carloads of the finished product last year. Experimental work in canning and freezing of green soybeans is in progress on a comprehensive scale at two eastern experiment stations this season."

The Bansei variety is said to be especially well suited to the making of soybean milk. Yellow-colored varieties are said to make a superior grade of soybean flour. "The chief objection to the soybean as a home-garden or market-garden vegetable is the difficulty of shelling the beans by hand... Perhaps progress would be made in popularizing this product if the Oriental method of serving were adopted. This involves cooking the beans in the pods and letting each guest do his own shelling. Some Americans have tried this method and are well pleased with it. It involves more leisurely eating and would be especially appropriate at a banquet table."

"Previous to the spring of 1940, seed of vegetable-type soybeans was practically unobtainable by the general public. It was not offered under variety names by a single seedman so far as I am able to learn. Last spring, however, at least six seedsmen announced several varieties in their catalogs or price lists, and seeds were sold to a large number of planters."

Note: This is the earliest English-language document seen (June 2009) that uses the term "field-type soybean." Address: Univ. of Illinois, Urbana.

510. Morse, W.J. 1940. Soybeans around the world. *Proceedings of the American Soybean Assoc.* p. 72-74. 20th annual meeting. Held 18-20 Aug. at Dearborn, Michigan.
• ***Summary:*** The areas where soybean production has recently increased are the East Indies, Rumania, Austria, Bulgaria, Czechoslovakia, and Yugoslavia. "Soybean production in the Danube Basin in 1939 amounted to approximately 5 million bushels. The acreage in Bulgaria, Hungary, Rumania, and Yugoslavia increased more than 60% in 1940, this being attributed to the activities of two German companies which distributed selected seed and inoculation culture, and contracted in advance for taking the entire production at increased prices. The Greek government planned extensive cultivation of soybeans in 1940, providing for importation of seed, requiring compulsory cultivation of the crop, and the purchase of the entire crop from farmers at remunerative prices."

The increase in production has been largely due to the development of adapted soybean types through introduction, selection, and hybridization. "Soybean breeding programs have been carried on extensively in Germany, Russia, Netherland Indies, Rumania, Japan, Manchuria, South Africa, Canada, and some of the Balkan countries, and to a lesser extent in Sweden, England, Holland, France, Italy, Poland, Australia, India, and the Philippines."

"The outbreak of hostilities in Europe and the resulting interference with the flow of Manchurian soybeans into European markets brought about a rather critical situation to the producers in that part of the Orient. Moreover, Manchurian authorities on November 1, 1939, set up a soybean monopoly whereby the government purchases all soybeans for sale, fixes the price, and makes all export sales... Soybean exports from Manchuria for the first 8 months of the 1939-40 marketing year amounted to approximately 24 million bushels as compared with 59 million bushels for the corresponding period last season. Exports to Europe during the 8 months of this season were estimated at about 4 million bushels as compared with actual exports of 32 million bushels for the same months in 1938-39. About one million bushels were exported this year to Germany via Trans-Siberian Railway, and over 2.5 million bushels to Europe by sea, a major portion of which went to Italy.

"With practical cessation of direct shipments to European countries, Japanese and Manchurian officials began concentrating on the development of new industrial outlets for soybeans. The process of making usable protein from soybean material as a substitute for imported milk casein has been widely studied by government and industrial agencies in Manchuria and Japan. At present the principal ways in which soybean protein is substituting for milk casein are as glue for wooden articles, furniture, veneer, plywood, etc., paper sizing, as the adhesive element in insecticides and water paints, and as material for artificial wool and plastics. In 1938 more than 22 million pounds of soybean glue were used. A few Japanese companies have industrialized the manufacture of protein on rather an extensive scale. In Japan only one firm is reported to be producing soybean plastics, and these are not entirely satisfactory. Soybean fiber, or casein fiber as it is known in Japanese trade circles, is manufactured exclusively by one concern which sells its products to a spinning firm for making into yarn and cloth. The present capacity of the factory is about 22,000 pounds per day although actual daily production is said to be only about 13,000 pounds. The fiber known as 'Silkool' has not yet been exported. The domestic prices range from 33 to 35 cents per pound.

"A sample of 'Soyalex' recently received from Japan was said to contain not less than 60% pure lecithin. This new soybean product may be used in making butter,

chocolate, for dressing of leather, making of shoe polishes and toilet foods such as face creams and soaps, for cooking, making noodles and macaroni, and in the preparation of valuable chemicals." A portrait photo shows W.J. Morse.

Note 1. This is the earliest document seen (Jan. 2000) concerning the cultivation of soybeans in Sweden.

Note 2. This is the earliest English-language document seen (Dec. 2004) that uses the term "soybean fiber" to refer to spun soy protein fiber used like a textile fiber. Address: USDA Bureau of Plant Industry, Washington, DC.

511. Megee, C.R. 1940. Performance of early soybean varieties in Michigan. *Proceedings of the American Soybean Assoc.* p. 56, 58.

• ***Summary:*** "Early maturing varieties of soybean have been available in Michigan for many years. As early as 1901, Mr. E.E. Evans took an active part in introducing, breeding, and distributing a large number of varieties. The Ogemaw was a result of Mr. Evans breeding; maturing exceedingly early it produced seed in about ninety days.

"The early maturity ability of Ogemaw was obtained by sacrificing much in both forage and seed yield. This is true of many of the early maturing varieties and usually results in the variety failing to become of economic importance. The trend at present in the breeding of early maturing varieties is to maintain a high yield of seed and at the same time shorten the time required to maturity. Considerable progress is being made in this effort.

"Approximately 40% of the acreage of soybeans grown in Michigan is devoted to seed production, approximately 40% is used for hay, and 20% for soil improvement purposes and for pasture."

The southeastern corner of Michigan is the best. "The heat units in this area are the highest in the state, the soil is naturally highly productive and yields of from 20 to 45 bushels of seed per acre are frequently obtained." Competition from other crops is not severe and soybeans tend to equalize the distribution of labor.

One popular, early maturing variety for seed in this section is the Canadian selection of the Mandarin made by Mr. Dimmick of the Central Experimental Farm at Ottawa. The Manchu, Mandel, and Illini varieties are preferred for hay production. "The Manchu is the leading variety when the entire season can be utilized."

In 1939, soybean acreage in Michigan was fifteen times greater than it was in 1929. Address: Farm Crops Dep., Michigan State College.

512. Lloyd, J.W. 1940. Range of adaptation of certain varieties of vegetable-type soybeans. *Illinois Agric. Exp. Station, Bulletin* No. 471. p. 77-100. Dec.

• ***Summary:*** Contents: Introduction. Range of successful culture in Illinois. Successful culture in cool climates (of collection A–Giant Green, Bansei, Fuji, Willomi): Upper Mississippi Valley and the Northwest, New England, Iowa and South Dakota, performance at high altitudes. Performance of varieties in collection B (No. 80494, Jogun, Illington, Imperial): Central Illinois, Indiana, Ohio, Pennsylvania, Nebraska, Connecticut, Missouri, and New Jersey. Performance of varieties in collection C (Giant Green, No 80490-1, Emperor, Higan): Kansas, Missouri, Eastern states bordering the south (Kentucky, Tennessee, Maryland, Virginia, West Virginia), Southern States (North Carolina, South Carolina, Georgia, Arkansas, Texas), California, and Arizona. Performance in Canada and other outlying regions. Acceptability of vegetable-type soybeans. Demand for seed. Place in vegetable industry. Summary.

A map of the United States (p. 83) shows "Areas reporting successful growth of vegetable-type soybeans." Table 2, titled "Performance of four varieties of soybeans (Collection A) in cool climates, 1939" (p. 85) gives figures summarizing 265 reports (218 of which–82%–were successful) from the following states: Colorado, Idaho, Iowa, Maine, Massachusetts, Michigan, Missouri, Montana, Nebraska, New Hampshire, New Mexico, New York, North Dakota, Oregon, Pennsylvania, South Dakota, Utah, Vermont, Washington, Wisconsin, Wyoming. Page 96 adds: "The vegetable-type soybeans were grown successfully in eleven California counties, distributed from Tehama in the north to San Diego in the south, and including both interior and coast regions... For the most part, the crops were grown under irrigation. One grower in Ventura county commented: 'They [vegetable-type soybeans] are now our favorite vegetable for fall, and I only wish they were a year-round crop... At the Agricultural Experiment Station at Tucson, Arizona, eight varieties... were grown under irrigation at an elevation of 2,400 feet. Planted June 12, all the varieties made satisfactory yields, Illington, No. 80490-1, and Emperor being especially prolific."

"A few observations on the range of adaptation of vegetable-type soybeans were included in Bulletin 453 of this Station, 'Eighteen Varieties of Edible Soybeans,' published in March, 1939. These observations were based on reports received from persons to whom seed had been distributed during the years 1935 to 1938 inclusive. The publication of this bulletin and press announcements regarding it contributed to the manifestation of a widespread interest in vegetable-type soybeans and resulted in the receiving of requests for seed from every state in the Union except two. There were also requests from five Canadian provinces and six foreign countries other than Canada. Persons living in 90 of the 102 Illinois counties requested seed.

"In response to these requests a total of 1,880 lots of seed were sent out from Urbana; 216 requests from the southern states were referred to W.J. Morse, of the U.S. Department of Agriculture, Washington, D.C., who had seed of varieties presumably better adapted to the South.

"The seed furnished most of these correspondents consisted of four packets, each containing approximately 100 seeds. Four varieties were represented, covering the season from early to late so far as possible with the seed available and with due consideration to the climatic conditions in the different parts of the country to which the seed was sent."

In Canada, early varieties were tested at St. George, Ontario; Central Experimental Farm, Ottawa; Barrington Passage, Nova Scotia; Bogot, Manitoba; Swift Current, Saskatchewan; Sea Island County and Westminster, British Columbia; Grand Falls, Newfoundland (49º north latitude, approximately. Planted in June, "the plants made a luxuriant growth but had not yet blossomed when killed by frost on Aug. 26). Varieties were also tested at Chihuahua, Mexico at 6,000 feet, and Honolulu, Hawaii.

Results based on reports received from 810 persons to whom samples of vegetable-type soybeans were sent in the spring of 1939: Had success in growing the crop: 78.8%. Liked the table quality 68.8%. Considered it a promising crop: 66.7%. Saved some seed for planting in the future: 76.5%. Main complaints: Difficulty in hand-shelling the green beans, and the readiness with which the mature beans shatter from the pods.

Note: This is the earliest document seen (Jan. 2010) concerning soybeans in Newfoundland province, Canada, or the cultivation of soybeans in Newfoundland. This document contains the earliest date seen for soybeans in Newfoundland, or the cultivation of soybeans in Newfoundland (June 1939). The source of these soybeans was the University of Illinois.

515. Royds, E. 1941. Soya beans. *Times (London).* April 7. p. 5, col. 5.
• ***Summary:*** This letter to the editor states: "Sir,–Mr. Hudson tells us to expect further reduction in rationing of livestock and cutting down in number–and Lord Woolton warns us of future food restrictions. Has it not now become imperative to grow The Magic Bean in this country?–food for man and beast and unquestionably the most valuable food plant in the world.

"Sir John Russell in a recent letter to *The Times* says this could be done–but that the yield of the crop would from Rothamsted experiments probably be only 6cwt. or 7cwt. [1 cwt = hundredweight = 112 lb] of grain an acre against a yield of 18cwt. or 20cwt. an acre of wheat or oats. This being so, even at this low level the nutritive value an acre of the bean crop would well exceed the value an acre of wheat or oats." [Note: 6½ cwt = 728 lb/acre = 12.1 bushels/acre or 818 kg/ha.]

"My society–formed for research and development on a non-profit basis–as a result of several years' experience confirms Sir John Russel's opinion, and thinks that suitable areas for a soya bean crop in this country could easily be found and that an extended area grown, coupled with continued and more intensive research, should result in an increased crop yield comparable with that in Canada where much the same methods have been adopted." Address: Chairman, British Soya Bean Growers Research and Development Society.

516. Jackson (Dr. Robert G.). 1941. Display ad: So you dare not drink coffee! *Toronto Daily Star (Canada).* April 15. p. 24.
• ***Summary:*** "Every day more and more coffee lovers buy Dr. Jackson's Kofy Sub because this delicious coffee substitute lets them sleep at night and never causes indigestion. Kofy Sub has rich, satisfying coffee flavour yet contains no caffeine, It is produced from cereal grains and soya beans; it is alkaline, nutritious, good for children. Easy to make the same way as coffee. Buy this inexpensive treat today.

"Know more about food and health. Send for free booklet 'A Glorious Achievement.' Address Robt. G. Jackson, M.D., 552 Vine Ave., Toronto.

"A Dr. Jackson product."

518. Mann, H.H. 1941. Soya bean culture in Great Britain. *Nature (London)* 147(3735):660-62. May 31. [5 ref]
• ***Summary:*** The author is interested in knowing if it is possible to grow soya beans successfully on a commercial scale in Great Britain. All early experiments indicated that most of the available types of soya beans were of no use for seed production in Britain. "Attempts have been made, at least since 1914, to select suitable varieties, and the work of J.L. North at the old Royal Botanic Society's gardens in Regent's Park resulted in the production of types, several of which ripened in September or the beginning of October... Further, W. Southworth, previously of the Manitoba Agricultural College [Manitoba, Canada], settled at Rothamsted in 1932, bringing with him a type derived from the well-known American soya bean 'Ogemaw' and some others, and under his general supervision several of these and North's also have been grown almost every year since then at Rothamsted and Woburn. The results of these trials with some of the most promising types in existence have not been encouraging for the prospects of the soya bean as a commercial crop."

The soybean seems to demand three conditions which are not readily found in Great Britain: (1) The soya bean cannot be sown until serious danger of frost is over; (2) The soya bean crop seems to require a 'continental summer,' i.e. a period of high temperature while it is growing; (3) The time of ripening should not be later than the first week of October, preferably the last week in September.

"The possibilities for the future seem to depend on the development of types which yield more heavily in our climate than any of those tried hitherto and which are still early enough to ripen at least by the first week in October, and on finding cultivation methods that will give again a larger yield than those I have hitherto adopted. I am not unhopeful of the chances in both these directions, but a very great deal of work will be required before the cultivation of the soya bean can take a large part in ordinary farming practice, even in the South of Great Britain." Address: Dr., Woburn Experimental Station, Bletchley, England.

519. Dimmock, F. 1941. Canada includes many excellent soybean acres. *Soybean Digest.* May. p. 5.
• ***Summary:*** "Canada has won six world's championships for soybeans at Chicago in the last 9 years. This should certainly dispel any doubt which may exist concerning the ability of Canada to produce soybeans... At the present time, good crops of soybeans are being produced across Canada– in Ontario, southern Quebec, southern Manitoba, and British Columbia. Small areas in Nova Scotia have reported satisfactory yields, while experimental trials on irrigated land in southern Alberta have indicated possibilities in that region also...

"While little or no soybeans were grown in 1929, by 1940 it had reached only an estimated 12,000 acres, 10,600 acres of which were in the province of Ontario. Around 95 percent of the present acreage is harvested for seed, and not more than 15 to 20 percent of this is disposed of to the processing mills. There are two of these in Ontario. A new one is reported to be under construction in British Columbia. The bulk of the soybeans produced are fed to livestock on the farms on which they are produced...

"Ottawa Mandarin is the most commonly grown variety... An active soybean research program has already resulted in the development of the following varieties: Mandarin (Ottawa), A.K. (Harrow), Kabott and Pagoda by the Dominion Experimental Farms, Dominion Department of Agriculture, and O.A.C. No. 211 and Goldsoy by the Ontario Agricultural College, Guelph."

A table gives the average composition (protein and oil percentages, and iodine number) for soybeans grown in Canada at the following locations: Brandon, Manitoba; Lethbridge, Alberta; Agassiz, British Columbia; Harrow and Ottawa, Ontario; Lennoxville, Quebec; and Nappan, Nova Scotia. The highest protein content was found at Brandon (42.5%) and Harrow (42.1%), and the highest oil content at Lennoxville (22.9%) and Ottawa (20.6%). The highest iodine numbers came from Nappan (135.4) and Lethbridge (134.7).

Note: This is the earliest document seen (Oct. 2004) that mentions the soybean variety Pagoda. Address: Dominion Experimental Farms, Div. of Forage Plants, Ottawa, ONT, Canada.

520. Pagoda: New Canadian soybean variety. 1941. Seed color: Yellow (straw), hilum pale.

• ***Summary:*** The authors investigated the effect on strawberry root rot of turning into the soil a succession of cover crops of different types; a succession of soybeans (in 1939) greatly reduced root rot and at the same time significantly increased the bacterial balance. Address: 1. Asst. Plant Pathologist, Dominion Lab. of Plant Pathology, St. Catharines, Ontario, Canada.

522. West, P.M.; Hildebrand, A.A. 1941. The microbiological balance of strawberry root rot soil as related to the rhizosphere and decomposition effects of certain cover crops. *Canadian J. of Research, Section C: Botanical Sciences* 19(6):199-210. June. [26 ref]
• ***Summary:*** In the first of two papers, the authors investigated the effect on strawberry root rot of turning into the soil a succession of cover crops of different types; a succession of soybeans greatly reduced root rot and at the same time significantly increased the bacterial balance.

In this second paper they showed that this increase in the bacterial balance index was not due to any rhizosphere of living soybean roots, but to the decomposition of soybean tissue after incorporation into the soil. This beneficial effect of soybean residues was ascribed to promotion of a "carbohydrate type of decomposition" in the soil. Glucose (at a rather high rate, equivalent to 10% by weight of soil) was shown to exert a similar beneficial effect in controlling root rot and raising the bacterial balance index. Address: 1. Agricultural Asst., Div. of Bacteriology and Dairy Research; 2. Asst. Plant Pathologist, Dominion Lab. of Plant Pathology, St. Catharines. Both: Ontario, Canada.

523. *New Canadian (The).*1941. Shoyu supplies cut off–Local firm prepared to meet demand. Community consumes fifty thousand gallons annually. Aug. 22. p. 8.
• ***Summary:*** Mr. Teiichi Amano, head of Amano Bros. Ltd. makes Maruten brand shoyu bean-sauce, miso, and vinegar in his plant at 2141, 2135, 2131 Dundas Street, Vancouver, BC, Canada. In January 1941 he started to brew shoyu, which used to be imported from Japan before budget import restrictions took effect. It must age for 7-12 months. His soybeans are imported from California. For 12 years he has made miso and vinegar, and in Japan his father and grandfather made shoyu. Mr. Amano estimates that shoyu consumption in British Columbia exceeds 48,000 gallons/year. A photo shows the inside of the shoyu plant. Address: British Columbia, Canada.

524. Horvath, Artemy Alexis. Assignor to Soya Corporation of America (A corporation of New York). 1941. Soya palatability developing process. *Canadian Patent* 399,998. Oct. 14. *
Address: Chambersburg, Pennsylvania.

525. *Science and Culture (Calcutta).*1941. The use of soyabeans in Canada. 7(4):218. Oct.
• ***Summary:*** A brief overview. "Soyabean acreage in Canada has recently increased and there large numbers of small patches are grown by individual farmers for home consumption. In most of the cases the crop is grown to maturity with the intention of feeding the beans to livestock."

526. **Product Name:** Maruten Shoyu.
**Manufacturer's Name:** Amano Brothers.
**Manufacturer's Address:** 2141 Dundas St., Vancouver, BC, Canada.
**Date of Introduction:** 1941.

**New Product–Documentation:** The New Canadian. 1941. Aug. 22. p. 8. "Shoyu supplies cut off–Local firm prepared to meet demand. Community consumes fifty thousand gallons annually." An ad in the lower left corner shows the bold black Maruten logo, with the character meaning "heaven" *(ten)* in a circle *(maru)*. Amano Bros. Ltd. is at 2141, 2135, and 2131 Dundas St., Vancouver, BC. Phone: Highland 5526.

Shurtleff & Aoyagi. 1983. The Book of Miso. 2nd ed. p. 234. "There were several semi-commercial makers of miso and shoyu in Canada, in the Vancouver area, prior to World War I, and at least one commercial miso manufacturer was in the area prior to 1927. In that year Mr. T. Amano started Amano Brothers. In 1982 the T. Amano Co. was still making fermented shoyu." Talk with Michael Weiner. 1987. Dec. 16. Amano is presently the largest manufacturer of fermented soy sauce in Canada. They may soon break ground for a large new miso and shoyu plant.

• ***Summary:*** "This volume presents information formerly published (until 1935) in the statistical section of the Yearbook of Agriculture" (p. 1). "Export and import statistics of the United States include trade with the Philippine Islands. They also include any trade between foreign countries and Alaska, Hawaii, and Puerto Rico, but do not include shipments between continental United States and these possessions. Prior to January 1, 1935, the Virgin Islands of the United States were treated in the same manner as the Philippine Islands, but since that date the Virgin Islands are treated in the same manner as Alaska, Hawaii, and Puerto Rico." (p. 5). A bushel of soybeans weighs 60 lb and a gallon of soybean oil weighs 7.5 lb (p. 7). Note: No separate statistics are given for soybeans or soybean products grown in or exported to or from Alaska, Hawaii, Puerto Rico, or the Virgin Islands.

Table 392 (p. 299) gives U.S. soybean acreage statistics for the years 1924-1940, including: Acreage grown alone for all purposes, total acreage (incl. half the interplanted acres), acreage harvested for beans, yield per acre, production, price (dollars/bushel), farm value (in 1,000 dollars), foreign trade (imports and exports, year beginning in July). In 1924 for soybeans: Acreage grown alone for all purposes: 1,567,000. Total acreage: 1,782,000. Acreage harvested for beans: 448,000. Yield per acre: 11.0 bushels. Production: 4,947,000 bushels. Average price per bushel received by farmers: $2.46.

The corresponding figures in 1928 were: Acreage grown alone for all purposes: 2,154,000. Total acreage: 2,439,000. Acreage harvested for beans: 579,000. Yield per acre: 13.6 bushels. Production: 7,880,000 bushels. Average price per bushel received by farmers: $1.88.

Table 393 (p. 299) gives U.S. soybean production and farm disposition statistics for the years 1924-1940, including: Total production, used for seed (total, or home grown), fed to livestock, sold.

Table 394 (p. 300) gives U.S. soybean statistics for acreage, yield, production, and season average price received by farmers, by States, average 1929-38, annual 1939 and 1940. The states are: New York, New Jersey, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri, Nebraska, Kansas, Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Oklahoma, Texas, and USA total.

Table 395 (p. 301) gives soybean statistics for acreage and production in specified countries, average 1930-34, and annual 1935 to 1940. The countries are China, Manchuria, United States, Chosen [Korea], Japan, Taiwan, Netherlands Indies, Rumania, Bulgaria, Yugoslavia, Hungary, and estimated world total.

Table 396 (p. 302) gives the average price per bushel of soybeans received by U.S. farmers each month and season average from 1930 to 1940.

Table 397 (p. 302) titled "Soybeans for seed" gives the average wholesale price per bushel at Baltimore and St. Louis, 1931-1941, each month from Jan. to May and average.

Table 398 (p. 302) titled "Soybeans for crushing" gives the average price per bushel, U.S. No. 2 Yellow, bulk, carlots, net track Chicago, 1933-40, each month from Oct. to Sept.

Table 399 (p. 303) gives statistics on amount of soybeans crushed, and production, imports, and exports of soybean oil (crude basis), and soybean cake and meal, USA, 1930-1940.

Table 400 (p. 303) gives the average price per pound of soybean oil (domestic crude) in tank cars, midwestern mills, 1929-1940, each month and yearly average.

Table 401 (p. 303) gives the average price per pound of soybean oil (domestic crude) in drums, New York, 1931-1940, each month and yearly average.

Table 402 (p. 304) gives the average price per ton of soybean meal (41% protein), at Chicago, 1930-1940, each month and yearly average.

Table 403 (p. 305) for soybeans and soybean oil, gives international trade (exports and imports), averages 1925-1934, annual 1938, 1939. For soybeans: Principal exporting countries–China, Manchuria, United States, total. Principal importing countries–Germany, Japan, Denmark, United Kingdom, Sweden, Italy, Netherlands, Canada, total. For soybean oil: Principal exporting countries–China, Manchuria, Denmark, Japan, Sweden, total. Principal importing countries–Netherlands, United Kingdom, Italy, Germany, United States, Belgium, Chile, France, Morocco, Norway, Algeria, Austria, Czechoslovakia, Canada, USSR, total.

Table 659 (p. 490) gives U.S. exports (in pounds) of vegetable oils (incl. corn, cottonseed, linseed, cocoa butter, coconut, peanut, and soybean oil) from 1914 to 1939.

Table 617 (p. 455) gives statistics on oleomargarine–materials used in manufacture, USA, 1924-1940. Concerning soybean oil: Less than 500 lb were used in 1924 and 1925, but 33,000 lb were used in 1926. The first significant amount was used in 1930: 2.25 million lb. Note: Additional statistics on oleomargarine production and consumption in the USA are given on p. 454-57.

Table 660 (p. 494) gives U.S. imports (in pounds) of oilseeds (incl. soybeans {but no data given for 1918-1926}, sesame seeds, rapeseed) and vegetable oils (incl. olive oil, palm oil, palm kernel oil, peanut oil, perilla oil, rapeseed oil, soybean oil, and tung oil) from 1914 to 1939.

Table 662 gives imports of principal agricultural products (incl. soybean and soybean oil) into the United States, by countries, each year 1932-1940. The source countries for soybean (p. 519) are: Kwantung, Japan, China, Germany, other countries, total. The source countries for soybean oil (p. 523) are: Kwantung, Japan, China, Netherlands, other countries, total. Address: U.S. Dep. of Agriculture, Yearbook Statistical Committee, Washington, DC.

Address: Ottawa, Canada.

530. *Globe (Toronto, ONT, Canada).*1942. Dr. C. Zavitz, crops expert, dies, aged 78: Field Husbandry chief at O.A.C. for 41 years; known over Canada. March 18.
• ***Summary:*** A nice obituary of Charles A. Zavitz, with a small portrait photo. He was born in Lobo Township and attended secondary school at Strathroy High School. He graduated from the Ontario Agricultural College. The University of Western Ontario honored him a few years ago when it conferred the degree of LL.D. on him.

Dr. Zavitz retired in 1927 at the close of the college year, then took up residence at Poplar Hill. A private service will be held at the residence at Poplar Hill at 2:00 p.m. Thursday and will be followed by a service in the Friends' Meeting House, Coldstream, at 2:30 p.m. He will be buried in the Friends Burying Ground.

Another obituary, titled "Good citizen," states: He was "an unswerving believer in the value of science applied to agriculture. He had many friends, no enemies. The great talents with which nature had endowed him he returned a hundred-fold to his fellow men, for their good. What better epitaph could a man have than that?"

531. Dorland, Arthur G. 1942. Charles A. Zavitz. *Friends Intelligencer (Philadelphia)* Third Month 28. p. 206.
• ***Summary:*** "On Third Month 19th, a large assembly of relatives and friends gathered in the Quaker Meeting House at Coldstream to pay their last respects to Charles A. Zavitz, who passed away at his home in Poplar Hill in his 79th year.

"Charles Zavitz was a product of this pioneer Quaker community in Western Ontario. The roots of his spiritual and intellectual life were nourished on this soil and though he travelled widely during his active career, it was back to this native soil that he came to spend his last days among his old friends and neighbours."

"After his retirement to Poplar Hill, Charles Zavitz published a little booklet called, 'Spiritual Life', in which he recorded some of his personal thoughts and musings on spiritual themes, which are a characteristic expression of his life. Here is one brief extract:

"'Being a Quaker with Quaker parents, I learned early in life to listen in silence to the still small voice of my Spiritual Father. During and since my forty-one years of very active service in college, teaching, and in scientific research in agriculture, the Christ Spirit within me has been the most precious thing in my life.'"

Note 1. This article was later reprinted (with small changes) in the *Canadian Friend* and in the OAC Review, Vol. 54. Note 2. In Quaker "plain talk" January is "First Month" and Sunday is "First Day." Quakers don't attend Sunday School, but rather "First Day School." Friends also say "thee, thou, thine." Note 3. Dr. Dorland is a Quaker and Prof. of History at the University of Western Ontario. Address: Prof., Ontario Agricultural College, and intimate friend of Dr. Zavitz.

532. Oveson, M.M. 1942. Re: Trials with soybeans at the Sherman Branch Experiment Station, Moro, Oregon. Letter to Mr. E.R. Jackson, Extension Specialist in Farm Crops, Oregon State College, Corvallis, Oregon, April 23. 2 p.
• ***Summary:*** "In 1917, four varieties of soybeans were planted on May 19. The yield from this planting was as follows: Early Green 11.4, Ito San 10.5, Manchu 10.5, and Black Eyebrow 7.8 bushels per acre.

"In 1918 12 varieties were planted on May 4th. These 12 included the four mentioned above and 8 new varieties. Good stands were obtained but rabbits destroyed most of the plants and the trial was discontinued.

"In 1941 thirty five varieties were seeded on May 6th in 16 foot rows two feet apart. The yields from this seeding varied from 1.4 to 9.6 bushels per acre. Many varieties were late in maturing and would normally be caught by an early frost." F.P.I. 68488 harvested on Sept. 22 gave the highest yield, 9.6 bu/acre.

A table shows all varieties planted in May 1941, plus the date harvested and yield. The named varieties are: Illini, Mandarin, Mukden, Hudson Manchu, Manchu 606, Manchu 831-1, Montreal Manchu, McRostie Mandarin, Manchuria, Minsoy, Hahote [Hakote], Tastei [Tastee], Ontario, Sausei, Seneca, O.A.C. 211, Habaro, Bansei, Richland, Cayuga, Chief, and Giant Green. Thirteen varieties have only F.P.I. numbers.

Note: This is the earliest English-language document seen (Nov. 2004) that mentions the soybean variety Montreal Manchu (or "Manchu (Montreal)"). Address: Superintendent, Sherman Branch Experiment Station, Moro, Oregon.

533. *Canadian Friend.*1942. Obituary: Charles Ambrose Zavitz. 38(10):15-16. April.

• ***Summary:*** "The Society of Friends, not only in Canada but in the United State of America, and many English Friends as well, will be united in sorrow at the loss of Charles Zavitz, who died in his home at Poplar Hill on March 17th after a long illness."

"The establishment of the Canadian Friends' Service Committee was due largely to his interest and influence., and from the time of its inception until forced to resign because of ill-health, he acted as its chairman. No member of this general committee, nor of its large executive, but will remember with gratitude the spiritual atmosphere of these meetings, which was his constant aim, and which his chairmanship helped largely to bring about."

"His own Monthly Meeting at Coldstream will miss his presence sorely." His wife was Rebecca Wilson Zavitz. His son was Raymond Zavitz of Ottawa.

"Charles Zavitz was born in Lobo Township [near London, in the southern tip of Ontario] and received his secondary school education at nearby Strathroy High School [a public school]. He attended Ontario Agricultural College and received the degree of Doctor of Science from the University of Toronto. University of Western Ontario honored him a few years ago when it conferred the degree of LL.D. on him.

"He was Professor of Field Husbandry at the Ontario Agricultural College, Guelph, for forty-one years, and for much of that time was head of the department."

"His work in his own field was outstanding. Of him Dr. W. H. Muldrew, Dean of Macdonald Institute, wrote, 'A modest gentleman who has done more to pave the way for practical nature study than any man in Ontario'–and the *Toronto Globe* described him in 1904 as 'one of Ontario's greatest benefactors, who by the successful carrying out of a single experiment' (we believe in regard to the inbreeding of grain), 'has raised the production of Ontario farms over a million dollars a year in value.'

"At the outbreak of the first World War Dr. Zavitz was acting President of the Ontario Agricultural College, owing to the illness of Dr. Creelman. It is a matter of interest, and we feel of high honour to his memory, that though he immediately disassociated himself from all military activity of the College and offered to resign, he was urgently requested, not only by the Board of Governors, but by the student body, to continue in this position.

"One of my own most impressive experiences was to hear Dr. Zavitz speak of his anxiety since he had promised Dr. Creelman to carry on in his absence.

"'I walked all day about the fields,' he said, 'trying to know what I should do.'

"On the next day he called a meeting of the O.A.C. students. It is a scene one loves to picture. Very simply he told them his feeling in regard to war, and the impossibility of his taking any part in college activities which had to do with military matters. It must have warmed his heart (listening to his story one felt it did!) that they were so unanimous in desiring him to remain. There was still the Board of Governors to meet; but that was probably less of a trial, and had the same result.

"Dr. Zavitz retired at the close of the college in 1927, and then took up residence in Poplar Hill." Address: Prof., Ontario Agricultural College, and intimate friend of Dr. Zavitz.

534. Dorland, Arthur G. 1942. Charles A. Zavitz–An appreciation. *Canadian Friend* 38(10):5-6. April.

• ***Summary:*** This excellent obituary was first published in the *Friends Intelligencer* (Philadelphia, Pennsylvania) (28 March 1943, p. 206). It was later reprinted in the *OAC Review* (Vol. 54, April-May 1942, p. 409-10). Address: Prof., Ontario Agricultural College, and intimate friend of Dr. Zavitz.

535. Montreal Manchu: New Canadian soybean variety. Also spelled "Manchu, Montreal." 1942. Seed color: Yellow.

• ***Summary:*** Sources: Oveson, M.M. 1942. Re: Trials with soybeans at the Sherman Branch Experiment Station, Moro, Oregon. Letter to Mr. E.R. Jackson, Extension Specialist in Farm Crops, Oregon State College, Corvallis, Oregon, April 23. 2 p. A table shows all varieties planted in May 1941, plus the date harvested and yield. The named varieties

include “Montreal Manchu,” which was harvested on Sept. 16 and yielded 5.8 bu/acre.

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. “USDA soybean germplasm collection inventory.” Vol. 1. INTSOY Series No. 30. p. 14-15. Manchu, Montreal is in the USDA Germplasm Collection. Maturity group: I. Year named or released: by 1944. Developer or sponsor: T.B. Macauley [sic, Macaulay], Montreal, Quebec, Canada. Literature: 13, 14. Source and other information: Selected from ‘Manchu’. Prior designation: None.

Letter from Richard Bernard, Dep. of Crop Sciences, University of Illinois. 2000. Jan. 26. Montreal Manchu is in the Soybean Germplasm Collection at the University of Illinois. “It was an early maturing selection from Manchu by T.B. Macauley of Montreal. I believe that he lived in a section (or suburb) of Montreal called Hudson Heights. We have another selection of his from Manchu named Hudson Manchu (apparently originated a few years before Montreal Manchu). It could be the one on your list called ‘Hudson Heights (Hudson)?’ They weren’t as particular about names (or about changing them) back then. Both Hudson Manchu and Montreal Manchu seeds have typical Manchu appearance, shiny yellow seed coat and black hilum.” Address: USA.

536. Dorland, Arthur G. 1942. Charles A. Zavitz–An appreciation. *O.A.C. Review* 54(7):409-10. April/May.
• ***Summary:*** This excellent obituary was first published in the *Friends Intelligencer* (Philadelphia, Pennsylvania) (28 March 1943, p. 206). It was later reprinted in the *Canadian Friend* magazine (April 1942, p. 5-6). Contains two photos of C.A. Zavitz.

537. *O.A.C. Review.*1942. Dr. C.A. Zavitz [obituary]. 54(7):409. April/May.
• ***Summary:*** “The professional work of Dr. C.A. Zavitz in crop improvement and in the general advancement of agriculture has long been well-known and has again been widely commented upon since his death on March 17th. Most of the references are to his work in the development of improved varieties of grains, and this can perhaps properly be looked upon as his main field of accomplishment. It should be remembered, however, that Dr. Zavitz investigated many other classes of crops and it will not soon be forgotten that his work with alfalfa alone was so outstanding and so far reaching that for many years he was popularly referred to as ‘Charles Alfalfa Zavitz.’ Then, too, he was one of the first to introduce soybeans in to Ontario, making an importation from the State of Kansas in 1894. Later he brought other varieties from Japan, China, and elsewhere in the east, and for more than thirty years devoted much attention to determining the best cultural methods for this crop in Ontario and to developing improved strains and distributing seed to farmers throughout the province.”

Note: This obituary a second, reprinted from the *Canadian Friend* magazine, titled “Charles A. Zavitz–An Appreciation,” by Arthur G. Dorland.

l'alimentation [Study of the fermentation of protein-rich milk of the broad bean / small garden bean / Windsor bean, in view of its utilization in foods]. MSc thesis, University of Montreal. 55 leaves. [Fre]*
• ***Summary:*** This milk can be used to make tofu. Gourgane is also called *fève des marais* (broad bean). Address: Dep. of Chemistry.

542. **Product Name:** Breakfast Foods (Called Soywheat, and Soyota in 1958).
**Manufacturer's Name:** Soy Products Co.
**Manufacturer's Address:** 7 Seventh St., Des Moines 9, Iowa.
**Date of Introduction:** 1942.
**New Product–Documentation:** USDA Bureau of Plant Industry. Div. of Forage Crops and Diseases. 1942. Firms manufacturing or handling soybean food products. p. 1. This company is listed as making or handling a "breakfast foods."

Soybean Blue Book. 1947. p. 69. Not clear what type of food this is. Soybean Blue Book. 1958. p. 82. Also listed in 1965.

Note: Soyata was a high protein bread containing whole soy flour made by Moirs Ltd. in Halifax, Nova Scotia, Canada, and introduced by April 1936.

543. Canadian Pacific Railway Co., Dep. of Colonization and Development 1943. Toronto, Ontario. *Agricultural and Industrial Progress in Canada.* 25(2):29. Feb.
• ***Summary:*** "Over one-third of the entire crop of 912,000 bushels of soybeans for the whole of the Province of Ontario was grown in Kent County last year, this division leading all 54 countries and districts with a production of 307,917 bushels. Due to the increasing demand for the beans and the success met with, it is expected that Kent farmers will produce a far greater crop this year."

544. **Product Name:** [Soya Flour].
**Manufacturer's Name:** Continental Soya Co.
**Manufacturer's Address:** Lachine, Quebec.
**Date of Introduction:** 1943. March.
**New Product–Documentation:** J.L. Doig. 1943. *Soybean Digest.* March. p. 6. "Life raft ration." Floya Milling Co. in Quebec, Canada, was looking for a source of soya flour to make a concentrated food for the Canadian Navy. "Ordinary soya flour was found unsuitable, but a specially processed flour was finally produced by Continental Soya Co. of Lachine [Quebec], which proved just right." Note: Lachine is located 8 miles southwest of Montreal on the St. Lawrence River.

545. Doig, James L. 1943. Life raft ration: Canadian Navy adopts soy. *Soybean Digest.* March. p. 6, 14.
• ***Summary:*** Concentrated rations were issued to German troops as early as 1930, and soya flour were one of the main ingredients. In about 1936 reports began to trickle out of Germany about so-called "Nazi food pills" in the form of lightweight concentrated biscuits. Each biscuit was oblong in shape, about 3 inches by 2 inches by ¼ inch thick. It contained 330 calories per 100 gm, 10% moisture, 22% protein, 22% fat, 44% carbohydrates, and 2% ash.

The author helped to develop a lifeboat and raft ration now used by the Canadian navy, stored in a sealed can, composed of 12 biscuits, 2 chocolate bars, and 12 milk chocolate tablets. The source of protein in the biscuits was soya four, especially processed by Continental Soya Co. of Lachine, Quebec, Canada. Feeding tests with rats showed the biscuits to constitute a balanced ration. "The biscuit is now ready to be produced commercially." It will be released under the name "Soycrisp" as soon as facilities for its manufacture are available. Address: Floya Milling Co., Montreal, Quebec, Canada.

546. Canadian Pacific Railway Co., Dep. of Colonization and Development 1943. Soybeans. *Agricultural and Industrial Progress in Canada.* 25(5):75. May.
• ***Summary:*** "The main purpose of increasing the acreage and production of soybeans in Canada is to provide more vegetable oil, which is urgently needed. In order to fulfill this purpose, soybean growers have been asked to see that their beans are delivered to the mills for the oil to be extracted. There is much to be gained by doing this, for, in addition to the high cash value of the crop itself, it has been demonstrated that soybean oil meal has a higher feed value for livestock than the beans themselves. Obviously, say agricultural authorities, the first thing for a grower to do is to put aside sufficient seed for an increased acreage. The remainder of the crop should go to the mill in preference to retaining any portion of it for feed purposes.

"Some growers have for many years used soybeans in livestock rations and with reasonably good results. Much work has been done in recent years, however, to determine the value of the beans in comparison with soybean oil meal as a feed for the various classes of livestock, including dairy cattle, beef cattle, sheep, hogs and poultry. The results have almost invariably been in favour of the oil meal, and the principal reason is that in the oil extraction process the protein of the beans is heated and partially cooked and this makes it both more palatable, more digestible and therefore more efficient. For pigs and poultry whole soybeans are quite unsatisfactory, but the meal can be fed to great advantage. One of the great disadvantages of the beans as feed is, of course, the oil content, which is too high for animals to use efficiently. That is another reason why the proper extraction of the oil makes the meal a better and more satisfactory feed to use. In sending the beans to the mill, therefore, a double purpose is accomplished: the

extracted oil becomes available for war purposes, and a better feed is made available in the form of the meal."

547. *Toronto Daily Star (Canada).*1943. Market sidelights: Vegetable oil processing. Sept. 13. p. 10.
• ***Summary:*** "It is now definitely settled that Victory Mills Ltd. is to be a wholly-owned subsidiary of Canadian Breweries Ltd. with E.P. Taylor, Brewers' chairman of the board, as president of the new company."

The new company's vegetable oil processing plant, now being constructed on Toronto's waterfront, will cost $2,000,000. "Production is expected to begin in November [1944] and should be in full swing by the spring of 1945. Soybeans will be the major raw material used, but Mr. Taylor says that with a few minor adjustments the plant can readily be operated on any of numerous other vegetable oil-bearing materials, including flaxseed, sunflower, rapeseed, peanuts, copra, etc.

"Mr. Taylor gives a lot of credit to the Toronto industrial commission and its general manager, T. Bartley, for its marshalling of factual material showing that Toronto, in competition with other centres, was the best place for Victory Mills and that the 5½ acre site in the Toronto harbor area at the foot of Parliament St. was a most suitable location for its needs."

Note: This is the earliest document seen (Jan. 2010) that mentions Victory Mills Ltd., later renamed Victory Soya Mills.

548. Doig, James L. 1943. White bread: The big market for soy. *Soybean Digest.* Nov. p. 5.
• ***Summary:*** "As the manufacture of soy flour gradually became a highly specialized process, and efficient grading of the beans made it possible to use only the highest grade in the manufacture of food products, the quality of soy flours reached a high standard of excellence, and the public became conscious of its amazing food value it was inevitable that soy flours would soon become a standard ingredient in bakery products."

"As a matter of fact, we had one plant in the Maritimes where they ran a special soy loaf, containing roughly 20 percent of soy flour, which proved a good selling item... The advertising campaign on this loaf very cleverly emphasized the high protein content of the loaf, and how it was obtained by the introduction of large percentages of 51 percent protein soy flour, which inversely lowered the starch content and increased the digestibility of the loaf, and asked the customers to ask their local doctors' opinion. Most of the doctors and nutritionists in the territory readily endorsed the claims."

Yet when we consider that these special breads rarely constitute more than 3% of the total output of a bakery, it "seems logical to us that a better idea was to introduce small percentages of soy into all bread with a view of raising the protein contents to higher maximums than ever before. We decided, therefore, to concentrate on 1-3% in white breads and 3-5% in dark breads, giving a protein increase of from 20 to 35%... As proof that this decision was sound, our output of soy flour has increased some 600 percent in the last five years." Address: Floya Milling Co., Montreal, QUE, Canada.

549. *Toronto Daily Star (Canada).*1943. $320,000 plant is planned for processing soya beans. Dec. 20. p. 9.
• ***Summary:*** "A constructional program calling for the immediate expenditure of $320,000, for buildings, is proposed by Victory Mills Ltd., of which E.P. Taylor is president. These buildings are to be erected on the southeast corner of Parliament and Fleet Sts. [Streets] and include a mill house, processing house, boiler rooms and other accommodation in connection with the processing of soya beans."

Note: This plant started using screw presses, but soon added a solvent extraction plant.

550. Canadian Pacific Railway Co., Dep. of Colonization and Development 1943. Oil-bearing seed crops. *Agricultural and Industrial Progress in Canada.* 25(12):183. Dec.
• ***Summary:*** "A preliminary estimate of the production of oil-bearing seed crops in Canada for the current year gives flaxseed at 17,689,000 bushels, soybean 909,750 bushels, sunflower seed 18,600,000 pounds and rape seed 3,423,000 pounds.

"Commercial production of Argentine rape seed in Canada this year was a new venture. Seed was distributed in five provinces, chiefly in Manitoba and Saskatchewan, and a crop of 3,423,400 pounds from 4,051 acres is estimated. Yields per acre were very high in Manitoba."

"Soybean production is not new in Canada, but heavy expansion in acreage was sought in 1943. Weather conditions interfered with planting operations, especially in Ontario where the bulk of the crop is produced, and while some increase in the seeded area took place the plantings fell far short of the objective of 90,000 acres. The preliminary estimate of the total production is placed at 909,750 bushels from 50,400 acres distributed by provinces as follows: Ontario, 874,200 pounds from 47,000 acres, average yield 18.6 pounds per acre; Manitoba, 22,500 pounds from 2,500 acres, average yield 9 pounds per acre; British Columbia 13,050 pounds from 900 acres, average yield 14.5 pounds per acre. This gave an average yield for the three provinces of 18.1 pounds per acre."

551. The international who's who. 1943. London: Europa Publications Ltd. See p. 840. 26 x 20 cm. *
• ***Summary:*** An annual periodical. On page 840 this biography states: "Taylor, Edward Plunket. B.Sc.; Canadian

industrialist;" Born 1901; Educated Ashbury College, Ottawa Collegiate Institute, and McGill Univ., Montreal, Canada.

"Joined McLeod, Young, Weir and Co. Ltd. 1923. Director 1929. Resigned 1930. Director Brading Breweries 1923. President Canadian Breweries, Ltd., Orange Crush, Ltd., Honey Dew, Ltd... Sunsoy Products Ltd."

552. *Toronto Daily Star (Canada).*1944. Cash grain. Jan. 24. p. 12.
• ***Summary:*** The section titled "Vegetable oils–L.C.L." includes these two listings: Soya bean, crude–15 nom.

" Soya bean, ref. deod. [refined, deodorised]–17 18 nom.

Note: This is the earliest document seen in the *Toronto Star* (Dec. 2009) that mentions soya bean oil, or that mentions it as a commodity with a price. Address: Toronto.

553. Canadian Pacific Railway Co., Dep. of Colonization and Development 1944. Progress paragraphs: Toronto, Ontario. *Agricultural and Industrial Progress in Canada.* 26(1):13. Jan.
• ***Summary:*** "The first section of a $2,500,000 plant to extract and process soybeans, linseed and other vegetable oils will be completed in Toronto before July 1st, it is officially announced. The new plant is an enlargement of Sunsoy Products Limited, which firm will shortly change its name to conform with the wider production of the proposed new plant. Six buildings in all are to be constructed, the first as a storage plant for seed. By the end of the year the plant will likely be in full operation with provision to store sunflower, copra and rape seed, as well as soybeans and linseed and to produce vegetable oil from them."

555. Laucks, I.F. 1944. The story of soybean adhesives. *Soybean Digest.* April. p. 11.
• ***Summary:*** I.F. Laucks, a chemist operating a customs analytical laboratory, was asked by the newly established fir plywood industry of the Pacific Northwest to develop a plywood glue. Laucks worked for several years using soybean meal as the basis of his glue. For the first trial run, he persuaded one plywood factory to try one ton of the new glue. It was sufficiently good that this factory changed over their entire operation to soybean glue.

"When a number of running boards began coming apart all over the country, a committee was appointed by the plywood industry to arrange competitive tests to determine the best glue for the industry to use. The result was that soybean glue showed up considerably better than any of the rest, especially in its water resistance.

"This was the turning point in the history of soybean glue. By the latter part of 1927, about one year from the date of the competition, every plant on the Pacific coast was using soybean glue."

Photos show I.F. Laucks (the man), the I.F. Laucks Soybean Plant at Portsmouth, Virginia, and a vat where soybean glue is mixed. The company has plants in the USA, Sweden, Vancouver (BC, Canada), and Australia. Address: I.F. Laucks, Inc., Seattle, Washington.

556. *Soybean Digest.*1944. American Soybean Association will hold its silver jubilee at Urbana, Illinois, September 12-13, 1944. May. p. 11.
• ***Summary:*** A large table lists the ASA's annual meetings and officers, 1920-1944 inclusive. 1st annual meeting. Sept. 1, 1920, Camden, Indiana. President: Taylor Fouts, Camden, Indiana. Secretary: W.A. Ostrander, Lafayette, Indiana. 2nd. Sept. 1, 1921, Urbana & Tolono, Illinois. President: W.E. Riegel, Tolono, Illinois. Secretary: W.A. Ostrander. 3rd. Sept. 1, 1922, Columbia, Missouri. President: C.E. Carter, Columbia, Missouri. Secretary: W.A. Ostrander. 4th. Sept. 11, 1923, Madison, Wisconsin. President: G.M. Briggs, Madison, Wisconsin. Secretary: W.A. Ostrander. 5th. Aug. 29-30, 1924, Ames, Iowa. President: W.J. Morse, Washington, D.C. Secretary: C.L. Meharry, Attica, Indiana.

6th annual meeting. Sept. 1-3, 1925, Washington, DC. President: W.J. Morse. Secretary: C.L. Meharry. 7th. Aug. 10-12, 1925, Stoneville, Clarksdale, and Greenville, Mississippi. President: W.E. Ayres, Stoneville, Mississippi. Secretary: C.L. Meharry. 8th. Aug. 9-11, 1927, Belhaven, Washington, and Elizabeth City, North Carolina. President: F.P. Latham, Belhaven, North Carolina. Secretary: W.E. Ayres. 9th. Aug. 15-17, 1928, Camden and Lafayette, Indiana. President: Taylor Fouts. Secretary: W.E. Ayres. 10th. Aug. 22-24, 1929, Guelph, Ontario, Canada. President: G.I. Christie, Guelph, Canada. Secretary: J.B. Edmondson.

11th annual meeting. Sept. 10-12, 1930. Urbana, Illinois. President: W.L. Burlison, Urbana, Illinois. Secretary: J.B. Edmondson. 12th. Aug. 17-18, 1931, Columbia, Missouri. President: W.C. Etheridge, Columbia, Missouri. Secretary: W.L. Burlison. 13th. Sept. 2-3, 1932, Washington D.C. President: W.J. Morse. Secretary: J.B. Park. 14th. Aug. 3-5, 1933, Baton Rouge and Houma, Louisiana. President: John Gray, Baton Rouge, Louisiana. Secretary: W.E. Ayres. 15th. Aug. 22-24, 1934, Little Rock and Stuttgart and Marianna, Arkansas [Jacob Hartz of Stuttgart spoke]. President: C.K. McClelland, Fayetteville, Arkansas. Secretary: P.A. Webber.

16th annual meeting. Aug. 22-24, 1935, Evansville and Lafayette, Indiana. President: K.E. Beeson, Lafayette,

Indiana. Secretary: P.A. Webber. 17th. Sept. 14-16, 1936, Ames and Cedar Rapids and Hudson, Iowa. President: E.C. Dyas, Ames, Iowa. Secretary: K.E. Beeson. 18th. Sept. 14-16, 1937, Urbana, Illinois. President: J.C. Hackleman, Urbana, Illinois. Secretary: K.E. Beeson. 19th. Sept. 12-14, 1938, Columbus and Wooster, Ohio. President: J.B. Park, Columbus, Ohio. Secretary: K.E. Beeson. 20th. Sept. 11-12, 1939, Madison, Wisconsin. President: G.G. McIlroy, Irwin, Ohio. Secretary: J.B. Edmondson.

21st annual meeting. Aug. 18-20, 1940, Dearborn, Michigan [Hosted by Henry Ford]. President: G.G. McIlroy. Secretary: J.B. Edmondson. 22nd. Sept. 12-13, 1941, Ames and Des Moines, Iowa. President: G.G. McIlroy. Secretary: J.B. Edmondson. 23rd. Sept. 15-17, 1942, Lafayette, Indiana. President: D.G. Wing, Mechanicsburg, Ohio. Secretary: G.M. Strayer. 24th. Sept. 5-7, 1943, Cedar Rapids, Iowa. President: D.G. Wing. Secretary: G.M. Strayer. 25th. Sept. 12-13, 1944, Urbana, Illinois. President: J.E. Johnson, Champaign, Illinois. Secretary: G.M. Strayer.

557. *Soybean Digest.*1944. Canadian supply [of soybeans] is lower. May. p. 17.
• ***Summary:*** "Of the 55,400 acres planted in 1943, about 47,000 [84.8%] were in Ontario"–according to the Dominion bureau of statistics. "A recent survey of that Province indicates that only 68 percent of the planted area was harvested and that approximately 35 percent of the beans will be fed to livestock."

"In order to keep domestic crushers operating, it has been necessary to import small quantities of soybeans from the United States. This is probably one of the reasons for increasing the 1944 goal from 55,100 to 90,000 acres. A price of $1.96 per bushel for No. 1 soybeans, basis Toronto, was established as a floor level for the 1942 and 1943 crops. This price nets the grower about $1.86 at the shipping point.

"Canada has produced soybeans for several years, but it is only since the war began that acreage has expanded sufficiently to make possible a commercial crop of importance. The area has been centered chiefly in southern Ontario, although experimental growing has taken place also in Manitoba and parts of British Columbia."

A table gives Canadian soybean acreage, production, and yield from 1936 to 1943. One bushel weighs 60 pounds.

1936–Acreage: 11,217. Production: 247,984. Yield: 22 bu/acre.

1937–Acreage: 8,602. Production: 159,244. Yield: 18 bu/acre.

1938–Acreage: 9,250. Production: 203,500. Yield: 22 bu/acre.

1939–Acreage: 9,786. Production: 215,292. Yield: 22 bu/acre.

1940–Acreage: 10,600. Production: 233,200. Yield: 22 bu/acre.

1941–Acreage: 10,900. Production: 216,900. Yield: 20 bu/acre.

1942–Acreage: 44,000. Production: 925,000. Yield: 21 bu/acre.

1943–Acreage: 50,400. Production: 907,250. Yield: 13 bu/acre.

Note: This is one of the few documents seen that gives statistics on soybean production in Canada before 1943.

558. *Soybean Digest.*1944. Ontario varieties. May. p. 16.
• ***Summary:*** "In his annual report, P.M. Dewan, Ontario Minister of Agriculture, gives the bushels per acre yields of different varieties of [soy] beans at the Western Ontario Experiment Farm, in 1942, as follows:

"E.F.R., 49.27; Wisconsin Robust, 49.27; Michigan Robust, 48.41; Navy (Wigle), 48.41; Guelph Selected, 47.98; Ithaca Robust, 47.54; Michelite, 46.68, Blue Pod, 39.76; Burbank (Alberta), 38.90; Yellow Eye, 34.58; Red Kidney, 34.58; Pinto, 32.58; B.C. White, 31.98; B.C. Speckled, 26.80; Alberta Brown, 12.97.

"'E.F.R.,' Michelite and the different types of Robust beans gave the largest yields. Michelite was slightly down in the test this year but continues to give the highest average over a period of years."

559. Taylor, Demetria M. comp. 1944. The soy cook book. New York, NY: Greenberg. 215 p. Index. 21 cm. [2 ref]
• ***Summary:*** Emphasis on recipes using soy flour, sprouts, and whole dry soybeans. Contains one of the most complete early listings of commercial soyfoods products, with product name, and manufacturer name and address.

Contents: 1. Soy–The wonder bean. 2. Growing soybeans in Victory Gardens. 3. How to sprout soybeans. 4. How to cook soybeans: Green soybeans preservation, canning, dehydration, quick freezing, dried soybeans, soybean pulp or "mash" (cooked, crushed or finely chopped soybeans), soybean milk and soybean curd or "cheese," recipes for dried soybeans, recipes for canned soybeans, recipes for soybean pulp, roasted soybeans or soynuts (p. 45), soynut butter (p. 47), recipes for soybean milk and mash [okara]; "It makes a good base for macaroon-type cookies" (p. 50), recipes for soybean curd or "cheese" (tofu). 5. How to use soy flour. 6. Using soy grits and flakes. 7. Stretching meat with soybeans. 8. Using other soy products. List of [commercial] soybean products (p. 199-202). Key to recipe sources.

Chapter 2, "Growing soybeans in Victory Gardens," states (p. 4): "In general, all varieties may be classified under two main types: the field type and the edible or vegetable type. The latter type is the one which is of interest to the Victory Gardener, although a few field varieties, such as Illini or Manchu, are satisfactory for eating purposes." Varietal trials (p. 5-8) with four type-A vegetable varieties (suited for cooler, northern climates) show: In mountainous

Colorado, all four varieties matured seed at altitudes of 5,000 to 7,000 feet. In Idaho, all four varieties matured seed at altitudes of 1,700 to 3,745 feet. In Montana, Giant Green soybeans matured seed at altitudes of 3,000 to 4,900 feet. In Wyoming, Giant Green was the only variety to mature seed in Campbell county (4,600 feet) and in Park county (4,600 feet). But all four varieties matured seed in Johnson county at an altitude of 3,750 feet. Giant Green also did well in Utah and New Mexico at altitudes of 7,000 to 8,000 feet. In California, 11 counties reported success with vegetable-type soybeans. In Tucson, Arizona, 8 varieties were grown under irrigation at an altitude of 2,400 feet, all with satisfactory yields. Some varieties also did well in Canada. In St. George, Ontario, Giant Green, Bansei, Fuji, and Willomi all matured seed before killing frost. Bansei was the best producer. In Barrington Passage, Nova Scotia, Fuji was the only variety that produced pods before frost. At Bogot, Manitoba, only Giant Green matured seed before frost, but Fuji reached edible condition. At Swift Current, Saskatchewan, the season was evidently too cool for soybeans. Page 142 states: "Soy grits and soy flakes are made from soybeans in much the same way that soy flour is made. However, they contain almost no fat, and are ground more coarsely. Grits are like corn meal in texture, while flakes resemble rolled oats. Grits and flakes both contain less than 45 per cent protein."

Note 1. This is the earliest English-language document seen (April 1995) that uses the term "soynuts" to refer to soynuts. On pages 45-49 the book gives recipes for: Cream of soynut soup (using 1 cup Co-Op soynuts), Soynut rice loaf. Soynut honey buns. Soynut brownies. Soynut butter. Economical soynut brownies. Soybean brittle (using 1 cup chopped roasted soybeans).

Note 2. This is the earliest English-language document seen (Nov. 2009) that contains the term "soynut butter," used to refer to a product resembling peanut butter that is made from roasted soybeans. The recipe for "Soynut butter" (p. 47) states: "Grind 2½ cups of roasted Vee-Bee soybeans and mix with 2 tablespoons of salad oil. Use in place of butter or as a sandwich spread." On p. 197 is a recipe for Mull-Soy "ice cream."

560. *Gazette (The) (Montreal, Quebec, Canada).*1944. Victory Mills plant nearing production. Sept. 1. p. 22.
• ***Summary:*** Victory Mills Ltd., a subsidiary if Canadian Breweries Ltd., will soon begin production at its 5-acre site on the Toronto waterfront. according to announcement by E.P. Taylor, president of Victory Mills.

Mr. Taylor says that the new plant contains equipment not previously used in Canada for extracting the oil from soybeans.

Note: From this and other articles we can conclude that Victory Mills has not yet crushed any soybeans commercially.

561. Lehmann, E.W.; Bateman, H.W. 1944. Contributions of machinery and power to soybean production. *Soybean Digest.* Sept. p. 25-27.
• ***Summary:*** Tells the story of how the harvesting of soybeans using combines came to Illinois, starting in 1924. "A special soybean harvester of the beater type, was developed in Virginia and was used to some extent in other southern states. Such a harvester was secured by the Department of Agricultural Engineering in 1923 for test purposes in Illinois. This beater machine was not successful for harvesting due to the high losses. Other harvesting machines tested before the combine came on the scene were: the self-rake reaper and thresher; the mower, rake and thresher; and the binder and thresher. Tests on these various methods indicated the average losses approximated 30 percent, with individual losses as high as 45 percent."

"In 1923 a conference was arranged with representatives of three of the large manufacturing companies, and they were requested to loan a combine to the University for testing its possibilities for harvesting soybeans. The idea of using a combine, then available in large sizes in the West, on the smaller farms east of the Mississippi River where grain had always been shocked and later threshed was considered by them as a 'wild-eyed dream,' and their decision was unfavorable.

"Through the interest of C.A. Dennison [sic, Denison], branch manager of the Massey-Harris Co., of St. Louis [Missouri], a machine from Canada was secured which was sold in 1924 to Garwood Bros. of Stonington, Illinois. According to the best information we have, this was the first combine that was ever used any place for harvesting soybeans. In 1925 Mr. Denison sold 11 additional combines in Illinois. In June of that year, at the request of Mr. Denison, I surveyed the possibilities of using combines in Mississippi and he sold several machines in that state that year. By 1926 other manufacturers of combines had recognized their error and realized that the combine apparently was the solution to the soybean harvesting problem. A total of 52 machines of various makes were sold in Illinois during 1926, making a total of 64 machines available.

"Most of the early combines were purchased for harvesting soybeans, although many other crops were successfully harvested with these machines. The soybean acreage made up 53 percent of the 11,105 acres of all crops harvested by 52 of the 64 machines being used in Illinois in 1926. The average losses incurred in harvesting with the combine were less than one-third the amount lost with the other methods, which proved the combine to be the machine for harvesting soybeans. However, it is evident that since the cutter bar loss is still fairly high, a great need exists for the development of a variety of soybeans which produces

all the pods higher up on the stalk and which will not shatter and lodge as badly as do existing varieties.

"The higher quality, in addition to lower losses, of beans harvested with the combine was also most convincing as to the value of the combine in harvesting soybeans. During 1925 and again in 1926, when the soybean harvesting seasons were exceptionally wet, tests indicated the higher quality of combined beans since they were not only of lower moisture content but also the germination of the combined beans was much higher than of those harvested by other methods. A difference of 10.1 percent moisture content was found in beans harvested the same day in adjacent fields, one lot with the combine and the other with a threshing machine. The beans threshed from the shock had 24.6 percent moisture content while those harvested with the combine contained a moisture content of only 14.5 percent. It is easy to understand that standing beans dry much more rapidly following a wet period than shocked beans. Consequently many of the shocked soybeans were of a poor quality when threshed."

"Before the combine was used to harvest soybeans, approximately 50 percent of the relatively small acreage of beans produced was grown for hay. To a large extent, those farmers who grew beans for grain expected to sell them for seed. Following the advent of the combine as a means of harvesting beans for grain, the acreage of soybeans has increased very rapidly.

"There have been changes in the combine design, but in principal it is essentially the same as the combine which was introduced from the west 20 years ago. Three types of combines were used in 1926: the motor-mounted type which was drawn by a tractor, the power take off type, and a combine mounted on a tractor and driven from the belt pulley. The latter was one of the first models of the self-propelled types which has been developed to a more successful machine and put on the market in limited numbers by a few companies this season.

"The first small combines, that is the 5- and 6-foot cut, came into the picture in 1935, and the 3½- and 4-foot machines were available in 1939. These small combines were of the power take off type and were designed so that they could be operated successfully with the tractors available on most farms. Since the investment required for these small machines was low, farmers with small acreages of beans were justified in purchasing them."

"In recent years further contribution in labor reduction has been made through the improved design of the 8- and 9-foot machines so they may be operated successfully by one man. The self-propelled machine, which is now receiving considerable attention, has the distinct advantages of saving labor, making it easy to open a field, and saving more grain in opening a field. Its inherent high cost seems to make it justified where large acreages can be harvested on a farm or through custom harvesting."

A small portrait photo shows E.W. Lehmann. Address: 1. Head, Dep. of Agricultural Engineering, Univ. of Illinois [Urbana, Illinois]; 2. Associate in Agricultural Engneering.

562. Ostrander, W.A. 1944. It's fun to remember [the birth of the American Soybean Assoc.]. *Soybean Digest.* Sept. p. 16-17.

• ***Summary:*** One of the best early histories of the A.S.A. It all began on the Fouts Bros. farms near Camden, Indiana. The author, now a farm manager, was formerly a member of the Purdue University faculty. He was one of the founding spirits of ASA and served as its secretary for the first four years. "The American Soybean Association grew out of the soybean campaign that was started in 1920 in Indiana because we needed a larger acreage of legumes in the cornbelt rotation. Clover was failing us possibly because of soil acidity, its biennial growth, or things we didn't know anything about. Soybeans looked like an answer."

"It was in the fall of 1920 that we in Indiana decided to have a sort of statewide get-together to see where we stood on the soybean situation, appraise what we had, and outline where we were going. We had had county soybean field meetings over the entire state and it seemed right that we hold a big get-together to finish it up. As we worked out the plan for this meeting it occurred to us that a good neighbor policy would be to invite the growers and experiment station men from our surrounding states to join us. Start it off with a bang. So out of that which started to be a state meeting was a Cornbelt meeting and out of it the American Soybean Association. All this on the Fouts Bros. farms near Camden, Indiana. Our idea was to take the soybeans to the farmer and the farmer to the fields of soybeans in his country. Conversion on the ground.

"The response to this meeting was away above what A.L. Hodgson, County Agricultural Agent of Carroll County, and I had any reason to expect. Illinois, Ohio, Michigan, Wisconsin, and Kentucky sent growers, county agents and men from the experiment stations. Over a thousand came. We fed them well. The start was made.

"All speeches were limited to three minutes; it shut off some of the long-winded folks but it gave all a chance.

"G.I. Christie reported for Indiana. He said we had 200,000 acres and thought he had the record stopped and I guess it was for the day. No one dared to go higher, but this year it is just 10 times that amount, 2 million acres. In those days we counted every acre that had a bean on it, in the corn, for hay and for seed.

"W.L. Burlison of Illinois said there were 25,000 acres in his state and more in sight. He was right. Last year they had 4 million acres.

"George Briggs was modest in reporting 4,000 acres for Wisconsin and he still is modest for they had 115,000 acres there last year.

"Wallace Hanger of Ohio surmised that Ohio had 15,000 acres and there the acreage is now 1,500,000.

"Iowa reported 50,000 acres and now has 2,200,000 acres and still going strong.

C.R. McGee [Megee] of Michigan said they were just getting going with 5,000 acres but they now have 150,000 acres."

"After visiting the soybean fields on the three Fouts Bros. farms, eating soybeans and talking our heads off and making many new friends, it was decided to hold a winter meeting at the time of the International Hay & Grain Show at Chicago, to keep the iron hot and to carry on. The first meeting was held on the bridge connecting the two exhibit rooms as we were not considered important or big enough to rate a room. Each year our numbers grew until we had to have the largest room they had. At these winter meetings we hashed over the latest soybean findings, worked on standards for the grading of the crop, talked over certification rules and always as a final job selected the state in which was to be held the summer meeting. Each year it was to be a different state.

"Our first big problems were better varieties, methods or harvesting, and the utilization of the crop.

"Just by a lucky break we brought the Manchu down from Michigan and this was our first unintentional success, a bean that was a 'natural' for the Cornbelt at that time. It did well most anywhere for hay or grain and did not shatter as did those we had. We were growing largely the old so-called Hollybrook (the Association changed its name to the Midwest) and the Ito San was our early variety. Our big headache was the harvesting of the crop... A combine seemed to be the answer.

"Then came the utilization of the crop. Up to 1920 we had been using all soybeans produced in the Cornbelt for seed, for hay, hogging off and seed again. It was not a grain crop yet. We went to the oil extraction companies and they said sure we will put in additional machinery to take care of them as soon as you have the quantity to make it worth while. Back to the farmers we went but they came right back and said sure we will put in more acreage and glad to as soon as we are certain we can get rid of the crop at a fair price. So–there we were. It is too long a tale to tell all that came and went until the oil plant at Chicago Heights was taking all beans offered. It was the old hydraulic system and it worked fairly well. The late Russel East and I got the corn starch plant at Edinboro, Indiana, to try some beans through their Anderson Expellers. It worked. It wasn't long then before Bloomington, Monticello, and Taylorville, Illinois, had plants and that chapter was ended.

"It had not been hard to sell the idea to our farmers that they were wise to grow their own protein feed. That was a natural. When we fed the soybeans alone as a supplement the oil in the beans gave us soft pork and that was a black eye for a few years but now that, too, has been eliminated.

"Where we fell down the worst, as I see it now, was that we did not stress the human food side stronger. We talked about it enough but got nowhere. The principal reason, I believe, was in our shortsightedness in not dropping the word 'bean' and just using the word 'soy.' Let's give away half of the name after we work on the grain and open up the road to unlimited food uses of this best of all protein grains raised on our farms.

"Many still with us: One of the fine things as we look back over the past 25 years is that so many of the boys that were with us at that first meeting are still going strong for soys. I don't believe the old mainspring, W.J. Morse of the U.S. Department of Agriculture, has missed a single meeting, at least not of his own volition. Probably the ones we miss most are the two Fouts Bros., Noah and Finis, Charles Meharry and Dean J.H. Skinner. They were always on hand. You can not meet Burlison, Hackleman or Bill Riegel of Illinois without talking soybeans. George Briggs of Wisconsin is still his old soybean story self.

"Helms of Missouri, McGee [Megee] of Michigan, and Hanger of Ohio still talk of that first meeting under the trees on the Fouts farm. Hughes of Iowa is as strong as ever for the beans and Christie, while he has been gone to Canada, this some time, can still tell a tall soybean story. Our own A.T. Wiancko here in Indiana, who guided us so well from behind the scenes, is still the active pusher for soys that he always was.

"We have been making soybean history in the Association for the past 25 years. If we can go on as much farther in the next 25 years–soybean history will have been made."

Photos show: (1) "The birthplace of the A.S.A." The three Fouts brothers, Taylor, Finis, and Noah (from left to right, each wearing a hat, coat, and tie) standing in front of a barn on which is written "Soyland–Taylor Fouts," at the first meeting of the ASA, September 1920. (2) "1,000 at first meeting." The top half of this photo shows hundreds of attendees seated on the grass under trees in the yard at Soyland listening to a speech. "Attendance was far beyond that expected, with representatives from many states." The bottom half shows 25-30 mean and women standing in a soybean field at Soyland. Address: Lafayette, Indiana.

563. Simpson, Jean I. 1944. Some problems in using soybeans as food. *Soybean Digest.* Sept. p. 43-44.
• ***Summary:*** "Soy foods, well chosen and properly prepared, are exceedingly attractive but their wide acceptance depends on proper precessing, standardization and appealing to people's tastes. Dr. Simpson has been a member of the Department of Home Economics staff of the University of Illinois since 1941, when she left a teaching position at the University of Toronto" [Ontario, Canada].

Many Americans have a prejudice against soybeans for table use. This as arisen because, until recently, soybeans

have been recommended chiefly for low-cost diets. This association has "created an impression that although they are nourishing, they are not very palatable."

Three types of soy flour are generally available: the minimum-fat or no-fat with less than 1% fat, the low fat flour with about 5-8% fat, and the high-fat or full-fat soy flour with 18-24% fat. These flours work well at home for baking quick-breads and cookies, or in smaller proportions, for yeast breads and shortened cakes.

The section titled "Vegetable soybeans" explains the difference between this type and "field types of soybeans." "Throughout Illinois and in all probability throughout other states, many families are growing vegetable soybeans in their Victory Gardens and are well pleased with the results of their efforts." "Considerable interest has been aroused recently in the use of vegetable soybeans at the green or immature stage. The season during which fresh green soybeans is available is rather limited, and hence arises the problem of finding suitable methods of preserving them..." Freezing works best. Soy sprouts are a good source of vitamin C. A portrait photo shows Jean Simpson. Address: Dep. of Home Economics, Univ. of Illinois.

564. *Soybean Digest.*1944. Pioneers recognized: Fouts, Ostrander, Meharry, Hurrelbrink, Burlison, Morse, Christie, Wilkins. Sept. p. 19.

• ***Summary:*** "Some pioneers whose work contributed materially to the rise of the soybean in America were given recognition on behalf of the Association by J.C. Hackleman, University of Illinois extension agronomist, at the Tuesday evening meeting of the Silver Jubilee. They included:"

Taylor Fouts, W.A. Ostrander, Chas. Meharry, Frank Hurrelbrink, Dr. W.L. Burlison, W.J. Morse, G.I. Christie, and F.S. Wilkins.

Taylor Fouts (Camden, Indiana) was the first president of the American Soybean Association. He was one of the most enthusiastic soybean producers and a farmer with vision.

W.A. Ostrander (Lafayette, Indiana) was the first secretary of the American Soybean Association. "Then the extension agronomist at Purdue University, he worked very closely with Fouts in preparing the first meeting [in Sept. 1920 at the Fouts farm, Soyland, in Indiana].

"The late Chas. L. Meharry (Tolono, Illinois), truly one of the pioneers of both Indiana and Illinois. He grew soybeans as early as 1908, and when he announced his intention of growing 19 acres in 1909, his farm manager, C.H. Oathout, asked, 'What in the world are you going to do with that many acres of soybeans?' Mr. Meharry helped pioneer the combine for harvesting soybeans. He assisted with the work of the Association for years, acting as secretary and as a member of the board of directors. He was largely responsible for the design of the Association emblem."

Frank Hurrelbrink, a farmer from Taylorville, Illinois, "began growing soybeans in 1904 and has grown them ever since. Obtaining seed from the University of Illinois, he set out to develop his own variety, seeking a bean that would stand well, resist shattering and could be left in the corn field until the livestock could harvest the seed from the standing plants. This he did. The Hurrelbrink soybean is still grown and in demand.

"Dr. W.L. Burlison, chief of the Agronomy Department of the University of Illinois, unable to attend the Jubilee because of illness although the program was largely of his planning. He has been actively interested in the crop since his association with the department. He led a coordinated study at Illinois is search of commercial outlets for soy products and had influence in obtaining a special federal laboratory for the study of the commercial uses of soybeans.

"W.J. Morse, U.S.D.A. Bureau of Plant Industry agronomist, dean of all soybean enthusiasts. The regional laboratories are in no small part the result of his unceasing efforts."

G.I. Christie of Guelph, Canada, a former Purdue University agronomist, was president of the American Soybean Association in 1929. Now president of the Ontario Agricultural College, he was formerly director of the Indiana Experiment Station and a booster for soybeans.

The late F.S. Wilkins of Ames, Iowa, was leader of the soybean project at Iowa State College until his death in 1936. He picked the Mukden soybean variety, the most widely grown of Iowa's varieties, from the thousands of selections under his supervision. "A most enthusiastic scientist."

Photos show: (1) A.E. Burwash (Champaign, Illinois), W.E. Riegel and J.T. Smith (Tolono, Illinois), and W.J. Morse (USDA). (2) Chas. Meharry (Tolono, Illinois).

Note: This is one of two articles published in 1944 which appear to be the forerunners of the concept of "honorary life members" in the American Soybean Association.–which began in Sept. 1946.

565. *Soybean Digest.*1944. First soybean combining. Sept. p. 26.

• ***Summary:*** "By the fall of 1923 the four Garwood brothers, Frank, Harry, Herman and William, who were extensive soybean producers at Stonington, Illinois, had decided that they must find a new method of harvesting if they were to continue to expand acreage. It was their belief that it should be possible to adapt the combine as used in the western wheat fields to soybeans.

"Several harvester companies were contacted and the Massey-Harris Company agreed to make the trial which was held October 22, 1924.

"Twenty-seven and 65-acre fields of AK soybeans were harvested with a 12-foot combine. The late A.E. Buchanan, Massey-Harris engineer of Toronto, followed the machine

making necessary adjustments. People from all over Illinois, including farm paper and farm machinery representatives, attended.

"The trial was successful and those who came to scoff went home convinced. Several harvester companies came out with combines the following year.

"The above photo of the first combine in operation on the Garwood farm is from *Prairie Farmer,* which sent a representative to cover the event."

A large, grainy photo (2½ by 4½ inches) shows a man standing atop an early combine.

566. *Soybean Digest.*1944. Grits and flakes from the industry: Victory Mills Ltd.,... Oct. p. 16.
• ***Summary:*** "... a subsidiary of Canadian Breweries, Ltd., of Toronto, Ontario, has built at the behest of the Dominion government a 2 million dollar processing plant with an annual capacity of 3 million bushels on the waterfront at Toronto. The undertaking is primarily to relieve Canada's acute vegetable oil and protein feeds shortage. Soybeans and other oilbearing seeds as well as brewers' grains will be processed. Both the expeller and solvent processes will be used."

567. *Toronto Daily Star (Canada).*1944. Market sidelights: Victory Mills Ltd. Nov. 20. p. 10.
• ***Summary:*** "First unit of the new $2,000,000 soybean and vegetable oil seed processing plant of Victory Mills, Ltd., wholly-owned subsidiary of Canadian Breweries Ltd., on the waterfront in Toronto, is now in operation. Three of the five mechanical screw presses are already operating.

"The second unit, which extracts the oil and meal by a solvent process, is now being erected and will be in production before next summer."

568. **Product Name:** Soybean Oil, and "V" Soybean Oil Meal (Renamed Veeline Soybean Oil Meal in 1949).
**Manufacturer's Name:** Victory Mills Ltd. (Subsidiary of Canadian Breweries Ltd.). Renamed Victory Soya Mills in 1955.
**Manufacturer's Address:** 285 Fleet St. East, Toronto, ONT, Canada.
**Date of Introduction:** 1944. November.
**Ingredients:** Soybeans.
**New Product–Documentation:** *Toronto Daily Star* (Canada). 1944. "Market sidelights: Victory Mills Ltd." Nov. 20. p. 10. "First unit of the new $2,000,000 soybean and vegetable oil seed processing plant of Victory Mills, Ltd., wholly-owned subsidiary of Canadian Breweries Ltd., on the waterfront in Toronto, is now in operation. Three of the five mechanical screw presses are already operating."

*Soybean Digest.* 1945. June. p. 9. "Canada climbs aboard soybean bandwagon with Victory Mills Ltd." "Victory Mills Ltd. was recently constructed on 5½ acres of vacant land on Toronto's busy waterfront. The continuous solvent extraction plant is now actively crushing soybeans..."

Soybean Blue Book. 1947. p. 64. "Processors of soybeans in Canada. Toronto–Victory Mills Ltd. 285 Fleet St. East, Toronto. Subsidiary: Canadian Breweries Ltd." 5 expellers, capacity 120 tons. Naptha [Naphtha] solvent, capacity 110 tons. Storage capacity: 1,150,000 bushels. President: H.D. Edgly. Vice President: C.L. Rogers. Head soybean buyer and director of agricultural research, D. Charles W. Cook. Plant superintendent: E.H. Gautkey. Meal sales manager: J.C. Henderson. "V" soybean oil meal. Also makes high and low fat soy flour.

Soybean Blue Book. 1948. p. 74. The company also makes Indosoy industrial soy flour, and Soywhite fat free soy flour.

Soybean Blue Book. 1949. p. 90. The company's soybean oil meal is now named Veeline." On page 82 is a half-page ad titled "Victory Mills Limited." An excellent illustration shows the entire facility. "Head office and plant: 285 Fleet St. East, Toronto. Montreal office: 816 Royal Bank Bldg, Montreal." Across bottom of ad: "Vegetable oils, oilmeals, soybean flours, malt sprouts, brewer's-malt, dried yeast, dried grains."

Soybean Blue Book. 1955. p. 97. The company is now named Victory Soya Mills, Ltd. Same address. "Affiliate of Procter & Gamble Co., Cincinnati, Ohio. Phone: Empire 2 8771.

Soybean Blue Book. 1960. p. 74. The company is now located at 333 Lake Shore Blvd. East, Toronto 2, Ontario. Phone: Empire 3-8771.

Soybean Blue Book. 1968. p. 96.

Soybean Digest Blue Book. 1978. June. p. 118. Address: 333 Lake Shore Blvd. E., Toronto M5A 1C2, Ontario, Canada.

569. *Chatham Daily News (Ontario, Canada).*1944. Kent county leads province in soybean production: Value of 10 field crops at over 6½ million. Dec. 18. p. 1.
• ***Summary:*** "Soybean production in Kent County for the past year was higher than that of any other county in Ontario, statistics released this morning by the Ontario Department of Agriculture reveal. Kent has led all of Ontario in the production of soybeans for the past three years."

"Kent's soybean output totalled 284,007 bushels which is over 200,000 bushels more than was produced in any other county. Essex was second in output with 81,720 bushels." The soybean Kent County soybean crop was worth $582,214.

570. Capital: New Canadian domestic soybean variety. 1944. Seed color: Yellow (straw), hilum pale.

• ***Summary:*** Sources: Dimmock, F. 1945. "Soybean growing in Canada." *Soybean Digest.* June. p. 8-9. "More recently new varieties made available through breeding work in the Dominion are Pagoda, Goldsoy, Kabott, Capital and Harmann."

Dimmock, F. 1948. "Soybean breeding at Ottawa." *Soybean Digest.* March. p. 18.

"More recently a new variety, Capital, has been added to the group. Capital originated from a cross between strain 171 x A.K. (Harrow) made in 1935. Strain 171 was a selection obtained from a mixed lot of seed received by the Division of Forage Plants, Ottawa, in 1931 from J.L. North, Royal Botanic Garden, London, England and was collected in the vicinity of Sochentze, east of Harbin, Manchuria."

Morse, W.J. 1948. "Soybean varietal names used to date." Washington, DC: Appendix to the mimeographed report of the Fourth Work Planning Conference of the North Central States Collaborators of the U.S. Regional Soybean Laboratory, Urbana, Illinois. RSLM 148. 9 p. May 26. See p. 2. "Capital–Central Experiment Farm (Canada)."

Dimmock, F. 1948. "Soybeans." *Canada. Department of Agriculture, Farmers' Bulletin* No. 149. p. 1-19. June. Also called Canada. Dept. of Agriculture, Publication No. 807 (Actually 808). A map (p. 13) shows that Ontario is divided into 5 climatic zones for soybeans, with each zone having earlier and later areas. The varieties best suited for each zone and area are given. Capital is best suited for zones 3 and 4.

USDA Production and Marketing Administration [Grain Branch]. 1948. "Soybean varieties: Descriptions, synonyms and names of obsolete or old and seldom grown varieties." Washington, DC. 25 p. Aug. See p. 3. "Capital–Selection from a cross between strain No. 171 and A.K. (Harrow) by the Central Experiment Farm, Ottawa, Canada. Maturity, very early; pubescence, gray; flowers, white; pods, two- to three-seeded; shattering, medium; seeds, straw yellow with pale hilum, about 3,800 to the pound; germ, yellow; oil, 19.7 percent; protein, 39.3 percent; iodine number, 137."

Weiss, M.G.; Stevenson, T.M. 1955. "Registration of soybean varieties, V." *Agronomy Journal* 47(11):541-43. Nov. See p. 542. Capital (Registration No. 16) "originated as an $F_8$ selection from the progenies of a cross between Strain 171 and AK (Harrow) in the soybean breeding program of Forage Crops Division, Central Experimental Farms, Ottawa, Ontario, Canada. Strain 171 is an early maturing selection from a mixed seed lot obtained in 1931 from J.L. North, Royal Botanic Gardens, London, England, the germ plasm of which had been collected in the vicinity of Sochentze, east of Harbin, Manchuria. AK (Harrow) is a selection made at the Dominion Experiment Station, Harrow, Ontario from the AK variety.

"Capital is a moderately tall variety with erect, determinate growth and numerous short side branches. It has purple flowers, tawny pubescence, brown pods at maturity, and predominantly 2 to 3 beans per pod. The beans are small, round in shape and have yellow cotyledons, and yellow seed coat color with a light brown hilum and a distinctly dark spot at the micropyle. Capital is classified as Group 0 maturity, ripening approximately 3 days earlier than the Ottawa strain of Mandarin when grown at Ottawa and approximately the same date at more southern locations. Its region of adaptation extends laterally through central Minnesota and Wisconsin, Northern Michigan, and southeastern Ontario.

"Capital has been tested since 1941 at Ottawa and since 1946 in the Group 0 Regional Tests in the North Central States."

"Capital was licensed as a new variety in Canada in 1944 and released for production the same year."

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 8-9. Capital is in the USDA Germplasm Collection. Maturity group: 0. Year named or released: 1944. Developer or sponsor: F. Dimmock, Dep. of Agriculture, Central Experimental Farm, Ottawa, Ontario, Canada. Literature: 13, 14. Source and other information: Selected from 'No. 171' (introduced in 1931 from Sochentze, east of Harbin, Heilongjiang, China, via the Royal Botanic Gardens, London, England) x 'A.K. (Harrow)'. Prior designation: None. Address: USA.

571. *Ontario Agricultural College and Experimental Farm (Guelph), Annual Report.*1944. Department of field husbandry. 69:57-59. For the year 1943. See p. 59.
• ***Summary:*** The section titled "Co-operative crop testing" (p. 59) begins: "Replicated tests with leading varieties of oats, barley, corn and soybeans are being conducted on farms in many parts of the Province to obtain reliable information regarding the best varieties for each district and soil type." In 1943 there were 16 tests with 9 varieties of soybeans. Address: Guelph, Ontario.

572. **Product Name:** Agé.
**Manufacturer's Name:** Slocan Soya Co.
**Manufacturer's Address:** Slocan, BC, Canada.
**Date of Introduction:** 1944?
**New Product–Documentation:** Note: Slocan is in the southeast part of British Columbia. Letter from Edward and Danette Westlind. 1989. Aug. 14. "My wife and I are purchasing a small tofu and agé business on September 1, 1989. Slocan Soya Co. was started during the second World War when there was a large population of Japanese Canadians interned in the Slocan Valley. For roughly 30

years, agé was the only product made by Slocan Soya. Twelve years ago Slocan Soya Co. was sold to a local Caucasian woman who started producing tofu to supplement her income. From the 1940s until now there has been very little in equipment upgrading and the business has been gradually declining due to lack of interest on the part of its owner. We are confidant that with new energy and enthusiasm on our part the business can be revived."

573. *Toronto Daily Star (Canada).*1945. D.J. Bunnell... Jan. 25. p. 14.
• ***Summary:*** "... who has just been appointed president and elected a Director of Victory Mills Limited... Mr. Bunnell was formerly Vice-President and Director of Central Soya Company, Inc., one of the three largest soybean processors in the United States."

A large portrait photo shows D.J. Bunnell.

574. Morse, W.J. 1945. Soybeans in the land of our enemies. *Soybean Digest.* Jan. p. 6-7.
• ***Summary:*** Text of a letter to the American Soybean Assoc., Guelph, Canada, written from Tokyo, Japan on 20 July 1929. This is the first ASA meeting Morse has missed. He and Dorsett, comprising the Oriental Agricultural Exploration Expedition, arrived in Japan on March 18 and set up headquarters in Tokyo. "It is amazing, the extent to which the soybean is used for food in Japan." For details, see Morse 1929 ("Letter from Dr. Morse"). Address: USDA Bureau of Plant Industry, Washington, DC.

575. *Toronto Daily Star (Canada).*1945. Ma's cooking was good. Daughter's is scientific. Feb. 14. p. 4.
• ***Summary:*** Miss Katharine Currie is a home economics teacher at Weston collegiate and vocational school. She is learning things about food her mother never learned.

"'A year ago girls of our class experimented with soy bean flour cakes, which they found had a high nutritional value, said Miss Currie."

576. **Product Name:** Nippy Nut Butter.
**Manufacturer's Name:** Kavanaugh Foods, Ltd.
**Manufacturer's Address:** Toronto, Ontario, Canada.
**Date of Introduction:** 1945. February.
**How Stored:** Shelf stable.
**New Product–Documentation:** *Soybean Digest.* 1945. Feb. p. 22. "'Nippy Nut Butter' is a bread spread recently introduced by Kavanaugh Foods, Ltd., Toronto. The product is made from debittered and deflavored soybeans, and is about the same consistency and color as peanut butter, though it has a flavor all its own. The product possesses high protein and mineral value. The company's covered wagon symbol is prominently displayed."

577. Nicholls, Lucius. 1945. Tropical nutrition and dietetics. 2nd ed. London: Baillière, Tindall and Cox. xii + 370 p. Feb. Illust. Index. 22 cm. [30+* ref]
• ***Summary:*** This 2nd edition, which contains more than twice as many pages as the 1st, is extremely clear and well written, especially for beginners. Both books were written when the knowledge of nutrition was undergoing rapid development. It contains new information on major vitamins (nicotinic acid, vitamin K), several minor vitamins, several minerals including "trace" elements, much recent knowledge on the constituents of foodstuffs, foodstuffs more or less peculiar to the warm climates, diets suitable for hospitals, prisons and other institutions and for labourers at large, public health activities related to nutrition, food poisoning, insect pests of grain foods. The great progress in parasitology and nutrition has led to the lowering of death rates, especially infantile mortality; this "is producing such an increase in the numbers of the populations of the tropics that one may wonder what will be the nature of the end of it, for an end there must be." There is "growing acceptance that all persons have a right to diets adequate for good growth and health, as in another sphere, it has long been accepted that all children have a right to primary education" (p. v-vi).

Fats and lipoids (p. 4-8): "The fats and lipoids may be defined as substances which are soluble in ether, chloroform or benzene, but insoluble in water, and can be used as food by living organisms." Edible oils include olive, coconut, and sesame (gingelly) oil. "The fats are compounds of glycerol, which is trihydric, and fatty acids, which are monobasic, hence on hydrolysis the fats split up into three molecules of fatty acids and one of glycerol." An example is given. The naturally occurring fats are made up of many triglycerides plus various acids. There are two categories of fatty acids: Saturated and unsaturated. In saturated fatty acids (which contain carbon, hydrogen, and oxygen), the number of hydrogen atoms is twice the number of carbon atoms. The names and formulas of 8 saturated fatty acids are given. In unsaturated fatty acids, the number of hydrogen atoms is less than double the number of carbon atoms. These include oleic acid, linoleic acid, linolenic acid (first found in linseed oil), and arachidonic acid. "The unsaturated fatty acids can take up iodine (or other halogen) by addition to form saturated compounds. The amount of iodine taken up by a fat is more or less characteristic of that fat, and is known as the *iodine number,* and this number roughly indicates the amount of unsaturated fatty acid in the composition of the fat. Table III (p. 6) gives the iodine numbers of 13 vegetable oils and 5 animal fats. The highest iodine numbers are found in linseed oil (175-205), soya bean oil (137-41), and maize [corn] oil (113-25). The lowest iodine numbers are found in coconut oil (9), butter (26-28), palm oil (20-56) Chinese "tallow" (30), margarine (50), shea butter (56), and lard (60-70).

"Soft fats or oils, which are rich in unsaturated fatty acids, can be hardened to a desired consistency by hydrogenation, by which they are saturated with hydrogen by the aid of a catalyst, such as powdered nickel. The process has been widely used for the production of *margarine* and lard substitutes from vegetable and whale oils." "Human needs for fat. Fats are deposited in the subcutaneous tissue as a protection against cola and injury, and in the abdomen as a padding and support for the viscera. Their light, compact and soluble nature enables the storage of them to take place without the addition of water, and this can occur with no other substance. The fats are composed of the same three elements as the carbohydrates, but they are superior to them as a supply of energy because they have less oxygen in proportion to the carbon and hydrogen, and hence on complete combustion produce more energy [more than twice as much per gram]. Any normal deposit of fat is a reserve store for the production of heat and work."

Lipoids fall into three groups: Sterols, phospholipides (incl. lecithin), and glycolipides.

Chapter 4, titled "Vitamins: History, animal experiments, etc.," contains an excellent history of the subject. "The history may be considered to have started with the slow realization that the disease scurvy was due to a dietary error." Doubtless in ancient times it had been common in besieged towns, but it was not mentioned in the literature until Europeans began to take long ocean voyages. In 1498 Vasco da Gama lost 100 of his 160 men to scurvy. In 1535 Jacques Cartier first used a fresh vegetable preparation (a decoction of spruce tree needles, on the recommendation of Red Indians in Newfoundland) to effectively treat scurvy. "Two names stand out in connection with the dietetic treatment of scurvy in the 18th century." An Austrian army doctor, Dr. J.G.G. Kramer, (Physician to the Imperial Armies of Hungary, 1720-1730) wrote at this time: "3 or 4 ounces of orange or lime juice will cure this dreadful disease without other help." In 1747 James Lind, a British naval surgeon, performed a famous experiment on 12 men who were severely ill with scurvy. He divided them into 6 groups and tried six therapeutic measures of which the only successful one was two oranges and a lemon daily. In 1757 his famous *Treatise on Scurvy* as published. In 1795 the British Admiralty finally adopted Lind's recommendation–after 100,000 lives had been lost to scurvy. Similar histories of beriberi and rickets are given.

There is a small section on "Roughage" (p. 162). In Chapter 11, "Analyses of foodstuffs," the information on the same 14 pulses, including Soya bean (p. 184), is slightly more detailed. Under nuts and seeds (p. 192-93) are: Coconut milk. Gingelly seeds. Mustard seeds, Brassica juncea. Rape seed, Brassica napus. See also: Adlay (Job's tears), Coix lachryma (p. 182, 214). A good section on "Pulses, dhals, and beans" (p. 215-17), includes the soya bean. "The beans and peas fall under the general term pulses. Split peas are called *dhals* in Southern India, and dried peas, especially the smaller kinds, are called *grams.*" "Unfortunately the pulses are not very digestible and do not find a prominent place in the diets of the well-to-do." The commonest of the dhals is the lentil, sometimes called *Massur dhal.* There are two methods of making dhal: dry and wet. The best dhals are prepared by the dry method. The dhals are more digestible than the grams. Beans are "pulses with seeds more or less kidney shaped... The dried beans are the least digestible of the pulses."

The section on "Nuts and oil seeds" (p. 227) has much about coconuts, coconut oil and coconut milk. The section on "Fluorosis" (p. 306-09) notes: "When the amount of fluorine in the water exceeds one part per million some degree of mottling of the teeth usually occurs among the children drinking it.

The section on "Saponins in foodstuffs" (p. 309-10) lists the many foodstuffs in which they are found, including the soya bean.

Lucius Nicholls was born in 1884. Address: M.D., B.C., B.A. (Cantab.), Colombo, Ceylon.

578. Milner, Max. 1945. The respiration and storage behavior of soybeans. PhD thesis, University of Minnesota. 70 p. March. In: Doctoral Dissertations Accepted by American Universities, 1945. Also published as Minnesota Agric. Exp. Station, Scientific Journal Series, no. 2247, 2249, 2274, 2304. See also Milner and Geddes 1945-1946 in Cereal Chemistry. [102 ref]
• ***Summary:*** Four parts discuss heating, interseed air movements, aeration, moisture content, mold growth. At the end of the thesis is a Vita (autobiographical sketch). Max Milner was born in Edmonton, Alberta, Canada on 24 Jan. 1914. Address: Univ. of Minnesota.

579. Olmsted, Fred L. 1945. Who's who and why [Herbert Marshall Taylor and Delsoy]. *Detroit News.* April 16. p. 4.
• ***Summary:*** Herbert Marshall Taylor is a native of Canada. When "hail, frost, and influenza" put an end to his farming in Alberta, he returned to Toronto, where he had received a university degree 6 years earlier. "He acquired American rights to a gadget which British housewives had bought in quantity to make cream from butter and milk through homogenization. He sold 30,000 in the United States, but it wasn't a big-time success.

"By 1937 Taylor had perfected a product using a milk base and vegetable fat. And he had motorized the gadget. He started selling the product to bakers in New York. It saved them $1 a gallon on whipping cream. The idea spread to other cities."

In Nov. 1942 the War Food Administration issued an order prohibiting the sale of whipping cream in America. After dairy interests forced Taylor to leave Chicago, he

picked up a partner, Eric R. Swanson, who is still with him, and in Dec. 1943 started a business in Detroit. [Note: Swanson lived most of his life in Dearborn.] Though dairy people continued to oppose him, his "business soared. In 1944 it jumped from 1,400 to 20,000 gallons a month. He sold at wholesale, then added half pints for the home trade. Now he claims 1,500 independent distributors here [in Detroit]. But along came a War Food Administration order placing a 19 per cent limit on all fats–animal or vegetable–used in his product [which combined a milk base with vegetable fat]. WFA also cut his milk quota. So he started using soy milk as a base, producing an all-vegetable product.

"Taylor drew the fire of OPA [Office of Price Administration], too. He says it is demanding damages for overcharges which would put him out of business. But Taylor isn't through. He grossed $267,000 last year. He added a plant in Dearborn to his start in Detroit. He's planning to market soy milk, butter, cheese [tofu?], and frozen dessert [soy ice cream]. There is an indication that Henry Ford is interested."

Note 1. This is the earliest English-language document seen (March 2007) that uses the term "frozen dessert" to refer to soy ice cream.

Note 2. Herbert Marshall Taylor learned how to make soymilk and soy-based whipped topping from Bob Smith and Rex Diamond at Henry Ford's George Washington Carver Laboratory in Dearborn.

"'The dairy lobby in Washington [DC] is powerful,' says Taylor. 'But I've been fighting the dairy interests for 12 years. They'll never stop me.'" A photo shows Mr. Taylor.

An ad below this article (not in *The Detroit News*, but in Rex Diamond's scrapbook; original source and date unknown) is titled "What is Delsoy? It's the dessert topping that's winning the enthusiastic approval of housewives by the hundreds of thousands. Delsoy is the original topping made of natural vegetable products." The ad shows illustrations of two non-dairy whip toppings: (1) In the foreground, "Delsoy Super Whip: Instant Dessert Topping" which is sold in a pressurized can. The ad states: "Introduced in August 1944, the first product of its kind, Delsoy dessert topping has gained tremendous popularity. Continuing to grow by leaps and bounds..." (2) In the background, "Delsoy: A delicious whip," a refrigerated perishable product which is sold in a half-pint paper container shaped like a truncated cone.

• ***Summary:*** A detailed description is given of several methods developed for sprouting cereal and legume seeds in bulk. Wooden tubs were found best for sprouting soybeans (Mandarin variety was used), Windsor broad beans, vetch, and cereals. Recipes for use of the sprouts are given. Served with tomato sauce or in a salad, parboiled and cooled soybean sprouts were disliked by more people than liked them. They were found tough, required too much chewing, and the flavor was not well liked. Address: Macdonald College, McGill Univ., Montreal, QUE, Canada.

581. Harman: New Canadian domestic soybean variety. 1945. Seed color: Yellow (straw), hilum black.

• ***Summary:*** Sources: Morse, William J.; Cartter, J.L.; Probst, A.H.; Williams, L.F.; Saboe, L.C.; Heuskinveld, D.; Collins, F.I.; Kroeber, O.A.; Kalton, R.R.; Feaster, C.V.; Geeseman, G.E.; Lawrence, R.E. 1945. See p. 7. "Harman–Selection from the Manchu variety by the Dominion Experiment Station, Ontario, Canada. Maturity, early; pubescence, tawny; flowers, purple; pods, two- to three-seeded; shattering, medium; seeds, straw yellow with black hilum, about 2,900 to the pound; germ, yellow; oil, 19.1 percent; protein, 42.6 percent; iodine number, 135."

Bernard, R.L.; Juvik, G.A.; Nelson, R.L. 1987. "USDA soybean germplasm collection inventory." Vol. 1. INTSOY Series No. 30. p. 10-11. Harman is in the USDA Germplasm Collection. Maturity group: III. Year named or released: 1943. Developer or sponsor: Department of Agriculture, ES (Experiment Station), Harrow, Ontario, Canada. Literature: 13, 14. Source and other information: Selected from 'Manchu'. Prior designation: None. Address: USA.

582. *Toronto Daily Star (Canada).*1945. Use soy bean flour to keep loaf fresh. May 3. p. 2.

• ***Summary:*** "Ottawa [Ontario], May 3–Mouldy bread, the age-old problem of sea cooks and ordinary housekeepers, may be ended by some kitchen magic of four Canadian navy cooks. Soy bean flour, they have found, added to bread, gives it richer flavor, higher nutritional value and works the miracle of keeping it fresh for at least 19 days.

"Canadian bakery concerns have already expressed interest in the discovery by Warrant Cookery Officer Alexander S. Jarvis..." Address: Special to The Star.

583. Doig, James L. 1945. Soy is a valuable food ingredient, not a substitute. *Soybean Digest.* May. p. 16, 18, 20.
• ***Summary:*** Note: This is the earliest document seen (Nov. 1999) that uses the word "soy" in the title (in the form "soy is") to refer to soy products; before this time "soy" always referred to soy sauce. Address: Canadian representative, A.E. Staley Mfg. Co.

584. *Soybean Digest.*1945. Grits and flakes from the industry: Henry Egly to Victory Mills in Toronto. May. p. 30.
• ***Summary:*** "Henry D. Egly has announced his resignation as manager of the A.E. Staley plant at Richmond [sic, Painesville], Ohio and effective May 1, he joined the Victory Mills, Ltd., Toronto, Ontario, a subsidiary of the Canadian Breweries, Ltd. The Victory Mills has just recently started operating a new soybean processing plant." Replacing Mr. Egly at Staley is Thomas Longbons, his assistant. Longbons' new assistant is James Creel.

585. MacDowell Brothers. 1945. If you are on a diet... (Ad). *Toronto Daily Star (Canada).* June 11. p. 8.
• ***Summary:*** "... requiring special foods, particularly those with low carbohydrate content, mail coupon below to MacDowell Bros., Brockville, Ont., manufacturers of Special Purpose Foods for 38 years [i.e., since about 1907]– Gluten Flour, Starch-free Bran, Soy Bean Flour, Sugar-free Desserts, Sugarless Sweetener, Sugar-free Beverages, Yeast-Vitamin B Complex, Diabetic Manuals, etc.

"Bread from Genuine Gluten Flour baked by:" Gives the name and address of three bakeries [probably located in Toronto or Brockville].

"Special purpose foods–Sold by: T. Eaton Co., Limited (Toronto, Canada). Simpson's Food Department. Michie & Co., 7 King St., West. Canadian Health Aids Company, 8 Richmond St., East."

Note 1. This ad also appeared in the issue of June 27 (p. 17). A similar ad, with a different format but much the same information, appeared on 13 Feb. 1946 (p. 16).

Note 2. An ad in this newspaper dated 16 Jan. 1934 (p. 7) is for MacDowell's Merrillized yeast (with added vitamin B). A subsequent ad in this newspaper dated 20 Nov. 1944 (p. 14) is for MacDowell's Gluten Bread. Address: Brockville, Ontario.

586. Dimmock, F. 1945. Soybean growing in Canada. *Soybean Digest.* June. p. 8-9.
• ***Summary:*** Canadian soybean production has more than quadrupled in 4 years. The soybean was the first grown in trial plots at Guelph, Ontario, in 1895. It was largely lost sight of during the next 30 years.

"According to official statistics the soybean crop in Canada totalled approximately 45,000 acres in 1944, of which 44,700 acres were grown in Ontario... Only last year one of the finest and most up-to-date processing plants on the whole continent was put into operation, and is capable of handling 3 million bushels of soybeans annually."

"Of the varieties grown at present, Mandarin (Ottawa), and A.K. (Harrow) are the most widely used. Mandarin (Ottawa) is early maturing and possesses many other excellent characteristics, among them being the ability to yield well, high resistance to lodging, and good plant type. A.K. (Harrow) is later in maturity, higher-yielding and produces seed of excellent quality. Both are selections which have been developed as the result of the breeding program conducted by the Dominion Department of Agriculture. Other popular varieties are O.A.C. No. 211 and Manchu. More recently new varieties made available through breeding work in the Dominion are Pagoda, Goldsoy, Kabott, Capital and Harmann."

In Canada, the stage is now set for an expansion of soybean production. High yielding, well adapted varieties are available and good market facilities have been provided.

Note: This is the earliest document seen (Oct. 2004) that mentions the soybean variety Capital. Address: In Charge, Soybean Breeding Work, Central Experimental Farm, Ottawa.

587. *Soybean Digest.*1945. Canada climbs aboard soybean bandwagon with Victory Mills Ltd. June. p. 9.
• ***Summary:*** Victory Mills Ltd. was recently constructed on 5½ acres of vacant land on Toronto's busy waterfront. The continuous solvent extraction plant is now actively crushing soybeans, and "is the last word in mechanical ingenuity and oil processing technology." It is bounded on two sides by deep water anchorage and served by railway sidings, and "is designed to get the utmost value out of the humble soybean."

"Victory Mills Limited is the answer to Canada's vegetable oil paradox; Canada is one of the largest consumers, per capita, of vegetable oils in the world... yet, Canada is one of the lowest producers. The fault has been inadequate processing facilities. Consequently, Canadian farmers could see no point to growing soybeans on a big scale.

"On the other hand, Canadian industrialists were reluctant to build a modern soybean plant, if they had to rely on imports. This picture changed almost overnight owing to the courage and foresight of Canadian business men, headed by E.P. Taylor, chairman of the board of Canadian Breweries Limited, and also, chairman of the board of Victory Mills Limited. Convinced that the soybean had a great future, and convinced that Canadian farmers would be

quick to take advantage of opportunity, these men built Victory Mills. Their judgment has already been proven sound. Canadian soybean acreage is starting to jump"–from a trifling 200,000 bushels in 1942 to 686,600 bushels in 1944. "That's a long way from Victory Mills' present 3 million bushel capacity so Canada will have to depend on U.S. farmers for some time to come."

An architect's drawing shows an aerial view of the Victory Mills plant. A photo shows the interior of the plant.

588. *Soybean Digest.*1945. Bees offer soy market. July. p. 15. [1 ref]
• ***Summary:*** Beekeepers offer a new market for soy flour, which is now being used extensively as an ingredient in pollen supplements fed to bees. Pollen is a high-protein food which bees gather from flowers and store in their hives. Pollen supplies in the hive tend to run low during the spring, and it is at this time that supplementary feeding with pollen substitutes is done.

Experimental feeding of bees with soy flour in pollen supplements has been conducted by: (1) the U.S. Bee Culture Laboratories at Madison, Wisconsin; (2) the division of entomology at the University State Farm, St. Paul, Minnesota; and (3) the Dominion Experiment Farm, Ottawa, Canada.

589. Victory Mills Ltd. 1945. Laborers needed immediately for full-time or part-time employment... (Ad). *Toronto Daily Star (Canada).* Sept. 6. p. 11.
• ***Summary:*** "... on building construction at Victory Mills Limited. Apply to National Employment Service, 174 Spadina Avenue, or direct to Pigott Construction Co., Ltd. Fleet and Parliament Streets, Toronto. Order No. 48."

590. Coolidge, Marian. 1945. Soy is original, not substitute (Abstract). *Let's Live.* Sept. p. 8.
• ***Summary:*** This ½-page article is "Highlighted from an article by Jas. L. Doig in *Soybean Digest."* That article is: Doig, James L. 1945. "Soy is a valuable food ingredient, not a substitute." *Soybean Digest.* May. p. 16, 18, 20.

591. Harkness, Ross. 1945. Canada ace high in France: Hope we understand plight. *Toronto Star (Ontario, Canada).* Oct. 6. p. 4.
• ***Summary:*** The French are grateful to Canada for the important part they played in winning World War II and liberating France. Food is still scarce and rationed in France. "Beginning in November bread will be made with a mixture of whole wheat and soya flour and will be unrationed."

592. Bailey, Ethel Zoe. 1945-1948. Soja max–U.S. and Canadian sources. Ithaca, New York: L.H. Bailey Hortorium. 1 card. Unpublished.
• ***Summary:*** *Soja max* is an early scientific name for the soybean given by Charles V. Piper in 1914; it was superseded / replaced by the current scientific name *Glycine max* (L.) Merrill in 1917. This hand-written index card is in the Bailey Hortorium's index system of nursery catalogs and/or botanic garden seed lists developed by Ethel Zoe Bailey. On the card are two-part coded entries referring to botanic gardens or nurseries. Part 1 is the code for the name of the botanic garden, and part 2 is the last two letters of the earliest year in which the plant for that card appeared in this garden's catalog. For example "Ottawa 45" refers to the 1945 catalog of the Arboretum in Ottawa, Canada. There are only two listings for *Soja max* from U.S. and Canadian sources:

(1) Ottawa 45–Arboretum, Central Experiment Farm, Ottawa, Ontario, Canada. (2) Asgrow 48–Asgrow Export Corp., Associated Seed Growers, Orange, Connecticut, USA. Address: L.H. Bailey Hortorium, 462 Mann Library, Cornell Univ., Ithaca, New York 14853-4301. Phone: 607-255-7981. Fax: 607-255-7979.

593. Bailey, Ethel Zoe. 1945. Soja hispida–U.S. and Canadian sources. Ithaca, New York: L.H. Bailey Hortorium. 1 card. Unpublished.
• ***Summary:*** *Soja hispida* is an early scientific name for the soybean given by Konrad Moench in 1794; it was superseded / replaced by the current scientific name *Glycine max* (L.) Merrill in 1917. This hand-written index card is in the Bailey Hortorium's index system of nursery catalogs and/or botanic garden seed lists developed by Ethel Zoe Bailey. On the card are two-part coded entries referring to botanic gardens or nurseries. Part 1 is the code for the name of the botanic garden, and part 2 is the last two letters of the earliest year in which the plant for that card appeared in this garden's catalog. For example "Ottawa 45" refers to the 1945 catalog of the Arboretum in Ottawa, Canada. There is only one listing for *Soja hispida* from U.S. and Canadian sources:

(1) Ottawa 45–Arboretum, Central Experiment Farm, Ottawa, Ontario, Canada. Address: L.H. Bailey Hortorium, 462 Mann Library, Cornell Univ., Ithaca, New York 14853-4301. Phone: 607-255-7981. Fax: 607-255-7979.

594. Bouthillier, Louis-Philippe. 1945. The amino acid deficiencies of soybean protein. PhD thesis, University of Illinois at Urbana-Champaign. 118 p. In: Doctoral Dissertations Accepted by American Universities, 1945. [10+ ref]
• ***Summary:*** The author received his MSc degree from the Univ. of Montreal, Canada. Address: Univ. of Illinois at Urbana-Champaign.

595. Chao, Buwei Yang. 1945. How to cook and eat in Chinese. New York, NY: The John Day Co. xviii + 262 p.

Foreword by Hu Shih. Preface by Pearl S. Buck. Illust. Index (of both recipe numbers and page numbers). 21 cm. An Asia Press Book. New editions, 1949 and 1963.
• ***Summary:*** A superb, funny, authentic Chinese cookbook. The "Author's note" begins: "I am ashamed to have written this book. First, because I am a doctor and ought to be practicing instead of cooking. Secondly, because I didn't write the book... You know I speak little English and write less."

The section on "Conventions and hints" states: Clear-simmering is slow cooking without soy sauce. Red-cooking is slow-cooking with soy sauce (p. xvi).

In Chapter 2 titled "Eating materials," the section on "Grains" (p. 21-22) notes: There are two important supplementary starchy foods in the Chinese diet: Sweet potatoes (the poor man's luxury) and "beans: red beans [probably azuki], horse beans, and above all soy beans and their products. Bean milk and bean curd [tofu] are regarded in this country [America] as specialties. But in China, cabbage and bean curd mean a poor family's home cooking. Soy beans not only give starch, but are also the most important source of protein, since most people cannot afford much animal food."

In Chapter 3, "Cooking materials": "The commonest vegetable oils in China are [soy] bean oil and peanut oil" (p. 24). Soy sauce is a "salter," which is not freely exchangeable with salt. It is never used in the white kind of cooking but it is used (sometimes with salt) in red-cooking and red-stir-frying (p. 25).

"Flavorers.–The most important flavorer of Chinese food is soy-bean sauce or soy sauce for short. With soy sauce you can cook an untiring series of Chinese dishes with nothing but those foods you can get at any American chain market. In fact even pretty good soy sauce can now be bought at such chain markets. Chinese dishes are called red-cooked or white-cooked according as soy sauce is or is not used. But even in the white-cooked dishes, especially the slow-cooking ones, the morsels, or rather the chopstickles [chopsticks], of food are often dipped in soy sauce before eating. One thing we never do, however, is to pour soy sauce on rice. When Americans do that, it looks funny. It must taste funny too.

"Soy sauce is made from fermented boiled soy beans in which salt is added. Several kinds are now seen in this country. The least useful is called in Cantonese *chü-yau,* "pearl sauce," a dark thick sauce without too strong a taste, which lends much color to the dish and is much used in restaurants. Next is *shang-ch'au* "raw extract," which is light brown, tastes very fine, but is not colorful enough for red-cooking and not available in any great quantity. The sauce most suitable for general purposes is called *ch'au-yau,* "extracted sauce," which fortunately is made by several manufacturers in this country and Canada. All varieties of soy sauce are also called by the general name *shi-yau* in Cantonese.

"Similar to soy sauce is a soy jam, which is much thicker in consistency. In China, fermented flour jam is even more common. Good samples of such jams are scarce in this country.

"There is a whole class of whitish savory powder made mostly from gluten of flour. We shall call it **taste powder** in the recipes. The oldest form of this is made from the dried fermented muscle-of-flour (flour gluten), often made in old Chinese households. Almost thirty years ago the Japanese manufactured, from hydrolized gluten, a powder called *ajinomoto,* 'prime element of taste.' Later in Chinese firm manufactured *ve-tsin [vetsin],* "essence of taste, which is still found on some shelves of Chinatown. 'Pickup' and *mee boan* taste powders are made in this country and sold mostly in Chinatown. You will note that relatively few recipes in this book call for the use of taste powder." "Other common flavorers are oyster sauce, sesame oil, and soy bean cheese *(fu-yü)* (p. 27-28).

Chapter 6, "Methods of cooking," includes a discussion of red-cooking (stewing with soy sauce, which gives a reddish color. "Red-cooking is the typical family cooking." Cooking time varies from 2-6 hours) and clear simmering (without soy sauce).

Soy-related recipes include: Bean curd stirs meat slices (p. 61). Bean curd stirs shelled shrimps (p. 118). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 156-57). Plain stirred bean curd (p. 158-59). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 159-60). Pot-stuck bean curd (p. 160). Bean curd and meat-slice soup (p. 164). Huichou pot (with fried bean curd [large triangles or small cubes], p. 181-82). Sandy-pot bean curd (p. 183). Soy jam noodles (p. 201-02, with ½ can *yünshi* soy jam {get in Chinatown}; this is typical northern food).

Page 158 states: "Bean curd is made of soy beans. It has only a faint flavor of its own. That is why it can be easily combined with other materials. Bean curd has the same nourishment value as bean, but in a much more digestible and palatable state and forms an important ingredient of the food for the poor people in China. It is cheap and easy to prepare. Those who can afford fancy dishes often combine it with meat, fish, and other sea foods. But just plain (Chinese) cabbage and bean curd connotes home sweet home. Bean curd is a versatile cooking thing. It can be boiled plain, with a little of any flavoring. It can be fried in deep oil by whole pieces so that the outer surface will become browned. We often stuff seasoned ground meat inside it like stuffed cucumber and then red-cook the whole thing. Bean curd can even be eaten as part of an American salad." The Chinese characters for all recipe names are given on pages 232-46. Address: Cambridge, Massachusetts.

596. Lager, Mildred. 1945. The useful soybean: A plus factor in modern living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. Illust. General index. Index of recipes. 22 cm.

• ***Summary:*** One of the most important and innovative books on soyfoods ever written. Contents: Preface. 1. Agriculture's Cinderella: America discovers the soybean, our wonder beans, soy as a food in the United States, soy in rehabilitation food programs, soybeans as an emergency crop, soybean terminology. 2. World-wide use of soybeans: A real antique, monarch of Manchuria, soybeans in mechanized warfare–Germany, soybeans in other countries (USSR, Italy, Spain, Belgium, Holland, Norway, Denmark, Sweden, Great Britain, Canada), soybeans in Lend-Lease and United States Agricultural Marketing Administration, Food for Greece, soybeans and the Mexican Indian, soybeans in Hawaii (Mr. C.G. Lennox). 3. Soybeans and industry: The versatile soy, uses of soybean in industry, soybean paint (from soy oil, incl. Duco finishing), soybean protein (used in making plywood, plastics, water paints, paper sizing, leather finishes, and insecticide sprays), Henry Ford and soybeans, soybean glue (I.F. Laucks and the firms he has licensed turn out some 30,000 tons of soybean glue annually), rubber substitute (Norepol), paper industry (Glidden), plastics, soy-cotton helmets, firefighting compounds, lecithin, fertilizers. 4. Nutritional nuggets: Food value of soybeans and soy products (vegetable or edible types of soybeans, protein, fat & carbohydrate, minerals, vitamins, lecithin, alkaline ash, economy, exaggerated claims), principal uses of soybeans and soy products (meat substitutes, meat enrichers, fortifying foods with soy flour). 5. From soup to nuts: Green beans, dry beans, frozen beans, roasted soybeans, sprouted soybeans, the cow of China–soy milk, the meat without a bone–tofu or soy cheese, the little giant among protein foods–soy flour, soy grits, puffed grits, soy oil, miscellaneous soy products (soy butter [soynut butter, p. 99-100], sandwich spreads, malts, coffee substitutes, soy sauce, soy albumen–a new product, greatly improved during the past two years, is now used to "replace egg albumen in candy manufacture" [as in marshmallows]).

Note 1. This is the earliest English-language document seen (March 2001) that refers to tofu as 'the meat without a bone.' In 1938 Horvath called tofu 'the meat without the bones.' Note 2. This is the second earliest document seen (Aug. 2002) in which the soybean is called the "cow of China."

Note 3. This is the earliest English-language document seen (Aug. 2003) that uses the term "soy albumen" (or "soy albumens") to refer to isolated soy protein as a product.

6. The blazed trail: Introduction (history and pioneers), our tardy acceptance, food pioneers (health-food stores, Dr. W.D. Sansum of Santa Barbara and soy bread, allergy studies, vegetarians, Seventh-day Adventist food companies, meatlike products, Madison College of Tennessee, Loma Linda Food Co., the International Nutrition Laboratory and Dr. H.W. Miller, special dietary concerns and diabetic diets), establishing soybeans in the kitchen (The Edison Institute and Henry Ford, the USDA and the U.S. Bureau of Home Economics, the Agricultural Marketing Administration, U.S. railroads, the Soy Products Division of the Glidden Co., the Soy Flour Association). 7. The challenge of nutrition: The dangers of hidden hungers, nutrition and health, corrective nutrition, starch-restricted diets, meatless diets, allergy diets, bland diets, building diets, reducing diets, acidophilus culture, lecithin. 8. Our wonder crop: Jack and the beanstalk, early history, new varieties, aids to the industry (Regional Soybean Industrial Products Laboratory, American railroads, American Soybean Association, Fouts Brothers of Indiana, *Soybean Digest* and George Strayer in Hudson, Iowa, Soy Flour Association with Edward Kahl as first president, Soya Kitchen in Chicago (Illinois) opened in Jan. 1943, National Soybean Processors Assoc., National Farm Chemurgic Council), educational program, restrictive regulations. 9. Soybeans and the farmer: Varieties, sources of information, seeding and inoculating, harvesting, grading, soybean diseases, crop rotation, damaged beans. 10. Tomorrow: Acreage and production, soybeans on the farm, soybeans in nutrition, postwar industrial uses, future improvements. 11. A few suggestions for better living: Kitchen diplomacy, personal opinions, soybeans for everyone. Recipes: Green soybeans, dry soybeans, sprouted soybeans, roasted or toasted soybeans, meat-substitute dishes, soy-enriched meat dishes, soy noodles, macaroni, spaghetti, sauces and gravies, soups, salads, dressings, soy spreads, soy milk, tofu or soy cheese, soy butter, soy cereals, soy desserts, soy candies, soy beverages, soy-flour recipes, bread and muffins, pancakes and waffles, soy gluten recipes, baking-powder biscuits, pastry, cookies and doughnuts, cakes.

Contains recipes for "Soy milk molasses shake (p. 238). Soy puddings. Soy ice cream (p. 250; "Soy milk may may be used in place of milk in ice-cream recipes... adding whipped cream"). Soy fruit ice cream. Soy chocolate dessert (Eggless) (p. 250-51). Soy shake "(p. 254, made in a "liquefier or mixer").

The story of Allied aid to Greece [p. 24-26] is one of the great mercy stories of World War II. Starting in March 1942, as many Greeks were starving, the first mercy ship sailed to Greece with food and medicine. Up to Nov. 1943, the United States through Lend-Lease sent 82 million pounds of food to Greece. A number of these foods (including soup powders, stew mixes, and spaghetti) were based on soy flour and grits, and specifically developed to suit Greek tastes.

Concerning Henry Ford (p. 35-38), his "first experiments were made in a laboratory in connection with

the Edison Institute in 1930. In these experiments, several tons of wheat were used, also several thousand bushels of carrots; sunflower seeds, which have a high oil content; cabbages; onions; and cornstalks. It was not until December, 1931, after a long series of experiments with the soybean, that Mr. Ford and his chemists felt that they were at last approaching a solution to the problem of finding a basic farm material from which the ordinary farmer could develop a commercially profitable product."

Note 4. This is the earliest English-language document seen (March 2007) that uses the term "Soy ice cream" (p. 250).

Note 5. This is the earliest document seen (July 2007, one of two) that uses the word "Cinderella" in connection with the soybean. The author, however, does not elaborate on this idea.

Note 6. This is the earliest English-language document seen (Oct. 2001) that uses the term "soy-flour." Address: Southern California.

597. Lager, Mildred. 1945. Preface (Document part). In: Mildred Lager. 1945. The Useful Soybean: A Plus Factor in Modern Living. New York and London: McGraw-Hill Book Company, Inc. xii + 295 p. See p. vii-ix.

• ***Summary:*** "We of the occidental world are just discovering that soybeans are indeed nuggets of gold in our modern civilization. During the last twenty-five years [i.e., since 1920], they have mushroomed from an almost unknown forage crop to one of our most important cash crops, vital to the fields of agriculture, commerce, nutrition, and industry. Nutritionally soybeans have become a vital food for a world at war and a postwar world at peace. Industrially they are a challenge to the chemists' flasks and test tubes; for more than two hundred commercial products have been made from the little beans. Hence soybeans and soybean products are indeed destined to be a vital plus factor in our world of tomorrow.

"Food has always been my hobby. When Fate, that unseen hand that sometimes guides us to our rightful groove in life, gave me firsthand experience with the miracles of proper diet, teaching fundamental facts on nutrition became my goal. I have tried to pass on the message of better eating via the platform, the printed page, and the radio, and for the last dozen years have enjoyed the unusual opportunity of occupying a vantage point on a busy crossroad of nutrition. I have seen, too, the value of soybeans in the so-called 'corrective regime,' and it has convinced me of their rightful place in the average diet.

"I experimented with soy as a food, secured special soy products for special diets, made up recipes, and in my classes taught the cooking of soybeans when they were practically unknown, when soy was eaten because it was soy and regardless of taste or palatability. In 1942, when soybeans became prominent as a war emergency food, a collection of these recipes was published under the title of '150 Ways to Use Soybeans.'"

"Because my main interest in soybeans and soy products is nutritional, the purpose of this book is to help bridge the gap from the unusual to the usual. I have tried to present the story of Asia's ancient food in a true, authentic manner–to give credit where credit is due. I am not a vegetarian, not affiliated with any organization or group advocating a meatless diet. I believe that proper nutrition and common-sense living are man's best medicine."

"I want to acknowledge the material, encouragement, and help that I have received from the men and women of medicine, research, industry, and business as well as homemakers and friends. I am especially grateful to

600. Doig, James L. 1946. Canadian Navy adopts high protein bread. *Soybean Digest.* Jan. p. 16.
• ***Summary:*** "The interest of the [Canadian] Navy nutritionists in soy flour dates back to 1917, to the hectic days of unrestrained submarine warfare. Captured German submarines were found to be carrying concentrated emergency rations containing roughly 50 percent soy, in the form of a dry biscuit. They were not particularly palatable, but the physical condition of the men left little doubt of their nutritional value. Experiments were undertaken in Britain with the object of supplying our ships with a similar ration... around 1924 a very palatable high fat soy flour named Soyolk was produced in Britain. The firm producing it sent over one of the best salesmen I have ever met. He succeeded in selling this new soy flour to practically every large baking unit between Halifax and Vancouver."

From this soy flour Moirs Limited of Halifax, Canada, developed a commercial high-protein bread named Soyota. The ingredients were 98 lb wheat flour, 9 lb high-fat soy flour, 3 lb shortening, 2 lb each sugar and salt, 1 lb 12 oz shortening, 1.5 lb each skimmed milk powder and malt flour, 3 oz. mineral salt, and 62 lb water. Although practically unadvertised, Soyota soon became a good selling bread.

After World War II began, the author and several Canadian firms developed a ration biscuit which contains 50% soy flour and is part of the emergency ration kits carried by all Canadian Naval Units. See also "Life Raft Ration," by Doig in *Soybean Digest,* March 1943. Address: Canadian Representative, A.E. Staley Mfg. Co., Montreal, P.Q.

601. *Toronto Daily Star (Canada).*1946. Appointed vice-president Victory Mills Limited. Feb. 12. p. 10.
• ***Summary:*** "C.L. Rogers, formerly General Sales Manager, has been appointed Vice-President of Victory Mills Limited, a division of Canadian Breweries Limited. A graduate engineer of McGill University, Mr. Rogers spent some time with Canadian General Electric and the Hydro Electric Power Commission of Ontario. During the war [World War II] he was with the Department of Munitions and Supply. He joined Victory Mills in June, 1945."

A large portrait photo shows C.L. Rogers.

602. Ontario Retail Feed Dealers' Association. 1946. Year book, 1944-45. Toronto, Canada. 91 p. Undated.
• ***Summary:*** On page 11 is a full-page ad that reads: "Toronto Elevators Limited. Toronto. Montreal. Grain. Linseed oil and meal. Soy bean oil and meal. Master Feeds." Inside the diamond-shaped logo is the word "Telco" and a drawing of many large grain elevators. A photo shows the same large elevators; on them is written "Master Feeds." The book contains the name, address, and phone number of many retail dealers. No such information is given for Toronto Elevators.

On page 3 is a list of the Association's officers for 1944-1945, and another list for 1945-46. The president for both terms was W.M. VanSickle of Campbellville.

Note 1. This is the earliest document seen (Jan. 2010) stating that Toronto Elevators Ltd., in Canada, is processing soybeans.

Note 2. Letter from Dave Duttenham, Executive Vice-President of the Ontario Grain & Feed Association in Ontario. 1997 March 3. His Association owns this Year Book. Looking at page 3, he would guess that was published in about January or February of 1946. Address: Toronto, Canada.

603. *Soybean Digest.*1946. The Soybean Digest (masthead). Feb. p. 3.

• ***Summary:*** "Victory Soy Bean Sauce, 7½-oz. bottle–15¢." Address: Basement, Toronto. Phone: TRinity 8111.

605. *Toronto Daily Star (Canada).*1946. 48 for 44 accord for Victory Mills. April 9. p. 2.
• ***Summary:*** "A closed shop agreement, providing a 44-hour week with take-home pay equivalent to 48 hours, has been signed between Victory Mills Co. [sic, Ltd.] and the International Chemical Workers' union, the union announced today.

"The contract also grants pay for six statutory holidays not worked, one week's vacation with pay after six months' employment and two weeks with pay after one year.

"William Edmiston, Canadian director of the union, emphasized that new pay provisions 'do not make necessary the same production in the shorter work week.'"

Note: Apparently the standard work week in Canada in 1946 was 48 hours, or six 8-hour days.

606. *Soybean Digest.*1946. Grits and flakes... from the world of soy: A new soybean variety has been developed at the Morden Experimental Station in Manitoba... April. p. 28.
• ***Summary:*** "... and probably will be licensed shortly, reports the *Family Herald and Weekly Star.* An early yellow variety, it was selected from a cross between Mandarin and Manitoba Brown. A cooperative crushing plant in Altona promoted primarily to process sunflower seeds, is interested in soybeans if a commercial crop can be developed in Manitoba.

Note: Altona (2006 population 3,709) is a predominantly Mennonite community in southern Manitoba about 100 km (62 miles) southwest of Winnipeg and 133 km north of Grand Forks, North Dakota. It is known as "The Sunflower Capital of Canada."

607. Soybean Research Council, National Soybean Processors Assoc. 1946. Proceedings–Conference on Flavor Stability in Soybean Oil. Chicago, Illinois. 98 p. Held 22 April 1946 at the Bismarck Hotel, Chicago, Illinois. [53 ref]
• ***Summary:*** This historic meeting was called by Edward J. Dies, chairman of the board, National Soybean Processors Association. The 28 attendees, listed alphabetically, included: O.H. Alderks (The Procter and Gamble Co.), H.C. Black (Swift and Co.), R.A. Boyer (The Drackett Co.), G.N. Bruce (Durkee Famous Foods), John C. Cowan (Northern Regional Research Lab.), B.F. Daubert (Univ. of Pittsburgh), Edward J. Dies (National Soybean Processors Assoc.), Maurice Durkee (A.E. Staley Mfg. Co.), Herbert J. Dutton (Northern Regional Research Lab.), Egbert Freyer (Spencer Kellogg and Sons, Inc.), Calvin Golumbic (Univ. of Pittsburgh), Warren Goss (Northern Regional Research Lab.), Arne Gudheim (Lever Brothers), J.K. Gunther (Central Soya Co., Inc.), Fred Hafner (Archer-Daniels-Midland Co.), R.G. Houghtlin (National Soybean Processors Assoc.), H.T. Iveson (The Glidden Co.), J. Jakobsen (General Mills, Inc.), N.F. Kruse (Central Soya Co., Inc.), Herbert W. Lemon (Ontario Research Foundation, Toronto, ONT, Canada), Herbert E. Longenecker (Univ. of Pittsburgh), Ralph H. Manley (General Mills, Inc.), Karl F. Mattil (Swift and Co.), R.T. Milner (Northern Regional Research Lab.), W.W. Moyer (A.E. Staley Mfg. Co.), F.W. Quackenbush (Purdue Univ.), H.E. Robinson (Swift and Co.), J.H. Sanders (The Procter and Gamble Co.), L.A. Spielman (The Glidden Co.). Address: [3818 Board of Trade Building, Chicago, Illinois].

608. Holmes, Marie. 1946. Cooking chat [Soybean flour]. *Toronto Daily Star (Canada).* May 1. p. 26.
• ***Summary:*** "Probably no food has had, in recent years, more merited favorable publicity than soybeans and the products made from them. 'It is now recognized that soybean flour is exceptionally rich in high quality protein, minerals and vitamins,' a leading agricultural research specialist has stated.

"At the present time when homemakers are conserving wheat flour, it would be wise to learn something about the use of soybean flour as a partial substitute. Because it is low in starch and gluten, soybean flour should not be substituted entirely for wheat flour but it is an excellent extender."

One cup soybean flour to 3 cups wheat flour in tea biscuit recipes, or 2 cups soybean flour to 11 cups wheat flour in bread recipes.

Gives four points to watch when substituting "soy flour," and discusses its value in special diets–such as those with low starch.

Gives recipes for: Soybean cakes. Soybean muffins (both low starch). Soybean fruit bread.

A new small portrait photo shows Marie Holmes.

609. Hildebrand, A.A. 1946. Diseases of soybeans: Their control. *Canadian Horticulture & Home Magazine* 65(5):129-31, 142. May. Summarized in Soybean Digest, Nov. 1946, p. 26.

• ***Summary:*** A popular account on the control of soybean diseases by seed treatment, proper cultural practices (such as optimum planting rate), and other precautions (weather conditions, wind-borne diseases). Thirteen soybean diseases have been reported in Canada. These include mosaic and bud blight, bacterial blight, and a number of fungus diseases. During the past 3 years at the Harrow plant disease laboratory, seed lots of soybeans have been treated with the seed protectant dusts, Spergon, Arasan, and Fermate. The author says the use of Spergon is compatible with inoculation. In practice, the seed is treated first with Spergon, then inoculated according to the manufacturer's directions.

"Soybeans were first grown in Canada at the Ontario Agricultural College, Guelph, about 1893. They were first distributed to farmers of the province in 1901. For many years they attracted very little attention because as recently as 1940 there were only 10,000 acres altogether in Canada. By 1944, however, the acreage had more than quadrupled itself to 45,000 acres. Of these, 44,700 acres, i.e. 90%, were in Ontario. Most of the Ontario acreage, i.e. some 35,400 acres, were concentrated in the southwestern part of the province in the counties of Essex, Kent, Middlesex, Norfolk, and Lambton." Address: Dominion Lab. of Plant Pathology, Harrow, Ontario, Canada.

610. Krishnaswamy, N.; De, S.S.; Subrahmanyan, V. 1946. Digestibility of soya milk (Letter to the editor). *Science and Culture (Calcutta)* 12(1):51-52. July. [4 ref]

• ***Summary:*** "Soya-bean milk is a highly digestible product. Experience in different parts of the World has shown that it is more easily digested than cow's milk. In America and other countries, persons who are allergic to cow's milk or otherwise experience difficulty in digesting it, experience no such discomfort when using soya-milk. In Canada, where there is no milk shortage, the sweet soya curd is flavoured for feeding children as it produces no digestive disorders.

"Our recent experience with feeding soya milk in child welfare centres has shown that even very young children can drink fair quantities of the milk without any discomfort. Even babies have been fed on soya milk without any ill effect."

"Soya milk forms a soft curd which disperses readily on either side of the iso-electric point. Cow's milk curd remains as such over a wider range."

"Further work bearing on the digestion of soya milk in the animal system is in progress. It is hoped that this study will throw fresh light on the digestibility of other vegetable milks as well." Address: Dep. of Biochemistry, Indian Inst. of Science, Bangalore.

611. Victory Mills Ltd. 1946. "Here's why I'm planting more acreage in soybeans this year!" (Ad). *Blenheim News Tribune (Ontario, Canada).* July. [1 ref]

• ***Summary:*** Blenheim is a town in Kent County, southeastern Ontario, about 10 miles southeast of Chatham. An illustration (line drawing) shows a farmer, dressed in overalls and holding a pitchfork. The text begins: "This Kent County farmer planted a 10-acre trial crop of soybeans last year. They grew well, needed little labor and brought him in $610.00. No wonder he's planting a third of his acreage in soybeans this year.

"Moreover, Ontario farmers can feel sure of a ready market for soybeans. For Victory Mills have invested over $2,500,000.00 in a new plant and want to buy more than 3,000,000 bushels a year."

The ad then gives "5 sound reasons for growing soybeans. 1. Soybeans are a Hardy crop–resistant to drought, light frosts and heavy rains during growing season. 2. They are a Profitable cash crop. 3. There's a Ready Market for all you can grow. 4. Soybeans need a Minimum of Labor–can be harvested with a combine whenever weather is suitable. 5. A real Soil-Builder, improving soil tilth and adding some nitrogen–soybeans fit into any 'crop rotation' planning."

A coupon at the bottom of the page invites the reader to send for a free booklet titled "How to Grow Soybeans–The Profitable Cash Crop." Address: 285 Fleet Street East, Toronto, Canada.

612. Balzli, Jean. 1946. Le soja à travers le monde [The soybean around the world]. *Revue Internationale des Produits Coloniaux et du Material Colonial* 21(204):134-35. Sept. [1 ref. Fre]

• ***Summary:*** Discusses soybean developments in the following countries: Canada, China, USA, Great Britain, Greece, Mexico, Philippines, Hawaii, Switzerland, Sweden. Address: PhD.

613. Victory Mills, Ltd. 1946. Victory Mills Limited (Ad). *Soybean Digest.* Sept. p. 5.

• ***Summary:*** In this half-page black-and-white ad, a photo shows the soybean crushing plant and its 8 tall silos on the Toronto waterfront. Its products are "soybean flours, vegetable oils, and oilcake meals." Address: 285 Fleet Street East, Toronto, Ontario, Canada.

614. *Toronto Daily Star (Canada).*1946. Dominion Linseed Oil. Oct. 10. p. 17.
• ***Summary:*** "An offering of $750,000 4 per cent. first mortgage series 'A' bonds of the Dominion Linseed Oil Co. is being made by Harrison & Co. The bonds, dated Oct. 1, 1946, and maturing Oct. 1, 1961, are being offered at 100 plus accrued interest."

615. *Soybean Digest.*1946. Grits and flakes... from the world of soy: Oilseed crops from western Canada will be processed at Fort William by Edible Oils, Ltd. Firm is headed by K.A. Powell, president of Halley and Carey Ltd., Winnipeg. Nov. p. 28.
• ***Summary:*** "It will process about 30,000 tons of oilseeds yearly." Note: This Fort William is in Ontario province, not in Winnipeg.

616. Elwood, Marjorie. 1946. Cooking chat [Mock almond paste]. *Toronto Daily Star (Canada).* Dec. 16. p. 25.
• ***Summary:*** Contains two recipes for "Mock almond paste." The second calls for "4 ounces soy bean flour." This paste, an alternative to icing, is English in its origin.

The sides of a fruit cake or Christmas cake are seldom iced–a tradition whose origins are obscure.

A portrait photo shows Marjorie Elwood.

617. Elliott, H.G. 1946. The soybean. Its possibilities in W.A. [Western Australia]. *J. of Agriculture, Western Australia* 23(4):285-93. Dec. Summarized in Soybean Digest, Nov. 1947, p. 34.
• ***Summary:*** Contents: Introduction. Economic position. Soybean oil. Uses of oil. Origin. Uses in Western Australia. Name and origin. Description. Climate. Soils. Cultivation. Fertiliser. Inoculation. Sowing. Intercultivation. Harvesting. Varieties. Summary of soybean trials in W.A. (using mostly American or Canadian varieties). Some edible varieties of soybeans (as a green vegetable, a cooking dried beans).

"In Australia, the acreage grown is as yet only small and up to the present time has been mainly experimental." In Western Australia it is doubtful if the soybean could compete as a fodder with other summer-grown fodders.

Varieties: The "Council for Scientific and Industrial Research have obtained best results with Charlee, Haberlandt, Creole and Georgian varieties in Queensland, whilst Manchu Yellow and Haberlandt have been grown with some success in Western Australia and yields as high as 35 bushels per acre have been obtained experimentally.

"Summary of soybean trials in W.A.: The Department of Agriculture of this State has for many years introduced numerous varieties of soybeans for trial at various centres over a wide range of soil and climatic conditions, from as far North as Ord River in the Kimberleys to Albany on the South coast, and the results to date have not been completely successful. The early trials did not meet with much success because of three main factors–1. Inability to obtain good inoculation on plants as a suitable strain of bacteria for inoculation of seeds was not available. 2. Suitable strains and varieties of soybeans were not available as those tried were too long in maturing. 3. Low germination of seed imported for trial. In recent years better results have been obtained" since these problems are been solved. "Of the varieties grown in the South-West, Manchu Yellow, Haberlandt, Arysoy, Easy Cook, Harrow Mammoth Brown, Kenway and Q1463 have all given reasonable results, with yields of up to 30 bushels per acre of seed.

A table (p. 292-93) shows that at present in Western Australia some 51 soybeans varieties from the USA and 18 varieties from Canada are under trial at various centers. For each variety the following information is given: name, average number of days to mature (range: 89-126), yield (6 varieties have yields from 35.0 to 37.44 bushels/acre), and whether or not the seed color is yellow.

Named American soybean varieties under trial: Ito San, Ohio 9100, Manchu, Black Eyebrow, Elton, Aksarben, White Eyebrow, Wilson 89, Ohio 9035 (Hamilton), Ohio 7490, Ohio 9016, Wilson, Ebony, Medium Green, Habaro, Haberlandt, Mikado, Royal, Peking Sel 1-21-8, Peking Sel 1-21-5, Peking Sel 1-21-7, Peking Sel 1-21-3, Sherwood, Virginia, Peking, Shingto, Chestnut, Early Yellow, American Coffee Berry, Early Black, Sable, Wisconsin Black, Medium Early Yellow, Medium Early Brown, Medium Early Black, Ohio 7046, Mongol, Taha, Jet, Haberlandt, Chernie, Nuttall, Ohio 7476, Medium Green, Amherst, Mever [Meyer], Cloud.

Named Canadian soybean varieties under trial: St. Anne's No. 92, Early Brown, Mandarin, Yellow 210, Yellow 17, Chinaton Echo, Italian, O.A.C. No. 211, O.A.C. No. 81, Summerland, Black (China), Early Korean, Green, Manchu, Black Eyebrow, Ito San, Golden, A.K.

Varieties grown experimentally in New Zealand and having an average yield of 23 bushels: Early Yellow, O.A.C., Black Ontario, Manchu (Hudson), Manchu (Ottawa), Cayuga.

Edible varieties of soybeans that are good for use as a green vegetable: Agate, Hahto, Easycook, Rokusen [Rokusun], Funk Delicious, Kura, Aoda, Bansii [Bansei], Shiro, Hokkaido, Chusei, Higan, Janro [Kanro?], Willoni [Willomi], Nanda, Jogun.

Edible varieties of soybeans that are good for use for cooking as dried beans: Easycook, Chusei, Rokusen, Jogun, Hokkaido, Janro [Kanro].

Note: This is the earliest document seen (Oct. 2004) that clearly mentions the soybean variety Chinaton Echo. Address: Agrostologist, Western Australia.

618. Ralston Purina Company. 1946. Annual report. St. Louis 2, Missouri. 12 p.

• ***Summary:*** Although the Ralston Purina Co. was founded in 1898, this is the earliest annual report owned by the company's library (as of Nov. 1998). Contents: Plants of the Ralston Purina Company (shown on a map of the United States and Canada). President's letter to the stockholders, from Donald Danforth, dated 20 Dec. 1946. Ralston Purina Company and domestic subsidiaries consolidated statement of profit and loss: Year ended Sept. 30, 1946. Ralston Purina Company and domestic subsidiaries balance sheet as of Sept. 30, 1946 (2 pages). Notes to financial statements. Accountant's report, by Peat, Marwick, Mitchell & Co., Certified Public Accountants, St. Louis, Missouri, dated 6 Dec. 1946. Products of the Ralston Purina Company: Ralston Cereals (Ralston wheat cereal, Instant Ralston for quick cooking, Shredded Ralston, Bite size ready-to-eat, Ry-Krisp whole rye wafers); Purina Chows–Balanced rations for livestock and poultry (for chickens, turkeys, ducks, dairy cows, calves, beef cattle, sheep, hogs, horses, dogs, rabbits, laboratory and fur animals). A personal message to stockholders from the chairman of the board of directors, by William H. Danforth." Illustrations show of a bag of Purina Chows and a box of Ralston Cereals, each with the checkerboard design.

The company has 29 plants in the USA–stretching from coast to coast, and from Houston, Texas, to Minneapolis [Minnesota]–plus one in Montreal, Canada. In St. Louis is the Purina Research Farm, a plant, and the company's general offices. The lifting of government controls and restrictions provides great challenges and opportunities for the company.

For the fiscal year ended 30 Sept. 1946, net sales were $160.2 million, net income was $161.4 million, and net profit was $4.053 million. Total current assets are $35.5 million.

William Henry Danforth, born in 1870 and now age 76, was the founder of Ralston Purina Co. His plan of four-fold personal development, became the company's famous checkerboard logo. His "Personal Message to Stockholders" states: "While this is a financial statement, it must be evident to all that there is far more to a successful company than merely dollars and cents. Since I have been active in our company from it's founding, I would like the privilege of adding a very personal word to this report.

"Our company stands Foursquare before the world represented by our famous Checker trademark.

"Our people stand Foursquare. They are physically strong, mentally alert, socially adjusted to their fellow men, and grounded in character, honesty and religion.

"Our products stand Foursquare, and return full value to those who purchase them. Our cereals–Ralston, Shredded Ralston and Ry-Krisp–add to the good health of our nation. Farming has been raised to a higher and more profitable level because of results from the use of our Purina Chows and Purina Sanitation Products. You can use and boost our whole line with confidence–and as a stockholder like you should.

"A message like this at the end of a financial statement may be a bit unusual, but I wanted to say to you in a personal way that with superior products, with right living and high ideals, we can have confidence in the days ahead.

"My appreciation goes to our Purina Family, both employees and stockholders, for service well done. Daringly yours, William H. Danforth." Address: St. Louis, Missouri.

619. *Soybean Digest.*1946. Government orders: Canada advances soybean prices. Dec. p. 38.
• ***Summary:*** "The minimum price for No. 1 and No. 2 Canada grade soybeans was advanced from $2.15 to $2.40 per bushel, effective Nov. 4, 1946. Increases on other grades are also 25 cents per bushel with the new prices ranging from $2.12 to $2.37 depending upon the moisture content. These prices apply to soybeans in bulk at Halifax [Nova Scotia], Quebec, Montreal [Quebec], Toronto [Ontario], Winnipeg [Manitoba], Lethbridge [Alberta], or Vancouver [British Columbia]. Deliveries elsewhere are at the maximum prices less the normal cost of transporting soybeans in carload lots from such point to the nearest named city."

620. Cargill, Inc. 1946. The history of Cargill, Incorporated 1865-1945. Minneapolis, Minnesota: Cargill. 118 p. Illust. No index. 18 cm. Saddle stitched.
• ***Summary:*** Contents: Foreword. Part I: History. 1. Beginnings, 1865-1880. 2. Building an integrated unit, 1880-1888. 3. S.D. Cargill and Minneapolis, 1888-1903. 4. (52) Minneapolis feed mill. (53) Soybean plant, Springfield, Illinois. It uses expellers for oil extraction and has a crushing capacity of 4,500 bushels/day of soybeans. The connecting elevator has storage space for about 220,000 bushels, and is equipped for both truck and rail handling.

Note: This is the earliest document seen (Nov. 2005) that mentions "Nutrena" in connection with Cargill. Address: 761 Chamber of Commerce, Minneapolis 15, Minnesota.

621. Holmberg, Sven A. 1946. Från sojaväxtförädlingen vid Fiskeby [Soybean breeding at Fiskeby]. *Kunglinga Lantbruksakademiens Tidskrift (J. of the Royal Swedish Academy of Agriculture)* 85(4):373-84. [Swe; eng]

• ***Summary:*** "The first aim of soya bean breeding at Fiskeby, Sweden, has been to achieve earlier maturity. Varieties which in America and elsewhere are described as 'extra-early,' do not behave as such when grown in the cool, long-day climate of Sweden. The Canadian variety, Manitoba brown, which ripens in 100 days at Ottawa, Ontario, on the 45th latitude, requires 143 days on the 58th latitude at Fiskeby, Sweden. The Sioux variety ripens in 185 days in Virginia, USA (39º), 114-121 days on southern Sachalin [Sakhalin] (47º), and in 136 days at Fiskeby (58º)."

Note: Sakhalin, belongs to the USSR; belonged to Japan from 1905-1945 as Karafuto, but belonged to Russia before that.

"Out of 6,426 attempted hybridizations, only 872 gave progeny. By crossing the short, extra-early varieties found on the islands of Hokkaido [Japan] and Sachalin with the taller, medium-early varieties from Manchuria and Germany, new hybrids were raised. Some of these are decidedly earlier in maturity than either of their parents and are also medium in height. Many of these new hybrids ripen on our latitudes the first days of September showing an advance in earliness of 2-3 weeks as compared with the 'extra-early' varieties cultivated before. New crosses have been made to increase the yield and improve the quality of these hybrids."

Note: This is the earliest document seen (Jan. 2010) that is by or about Sven A. Holmberg, or his work breeding soybeans for northern latitudes and/or cold climates. Address: Sweden.

622. *Gazette (The) (Montreal, Quebec, Canada).*1947. Canadian Breweries Limited and subsidiary companies: Report of the board of directors. Jan. 23. p. 19.

• ***Summary:*** The report, which is printed in the newspaper like an ad, begins: "Toronto, Canada, January 22nd, 1947.

"To the Shareholders: Your Directors present herewith a statement of the affairs and financial position of your Company for the fiscal year ended October 31st, 1946.

"The most important development of the year were the bringing into production of additional capacity at O'Keefe's Victoria Street plant in Toronto and the Carling plant at Waterloo, and the completion of the main plant of Victory Mills Limited, Toronto."

The company's assets and liabilities are given.

623. Hildebrand, A.A.; Koch, L.W. 1947. Soybean diseases in Ontario and effectiveness of seed treatment. *Phytopathology* 37(2):111-24. Feb. [28 ref]

• ***Summary:*** An excellent review of the literature on the effect of treating soybean seed with fungicides. "The number of parasitic diseases now known to have been found in soybean-growing areas variously scattered across the Dominion from Nova Scotia to British Columbia, has reached a total of 13, which figure represents approximately half of the known number of parasitic diseases of the soybean... Eleven of these diseases have been variously reported in the Annual Reports of the Canadian Plant Disease Survey." Most of these diseases are found in southwestern Ontario.

In a 3-year series of experiments, the authors tested the efficacy of Spergon, Arasan, and Fermate on soybeans. Results concerning emergence and yield were inconclusive. Treating poor-quality seed with Spergon increased emergence and yield. Spergon was consistently more effective than Arasan or Fermate in reducing disease or abnormality in early-season stands. Address: Dominion Lab. of Plant Pathology, Harrow, Ontario, Canada.

624. *Soybean Blue Book.*1947-1966. Serial/periodical. Hudson, Iowa: American Soybean Assoc. Annual. Titled Soybean Blue Book from 1947-1966; Soybean Digest Blue Book from 1967-1979; Soya Bluebook from 1980 to present.
• ***Summary:*** A directory and information book for the soybean production and processing industries–but with much greater emphasis on processing and utilization. One of the most valuable sources of worldwide information on soybeans. During the period from 1947 to the 1960s, the Blue Book was usually published in March or April of each year.

In the 1966 Blue Book (p. 28-29) are two full-page tables titled "World Soybean Production." The first gives acreage in 1,000 acres, yield in bushels per acre, and production in 1,000 bushels. The second gives hectarage, yield in kilograms per hectare, and production in 1,000 metric tons. Figures are given for: 1950-54 (average), 1955-59 (average), 1963, 1964, and 1965. Statistics are given for the following countries: North America: Canada, United States. South America: Argentina, Brazil, Colombia, Paraguay. Europe: Italy, Rumania, Yugoslavia, Other Europe (excluding USSR). USSR (in Europe and Asia). Africa: Nigeria, Rhodesia, Tanzania. Asia: Turkey, China (Mainland), Cambodia, China (Taiwan), Indonesia, Japan, Korea (South), Thailand. Estimated world total. Address: Hudson, Iowa.

625. American Soybean Association. 1947. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 96 p. Subject index (at front). Index of advertisers (at back). 22 cm.
• ***Summary:*** Contents: Subject index. Many full-page ads. American Soybean Association. National Soybean Processors Association. Soy Flour Association. Terminology. Tables of soybean production, supply, and utilization in the United States. Soybean production in Canada. Production of protein concentrates in USA. Production of soybean oil in USA. Production of soybean meal in the USA. U.S. soy flour production. Prices of U.S. soybeans. Prices of U.S. soybean meal and oil. Official standards for soybeans. Soy flour standards. Processors of soybeans in USA and Canada. Refiners of soybean oil. Manufacturers and handlers of soy foods. Manufacturers of margarine. Manufacturers and handlers of industrial products. Soybean research. Analysts. Equipment manufacturers. Edible soybean growers and distributors. Nutritive value of soybeans. Oil specifications for technical uses. Vitamin content of soy products. Uses of soybeans (diagram). Address: Hudson, Iowa.

626. *Gazette Apicole.*1947. Prime de Mars: Une boîte de "Farine de Soja" pour compléter les apports de pollen [March premium: A box of soy flour to supplement your supply of pollen (Ad)]. 48(484):Inside front cover. March. [Fre]
• ***Summary:*** In Canada, soya flour is currently used by apiculturists (beekeepers). In England it is used not only as a substitute for pollen but to provide nourishment from March to May. In Scotland, Mr. Jeffrée, of the Craibstone College of Agriculture, mixed 1,600 gm of sugar with 400 gm of water, heated it while stirring until boiling, then removed it from the fire and added 500 gm of soya flour. In Germany, during World War II, beekeepers received 250 gm of soya flour per hive as a pollen substitute. In France, some beekeepers have obtained good results using defatted soya flour which contains no more than 5% oil. This product is not sold commercially. We offer it at the good price of 60 French francs to those who want to try it. To use, simply mix the flour with honey to make a solid paste; do not cook. Send your order to *La Gazette Apicole,* Service des Primes, Montfavet (Vaucluse), France.

A comical illustration shows 4 bees stirring a pot.

627. *Soybean Blue Book.*1947. American Soybean Association. p. 13-14.
• ***Summary:*** Organized 1920. Incorporated Feb. 28, 1946. Executive Office, Hudson, Iowa. Officers. Directors. Activities: Fights your legislative battles, holds annual conventions, sponsors yield contests, conducts campaigns (such as inoculation campaigns), answers your questions. Publications: Soybean Digest and Soybean Blue Book. Memberships: Active membership open to individuals for $2.00 a year, or associate memberships open to organizations for $10 a year. Honorary life members.

Local soybean growers associations: (1) Soybean Roundup, Van Wert, Ohio. Eighth annual meeting held Feb. 1947. Lists committee and officers. (2) Remington (Indiana) Soybean Show. Held annually in December. Ninth annual meeting held December 1946. Lists committee. (3) Audrain County Association, Mexico, Missouri. John M. McClure, county agent. (4) North Mississippi County Planning Committee, Blytheville, Arkansas. Keith J. Bilbrey, county agent. (5) Essex County Soybean Association, Essex, Ontario [Canada]. Angus McKenney, agricultural representative Essex County.

628. *Soybean Blue Book.*1947. Soybeans in Canada [acreage, yield and production statistics]. p. 32.

• ***Summary:*** This section consists of 4 tables of Canadian soybean statistics: (1) Acreage, yield, and total production of soybeans in Canada, 1941-1946. Total production of soybeans grew from 216,900 bu in 1941 to 1,072,000 bu in 1946.

(2) Soybean production in Ontario, for the years 1936-40, then each year from 1943 to 1946. For each year is given acres and bushels. Soybean production in Ontario (Canada's southernmost province) grew from an average of 217,844 bu/year during the years 1936-1940 to 1,072,000 bu in 1946.

(3) Soybean production in Manitoba, 1943-1945. Decreased from 35,000 bu in 1943 to 2,000 bu in 1945. (4) Soybean production in British Columbia. 943 acres were planted in 1943. No production figure is given.

629. *Soybean Blue Book.*1947. Processors of soybeans [USA and Canada]. p. 44-64.

• ***Summary:*** Processors are listed by state (alphabetically), and within each state alphabetically by city. For each firm is given the officers, brand names, type of processing equipment, processing capacity, and storage capacity. "Information was obtained through questionnaires sent directly to the processing companies.

630. *Soybean Digest.*1947. Sweden hunts for varieties. March. p. 18.
• ***Summary:*** "The first problem of soybean production is Sweden is finding varieties that will mature in that northern latitude.

"Breeding work at Fiskeby in Sweden is covered in the preliminary report of Sven A. Holmberg of Norrkoping in the *Journal of the Royal Swedish Academy of Agriculture.* Middle Sweden is in the same latitude as northern Canada and southern Alaska. Successful soybean growing requires varieties that can be harvested in early September... The Canadian variety, Manitoba Brown, which ripens in 100 days at Ottawa, Ontario on the 45th latitude requires 143 days on the 58th latitude at Fiskeby, Sweden. The Sioux variety ripens in 85 days in Virginia, in 114-121 days on southern Sachalin [Sakhalin] and in 136 days at Fiskeby...

"Mr. Holmberg will be glad to send a copy of his report on the work at Fiskeby, which contains an English summary, to interested readers. Address Sven A. Holmberg, Norrkoping, Sweden."

631. **Product Name:** Cocosoy Toasted Soy Flour [Full Fat, or Low Fat], and Indosoy (Industrial Soy Flour).
**Manufacturer's Name:** Victory Mills, Ltd.
**Manufacturer's Address:** 285 Fleet St. East, Toronto, ONT, Canada.
**Date of Introduction:** 1947. March.
**New Product–Documentation:** Soybean Blue Book. 1947. p. 64, 70. The company also makes Indosoy industrial soy flour.

632. **Product Name:** Soy Nuts.
**Manufacturer's Name:** Victory Mills, Ltd.
**Manufacturer's Address:** 285 Fleet St. East, Toronto, ONT, Canada.
**Date of Introduction:** 1947. March.

634. Brillmayer, Franz A. 1947. Die Kultur der Soja in Oesterreich [The cultivation of soybeans in Austria]. Vienna, Austria: Scholle-Verlag. 97 p. Scholle-Buecherei, Bd. 80. With 33 illust. and 16 tables. 22 cm. [Ger]
• ***Summary:*** Contents: Foreword (written in May 1947 at Braunsdorf-Wien). 1. The origin of the soybean and how it spread throughout the world. 2. The history of its introduction into Europe: Into Austria, into Germany, into France, into Poland, Hungary, and the Balkans. 3. Botanical information about the soybean: Its morphology, physiology, Austrian varieties, European varieties, diseases and pests, nodule bacteria and hormones. 4. Breeding, the goals of breeding, and conduct of investigations (Versuchswesen). 5. Climate and suitable varieties. 6. Culture: Soil, preceding and subsequent crops in rotations, preparation of the soil, fertilizing the soil, time of seeding, inoculation, seeds, scarification *(Beizung)* of the seeds [to "wound" or scratch the seed coat so that the seeds imbibe water and thus germinate better], plant spacing and density of planting, amount of seeds and depth of planting, damage done by wild animals (game), care of the crop, harvest, threshing, storage.

The many interesting photos at the back of the book include: 3. The first soya field in 1924 growing the variety Platter SS 14. 5 and 6. A breeding plot in southern France (Lamagistere). In April 1937 the best Austrian soybean varieties were planted at St. Sylvain d'Anjou. 7. Threshing of Platter gelbe Riesen varieties harvested in Casablanca, Morocco. 8. A field of Austrian soybean varieties in Marrakech (Marakesh), French Morocco. 10. Marcel Blanchard with a breeding plot of Austrian soybeans at Agen (Garonne), France. 11. Soybean nodules inoculated with Radicin. 11-12. The Radicin factory. 26. The soybean breeding plots at Platt. Address: Braunsdorf, Post Roseldorf, Niederoesterreich (Lower Austria), Austria.

635. Brillmayer, Franz A. 1947. Geschichte der Einfuehrung der Soja in Oesterreich [History of the introduction of the soybean to Austria. I. (Document part)]. In: F.A. Brillmayer. 1947. Die Kultur der Soja in Oesterreich. Vienna: Scholle-Verlag. 97 p. See p. 11-14. [Ger]
• ***Summary:*** In the section titled "History of the introduction of soya to Europe," page 11 states: "Starting in 1920 again, for the second time, Austria promoted the

production and utilization of soybeans, and with this the impulse for a new "soya wave," which now went all over Europe, was unleashed. Here in Vienna a soya industry also began with the production of Edelsoja. Assistant Professor Kupelwieser used it to demonstrate the outstanding significance of soya as a protein source, going against the then current opinion that soya was primarily an oilseed. From my soybean breeding location at Platt in Lower Austria, Austrian cultivars spread all over Europe and even overseas.

"Why should it not be widely known that valuable pioneering work was performed in Austria? The line of soybeans bred in Platt went to Poland, the Balkans, to Hungary, Belgium, Holland, and Greece, to Turkey, to Persia, Canada, England, Germany, Dutch Guiana [later renamed Suriname], the Indian Peninsula [Vorderindien, incl. India, Sri Lanka, and parts of Pakistan and Burma], China, Java, Tanganyika, to French Morocco, and Bessarabia [now part of the Moldavian S.S.R. in the USSR]. It was not only new breeds of soybeans that spread out from Austria but a rekindling of the "soya idea" that had its origin here. This led to a change of opinion and the soybean came to be seen as a world power factor *(Weltmachtfaktor),* as is already well known today.

"According to Dr. [E.C.] Winkler's patented process for debittering soya, a very modern factory was erected in Vienna XX. In it, a part of the oil was expressed, leaving a meal with only half its original fat content. Dr. Winkler achieved, through prior debittering of the soybeans, an excellent food and salad oil that did not need to be further refined. Also, the production of unrefined salad oil from Edelsoja originated in Austria.

"History of the introduction of soya to Austria (p. 11): On the occasion of the Vienna World Exhibition of 1873, Japan exhibited soybeans and awakened a great interest for this Asian plant throughout Central Europe. This was mainly because of the fact that in the Exhibition attention was called to the value of the soybean. The Viennese university professor Friedrich Haberlandt took the matter into his own hands. Through the agency of the imperial embassy / legation he had the Ministry of Agriculture acquire 20 soybean samples from Japan and China. The tests were done in the warmer provinces of the Monarchy. There were 148 agronomic trials introduced in Hungary, Dalmatia [a former region on the Adriatic coast of what is now Croatia; formerly an Austrian crownland], Kärnten [Carinthia, today a state in southern Austria bordering on Italy and Yugoslavia], Steiermark [Styria, a state in the mountainous part of central and southeast Austria], Istrien [Istria, in Slovenia since June 1991], and Mähren [Moravia, a region in central Czechoslovakia]. In 1877 Haberlandt had already gathered so much experience that exact guidance for cultivating soybeans could be given. At this time the first composition analyses were undertaken, so exact knowledge of the value of soybean seeds was obtained. Likewise, through Steuf and Wolker, experience was gained in pressing oil from the seeds, and selections were undertaken in the Botanical Garden at Vienna. The highest yielding types were called "Haberlandt" and these first appeared in the seed catalog of the great seed company Vilmorin Andrieux & Co. in 1880.

"Haberlandt pointed out the value of the soybean as food and recommended a diet of soybeans and potatoes, which contained all nutrients necessary for human life. It was also recommended that the soybean be incorporated into the commissary provisions of the army, and in this process that peas in the popular pea sausage 'Erbswurst' be partially replaced by soybeans.

"At that time, the soybean could not stand on its own. It remained strong for a long time in the peasant agriculture of Krain [Carniola; now in Slovenia] and Istrien, and served as a 'coffee bean' *(Kaffeebohne)* in the preparation of a breakfast drink. There were two conditions which stood in the way of the spread of soybeans. First, the soybean is a foreign food to us. When cooked, it remains hard and has an after-taste, an off flavor that is bitter. The very thin layer under the seed coat of the bean is the source of this after-taste. In addition, it was said that Asian soyfoods have no taste. What is more, there was plenty of food in the Monarchy, so there was no need for a new, foreign food.

"The soybean completely disappeared from memory in Austria. It was only kept in a few botanical gardens as a curiosity.

"In 1920 I began breeding soybean lines with the goal of getting ones that would ripen in our climate and give reasonable yields. Conditions for soybean culture became ripe after World War I due to the general lack of food. My starting material was a matchbox full of soybeans that a prisoner of war had brought with him from Siberia. After a long delay, the solution to the soybean problem was begun in Platt in lower Austria, near Zellerndorf in the district of Hollabrun. Some of the seeds ripened and in the next year those that ripened earliest were selected. In 1924 I was able to announce to Dr. Markus Brandl (the top agricultural official in the area) that I had a field of soybeans that matured in mid-September. Immediately Dr. Fritz Drahorad was sent to Platt to inspect and report on the soybean plant. Drahorad was the current top ranking agronomic official in Vienna in charge of plant cultivation and seed testing *(Oberkommissär der Bundesanstalt für Pflanzenbau und Samenprüfung)* and the assistant to Privy Councillor *(Hofrat)* Professor Dr. Tschermak von Seysenegg, who had been involved with soya at Royal College of Agriculture *(Hochschule für Bodenkultur)* in Vienna. He wrote a confirming report, that a good yielding, early maturing variety was now at hand. This first domestic variety was small seeded and black. It was called Platter SS (Black Seeded) 14.

"Using only newspaper articles and a small price list, I propagated soybean culture. I pointed out its significance as human and animal food, established connections with central authorities in China, and exchanged experiences and breeding material with research stations in Manchuria. The Chinese Eastern Railway soybean station in Harbin, which then employed a staff of 20 scientists, published annually a hefty volume with research results dealing with all questions of culture, breeding and utilization. In this way, Austria received new breeding material from Manchuria– over 80 soybean varieties. But in Platt they failed to perform up to our expectations because of the longer vegetation period.

"Meanwhile, from the small-seeded SS 14 a very large seeded strain was selected. In the price list of 1929, eight lines appeared, with maturity times ranging from 114 to 128 days. One thousand seeds weighed 158 to 170 gm. Yields steadily improved throughout 1929. In the same year, the new varieties of Platt Yellow and Platt Yellow Giant were made available in small quantities for research. A table (p. 14) shows that 100-gm packets of mixed types were sold, including many black types and Professor Früwirth's Black Eyebrow, all prefaced by the word 'Platter.'

Note: This is the 2nd earliest document seen concerning the cultivation of soybeans in Persia [renamed Iran in 1935]. Address: Braunsdorf–Vienna, Austria.

636. Hildebrand, A.A.; Koch, L.W. 1947. Observations on bud blight of soybeans in Ontario. *Scientific Agriculture (Ottawa)* 27(7):314-21. July. [15 ref]

• ***Summary:*** "As the acreage of soybeans in southwestern Ontario has increased rapidly during the past few years, so also has the number of diseases that affect this crop. One of the most potentially dangerous of these is bud blight or, as it has also been designated, top necrosis or streak. The first occurrence of this disease in the field was noted in 1941, and the following year it was found in Iowa and Indiana... Bud blight was first detected in Ontario early in July 1944 in the Harrow laboratory soybean experimental plots." Bud blight is caused by the tobacco ring-spot virus. The symptoms of the disease are described. Little evidence was obtained on the seed-borne nature of the virus. Address: Dominion Lab. of Plant Pathology, Harrow, Ontario.

637. Lehberg, F.H. 1947. Production and processing of soybeans in Canada. *Soybean Digest.* Sept. p. 31-32. [20 ref]

• ***Summary:*** Contents: Introduction. Most oil is imported. Crushing industry. Most soybeans are grown in Ontario. Uses are much like U.S. Mixed feed industry.

"Victory Mills Ltd., under the direction of its president, H.D. Egly who brought to us in Canada many years of invaluable experience in soybean production in the United States, undertook a most extensive educational and promotional program with the result that in 1947, we will produce more soybeans than heretofore in our history, or an estimated 1,134,000 bushels." Address: Victory Mills, Ltd., Toronto, ONT, Canada.

638. Peck, R.H. 1947. Ontario growers organize. *Soybean Digest.* Nov. p. 8.

• ***Summary:*** "The Ontario Soybean Growers Association was organized at a meeting at Leamington, Ontario, November 8, 1946. Committees set up for the purpose from five counties took part in the organization.

"Action had been initiated earlier at a meeting of Essex County soybean growers interested in an organization to look after their interests. There, two committees of five men each from Essex County and Pelee Island were set up to contact soybean growers in other southwestern Ontario counties and urge them to select committees to meet with the Essex County group.

"The Association represents growers of about 60,000 acres of soybeans with an estimated yield of 1,134,000 bushels in 1947. Finances are provided by voluntary membership fees and some help from local elevators.

"John Wilcox, Woodslee, Essex County, was elected chairman of the group; and Angus McKenny, Essex County agricultural representative, secretary."

"The usefulness of the organization was shown early. A delegation persuaded the Federal government at Ottawa to raise the ceiling price of soybeans from $2.15 to $2.40 to bring it more nearly into line with the ceiling on corn. (Ceiling was removed September 15 of this year.) Proceedings also were started to form an Ontario soybean growers marketing scheme under the Farm Products Marketing Act of Ontario. Under the scheme, which is subject to approval by a vote of the majority of the growers of soybeans, a growers' negotiating committee would meet with a dealers' and processors' negotiating committee to decide on the price, grade, handling charges, etc., of the crop."

"The Ontario soybean acreage will likely be increased as earlier-maturing varieties are developed for counties further north, and when more southwestern Ontario farmers recognize their value in the crop rotation.

"The future plan of the Association is to do everything possible to promote the soybean industry."

Note 1. This was Canada's first trade association for soybean growers, and the forerunner of the Ontario Soya-Bean Growers' Marketing Scheme (soon renamed the Ontario Soya-Bean Growers' Marketing Board), established in 1949 under the "Farm Products Marketing Act" of Ontario.

Note 2. This is the earliest document seen (Jan. 2010) concerning Ontario Soybean Growers or its ancestors. Address: River Canard, Ontario.

639. *British Columbia, Department of Agriculture, Annual Report.*1947. Soybean trials. 42:1-189. *
• ***Summary:*** The Field Crops Branch conducted these soybean trials. The soybean variety Earlyana, which as introduced recently, was tested on plots on Vancouver Island and the Lower Mainland, but it is not early enough for local conditions. Some seed has been kept for earlier planting and another test in 1948. Address: Dep. of Agriculture, Victoria, Province of British Columbia.

640. **Product Name:** Soybean Oil, and Soybean Oil Meal.
**Manufacturer's Name:** Dominion Linseed Oil Co.
**Manufacturer's Address:** 587 Fleet St., Toronto, ONT, Canada.
**Date of Introduction:** 1947.
**Ingredients:** Soybeans.
**New Product–Documentation:** Soybean Blue Book. 1947. p. 64.

641. **Product Name:** Clearate Lecithin.
**Manufacturer's Name:** W.A. Cleary Corp.
**Manufacturer's Address:** New Brunswick, New Jersey.
**Date of Introduction:** 1947.
**New Product–Documentation:** Ad in Soybean Blue Book. 1947. p. 71. "Contact W.A. Cleary Corporation. The world's largest independent manufacturer of lecithin for profitable disposition of your wet gums and other lecithin-containing raw materials. Plants in Chicago, Illinois; New Brunswick, New Jersey; and Belleville, Ontario, Canada."

642. Food and Agricultural Organization of the United Nations. 1947. Soybeans: Area, yield, and production. *Yearbook of Food and Agricultural Statistics.* See p. 101-02.
• ***Summary:*** Under soybeans, gives region/continent and country, then statistics for soybean area, yield, and production for each soybean producing country. Statistics show that the following countries produced the following amounts of soybeans (measured in 1,000 metric tons) during the 1934-38 period (the earliest period given).

Europe: Austria 0.2. Bulgaria 11.6. Czechoslovakia 0.9. Hungary 0 (but 6.2 in 1940 and 1.3 in 1945). Italy less than 0.5 (but 0.01 in 1940 and 0.9 in 1945). Poland 0.5. Rumania [Romania] 11.7, Yugoslavia 1.5. Europe total: Former boundaries 550, present boundaries 260. USSR: Former boundaries 68.1, present boundaries 97.1.

America: Canada 5.5. United States 1,164.0. Total 1,170.0

Asia: China: China Proper 6,092.7, Formosa (Taiwan) 4.2, Kwantung 20.2, Manchuria 3,851.0. Indochina: Cambodia 0.4 (in 1937). Japan 325.1. Korea 518.6. Netherlands Indies [Indonesia]: Bali and Lombok 9.0, Java and Madura 236.4. Asia total: 10.60. Africa: Southern Rhodesia less than 0.5 (but 0.3 in 1942 and 0.2 in 1945).

World totals: Excluding USSR–Former boundaries 11.829. Excluding USSR–Present boundaries 11.800. Including USSR: 11.9000.

643. Harly: New Canadian domestic soybean variety. 1947. Seed color: Yellow.
• ***Summary:*** Sources: Owen, C.W. 1949. "New Canadian variety." *Soybean Digest.* June. p. 8. The new soybean variety, Harly, was bred at the Dominion Experimental Station, Harrow [Ontario], and accepted for registration by the Canadian Seed Growers' Association. It originated from a selected segregate in a cross between Mandarin and A.K. (Harrow).

USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 11. "Harly.–Selection from a cross between the Mandarin and A.K. varieties by the Dominion Experiment Farm, Harrow, Ontario, Canada. Released in 1947. Pubescence, gray; flowers, purple; shattering, little; seeds, yellow with yellow hilum, about 2,600 to the pound; cotyledons, yellow; oil, 18.9 percent; protein, 38.9 percent; iodine number, 130. Maturity, group I."

644. *Windsor Daily Star (Essex County, Ontario, Canada).*1948. Provides nourishing meals costing three cents each: Versatile source of shortening and industrial oils makes good Ontario cash crop. Jan. 20. p. 5-6.
• ***Summary:*** Robert H. Peck of River Canard, Ontario, has grown soy beans for 22 of his 33 years. "It is his confident faith that the soy bean will have more to do with Canada's future health and wealth than most people suspect... He raised his first soy beans for a school fair in 1925. Since then he has planted more and more each year until in the middle 1930s, he began devoting a considerable acreage to registered seed production. Last fall his beans took first prize at the Royal Winter Fair at Toronto but, to his chagrin only placed second in the International Grain and Feed Show at Chicago [Illinois].

In October 1947 "he was made a director of the American Soy Bean Association, becoming the first Canadian to be chosen for the governing body of that organization since, in 1929, G.I. Christie of Guelph served as president.

"In 1947 Bob Peck raised about 800 bushels of high-grade seed soy beans on 50 of his 180 acres of farmland at River Canard, seven miles south of Windsor, as well as running a test plot for the Harrow Experimental Farm, where new varieties are developed... In all Canada nearly 200,000 acres of farmland were devoted to soybeans last year, as compared with 10,000 acres in 1941." About 88% of Canadian soy beans are produced in Western Ontario, chiefly in Essex and Kent Counties. Some are grown in

Middlesex, Elgin, and Lambton Counties. Soybean oil is now widely used in making shortening, while the meal is used to feed dairy cattle and poultry. Soybean oil can also be used to make more than 4,000 industrial products, such as paints, plastics, and linoleums. In the USA it serves as a basic ingredient in oleomargarine. "New uses are constantly being sought by such firms as Victory Mills, Limited, which recently announced the establishment of a $300,000 research project directed by Dr. W.D. McFarland, former head of the chemistry department of MacDonald [sic, Macdonald] College in Quebec."

A large photo shows Mr. Robert H. Peck with sack of soybean seeds. Also discusses the work of Meals for Millions in using soybeans to develop a 3-cent meal to feed the hungry in Europe.

645. *Soybean Digest.*1948. Grits and flakes... from the world of soy: Milquo Ltd. is now Vi-Tone. Jan. p. 34.
• ***Summary:*** "Milquo Limited has changed its firm name to Vi-Tone Products Limited, 198 Gage Ave. S., Hamilton, Ontario. Ray H. Bissell is president."

646. *Windsor Daily Star (Essex County, Ontario, Canada).*1948. Yields best in soy beans: Essex, Kent growers winners of contest. Feb. 28. p. 5, col. 8.
• ***Summary:*** "Top places in the Ontario Crop Improvement Association's high yield soybean contest were won by Essex and Kent County men." The top four places were named. Fred Newcombe, of Blenheim, placed first with a yield score of 100 and yield per acre count of 40.56 bushels; he won $100. William Pajot, of River Canard, was second with 36.18 bu/acre, and a prize of $60.

The contest was carried out in co-operation with Victory Mills and Toronto Elevators Limited and was designed to expand soybean acreage in Ontario, lead to another good cash crop with high yields, and "further the production of an edible vegetable oil from a home-produced crop."

Note: This is the earliest article seen (Aug. 2002) that mentions Toronto Elevators Ltd. in connection with soybeans.

647. Roberts, I.M. 1948. Organize Ontario soybean committee. *Soybean Digest.* Feb. p. 16.
• ***Summary:*** "In the fall of 1946, Dr. G.P. McRostie, field husbandry department, Ontario Agricultural College, called a meeting of a group which included plant breeders who were working with soybeans at the different Dominion and provincial experimental stations and processor representatives. He believed that the interests of those specially concerned with soybean improvement in Ontario would best be served by forming an Ontario Soybean Committee." The Committee would serve "the following purposes: (1) a means of planned attack on soybean improvement; (2) co-ordination of work between experimental stations; (3) a clearing house for information; (4) a basis for uniform recommendation.

"On December 10, 1947, the same group and, in addition, representatives of the soybean growers, met in Chatham with the sanction obtained for an Ontario Soybean Committee. Informal reports were heard from Dr. F. Dimmock, Ottawa; I.M. Roberts, Guelph; J.J. Nelson, Ridgetown, and C.W. Owen, Harrow, on the research and breeding programs being carried out at their respective stations." Address: Research Fellow, Field Husbandry Dep., Ontario Agricultural College, Guelph, Ontario.

648. American Soybean Association. 1948. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 112 p. Advertisers' index. 22 cm.
• ***Summary:*** A table (p. 48) shows "Canadian consumption of soybean oil" (1938, 1944, 1945) for each of eight different uses. In 1938 some 2.4 million lb were used including 1.6 million lb in soaps and washing compounds. In 1944 some 11.2 million lb were used in slaughtering and meat packing. Address: Hudson, Iowa.

649. Dimmock, F. 1948. Soybean breeding at Ottawa. *Soybean Digest.* March. p. 18.
• ***Summary:*** "Breeding work with soybeans was begun at the Central Experimental Farm, Ottawa, Ontario, in 1928. The main objectives of the program were to develop early maturing high yielding varieties of desirable plant type, suitable for production in eastern Ontario and southern Quebec and other short seasoned areas throughout Canada... The earliest variety secured was Manitoba Brown, a selection made at the Manitoba Agricultural College, from Ogemaw. Others included Wisconsin Black, Mandarin, Ito San, Manchu, together with collections from the United States Department of Agriculture, the Royal Botanic Gardens, London, England, and several private sources."

"By 1934 sufficient progress had been made to request a license for the sale of a selection from Mandarin, which was named Mandarin (Ottawa). It was accepted for registration by the Canadian Seed Growers Association in the same year. Mandarin (Ottawa) remains the most popular variety in eastern and central Ontario and is still the standard used by many growers to judge the merits and value of more recent varieties.

"As the years passed additional new varieties have been developed and made available to growers. In 1937 the variety Kabott was released. It was 10 days earlier in maturity than Mandarin (Ottawa) and originated from a mixed lot of seed obtained in 1933 through R. R. Kabalkin, London, England and collected in the district of Ninguta, Manchuria. In 1939, seed of Pagoda was made available to growers. This variety ripens about 10 days earlier than Kabott and represents one of the progenies from a cross

made in 1930 between Manitoba Brown and a selection from Mandarin. Pagoda combines the early maturity of Manitoba Brown with the greater growth, increased yield, absence of shattering and yellow seed of Mandarin."

"More recently a new variety, Capital, has been added to the group. Capital originated from a cross between strain 171 x A.K. (Harrow) made in 1935. Strain 171 was a selection obtained from a mixed lot of seed received by the Division of Forage Plants, Ottawa, in 1931 from J.L. North, Royal Botanic Garden, London, England and was collected in the vicinity of Sochentze, east of Harbin, Manchuria." Address: Ottawa, ONT, Canada.

650. Victory Mills, Limited. 1948. Vegetable oils, oilmeals, soybean flours, malt sprouts, brewer's-malt, dried yeast, dried grains (Ad). *Soybean Blue Book* p. 75.

• ***Summary:*** This ½-page ad shows a large illustration (aerial view) of the Victory Mills plant with a tanker nearby on the water. Address: Head office and plant: 285 Fleet St. East, Toronto; Montreal office: Big Royal Bank Bldg., Montreal.

Note 1. This is the earliest document seen (June 2009) that mentions the soybean varieties Round Black or Yelnando. Both Yelnando (1948) and Yelnanda (1961) appear to have been developed by the Coker Seed Co. of Hartsville, South Carolina.

Note 2. This is the earliest document seen (Oct. 2004) which states that Round Black is the same as Buckshot, or that Wilson Black is the same as Wilson. Address: USDA, Bureau of Plant Industry, Soils & Agricultural Engineering, Div. of Forage Crops & Diseases [Beltsville, Maryland].

653. Dimmock, F. 1948. Soybeans. *Canada. Department of Agriculture, Farmers' Bulletin* No. 149. p. 1-19. June. Also called Canada. Dept. of Agriculture, Publication No. 807

(Actually 808). Revision of Farmers' Bulletin No. 80 (1939). Summarized in Soybean Digest, Nov. 1948, p. 38.
• ***Summary:*** Contents: Introduction. Description of the soybean plant. Soil and climatic adaptation. Uses of soybean seed: Soybean oil, soybean meal, soybean flour. Uses of the soybean for forage and soil improvement. Varieties (incl. maturity and seed color; see best varieties below): Yield, varietal adaptation, protein, oil, and iodine number, size of seed (weight in grams of 1,000 seeds for 11 varieties), color of seed. Culture: Soil preparation, lime and fertilizers, inoculation of the seed, time of seeding, method of seeding, rate of seeding, depth of seeding, cultivation, harvesting, threshing. Storage of the seed.

Until 1940 the area devoted to soybeans in Canada "did not exceed 20,000 acres annually, but since then it has increased steadily until it averages 50,000 to 60,000 acres with every indication of still further increase. Nearly all of the present soybean acreage is in Ontario. Small patches are being grown in Quebec, Manitoba, Alberta, and British Columbia and investigations are under way in practically every province to determine the possibilities for soybean production."

A map (p. 13) shows that Ontario is divided into 5 climatic zones for soybeans, with each zone having earlier and later areas. The varieties best suited for each zone and area are given. Proceeding roughly from north to south, they are: Pagoda (Maturity: very early. Seed color: yellow. Weight in gm per 1,000 seeds: 175), Kabott (early, yellow, 235), Flambeau (early, yellow with black hilum, 185), Goldsoy (yellow, 225), Capital (yellow with buff hilum, 162), Mandarin (Ottawa, yellow, 218), Earlyana (yellow with pale hilum, 181), Richland (yellow with dil. black hilum, 188), Harman (yellow with black hilum, 185), A.K. (Harrow, yellow with buff hilum, 165), and Lincoln (yellow with black hilum, 175).

Tables show: (4) Average maturity period, source, and origin of the 11 soybean varieties listed above. Note on sources: C.E.F. = Central Experimental Farm. D.E.F. = Dominion Experimental Farm. O.A.C. = Ontario Agricultural College. A.E.S. = Agricultural Experiment Station (USA). Address: Div. of Forage Plants, Experimental Farm Service, Ottawa, ONT, Canada.

654. Cohn, Henry I. 1948. The Rickard Koreans. *Soybean Digest.* Aug. p. 13, 28.
• ***Summary:*** In 1941 the Dominion Experiment Station at Harrow, Ontario, received from Asia about 1 pound of seed of each of many traditional soybean varieties for experimental purposes. The station did little or nothing with the sample of one of the varieties that had unusually large seeds, probably thinking that it would require an unusually long maturity period.

W.G. Baldwin of Harrow, Ontario, a Canadian farmer not connected with the Experiment Station, obtained a sample of this large-seeded soybean, planted the seed in 1942, and discovered that it was a variety that yielded well and matured one week ahead of the variety Richlands.

E.T. Rickard of Champaign, Illinois, who owned farms in both Ontario and Illinois, saw the soybean growing in Canada, and brought 1 bushel to Illinois in 1942 and 8 bushels in 1943. Rickard gave three pecks of the original bushel to H.I. Green, a close friend, on the condition that they would be planted nearby where Rickard could observe them. P.A. Stone of Pleasant Plains was given some seed which was planted in 1944. Mr. Rickard first planted these on his farm in Alexander, Illinois, in 1944.

The unfolding story of the Rickard Koreans is told. A portrait photo shows E.T. Rickard in 1942; he died in 1947. Address: Manager Valley Farms, Carrollton, Illinois.

655. Hildebrand, A.A. 1948. Soybean diseases in Ontario. *Soybean Digest.* Aug. p. 16-17.
• ***Summary:*** Since 1942, 14 diseases have been found. Eight or nine of them are seed borne. Mosaic and pod and stem blight were severe in 1942. Address: Dominion Lab. of Plant Pathology, Harrow, Ontario.

656. *Soybean Digest.*1948. Grits and flakes... from the world of soy: Victory Mills, Ltd., Toronto. Aug. p. 34.
• ***Summary:*** "A fine example of color printing is the recent folder by Victory Mills, Ltd., Toronto [Ontario, Canada], describing the firm and its soybean and linseed and malt products."

657. McFarlane, W.D. 1948. Chemurgy in Canada. *Chemurgic Digest* 7(9):22-26. Sept.
• ***Summary:*** The "National Chemurgic Committee of Canada" was organized in 1938 as an activity of the Canadian Chamber of Commerce. A photo in the section on soybean oil (p. 23) has the caption: "Aerial view shows the highly modern Toronto plant of Victory Mills, Ltd, an important center of research in the chemurgic utilization of farm products."

A sharp expansion in soybean acreage took place in 1942 when a floor price was established for number one beans. The peak year was in 1946 when 59,200 acres produced just over 1 million bushels of soybeans. A record production is indicated for 1948. Ontario province accounts for 96% of Canada's soybean production. The limits of this crop's expansion will not be reached until Canada has replaced all imports of edible oils.

"The completion in 1944 of the large solvent extraction plant of Victory Mills Limited, Toronto, established for the first time in Canada a stable market for soybeans and ensured the Ontario farmer of ready disposal of his crop.

"Much progress has been made in Canada in research on the modification of soybean oil in order to convert this

semi-drying variety into an oil with enhanced drying properties...

"Soybean oil has been found to be ideal for solvent segregation which splits it into two fractions–a fast-drying oil and a new improved food oil–each fraction being superior to the original oil for certain specific uses."

Photos show: Dr. W.D. McFarlane, D.G. McKenzie, D.L. Morrell, E.S. Archibald, G.A. Ledingham, W.H. Cook, and H.B. Speakman. Address: Vice Chairman, National Chemurgic Committee, Canadian Chamber of Commerce; Director of Research, Canadian Breweries Ltd. and Victory Mills Ltd., Toronot, Canada.

658. Ross, J.V. 1948. Soybeans in the Canadian fats and oils economy. *Soybean Digest.* Sept. p. 47-48.

• ***Summary:*** "You are aware of the fact that Canada is deficient in edible vegetable oils, and that we have always been an importing nation. During the last war however, when imports from other countries were cut off, it became apparent that we would have to produce more of our requirements, consequently, the growing of oilseed crops, such as soybeans, sunflower and rapeseed was encouraged and promoted.

"Of these crops, the production of soybeans was by far the most successful in Ontario. In prewar years, our annual production totalled a mere 50,000 bushels... this year it is estimated the production in Ontario will exceed by a considerable margin the 2 million bushel mark. This, however, will supply only about 20 percent of our present domestic edible oil requirements. There is a possibility the requirements will become still greater by the legalizing of the manufacture and sale of margarine.

"At the present time, soybean oil represents over 30 percent of our total liquid edible oil consumption. The source of this oil is, of course, our domestic production plus importations of beans and oil from the United States. During the war, and until August 1st of this year, our fats and oils, both domestic and imported, were under strict government control. The sale of soybean oil could only be made to certain manufacturers as designated by the government, and the oil was allocated almost exclusively to the shortening trade." Address: Victory Mills, Ltd., Toronto.

659. Dimmock, F. 1948. Korean soybeans (Letter to the editor). *Soybean Digest.* Oct. p. 7.

• ***Summary:*** Concerns an article titled "The Rickard Koreans" in the August issue of this magazine (p. 13, 28). The writer is interested in the origin of the Early Korean variety insofar as the Dominion Experimental Station at Harrow, Ontario, is concerned. Dimmock writes: "I was in charge of corn and soybean breeding work at this station from 1924 to 1929. In 1924 I received envelope samples of seed of several lots of soybeans and one of them was labelled 'Early Korean,' China. I do not remember how these envelopes came into my possession, but I grew all the seed in short rows in 1924, sufficient to have enough for testing purposes in 1925."

"These tests were run for several years. I left Harrow to come to Ottawa in 1929 and they were still being conducted at that time. During this period, I made two selections which were licensed as varieties in Canada, one from the A.K. variety, which was named A.K. (Harrow) and the other from Mandarin, which was named Mandarin (Ottawa). Both of these varieties are still being grown here.

"Early Korean was among the highest yielders in our tests. It was strong in the straw, but was rather short for a fairly late variety. It was not quite as late as A.K. (Harrow), but neither was it as tall and it did not yield quite as well. I, therefore, selected A.K. (Harrow) as the better variety for southwestern Ontario and Mandarin (Ottawa) as an early variety for central and eastern Ontario, where the season is shorter.

"I had several times thought of releasing 'early Korean' as a variety, but there was practically no interest in Canada in growing soybeans at that time and even until the beginning of the war in 1939 the total acreage did not average more than 9,000 to 10,000 acres annually. During the war period and since its close the acreage of soybeans has shown a steady increase until this year 1948, it is estimated to be about 100,000 acres.

"As your article was not clear on the origin of the Early Korean variety, I thought that you might like to know something of its early history at Harrow, Ontario." Address: Central Experimental Farm, Dep. of Agriculture, Ottawa [ONT, Canada].

660. Owen, C.W. 1948. Soybeans at Harrow: Breeding work at the Ontario Experiment Station. *Soybean Digest.* Nov. p. 18.

• ***Summary:*** "For several years previous to 1941 the acreage devoted to soybeans in Ontario ranged from 8 to 10 thousand acres annually. In 1941 the acreage increased to 40,000 acres and has been above this figure ever since, the largest acreage of 59,200 being recorded in 1946... The Dominion Experimental Station at Harrow is located in Essex county where soybean testing work has been underway since the early 20's."

The first important variety developed and released was A.K. (Harrow). It is widely grown in Essex and Kent counties, where it can be matured. "The work of hybridizing between varieties from which the present breeding program has developed began in 1931. Since that time one new variety, Harman, has been released. This variety matures about a week earlier than A.K. (Harrow) and therefore, may be grown over a wider section of the district. The acreage devoted to Harman was quite extensive in 1947.

"In 1948 a new variety, Harly, is being released. It will find a place in the shorter season sections..." Address: Asst.,

Forage Crops, Ontario Agric. Exp. Station, Harrow, ONT, Canada.

661. **Product Name:** Soybean Oil, and Soybean Oil Meal (Named CVOP Soybean Oil Meal by 1952).
**Manufacturer's Name:** Canadian Vegetable Oils, Ltd. Renamed Canadian Vegetable Oil Processing Ltd. by 1952.
**Manufacturer's Address:** Victoria Ave. and Burlington St., Hamilton, ONT, Canada.
**Date of Introduction:** 1948.
**Ingredients:** Soybeans.
**New Product–Documentation:** *Soybean Blue Book.* 1948. p. 74. No address is given.

*Soybean Blue Book.* 1952. p. 94. The entry now reads: Canadian Vegetable Oil Processing Ltd., Victoria Ave. and Burlington St., Hamilton. 7 expellers, capacity 150 tons. Storage capacity: 500,000 bushels. CVOP soybean oil meal. Served by CN RR.

Soybean Blue Book. 1968. p. 96.

*Soybean Digest Blue Book.* 1978. June. p. 118. French, Blaw-Knox hexane solvent, capacity 1,000 tons. Storage capacity 700,000 bushels. CVOP Soybean Meal.

Note: This is the earliest record seen (Jan. 2010) concerning Canadian Vegetable Oil Processing Ltd. (Hamilton, Ontario) in connection with soybeans. The company was later renamed CVOP, then CanAmera Foods.

662. **Product Name:** Soybean Oil, and Edible Brand Soybean Oil Meal.
**Manufacturer's Name:** Edible Oils Limited.
**Manufacturer's Address:** P.O. Box 130, Fort William [Thunder Bay], ONT, Canada.
**Date of Introduction:** 1948.
**Ingredients:** Soybeans.
**New Product–Documentation:** Soybean Blue Book. 1948. p. 74. Plant and offices: P.O. Box 130, Fort William, Ont., Canada. Gen'l offices: Grain Exchange Bldg., Winnipeg, Manitoba, Canada. Naptha [Naphtha] solvent, capacity 50 tons. Storage capacity: 50,000 bushels. "Edible Brand" soybean oil meal.

Soybean Blue Book. 1968. p. 96.

664. Victory Mills, Ltd. 1948. Beans of bounty (Color motion picture). Toronto, Ontario, Canada. 20 minutes. With sound. *
• ***Summary:*** About soy in Canada. "The audience is taken to farms in Ontario where the value of feeds containing soy products is illustrated. From there, the camera focuses on research under way at the Agricultural College and the experiment station to develop suitable soybean varieties. By means of animation, Canadian production and consumption of edible oils are shown. Final scenes show harvesting and explain why Ontario farmers are growing more and more soybeans. This film is staged in Canada, but most of the points made are applicable to the U.S."

665. **Product Name:** Soywhite Fat Free Flour.
**Manufacturer's Name:** Victory Mills, Ltd.
**Manufacturer's Address:** 285 Fleet St. East, Toronto, ONT, Canada.
**Date of Introduction:** 1948.
**New Product–Documentation:** Soybean Blue Book. 1948. p. 74. Soybean Blue Book. 1949. p. 100. Cocosoy is no longer listed. Indosoy still is. Soya Bluebook. 1986. p. 85. Victory Soya Mills Ltd. is now a division of Central Soya Co. Inc. and is located at 333 Lake Shore Blvd., E. Toronto, ONT, M5A 1C2, Canada.

666. Food and Agricultural Organization of the United Nations. 1948. Soybeans: Area, yield, and production. *Yearbook of Food and Agricultural Statistics–Production.* See p. 101-02.
• ***Summary:*** Under soybeans, gives region / continent and country, then statistics for soybean area, yield, and production for each soybean producing country. Statistics show that the following countries produced the following amounts of soybeans (measured in 1,000 metric tons) during the 1934-38 period.

Europe: Austria 0.2. Bulgaria 11.6. Czechoslovakia 0.9. Hungary 0 (but 1.3 in 1945). Italy less than 50 metric tons (but 0.9 in 1945). Poland 0.5. Rumania [Romania] 11.7, Yugoslavia 1.5. Europe total: 27.0.

USSR: (97.1).

North America: Canada 5.5. United States 1,164.0. Total 1,170.0

Asia: China: China Proper 6,092.7, 3,851.0, Taiwan (Formosa) 4.2. Indonesia: Bali and Lombok 9.0, Java and Madura 236.4. Japan 325.1. Korea 518.6. South Korea 0 (but 122.2 in 1945 and 130.6 in 1946). Philippines 0 (but 0.2 in 1946). Siam [later Thailand] 3.6. Turkey (but 0.4 in 1945). Asia total: 11,070.0.

Africa: Nyasaland 0 (but 0.4 in 1946). Ruanda-Urundi 0 (but 0.9 in 1947). Southern Rhodesia less than 50 metric tons (but 0.2 in 1945). Uganda 0 (but 2.6 in 1946). Union of South Africa 0 (but 1.5 in 1945).

World totals (Excluding USSR): 12,300.0.

Note: This is the earliest document seen (Nov. 2007) that gives soybean production or area statistics for Turkey or for the Middle East. This document contains the earliest date seen (1945) for soybean production or area statistics for Turkey or for the Middle East.

667. Quigley, D.T. 1948. The national malnutrition. Milwaukee, Wisconsin: Lee Foundation for Nutritional Research. See p. 3, 38. *
• ***Summary:*** The Indians of northwestern Canada enjoyed good health and long life before they began consuming the white man's food. "They took to this with as great enthusiasm as they did to alcohol; resulting in many cases of arthritis, tuberculosis, and tooth decay, with a shortened period of life and lessened ability to work. The Indians in the back country who did not have access to the white man's food kept their good health; they had no tuberculosis or any of the other diseases mentioned."

668. Victory Mills, Ltd. 1948. For the successful farmer. New soybean guide. Toronto, Canada. 20 p. Summarized in Soybean Digest, May 1948, p. 8. *
• ***Summary:*** This booklet contains considerable information on how to grow soybeans in Canada, including a variety zone map for southern Ontario, where practically all of Canada's soybeans are grown.

"Canada can no longer freely import her fats and oils requirements, and it is necessary for us to promote production, both from a point of relieving our immediate shortage and to better our position in the future, so as to avoid being dependent on imports of these essential commodities which are produced in the far-flung corners of the globe. It is recognized today that it is an economic and strategic necessity for Canada to be more self-sufficient in respect of these vital edible and industrial fats and oils.

"Soybeans are the only crop in Canada which produce edible vegetable oil in substantial quantities." Address: Toronto, ONT, Canada.

669. *Soybean Digest.*1949. Margarine goes on sale in Canada. Jan. p. 26.
• ***Summary:*** Canada's margarine law was passed in 1886. Since then, except for a brief period during World War I, margarine could not be manufactured or sold legally in Canada.

However on 14 December 1948 the Canadian Supreme Court threw out the 62-year-old legal ban on margarine production in Canada. Canadian margarine manufacturers jumped into immediate operation. Some margarine went on sale in Vancouver [British Columbia] stores within a week after the ruling. The product was said to look and taste like butter, but it sold for a much lower price. Canada now has no regulations on the manufacture or sale of margarine, except for a ban on importing margarine from other countries. Strong federal and state anti-margarine legislation still exists in the USA. A photo shows mixing vats in a margarine plant.

670. American Soybean Association. 1949. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 128 p. Advertisers' index. 22 cm.
• ***Summary:*** A table (p. 56) shows "Production of soybean oil and cake in Canada" (1945-1947). In 1946-47 Canada produced 22.8 million lb of oil and 105 million lb of cake and meal. Address: Hudson, Iowa.

671. Associated Seed Growers, Inc. 1949. A descriptive catalog of vegetables (No. 14): Asgrow. New Haven, Connecticut. 23 cm.
• ***Summary:*** An outline map of the United States, titled U.S. Asgrow, shows the location of 26 production branches (with codes letters indicating whether peas, beans, corn, or garden seed are produced at each branch), 8 breeding and research stations, and 16 sales branches. A bold letter in a box indicates: A–Associated Seeds, San Antonio, Texas. B. Grimm Alfalfa Seed Growers of Alberts, Ltd., Brooks, Alberta, Canada. C–Asgrow Export Corporation, New Haven, Connecticut. Address: New Haven, Connecticut.

672. *Soybean Digest.*1949. Conducts soybean trials in Britain. March. p. 34. [3 ref]
• ***Summary:*** J.C. Ferree, director of Soya Foods, Ltd., London, believes that the question of growing soybeans in the British Isles should be considered. He has been growing a number of varieties experimentally; they come from Yugoslavia, Manchuria, Canada, the USA, etc.

Henry Ford's Fordson Estates grew soybeans in Essex, England, in the early 1930s on a significant scale. "The crop was successful agriculturally but not economically."

Photos show: (1) A Yugoslavian variety that matured and produced small yellow seeds in 1948; it was suggested for forage and silage. (2) Canadian Mandarins, which also matured in 1948; a 100-day variety in Canada, they took 160 days to mature in England.

673. Owen, C.W. 1949. New Canadian variety [of soybean–Harly]. *Soybean Digest.* June. p. 8.
• ***Summary:*** The new soybean variety, Harly, was bred at the Dominion Experimental Station, Harrow [Ontario], and accepted for registration by the Canadian Seed Growers' Association. It originated from a selected segregate in a cross between Mandarin and A.K. (Harrow). It is 6 to 15 days earlier than both parents, superior to Mandarin in yield, and stands 12 inches higher. Its height and stem strength make it suitable for harvesting with a combine.

Only a small amount of Harly seed was available for planting in 1948, but enough should be available in 1949 to produce sufficient acreage. A photo shows a man standing in a field of Harly soybeans. Address: Asst., forage crops, Dep. of Agriculture Experiment Station, Harrow, Ontario.

674. *Soybean Digest.*1949. Wins top film award. July. p. 22.
• ***Summary:*** "The Victory Mills, Ltd., film on soybeans, 'Beans of Bounty,' has shared top honors in the non-

theatrical class of the Canadian Film Awards, it is announced."

675. Owen, C.W. 1949. Soybeans in Ontario. *Soybean Digest.* Sept. p. 56-57.
• ***Summary:*** A good history and overview. A table shows Ontario soybean acreage and production from 1941 to 1949 (estimate). During this period acreage grew to 120,000 from 10,900 and production increased to 2,250,000 bushels from 216,000. Ontario's two southernmost counties of Essex and Kent grow more than 70% of the present total acreage. The most popular soybean varieties in the main section of Ontario's soybean belt are currently Harman (25% of total), Lincoln (20%), A.K. (Harrow, 15%), Mandarin (15%), Earlyana (10%), Capital (5%), Hawkeye (5%), Others (5%). A photo shows C.W. Owen. Address: Asst. Forage Crops, Dep. of Agriculture Experiment Station, Harrow, Ontario, Canada.

676. *Chemurgic Digest.*1949. Friends of Chemurgy: Edward J. Dies. Oct. p. 1.
• ***Summary:*** Dies is described by adjectives such as "energetic," "thorough," "definite," "forceful," and "chemurgic." "For 13 years he has been a sponsor of the National Farm Chemurgic Council. For the past 10 years he has represented industry on the Council's board of governors."

In college he studied finance and economics. His extensive travels as a newspaper correspondent have him broad exposure to agriculture. As a writer for the Canadian government he advocated colonization of the prairie provinces [Manitoba, Saskatchewan, and Alberta]. "For seven years with Associated Press and one year with United Press, he served as a staff correspondent." The author of seven books, he operated his own public relations bureau in Chicago, Illinois, for 20 years before moving to Washington, DC, in 1945. For most of that period, his main interest was agriculture. Today he is chairman of the Soy Flour Association.

"He has a deep-seated conviction that the farmer–not industry or labor–will in the end be responsible for the preservation of our democratic form of government." He also believes: "The work that Wheeler McMillen, John Ticknor and the other chemurgic leaders are doing today will brighten the history books of tomorrow. It is tremendously important. It right down to the very roots of agriculture which, after all, are the roots of democracy." A small portrait photo shows Edward J. Dies.

677. *Soybean Digest.*1949. Ontario sets bean price. Oct. p. 6.
• ***Summary:*** The price was set by the Ontario Soybean Marketing Board, Toronto. "Price Sept. 29 was $2.33½ per bushel delivered to the country elevator with ½ cent deducted to finance the marketing board. The devaluation of the Canadian dollar raised the price about 15 cents per bushel."

Soybean processors in Canada are Victory Mills, Canadian Vegetable Oils, and Toronto Elevators.

678. *Lafayette Journal and Courier (Indiana).*1949. Retired agronomy professor is dead. Dec. 12.
• ***Summary:*** Prof. Alfred T. Wiancko, age 77, died Saturday morning [Dec. 10] at Eustis, Florida, of bronchial pneumonia. In 1943, when he retired, he was given the title of professor emeritus of agronomy and continued to keep in touch with research activities at the university.

A bachelor until after his retirement, Prof. Wiancko was married on 5 Nov. 1949 to Maria Eva Featherly of Niagara Falls, New York. But their marriage was to last for little more than a month. On their way to Eustis, Florida, where he had spent the winter months for the past several years, he became ill and was hospitalized for a week. The couple then proceeded to Florida, where he entered a hospital several days before he died. He had made his summer home near Toronto, Canada.

Gives a brief biography of Prof. Wiancko, who was born on 16 Oct. 1872 in Ontario, Canada. The funeral was held at Crestes / Orestes [Eustis?], Florida, and the body was sent to Orillia, Ontario, Canada, for burial.

679. *J. of Farm Economics.*1949. The Ontario Soya Bean Growers' Marketing Scheme, 1949. 31(3-4):615. *
• ***Summary:*** Provincial marketing acts have been passed in Alberta, Saskatchewan, and other Canadian provinces.

680. Alfred Theodore Wiancko: 1872-1949. 1949. Lafayette, Indiana: Purdue Univ. Dep. of Agronomy. 1 p. Unpublished typescript.
• ***Summary:*** This is a combination obituary and memorial resolution: "Alfred Theodore Wiancko was born in Ontario, Canada and reared on a farm in that Province. He was graduated from the Ontario Agricultural College in 1895 following which he served there three years as Assistant Librarian and Instructor in German. From 1901 through 1902 he served as Instructor in Agriculture and Assistant Agriculturist at the Nebraska College and Station.

"In January, 1903, Wiancko was appointed Associate Professor and Associate Agriculturist at Purdue University and headed up both teaching and research in agronomic subjects. The School of Agriculture was reorganized into 4 major departments in 1908 and Prof. Wiancko became Head of the Agronomy Department. In the A.E.S. [Agricultural Experiment Station] the Department of Agriculture was changed to the Department of Agronomy in 1909 and in 1911 the soil fertility work of the Chemical Department was combined with the crops work of the Agronomy Department and called the Soils and Crops Department under A.T.

Wiancko, Chief. In the fall of 1903, Prof. Wiancko and M.L. Fisher organized and taught two courses in crops and two courses in soils. Other courses in agronomy were added from time to time as well as additional staff members."

"Prof. Wiancko's primary interest was in research. In addition to the 10 acres of the University Farm set aside for research in agriculture (agronomy) he conducted a large number of cooperative tests with farmers in the early years. It was through these tests that soybeans were introduced into the Cornbelt in 1904. These cooperative tests were later replaced by outlying experiment fields on the major soil types of the state. At one time there were 11 such fields. In 1913, Prof. Wiancko was instrumental in having the University acquire the Wilson Farm–later the Soils and Crops Farm–consisting of 120 acres immediately east of Lafayette..."

"A full time soybean specialist was attached to the Agronomy Department in 1935 in cooperation with the Central Soybean Laboratory of the U.S.D.A."

"Prof. Wiancko was a prolific writer on agronomic subjects and was either author or co-author of 23 bulletins, 27 circulars and 27 soil survey reports. He was active in the American Society of Agronomy in which he was elected a Fellow. He served with the Soil Survey Association in this country and as its President in 1922."

"Prof. Wiancko retired as Chief of the Agronomy Department July 1, 1943 with the title of Professor Emeritus until his death December 10, 1949."

Source: Purdue University, West Lafayette, Indiana, in the Department of Agronomy, Biographical File–Department Heads. A copy is on the back of Prof. Wiancko's portrait hanging in the Department Heads Conference Room. Address: Dep. of Agronomy, Purdue Univ., West Lafayette, Indiana.

681. Bailey, Ethel Zoe. 1949. Glycine soja–U.S. and Canadian sources. Ithaca, New York: L.H. Bailey Hortorium. 1 card. Unpublished.

• ***Summary:*** *Glycine soja* is the scientific name for the wild soybean, an annual plant. This hand-written index card is in the Bailey Hortorium's index system of nursery catalogs and/or botanic garden seed lists developed by Ethel Zoe Bailey. On the card are two-part coded entries referring to botanic gardens or nurseries. Part 1 is the code for the name of the botanic garden, and part 2 is the last two letters of the earliest year in which the plant for that card appeared in this garden's catalog. There is only one listings for *Glycine soja* from U.S. and Canadian sources:

(1) M.B.G. 49–Montreal Botanic Garden, 4101 or 4581 Sherbrooke St. East, Montreal, Quebec, Canada, 1949. Address: L.H. Bailey Hortorium, 462 Mann Library, Cornell Univ., Ithaca, New York 14853-4301. Phone: 607-255-7981. Fax: 607-255-7979.

682. Roberts, I.M.; McRostie, G.P. 1950. The soybean as a grain crop in Ontario. *Ontario Department of Agriculture, Bulletin* No. 474. 19 p. Feb. Summarized in Soybean Digest, July 1950, p. 26.

• ***Summary:*** Contents: Introduction. Where to grow soybeans. Soybeans and the soil. Soybeans in the rotation. Preparation of the seed bed. Depth of seeding. Time of planting. Sow only good seed: It is sound practice to purchase Registered or Certified seed at least once every 3-4 years, seed germinating at 85% or better should give satisfactory field stands, try to plant seed grown the previous year, seed should be cleaned of inert materials, weed seeds, splits, and foreign seeds, several forms of seed protectant dusts may be purchased for treatment against disease. Inoculation.

Method and rates of seeding: There are many advantages of planting soybeans in rows rather than solid (7 reasons are given), narrower rows (down to 21 inches) give larger soybean yields than wider rows (42, 36, 28, or 24 inches; see the 1949 High Yield Soybean Contest for Ontario). Weeds vs. soybeans. Weed control implements (such as rotary hoe, finger weeder, a set or ordinary, light, spike-toothed harrows). Methods of weed control [mechanical].

Varieties: Soybeans, like corn, vary in their "time to maturity, use the right variety for each of Ontario's five zones (a table is given), later maturing varieties include (from Zone 1 to 5) Lincoln, A.K., Harman, Hawkeye, Earlyana, Blackhawk, Monroe, Harly, Mandarin, Capital, Goldsoy, Flambeau, Kabott; earlier maturing varieties include (from Zone 1 to 5) Earlyana, Blackhawk, Monroe, Harly, Mandarin, Capital, Flambeau, Kabott, Pagoda.

Harvesting. Storage. Fertilizer.

Photos show: (1) Two boys standing in a large field of soybeans. "The growing of soybeans is now big business on many Ontario farms." (2) A man holding soybean roots that are well nodulated. (3) A large field of soybeans at the Ontario Agricultural College where the effect of varying the distance between is studied. (4) A tractor pulling a finger weeder in a field of soybeans. (5) A large field of soybeans in which the weeds have been controlled. (6) A well-podded soybean plant growing at the end of a row.

Figures show: (1) A pair of bar charts of inoculated vs. non-inoculated soybeans, in high- and low-fertility soils. "Inoculation pays dividends." (2) Bar chart showing the effect of weed competition on soybean yields. "There is money in weed control." with Capital and Mandarin varieties. (3) A map (p. 16) shows each of the soy-bean growing counties in Ontario. The southernmost county in Ontario is Essex, on the shores of Lake Erie. Moving northward, we find Kent County, Elgin County, and Lambton County.

"Few crops in the history of Ontario agriculture have had the phenomenal increase in acreage that has been

experienced in the case of the soybean during the past decade... It is only in the past eighteen years that the crop was considered of sufficient importance to be recorded in provincial agricultural statistics.

"In 1932 the acreage was recorded at 7,781. For the succeeding nine years the acreage remained between 8,602 and 11,272. The demand for oil and protein during the war years [World War II], coupled with a very substantial increase in price, raised the acreage nearly four hundred percent." Soybean production in Ontario decreased immediately after the war, but by 1949 it "had more than doubled from the highest war year production. Most recent figures for soybean production in 1949 are" about 110,000 acres.

"Until recently it was felt that soybean production was confined to Essex and Kent Counties [the two southernmost counties in Ontario]. Now high-yielding, early maturing varieties have made the greater part of old Ontario a potential soybean area with yields and net returns comparable to other cash crops." (p. 3). Address: Dep. of Field Husbandry, Ontario Agricultural College, Guelph, Ontario, Canada.

683. Rouatt, J.W.; Atkinson, R.G. 1950. The effect of the incorporation of certain cover crops on the microbiological balance of potato scab infested soil. *Canadian J. of Research, Section C: Botanical Sciences* 28(1):140-52. Feb. [16 ref]
• ***Summary:*** After soil was infected with potato scab *(Streptomyces scabies),* several cover crops (rye, red clover, and soybeans respectively) were grown, then incorporated into the soil. The growth and turning in of several soybean crops reduced the incidence of disease. The incidence of scab (on the basis of tuber area) was reduced from 48% in the control soil to 10.3 after two crops of soybeans. Neither rye nor clover produced significant reduction in the incidence of scab.

The soybean treatment also produced a 4-fold increase in beneficial bacteria. This increase was similar to that reported by West & Hildebrand (1941) with bacterial around infected strawberry roots.

The difficulty of interpreting this effect of green manuring with cover crops of soybeans to reduce potato scab was recognized by the authors. They pointed put that green manuring with soybeans reduced the pH of the soil from 6.4 to 5.0, whereas green manuring with rye or clover did not change the pH value of the soil. This effect on soil pH value alone might be responsible for much of the reduction of incidence of scab. Address: 1. Assoc. Bacteriologist, Div. of Bacteriology and Dairy Research, Science Service, Dep. of Agriculture, Ottawa, Canada.

684. Watts, Sybil. 1950. Women's lives tied in with legume, in cosmetics, soap, cleaners, candies. *Windsor Daily Star (Essex County, Ontario, Canada).* March 23. p. 9.
• ***Summary:*** Few home makers or business girls realize how closely their lives are tied to the soybean. Soy lecithin is used in cosmetics, such as lipstick, as well as in baked goods, soaps, dry cleaners, gasoline, oils, and candles. Essex County grows more than 35% of the soybeans cultivated in Canada, and Essex and Kent counties combined account for 70%. Yet despite the rapid growth of this crop in Canada, the country still imports about two-thirds of the soybeans it needs. Dr. G.F.H. Buckley, of the Dominion Experimental Farm, Harrow, points out that "The soybean is the closest thing in the vegetable kingdom to animal protein." Thus soybeans can be used with good results "to pad out [extend] meat dishes" with almost the same protein value.

Four photos titled "Soybean ills are cured at laboratory of plant pathology in Harrow" show (1) Miss Gladys Hedges of Harrow (hand sorting soybeans to separate discards from basic seed stock); (2) Dr. A.A. Hildenbrand of the Dominion Laboratory of Plant Pathology, Harrow (he has diagnosed and cured 14 soybean diseases); (3) Dr. G.F.H. Buckley and Mr. C.W. Owen (who share responsibility for the extensive growth of soybeans in this area); and (4) and Mrs. Joseph Menard, who is applying lipstick made in part from soybean lecithin.

685. American Soybean Association. 1950. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 128 p. Advertisers' index. 22 cm.
• ***Summary:*** This is the first issue of the *Blue Book* that contains a directory of soybean crushers outside the USA and Canada. They are listed by alphabetically by country, as follows: France (3 crushers). Germany (10). Norway (1). Address: Hudson, Iowa.

686. Loblaws. 1950. As modern as tomorrow: Streamlined, sparkling markets (Ad). *Toronto Daily Star (Canada).* May 16. p. 50-51.
• ***Summary:*** Near the lower left of page 51 (a full-page ad) are these two small ads:

"Vi-Tone Fast Fudge Mix. Maple or Vanilla. 12-oz. pkg. 29¢."

"Vi-Tone 8 oz. tin 37¢. New design can [an illustration is shown], but still with seven nourishing foods in one tasty drink. Milk, sugar, soya bean flour, barley malt, cocoa with added Vitamins and Minerals." Address: Toronto.

687. Fletcher, Merna Irene. 1950. Changes in world soybean production in 1949. *Soybean Digest.* June. p. 20-21, 28.
• ***Summary:*** The USA is again the world's largest soybean producer, followed by China and Manchuria. All three countries reported smaller soybean crops in 1949 than in 1948. Production in Canada continues to increase, as it has

for the past 6 years. Canada's average yield per acre was 25.1 bushels/acre or nearly 3 bu/acre higher than the U.S. average. Brazil is the only other country besides Canada in the Western Hemisphere with recorded soybean production for 1949. Brazil produced an estimated 1 million bushels in 1949, which is double the figure for 1947. Slightly more than half the 1948 crop was exported. European production continues to decline. The only country reporting during 1949 was Italy, which had only 52,000 bushels, compared with 107,000 in 1948. Production in the USSR is increasing. "The extensive research program begun several years ago is no doubt bearing fruit, particularly in the Soviet Far East where Balzac *(Economic Geography of the USSR,* American edition) reports a big development in the Amur-Ussuri River Valley.

"The major decline in world production occurred in Asia, more specifically in Manchuria and China... No figures have come out of North Korea since 1946. Previously it was the great producing area of the country. South Korean production continues to show marked increase. The 1949 crop of 6,654,000 bushels is 1.7 million bushels more than was produced in that area in 1948. The average production for Korea from 1935-39, when most of production was in the north, was 17,654,000 of which less than 2 million bushels were produced in South Korea."

In Africa, Tanganyika reported only 36,000 bushels, less than half the 1948 crop. The Union of South Africa reported 80,000 bushels, the largest soybean crop ever produced there.

688. *Soybean Digest.*1950. Canadian margarine decision is upheld. Nov. p. 24.
• ***Summary:*** "The Canadian Supreme Court, in Dec. 1948, declared that the legislation that had banned the manufacture and sale of margarine in Canada for many years was invalid." The Privy Council in London, England, has upheld the Canadian margarine decision, and confirmed that "the responsibility for regulating the sale and manufacture of margarine in Canada rests with the various provinces themselves, rather than the Dominion Government."

689. *Soybean Digest.*1950. Exports to Cuba. Nov. p. 20.
• ***Summary:*** Exports of soybean oil to Cuba from the USA in 1949 amounted to 4,812 tons, crude oil equivalent, more than to any other country in the Western Hemisphere except Canada, and 2.5 times the annual average quantity sold to Cuba in 1935-39.

690. Hildebrand, A.A.; Koch, L.W. 1950. Observations on six years' seed treatment of soybeans in Ontario. *Scientific Agriculture (Ottawa)* 30:112-18. [11 ref]*
• ***Summary:*** This study confirms earlier views that where high quality soybean seed of high germination is sown, seed treatment is of doubtful value. Soybeans were treated with 6 different seed protectants. In only one case where extremely poor seed (40% visibly diseased, 23.4% germinating capacity) was treated with Spergon (tetrachloro-para-benzo-quinine) did the treatment lead to increased emergence and yield. Rainfall, temperature, and yield data given in the study show the far greater effect of rainfall, and its distribution over the growing season, on yields. Results showed that though seed treatment might lead to an increased stand of plants, yields remained largely unaffected. Address: Dominion Plant Pathology Lab., Harrow, Ontario, Canada.

691. Photograph of the T. Amano Co. in Vancouver, British Columbia, Canada. 1950. Vancouver, British Columbia, Canada.
• ***Summary:*** This black-and-white photo, sent to Soyfoods Center in 1981 by T. Amano Co. of British Columbia, shows the front of a small, modern building. A floor-to-ceiling panel of glass bricks are to the left of the main door near the center. Over the door, in large letters is written: "T. Amano Co." On the right front window, partly covering venetian blinds, in smaller letters, we read on five lines: "T. Amano Co. Manufacturers–Soya sauce & rice paste [miso]. Oriental food products. Importers & exporters." Address: Vancouver, British Columbia, Canada.

692. **Product Name:** Whipping Agent.
**Manufacturer's Name:** W.A. Cleary Corp.
**Manufacturer's Address:** New Brunswick, New Jersey. Also Chicago, Illinois and Bellevue, Ontario, Canada.
**Date of Introduction:** 1950.
**New Product–Documentation:** Soybean Blue Book. 1950. p. 88. "Whipping Agents." This product was probably manufactured for Cleary by some other company. 1959. Also in Skokie, Illinois. 1961 was last year of listing.

693. Burtis, E.L. 1950. World soybean production and trade. In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 61-108. [17 ref]
• ***Summary:*** Contents: 1. Historical summary. 2. The Far East: China, Manchuria, Korea, Japan, Netherland Indies, other countries of Asia, net foreign trade of Asia. 3. Europe: Production, foreign trade. 4. United States: Varietal development, trends in planted acreage, soybeans for seed, acreage and production of soybeans for hay, vegetable-type soybeans, growth of the soybean-processing industry, soybean oil production, trade, and utilization, production and utilization of soybean oil foots (the residue from refining), soybean meal and other soybean protein products (incl. soybean flour, soybean glue, and other industrial soybean products). 5. Minor world areas.

Tables: (2) Soybean production in leading countries and estimated world total, 1922-1948. Statistics are given for China (excluding Manchuria), Manchuria, Korea, Japan, Formosa [Taiwan], Netherlands Indies [Dutch East Indies, later Indonesia], United States, Canada (1936 on), USSR (1928-1938), 5 Danubian countries (Austria, Yugoslavia, Hungary, Rumania, and Bulgaria, 1934 on, partly estimated by author).

(3) Net exports or imports of soybeans (million bushels) by major exporting and importing countries, 1909-1913 and 1922-1948. China and Manchuria (combined) dominate world soybean exports from 1910 to 1940, with the peak year being 1929 (100 million bushels) and with more than 50 million bushels being exported every year from 1926 to 1939. But by 1941 exports as fallen to almost zero. The only other exporter was the USA, which had its first net soybean exports in 1932 (4.2 million bu); this rose to a peak of 10.5 million bu in 1939 then dropped to almost zero during World War II. Europe was the largest a net importer of soybeans from 1910 to 1948; the peak years were 1929 and 1933, when 62.6 million bushels were imported. Japan was the second largest net importer of soybeans from 1910 to 1948; the peak year was 1938, when 29.8 million bushels were imported.

(4) Net exports or imports of soybean oil (million pounds) by major exporting and importing countries, 1909-1913 and 1922-1948. (5) Net exports or imports of soybean cake and meal (thousands of metric tons) by major exporting and importing countries, 1929-1948. (6) Net exports or imports of soybean oil and soybean in terms of oil (million pounds) by major exporting and importing countries, 1909-1913, 1922-1948.

(7) Net exports or imports of soybean cake and meal and soybeans in terms of meal (thousands of metric tons) by major exporting and importing countries, 1929-1948. (8) Apparent consumption of soybean oil and soybean cake and meal by principal European countries, 1929-1938 (based on tables 3-7). (9) Soybean acreage grown in the United States for all purposes (equivalent solid acreage), by states and groups of states, 1924-1948 (1,000 acres).

(10) Soybean acreage harvested for beans in the United States, 1924-1948 (1,000 acres). (11) Soybean production in the United States, by states and groups of states, 1924-1948 (1,000 bushels). (12) Soybean supply and disposition in the United States, 1924-1948 (1,000 bushels).

(13) Acreage and production of soybeans, soybeans processed for oil and meal, and soybean oil produced in the United States, 1924-1948. (14) Soybean oil production, trade, (imports and exports), stocks (crude basis), and domestic disappearance in the United States, 1910-1948 (1,000 pounds; compiled from reports of the Bureau of the Census). (15) Soybean oil utilization by classes of products in the United States, 1931-1948. Food products: Margarine, shortening, other, total. Nonfood products: Soap, paint and varnish, other drying oil products, miscellaneous non-food products, loss, incl. oil in foots, total. Total domestic disappearance. One table is in 1,000 lb.; a 2nd is in per cent of total.

(16) Supply and utilization of soybean protein products (meal basis) in the United States, 1921-1947 (1,000 metric tons). For each year is given: Estimated production, imports or soybean cake and meal, total supply, exports of soybean cake and meal. Domestic utilization in: Full-fat soybean flour, low- and medium-fat soybean flour, soybean glue for softwood plywood, soybean glue for hardwood plywood, other uses (largely feed for livestock).

A map (p. 90) shows soybeans harvested for beans in the USA, 1944. Each dot represents 2,000 acres.

A graph (p. 105) shows tonnage of high-protein feeds fed to livestock, 1926-1947. Within this are four graphs for: Soybean cake and meal, other oilseed cake and meal (mostly cottonseed), tankage and meat scraps, fish meal, dried milk products, gluten feed and meal, and (beginning 1935) brewers' and distillers' dried grains, and total.

A graph (p. 66) shows world soybean production from 1922 to 1949. The data is from Table 2. Within this are graphs for USA and for East Asia (incl. China, Manchuria, Korea, and Japan).

One bar chart (p. 73) shows domestic consumption and net exports of soybeans and soybean oil, in terms of oil (million lb.), by principal consuming countries, annual average, 1929-1938 (Based on tables 2-4. Oil equivalent of soybeans calculated at 8.4 pounds per bushel). By far the biggest consumer is China. By far the biggest exporter is Manchuria. Others: Japan, Germany, United States, Korea, Netherlands Indies, United Kingdom, Netherlands, Denmark, Other Europe (except U.S.S.R.).

Another bar chart (p. 74) shows domestic consumption and net exports of soybeans and soybean meal, in terms of meal (1,000 metric tons), by principal consuming countries, annual average, 1929-1938 (Based on tables 2, 3, 5, and 7. Meal equivalent of soybeans calculated at the rate of 0.02117 metric tons per bushel). The biggest consumer is China, followed by Japan. By far the biggest exporter is Manchuria. Other small exporters: Germany, United States, Korea, Formosa, Netherlands Indies, Denmark, United Kingdom, Other Europe (except U.S.S.R.). Address: Bureau of Agricultural Economics, USDA, Washington, DC.

694. Morse, W.J. 1950. History of soybean production: 5. World distribution (Document part). In: K.S. Markley, ed. 1950. Soybeans and Soybean Products. Vol. I. New York: Interscience Publishers or John Wiley & Sons. xvi + 1145 p. See p. 10-14.

• ***Summary:*** "The production of soybeans, which for many centuries was confined to the countries of Asia, spread rapidly after World War I to the western world, and since World War II practically all leading nations have become

more and more interested in the culture and production of the crop. Agricultural experiment stations throughout the world have become engaged in the development of varieties suited to their soil and climatic conditions through introduction, selection, and hybridization. Successful results have been obtained in many countries and, in a few, acreage and production have increased to the extent that the crop has become an important factor in that nation's agriculture. This is especially true of the United States, Netherland Indies, Rumania, U.S.S.R., Austria, Bulgaria, and Poland.

"The principal zones of soybean production in the Orient are China, Manchuria, Korea, and Japan. In Manchuria, the soybean occupies about 25% of the total cultivated area and is a dominating factor in the economic life of the country. As a cash crop it provides fully half the farm income in the north and more than half the total volume of freight handled by the railroads. It is estimated that from one- to two-thirds of the production of soy beans is exported; 15 to 20% is utilized for food, feed, and planting, and the remainder is used for oil extraction.

"In China, the soybean is one of the principal and most ancient of crops, ranking fifth in extent of culture and occupying about 9% of the total cultivated area. Although grown everywhere in China, about 60% of the soybean acreage is confined to three northern provinces, Shantung, Kiangsu, and Honan. China consumes practically all of her production, estimates indicating more than 50% for food, 27% for oil extraction and other purposes, 10% for stock feed, and 8% for planting.

"Korea occupies third place among the soybean-producing countries of Asia. Acreage and production are confined largely to central and northern Korea, as southern Korea, which grows principally cotton and rice, seems to be less suited to the successful production of soybeans. The entire Korean production is used for food, stock feed, planting and export, and none is used for oil extraction.

"Japan, although a large producer of soybeans, has consumed all her production and has imported large quantities from Manchuria and Korea. Acreage and production of soybeans in Japan have decreased since World War I and greater emphasis has been placed on increased production of rice. The proportions of soybeans used by Japan for various purposes are: 'miso' (soybean-rice fermented paste), 22%; soy sauce, 22%; oil and oil cake, 21.5%; soybean curd [tofu], 15.5%; confections, 7.2%; forage, 6.2%; green manure, 2.5%; seed, 1.8%; green vegetable beans, 0.8%; and miscellaneous, 0.5%.

"In the Soviet Far East, the soybean is said to be one of the chief industrial crops and in some districts constitutes 20% of the cultivated area. Acreage and production have increased markedly since 1926, especially in Khabarovsk territory, the largest seed-producing area.

"South of China, the soybean is cultivated to some extent in the Netherland Indies, India, Siam, Cochin China, Philippines, and Australia. Until 1932, the production of soybeans in the Netherland Indies was not sufficient to meet the domestic demand. Since then, acreage and production have gradually increased until soybeans began to be exported to Holland about 1936. The soybean has been widely cultivated for a long time by the natives of the hilly regions from the borders of Afghanistan eastward to Burma, to northern Siam, and French Indo-China. The crop in India has been grown for its forage and food value rather than for commerce. Although successful results have been obtained in some of the provinces with varieties of good oil content, the growing of the crop as an oil seed does not appear to have been popular with the native farmers. In Australia successful results with American varieties have greatly increased acreage and production, especially in the states of Queensland, New South Wales, and Victoria.

"Although attempts to grow soybeans in European countries have extended over many years, it is only within the past few years that there has been any appreciable production. At present, production is confined largely to European U.S.S.R., Bulgaria, Yugoslavia, Austria, Rumania, and Czechoslovakia, production being largest in Rumania, Bulgaria, and Yugoslavia. In the development of adapted varieties, some progress has been made in Sweden, Poland, Netherlands, and Hungary. Because of the economic importance of the soybean, scientists of the U.S.S.R. have carried on extensive experiments with it, especially in the development of adapted varieties and utilization. At present, the principal areas of production are Ukraine, Moldavia, and certain regions in the North Caucasus.

"Experiments have been conducted with the soybean in nearly all regions of Africa but as yet it is an unfamiliar crop to the majority of African farmer. It has been grown successfully in the upland, midlands, and coastal districts of Natal [South Africa] and throughout Gambia, Nigeria, Egypt, the Gold Coast Colony, and also in the corn- and cotton-growing districts of the Belgian Congo.

"Although the soybean has been the subject of considerable experimental work in practically all countries of the Americas, little progress has been made in commercial culture except in the United States and Canada."

Note: This is the earliest document seen (Dec. 2007) that clearly refers to soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan. This document contains the earliest clear date seen for soybeans in Afghanistan, or the cultivation of soybeans in Afghanistan (long before 1950). The source of these soybeans is unknown. Address: 6809 Fifth St. N.W., Washington, DC; formerly Principal Agronomist, Div. of Forage Crops and Diseases, Bureau of Plant Industry, Soils, and Agricultural Engineering, USDA, Beltsville, Maryland.

695. *Proceedings of the Indiana Academy of Science.*1950. Necrology: Alfred Theodor Wiancko [obituary]. 60:26-28.
• ***Summary:*** 1872 Oct. 16–Born on a farm near Sparrow Lake, Ontario, Canada; he spent his boyhood and early manhood years there. 1895–Graduated from Ontario Agricultural College (OAC) with a B.S. degree in agriculture. Then for several years he managed a large farm in Minnesota. 1898–Returned to OAC as assistant librarian and instructor in German.

1901–He became experimentalist on the 12,000 acre farm of the Standard Cattle Company in Nebraska. 1901 Oct.–He accepted a position at the Univ. of Nebraska as instructor in Agriculture and Assistant Agriculturist in its Experiment Station. 1903–Moved to Purdue University as Associate Prof. of Agriculture. 1904–He "started the systematic breeding of small grains and developed several new varieties of wheat and soy beans especially adapted to Indiana soil." 1905–He is made head of the newly formed Department of Soils and Crops. From 1905 to 1907 he had charge of the first instructional work at Purdue in Farm Management, Agricultural Engineering, Agricultural Chemistry, and Agricultural Botany. The Deportment of Soils and Crops eventually became the Dep. of Agronomy with Prof. Wiancko as Chief.

1916–He relinquished his teaching duties and thereafter devoted his time to experimental and research work. 1943–Retired as Prof. Emeritus of Agronomy after having served Purdue University for 40 years. His main contributions were related to corn, soils, and fertilizers. 1949 Dec. 10–Died at Eustis, Florida.

696. Crampton, Earle W.; Farmer, F.A.; Berryhill, F.M. 1951. The effect of heat treatment on the nutritional value of some vegetable oils. *J. of Nutrition* 43(3):431-40. March 10. [9 ref]
• ***Summary:*** The authors reported a marked decrease in weight gains per 1,000 calories of food ingested in the case of rats fed oils (including soybean oil) which had been heated ("heat-polymerized") at 275ºC. The most marked decrease was noted for peanut oil; the gain decreased from 87 grams per 1,000 calories for the unheated oil to 30 for the oil heated for 30 hours. Vegetable oils subjected to severe heat treatment have been reported to cause cancer.

"The soybean oil was prepared and contributed through the courtesy of Dr. W.D. McFarlane, Canadian Breweries, whose personal interest in these studies has been of much help." Note 1. This is the earliest document seen (Sept. 2001) that concerns diet and cancer, and that mentions a soy product (overheated soybean oil). Address: Dep. of Nutrition, Macdonald College, McGill Univ., Province of Quebec, Canada.

697. American Soybean Association. 1951. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 144 p. Advertisers' index. 22 cm.
• ***Summary:*** Canada: Added to the table of oil and cake production (p. 33) is a new column showing bushels of soybeans crushed each year. They increased from 981,000 bushels in 1945 to 4.5 million bushels in 1949. Address: Hudson, Iowa.

698. *Soybean Blue Book.*1951. Ontario associations. p. 11.
• ***Summary:*** *"Ontario Soya Bean Marketing Committee.* H. Pugh, Chatham, Ontario, chairman. K.A. Standing, Essex, Ontario, Essex County agricultural representative, Essex, Ontario, secretary. Purpose, to promote the soybean industry in Ontario and to regulate marketing. The Ontario marketing board is selected from this committee.

*"Ontario Soybean Committee.* G.P. McRostie, field husbandry department, Ontario Agricultural College, Guelph, Ontario, chairman; and George F. Jones, field husbandry department, Ontario Agricultural College, Guelph, Ontario, secretary.

"Sponsored by the Ontario Department of Agriculture."

Note: This is the earliest document seen (Jan. 2010) in the *Soybean Blue Book* concerning an organization related to soybeans in Ontario or Canada.

699. *Soybean Digest.*1951. Hold first Ontario soybean convention. March. p. 28.
• ***Summary:*** "The first annual Ontario Soybean Convention held at Chatham, Ontario Feb. 15 and 16, was a big success; as a result its sponsors plan to make it an annual affair.

"About 400 soybean growers, processors and others attended the event. Sponsors were Canadian processors, the Ontario Elevator Association, the Ontario Soybean Marketing Board and the Farm Products Marketing Board of Toronto.

"The Ontario soybean growers, concentrated in Essex and Kent Counties, were told that they should at least double the 3 million crop they grew in 1950, by Harry Pugh, chairman of the Ontario Soybean Marketing Board. He suggested that the growing area could be extended further north and east with earlier maturing varieties."

"The problems of marketing and storage of soybeans were also discussed by Geo. M. Strayer, secretary-treasurer of the American Soybean Association, who was on the program.

"New varieties should be available soon with a higher oil yield, C.E. Jones, field husbandry department, Ontario Agricultural College, told the group. Jones said Mandarins are proving to be the highest yielders of oil." Other promising varieties are Blackhawk, Monroe, and Hawkeye.

"The film, Soybeans, the Feature Story, was shown twice during the meeting."

"Other speakers included: Dr. F. Dimmock, Dominion Department of Agriculture, Ottawa; C.W. Owen, Dominion Experimental Farm, Harrow; Dr. S.J. Slinger, poultry

department, Ontario Agricultural College, Guelph; Don McLachlin, Tupperville, Ontario; Gillis De Putter, Appin, Ontario; and James Ferris, sales manager, Ford of Canada."

Note: This is the earliest document seen (Feb. 2000) that mentions the "Ontario Soybean Marketing Board." The name, written exactly like this, is mentioned twice.

700. Victory Mills, Limited. 1951. Vegetable oils, oilmeals, soybean flours, malt sprouts, brewer's-malt, dried yeast, dried grains (Ad). *Soybean Blue Book* p. 80.
• ***Summary:*** This ½-page ad shows a large illustration of the Victory Mills plant with a tanker nearby on the water. Address: Head office and plant: 285 Fleet St. East, Toronto; Montreal office: Big Royal Bank Bldg., Montreal.

701. *Toronto Daily Star (Canada).*1951. Dominion Linseed in merger scheme. Oct. 25. p. 24.
• ***Summary:*** "Bondholders of Dominion Linseed Oil Co. at a meeting on Nov. 14 are to consider a proposal for reorganization involving the acquisition by Dominion Linseed Oil Co. of McArthur, Irwin Ltd. and Hart Battery Co."

Describes the mechanics of the proposal. "The reason for the proposal is the continued unsatisfactory operations of Dominion Linseed Oil. During the past year the company had a deficit of approximately $100,000 bringing the accumulated deficit for the past four years to more than $1,000,000." "As of June 30 last, Dominion had bank loans of $1,475,000 and a working capital deficit of $659,000."

702. Brock, F.H. 1951. Soy flours improve quality of many bakery products. *Canadian Baker* 64:36. Oct.
• ***Summary:*** The first commercial soy flour was developed in 1926 and was sold as "Health Flour." Address: Foods Chemist, A.E. Staley Mfg. Co., Decatur, Illinois.

703. Mining, Metallurgical and Chemical Section, Industry and Merchandising Division, Dominion Bureau of Statistics, Department of Trade and Commerce, Canada. 1951. The vegetable oils industry 1950. Ottawa, ONT, Canada. Vol. 2–Part XVIII–p. J-1 to J-8. Oct. 13.
• ***Summary:*** Ontario province is Canada's leading producer of vegetable oils. The leading oilseed, in terms of value at the mill, is flaxseed ($18.5 million) used to make linseed oil and meal, followed by soya beans ($14.4 million). Most of the soya bean oil in Canada is processed by companies in the slaughtering and meat packing industry to make shortening, etc. Other major uses are in fish packing (5.5%), paints (3.3% of total), and miscellaneous foods (3.2%). In 1950 Canadian imports included $878,794 worth of edible soya bean oil and $627,095 of non-edible soya bean oil, $1,265,296 of soya bean oilcake and oilcake meal, and $269,120 of soya bean flour. Page J-8 gives a "Directory of Canadian firms in the vegetable oils industry, 1950," including: (1) Victory Soya Mills at 285 Fleet St. E., Toronto. (2) Toronto Elevators, Limited (Oil Crushing Division), Queens Quay, Toronto. (3) Edible Oils Limited, Fort William. Address: Ottawa, ONT, Canada.

704. *Soybean Digest.*1951. Solvent plant by Toronto Elevators. Oct. p. 35.
• ***Summary:*** Toronto Elevators Ltd. is constructing a $1 million solvent plant for extraction of vegetable oils on the Toronto waterfront, according to an announcement by H.E. Bryant, manager of the vegetable oils department. The plant, which will be used primarily for soybean oil extraction, is the most modern of its kind in Canada, incorporating a number of processing features new in Canada.

A pioneer in Canada's soybean crushing industry, Toronto Elevators Ltd. has been actively engaged in this field since 1938.

Located near the company's grain elevators, master feed plant, and vegetable oils refinery, the new plant is expected to be in operation by about the end of 1951. The crude soybean oil will be pumped to the refinery for processing to meet the requirements of the paint industry. The new solvent plant will also produce edible oils.

The present expeller plant operated by Toronto Elevators Ltd. will be continued in use for crushing flaxseed.

Address: Dominion Plant Pathology Lab., Harrow, Ontario, Canada.

706. Lips, H.J.; Grace, N.H.; Ziegler, J.A. 1952. Processing procedure and flavor stability in soybean oil. *Canadian J. of Technology* 30(1):1-8. Jan. [9 ref]
• ***Summary:*** "Chemical and physical measurements and small scale taste panel tests on laboratory refined American and Canadian solvent extracted soybean oils indicated that their quality was generally similar. Flavor stability was not improved by deodorization in the presence of citric acid, increased deodorization time, treatment with activated magnesia, preliminary treatment with concentrated hydrochloric acid, or by refining in miscella with or without subsequent addition of butylated hydroxyanisole." Address: 1-2. Biochemists, National Research Laboratories, Ottawa, Canada; 2. Biochemist, Victory Mills Ltd. Research Inst., Toronto, ONT, Canada.

707. *Soybean Digest.*1952. Ontario convention. Feb. p. 33.

• ***Summary:*** "The second annual Ontario Soybean Convention will be held at the Pyranon Ballroom in Chatham, Ontario [Canada], Feb. 20, beginning at 10 a.m.

"Reports of experiments and research on soybeans at the different experiment stations will be given by A. W. Owens, Harrow Experimental Station; Dr. F. Dimmock, Department of Agriculture, Ottawa; George Jones, Ontario Agricultural College, Guelph; Ken Murphey, Victory Mills, Ltd.; and Dr. A. A. Hildebrand, Experimental Station, Harrow.

"Geo. M. Strayer, editor of the *Soybean Digest* and secretary of the American Soybean Association, will be guest speaker at the noon banquet."

708. McCloud, J.L. 1952. Reminiscences: The plastic automobile body, Robert Boyer's major accomplishments, and solvent extractors (Document part). Dearborn, Michigan: Ford Motor Company Archives, Oral History Section. 423 p. See p. 152-62. Unpublished manuscript. 28 cm. Courtesy of Henry Ford Museum & Greenfield Village Archives. Acc. 65.

• ***Summary:*** The idea of a plastic car or plastic parts that were made from soybeans was a natural outgrowth of Henry Ford's interest in chemurgy and Robert Boyer's research in that area. "Actually I think that the statement that this plastic automobile body, which was eventually built, had anything to do with soybeans was a complete misnomer. It was a plastic body, but the plastic wasn't made from soybeans. It was a phenolic plastic and reinforced. Mr. Boyer, in Dearborn, developed a combination of phenolic and protein plastic. Protein plastics are not new...

"The plastic that Boyer is credited with having started and which we equipped the Glass plant to make, and made in quite a substantial volume, actually was a phenolic plastic in which some of the soybean protein just replaced some of the filler, such as wood or asbestos fiber. We used to kid Mr. Boyer and I used to kid Hud McCarroll about it, that all they did was to raise sawdust on bean vines in order to use up the product of the bean vine. It annoyed Hud but he knew damn well that that was about all they succeeded in doing.

"Of course, the fact is it didn't continue because it just wasn't economical. Furthermore, while it was perfectly successful for the part, you can't keep on pulling yourself up by your bootstraps and paying more money than you can buy it, so the manufacture of plastics was discontinued...

"The plastic body that was produced, however, was a phenolic plastic. The only soybean that got anywhere near it was soybean oil that was used to paint it, and the only reason that it was painted was because it was never possible to put the plastic body together in such a good way that it had a good finish without painting it. Consequently the plastic body which was made actually was painted and as all automobile bodies were then and now painted with soybean oil paint...

"I would say that the first big thing that Mr. Boyer did was this development of a combination of a phenolic plastic with a protein plastic which we used for quite a little while and successfully in electrical insulation parts such as the distributor and so on. That was very good. The only trouble was that it wasn't economical.

"The other thing was the actual production of protein fibers. Of course, there was little poetic license in that, because Mr. Boyer never succeeded in Dearborn in purifying protein produced around here to the extent that it was possible to spin and make fibers. He actually had to buy the purified protein from some other people [Note: Boyer probably bought Alysol brand industrial soy protein from The Drackett Co., at least during the early 1940s]. That was a step that was blithely jumped. Mr. Ford undoubtedly realized this. He felt that that was a detail or hurdle that could have been overcome. Probably the answer is correct. It probably could have been overcome if Mr. Boyer had a little more time.

"The third thing that I would say that Mr. Boyer did was the making of a continuous percolator or extractor. Several of them were built in Dearborn. I think some of them are actually running now."

Concerning the solvent extractor, there existed a type of roller press used in the oil extraction industry that was better than one press designed by Ford and Boyer. "Mr. Ford wouldn't let Boyer buy one of these because he wanted to make his own, and for that reason it [the extraction system] wasn't as successful as it ought to have been, but he just wouldn't accept such a combination... The Rouge extractor was eventually sold to a Canadian company. One of the men who worked under Mr. Boyer who remained here and had charge of this extractor after Mr. Boyer left went along with the sale of this outfit to the Canadian company, and to the best of my knowledge the Canadian company uses this extractor, and this man is in charge of it."

The soybean solvent extractor at Milan had the advantage of railroad access, so you could bring in soybeans by rail and send out the oil and meal by rail. But a study indicated that the soybean operations at Milan were not very successful economically, so the equipment was moved to Saline. In Saline it had two other handicaps. First there was no railroad access, so all soybeans had to be brought in by farm wagon and the product sent out by truck. Second the soybeans could not be purchased at the best times for the best prices because of insufficient soybean storage silo facilities. "They had to buy from hand to mouth in Saline." In addition they had no equipment to process the oil to produce a non-break oil, the type Ford used in making varnished.

"Mr. Ford's interest in the extraction of oil from soybeans for developing a cash crop was lost before he

retired from the Company. He lost interest in it in the beginning of World War II, when his attempt to get the Government backing failed. From that time on there was never any evidence of Mr. Ford's personal backing of the soybean business, including oil.

"I would say that Mr. Ford thought the plastic car was just a stunt and that it had been proven, but from this point on it would depend upon whether or not anybody wants to take it up enough to successfully make it. He had no idea of setting up a small pilot plant of his own to produce that plastic car. I would say that he gave Mr. Boyer a terrific backing for a while, even to the annoyance of a good many people in the Company by actually diverting and earmarking presses in the Dearborn Tool and Die plant that were brought in for some other purpose to work on this plastic car job. It just stymied some other work in the Ford Motor Company. Unless Mr. Ford saw to it continuously that Mr. Boyer did get the backing for the job of making the plastic car, Mr. Boyer wouldn't get it.

"There was a very definite break in the relationship between Mr. Boyer and Mr. Ford. I didn't know any of the circumstances except that Mr. Boyer seemed to get going along and was riding quite high...

"It was progressing along at a pretty good clip, and when it was obvious that the Government wasn't going to give Mr. Ford backing on the thing, Mr. Boyer was given his walking papers. Who Mr. Ford delegated to do this, I don't know. We just got word that Mr. Boyer was out. I saw Mr. Boyer and he told me he was going to leave.

"About that time one man who was a pretty capable man and had been working under Mr. Boyer was up here. He was working for The Drackett Company in Cincinnati [Ohio] and was supplying Mr. Boyer with purified protein which Mr. Boyer was using to make the protein fibers. He had tried to lure Boyer away from the Ford Motor Company.

"Mr. Boyer had considered that he was going very well in the Ford Motor Company, so he wanted to stay. When it looked like he was slipping, Mr. Boyer immediately said that he would reconsider what he had told him and that he would go with The Drackett Company.

"The Drackett Company offered to buy practically all the equipment that Mr. Boyer had for making soybean fibers, and anything that Mr. Boyer said goes with the making of soybean fibers just went. We didn't save much of anything except some laboratory benches. Drackett got just about everything they wanted in that respect from the Dearborn setup."

709. *Soybean Digest.*1952. Second Ontario convention is held. March. p. 28.
• ***Summary:*** "A capacity crowd of about 350 persons attended the second annual Ontario Soybean Convention held in Chatham [Ontario, Canada] Feb. 20. The convention was sponsored by the Ontario Soybean Marketing Board and the Farm Products Marketing Board of Ontario. Harry Pugh, Chatham, chairman of the Ontario Soybean Marketing Board, served as chairman of the meetings, and was in charge of arrangements, assisted by Ken Standing, Essex, secretary of the board." Details on the morning program, banquet, and afternoon program are given. George M. Strayer, secretary of the American Soybean Association and editor of *Soybean Digest,* gave a talk at the banquet on "The Trend of Soybean Prices."

"The afternoon program consisted of a presentation on soybean production and culture by Ivan Roberts, head of the agronomy work for Victory Mills, Ltd., and a discussion of the industrial uses of soybeans and soybean products by Dr. Parker, head of the Victory Mills laboratory at Toronto."

710. Clandinin, D.R.; Robblee, A.R. 1952. The effect of processing on the enzymatic liberation of lysine and arginine from soybean oil meal. *J. of Nutrition* 46(4):525-30. April. [5 ref]
• ***Summary:*** Conclusions: "1. Amino acid or alpha-amino-nitrogen values obtained subsequent to *in vitro* enzymatic hydrolysis do not necessarily constitute a reliable index of the relative nutritive value of soybean oil meals processed for varying periods of time under the same or under different autoclave conditions. 2. Maximum values at any one autoclave processing temperature would, however, characterize a good meal." Address: Poultry Div., Univ. of Alberta, Edmonton, ALB, Canada.

711. Dimmock, F. 1952. Soybean improvement at Ottawa. *Soybean Digest.* April. p. 14-15.
• ***Summary:*** "The soybean breeding program which was begun in 1929 at the Central Experimental Farm, Ottawa, Ontario, Canada, has resulted in the development and release of four varieties, namely Pagoda, Kabott, Capital and Mandarin (Ottawa strain). These varieties have had a wide distribution, not only in Canada, but also in certain areas of the United States where they have been highly recommended... There is only one other experiment station engaged in soybean breeding work in Canada. It is located at Harrow, Ontario... The main emphasis at present is being placed on a rather extensive program of hybridization between selected varieties and strains... We are particularly interested in securing an early, productive variety for eastern Ontario... During the past few years, more and more attention has been directed towards disease resistance." Address: Div. of Forage Plants, Central Experimental Farm, Ottawa, ONT, Canada.

712. *Toronto Daily Star (Canada).*1952. Victory Mills Limited appointments (Photo caption). Aug. 27. p. 18.
• ***Summary:*** Four portrait photos show four men (left to right) in the order listed below.

The lower caption reads: "E.P. Taylor, Chairman of the Board of Canadian Breweries Limited, announces the following executive appointment at its Soybean and Malt processing subsidiary, Victory Mills Limited: (1) J.G. Campbell, C.A., President. (2) J.C. Henderson, Vice-President, Sales. (3) A.R. Gillespie, Vice-President, Purchasing. (4) G. Abrams, C.A., Vice-President and Treasurer."

713. Victory Mills, Ltd. 1952. Veeline: Serving agriculture and industry (Ad). *Soybean Blue Book.* p. 101.
• ***Summary:*** "Victory Mills operate the largest vegetable oil extraction plant and the most modern malt plant in Canada. Victory Mills Products are as follows: vegetable oil and oil meals, brewers' malt, soybean flours, brewers' dried yeast, malt sprouts, brewers' dried grain."

A similar ad appears in *Soybean Digest* (Sept. 1953, p. 70) except that several additional products are listed: Brewers' dried grains, malting barley by-products, and 50% protein soybean oil meal.

Note: Another ad for the same (1953) Veeline products appears in *Soybean Digest*, Sept. 1954, p. 56. Veeline is the company's registered trademark. Address: Head Office and Plant: 285 Fleet St. East, Toronto, Ontario, Canada.

Campbell, C.A., president; J.C. Henderson, vice president, sales; A.R. Gillespie, vice president, purchasing; G. Abrams, C.A., vice president and treasurer." A portrait photo shows J.G. Campbell.

715. Packman, D.J. 1952. Soybean production on Ontario farms. *Economic Annalist (The)* 22(6):131-37. Dec. Reproduced in 1953 as part 1 of a 15-page booklet titled *Soybeans* by Dept. of Agriculture, Ottawa, Canada. of Agric. [4 ref]
• ***Summary:*** Contents: Introduction. Changes in land use. The soybean enterprise. Farm organization. Labour returns from soybeans. Cultural practices. Sales of soybeans. Outlook.

"The acreage sown to soybeans in Canada has increased from about 44,000 acres in 1942 to 155,000 acres in 1951." Table 1 shows that in 1951 about 40.5% of the soybean acreage in Ontario province was found in Essex County and 38.9% in Kent County. "In Essex County, for example, the farm value of soybeans constitutes 17 per cent of the total gross value of field crops, and is exceeded only by corn and potatoes. In Kent County, soybeans rank third after corn and winter wheat and provide approximately 14 per cent of the total gross value of field crops." Address: Canada.

716. Porteous, W.L. 1952. Utilization and prices of soybeans in Canada. *Economic Annalist (The)* 22(6):125-31. Dec. Reproduced in 1953 as part 2 of a 15-page booklet titled *Soybeans* by Dept. of Agriculture, Ottawa, Canada. [1 footnote]
• ***Summary:*** Contents: Introduction. Domestic crushings of soybeans. Domestic crushings in relation to production. Foreign trade in soybeans and soybean products. Tariffs on soybeans and soybean products. Comparison of the market for soybean oil and oilcake and meal (1946 and 1951). Domestic uses for soybean oil. Domestic uses for soybean oilcake and meal. Total domestic disappearance of soybean oil oilcake and meal. Prices for soybeans. Prices for soybean oil. Soybean oilmeal prices. Processors' margins and transportation charges. Seasonal pattern of soybean prices. "The Ontario Soya-Bean Growers' Marketing Scheme."

The section titled "Domestic uses for soybean oil" (p. 128) states: "Between 1920 and 1930 almost all of the soybean oil used in Canada (about 1,500 tons per year) was used for making soaps and paints; about 90 per cent was used for soap and 10 per cent for paints. During the next decade the pattern of utilization began to shift and soybean oil was used more widely as an edible oil; about 35 per cent went to food uses and 65 per cent was used to make soaps and paints. This trend was accelerated during World War II. At present most of the oil is used by various food processing industries. Margarine and shortening accounted for 79.5 per cent of the total utilization in 1950 and 71.1 per cent in 1951 (Table 6). Industrial use is mainly for paints and varnishes."

The section titled "The Ontario Soya-Bean Growers' Marketing Scheme" (p. 130) states: "This organization, established in 1949 under the 'Farm Products Marketing Act' of Ontario, negotiates an agreement annually or as often as necessary with the processors and dealers regarding the conditions of sale of Ontario soybeans. Under the 1951 agreement no fixed or contract price for soybeans was established.

"In drawing up the agreement, six representatives of the producers meet with three processors and three dealers' representatives. The agreement reached by these groups is submitted to and must be approved by the Farm Products Marketing Board. No buyer may do business on terms below those set out in the agreement.

"Under the 1951 agreement the minimum price was the trading price for each day as established on an open market basis. However, the processors undertook to pay the best possible prices consistent with the prevailing market prices obtainable for the end products of processing. In addition processors were to inform the Marketing Board as to the

causes of major price fluctuations and co-operate in providing information relative to prices based on the previous day's trading price.

"The agreement specified the discounts to be imposed on soybeans containing over 14 per cent moisture. Soybeans containing over 14 per cent and up to 18 per cent (inclusive) moisture were to be discounted with the maximum rate being 1½ cents per bushel for each ½ per cent of moisture content.

"The maximum charge to any grower by every dealer for cleaning, handling and selling soybeans was fixed at ten cents per bushel under the 1951 agreement. The maximum storage charge to any grower was 1/30 of one cent per bushel per day.

"The agreement stipulates that dealers are to pay cash on demand for soybeans and procure specific information about the conditions of sale such as the date of sale, condition of the soybeans, weight and prices paid. The name of the purchaser, the name and address of the grower, date of purchase and the number of bushels sold is to be forwarded to the Secretary of the local Board by the 15th of the following month. The agreement also stipulates that matters of dispute between the growers and a dealer as to grade and moisture content are to be referred to an Inspector of the Board of Grain Commissioners at Chatham, Ontario, and his decision is to be final."

Note: This is the earliest document seen (Feb. 2000) that mentions "The Ontario Soya-Bean Growers' Marketing Scheme."

Tables show: (1) "Soybean crushings and production of soybean oil, cake and meal, 1946 to 1951." The number of soybean bushels crushed in Canada grew from 1,846,000 in 1946, to 2,702,000 in 1947, to 4,508,000 in 1949, to a record 7,483,000 in 1951. Soybean oil production grew from 9,101 tons in 1946, to 13,536 tons in 1947, to 22,982 tons in 1949, to a record 36,757 tons in 1951. Soybean oilcake and meal production grew from 42,712 tons in 1946, to 62,975 tons in 1947, to 105,314 tons in 1949, to a record 177,982 tons in 1951.

(2) "Canadian supplies of soybeans in relation to total crushed, 1946 to 1951. Soybean imports grew from 1,136,000 bushels in 1946 to 4,659,000 in 1951. During this period Canadian supplies accounted for about 42% of the total crushed (range: 29.1% to 58.3%).

(3) "Production, trade, and apparent domestic disappearance of soybean oilcake and meal, 1946-51." (4) "Production, trade, and apparent domestic disappearance of soybean oil, 1946-51." (6) "Soybean oil used in margarine and shortening and total disappearance, 1950-51." In 1950 some 9,040 tons of soybean oil were used in margarine and 16,943 tons in shortening for a total of 26,037 tons (refined basis). In 1951 some 17,599 tons of soybean oil were used in margarine and 15,368 tons in shortening for a total of 32,967 tons (refined basis). Address: Canada.

• ***Summary:*** The section on soybean varieties (p. 16) states that four selections from Pagoda have shown promise.

718. Goldberg, Ray A. 1952. The soybean industry: With special reference to the competitive position of the Minnesota producer and processor. Minneapolis, MN: The University of Minnesota Press. xv + 186 p. Index. 24 cm. [156 ref]
• ***Summary:*** Contents: 1. Introduction: Purpose and scope, source of data, procedure. 2. Production: World production, national production, acreage changes in the Corn Belt, Minnesota production, areas of production, suitable varieties, acreage changes in Minnesota, summary.

3. Utilization: World utilization, national utilization, soybean meal utilization, soybean oil utilization, world and national trade movements, price relations, shortening, margarine, other edible uses, industrial uses, Minnesota utilization, summary.

4. The processing industry: Marketing channels of the crop, historical evolution, the national processing industry, the Minnesota processing industry, technical development, processing costs, Minnesota processing costs, summary.

5. Factors affecting the competitive position of the Minnesota soybean processor: Transportation, Minnesota transportation, Buffalo–New York, Fargo–North Dakota, St. Cloud–Minnesota, Chicago soybean prices, qualifications, foreign market, summary, storage, commodity markets, price formulation, government action, the Minnesota processor, crushing margins, specific example, crushing-margin relationships over time.

6. Summary and conclusions: The producer, the processor. Appendixes. I. Tables. II. Interviews. Bibliography.

Although Minnesota was one of the last states to develop a soybean crop, the state now ranks 6th in total soybean production in America. In the decade from 1940 to 1950 the dollar value of the Minnesota soybean crop rose from $76,000 to $37,000,000.

Tables: (1) A comparison of the twelve leading soybean producing states for 1920 to 1950. (2) A summary of protein content, and iodine number of soybeans, by area, three-year averages, 1945-1947. (3) The results of tests on two groups of varieties of soybeans. (4) The averages for soybean varieties for date mature and oil content at three locations, Waseca, Blue Earth, and southwestern Minnesota. (5) Percentage changes in the use of land by forty-two Minnesota farmers, 1941 through 1945 (1940 = 100 per cent). (6) Changes in crop acreages between 1939 and 1949. (7) Index numbers (by percentage) of acreage on fifty southern Minnesota farms, 1941 through 1950 (1941 = 100

per cent). (8) Percentage of total tillable land in specific crops on fifty southern Minnesota farms, 1941 through 1950. (9) Tillable land and specified crops in Minnesota. (10) Percentage of total tillable land in specified crops in Minnesota. (11) The dollar value per acre of grain crops in Southern Minnesota. (12) The comparative cost and returns per acre for grain crops in southern Minnesota, 1945-1949. (13) The indicated frequency with which forty-seven selected farms produced soybeans, 1941-1950. (14) The number and percentage of fifty southern Minnesota farms producing soybeans. (15) Soybean acreage and soybean farms in Minnesota. Cash prices of number 2 yellow soybeans at Minneapolis and Chicago.

34. Soybeans under price support programs, United States, 1941-1950. The first government price support program was in 1942, designed to increase soybean acreage during World War II; both a support price and a ceiling price were established each year for soybeans (see table 42). In 1942, however, only 4,000 bushels were under this price support program; the average price received by farmers for soybeans nationwide was $1.61/bushel whereas the price support was only $1.60 a bushel and the ceiling price was $1.66. From 1943 to 1946 the average priced received by farmers for soybeans was higher than the support price, so essentially no soybeans were under the price support program. During the war there were also price supports for soybean oil and meal. Soybean price supports were higher than ceiling prices of soybean meal and oil. So during this time the government paid the extra cost of the processor's soybeans so the processor would be sure of an adequate crushing margin.

"Supports for soybeans were continued after the war. However the market price remained higher than the support price." Consequently, very few soybeans were purchased by the Commodity Credit Corporation (CCC). The largest percentage of the crop to be under price-support programs was 7% (16,000 bushels) in 1949; this figure fell to 5% (about 14,000 bushels) in 1950.

35. Prices of soybeans: On track bids at Minnesota and Illinois country points. 36. Prices of soybeans: On track bids at Minnesota and Iowa country points. 37. Solvent crushing margins compared to weighted processing costs, seven Minnesota farms. 38. Soybean crushing margins for solvent and expeller plants in Minnesota. 39. Soybean crushing margins for solvent plants in Minnesota and Illinois. 40. Soybean crushing margins for solvent plants in Minnesota and Iowa.

41. Soybean crushing margins for expeller plants in Minnesota and Illinois. 42. Soybean crushing margins for expeller plants in Minnesota and Iowa. Address: Minnesota.

720. Harosoy: New Canadian soybean variety. 1952. Seed color: Yellow.
• ***Summary:*** Sources: Owen, C.W. 1953. "Harosoy new variety [of soyabean] for Ontario." *Soybean Digest.* June. p. 11. Harosoy is a new soybean variety adapted to most of Ontario Province.

Weiss, M.G.; Stevenson, T.M. 1955. "Registration of soybean varieties, V." *Agronomy Journal* 47(11):541-43. Nov. See p. 542. Harosoy (Registration No. 17) "originated as a $BC_4$ selection from the progenies of a backcross Mandarin x (Mandarin x AK) in the soybean breeding program of the Dominion Experimental Farm, Harrow, Ontario, Canada. The variety is characterized by upright determinate growth, short branches held closely to the main stem, light green foliage with upper leaflets tending to have acute points, purple flowers, gray pubescence; pods borne well off the ground, medium light brown in color at maturity, predominantly 2 to 3 seeded and resistant to shattering; beans round in shape, of medium size, and having yellow cotyledons, yellow seed coat with a yellow hilum and bearing a slight brownish tinged spot at the micropyle. Harosoy matures approximately 3 days earlier and exhibits greater field resistance to stem canker than Hawkeye. In maturity it is classified as Group II and its optimum area of adaptation extends from northeast Nebraska and southeast South Dakota eastward through the northern regions of Iowa, Illinois, Indiana, and Ohio and the southwestern area of Ontario.

"After superiority of Harosoy was established at Harrow, it was entered in 1951 in regional tests conducted cooperatively by the Agricultural Experiment Stations of the North Central Region and the U.S. Regional Soybean Laboratory."

"Harosoy was increased by the Dominion Experimental Farm and distributed to growers in 1951. Its acreage is increasing and it has replaced Hawkeye acreage particularly in the eastern belt of its adaptation." A table shows Harosoy and Hawkeye. Harosoy yielded 32.5 bu/acre in 1951-53 regional tests, compared with 31.6 bu/acre for Hawkeye.

USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 11.

721. Ontario Agricultural College. 1952. Soybean investigations at the Ontario Agricultural College–1951. Guelph, Ontario, Canada. 16 p. 28 cm.
• ***Summary:*** Includes results of many soybean variety trials in Ontario, plus a list of varieties entered in the U.S. Regional Soybean Laboratory tests for 1951. Address: Guelph, Ontario, Canada.

722. **Product Name:** Veeline Soy Flour.
**Manufacturer's Name:** Victory Mills Ltd.
**Manufacturer's Address:** 285 Fleet St. East, Toronto, ONT, Canada.
**Date of Introduction:** 1952. January.
**New Product–Documentation:** Ad in Soybean Blue Book. 1952. p. 101. Veeline: Serving industry and agriculture.

Soya Bluebook. 1985. p. 86. The company name and address have changed: Victory Soya Mills Ltd. Div. of Central Soya Co., Inc. 333 Lake Shore Blvd. East, Toronto, ONT, M5A 1C2, Canada.

723. *Soybean Digest.*1953. Victory Mills trophy. Jan. p. 28.
• ***Summary:*** "Victory Mills, Ltd., Toronto, Ontario, has donated a magnificent perpetual challenge trophy to be awarded annually to the grand championship exhibit of soybeans at the Royal Agricultural Winter Fair in Toronto, according to the Fair catalog.

"The Royal Agricultural Winter Fair offers two soybean classes for residents in all parts of Canada, one for early maturing varieties, and the other for any variety other than early."

724. Canadian Press (CP). 1953. Dominion Linseed plant to reopen. *Toronto Daily Star (Canada).* March 27. p. 21.
• ***Summary:*** "Kitchener [Ontario], March 27–The Dominion Linseed Oil Co. at Baden, closed since last June, has been purchased by Toronto Elevators Ltd., it was announced yesterday,

"The plant will re-open Monday with a staff of 20. Ten are former employees laid off when the plant closed. The plant, renamed Baden Linseed Oil Mills, will produce crushed flax, linseed oil and soap. Baden is 10 miles west of Kitchener."

725. *Soybean Digest.*1953. New plant of Toronto Elevators, Ltd. April. p. 27.
• ***Summary:*** A new solvent extraction plant for soybeans, located on Toronto harbor, was recently put into operation by Toronto Elevators, Ltd., Toronto, Ontario, Canada. Having a capacity of 150 tons/day, it was designed and built by Blaw-Knox Construction Co. "It incorporates the unique Rotocel process that permits a very compact unit. Storage facilities for soybeans are provided in the company's 4-million-bushel capacity grain elevators. Additional storage elevators are located in Sarnia... The firm formerly crushed soybeans with Expellers... The soybean oil produced is further processed in the firm's large and modern refinery completed some six years ago. The meal is incorporated into feeds that are manufactured in the company's feed plant." A large photo shows the 2-story plant.

726. Canadian Press (CP). 1953. Ontario soybean growers may get $210,000 bonus. *Toronto Star (Ontario, Canada).* May 15. p. 28.

• ***Summary:*** "Chatham, May 15–With a 20 per cent. increase predicted over last year's 4,000,000 bushel crop, Ontario soybean growers may get an unexpected bonus of $210,000 this year" or 4.2 cents a bushel.

This will happen if soybeans, quickly developing into southwestern Ontario's largest, "is reclassified as a grain by the freight rate reclassification committee of the Railway Association of Canada."

About 85% of Ontario's soybean production is now concentrated in the two counties of Kent and Essex, with Kent producing about half of Canada's soybeans. Last year the crop was worth over $5,00,000 to Kent county soybean growers.

727. Owen, C.W. 1953. Harosoy new variety [of soyabean] for Ontario. *Soybean Digest.* June. p. 11.
• ***Summary:*** Harosoy is a new soybean variety adapted to most of Ontario Province. It is expected to largely replace Harman, compared with which it is earlier in maturing, has stiffer straw, a higher oil content, and a pure yellow seed. A table shows a summary of 6 years' trials at Harrow of Harosoy and 3 other soybeans. Harosoy gave an average yield of 28.1 bushels/acre, compared 25.1 for Harman, 24.4 for Earlyana, and 23.1 for Hawkeye. A photo shows a man standing in a large field of Harosoy soybeans in Middlesex County, Ontario, on 24 July 1952.

Note: This is the earliest document seen (Jan. 2010) that mentions the Canadian soybean variety Harosoy. Address: Asst., Forage Crops, Dominion Experimental Station, Harrow, Ontario, Canada.

728. *Soybean Digest.*1953. Canadian imports continue large. June. p. 15.
• ***Summary:*** "Canada's imports of soybean and soybean oil, which made up 27% of the total importation of fats and oils in 1952, are expected to continue large in 1953." Edible oils imported in 1952 included, in descending order of quantity: cottonseed oil 32,858 tons, coconut oil 8,375 tons, soybean oil 7,840 tons, palm oil 4,198 tons, etc.

729. Roberts, Ivan. 1953. Canada as a continuing market for soybeans. *Soybean Digest.* Sept. p. 48.
• ***Summary:*** A table shows production and importation of soybean oil, whole soybeans, and oilcake meal from 1948 to 1952. Soybean production has more than doubled during this period, from 1,824,000 bu in 1948 to 4,128,000 bu in 1952. At the same time, imports of whole soybeans from the United States increased from 1,245,000 bushels in 1948 to 4,004,000 bushels in 1950, and remained at about 4,600,000 bu in 1951 and 1952, where it is predicted to remain in 1953.

This year, in Ontario and most other provinces, the dairy industry has sponsored legislation, which has been passed into law, to "prohibit the manufacture or sale of any edible oil product, other than margarine, that contains any fat or oil other than that of milk, which has been blended or mixed with a dairy product in such a manner that the resultant edible oil product is an imitation of, or resembles, any dairy product."

While soy meal enters Canada duty free, the U.S. government about 18 months ago doubled the rate of duty on soy meal imported to the USA–from $3 a ton to $6 a ton.

In Canada almost all soybeans are planted in rows that are 24 inches or less apart; this is a narrower spacing than in the USA. Canada has the potential to produce 4 times as many soybeans as it now produces. Address: Agronomist, Victory Mills, Ltd., Toronto, ONT, Canada.

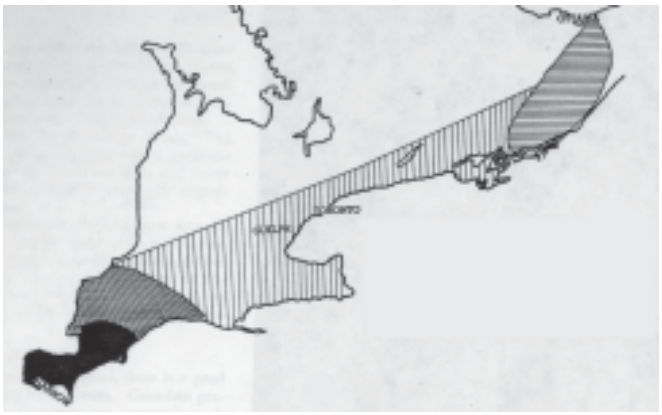
730. Chinn, S.H.F. 1953. A slide technique for the study of fungi and actinomycetes in soil with special reference to *Helminthosporium sativum. Canadian J. of Botany* 31(6):718-24. Nov. [3 ref]
• ***Summary:*** When 2% soybean was added to unsterilized soil, it stimulated spore germination in *Helminthosporium sativum* and a number of other fungi; the germlings of *H. sativum* were unable to establish themselves upon this substrate in competition with other fungi and shortly died. This effect might be used to eliminate long-lived resting spores and sclerotia of root-infecting fungi from the soil. Address: Assoc. Bacteriologist, Lab. of Plant Pathology, Science Service, Saskatoon, Sask., Canada.

731. Dimmock, F.; Warren, F.S. 1953. The influence of time of planting on the yield and composition of soybean seed. *Canadian J. of Agricultural Science* 33(6):550-558. Nov/Dec. [8 ref]
• ***Summary:*** "Planting soybeans at the normal seeding time gave the highest yield and the highest percentage of oil in the seed.

"Delayed planting decreased the yield and lowered the oil content of the seed and the longer the delay, the greater the reductions became.

"Delayed planting showed a tendency to increase both the protein content of the seed and the iodine number of the oil." Address: Div. of Forage Plants, Central Experimental Farm, Ottawa, ONT, Canada.

732. Pellett, Kent. 1953. Room for big expansion of soybean crop in Ontario. *Soybean Digest.* Dec. p. 14-15.
• ***Summary:*** A map shows Ontario's soybean growing areas–actual and potential. Most of Canada's soybeans are grown at the southernmost tip of Ontario province in the area around Harrow and Chatham. In Essex County, Ontario's southernmost county, over 20% of all cleared land is now seeded to soybeans. However acreage and production are rapidly expanding toward the northeast, toward Guelph, Toronto, and eventually Ottawa. In this area are an estimated 8½ million acres that are favorable to



producing soybeans of a maturity ranging from Lincoln to Flambeau.

"Six Canadian soybean processors are listed in the Soybean Blue Book. All except one are located in Ontario. The other is in Manitoba.

"The Ontario Soya Bean Growers' Marketing Board is set up for the purpose of regulating marketing and helping with growers' problems. George Phillips, Muirkirk, is chairman. Gilles DePutter, Appin, is vice chairman."

Present soybean yields in Ontario compare very well with those in the U.S. Cornbelt. The provincial average in 1952 was 24.8 bushels per acre. In the USA only Iowa and Nebraska had higher yields. "Canadians give some credit to narrow-width rows [22-27 inches] for their high yields. They do not grow many soys in corn-row widths [36-42 inches].

Cornbelt varieties such as Lincoln, Hawkeye, and Blackhawk are adapted to Ontario and now widely grown. But the U.S. varieties "have served to introduce troublesome diseases into the area, particularly brown stem rot and stem canker. For this reason, the trend is toward Harrow-developed varieties..."

"The fact that the Harrow station is making good progress in disease work is at least partly due to the fact that a good breeder, C.A. Owen, and a good disease man, Dr. A.A. Hildebrand, are working together very closely at the station."

Photos show: (1) K.A. Standing (secretary-fieldman of the Ontario Soya Bean Marketing Board, Chatham) and Ivan Roberts (agronomist for Victory Mills, Ltd). (2) C.W. Owen, agronomist of the Harrow Experiment Station, with inverted jars of the four soybean varieties he has developed: Harosoy, Harley [Harly], Harman, and the new Hardome.

Note: The six Canadian soybean processors are listed in the Soybean Blue Book are:

(1) Altona, Manitoba: Co-Op Vegetable Oils Ltd. 3 expellers, capacity 50 tons/day. Storage capacity 250,000 bu [bushels]. "Advance" soybean oil meal. Soybean operations 250,000 to 400,000 bu. Served by CP RR [Canadian Pacific Railroad].

(2) Baden, Ontario: Dominion Linseed Oil Co., Ltd. 5 screw presses, capacity 75 tons/day. Storage capacity: 95,000 bu. "Blue Blossom" soybean oil meal. Soybean operations 300,000 by. Served by CN RR [Canadian National Railway / Railways].

(3) Fort William, Ontario: Edible Oils Ltd. Solvent extraction, capacity 50 tons/day. Storage capacity: 500,000 bu. "Edible" soybean oil meal. Served by CN, CP RR.

(4) Hamilton, Ontario: Canadian Vegetable Oil Processing Ltd. 7 expellers, capacity 150 tons/day. Storage capacity: 500,000 bu. "CVOP" soybean oil meal. Served by CN RR.

(5) Toronto, Ontario: Toronto Elevators Ltd. (Queen's Quay). 8 screw presses, capacity 150 tons. Hexane solvent, capacity 150 tons/day. Storage capacity: 2,00,000 bu. "Double Diamond" soybean oil meal. "Master" mixed feeds and pellets. Served by CN, CP RR.

(6) Victory Mills Ltd. (285 Fleet St. E.). Wholly owned subsidiary of Canadian Breweries Ltd., Toronto. Chairman of board, E.P. Taylor. 5 screw presses, capacity 120 tons/day. Hexane solvent, capacity 210 tons/day. [Soybean] Storage capacity: 1,100,000 bu. "Veeline" soybean oil meal. "Soywhite" fat-free soy flour. Served by CN, CP RR. Address: Managing Editor, Soybean Digest.

733. **Product Name:** Soybean Oil, and Advance Soybean Oil Meal.
**Manufacturer's Name:** Co-Op Vegetable Oils Ltd. Renamed CSP Foods in 1976.
**Manufacturer's Address:** P.O. Box 150, Altona, Manitoba, Canada.
**Date of Introduction:** 1953.
**Ingredients:** Soybeans.
**New Product–Documentation:** Soybean Blue Book. 1953. p. 96. 3 expellers, capacity 50 tons. Storage capacity: 250,000 bushels. "Advance" soybean oil meal. Soybean operations 250,000–400,000 bu. Served CP RR [Canadian Pacific railroad]. Note: Two solvent extraction plants of 25 tons/day capacity were built and installed here in 1955 by Crown Iron Works for processing soybeans and rapeseed.

Soybean Blue Book. 1968. p. 96.

*Soybean Digest Blue Book.* 1976. June. p. 124. The entry now reads: Altona, Man.–CSP Foods Ltd., P.O. Box 750. Phone: 324-6481. Storage capacity: 670,000 bu. Soybean, sunflower, and rapeseed operations.

*Soybean Digest Blue Book.* 1978. June. p. 118.

734. Acme: New Canadian soybean variety. 1953. Seed color: Yellow.
• ***Summary:*** Sources: USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 4. * Acme.–Resulted from

increase of a single plant selection made from the variety Pagoda by the Division of Forage Plants, Central Experiment Farm, Ottawa, Ontario, Canada. Released in 1953. Pubescence, gray; flowers, purple; shattering, little; seeds, yellow with yellow hilum, about 2,300 to the pound; cotyledon, yellow; oil, 19,0 percent; protein, 40 percent; iodine number, 129. Maturity, group 0." Footnote: * Acme was "Also the name of an old variety which is believed to be no longer in existence."

*Soybean Digest.* 1960. "Honorary life members [ASA]: Dr. E.E. Hartwig and Dr. Frederick Dimmock." Sept. p. 8. "The program of soybean research which he [Dr. Dimmock] initiated at Ottawa has resulted in the development and distribution of the following early-maturing varieties of soybeans, most of them from hybridization: Mandarin (Ottawa), Capital, Kabott, Pagoda, Comet, Acme, and Merit. These varieties have contributed greatly to the development of a successful soybean industry in Canada, and have been of great importance in the northern United States."

Johnson, Herbert W. 1960. "Registration of soybean varieties, VII." *Agronomy Journal* 52(11):659-60. Nov. See p. 659. Acme (Registration No. 25) "originated as a single plant selection from the variety Pagoda, which came from a cross between Manitoba Brown and Mandarin (Ottawa) made at Ottawa, Canada, in 1930. Acme is characterized by purple flowers, gray pubescence, and light brown pods at maturity. The seed coats, hila, and cotyledons are yellow. Acme is classed in maturity group 00, a recently established group for selections earlier than those in group 0, and is adapted to eastern Ontario, southwestern Quebec, southern Manitoba, and northern counties of Minnesota, Michigan, Wisconsin, and North Dakota.

"Tests conducted at the Central Experimental Farm, Ottawa, and five Branch Experiment Stations throughout Canada indicate that Acme is superior to Pagoda, the parent variety, in yield and oil content and slightly earlier in maturity. It is much earlier than Flambeau, superior in lodging resistance and higher in oil, but shorter in height and lower in yield (table 1a). Acme is one of the earliest varieties in Canada and the United States and there are few released varieties to which it can logically be compared.

"Acme was licensed as a new variety by the Plant Products Division, Department of Agriculture, Ottawa, in 1953 and released for production in Canada in 1954."

*Soybean Digest.* 1962. "Leading soyabean varieties." Feb. p. 8-9. Acme is one of the varieties listed.

735. Hardome: New Canadian soybean variety. 1953. Seed color: Yellow.
• ***Summary:*** Sources: Pellett, Kent. 1953. "Room for big expansion of soybean crop in Ontario." *Soybean Digest.* Dec. p. 14-15. A photo shows agronomist C.W. Owen of the Harrow Experiment Station and 4 soybean varieties he has developed: Harosoy, Harley [Harly], Harman, and the new Hardome.

USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 11. "Hardome.–Selection from a backcross, Mandarin x (Mandarin x A.K.), made by the Dominion Experiment Farm, Harrow, Ontario, Canada. Released in 1953. Pubescence, gray; flowers, purple; shattering, little; seeds yellow with gray hilum about 2,800 to the pound; cotyledons, yellow; oil, 19.8 percent; protein, 40.9 percent; iodine number, 131. Maturity, group 0."

Brown, D.M.; Chapman, L.J. 1961. "Soybean ecology III. Soybean development units for zones and varieties in the Great Lakes region." *Agronomy Journal* 53(5):306-08. Sept/Oct. Hardome is a variety that will mature in this region.

736. Packman, D.J.; Porteous, W.L. 1953. Soybeans: Production on Ontario farms. Utilization and prices in Canada. Ottawa, Canada: Dep. of Agriculture. 15 p. [7 ref]
• ***Summary:*** This booklet is reprinted from two articles published in *The Economic Analyst* 12(6):125-37, Dec. 1952 (which see). Packman's article comprises pages 1-8 of the booklet and Porteous' article comprises p. 9-15. Address: Canada Dep. of Agriculture, Ottawa.

737. Hopkins, R.H.; Jelinek, B. 1954. Mechanism of β-amylase action. I. Multichain action on amylose. *Biochemical Journal* 56(1):136-40. Jan. [17 ref]
• ***Summary:*** Amylose, a major constituent of starch, is hydrolysed by β-amylase in stepwise fashion starting from the non-reducing end. The sole fission products are maltose and continually shortened amylose chains. The authors wish to challenge that theory that amylase acts by a "single chain" mechanism. Beta-amylase was prepared from soya beans. It was found that this enzyme shows no decided preference for either long or short chains; thus, short chains disappeared quickly from a mixture of long- and short-chain polysaccharides. This proved the "multichain" mode of attack by the enzyme. Address: Dep. of Brewing and Applied Biochemistry, Univ. of Birmingham, and Dep. of Biochemistry, Univ. of Alberta, Edmonton, Canada.

738. *News-Gazette (Champaign, Illinois).*1954. Soybeans for use as seed. Feb. 28. p. 35, 37.
• ***Summary:*** Illinois farmers will have to depend on "below-standard" seed to grow their 1954 soybean crop. The standards will be lowered for germination of soybeans that will be certified this year. The extremely hot and dry weather is responsible. Gives a detailed discussion of the Illinois Crop Improvement Association, located at 110 West Green Street, Urbana. Like similar organizations in more

than 40 sates and Canada, it is a member of the International Crop Improvement Association. A photo shows Arthur Menges, inspector for the Illinois Crop Improvement Association, collecting a sample from one bag in a large stack of bags of soybeans for making a germination test.

739. *Soybean Digest.*1954. Seed directory (Ad). March. p. 40.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Illinois, Indiana, Iowa, Minnesota, Missouri, North Carolina, North Dakota, Virginia, Wisconsin, and Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers.

740. Strayer, George M. 1954. Editor's desk: In this case duty is only an expense. *Soybean Digest.* March. p. 4.
• ***Summary:*** For many years a duty of 2 cents per pound of $1.20 per bushel has been levied by the United States government on all soybeans brought into the United States. "This duty was first levied back in the days when the soybean industry was just getting started, and when growers needed all possible protection. In the meantime we have fought a war [World War II], have changed from a debtor to a creditor nation, and have expanded our soybean industry from a few million bushels to the 300 million bushel level.

"Now the Experiment Station in Ontario, Canada, has come up with a variety of soybeans which growers in the areas adjacent to the Great Lakes find very interesting." But when they enquire about importing seed from Ontario they are immediately confronted with the $1.20 per bushel duty. So today, instead of protecting American farmers, the duty imposes an additional expense on the buyer of the seed.

"Attempts are being made to lift the duty on certified or registered seed."

"The best laid schemes o' mice and men" oft go astray (Robert Burns 1785). Address: American Soybean Assoc.

741. Department of Field Husbandry, Ontario Agricultural College, Guelph. 1954. Soybeans as a cash crop in Ontario. *Ontario Department of Agriculture, Circular* No. 173 (Revised ed.). 7 p. April.
• ***Summary:*** Contents: Production, price and gross returns per acre on selected crops in Essex and Kent counties, 1946-1950 average (grain corn gives the highest gross returns, followed by soybeans). Outlook for 1954. Cultural practices with the soybean crop: Inoculation, planting date, soil, rotations and fertilizers, row widths (20-28 inches recommended), rate of seeding, methods of seeding, depth of planting, weed control, harvesting, varieties (in each of 5 climatic zones, and early, medium, or late within each zone; A map shows the 5 zones and all counties in Ontario. Zone 1, the warmest, is Essex County and most of Kent County), source of seed, storage, marketing. Address: Ontario, Canada.

742. *Soybean Digest.*1954. Victory Mills, Ltd., Toronto, Ontario... May. p. 26.
• ***Summary:*** "... has announced plans for expansion of its storage capacity in Toronto from 3.25 million bushels to 4.25 million bushels. The new elevator, to be built at a cost of $600,000, will handle soybeans and barley." Address: Toronto, Ontario, Canada.

743. Northern Utilization Research Branch, Agricultural Research Service. 1954. Seventh Annual Cooperative Soybean Oil Mills Conference on problems of cooperative soybean oil mills [Proceedings]. Peoria, Illinois. 19 p. Held 3-4 May 1954 at the Hanford Hotel, Mason City, Iowa. Publ: June 21.
• ***Summary:*** This conference was sponsored by: (1) Agricultural Research Service, Northern Utilization Research Branch, Peoria, Illinois; (2) Farmer Cooperative Service, Cotton and Oilseeds Branch [USDA], Washington, DC. (3) North Iowa Cooperative Processing Association, Mason City, Iowa (manager Glenn Pogeler, who gave the first welcoming remarks).

A detailed program is given. Presentations included: "Recent findings on the toxicity of TESOM (trichloroethylene extracted soybean oil meal), by L.L. McKinney of Peoria. Panel discussion: "Procurement problems of cooperative soybean oil mills. Chair: Dr. W.W. Fetrow, Chief, Farmer Cooperative Service. Panelists: Maurice Maze, manager, M.F.A. Cooperative Grain and Feed Company, Mexico, Missouri. S.O. Frey, manager, Producers Cooperative Association, Girard, Kansas. C.W. Hanson, manager, Big 4 Cooperative Processing Association, Sheldon, Iowa. "Government programs as they affect producers and processors of cottonseed and soybeans," by Glenn Pogeler. "Has operation to date justified conversion to solvent extraction?," by Ed Olson (manager, Boone Valley) and Glenn Pogeler. After lunch there was a guided tour of the facilities of the North Iowa Cooperative Processing Association.

On pages 18-19 is a "List of attendance" from Farm Cooperative Associations, listed here alphabetically: Big 4 Cooperative Processing Ass'n, Lake Park & Sheldon, Iowa. Boone Valley Cooperative Processing Ass'n., Eagle Grove & Woolstock, Iowa. Co-Op Vegetable Oils, Ltd., Alton, Manitoba, Canada. Farmers Cooperative Ass'n., Ralston, Iowa. Farmers Cooperative Company, Dike, Iowa. Farmers Grain Dealers Ass'n., Des Moines, Iowa. Farmers Union Grain Terminal Ass'n. [GTA], St. Paul, Minnesota. Imperial Hay Growers Ass'n., Brawley, California. M.F.A. Co-op Grain and Feed Company [MFA], Mexico, Missouri. North Iowa Cooperative Processing Ass'n., Mason City & Nora

Springs, Iowa. Northwest Co-op Mills, St. Paul, Minnesota. Producers Cooperative Ass'n., Girard, Kansas. Southwest Flaxseed Ass'n., Imperial, California. Tri-County Co-op Soybean Ass'n. [later renamed Dawson Mills], Dawson, Minnesota. West Bend Elevator Company, West Bend, Iowa.

Note 1. This is the earliest English-language document seen (June 2006) that uses the acronym "TESOM."

Note 2. North Iowa Cooperative Processing Association apparently now has two plants. Nora Springs is about 9 miles due east of Mason City. Address: Peoria, Illinois.

744. *Soybean Digest.*1954. Canadians process bulk of 1953 crop. June. p. 21.
• ***Summary:*** "The bulk of the record 4,406,000-bushel soybean crop in Canada in 1953 will be processed in Canada as usual... During calendar year 1953 a record 8.6 million bushels of soybeans was crushed in Canada, yielding 45,285 short tons of oil and 206,581 tons of oil meal. The first overseas shipment of Canadian soybeans ever made was reported to have left an Ontario port bound for Western Germany during the early part of last October...

"The continued increase in the production of margarine and shortening in Canada has been a major factor contributing to the increased production and consumption of soybeans... In 1950, soybean oil represented 24 percent of all fats and oils consumed in margarine production; and in 1953, 48 percent."

745. Doig, James L. 1954. Sell soy to humans. *Soybean Digest.* Aug. p. 34.
• ***Summary:*** The author encourages *Soybean Digest* and the American Soybean Assoc. to promote the use of soy (especially soy flour) in human foods worldwide. Address: Montreal, P.Q., Canada.

746. *Toronto Star (Ontario, Canada).*1954. Procter, Gamble buys plant of Victory Mills. Sept. 15. p. 26.
• ***Summary:*** E.P. Taylor, chairman of the board of Canadian Breweries Ltd., announced today that the soybean crushing plant of Victory Mills Ltd., a subsidiary of Canadian Breweries and one of the most modern in Canada, will be sold Oct. 1 to Procter and Gamble Co. of Cincinnati, Ohio. It will be renamed Victory Soya Mills.

Victory Mills was built at the request of Canada's federal government during World War II to help alleviate the country's wartime shortage of fats and oils.

With the change of ownership, production will proceed interrupted. The majority of current employees will retain their jobs; employment will be about 140.

Neil H. McElroy, president of Procter and Gable, will become president of Victory Soya Mills. E.L. Newman will be vice-president and general manager.

A small portrait photo, several columns to the right of this article, shows E.L. Newman, who comes to Toronto from Louisville, Kentucky, where he managed a large soybean mill.

747. *Toronto Daily Star (Canada).*1954. Imperial Bank of Canada announces... Oct. 28. p. 22.
• ***Summary:*** "... Mr. W.E. Williams of Toronto as a Director... Mr. Williams is President and General Manager of the Procter and Gamble Company of Canada, Limited, and a Director of Victory Soya Mills Company, Limited." A portrait photo shows W.E. Williams.

748. *Soybean Digest.*1954. P & G [Procter & Gamble] buys Victory Mills. Oct. p. 19.
• ***Summary:*** "Neil H. McElroy, president of the Procter & Gamble Co., Cincinnati, Ohio, has announced that arrangements have been made for the purchase of the assets and properties of Victory Mills, Ltd., of Toronto, Ontario, through a new Canadian subsidiary company.

"The principal business of Victory Mills Ltd. is crushing soybeans and marketing soybean oil and meal. The mill has the capacity to crush 12 million bushels of soybeans annually. Procter & Gamble's new subsidiary, which is making the purchase, is to be named Victory Soya Mills, Ltd. In announcing the formation of this subsidiary company, Mr. McElroy said, 'Vegetable shortening and margarine are enjoying increased popularity among Canadian housewives. This has resulted in a large growth in sales of the edible fats manufactured by Procter & Gamble of Canada, Ltd., which has been established in Canada for almost 40 years.'

"'The popularity of our products has caused us to look for an established source of oil for our production.' Mr. McElroy indicated that soybeans will be bought to the maximum extent possible from Canadian growers."

Note: According to Duda (1974), Victory Soya Mills, located at 333 Lake Shore Blvd., Toronto, ONT, Canada, was a manufacturer of soy protein products and an affiliate of "Proctor & Gamble" in 1974.

749. **Product Name:** Miss Nineteen Bread.
**Manufacturer's Name:** Wonder Bakeries Ltd.
**Manufacturer's Address:** Ontario, Canada.
**Date of Introduction:** 1954. November.
**Ingredients:** Soybeans.
**Wt/Vol., Packaging, Price:** 19¢ a loaf.
**How Stored:** Shelf stable.
**New Product–Documentation:** Ad in *Toronto Daily Star* (Canada). 1954. Nov. 15. p. 28.

750. Wonder Bakeries Ltd. 1954. Are you on a fight weight diet? Miss Nineteen Bread: Price 19¢ a loaf (Ad). *Toronto Star (Ontario, Canada).* Nov. 15. p. 28.

• ***Summary:*** "Then there's good news! Miss nineteen bread contains nineteen different ingredients, such as 100% whole wheat flour, gluten flour, soya flour, plus small amounts of (water-free) dehydrated vegetables–asparagus, kale and string beans... Be sure to include this good tasting bread in your Fight-Weight diet. One 18-gram slice... contains approximately 45 calories."

"Fat added? No. Shortening added? No. Crisp, crunchy toast. For home delivery call Miss Nineteen LO. 1191. Baked and sold exclusively by Wonder Bakeries Ltd.

A large photo shows the wrapped loaf with the silhouette of a ballerina doing a pirouette on top of it. Another ballerina is on the side of the loaf's wrapper.

751. **Product Name:** Lecithin.
**Manufacturer's Name:** Lecithin Products (Canada) Ltd. Subsidiary of W.A. Cleary Corp., New Jersey.
**Manufacturer's Address:** 48 Dundas St. West, Belleville, ONT, Canada.
**Date of Introduction:** 1954.
**New Product–Documentation:** Soybean Blue Book. 1954. p. 105.

752. **Product Name:** Soybean Coffee (Dietary Food).
**Manufacturer's Name:** MacDowell Brothers.
**Manufacturer's Address:** P.O. Box 141, Brockville, ONT, Canada. Also at Ogdensburg, New York.
**Date of Introduction:** 1954.
**New Product–Documentation:** Soybean Blue Book. 1954. p. 102. "Dietary Foods." No brand name given. Disappears after 1 year, then reappears in 1958 as "Soybean Coffee." *Soybean Digest Blue Book.* 1977. p. 32.

753. *Manitoba Department of Agriculture, Annual Conference of Manitoba Agronomists (Canada).*1954. Soyabean yield trials–1953. 63 p. For 1953. *
• ***Summary:*** In trials over 4 years at 3 locations, yields of Acme, Kabott, and Flambeau averaged 21.7, 25.3, and 30.7 bushels/acre respectively. In sowing-date trials, yields following sowings on 16 and 26 May were similar and were significantly higher than when sowings were made on May 6 or June 8. In spacing trials, the varieties Acme and Flambeau produced progressively higher yields as row spacing decreased from 36 to 18 inches, the responses being greater for Acme (a small and early variety) than for Flambeau.

754. Comet: New Canadian soybean variety. 1954. Seed color: Yellow.
• ***Summary:*** Sources: USDA Agricultural Marketing Service. 1957. "Soybean variety names." Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act." See p. 7. "Comet.–Selection from a cross between Pagoda and Mandarin by the Division, of Forage Plants, Central Experiment Farm, Ottawa, Ontario, Canada. Released in 1954. Pubescence, gray; flowers, purple; shattering, little; seeds, yellow with yellow hilum, about 2,800 to the pound; cotyledons, yellow; oil, 20,0 percent; protein, 40.0 percent; iodine number, 133. Maturity, group 0."

*Soybean Digest.* 1959. "Soybean varieties: The leading varieties acreagewise in soybean growing states as reported by state statisticians, crop improvement associations, and agronomists." Jan. p. 20, 22-23. The approximate percentage of leading soybean varieties grown in North Dakota is: Capital 20%, Grant 20%, Norchief 20%, Comet 10%.

*Soybean Digest.* 1960. "Honorary life members [ASA]: Dr. E.E. Hartwig and Dr. Frederick Dimmock." Sept. p. 8. "The program of soybean research which he [Dr. Dimmock] initiated at Ottawa has resulted in the development and distribution of the following early-maturing varieties of soybeans, most of them from hybridization: Mandarin (Ottawa), Capital, Kabott, Pagoda, Comet, Acme, and Merit. These varieties have contributed greatly to the development of a successful soybean industry in Canada, and have been of great importance in the northern United States."

Johnson, Herbert W. 1960. "Registration of soybean varieties, VII." *Agronomy Journal* 52(11):659-60. Nov. See p. 659. Comet (Registration No. 27) "originated as an $F_6$ plant selection from the cross Pagoda X Mandarin (Ottawa) made at Ottawa, Canada, in 1941. Comet is characterized by purple flowers, gray pubescence, and light brown pods at maturity. The seed coats, hila, and cotyledons are yellow. Comet is classed in maturity group 0 and is adapted to eastern Ontario, southwestern Quebec, and areas in Minnesota, Michigan, North Dakota, and Wisconsin.

"Regional tests conducted by agricultural experiment stations in northern United States and in Canada indicate that Comet is slightly later in maturity than Norchief but excels the latter to some extent in yield, plant height, and seed quality. It is quite resistant to lodging and high in oil content (table 1c).

"Comet was licensed as a new variety by the Plant Products Division, Department of Agriculture, Ottawa, and released for production in Canada in 1954."

755. *Soybean Digest.*1955. Seed directory (Ad). March. p. 36.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Alabama, Arkansas, Illinois, Indiana, Iowa, Minnesota, Missouri, North Carolina, Ohio, Virginia, and Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers.

756. *Department of Field Husbandry, Ontario Agricultural College (Guelph, Canada), Circular.*1955. Soybeans as a cash crop in Ontario. No. 173 (Revised ed.). 7 p. April.
• ***Summary:*** A previous edition, very similar in content, was published in April 1954.

757. *Soybean Digest.*1955. 1954 world [soybean] crop hit new record. April. p. 20. [1 ref]
• ***Summary:*** According to the USDA Foreign Agricultural Service, world soybean production established a new record in 1954; 742.8 million bushels were harvested, up 14% over 1953. Over 80% of the increase was accounted for by the United States. Most of the remaining increase occurred in China-Manchuria. In 1953 China produced 198 million bushels and Manchuria produced 134 million. In 1954 Manchuria's production statistics were included with those of China, the total being 350 million bu. Canada also set a new record with 5.065 million bu harvested. Also mentioned (with production statistics for 1953 in bushels) are Italy (35,000), Yugoslavia (155,000 avg. 1945-49), Other Europe (565,000) USSR (NA), Turkey (125,000), Indonesia (10,839,000), Japan (15,777,000), South Korea (4,995,000), Taiwan (Formosa) (640,000), Thailand (743,000), Brazil (3,242,000), Tanganyika (25,000), Nigeria (the biggest producer in Africa with 140,000 to 150,000 bu for export), and the Union of South Africa (68,000).

In Brazil, soybeans are produced in the states of Rio Grande do Sul and Sao Paulo. Average soybean acreage (harvested acres) in Brazil: 1945-1949: 23,000 acres. 1953: 148,000 acres. 1954 (preliminary): 162,000 acres. Average soybean yield in Brazil: 1945-1949: 19.0 bu/acre. 1953: 21.9 bu/acre. 1954 (preliminary): 22.7 bu/acre. Average soybean production in Brazil: 1945-1949: 446,000 bushels. 1953: 3,242,000 bushels. 1954 (preliminary): 3,674,000 bushels. "Brazil's harvest at 3.5 million bushels was up 13% from the year before. Some 2.6 million bushels were expected to be available for either crushing or export. The much-publicized program to increase soybean planting in Sao Paulo has so far met with discouraging results. This reportedly is due to the farmers' dissatisfaction with the earnings derived from soybeans compared with cotton and some other crops and to a shortage in Sao Paulo of combine harvesters."

Note 1. This is the earliest document seen (Jan. 2005) that gives soybean production or area statistics for Brazil.

Note 2. This is the earliest document seen (Jan. 2005) concerning the USDA's Foreign Agricultural Service and soybeans.

758. *Soybean Digest.*1955. Canadian imports set record. June. p. 25.
• ***Summary:*** In October 1953 Canada exported its first soybeans. During 1954 approximately 650,770 bushels were shipped overseas, largely to the United Kingdom.

Tables show: (1) Canada–Soybean crushed (bushels), soybean oil production (short tons), and soybean oilcake and meal production (short tons) (1945-1954). Soybeans crushed increased from 973,178 bu in 1945 to a record 9,438,795 bu in 1954. (2) Canadian imports–Soybeans (bushels), edible soybean oil, and inedible soybean oil (short tons). Soybean imports increased from 1,311,417 bu in 1945 to a record 6,873,965 bu in 1954.

759. Youngs, C.G.; Sallans, H.R. 1955. Acetone as a selective solvent for vegetable oils. *J. of the American Oil Chemists' Soc.* 32(7):397-400. July. [9 ref]
• ***Summary:*** Discusses research on the modification of drying- and semi-drying oils (soybean and linseed oil) using acetone. The authors found that useful fractionations of soybean (iodine value = 129.3) and linseed oil could be made by using as solvent 100 parts of acetone and 3 to 7 parts of water.

The authors constructed a pilot plant in Saskatoon and ran a number of tests using soybean oil in the plant. It is not known where the soybeans that provided this oil were grown; there is no indication that they were grown in Saskatchewan, or even in Canada. Address: Prairie Regional Lab., National Research Council, Saskatoon, Saskatchewan, Canada.

762. McCay, Clive M.; McCay, Jeanette B. 1955. You can make Cornell Bread–at home or in the bakery. Ithaca, New York: Published by the authors. 16 p. Illust. 21 cm. Revised, 1961, 1973. 33 p.
• ***Summary:*** Contents: Where to buy ingredients ("Full fat soy flour may be ordered directly from Spencer Kellogg & Sons, Box 1031, Decatur, Illinois. 5 lbs. for $1.00"). Introduction (How rats grow on good and regular bread). Tips for good luck. Family recipe for Cornell (Triple Rich) bread (calls for ½ cup full-fat soy flour). Fifty-fifty whole-

wheat bread. Cornell oatmeal bread. Cornell wholewheat bread. Cornell sweet breads. Refrigerator potato rolls. Cornell (Triple Rich) Bread–Straight dough method. Cornell (Triple Rich) Bread–Sponge method (Courtesy of Messing Bakeries, Brooklyn, New York). The "Open Recipe" ("Any baker can make the Cornell formula without permission and without charge. However, each baker is requested to formula on the wrappers, including 'how much' of each ingredient. The label on Cornell bread should read that for every 100 pounds of unbleached enriched flour there are

"2 pounds wheat germ

"8 pounds dry milk

"6 pounds high fat soy flour

"If you find these proportions on the wrapper you'll know you have Cornell bread").

Bakers who have inquired about Cornell Bread (Names of 110 bakers in the United States and Canada, listed alphabetically by state, and within each state, alphabetically by company name. New York state has the most with 37, followed by Pennsylvania with 8, and California with 7).

This booklet is filled with informative black-and-white photos by Louise Boyle showing the processes and finished products described. One shows a bag of Co-op Full Fat Soy Flour.

An earlier 1955 edition of this booklet omitted the list of bakers and added a bakery formula for Cornell (Triple Rich) bread plus a recipe for sour rye bread. Address: Route 1, Ithaca, New York.

763. Shea, Albert A. 1955. Vision in action: The story of Canadian Breweries Limited from 1930 to 1955. Toronto, Ontario, Canada: Canadian Breweries. See p. 53. *
• ***Summary:*** "In 1938, (E.P. Taylor) had encouraged Canadian Breweries Limited to invest in a subsidiary company known as Sunsoy Products Limited, which processed soybeans on a small scale in Toronto. The experience convinced him that a large unit, including elevators and a processing plant, could produce oil needed to overcome the wartime shortage of shortening, margarine and soap, and that it would also have a good economic future when the war was over. The approval of the board of directors was obtained for the establishment of a company to be known as Victory Mills Limited."

764. *Soybean News.*1956. Soybean champions: Canadian champion 67.93 bushels. 7(3):1, 4. Feb.

765. American Soybean Association. 1956. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 160 p. Advertisers' index. 22 cm.
• ***Summary:*** Under the heading "Canadian production" are three tables (p. 30) with the following titles: (1) "Production of soybeans in Canada, 1942-1955." For each year gives acreage, yield per acre, and total production–which was 5.650 million bushels in 1955.

(2) "Production of soybean oil and oilcake in Canada." For each crop year from 1943-44 to 1954-55 gives soybeans crushed (bushels), oil produced (tons), and oilcake and meal produced (short tons). The crush increased from 241,315 bushels the first crop year to 10,211,418 bushels the last year.

(3) "Soybean production, utilization and value, Canada." The columns are: (1) Year beginning Aug. 1, from 1936 to 1955. (2) Production. Statistics for early years are given: 248,000 bu in 1936. 159,000 bu in 1937. 204,000 bu in 1938. 215,000 bu in 1939. 233,000 bu in 1940. 217,000 bu in 1941. 872,000 bu in 1942. Footnote: "With the exception of the period 1943-45 when small quantities were grown in Manitoba and British Columbia, the production of soybeans in Canada has taken place in the province of Ontario." (3) Imports. Increased from 7,000 bu in 1936 to 7,683,000 bu in 1954. Imports dropped sharply during the years 1940-1942. (4) Supplies (1,000 bu). (5) Exports of soybeans. Started in 1953 with 568 (units not given), increasing to 905 in 1954. (6) Farm value of production. Increased from $1,509,000 in 1942 to $11,857,000 in 1954. (7) Processed for oil and meal (000 bu). (8) Soybean oil produced (000 lb). (9) Soybean oilcake produced (short tons). Address: Hudson, Iowa.

766. Jogaratnam, T. 1956. The marketing of soybeans in Ontario 1945-1954. MSc thesis in agriculture, University of Ontario. Published by the Ontario Soya-Bean Growers' Marketing Board, Chatham, Ontario, Canada. iv + 122 p. June. 28 cm. [12 ref]
• ***Summary:*** Contents: 1. Introduction. 2. The world situation in fats and oils: Edible vegetable oils, palm oils, industrial oils, animal fats, marine oils. 3. Canadian production of fats and oils: Edible vegetable oils, industrial oils, animal fats, marine oils. 4. Canadian trade in fats and oils: Edible vegetable oils, industrial oils, palm oils, animal oils, marine oils, tariffs, on fats, oils and oilseeds. 5. Grades and grading of soybeans in Ontario. 6. Utilization of soybeans in Canada: Utilization of soybean oils, utilization of soybean oilcake and meal. 7. The prices of soybeans in Ontario: Basis for the establishment of prices, marketing and processing margins, seasonal variations in soybean prices, hedging and the effectiveness of hedging. 8. Transportation of soybeans in Ontario: Road transportation, water transportation, railroad transportation, transit privileges and benefits to growers, local freight rates to Toronto. 9. The Ontario Soybean Growers' Marketing Scheme. 10. Summary and conclusions.

Contains the following 31 tables: 1. Fats, oils, and oilseeds: Estimated world production, average 1935-39, annual 1946-1954. 2. Fats, oils, and oilseeds: World exports, average 1935-39, annual 1947-1954. 3. Fats and

oils used in shortening in U.S.A. & U.K. 4. Fats and oils used in margarine in U.S.A. 5. Percentage distribution of consumption of fats and oils in all drying oil products, by kind of oil, in United States, 1931-1954. 6. Utilization of fats and oils in drying oil products, by type of product, in United States, 1932-1953. 7. Production of fats, oils and oilseeds in Canada, 1945-54. 8. Oilseed crushings and production of oil, and oil cake and meal in Canada, 1945-54. 9. Production of soybeans in Elgin, Essex, Kent, Middlesex and Lambton counties, 1945-54. 10. Imports of fats, oils and oilseeds into Canada, 1945-54. 11. Exports of fats, oils and oilseeds from Canada, 1945-54. 12. Customs tariff on fats, oils and oilseeds imported into Canada. 13. Tariffs levied on Canadian exports of fats, oils and oilseeds by some of the principal markets. 14. Comparison of Canadian and United States grading standards for soybeans. 15. Apparent domestic disappearance and quality of soybeans crushed in Canada, average 1945-1949, and annually 1950-1954. 16. Apparent domestic disappearance of soybean oil in Canada, average 1945-1949, and annually 1950-1954. 17. Total domestic disappearance of soybean oil, and its utilization in margarine and shortening in Canada 1950-1954. 18. Utilization of oils and fats in margarine and shortening in Canada, 1950-1954. 21. Total domestic disappearance of soybean oils and its utilization in the manufacturing industries in Canada, 1948-1954. 22. Utilization of industrial oils in the paints and varnishes industry in Canada, 1948-1954. 23. Production, trade and apparent domestic disappearance of soybean oil cake and meal in Canada, 1950-1954. 25. The average cost per pound in Canada of digestible protein from different sources, 1948, 1951, 1953. 26. Utilization of soybean meal, linseed meal and meat meal in the feeds industry in Canada, 1948-1953. 27. Average annual prices and marketing margins of soybeans in Ontario, 1948-54. 28. Changes in cash prices of Ontario soybeans over 8 week periods, by years, 1951-1954. 29. The number of effective and ineffective eight week hedges on near or second near month futures at Chicago [Board of Trade, Illinois] having various degrees of effectiveness, by years, 1951-1954. 30. Amounts by which gains or losses were decreased or increased by using the hedge over not using the hedge, at Chicago over 8 week periods, by years, 1951-1954. 31. Freight rates on soybeans and soybean meal from points in S.W. Ontario to Toronto, Montreal and St. John, New Brunswick–1956.

Production of margarine in Canada has been permitted only since Jan. 1949. Table 18 (p. 62) shows that the amount of soybean oil used in margarine has increased steadily (mostly at the expense of cottonseed oil) from 9,093 tons in 1950 to 22,009 tons in 1953–at which time it was by far the most widely used oil or fat used in Canadian margarine, accounting for 49.1% of all oils used. The amount of soy oil used in shortening in Canada has likewise increased from 16,943 tons in 1950 to 22,744 tons in 1954–at which time it was also by far the most widely used oil or fat used in Canadian shortening, accounting for 28.9% of all oils used.

The volume of soybean oil used in industrial, non-food products is relatively small, but increasing. The volume used in paints and varnishes rose from 266 tons in 1948 to 3,440 tons in 1954. The volume used in the primary plastics industry rose from 748 tons in 1951 to 1,746 tons in 1954.

"The Ontario Soybean Growers' Marketing Scheme for regulating and controlling the marketing of soybeans in Ontario was established in 1949 under the Farm Products Marketing Act of Ontario 1946. The Act created a Farm Products Marketing Board with powers to regulate or enter into the actual marketing or regulated farm products." Under the Marketing Scheme "was established a local producer board known as the Ontario Soybean Growers' Marketing Board. The Board as it operates today consists of eleven members who are elected annually by the District Soybean Growers Committee. Growers producing soybeans are divided into six districts, comprising the counties of Essex, except Pelee Island; and the counties of Elgin, Kent, Lambton and Middlesex. Growers of soybeans who do not belong to any of the above districts may become members of the district that is closest to their places. Growers belonging to each district elect members annually to the District Soybean Growers' Committee on the basis of one representative for every 250 growers" (p. 112-13).

"The Soybean Growers' Marketing Board has, since its formation, entered into yearly agreements with the dealers and processors. These agreements have mainly concerned themselves with minimum prices, moisture contents and cleaning, handling, storage and selling charges and have differed very little from year to year. The minimum price for soybeans produced in Ontario have been set at the trading price for each day on an open market basis. The maximum discounts for soybeans containing over 14 percent moisture content have been set at 1½ cents per bushel for each ½ percent of moisture content over 14 percent. It has also been agreed that dealers should charge a maximum of 10 cents per bushel for cleaning, handling, and selling soybeans" (p. 114).

"The activities of the Soybean Growers' Marketing Board would thus seem to be mainly limited to negotiating prices, dealers' commissions and storage charges. No attempts have been made to handle the product and engage directly in marketing activities. Even in negotiating prices, it is interesting to note that in no year has any definite minimum price been set" (p. 115).

Note: This is the earliest document seen (Feb. 2000) that mentions the "Ontario Soya-Bean Growers' Marketing Board" (see title page) or the "Ontario Soybean Growers' Marketing Board" (slightly different spelling, see p. 112). Mr. Kenneth Standing is Secretary of the Board. Address: Ontario, Canada.

767. Collins-Williams, C. 1956. Clinical studies with powdered Sobee, a new milk substitute. *Canadian Medical Association Journal* 75(11):934. Dec.
• ***Summary:*** Powdered Sobee was tested and found to be acceptable as a milk substitute in the feeding of allergic infants. The composition of the product is given. It was tested on 25 infants whose average age was 7½ months, and was well accepted by 23 of these infants. One infant took it only if it was mixed with cereal. One refused it. Weight gain and stools were normal. Address: M.D., Allergy Clinic. Hospital for Sick Children, Toronto, and Dep. of Pediatrics, Univ. of Toronto, Canada.

768. Bailey, Ethel Zoe. 1956-1973. Glycine max–U.S. and Canadian sources. Ithaca, New York: L.H. Bailey Hortorium. 1 card. Unpublished.
• ***Summary:*** This hand-written index card is in the Bailey Hortorium's index system of nursery catalogs and/or botanic garden seed lists developed by Ethel Zoe Bailey. On the card are two-part coded entries referring to botanic gardens or nurseries. Part 1 is the code for the name of the botanic garden, and part 2 is the last two letters of the earliest year in which the plant for that card appeared in this garden's catalog. For example "B.C. 56" refers to the 1956 catalog of the British Columbia Botanic Garden. There are only two listings for *Glycine max* from U.S. and Canadian sources: (1) B.C. 56–British Columbia Botanic Garden, BC, Canada, 1956. (2) Redw. 73–Redwood City Seed Co., Redwood, California, USA, 1973. Address: L.H. Bailey Hortorium, 462 Mann Library, Cornell Univ., Ithaca, New York 14853-4301. Phone: 607-255-7981. Fax: 607-255-7979.

769. Campbell, D.R. 1956. Country elevators in south-western Ontario handling corn, soybeans, wheat, and white beans, 1955-56: A preliminary report. Ontario, Canada. Ontario Dep. of Agriculture. 24 p. 28 cm.
• ***Summary:*** Contents: Introduction. The 15 areas studied (table and map) in Essex, Kent, Elgin, Middlesex, Lambton, and south Huron counties. Description of the 15 areas: Townships, number of silos and bins, total storage capacity, amount of grain and beans handled, number of elevators, number of bushels, cleaner capacity per hour, sheller capacity per hour, value of grain storage and handling facilities. Totals from the 15 areas: Facilities, volume and value of grain handled. Payments, grading, and testing for moisture content (94-97% all elevators paid for soybeans and other crops based on their moisture content, and 85-86% also paid by grade). Location relative to railways. Contracting. Ownership of elevators. Seasonality of shipments.

"One of the most remarkable developments in Ontario agriculture over the post-war period has been the increasing importance of cash crops." In 1939 the 4 crops studied represented 14% of the value of all field crops grown in Ontario; by 1954 they represented 27% of the value. Corn comprises about 58% of the volume (in bushels) handled, soybeans 22%, wheat 16%, and white beans 4%. Address: Dep. of Agricultural Economics, Ontario Agricultural College, Guelph, ONT, Canada.

770. Chao, Buwei Yang. 1956. How to cook and eat in Chinese. London: Faber and Faber. 286 p. Illust. Index. 21 cm.
• ***Summary:*** The basic information about soy in this 1956 British edition is quite similar to that in the original 1945 American edition except: (1) British spelling is used (e.g., flavour instead of flavor), and additional information about European ingredients or substitutes; (2) The same (or almost the same) text appears on different pages. See pages 20-21 (Vesop is very much like soy sauce. Clear-simmering is slow-cooking without soy sauce. Red-cooking is slow-cooking with soy sauce), p. 43-44 (red beans, [probably azuki], horse beans, soy beans and their products, bean milk and bean curd [tofu]), p. 46 ([soy] bean oil and peanut oil), p. 47 (soy sauce), p. 49-50 (soy-bean sauce, soy sauce or *shi-yau* in Cantonese, "Acceptable substitutes for soy sauce in the order of preference, are as follows: 'Vesop' sauce (Italian), 'Maggi' (German), and 'Kub' (French))." "Similar to soy sauce is a soy jam, fermented flour jam, "In Cantonese the soy jam is called *mo-shi."* Oyster sauce, sesame oil, soy bean cheese *(fu-yü).*

Soy-related recipes include: Bean curd stirs meat slices (p. 84-85). Bean curd stirs shelled shrimps (p. 144). Arhat's fast or Vegetarian's ten varieties (with wheat gluten, bean curd skin [yuba], fried puffy bean curd, soy sauce, etc., p. 180-81). Plain stirred bean curd (p. 181-82). Oyster sauce bean curd. Mushrooms stir bean curd. Scallions stir bean curd (p. 182-83). Pot-stuck bean curd (p. 184). Bean curd and meat-slice soup (p. 188). Huichou pot (with fried bean curd [large triangles or small cubes], p. 204-05). Sandy-pot bean curd (p. 205-06). Soy jam noodles (p. 224-25, with ½ can *yünshi* soy jam {also called *mo-shi* in Chinese foodshops}).

Pages 181-82 discuss bean curd. The Chinese characters for all recipe names are given on pages 257-71. Address: Cambridge, Massachusetts.

771. Schwitzer, M.K. 1956. Margarine and other food fats: Their history, production and use. New York, NY: Interscience Publishers, Inc. 385 p. [52 ref]
• ***Summary:*** Contents: List of illustrations. List of tables. Preface. 1. Food fats: Definitions, types of margarine and related products. 2. Margarine and cooking fats: Their history and world trade. 3. Fats used in margarine and cooking fats. 4. Processing fats for margarine and cooking fats. 5. Theoretical aspects. 6. Margarine manufacture. 7.

The manufacture of cooking fats and related products. 8. Wrapping, packing, and preserving. Industrial uses of margarine and cooking fats. 10. Dietary and legal aspects.

Page 43 states: "Soyabean oil is not used a great deal in the manufacture of cooking and table oils, due to its tendency to develop an unpleasant flavour."

Page 50 discusses "vanaspati ghee," which it describes as "a cooking fat produced entirely from vegetable fats to replace natural clarified buffalo or cow butter. This cooking fat is called vanaspati ghee or vegetable ghee in India where it replaces natural ghee. Since before the last war when production in India was negligible, many factories have been installed for the manufacture of vanaspati ghee... The raw materials used are mainly groundnut, cottonseed, and sesame fats as well as smaller quantities of other vegetable fats. There are two ways of making vanaspati ghee: either a hydrogenated fat is mixed with a soft fat or a single fat is hydrogenated in a not too selective way." The latter method makes a better product, with much better keeping quality and a smoother texture. The melting point of vanaspati ghee in India is fixed by law between 31º and 37ºC. "Vanaspati ghee is not used for spreading like butter or margarine in the West. It is consumed in a heated liquid form, or in the preparation of curries, sweets and other foods."

Soyabean oil is discussed on the following pages: Fats used in margarine and cooking fat (p. 88-89, 91-92), incl. groundnut oil (p. 97-98). Soyabean oil (p. 98-105): The soyabean–The universal crop. The plant. Handling soybeans. Fat extraction. Soyabean oil and lecithin. A full-page illustration (p. 96) shows the soybean processing plant of Victory Oil Mills at Toronto, Ontario, Canada.

Use of lecithin in margarines (p. 142-43). Tocopherols and vitamin E (p. 146). Continuous deodorization (p. 181). Typical composition of fat blends of some margarines (p. 241). Address: Highgate, UK.

772. Schwitzer, M.K. 1956. Margarine and cooking fats: Their history and world trade. I (Document part). In: M.K. Schwitzer. 1956. Margarine and Other Food Fats: Their History, Production and Use. New York, NY: Interscience Publishers, Inc. 385 p. See p. 59-78. Chap. 2. [52 ref]
• ***Summary:*** Contents: The invention of margarine in France. Other countries follow. The coining of a new word. The history of cooking fat [shortening]. Impact of fat hydrogenation. Recent expansion in margarine consumption. Consumption levels of margarine (per capita). Present world trade in margarine. The production of cooking fats (shortenings).

Margarine was invented in France in 1869 by the French chemist-turned-business man, Hippolyte Mège-Mouriés. Production started at Poissy in about 1872-73. In other European countries, margarine production started as follows: Netherlands in 1871, by the Jurgens and Van den Berghs in the little village of Oss; Denmark 1870-71, by Otto Monsted, Denmark soon had the highest per capita margarine consumption; Austria-Hungary 1873-74, in Liesing near Vienna; Germany 1875; United Kingdom 1889–Otto Monsted established England's first margarine plant in an old hat factory in Godley, Manchester. Demand was so great that he had to erect a new factory in Southall near London. Production began in March 1895 at the rate of more than 1,500 tons/week. The word 'margarine' was first used by Mège's teacher, Michel Eugène Chevreul, around 1813. At a meeting of the French Academy on 13 July 1813 Chevreul reported on a fat-like substance that he had prepared and which he named margarine or margaric acid

Page 59 states: "When Napoleon III had offered a prize in 1869 for a butter substitute that would be cheaper and would keep better than cows' butter, Mège was an easy winner, as by then he had produced a satisfactory product. A factory was installed in Poissy, but manufacture did not get under way until after the Franco-Prussian war of 1870-71 [in which France under Napoleon III was defeated by Prussia under Bismark]. The way was not clear, however, until Félix Boudet, a distinguished chemist retained by the French health authorities for the purpose, had reported favourably on the new product. On 12th April, 1872, a regulation was passed permitting the sale of margarine, but it was not to be called butter. Mège promptly formed the 'Société Anonyme d'Alimentation' with a capital of 800,000 francs. Large scale production started in 1873."

The Mège patent in the USA, issued in May 1874, was purchased by the United States Dairy Co., which hired Henry A. Mott to improve on Mège's method. A number of U.S. margarine patents were issued in the following years. Many of these suggested the use of lard or vegetable fats instead of oleo oil. One of the improved methods was used by the Commercial Manufacturing Co. in New York, which soon became America's largest margarine manufacturer.

Margarine was introduced to the USA after the Civil War, when the country was undergoing profound economic changes. Farmers strongly resisted the introduction of margarine, believing that it would compete with the butter made on their farms.

The word "margarine" was coined by Mège's teacher, Michel Eugène Chevreul, in about 1813. At a meeting of the French academy on 13 July 1813 Chevreul reported on a fat-like substance that he had prepared and which he named margarine or margaric acid. The name was derived from the Greek word for pearl *(margarites)* He gave its chemical formula as $C_{17}H_{34}O_2$. What Chevreul thought to be a new substance was, in fact, a mixture of palmitic and stearic acids.

Since Mège's crystalline substance had a pearly luster, he gave the soft portion of the tallow, expressed after digestion, the name oleo-margarine, since he believed it to be a mixture of oleine and margarine.

As in the Greek root the *g* is pronounced hard like the *g* in garlic; it is incorrect to pronounce margarine as marjarine, as if the g were replaced by j.

In England, margarine (imported from Holland) was first sold under the name of Butterine. This name was dropped in 1887 after Parliament passed the first Margarine Act (p. 63).

The histories of margarine and cooking fat [shortening] are closely connected. "Whereas all the important developments in the early history of margarine took place in Europe, the first significant pages in the history of cooking fat were written in America. It is ironical that one of the largest lard-consuming and exporting countries [USA] should have been the first to turn to an alternative. There is here a parallel with Denmark, which as the biggest exporter of butter had the highest *par caput* consumption of margarine. The new lard substitute was called 'compound' lard or 'shortening' in the United States; both were misnomers. There was often very little or no lard present, nor was the new product used only for baking purposes where 'shortness' was required. Compound fat or cooking fat are more correct designations" (p. 63).

"The introduction of hydrogenation into fat technology can be regarded as the re-birth of the margarine and cooking fat industries... No more was it necessary to rely on animal fats which were available only as by-products of the meat-packing and dairy industries." In 1902 Normann announced that he had hardened a liquid fat by hydrogenating it with a catalyst. Early commercial success was expected. Patents were applied for in Germany by a plant engineering firm (Leprince and Sivke; German Patent No. 141,029, of 1902) and by Normann himself in the United Kingdom (No. 1,515, or 1903). Normann's work was based on earlier experiments by Varentrapp (1840), Sabatier, Senderens, and others. The first large-scale hydrogenation plant began operations in 1906 in England, at Crosfield's factory in Warrington. In Germany the Oelwerke Germania, at Emmerich on the Rhine, started a plant for hydrogenating whale and linseed oils. Several years later, Procter & Gamble Co., Cincinnati, Ohio, began commercial hydrogenation in the USA.

Canada: Recent developments with margarine in Canada have followed those in the USA. In 1948 the Supreme Court rules that the provisions of 1935 Dairy Industry Act relating to margarine were invalid; in 1949 margarine was first produced in Canada. By 1952 margarine production had reached 47,000 tons, making Canada the second largest margarine producer in the British Commonwealth, after Great Britain. Address: Highgate, UK.

773. Schwitzer, M.K. 1956. Margarine and cooking fats: Their history and world trade. II (Document part). In: M.K. Schwitzer. 1956. Margarine and Other Food Fats: Their History, Production and Use. New York, NY: Interscience Publishers, Inc. 385 p. See p. 59-78. Chap. 2. [52 ref]

• ***Summary:*** Tables: Table 8 (p. 67) shows margarine production in major countries worldwide in 1938, and 1946 to 1953. The countries are: United Kingdom, Australia, Canada, South Africa, British Caribbean, Austria, Belgium, Denmark, Finland, France, Germany, Israel, Japan, Netherlands, Norway, Poland, Soviet Union, Sweden United States. Production in these countries totaled 1,350,000 tons in 1938, dropping to 949,000 tons in 1946, then rising steadily to 2,618,000 tons in 1953. In 1938 Germany was by far the leading producer (439,000 tons), followed by United Kingdom (208,000), and USA (172,000). In 1953 the three largest producers were USA (577,000 tons), Germany (573,000), and United Kingdom (406,000). Holland was the world's largest margarine exporter.

Page 69: Graph of per capita consumption of margarine and butter in the UK and USA, 1938-1953. During this time, butter consumption decreased and margarine consumption increased in both countries. In the UK, per capita consumption of both margarine and butter are higher than in the USA, and margarine consumption passed that of butter in the mid-1940s.

Page 70: Estimated per caput consumption margarine in major countries worldwide in 1938, and 1946 to 1953. The countries are: United Kingdom, Australia, New Zealand, Canada, Norway, Netherlands, Sweden, USA, Finland, Denmark, Western Germany, and Belgium. Clearly Europeans, and especially those in Scandinavian or northern European countries, are the leading margarine consumers. In 1938 the leading countries were Denmark (47.4 lb/capita), Norway (141.2), and Sweden (10.5); USA was 2.9. In 1953 the leaders were Norway (51.1), Netherlands (40.8), and Denmark (40.1); USA was 7.9.

Page 71. Fats used in the production of margarine in the United Kingdom (1937-1953; soy oil started in 1951 and is insignificant). In 1938 UK margarines were made from 53% vegetable oils (groundnut was the leader, followed by coconut), 41% marine oils, and 6% animal fats. In 1953 UK margarines were made from 91% vegetable oils (groundnut was still the leader, followed by coconut), 8.8% marine oils, and 0.2% animal fats.

Page 72: Fats used in the production of margarine in the USA (1938-1953; soybean oil passed cottonseed oil in 1951). In 1938 U.S. margarines were made from 93.6% vegetable oils (cottonseed was the leader, followed by coconut then soybean oil), and 6.3% animal fats. In 1953 U.S. margarines were made from 98.9% vegetable oils (soybean oil was now the leader, followed by cottonseed), and 1.1% animal fats.

Page 73: Fats used in the production of margarine in certain countries (1937-1952) In 1951-53 soybean oil comprised the following percentage of all oils used to make

margarine is these countries: Australia 0%, Canada 50%, Denmark 5%, Netherlands 5%, Norway 3%, Sweden 0%.

Page 75: Production of cooking fat (shortening), 1938, and 1946-53, in the UK, Canada, Germany, and USA. World production of "lard substitutes" is considerably smaller than that of margarine, and the USA and the UK are the only major manufacturers. Total production in these countries grew from 868,000 tons in 1938 to 1,075,000 tons in 1953. In 1953 the leading producers were USA (748,000 tons), United Kingdom (209,000 tons), and Canada (61,000 tons). In Germany shortening is called *Plattenfett* and *Kunstspeisefett.*

Page 76. Fats used in the production of cooking fat in the UK (1937-1953; soy is not mentioned).

Page 76: Fats used in the production of cooking fat in the United Kingdom (1937-1953; soybean oil is not mentioned).

Page 77: Fats used in the production of cooking fat in the USA (1938 and 1946-1953; soybean oil had passed cottonseed oil by 1946). In 1938 U.S. shortenings were made from 91.7% vegetable oils (cottonseed was by far the leader, followed by soybean then palm oil), 8.2% animal fats, and 0.1% marine oils. In 1953 U.S. shortenings were made from 18.6% vegetable oils (soybean oil was now by far the leader, followed by cottonseed), and 16.2% animal fats (mostly lard). Address: Highgate, UK.

774. Fisher, John E. 1957. The effect of gravity on flowering of soybeans. *Science* 125(3244):396. March 1. [4 ref]
• ***Summary:*** Flambeau soybeans were made to grow downwards by placing lead weights around the stems. Inverted plants flowered earlier and at lower nodes than the control plants. Removing the suckers from inverted plants stimulated the earliest flowering, 22% of which took place about 15 days before it began in the control plants. The results are considered to support a theory of auxin control in flowering. Address: Botany and Plant Pathology Div., Science Serv. Bldg., Ottawa, ONT Canada.

775. *Soybean Digest.*1957. Market street and seed directory (Ad). Feb. p. 35.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Illinois, Indiana, Iowa, Minnesota, Mississippi, Missouri, North Carolina, North Dakota, Ohio, South Carolina, South Dakota, Virginia, and Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers. Companies include: Jacob Hartz Seed Co. (Stuttgart, Arkansas, selling Lee, Jackson, Ogden, Dorman, JEW 45, Volstate, Mamloxi). L.B. Wannamaker Seed Co. (Box 194, St. Matthews, South Carolina, selling Lee, Jackson, CNS 24, JEW 45). T.W. Wood & Sons (Richmond, Virginia, selling Ogden, Early Wood's Yellow, Jackson, Lee).

Note 1. This the earliest listing in this directory for Wannamaker in South Carolina.

Note 2. This directory also appeared in the March 1957 issue (p. 38) of this magazine.

776. Dimmock, F. 1957. La fève soja au Canada [The soybean in Canada]. *Revue Internationale des Produits Tropicaux et du Materiel Tropical* 32(330):84-85, 89. April. [Fre]
• ***Summary:*** Gives an overview of soybean production in Canada and compares the suitability of different varieties. Address: Canada.

777. Deveza, Manuel Carneiro. 1957. Mais uma cultura para Moçambique [One more crop for Mozambique]. *Gazeta do Agricultor (Mozambique)* 9(96):140-42. May. [Por]
• ***Summary:*** This crop is the soybean. Trials conducted at the Embeluzi Experiment Station *(Estacao Experimental do Umbeluzi)* showed that soybeans yield from 1,800 to 2,400 kg/ha. Some 19 varieties were found to be good for forage, including Jubiltan 65, 67, and 77, Improved, Canadian, Charles, Laredo, Palmetto, Seminole, etc. Most soybeans have a long vegetative cycle, longer than 130 days. Some 13 varieties were found to give the best yields: Nigra, Seminole, Creole, Biloxi, Maxum, Palmetto, Avoyelles, Otootan, etc. Details on cultivation and inoculation are given.

Note: This is the 2nd earliest document seen (Aug. 2009) concerning soybeans in Mozambique, or the cultivation of soybeans in Mozambique. Address: Eng. Agrónomo, Da Estacao Experimental do Umbeluzi.

778. Sims, R.P.A. 1957. Possible mechanisms in thermal polymerization of vegetable oils. II. Polymer formation. *J. of the American Oil Chemists' Soc* 34:466-69. Sept. [16 ref]
• ***Summary:*** Oils studied included linseed, sunflower, alpha tung, beta tung, and oiticia. "The hydrogenation data indicate that more than one double bond per molecule can be consumed during polymerization." Address: Chemistry Div., Science Service, Dep. of Agriculture, Ottawa, Canada.

779. Macmorine, Hilda G. 1957. Some factors influencing the production of certain biosynthetic penicillins. *Applied Microbiology* 5(6):386-91. Nov. [6 ref]
• ***Summary:*** Soya bean oil is used as an antifoam agent. Address: Connaught Medical Research Labs., Univ. of Toronto, Toronto, Canada.

780. *Soybean Digest.*1957. Crest a new early soybean variety. Nov. p. 17.

• ***Summary:*** Crest is a new, early maturing, high oil-content soybean variety, developed at the Central Experimental Farm in Ottawa, Canada. Tests conducted at the Branch Experimental Farm at Morden, Manitoba, Canada, indicate that Crest is well adapted to southern Manitoba. It matures 3-4 days than Kabott and 4-7 days earlier than Flambeau.

781. USDA Agricultural Marketing Service. 1957. Soybean variety names. Washington, DC. 31 p. Nov. Supplement 1 to Service and Regulatory Announcements No. 156 "Rules and Regulations Under the Federal Seed Act."

• ***Summary:*** The title page states: "Included in Sec. 201.34(e) of the Regulations Under the Federal Seed Act and Descriptions." At the bottom of the "Contents" page is written: Supersedes mimeographed publication "Soybean Varieties" issued by the former Publication and Marketing Administration, U.S. Department of Agriculture, revised July 1953."

Contents: Introduction. Map showing maturity group areas. Description of varieties. Synonyms of variety names. List of obsolete or seldom grown varieties.

Description of varieties: Acadian, *Acme (Canada. * = Also the name of an old variety which is believed to be no longer in existence), Adams, Agate, Aoda, Arisoy, Arkan, Arksoy, Arksoy 2913, Armredo, Avoyelles, Bansei, Barchet, Bavender Special, Biloxi, Blackhawk, Boone, Capital (Canada), Cayuga, Chame, Charlee, Cherokee, Chief, Chippewa, Chusei, Clark, Clemson, CNS, CNS-4, CNS-24, Comet (Canada), Creole, Cypress #1, Delsoy, Delsta, Dorman, Dortchsoy #31, Dortchsoy #67, Dunfield, Earlyana, Easycook, Ebony, Emperor, Etum, Flambeau, Funk Delicious, Gatan, Georgian, Giant Green, Gibson, Goldsoy (Canada), Granger, Grant, Habaro, Haberlandt, Hahto, Hakote, Hardome (Canada), Harly (Canada), Harman (Canada), Harosoy (Canada), Hawkeye, Hayseed, Herman, Hidatsa, Higan, Hokkaido, Hongkong, Illini, Imperial, Improved Pelican, *Jackson, JEW 45, Jogun, Kabott (Canada), Kanrich, Kanro, Kanum, Kim, Kingwa, Korean (Canada), Kura, Laredo, Lee, Lincoln, L.Z., Macoupin, Magnolia, Mamloxi, Mammoth Brown, Mammoth Yellow, Mamotan, Mamredo, Manchu, Manchu No. 3, Manchu No. 606, Manchukota, Mandarin, Mandarin No. 507, Mandarin (Ottawa) (Canada), Mandell, Mendota, Mingo, Minsoy, Missoy, Monetta, Monroe, Montreal Manchu (Canada), Morse, Mount Carmel, Mukden, Nanda, Nanking, Norchief, Norsoy, Ogden, Ontario, Otootan, Pagoda (Canada), Palmetto, Patoka, Peking, Pelican, Pennsoy, Perry, Pridesoy No. 57, Ralsoy, Renville, Richland, Roanoke, Rokusun, Rose Non Pop, S-100, Sac, Sato, Scioto, Seminole, Seneca, Sioux, Smith Super, Sousei, Tanner, Tastee, Tennessee Non Pop, Tokyo, Viking, Virginia, Volstate, Wabash, Willomi, Wilson, Wisconsin Black, Wolverine, Woods Yellow, Yellow Gatan, Yelnando, Yelredo.

Synonyms of variety names (p. 24; Synonym -> Official variety name): Austrian Green -> Tokyo. Bakaziro -> Amherst. Banner -> Midwest. Bell -> Midwest. Best Green -> Hope. Best White -> Amherst. Black -> Buckshot. Black Beauty -> Ebony. Black Champion -> Peking. Black Sable -> Peking. Bopp -> Chernie. Brown -> Mammoth Brown. Brown Biloxi -> Biloxi. Brown Eda Mame -> Eda. Brown Otootan -> Tanner. Buster Brown -> Trenton. Cha Daidzu -> Eda. Clay -> Midwest. Claybank -> Midwest. Clemson Non-shattering -> CNS. Cluster Bean -> Midwest. Coker's 31-15 -> Pee Dee. Columbian -> Columbia. Dortchsoy-2 -> Ogden. Dwarf Brown -> Ogemaw.

Dwarf Early Yellow -> Ito San. Dwarf Green -> Medium Green. Early Black -> Wisconsin Black. Early Green -> Medium Green. Early Indiana Laredo -> Norredo. Early Japan -> Butterball. Early Korean -> Korean. Early Laredo -> Norredo. Early Mammoth Black -> Buckshot. Early Mandarin -> Mandarin. Early Virginia Brown -> Virginia. Early White -> Ito San. Early Wilson -> Wilson. Early Wilson Black -> Wilson. Early Wisconsin Black -> Wisconsin Black. Early Wood's Yellow -> Arksoy. Early Yellow -> Ito San. Eda Mame -> Ito San, Eda. Edsoy -> Delsoy. Essex -> Peking. Etampes -> Ito San. Evan's Crossbred No. 9 -> Ogemaw. Extra Early Black -> Wisconsin Black. Extra Early Black Eyebrow -> Black Eyebrow. Extra Select Sable -> Peking.

Feeser's Prolific -> Midwest. Flat Black -> Flat King. Foster's Prolific -> Midwest. Galloway -> Midwest. German Coffee Berry -> Ito San. Giant Brown -> Mammoth Brown. Giant Yellow -> Butterball. Gosha -> Manhattan. Green -> Medium Green. Green Field -> Illini. Green Samarow -> Samarow. Guelph -> Medium Green. Hale-Ogden 2 -> Ogden. Hollybrook Early -> Midwest. Ignotum -> Ogemaw. Illinois 13-19 -> Ilsoy. Illinois Champion -> Midwest. Indiana Hollybrook -> Midwest. Ita Mame -> Tokyo. Japan No. 15 -> Kingston. Japan Pea -> Ito San. Kiyusuke Daidzu -> Ito San. Kysuki -> Ito San. Large Black -> Buckshot. Large Brown -> Mammoth Brown. Large Yellow -> Mammoth Yellow.

Late -> Mammoth Yellow. Late Ita Mame -> Tokyo. Late Yellow -> Mammoth Yellow. Lima Soy -> Hahto. Mammoth -> Mammoth Yellow. Mammoth Black -> Tarheel Black. Mamotoc -> Tokyo. Manchuria -> Pinpu. Medium Black -> Buckshot. Medium Early Black -> Buckshot. Medium Early Brown -> Early Brown. Medium Early Green -> Medium Green. Medium Early Yellow -> Ito San. Medium Ita Mame -> Tokyo. Medium Yellow -> Midwest. Michigan Green -> Medium Green. Midwest Free -> Midwest. Minnsoya -> Monsoy [Minsoy?]. Mongol -> Midwest. New Bush Bean -> Midwest. New London -> Midwest. Northern Hollybrook -> Midwest. Ogema -> Ogemaw. Ohio Champion -> Midwest. Ohio Medium Green -> Medium Green.

Ohio 9035 -> Hamilton. Oloxi -> Coker's Black Beauty. Pedigreed Sable -> Peking. Pekwa -> Kingwa. Perley's Mongol -> Midwest. Premier -> Midwest. Prolific -> Midwest. Purredo -> Norredo. Rattlesnake -> Taha. Red Otootan -> Tanner. Red Sable -> Peking. Red Tanner -> Tanner. Roosevelt -> Midwest. Roosevelt Medium Early Yellow -> Midwest. Round Black -> Buckshot. Royal -> Wilson-Five. Sable -> Peking. Shanghai -> Tarheel Black. Siegenthaler -> Morse. Southern -> Mammoth Yellow. Southern Medium Green -> Tokyo. Soy Good -> Etum. Super Quick -> Sousei. Tarheel -> Tarheel Black. Tarheel Brown -> Mammoth Brown. Vanderburg Black -> Norredo.

Virginia Brown -> Virginia. Virginia Early Brown -> Virginia. Wilson Black -> Wilson. Wilson Early -> Wilson. Wilson Early Black -> Wilson. Wings Royal -> Peking. Wisconsin Early Black -> Wisconsin Black. Wisconsin Early Brown -> Early Brown. Wisconsin Early Green -> Medium Green. Wonder -> Midwest. Wyokatenn -> Yokoten. Yamagata Cha-daidzu -> Eda. Yellow -> Mammoth Yellow. Yellow Eda -> Ito San. Yellow Etampes -> Ito San. Yoko -> Yokoten. Yokotenn -> Yokoten. Yoshioko -> Yosho.

Obsolete or seldom grown varieties (p. 30): Acme* (* = Also the name of a Canadian variety released in 1953), A.K., A.K. Harrow, Aksarben, Aksawa, Allison Black, Amherst, Arlington, Auburn, Austin, Baird, Black Eyebrow, Brindle, Brooks, Brown Eda Mame, Brownie, Buckshot, Butterball, Chernie, Chestnut, Chiquita, Cloud, CNS-3, Columbia, Delaware No. 1838, Delaware No. 1846, Delnoshat, Delredo, Dixie, Doxie, Duggar, Early Brown, Early White Eyebrow, Eda, Edgecombe, Edward, Elton, Etampes, Extra Early Black, Extra Early Wood's Yellow, Fabulin, Fairchild, Farnham, Flat King, Flava, Fuji, Funman, Gala, George Washington, Giant Yellow, Goku, Goshen Prolific, Green and Black, Hamilton, Hankow, Hansen, Harbinsoy, Hiro, Hollybrook, Hoosier, Hope, Hudson Manchu, Hurrelbrink, Illington, Illinois 178, Ilsoy, Imported Yellow, Ito San, Ito San Cross, Jackson** (** = Also the name of a United States variety released in 1953), Jet, Jefferson, Kagon, Kentucky, Kenua, Kingston, Lexington, Looney No. 2, Lowrie, Loxitan, Luthy, Manhattan, Manitoba Brown, Mansoy, Medium Green, Merko, Meyer, Midunk, Midwest, Mikado, Misstuck, Morgan, Nanksoy, Nansemond, Natsu, Nemo Sonoma, New Deal, Nielson [Nielsen], Nigra, Norredo, Nuttall, O.A.C. No. 211, Ogemaw, Ohio 9001, Okute, Old Dominion, Osaya, Ozark, Pee Dee, Pinedell, Pine Dell Perfection, Pingsu, Pinpu, Pluto, Pocahontas, Preston, Riceland, Samarow, Sangra, Sedo, Sherwood, Shingto, Shiro, Sonoma, Sooty, Southern Green, South Prolific, Soysota, Stuart, Suru, Swan, Taha, Tanloxi, Tarheel Black, Tashing, Thurnoko [Tsuronoko?], Toku, Toyonago, Trenton, U.S. 2, U.S. 5, Verea, Vireo, Waseda, Watson Black, Wea, White Biloxi, White Eyebrow, Wilson-Five, Wing Jet, Yellow Marvel, Yellow Reisen [Yellow Riesen], Yokoten, Yosho.

Note: This is the earliest document seen (July 2000) that mentions the soybean variety Fabulin. Address: Washington, DC.

782. **Product Name:** Tofu.
**Manufacturer's Name:** Sunrise Market Ltd.
**Manufacturer's Address:** 300 Powell St., Vancouver, BC, V6A 1G4, Canada. Phone: 604-685-8019.
**Date of Introduction:** 1957.
**New Product–Documentation:** Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Owner: Mr. Leslie Joe.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Leslie Joe.

Talk with Michael Weiner. 1987. June 12. Sunrise in Vancouver has a history going back to the 1950s, and is the largest tofu manufacturer in Western Canada. Mandarin is second largest. He will ask Sunrise to send me a history. Another talk. Dec. 16. Peter Joe is the present owner of Sunrise. His father, Leslie Joe, started making tofu in the 1950s. Letter from Peter Joe. The company started to make soyfoods in 1955. Form filled out by Peter Joe. 1988. May 20. Gives date as 1960. Apparently company started in 1955 but did not make tofu until 1960? In 1984 the company moved to 729 Powell St.

Talk with Peter Joe. 1993. March 12. This company was started in about 1955 by his father's uncle. His father (Leslie Joe, who lives nearby) started to work for the company in about 1956-57. In about 1957 Leslie Joe took over the company. Peter does not know the name of the company at the time it was founded; it may have had a Chinese name but no English name. The company was at some other address on Powell Street initially (such as 360 Powell St.) before it moved down to 300.

Note: This is the earliest known commercial soy product made by Sunrise Market Ltd.

783. Snow, W.W. 1958. Crop sequence effects on soybeans. MSc thesis in agriculture, University of Toronto, Ontario, Canada. 54 p. Jan. 28 cm. [23 ref]
• ***Summary:*** "When introduced into Ontario, soybeans were considered to be a high protein livestock feed with little value as a cash crop. The development of the vegetable oil industry in Ontario and the general use of the combine harvester have given impetus to greatly increased production. At the present time only grain corn is regarded as a more important cash crop in the south-western section of the Province."

This is a study of the effect of the previous crop, of fertilizer use, and of crop rotations on soybeans. Crop rotation was found to increase soybean yields. Address: Toronto, Ontario, Canada.

784. *Soybean Digest.*1958. The news in brief: Crops, markets and other items of note. Feb. p. 11-12.
• ***Summary:*** This is a new section of *Soybean Digest,* printed on 2 pages of green paper in each issue. In a box below the title we read: "This issue introduces to our readers 'The News in Brief,' which will be made up at the last possible minute before press time to include the latest information.

"Together with 'Washington Digest,' by Porter Hedge, 'In the Markets' section in the back, and a monthly crop report during the growing and harvesting season, 'The News in Brief' will be part of the continuing earnest effort of your editors to provide the most complete and thorough coverage of the soybean crop and markets and soybeans generally to be had anywhere.

"Late News, which has appeared in these pages, will no longer be part of the Soybean Digest. It will be mailed only to its subscribers.

"We believe this change will improve service both to Digest and Late News readers–The Editors."

Contents of this first section: Freight increase postponed. Oil content not quite so good. Some beans never harvested. Some high moisture beans. Meal production up a little. Canadians want tariff on beans. Stocks of soybean oil up. Japanese short of soybeans. Prices of oilseeds and fats, cif Rotterdam [Netherlands] and Hamburg [Germany], week of Jan. 25 (dollars per metric ton). Sixteen oils are listed. Reported by Albrecht H. Zetsche, Hamburg, Germany.

785. Carter, C.F.; Cuthbert, N. 1958. World commodity survey. *Times Review of Industry (London).* April. p. 89, 91-92. [1 ref]
• ***Summary:*** A large table of commodity prices (p. 89) gives prices for "Soyabean oil" (in £/ton; 2 ton lot ex mill) in the UK at various dates: 1934-1938 average: £20. March 1937: £133. 14 Feb. 1958: £115. 21 March 1958: £109.

The section titled "Fats and oils" states that world production of fats and oils is a little more than 29 million metric tons, or about 5% per capita more than before World War II. Edible vegetable oil production increased by almost 10% during the past year. "The 1957 increase was well spread; there were large crops of peanuts in French West Africa and in India, and good crops of soyabeans in the United States, of sunflower seed in Argentina and the U.S.S.R., of rapeseed in China and Canada, and of olive oil in the Mediterranean countries. The output of cottonseed oil, on the other hand, declined..."

• ***Summary:*** Table 1 shows the estimated per capita consumption of animal and vegetable protein in all countries which maintain food balance sheets (47 countries are listed with the total population and the consumption of animal and of vegetable protein, in grams per person per day). Fig. 1 is a map of the world that shows the caloric content of national average food supplies. There are four categories: 1. Over 2,700 calories per capita per day (includes most industrialized countries). 2. Between 2,700 and 2,200 calories. 3. Under 2,200 calories. 4. Data not available. Figure 2 is a pie chart (dated Nov. 1952) showing that 58% of the world's population consumes lass than 15 grams per person per day of animal, 17% consumes 15-30 grams, and 25% consumes over 30 grams. Table II shows estimated protein consumption of the world population. Address: 2. Nutrition Div., FAO, Rome, Italy.

789. *FAO Production Yearbook.*1958—. Serial/periodical. Rome, Italy: Food and Agricultural Organization of the United Nations. Yearly. ca. 350 p. Supersedes the Yearbook of Food and Agricultural Statistics, Part I (1947-1957), which was superseded by Production Yearbook (1958-1975).
• ***Summary:*** Under soybeans, gives region/continent and nation, then statistics for soybean area, production, and yield for each soybean producing nation during the following time periods: 1948-1952, 1955, 1956, 1957. Regions and nations listed in the 1958 edition are: Europe: Czechoslovakia, Hungary, Italy, Romania, Yugoslavia.

U.S.S.R.

North and Central America: Canada, United States.

South America: Argentina (in 1948-52 1,000 hectares produced on average 1,000 metric tons of soybeans per year. This remained unchanged in 1955-1957), Brazil (in 1948-52 53,000 hectares produced on average 57,000 metric tons of soybeans per year. Production rose to 115,000 metric tons in 1955, 122,000 in 1956, and 132,000 in 1957).

Asia: Cambodia, China-Mainland, China-Taiwan, Indonesia-total (Java and Madura, Other islands), Japan,

Korea-South, Philippines, Ryukyu Islands, Thailand, Turkey.

In 1948-52, Turkey produced 2,000 metric tons of soybeans on 2,000 ha; yield: 860 kg/ha. Production in Turkey increased to 4,000 metric tons in 1955, then 5,000 metric tons in 1956. Note: This is the earliest document seen (Dec. 2007) that gives soybean production or area statistics for Turkey or for the Middle East. This document contains the earliest production or area statistics seen for Turkey or the Middle East.

Africa: Belgian Congo (production in villages), Ethiopia and Eritrea (Fed. of Ethiopia) (starting with 5,000 tonnes {metric tons} in 1948-1952), Nigeria (Fed. of), Rhodesia and Nyasaland (Fed. of Nyasaland), Ruanda-Urundi (production in villages), Tanganyika, Uganda (recorded sales), Union of South Africa (farms and estates).

World total (excluding U.S.S.R.). Regional totals: Europe, North America, Latin America, Near East, Far East, Africa.

Note that statistics for given years (e.g. 1948-52) may change as time passes; apparently this yearbook is periodically updating its statistics.

790. Haldeman, Robert C. 1959. Potential effects of St. Lawrence Seaway on costs of transporting grain *Marketing Research Report (USDA Agricultural Marketing Service)* No. 319. 149 p. April.
• ***Summary:*** Contents: Summary. Introduction. Grain production–Great Lakes–St. Lawrence waterway tributary area: Wheat, corn, barley, soybeans, other grains. Characteristics of inland grain movements to interior and port destinations. Export grain movements: Wheat, corn, barley, soybeans and soybean oil, other grains. Potential export volume via the St. Lawrence Seaway. The Great Lakes- St. Lawrence waterway. Physical limitations of the waterway: Season of navigation, capacity of the Welland Canal, relationship of estimated traffic volume to capacity, capacity of the St. Lawrence Seaway locks, other physical limitations. Enabling legislation and seaway tolls: The Wiley-Dondero Act of May 13, 1954, The St. Lawrence Seaway Authority Act (of Canada), December 21, 1951. Grain handling expenses. Transportation costs and charges: motortrucks, railroads, inland waterways, Great Lakes, ocean transportation, liberty-type vessel, lake-ocean bulk carrier, comparative costs and charges. Summary of computed costs and charges on grain from interior points to foreign ports. Summary of computed costs and charges on grain to Atlantic Coast ports and tributary areas. Appendix. Address: Transportation Economist, Marketing Research Div., Agricultural Marketing Service, USDA, Washington, DC.

791. *Times (London).*1959. No U.S. transit for Chinese shrimps: Canadian lorries held up. Customs ruling. May 4. p. 10, col. 5.
• ***Summary:*** "From a correspondent in Ottawa, Canada." The United States Customs office prohibited Canadian lorries carrying Chinese goods (including "soya sauce and herbs") from Vancouver, B.C., from using U.S. roads due to American legislation concerning trade with China. There are no roads yet in British Columbia or Alberta suitable for shipping huge refrigerated vehicles.

792. Hedge, Porter M. 1959. Washington Digest: Seaway offers cheaper trade route abroad. *Soybean Digest.* May. p. 38, 40.
• ***Summary:*** "Soybeans will be able to move to Europe and the Mediterranean and Middle Eastern areas at rate 12¢ to more than 20¢ a bushel cheaper through the newly opened St. Lawrence Seaway." "Minimum channel depth of 27 feet will be completed by midyear between Lake Ontario and Montreal [Quebec] and Lake Ontario and Lake Erie."

Oil outlook. Big crush (Oil may be shipped late to Spain and Turkey. Argentina wants edible oil. "Nearly 140 million bushels have been put under price support through March 31... A substantial part of the crush of soybeans during the summer months will have to come from beans under loan, officials feel. CCC takes over soybeans on May 31. The announced sale price is the 1959 loan rate plus 5%").

"Humphrey Bill: The food for peace program advocated by Senator Humphrey of Minnesota is now in bill form and introduced in the Senate. It provides for a 5-year program similar to P.L. 480 and would authorize the use of $2 billion worth of surplus commodities a year. About $1½ billion are now being used."

"There is little chance of the Humphrey bill becoming law this year or next. USDA is opposed to a longtime program of the P.L. 480 type, but considers it useful as an emergency program."

A portrait photo shows Porter M. Hedge. Address: Washington Correspondent for the Soybean Digest.

Richmond Hill, Ontario, Canada.

794. Gantt, B.J. 1959. Buckeye manufacturing history. [Memphis, Tennessee]. 21 p. Unpublished manuscript. Corrected by the author in Aug. 1959. 28 cm.
• ***Summary:*** The story began when Procter & Gamble Co. created/established Buckeye. "The Buckeye Cotton Oil Company had its beginning in the year 1901 when its parent company, The Procter & Gamble Company, leased a cotton

oil mill at West Point, Mississippi, for one year in order to experiment with getting a steady supply of oil for P&G products. The experiment proved to be a wise one. The Buckeye Cotton Oil Company was incorporated in 1901. William Cooper Procter actively sponsored the business from the beginning. In 1902, The Buckeye Cotton Oil Company bought two six-press mills at Birmingham, Alabama, and Greenwood, Mississippi. With the purchase of these two mills, the first Buckeye General Manager was appointed.

"In 1903, mills were constructed at Augusta and Macon, Georgia; Jackson, Mississippi; Little Rock, Arkansas; and Selma, Alabama. The following year the Greenwood mill was practically rebuilt. The old mill at West Point later burned. In 1910, the press capacity of all the mills, with the exception of Charlotte, was increased to 12. Also during this year, the first mill laboratory was installed in the Birmingham mill. It was later made a division laboratory and moved to Atlanta." In 1929 the company bought the Hollywood Mill in Memphis, Tennessee, and mills in Louisville, Kentucky, and Chattanooga, Tennessee.

"In the fall of 1958, the company decided to sell four of its soybean processing mills to the Ralston-Purina Corporation." A P&G news release describing the sale is quoted at length. "The mills involved in the transaction are at New Madrid, Missouri; Louisville, Kentucky; Raleigh, North Carolina; and the Binghampton mill at Memphis, Tennessee.

"The sale of these mills, which virtually takes the company out of the soybean crushing business in this country, has resulted from changes which have taken place in marketing the end products from the soybean crushing operation.

"Buckeye's principal reason for crushing soybeans has been to supply soybean oil for Procter & Gamble food products... The company will continue to operate its seven crushing mills at Augusta, Georgia; Ft. Worth, Texas, Corinth, Mississippi; Montgomery, Alabama; Little Rock, Arkansas; Memphis, Tennessee (Hollywood Mill) and Toronto, Canada.

"This drastic reduction in the number of operating mills brought about several major problems. First, how to deliver to the Ralston organization the four soybean mills in the middle of an operating season–December 1, 1958."

Note: This news release was reprinted 4 Nov. 1958 issue of the *State Times* (Jackson, Mississippi).

"New Methods of Unloading: Around 1940, truck dumpers were being improved and the first installation was made at one of the mills whereby a load of from 15 to 18 tons could be unloaded within a few minutes... In the rapid increase to soybean usage, a much larger percentage of those were still received at the Louisville Mill by rail. Because of this problem, in 1957 a car vibrator-type unloader was installed at Louisville. This was the latest development for unloading soybeans from rail cars and will unload a 50-ton car in three or four minutes.

"Solvent Extraction Process–First for Soybeans: The solvent extraction process was invented by the Germans to use gasoline, or hexane, to get the oil out of the cottonseed and soybeans. It was the first process to replace the traditional hydraulic pressure in extracting oil. The machine for solvent extraction was patented. This patented unit, bought by Proctor & Gamble from Hans-Muhle was on the docks at Hamburg, Germany, awaiting shipment when the war broke out in 1939. Because of the blockade, it never left Germany. The only way to make-do was to go to the French Oil Mill Machinery Company in Piqua, Ohio, and try to have a similar unit built. As this was designed and built to Buckeye's specifications all of the other features on the solvent extraction tower were worked out by Buckeye including the 'basket on a ferris wheel' for holding the meats. A year's experimental work was done at the Louisville Mill and we finally began processing soybeans by solvent extraction at Louisville in 1941. The experience gained in Louisville permitted us to develop sufficient confidence to proceed with installations of solvent extraction units for cottonseed."

"Many improvements have been made to both equipment and solvent extraction processes for seed and soybeans and in 1958, 95% of all soybeans in Buckeye were processed by the solvent extraction method and 68% of the cottonseed also is processed on this type of equipment.

"Soybean Crushing: Buckeye crushed the first soybeans on expellers at the Louisville Mill in 1931-32. In 1935-36, Binghamton at Memphis also processed a sizable quantity of 28,000 tons of soybeans. Louisville, that same year (1936) crushed about 15,000 tons. Since the 1937-38 season, Binghamton was changed to process soybeans only, with all cottonseed being diverted to the Hollywood Mill in Memphis. The next year, 1938-39, Raleigh started crushing soybeans. Since that time, practically all mills have processed some beans and in 1958 the division of bean and seed crushing is about as follows: Crushing Soybeans Only: Louisville Mill (solvent extraction), Binghamton Mill (solvent), New Madrid, Missouri Mill (solvent). Crushing Soybeans and Cottonseed: Augusta, Georgia Mill (solvent), Little Rock, Arkansas Mill (solvent), Hollywood Mill (solvent), Raleigh, North Carolina Mill (started solvent–4/1/59)... With the advent of soybeans, 1931-32, the per cent of the total crush in soybeans has been increasing every year. In the fiscal year which ended on 30 June 1958, Buckeye processed 240,000 tons cottonseed (this does not include Traders Oil Mill, Ft. Worth, Texas, which crushed about 44,000 tons of cottonseed). In the same fiscal year, Buckeye processed 522,000 tons of soybeans.

"Soybean Protein: In the fall of 1946, Proctor & Gamble needed a raw material to use in the new formula of Spic and Span. It was found that a protein product that

could be made from soybeans at Louisville would supply this demand. As a result, a protein unit [for making industrial-grade isolated soy protein] was erected at the Louisville Mill and adequately took care of the Proctor & Gamble needs.

"After a few years, the Spic and Span formula was changed again so there was less need for this protein product and it was necessary to develop outside markets where it was used largely as a substitute for casein in the paper trade.

"One of the most interesting developments in the processing of soybeans recently has been the advent of 50% protein low-fiber soybean meal. This is a premium product usually selling from $7 to $8 a ton over the regular soybean meal market, and is in great demand by the poultry trade. Buckeye started producing 50% soybean meal at Louisville and Binghamton Mills in 1956-57."

Talk with Ed Rider, corporate archivist, Procter & Gamble Co. (who located and sent this valuable document). 1993. July 15. When B.J. Gantt wrote this history he was probably residing and working in Memphis, Tennessee, which is where P&G's Buckeye subsidiary was headquartered. Address: Vice President and Superintendent of Manufacture, Buckeye [Memphis, Tennessee].

795. Canada–Dominion Bureau of Statistics, Agriculture Div., Crops Section. 1959. Handbook of agricultural statistics. Part I–Field crop. Historical series of acreage, production, and value, by provinces, of Canada's principal field crops with supplementary data on the supply and disposition of the major grain crops. Ottawa, Canada: Queen's Printer and Controller of Stationery. See p. 110-11. Sept.
• ***Summary:*** Under soybeans, statistics are given for Canada, Ontario, and Manitoba, concerning crop year, seeded acreage, average yield per seeded acre, production (bushels), average farm price, and total farm value. The earliest year given for soybean production in Canada and Ontario is 1941-42, when 10,900 acres were planted, yielding 217,000 bushels, or 19.9 bu/acre. The total farm vale that year was $1,509,000.

The earliest year given for soybean production in Manitoba is 1956-57, when 3,200 acres were planted. They yielded 32,000 bushels. In the peak year, 1958-59, 7,000 acres yielded 70,000 bushels. No figures are given after the year 1960-61, when only 6,000 bu were produced on 500 acres. Address: Canada.

796. Lemon, H.W. 1959. An historical survey of fats and oils research in Canada. *J. of the American Oil Chemists' Soc.* 36(9):420-24. Sept. Symposium on fifty years of fat and oil research in selected countries of the world. [57* ref]
• ***Summary:*** Contents: Introduction. Fisheries Research Board of Canada. The Ontario Research Foundation. Macdonald College, McGill University (Montreal, Quebec). The National Research Council Laboratories: Division of Applied Biology, Div. of Pure Chemistry, Prairie Regional Laboratory at Saskatoon. The Food and Drug Laboratories, Department of National Health and Welfare. The Department of Agriculture. The Universities (incl. Dr. K.K. Carroll at Univ. of Western Ontario). The Canadian Committee on Fats and Oils (est. Dec. 1944).

"Organized fats and oils research in Canada began at the Fisheries Experimental Station at Prince Rupert, B.C., in the late 1920's under the guidance of H.M. Brocklesby... Much progress has been made by the plant breeders... Better soybean varieties have been developed, and this crop has increased from 200,000 bu. in 1941 to 6½ million bu. in 1957. Most of the soybean crop is in Ontario, but an earlier-maturing variety is now being grown in Manitoba." Address: Dep. of Biochemistry, Ontario Research Foundation, Toronto, Canada.

797. Perkins, Harold J.; Nelson, C.D.; Gorham, Paul R. 1959. A tissue-autoradiographic study of the translocation of $C^{14}$-labelled sugars in the stems of young soybean plants. *Canadian J. of Botany* 37(5):871-77. Sept. [21 ref]
• ***Summary:*** "Autoradiography was used to determine the tissues involved in the downward translocation of carbon-14 labelled photosynthate and of carbon-14 labelled glucose, fructose, or sucrose introduced into soybean plants through the cut petiole of a primary leaf."

"This comparative study has demonstrated that all translocation need not take place in the phloem, but some may take place in such tissues as pith and xylem."

Note: The cross section of the stem of a typical vascular plant (such as the soybean) has pith at the center, xylem around that, phloem around that, followed by schlerenchyma, cortex, and epidermis (the outer layer, or bark in trees). Xylem and phloem are both types of transport tissue. Phloem is living tissue that carries organic nutrients (known as photosynthate), particularly sucrose, a sugar, to all parts of the plant where needed. Address: Div. of Applied Biology, National Research Council, Ottawa, Ontario.

798. Smith, Allan K. 1959. Research on the increasing use of U.S. soybeans in Japan. *Soybean Digest.* Sept. p. 62-65.
• ***Summary:*** "In 1956 the American Soybean Association in collaboration with the Foreign Agricultural Service of the U.S. Department of Agriculture started a market development program on soybeans in Japan."

Late in 1957 Dr. Smith "spent 2 months in Japan studying the products and processes where U.S. soybeans are competing with Japanese and communist Chinese beans." He found that the traditional foods of Japan are processed from whole soybeans, whereas in the USA the use of whole soybeans has, until recently, "received no commercial recognition for food, feed, or industrial

application. Also the traditional food processors of Japan value the protein more highly than the oil which is the reverse of the emphasis in this country."

The results of Dr. Smith's investigations were published in April 1958 under the title "Use of United States soybeans in Japan." "The problems raised by the Japanese are briefly summarized as follows: 1–Composition: It was generally stated that Japanese soybeans are higher in protein than our soybeans. 2–U.S. soybeans are slower to absorb water than Japanese beans and absorb water unevenly. 3–Our soybeans cook unevenly and consequently they may not support uniform fermentation. 4–Products from U.S. soybeans are darker in color than those made from Japanese soybeans. 5–Food products from U.S. beans do not have as good a flavor as from Japanese soybeans. 6–The Japanese do not like the amount of foreign matter, split and broken beans, and other crop material in U.S. soybeans.

Following Dr. Smith's investigation in Japan, a research project was initiated at the Northern Regional Research Laboratory in Peoria, Illinois. The immediate objectives of the project are: 1–To investigate the reported differences between U.S. and Japanese soybeans and to evaluate their significance. 2–To compare approximately 30 U.S. and 6 Japanese soybean varieties in miso and tofu, two most important Japanese foods, and to determine which U.S. varieties are suitable for making these foods. 3–To study the processing methods used by the Japanese and to modify their processes for better adaption [adaptation] of our soybeans to their use...

"Two Japanese scientists, Tokuji Watanabe and Kazuo Shibasaki, accepted invitations to come to the Northern Laboratory to work on these projects."

In the 9 months that Dr. Shibasaki and Mr. Watanabe spent at the NRRL they made progress on all the 6 problems listed, though the project is still underway. They found two U.S. soybean varieties, Jackson and Lee, that make tofu very similar to that made from Japanese soybeans. Other promising varieties are Blackhawk, Comet, Dorman, Ottawa, Mandarin, and Acme.

"Composition: It was reported, and generally assumed to be true, that Japanese soybeans were higher in protein and lower in oil than U.S. soybeans. We have accumulated data (all on a moisture-free basis) to determine whether this report is true. Table 1 shows the protein and oil content of eight Japanese soybean varieties grown in various parts of Japan during 1957 or 1958. The name often indicates the area grown: Aomori, Hokkaido Akita, Kumamoto, Miyagi, Nagano, Hagi-Dani, Hokuho, and White Hilum Iwate. These 8 Japanese varieties contained an average of 40.5% protein and 17.2% oil in 1957 and 42.3% protein and 16.8% oil in 1959.

Table 2 shows the protein and oil content of 15 U.S. [and Canadian] soybean varieties grown in various parts of the USA during 1956, 1957 or 1958: Acme, Adams, Blackhawk, Chippewa, Clark, Comet-1, Comet-2, Dorman, Dortchsoy, Harosoy, Hawkeye, Jackson, Lee, Lincoln, and Norchief. These 15 U.S. varieties contained, on average, 41.8% protein in 1956, 40.1% in 1957, and 40.7% protein and 20.2% oil in 1958. Comparing these two tables, Dr. Smith concludes that U.S. and Japanese soybeans contain about the same amount of protein, but that U.S. field-type soybeans contain about 3.7% more oil than Japanese soybeans.

Table 3 shows the maturity group, protein and oil content, and weight in grams of 100 seeds for 33 recommended U.S. and Canadian varieties. This data is based on Cooperative Uniform Soybean Tests. These 33 varieties are grown in all the major soybean growing areas of the USA; Groups 00 to IV inclusive are grown in the North Central States, approximately north of Cairo, Illinois, to northern Minnesota; groups V to VIII inclusive are grown south of Cairo. The 33 varieties, sorted by ascending maturity group, and within each group alphabetically by varietal name are: Acme (00, Canadian), Crest, Flambeau, Capital (0), Comet, Grant, Mandarin, Norchief, Blackhawk (I), Chippewa, Adams (II), Harosoy, Hawkeye, Lindarin, Ford (III), Lincoln, Shelby, Clark (IV), Perry, Scott, Wabash, Dorman (V), Dortchsoy, S-100, Hood (VI), Ogden, CNS-4 (VII), Jackson, Lee, Bienville (VIII), Improved Pelican, J.E.W. 45 [Wannamaker], and Yelanda. This table shows that the oil content increases slightly as one moves from north to south

Smith then discusses garden- or vegetable-type soybeans. "U.S. vegetable soybeans: There is no clear definition for distinguishing the field-type from the garden-type beans. The distinctive features of the garden beans are in their superiority in flavor, texture, and ease of cooking–properties that make them preferred for food use... Most of our so-called vegetable-type soybeans we are growing in this country are Japanese garden varieties that came directly from that country; the Kim and Kanrich were developed in this country. Serious disadvantages of garden-type beans which restrict production are the tendency to shatter from the pods when ripe and the consequent large loss with mechanical harvesting... the yields of some varieties are also lower than for field beans. It has been stated frequently that the garden-type bean is higher in protein and lower in oil than the field type.

Table 4 shows the protein, oil, weight of 100 seeds in grams and hilum color for 14 "garden-type soybeans" on a dry basis. The source of the data for all the varieties except Kanrich, Kim, and Easycook is the University of Illinois Bulletin 453 by J.W. Lloyd and W.L. Burlison 1939 ["Eighteen varieties of edible soybeans: Their adaptability, acceptability, culture and characteristics"]. "For these data the protein values are no higher than for present-day field types and the oil values are only 0.77% lower" than typical field types soybeans shown in table 3. The weight in grams

of 100 seeds, in descending order of seed weight and size, is as follows: Hokkaido 31.9, Funk Delicious 31.7, Willomi 31.1, Jogun 29.9, Emperor 29.7, Giant Green 29.4, Kim 28.7, Imperial 28.4, Kanrich 27.3, Fuji 25.9, Illington 25.9, Higan 23.4, Bansei 21.2, and Easycook 16.2.

Conclusion: It "appears that claims for high protein values for garden type soybeans may be exaggerated." A portrait photo shows A.K. Smith.

Note 1. This is the earliest document seen (Dec. 1998) concerning the breeding or selection of soybean varieties for food use–in this case tofu for Japan.

Note 2. This is the earliest English-language document seen (June 2009) that contains the term "garden-type soybeans" or "vegetable-type soybeans." The two terms as synonyms. Address: NRRL, Peoria, Illinois.

799. *New York Times.*1959. Food news: No tipping allowed in Red China. Oct. 26. p. 32.
• ***Summary:*** Mr. Gerald Clark, a Canadian, and author, and a correspondent for the Montreal Star, has just returned from China. He said that his favorite dish was Peking duck, a specialty of that city.

"'It's really something,' he said. The ducks are specially fed and spend the latter part of their short lives tethered. It seems cruel, but the result is an unusually tender and succulent dish. After roasting, the duck is carved into very thin slices covered with wonderfully crisp skin. The pieces are wrapped pancake fashion in a 'doily' made of wheat flour, and dipped in hoisin sauce and scallions."

800. *Forage Notes–Notes sur les Fourrages (Ottawa, Canada).*1959. Merit soybean. 5(1):38-39. *
• ***Summary:*** The soybean variety Merit, a cross between Blackhawk and Capital, matures 2-3 days earlier than Comet and 5-6 days earlier than Capital. It is well adapted to some regions in Ontario and southwestern Quebec, Canada.

801. Martin, A.L.D.; et al. 1959. Oilseeds committee report. In: Report Annual Conference Manitoba Agronomists. See p. 8-13. *
• ***Summary:*** Gives information on the yield and agronomic characteristics for the soybean varieties Acme, Crest, and Flambeau. Also discusses flax, Polish rapeseed, and sunflowers.

802. Pearse, F.S. 1959. Low cost weed control in soybeans. *Down to Earth* 14(4):7-8. [4 ref]*
Address: Dow Chemical of Canada Ltd., Sarnia, ON.

803. Prescott, Samuel Cate; Dunn, Cecil Gordon. ed. 1959. Industrial microbiology. 3rd ed. Revised by Cecil Gordon Dunn. New York, NY: McGraw-Hill Book Co., Inc. 942 p. Illust. Index. 23 cm.

• ***Summary:*** Chap. 41, titled "Mold enzyme preparations: Uses and products" (p. 666-83) discusses: Mold enzymes: Submerged culture method, continuous tray method for producing mold enzymes, rotating drum method for producing mold enzymes (described by Underkofler et al. 1947), glucose oxidase, uses of mold enzymes (proteases, fungal enzymes). Some mold products: Use in Japan and China, soy sauce (koji from *Aspergillus flavus-oryzae*, Chinese soy sauce, preparation of the "kojies," chemical soy sauce), soy sauce yeasts, tamari, miso, koji. The section on patents (p. 682) cites 15 patents by J. Takamine yet (amazingly) Takamine's name does not appear in the extensive index at the end of the book–though he is considered by some to be the father of industrial microbiology.

The amylo process and a modified amylo process are discussed on pages 864-66. The amylo process is used primarily for converting starch to sugar by the use of selected molds *(Mucor, Rhizopus),* some of which have the ability to produce small quantities of alcohol from sugar.

Soy is also discussed on the following pages: Soybean oil and meal are used in the production of vitamin B-12 by *Streptomyces olivaceus* (p. 485-86). In the production of pentonic acids, several drops of soybean oil were used as an antifoam agent (p. 508). In the production of sodium gluconate, small amounts of soybean oil could be used as an antifoam agent, though they decreased the sugar utilization to an impractical value. (p. 594). L-Glutamic acid can be produced in a number of ways. One is by the hydrolysis of wheat gluten, soybean cake, or other protein-rich food material (p. 713-16). The commercial process now being used in Japan employs sweet potatoes as the chief raw material in a one-stage fermentation process with a strain of *Micrococcus* (p. 712-13).

In the chapter on Saccharifying Agents, Takamine is discussed in the section on "Mold bran" (p. 844). "Takamine, in 1914, advocated the use of mold enzymes (from *A. oryzae)* in the distilling industry. Studies were carried out in distilleries in Canada using his mold-bran preparation *(Taka-koji)* in place of malt to saccharify grains. Although the yields of alcohol obtained through the use of mold bran were reported to be higher than those obtained through the use of malt, the process was not adopted."

A table (p. 857) lists 19 sources of microbial amylase, including Taka-Diastase, made by Parke, Davis & Co., and Alase, made by Takamine Lab. Also in this chapter, in the section on submerged culture of mold amylases, a table (p. 859) shows that soybean meal is used as a protein source in the production of dextrinizing enzyme by *Aspergillus niger* NRRL 337. Address: 1. Sc.D., Prof. of Industrial Biology (Emeritus), Former Head of the Dep. of Biology and Public Health and Dean of the School of Science, MIT; 2. Assoc. Prof. of Industrial Microbiology in the Dep. of Food Technology, MIT (Massachusetts).

• ***Summary:*** The soybean was one of six crops whose seeds were germinated. "Early work on the injurious effects of preceding crops... suggested that nutrient deficiency may be important... More evidence has accumulated recently to show that many plants contain germination and growth inhibitors... and also to show that toxic compounds are produced in the decomposition of crop residues in the soil." Soybean germination was most negatively influenced by alfalfa extract, followed by timothy extract. Address: Canada Dep. of Agriculture, Ottawa, Ontario.

805. Howell, R.W.; Wargel, C.J.; Brim, C.A.; et al. 1960. Response of soybeans to seed-treatment with gibberellin under simulated commercial conditions. *Agronomy Journal* 52(3):144-46. March. [14 ref]
Address: 1. Plant Physiologist; 2-3. Research Agronomists. All three: Crops Research Div., ARS, USDA.

806. *Soybean Digest.*1960. Canadian crush 16 million bu. in 1957 [sic, 1959]. April. p. 10.
• ***Summary:*** Canadian processors crushed 16.1 million bushels of soybeans in 1959, up from 2 million bushels in 1958–according to the USDA Foreign Agricultural Service.

807. Shuel, R.W. 1960. Dr. Charles Ambrose Zavitz, an Ontario pioneer agronomist. *O.A.C. Review* 72:8-9. Spring. *

808. Brown, D.M. 1960. Soybean ecology. I. Development-temperature relationships from controlled environment studies. *Agronomy Journal* 52(9):493-96. Sept. [15 ref]
• ***Summary:*** "The aim of this study was to devise a system of heat units that would serve as a better maturity rating than calendar days."

Development of the soybean plant (number of days to flowering) is optimum at about 86ºF. The curve of development is parabolic, with development dropping to zero at about 50ºF and dropping to about 20% below the peak at 100ºF. Address: Research Fellow, Dep. of Physiography, Ontario Research Foundation, Toronto, Canada.

809. Brown, D.M.; Chapman, L.J. 1960. Soybean ecology. II. Development-temperature-moisture relationships from field studies. *Agronomy Journal* 52(9):496-99. Sept. [6 ref]
• ***Summary:*** Lack of available moisture slows the average rate of development. "These studies were conducted in Ontario at Brampton, Guelph, Jarvis, and Harrow, from 1954 to 1958, and at Ames and Kanawha, Iowa, from 1955 to 1957."

Three phenological stags were recorded: (1) First bloom date, when one or more of the plants had one or more flowers visible. (2) Maximum podding date, when 95% of the plants had pods 1/8 to 1/4 inch long on uppermost nodes of the main stem and lower pods full length. (3) Maturity date, when all leaves had fallen and at least 95% of pods had turned brown.

The period prior to the first bloom date is referred to as the preflowering period. Address: 1. Research Fellow; 2. Senior Research Fellow. Both: Dep. of Physiography, Ontario Research Foundation, Toronto, Canada.

810. *Soybean Digest.*1960. Honorary life members [American Soybean Assoc.]: Dr. E.E. Hartwig and Dr. Frederick Dimmock. Sept. p. 8.
• ***Summary:*** Dr. Edgar E. Hartwig, who has played a leading role in the rapid growth of soybean production in the southern United States, was born in 1913 at Wheaton, Minnesota. He received his bachelor of science degree from the Univ. of Minnesota and his PhD degree from the Univ. of Illinois. In 1943 he joined the southern soybean improvement program in cooperation with the North Carolina Agric. Exp. Station.

"In January 1949 he became coordinator of the southern soybean improvement program at the Delta Branch Experiment Station, Stoneville, Mississippi, which position he still holds. Dr. Hartwig has had a major part in the development and release of the following soybean varieties: Roanoke, Jackson, Dorman, Lee, Hood and Hill. In recent years more than 90% of the soybean acreage in the Midsouth has been planted to these varieties."

Dr. Dimmock was born at Edgware, Middlesex County, England in 1896, and came to Canada at the age of 15. "He received his BSA degree at McGill University in 1923, his MSA degree in 1925, and his PhD at the University of Nebraska in 1947. Dr. Dimmock served as assistant agrostologist at the Agricultural Experiment Station, Harrow, Ontario, from 1923 to 1928, and was transferred to the forage crops division, Experimental Farms Service, Canada Department of Agriculture at Ottawa, Ontario, in 1928. He has been in charge of the soybean and corn breeding programs at Ottawa since 1928... He has had charge of the program of soybean investigations for the Canada Department of Agriculture since it was initiated in 1924. During the 6 years he was at Harrow he developed and distributed A.K. (Harrow), and later Harman, the selection of which he began at Ottawa.

"The program of soybean research which he initiated at Ottawa has resulted in the development and distribution of the following early-maturing varieties of soybeans, most of them from hybridization: Mandarin (Ottawa), Capital,

Kabott, Pagoda, Comet, Acme, and Merit. These varieties have contributed greatly to the development of a successful soybean industry in Canada, and have been of great importance in the northern United States."

Photos show Dr. E.E. Hartwig (with Jake Hartz, Jr., who introduced him at ASA's 40th convention in Memphis, Tennessee) and Dr. Frederick Dimmock (with ASA vice president Charles V. Simpson presenting the award, and K.A. Standing of Chatham, Ontario, who introduced Mr. Dimmock).

811. Standing, K.A. 1960. The organization of Ontario [soybean] growers. *Soybean Digest.* Oct. p. 26-17.
• ***Summary:*** From a speech before the American Soybean Association in Memphis, Tennessee. Contents: Introduction. Powers granted under legislation. Finance. Activities of the Board: Transportation, storage, market development, price support, tariffs and import restrictions.

"Canada imports 15 million bushels of soybeans from the United States, double her domestic production plus 6 million in the form of soybean meal." "There are 15,000 soybean growers all of whom are members of the Ontario Soya-Bean Growers' Marketing Plan under provincial and federal legislation."

Finance. Under the legislation, each grower has deducted from the selling price of his soybeans a fee, at present ½¢ per bushel, which is forwarded by the buyer to the board office with a record of each grower's name, address and number of bushels sold." A portrait photo shows K.A. Standing.

Note: This is the earliest document seen (Feb. 2000) that mentions "The Ontario Soya-Bean Growers' Marketing Plan." "The Ontario Soybean Growers Marketing Board" is referred to but not actually mentioned in the text of the article; it is mentioned only under the writer's name as the organization of which he is Secretary-Manager. Address: Secretary-Manager, Ontario Soya-Bean Growers' Marketing Board, Chatham, Ontario.

812. Obolensky, G. 1960. Getreidekultur und klima. I und II. Kanada [Cereal growing and climate. I. Canada (Quebec, Ontario, Manitoba, Saskatchewan). II. Canada (Alberta, British Columbia, Yukon, Northwest territories)]. *Qualitas Plantarum et Materiae Vegetabiles* 7(3):297-323. Nov. 15. [35 ref. Ger; eng]
• ***Summary:*** Discusses the breeding and production of cereals (especially wheat) throughout Canada, province by province, in relation to variety, climate, rainfall, and soils. Also discusses cultivation of soybeans, barley, flax, and sunflower. Soybeans are grown in the provinces of Ontario (p. 301), Manitoba (p. 306), and Alberta (p. 315). Address: Dr. Ing. Agr., Doct. ès Siences (Doctor of Sciences).

813. Arnould, Francis. 1960. La vie et l'oeuvre du Dr. Berczeller et le soja alimentaire [The life and works of Dr. Berczeller and soyfoods (Continued–Document part III)]. *Revue d'Histoire de la Medecine Hebraique* 13(4):153-68. Dec. [Fre]
• ***Summary:*** Continued from page 164. Dr. Berczeller was certainly a very remarkable person both intellectually and morally. His large-scale programs for the scientific study of food proteins and economies were but a projection of his personality on the social reality of the vast world. In this domain he succeeded technically, scientifically and also practically. He foresaw the future clearly. He was a sort of hero and prophet in the drama of underdeveloped and undernourished countries, and in supplying one of the keys to solve these problems. His breadth of knowledge was vast both in his area of specialty and also in many of the great human questions such as history, politics, and art. He had an insatiable curiosity. He read a lot, and swiftly. In addition to Hungarian, he spoke German, English, and also French, but with some difficulty. We have a list of the titles of articles and other document published by Dr. Berczeller (about 280); this is available upon request.

Until 1923 he did research in biochemistry. Thereafter he devoted himself primarily to questions of soya. But he also conducted many other studies, and worked on inventions that have not been published. Starting in 1932 he developed an interest in biometrics, and in the general organization of scientific knowledge and international affairs. To the end, he maintained a faith in the potential of international organizations, and the fecundity of the international point of view over that of individual nation states.

We did not learn until June 1940, when Dr. Berczeller withdrew to Toulouse at the moment of the armistice, that he was from a rich Jewish medical family from Budapest, benefactors of the hospital. In 1934 he separated from his wife, Mme. Selma Berczeller, who was German "Aryan" and pro-Nazi. He never spoke of Judaism.

Dr. Berczeller lived a long time in London. In 1932 he had had contact with many members of the conservative party, who dreamed of a food policy and politics for Europe. In 1947 Dr. Berczeller told us that the patent rights on the soy treated in Germany by his process were very considerable. He estimated them at 5 million pounds sterling. Hitler completely spoiled it. But after Hitler's fall, he could have recouped these right completely, as an Israelite. He searched in Paris for lawyers to uphold these rights, but without success. As he was single and without children, he wanted to donate his fortune to his project of an international laboratory. We do not have very considerable proof of this fact. The state of his mental health led us to doubt a little the reality of these affirmations, but since he always told us the truth, they are probably true.

He had various collaborators and friends. In Budapest: The University of Budapest, where he had been a professor. Royal Hungarian Institute of Chemistry–Prof. Alfred Savacker [Schwicker?]. Budapest experiment station of veterinarian physiology–Dr. Stephan Weiser. Vienna: Food Institute of Vienna–Victor F.A. Richter. Institute of Physiology–Pr. A. Durig and Dr. H. Wastl. Institute of Pharmacology: Pr. Wasicky, Dean Ernest Kupelweiser [sic, Kupelwieser], Pr. Zederbauer, Dr. Hugo Glaser, Dr. Harnish, Dr. H. Prinz, Dr. Alfred Schneiker [Schwicker?], Frau Herta Spring–president of the Bundes Oesterreichische Frauen vereine. Frau Olga Hess, director of the Bundeslehranstalt für wirtschaftlicher Frauenberufe. Dr. Leopold Mall, director of the Reichanstalt fur Mutter und Saeuglingsfursoge. P. Frankfurter, expert in bread baking. Prague: Pr. D. Stoklasa, Pr. Mayerhoffer, Skoda Foundation. British Empire: Royal Empire Society–Miss Eddie A. Hornibrook. John Freud, physiologist at University College, Cork, Ireland. Pr. T.R. Parsons, Prof. of Medical Research, McGill University Clinic, Montreal [Quebec], Canada.

814. Short (J.R.) Milling Company; Short (J.R.) Canadian Mills Ltd. 1960. Wytase: The enzyme product of modern soybean research. Chicago, Illinois. 37 p. 28 cm. Spiral bound.

• ***Summary:*** Contents: Beautiful white bread made with Wytase. (Full-page photo of slices of white bread on a plate against a background of soybean seeds). What is Wytase? What is an enzyme? Wytase contributes to better machinability. Farinograms show the greater mixing tolerance of Wytase doughs. Wytase makes bread whiter. Wytase makes bread of better flavor. Wytase millers survey each soybean crop for enzyme strength. Milled to preserve enzyme activity. Enzymes are sensitive. Modern milling and packaging brings J.R. Short products to you pure and safe. Wytase standards of identity for bakery products. Laboratory program. Where corn for Wytase grows almost at the door. Ceratex aids fermentation. Protein research by J.R. Short contributes to better nutrition. Special 70–Another new product for bakers (A stable calcium peroxide dough conditioner). W-52–A new product to help bakers (a stable dough conditioner). Wytase products and services near you (19 warehouses in the USA and 6 in Canada). The benefits of Wytase (rear cover; it makes whiter, softer bread with greater yield).

"Wytase is used extensively in the production of white bread and rolls. It is a natural enzyme preparation processed from enzyme active soy flour and a special dextrinized product (Footnote: Ceratex, see p. 29) made from corn. Wytase was developed by J.R. Short Milling Company more than 30 years ago to provide a product which would utilize the enzyme systems of soybeans for the use of bakers." The key enzymes in Wytase are lipoxidases, plus some beta amylase. "Enzyme activity is responsible for all life, and without enzymes life would not exist." Enzymes are proteins, which contain nitrogen. "Their molecular weight is very large, their structure is exceedingly complex, and they are greatly affected by their environment"–especially pH and temperature. One main function of Wytase is to bleach the carotenoid pigments of flour. Even bleached flours contain a substantial amount of carotenoid pigments.

"J.R. Short Milling Company mills soybeans exclusively to produce full fat enzyme active soy flour, the chief ingredient of Wytase. The milling of enzymatically active soy flour requires great care to preserve the enzyme systems." The company maintains laboratories in its three mills located at Chicago, Illinois; Mount Vernon, Indiana; and Toronto, Canada.

This booklet contains many photos, a small one at the bottom of each right-hand page of text, and a large one on the left-land facing page. Photos show: Slices of white bread on a plate against the background of a field of soybeans (cover, full page). Slices of white bread on a plate against a background of soybean seeds (p. 1, full page). A handful of soybeans against a background of soybeans (p. 2). J.R. Short's laboratories (p. 4-5). An Extensograph: It measures the extensibility of dough which contributes to its gas retention property (p. 6). Farinogams for bread with and without Wytase (p. 8-9). Harvesting soybeans from a combine into a truck (p. 14). The latest pneumatic milling system used by J.R. Short (p. 16). A compressimeter measuring the softness of a slice of bread containing Wytase. Wytase Dough Whitener being packaged in 100 lb 5-ply multi-wall [multiwall] sacks. Letter of quality guarantee from Jeffrey R. Short, Jr., President. The bake shop and pilot plant at J.R. Short (p. 24-25). Illustration of J.R. Short's Mt. Vernon Milling Co. on the Ohio River (Mr. Vernon, Indiana, p. 26). Harvesting corn. Measuring amylase activity with the Amylograph. Mellon Institute (Pittsburg, Pennsylvania) where a J.R. Short Milling Company research fellowship developed a process for isolating an undenatured edible protein from soybeans [in about 1953-56] (p. 30). Address: 20 North Wacker Dr., Chicago 6, Illinois.

815. Baker, E.J., Jr. 1961. Combine: Reflections. *Implement & Tractor (Kansas City, Missouri)* 76(4):35-36. Feb. 1. [1 ref]

• ***Summary:*** First the author reprints a prophetic editorial he wrote 36 years ago in the 20 Nov. 1924 issue of *Farm Implement News.* That prophetic editorial began: "Recent tests of a combined harvester in Illinois in harvesting soy beans may prove a milestone in the extension of the use of this great labor-saving machine from the comparatively dry grain growing sections of the west to the eastern part of the country more blessed with rainfall."

It was the soybean that turned out to be responsible for the introduction of the combine into the eastern United States.

He then reflects on the history of the combine and the developments that were necessary to make it a practical and widely used farm machine. In the USA during the early 1900s, combines were made and used only in California. No effort was made to sell them to the "humid east" because it was widely believed that no small grain containing more than 14% moisture could be combined and the grain stored without overheating and spoiling.

Meanwhile in Australia, starting as early as 1843, a large market had developed for a harvesting machine that stripped the kernels from the stem but did not cut the stems; it left the winnowing to a later operation. In 1884 Hugh Victor McCay of Sunshine, near Melbourne, perfected a stripper-harvester that cleaned the grain after stripping it. This as similar competitive harvesters which followed revolutionized grain harvesting "Down Under" and later, by exports, in Argentina.

These developments prompted North American makers of harvesting machines to follow suit. In 1901 Massey-Harris (MH) of Toronto (Ontario, Canada) began production of a stripper for export; in 1904 the International Harvester Co. (IHC) of Chicago, Illinois, did the same. Amazingly, neither company sold these machines to their domestic markets. But they both began to think about making smaller versions of the huge California combines, which were harvester-threshers rather than strippers. Thus, in 1910 Massey-Harris introduced a 10-foot reaper-thresher which had a cutterbar; it would be sold to the export markets of Australia and Argentina; in 1914 International Harvester did the same. Not long after, a market for combines developed in "dry" Kansas. Holt machines got there first, with IHC not far behind. At that time, MH had no sales organization in the USA.

The some time in 1923 or early 1924 *Farm Implement News* (FIN) received a letter from a subscriber in down-state Illinois. He was also an IHC dealer. He explained that one of his big customers [one of the Garwood Brothers of Stonington] was raising that newfangled crop, the soy bean, on a large scale, and he thought he could harvest them better if he had a combined harvester. He was willing to buy and use it at his own risk. IHC had discussed the matter at its headquarters and refused to ship a combine to Illinois under any circumstances, since it believed that combining any crop was impractical in any humid region such as Illinois. So, enquired the dealer, could FIN suggest any other source of a combine for his customer. Mr. Baker referred the subscriber to the Massey-Harris Co. of Canada as the only possible source of a moderate-sized machine, but knowing full well that MH did not sell in the USA. After some correspondence and reflection, Massey-Harris shipped the combine to Illinois, "and may even have sent an expert to see that it was set up and operated right."

The editorial in FIN described not only first successful combining of soy beans in Illinois–but also the first successful use of a combine on any crop east of Kansas.

Before 1925 all combines were pulled by horses or a tractor. In 1925 the first self-propelled combine was introduced in Australia. Named the Sunshine auto-header, it was developed by Headlie S. Taylor of H.V. McKay Pty., Ltd., of Sunshine, Australia. In 1939 Massey-Harris introduced the first self-propelled combine in North America. Its design had been perfected by the time World War II began and the demand for wheat skyrocketed. But steel was in very short supply during the war, and needed for crucial military operations. A man named Joe Tucker, a Michigan-born expert in heavy machinery with good ideas and irresistible drive, joined Massey-Harris at that fateful moment. He started the "Harvest Brigade" and persuaded the U.S. government to ship scarce domestic steel to a Canadian company so it could make combines to harvest American wheat. This, in turn, helped prevent delay of farmer acceptance of the new technology. Details of the history of the Harvest Brigade success are given.

Photos show: (1) A man with a big smile stepping onto a machine bearing a large white sign: "Massey-Harris, Self-Propelled, Harvest Brigade." (2) Front view of a Massey-Harris self-propelled combine working in a field.

816. American Soybean Association. 1961. Soybean Blue Book. Hudson, Iowa: American Soybean Assoc. 160 p. Advertisers' index. 22 cm.

• ***Summary:*** Under the heading "Canadian production" are four tables (p. 24) as follows: (1) "Production of soybeans in Canada, 1942-1960." For each year gives acreage, yield per acre, and total production–which was 5.675 million bushels in 1960.

(2) Production of soybean oil and oilcake in Canada." For each crop year from 1943-44 to 1959-60 gives soybeans crushed (bushels), oil produced (tons), and oilcake and meal produced (short tons). The crush increased from 241,315 bushels the first crop year to 17,080,212 bushels the last year.

(3) "Soybean production, utilization and value, Canada, 1936-1960."

(4) "Soybean crushings in Canada, crop years 1946-47 through 1959-60." Address: Hudson, Iowa.

• ***Summary:*** Gives data collected mainly from Harrow, Ontario. Address: 1. Ontario Research Foundation, Toronto, Canada; 2. Agricultural Research Station, Harrow, Canada.

818. Nelson, C.D.; Clauss, H.; Mortimer, D.C.; Gorham, P.R. 1961. Selective translocation of products of photosynthesis in soybean. *Plant Physiology* 36(5):581-88. Sept. [21 ref]
Address: Div. of Applied Biology, National Research Council, Ottawa, Canada.

819. Brown, D.M.; Chapman, L.J. 1961. Soybean ecology III. Soybean development units for zones and varieties in the Great Lakes region. *Agronomy Journal* 53(5):306-08. Sept/Oct. [12 ref]
• ***Summary:*** A map shows the Great Lakes region divided into zones, defined by the number of Soybean Development Units (SDU) available for maturing soybeans in 3 out of 4 years. Table 1 shows the SDU required to mature 29 soybean varieties and the number of SDU available in recommended zones. The varieties are: Acme, Crest, Flambeau, Norchief, Merit, Comet, Hardome, Mandarin (Ottawa), Grant, Capital, Chippewa, Renville, Monroe, Blackhawk, Earlyana, Lindarin, Harosoy, Hawkeye, Richland, Adams, Dunfield, Ford, Shelby, Lincoln, Illini, Clark, Chief, Wabash, Perry. Address: 1. Research Fellow; 2. Senior Research Fellow. Both: Ontario Research Foundation, Toronto, Ontario, Canada.

820. Co-op. Vegetable Oils Ltd. 1961. Brief to the Tariff Board Canada supporting proposals relative to Reference No. 131 as submitted to the Secretary of the Tariff Board under date of November 6, 1961. Altona, Manitoba, Canada. 12 + 6 p. Dec. 1. [2 ref]
• ***Summary:*** This report was prepared by J.J. Peters, President of Co-op. Vegetable Oils Ltd. on behalf of its member oilseed producers. This co-op is owned and operated by oilseed producers, and its members constitute over 90% of the sunflower growers, and over 66% of the rapeseed growers in Manitoba province. They are addressing proposed tariff changes.

Appendix 1 shows that in 1956 in Canada rapeseed acreage (351,900 acres) first passed soybean acreage (240,000 acres). In 1957 rapeseed acreage had skyrocketed to 617,900 acres, versus 252,000 acres for soybeans. However (as shown by Appendix 3) during the 1950s, most of the edible vegetable consumed in Canada from crushing domestic oilseeds was soya bean oil. In 1959, for example, 52.0 million lb of such soya bean oil was consumed, compared with 18.0 million lb of rapeseed oil and 2.0 million lb of sunflower oil. However in 1959 Canada's main source of edible vegetable oil came from the crushing in Canada of imported soybeans–which produced 118.0 million lb of soya bean oil.

By far the leading source of oilcake meals consumed in Canada was the soybean. In 1959, some 117,000 tons of soya bean meal were produced from domestic soybeans, versus 50.0 tons from domestic linseed and 12.0 tons from domestic rapeseed. In addition that year, 266,000 tons of soya bean meal were produced in Canada by crushing imported soybeans, and another 249,000 tons of soya bean meal were imported. Address: Altona, Manitoba, Canada.

821. **Product Name:** Soybean Oil, and Soybean Oil Meal.
**Manufacturer's Name:** Saskatchewan Wheat Pool.
**Manufacturer's Address:** Saskatoon, Saskatchewan, Canada. Phone: FA 8-2321.
**Date of Introduction:** 1961.
**Ingredients:** Soybeans.
**New Product–Documentation:** Soybean Blue Book. 1961. p. 92. Vegetable oil division manager: C.A. Warren. Note 1. This entry does not appear in the 1962 Blue Book (p. 96). Note 2. This is the earliest known commercial soy product made in Saskatchewan province, Canada.

822. **Product Name:** Soybean Oil, and Soybean Oil Meal (44% and 50%).
**Manufacturer's Name:** Western Canadian Seed Processors Ltd.
**Manufacturer's Address:** Lethbridge, Alberta, Canada. Phone: FA 8-2321.
**Date of Introduction:** 1961.
**Ingredients:** Soybeans.
**New Product–Documentation:** Soybean Blue Book. 1961. p. 92. 3 expellers and Anderson solv., capacity 120 tons. Storage capacity 250,000 bushels. 44% and 50% soybean meal. Approximate operations, up to 750,000 bushels. Served by CP RR [Canadian Pacific railroad].

Soybean Blue Book. 1968. p. 96.

Note: This is the earliest known commercial soy product made in Alberta province, Canada.

823. Department of Trade and Commerce, Canada. 1961. Oilseeds from Canada. Ottawa, Ontario, Canada. 24 p. 28 cm.
• ***Summary:*** "Oilseeds have been grown commercially in Canada since 1720 when the pioneers of New France grew flax for fibre and later for oil." Canada has gradually changed from a net importer of fats and oils to a net exporter. "Last year there were more than 4 million acres in Canada planted to various types of oilseeds, and the bulk of the oilseed production was exported to more than 25 countries of the world. Flaxseed, rapeseed, soybeans and mustardseed are the principal oil-bearing seeds exported from Canada."

A table (p. 3) shows acreage and production of Canada's 4 major oilseeds from 1948-52 to 1960. Throughout this period, flaxseed was the leading oilseed, with production growing from 230,000 tonnes to 638,000. Rapeseed grew from a minor crop to the second largest one, 9,000 tonnes in 1948-52 increasing to 250,000 tonnes in 1960. Soybeans are third, having grown from 86,000 tonnes

to 154,000. In 1960 rapeseed first surpassed soybeans in production. Most of Canada's rapeseed is grown in the three prairie provinces of Alberta, Saskatchewan, and Manitoba. Virtually all soybeans are gown in southern Ontario. Canada is the world's leading exporter of rapeseed. The leading importers of this rapeseed are Japan (40,128 tonnes in 1960), followed by Italy (37,138 tonnes).

The section titled "Soybeans in Canada" (p. 16) gives statistics (tons exported and dollar value) on acreage and production, and on yearly exports from 1956 to 1960 of soybeans, soybean oil, soybean meal, and total. In 1960, Canada exported $20,939,000 worth of soybeans and soybean products, down from $26,988,000 in 1956. The main trend has been toward increased exports of soybeans and decreased exports of oil and meal [value-added products]. Address: Ottawa, Ontario, Canada.

824. Brockman, Francis J.; Murdock, J.D.; Nelan, N. Assignors to Canadian Industries Ltd. 1962. [Coating compositions]. *German Patent* 1,122,647. Jan. 25. British application filed 20 May 1959 and 27 April 1960. 3 p. (Chem. Abst. 57:4793e). [Ger]*
• ***Summary:*** Soybean oil fatty acids are used as a major ingredient in these compositions containing oil-modified alkyd resins.

825. *Soybean Digest.*1962. Leading soyabean varieties. Feb. p. 8-9.
• ***Summary:*** Gives the name and location of the organization that developed each variety, the year of release, and the botanical and agronomic characteristics of 26 northern and 10 southern soybean varieties. The most widely grown northern varieties (listed in order of maturity from earliest to latest) are: Acme, Crest, Flambeau, Norchief, Merit, Comet, Grant, Mandarin (Ottawa), Hardome, Capital, Chippewa, Monroe, Blackhawk, Lindarin, Harosoy, Hawkeye, Harman, Adams, Ford, Shelby, Clark, Wabash, Perry, Kent, Bethel, Scott.

Southern varieties (listed in order of maturity from earliest to latest) are: Hill, Hood, Ogden, Lee, Jackson, Rebel, Bienville, Hampton, JEW 45, Improved Pelican. A map of the USA and Canadian growing areas shows recommended areas for production of these varieties.

826. *Soybean Digest.*1962. Seed directory (Ad). Feb. p. 36.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Illinois, Indiana, Iowa, Kansas, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, Ohio, South Carolina, Tennessee, Virginia, Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers.

827. Evans, E.J.; Dekker, A.J. 1962. Comparative SR90 [strontium-90] content of agricultural crops grown in a contaminated soil. *Canadian J. of Plant Science* 42(2):252-58. April. [9 ref]
• ***Summary:*** Strontium-90 "is generally recognized as one of the most hazardous of the fission products which have contaminated the biosphere since the advent of nuclear fission. Attention has, therefore, been focused on the factors which influence its entry into food consumed by man. One of the important paths of entry of Sr90 into the diet is its absorption by plants from the soil." Moreover: "Different parts of the same plant species may differ in Sr90 content."

The soybean was one of 36 plant species grown in soil contaminated with Sr90. Considerable variation was found in the Sr90 content of samples of botanically unrelated species; it was found to vary directly with the content of the plant samples. Legumes, as a group, "contained higher amounts of both Ca and Sr90 than did grasses, straw, or cereal grains." Address: Canada Dep. of Agriculture, Ottawa, Ontario.

828. Munns, W.O.; Kairys, S.; Manion, D.A.; Meade, E.M. 1962. The separation of solid fatty acids from liquid fatty acids by the formation of acid soaps. II. Pilot plant studies. *J. of the American Oil Chemists' Soc.* 39(4):192-93. April. [2 ref]
• ***Summary:*** Soybean fatty acids are included. Address: 1-3. Canada Packers Limited, Toronto; 4. Univ. of Toronto, Canada.

829. *Soybean Digest.*1962. World oils and fats: Canada. April. p. 14.
• ***Summary:*** "The Ontario Soya-Bean Growers' Marketing Board has proposed to the Canadian Tariff Board a tariff of $0.30 per bushel on soybeans, $6 per ton on soybean meal, and $0.04 per pound on soybean oil. The board points out that about $50 million worth of U.S. soybeans and soybean products enter Canada duty-free annually." The board believes that by reducing imports, soybean production in Canada would more than double without any surpluses developing. 15.4 million bushels of soybeans were crushed in Canada in 1961.

Note: This is the earliest document seen (Jan. 2010) that mentions "The Ontario Soya-Bean Growers' Marketing Board."

830. Roytenberg, M.M.; Hughes, R.G. 1962. Soybean prices: Some relationships between Canadian and United States markets. *Economic Annalist (The)* 32(3):61-65. June. [1 ref]
• ***Summary:*** Canadian soybean prices, production, imports, exports, net imports and domestic utilization for 1956-61.

831. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics).*1962. U.S. exports of soybeans, edible oils and meal rose in April. 85(2):20-21. July 9.
• ***Summary:*** Major markets for U.S. soybeans in April, with their percentages of total exports were: Japan 28, Canada 24, the Netherlands 17, and West Germany 14.

832. Brown, B.E.; Meade, E.M.; Butterfield, J.R. 1962. The effect of germination upon the fat of the soybean. *J. of the American Oil Chemists' Soc.* 39(7):327-30. July. [27 ref]
• ***Summary:*** "There was a continuous decrease in the total dry matter and crude fat of the cotyledons and whole seedlings of soybeans during 12 days of germination [at 25ºC in the dark], contrary to the observations of some of the earlier workers." The loss of fat gradually decreased with the germination time. The classic work in this area was done by Hellriegel in 1885 with sunflower seeds. Address: Dep. of Food Chemistry, Univ. of Toronto, Ontario, Canada.

833. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics).*1962. Canada continues to import soybeans for crushing duty free. 85(6):16. Aug. 6.
• ***Summary:*** "Under Canada's austerity program, a 5-percent surcharge would be assessed on imported soybeans, according to the announcement made on June 24, 1962. However, the surcharge is not applicable to soybeans imported for crushing, which continue to enter Canada duty free."

834. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics).*1962. Canada raises soybean, and sunflower support prices. 85(6):16-17. Aug. 6.
• ***Summary:*** "The Canadian Agricultural Stabilization Board recently announced that 1962-crop soybeans would be supported at C$2.14 per bushel and sunflower seed at C4.22 cents per pound. This compares with 1961-crop support prices of $2.12 and 4.15 cents, respectively.

"The support for Ontario-grown soybeans applies to Canada No. 2 grade or better quality, 14 percent moisture, delivered at elevator in Ontario from July 1, 1962, to June 30, 1963. The support level is 100 percent of the base price of the last 10-year average.

"If the average price received during the 1962-63 marketing year falls below $2.14, the Board will pay the difference to producers. During the marketing year ending June 30, 1962, prices were well above the support level of $2.13 and, consequently, no deficiency payment was made. Returns to producers in the season just ended were the highest since 1954."

835. *Foreign Crops and Markets (USDA Bureau of Agricultural Economics).*1962. Canadian oil plantings decline sharply in 1962. 85(7):16-17. Aug. 13.
• ***Summary:*** Canadian oilseed plantings in 1962, largely flaxseed and rapeseed, have been sharply reduced from 1961, according to preliminary estimates from the Dominion Board of Statistics. Sunflower seed plantings, although small, also declined sharply while soybean plantings increased slightly."

"Soybean plantings in Ontario, at 221,000 acres, increased 4% from last year." In Canada, soybeans are grown only in Ontario."

836. Knopf, H. 1962. Soya beans: Notes on their uses and the world market. *Rhodesia Agricultural Journal* 59(4):221. July/Aug.
• ***Summary:*** This is the summary of a lecture given by Mr. Knopf at a field day for soya beans at Bauhinea Farm. He urges Rhodesian farmers to familiarize themselves with the world market and prices for soya beans. "The Canadian soya bean, enjoying Imperial preference of 5 per cent over beans from non-Commonwealth countries, is greatly favoured in the market in Britain due to its reputation for purity and consistently high quality."

"While we are gaining experience in handling the crop, soya beans which cannot be used locally for stock feed and seed, may be sold on the London or Liverpool markets, provided they are clean, sound, of good quality, and of sufficient quantity."

Negotiations are now being conducted to establish a modern and efficient solvent extraction plant in Rhodesia, in which Rhodesian Producer Farmers would provide the bulk of shareholders. By the use of solvent extraction, 1,000 tons of beans would yield about 170 tons of crude oil and 800 tons of meal with a residual oil content of only 1%. This meal can serve as an excellent stock feed or it may be refined and processed into a high protein flour for human consumption, and used for filling sausages and meat loaves, in baby foods and in the bakery trade. It is used as a nutrient in the manufacture of yeast, antibiotics, beer and ale. Isolated protein is used in the confectionery trade...

"The refined oil is making an excellent cooking oil and is also used pharmaceutically; in salad oils, mayonnaise, margarine, sandwich spreads, and special varnishes." Address: Chairman, Glendale Intensive Conservation Area, Rhodesia.

837. Siragel-Din, Ismail A. 1962. The economics of high protein feeds in Canada. M.S.A. thesis, Ontario Agricultural College, Guelph, ONT, Canada. Aug. *
Address: Canada.

838. Burnett, Alvin A. ed. 1962. Production and utilization of soybeans in Canada. *Ontario Farm Business.* Fall. p. 4-5. [1 ref]
• ***Summary:*** Indicates that soybean meal is more important than oil in the determination of price. Based on an M.S.A.

thesis by Ismail A. Siragel-Din titled "Economics of High Protein Feeds in Canada," August 1962. Address: Dep. of Agricultural Economics, Ontario Agricultural College, Guelph, ONT, Canada.

839. Tobe, John H. 1962. Margarine (The plastic fat) and your heart attack. St. Catharines, ONT, Canada: The Provoker Press. 145 p. Dec. 18 cm. No index.
• ***Summary:*** Contents: 1. The challenge. 2. What is hydrogenation. 3. The hydrogenation principle laid bare. Commercial point of view. The mechanics of margarine. The 100% corn oil fraud. Hydrogenated oils in the body. Dangers in hydrogenated fats. They say not harmful. More incriminating evidence. Sure-fire formula for a heart attack. Hydrogenation and sex. Some correspondence. The plastic curtain. Summary. It's up to you!

Page 4 states that the use of hydrogenated fats "is unqualifiedly the greatest known threat to the health of the people at the present time." Page 5 states that the process of hydrogenation was discovered by Paul Sabatier, a French chemist who lived 1854-1941. He was once the Dean of the Faculty of Science at the University of Toulouse. He became widely known for his research on catalysis and "in 1912, along with Victor Grignard, he was awarded the Nobel Prize in chemistry for his method of hydrogenating organic compounds in the presence of finely divided metals." He was interested in hydrogenation solely in order to make soaps from vegetable or soft oils.

Soybean oil is mentioned in passing (p. 103) in a letter from Dr. Frederick J. Stare, of Harvard University, School of Public Health, Massachusetts.

Note: This is one of the most poorly researched, poorly written, and poorly documented books on the subjects of margarine and hydrogenation that we have ever seen. It is emotional and sensational fluff. Address: St. Catharines, ONT, Canada.

840. *Harrow Research Station, Research Report (Ontario, Canada).*1962. [Spacing and fertilizer applications for soyabeans]. p. 25. For the years 1959-60. *
• ***Summary:*** In spacing trials with soybeans, the distance between rows was 24 inches and between plants in each row from 1 to 4 inches. In general, the highest yields were obtained from the closest spacing. The addition of fertilizer increased the plant height, number of branches, and 100-seed weight at all planting rates but did not consistently increase yields, yet did cause greater incidence of *Phytophthora* root rot.

841. Cartter, Jackson L.; Hartwig, Edgar E. 1962. The management of soybeans. *Advances in Agronomy* 14:359-412. [174 ref]
• ***Summary:*** Contents: I. Introduction: World production (958,275,000 bushels in 1960), United States production trends, utilization (processing to obtain oil and meal, hay and green manure). II. Soil and climatic adaptation: Areas of production in the United States, soil requirements, climatic adaptation (effect of temperature on plant growth, effect of temperature on composition of seed, effect of light on plant growth, effect of photoperiod on flowering and maturity, effect of soil moisture on growth). III. Time of planting and varietal adaptation: Effect on plant characters (maturity, plant height, lodging, seed quality, size of seed, seed yield), effect on composition of the seed. IV. Planting methods and equipment: Seedbed preparation (conventional, minimum tillage, deep tillage), row width and planting rate (row width, planting rate), double cropping (after fall-sown grain crops, after peas), special methods of planting, types of equipment. V. Rotation practices and erosion control: Effect on soybean yields, effect on the following crop, effect on weed population, soil residues from herbicides, erosion control. VI. Weed control: Effect of planting time on plant growth and weed competition, methods of cultivation, chemical weed control (pre-emergence herbicides, post-emergence herbicides). VII. Seed quality and seed treatment: Factors affecting seed quality and germination, seed treatment. VIII. Nutrient requirements: Nitrogen requirements and nodulation (effectiveness of nodulation as a source of nitrogen, methods of inoculation, survival of bacteria in the soil, effect of seed treatment on inoculation, effect of nitrogen applications), liming and pH levels (pH and plant development, calcium and magnesium requirements), phosphorus, potassium, trace elements, fertilizer practices and recommendations. IX. Water requirements and utilization: Water needs in relation to plant growth and development, irrigation and soil management. X. Growth-regulating chemicals. XI. Harvesting: When to harvest, harvesting methods. XII. Seed storage. XIII. Discussion. The USA now produces about 57% of the world's soybeans, followed by China (PRC; about 33%), Indonesia, Japan, Korea, USSR, Brazil, and Canada, in that order. By 1920, U.S. production was 3,000,000 bushels and the leading states were North Carolina, Virginia, Alabama, Missouri, and Kentucky–North Carolina producing 55% of the total. By 1931, the center of production had shifted to the North Central States, where it is at present. Address: 1. United States Regional Soybean Lab., Urbana, Illinois; 2. Stoneville, Mississippi.

842. Ontario Soya-Bean Growers' Marketing Board. 1962? About soybeans: "A know your industry presentation." Chatham, Ontario, Canada. 12 p. Undated. 23 x 11 cm.
• ***Summary:*** Contents: A message from Dick Smith, Chairman, OSGMB. The big three: Soybeans, soybean oil, and soybean meal. Other soybean products: Soybean flour, milk, cheese (tofu), sauce, and sprouts. Where soybeans are grown worldwide. The position of soybeans in world fats

and oils production. The import and export pictures in 1961. Production of soybeans by county in Ontario. Marketing the crop. Soybean grades. Activities of OSGMB.

In 1961 Canadian soybean production accounted for only 30.5% of Canada's need for soybean oil, and 31% of the country's needs for soybean meal; the rest had to be imported. In 1954, in order to establish a healthy market situation, OSGMB initiated a soybean export program. "The establishment of this 'second market' has proven its intended worth in helping to maintain price levels in Canada. In 1961, Canadian exports of soybeans and the bushel equivalent of meal and oil totalled 11.7 million bushels." Address: Box 668, 143 Wellington St. West, Chatham, Ontario, Canada.

843. Burnett, Alvin A. 1963. Fats and oils: A review of recent world trends in production, trade and consumption with some notes on the Canadian industry. 57 p. [10 ref]
• ***Summary:*** Contents: Introduction. 1. Trends in production of fats and oils. 2. World trade in fats and oils. 3. World utilization and consumption of fats and oils. 4. Some notes on the Canadian fats and oils industry.

Each chapter has at least one substantial section on soybeans and soybean oil. Address: Dep. of Agricultural Economics, Ontario Agricultural College, Guelph, ONT, Canada.

844. Donovan, L.S.; Dimmock, F.; Carson, R.B. 1963. Some effects of planting pattern on yield, per cent oil and per cent protein in Mandarin (Ottawa) soybeans. *Canadian J. of Plant Science* 43(2):131-140. April. [8 ref]
• ***Summary:*** "The performance of Mandarin (Ottawa) soybeans was tested over a 4-year period in fifteen planting patterns resulting from five row spacings (7, 14, 21, 28, and 35 inches) and three plant spacings (1, 2, and 3 inches) within the row. Response of yield and oil percentage [in the seeds] to spacing was considerable. The combination of narrowest row and widest plant spacing within the row (7 x 3) gave the highest yield, whereas the highest per cent oil was obtained from the widest row and the widest plant spacing (35 x 3)."

The best of both yield and oil is probably obtained from a 7 x 4 pattern.

"Protein [content in the seeds] showed less response to spacing. It was highest in the closest spacing... Iodine number did not respond to spacing." Address: Canada Dep. of Agriculture, Ottawa, Ontario, Canada.

845. Barrett, Keith. 1963. Britain: Major growth market? A British economist's view. *Soybean Digest.* May. p. 39-40.
• ***Summary:*** Contents: Introduction (Three reasons for the writer's intense interest in American soybeans and products markets; great potential in the UK). Present handicaps. Import duty structure, Effects of Commonwealth Preference System (soybeans grown in Canada, Nigeria, etc. are preferred). Effects of a change in the preference system. A dilemma for U.S. policy.

"Where the Commonwealth has an overall deficit of an item, Commonwealth production tends to command a premium over the world price, nearly equivalent to the duty preference it enjoys. Soybeans fall within this category. U.K. does import them from Canada and Nigeria but the overall Commonwealth availability is inadequate and the British buyer has also to purchase dutiable non-Commonwealth beans, mostly from the United States." Address: Raw Materials Economist, J. Bibby and Sons Ltd., Liverpool, England.

846. Meals for Millions. 1963. Friendship food for a hungry world. Distribution of relief shipments, September 1946–May 15, 1963. 215 West 7th Street, Los Angeles 14, California. 4 p. Undated. [2 ref]
• ***Summary:*** Total distribution of MPF (Multi-Purpose Food) up to 15 May 1963 was 12,830,416 pounds, comprising 102.6 million meals. Countries receiving over 20,000 pounds, in descending order of amount received, were: India (1,979,748 lb), Korea (1,356,110), Japan (541,102), Hong Kong (394,259), China (358,957, stopped in 1951), Brazil (312,244), Germany (206,185), United States (183,366), Philippines (146,943), Haiti (139,823), France (126,022), Pakistan (101,041), Congo (86,101), Austria (82,159), Tanganyika (77,997) Mexico (65,722) Burma (63,554), Taiwan (58,639), Lebanon (56,910), Canada (51,836), Ceylon (38,428), Israel (38,280), Jamaica (38,171), Greece (38,133), Vietnam (37,524), Italy (36,768), Indonesia (35,873), Jordan (33,375), Hungary (33,165), New Guinea (31,535), Gabon (27,704), Liberia (27,187), Okinawa (23,640), Malaya (23,454), Morocco (22,736), Chile (22,721), Iran (21,482), Peru (21,374), Honduras (21,168), Bolivia (20,860), Nepal (20,626), Borneo (20,053).

The following countries (listed alphabetically) were early recipients of soy-based Multi-Purpose Food from Meals for Millions, and were late in introducing soybeans to the country: Bahamas (received 6 shipments totaling 2,079 lb between 1 July 1960 and 31 Dec. 1962). Basutoland [Lesotho] (received 2 shipments totaling 1,539 lb between 1 July 1960 and 31 Dec. 1962). Bolivia (received 2 shipments totaling 1,634 lb between Sept. 1946 and 30 June 1960). British Honduras (received 5 shipments totaling 11,319 lb between Sept. 1946 and 30 June 1960; renamed Belize in about 1975). Cape Verde Islands (received 1 shipment of 2,007 lb between Sept. 1946 and 30 June 1960; independent since 1975). Caroline Islands (received 2 shipments totaling 2,008 lb between Sept. 1946 and 30 June 1960; renamed Federated States of Micronesia in 1986). Central African Republic (received 1 shipment of 2,025 lb between 1 July 1960 and 31 Dec. 1962). Eritrea (received 1 shipment

totaling 2,025 lb between Sept. 1946 and 30 June 1969). Fiji Islands (received 2 shipments totaling 2,052 lb between Sept. 1946 and 30 June 1969). Finland (received 1 shipment of 2,040 lb between Sept. 1946 and 30 June 1960). Gabon (received 3 shipments totaling 17,660 lb between Sept. 1946 and 30 June 1960). Guam (received 3 shipments totaling 4,995 lb between 1 July 1960 and 31 Dec. 1962). Guadalcanal ([later part of the Solomon Islands] received 1 shipment of 513 lb between Sept. 1946 and 30 June 1960). Iraq (received 3 shipments totaling 8,122 lb between Sept. 1946 and 30 June 1960). Jordan (received 9 shipments totaling 28,839 lb between Sept. 1946 and 30 June 1960). Liberia (received 10 shipments totaling 21,949 lb between Sept. 1946 and 30 June 1960). Luxemburg [Luxembourg] (received 1 shipment of 5,130 lb between Sept. 1946 and 30 June 1960). Marshall Islands (received 1 shipment of 739 lb between Sept. 1946 and 30 June 1960). Mozambique (received 3 shipments totaling 7,641 lb between Sept. 1946 and 30 June 1960). New Hebrides [later Vanuatu] (received 1 shipment of 513 lb between Sept. 1946 and 30 June 1960). Oman (received 4 shipments totaling 10,659 lb between Sept. 1946 and 30 June 1960). Panama (received 1 shipment of 96 lb between Sept. 1946 and 30 June 1960). Samoa (American) (received 6 shipments totaling 6,480 lb between Sept. 1946 and 30 June 1960). Somali (received 1 shipment of 270 lb between 1 July 1960 and 31 Dec. 1962). Swaziland (received 1 shipment of 621 lb between 1 July 1960 and 31 Dec. 1962). Tonga Islands [Kingdom of Tonga, independent since 1970] (received 5 shipments totaling 6,723 lb between 1 July 1960 and 31 Dec. 1962). Virgin Islands [USA] (received 2 shipments totaling 2,113 lb between Sept. 1946 and 30 June 1960). Western Samoa [independent since 1962] (received 1 shipment of 1,026 lb between 1 Jan. 1963 and 15 May 1963).

Other countries which received MFM shipments by 15 May 1963 are: Afghanistan, Algeria, Angola, Argentina, Basseterre [Probably refers to the island, Basse-Terre (or Guadeloupe proper) which is the western half of Guadeloupe, separated from the other half, Grand-Terre, by a narrow channel. As of 1994 Guadeloupe is a French Overseas Department. Probably not the seaport on St. Christopher Island, capital of St. Christopher-Nevis–since that is not a country], Belgium, Cambodia, Republic of Cameroun [Cameroon], Canal Zone, Colombia, Costa Rica, Cuba, Czechoslovakia, Dominica, Dominican Republic, Ecuador, Egypt, El Salvador, England, Eritrea, Ethiopia, French West Indies, Gambia, Ghana, Goa [former Portuguese possession; annexed by India in 1962; became a state of India in 1987], Grenada, Guatemala, Haute Volta [Upper Volta, later Burkina Faso], Iraq, Kenya, Laos, Libya, Macao, Madeira Islands [autonomous region of Portugal in east Atlantic Ocean, 600 miles due west of Casablanca, off the coast of Morocco], Mauritius Islands, Montserrat [island in the West Indies], Netherlands, Nicaragua, Nigeria, Northern Rhodesia [later Zambia], Nyasaland [later Malawi], Oman, Paraguay, Persian Gulf, Poland, Puerto Rico, Ruanda Urundi, Rumania [Romania], Ryukyu Islands, American Samoa, Santa Lucia [probably Saint Lucia island in the Caribbean], Sicily, Sierra Leone, South Africa, Southern Rhodesia [later Zimbabwe], Spain, Surinam [Suriname], Switzerland, Thailand, Trieste [Italy], Tunisia, Turkey, Uganda, Uruguay, Venezuela, Yugoslavia.

Note: This is the earliest document seen (Aug. 2009) concerning soybean products (soy flour in MPF) in British Honduras [Belize], Cape Verde, Caroline Islands, Eritrea, Iraq, Lesotho, Liberia, Luxembourg, Marshall Islands, New Hebrides [Vanuatu], Oman, Samoa (American), Tonga, or Western Samoa. Soybeans as such have not yet been reported in these countries.

This document contains the earliest date seen (Feb. 2009) for soybean products (soy flour in MPF) in Bolivia (June 1960), British Honduras (June 1960), Cape Verde (June 1960), Central African Republic (Dec. 1962), Eritrea (June 1960), Iraq (June 1960), Lesotho (Dec. 1962), Liberia (June 1960), Luxembourg (June 1960), Marshall Islands (June 1960), New Hebrides (June 1960; Vanuatu), Oman (June 1960), Samoa (American) (June 1960), Tonga (Dec. 1962), or Western Samoa (May 1963). Soybeans as such had not yet been reported by that date in these various countries. Address: Los Angeles, California.

847. *Foreign Agriculture.*1963. Canadian soybean support price announced. 1(25):15-16. June 24.
• ***Summary:*** Canadian Minister of Agriculture announced that the price support for 1963-crop soybeans will be C$2.15 (U.S. $2.00) per bushel on Canada grade No. 2 or better.

848. Fisher, J.E. 1963. The effects of short days on fruitset as distinct from flower formation in soybeans. *Canadian J. of Botany* 41(6):871-73. June. [6 ref]
• ***Summary:*** The "soybean is normally regarded as a short-day plant... While flowering occurs most rapidly under short days it will occur with prolonged exposure to long days..."

"The purpose of this communication is to show that flowering plants can be induced to set fruit by as few as three short-day cycles inserted into an otherwise long-day regime, and that the plants will continue to set fruit for the remainder of the reproductive life of the plant regardless of the subsequent photoperiod." Address: Research Branch, Canadian Dep. of Agriculture, Ottawa, Canada.

849. *Foreign Agriculture.*1963. Canadian oilseed plantings up sharply. 1(34):15. Aug. 26.
• ***Summary:*** Total flaxseed acreage for 1963 in Canada amounted to 1,685,400 acres. Rapeseed had 483,500 acres, soybeans took up 228,000 acres, and there were 38,000 acres of sunflowerseeds.

850. Cartter, Jackson L.; Hartwig, Edgar E. 1963. The management of soybeans. In: A.G. Norman, ed. 1963. The Soybean. New York: Academic Press. x + 239 p. See p. 161-226. [209 ref]

• ***Summary:*** Contents: 1. Introduction: World production, United States production trends, utilization (processing to obtain oil and meal, hay and green manure). 2. Soil and climatic adaptation: Areas of production in the United States, soil requirements, climatic adaptation (effect of temperature on plant growth, effect of temperature on composition of seed, effect of light on plant growth, effect of photoperiod on flowering and maturity, effect of soil moisture on growth). 3. Time of planting and varietal adaptation: Effect on plant characters (maturity, plant height, lodging, seed quality, size of seed, seed yield), effect on composition of the seed. 4. Planting methods and equipment: Seedbed preparation (conventional, minimum tillage, deep tillage), row width and planting rate (row width, planting rate), double cropping (after fall-sown grain crops, after peas), special methods of planting, types of equipment. 5. Rotation practices and erosion control: Effect on soybean yields, effect on the following crop, effect on weed population, soil residues from herbicides, erosion control. 6. Weed control: Effect of planting time on plant growth and weed competition, methods of cultivation, chemical weed control (pre-emergence herbicides, post-emergence herbicides). 7. Seed quality and seed treatment: Factors affecting seed quality and germination, seed treatment. 8. Nutrient requirements: Nitrogen requirements and nodulation (effectiveness of nodulation as a source of nitrogen, methods of inoculation, survival of bacteria in the soil, effect of seed treatment on inoculation, effect of nitrogen applications), liming and pH levels (pH and plant development, calcium and magnesium requirements), phosphorus, potassium, trace elements, fertilizer practices and recommendations. 9. Water requirements and utilization: Water needs in relation to plant growth and development, irrigation and soil management. 10. Growth-regulating chemicals. 11. Diseases: Foliar, root and stem, seed. 12. Insects and spider mites: Leaf feeders, above-ground stem feeders, pod feeders, root feeders. 13. Nematodes: Root knot, cyst, others. 14. Harvesting: When to harvest (moisture content of seed, chemical defoliation, losses from respiration after maturity), harvesting methods (historical, combine harvesting). 15. Seed storage. 16. Discussion. The USA now produces about 57% of the world's soybeans, followed by China (PRC; about 33%), Indonesia, Japan, Korea, USSR, Brazil, and Canada, in that order. By 1920, U.S. production was 3,000,000 bushels and the leading states were North Carolina, Virginia, Alabama, Missouri, and Kentucky–North Carolina producing 55% of the total. By 1931, the center of production had shifted to the North Central States, where it is at present.

The subsection titled "Seed treatment" (p. 193) states: "Seed treatment with a fungicide is not recommended as a general practice when seed with high germination is planted. Stands may be increased by seed treatment when seed having a germination of 85 per cent is planted. Although seed treatment seldom results in increased seed yields,... the improved stands resulting from seed treatment aid in giving soybeans a competitive advantage with weeds. Studies by Howard W. Johnson *et al.* (1954) show that seed may be treated at any time between harvest and planting with equal effectiveness. The most satisfactory time for treating seed would be as it is cleaned. The materials Arasan, Captan, and Spergon have proved to be most satisfactory for treatment of soybean seed. Before any lot of seed is treated, it may be a good practice to check the germination with and without the fungicide to determine the beneficial effect of seed treatment on each seed lot."

The section titled "Harvesting methods: Historical" (p. 219) states: "The earliest harvester designed specifically for soybeans was a two-wheeled, horse-drawn machine which straddled the bean row (Piper & Morse, 1923, p. 94). This special harvester was common in Virginia and North Carolina, but was never commonly used in the North Central States. Harvesting losses ranged from 20 per cent under favorable conditions to as high as 60 per cent under unfavorable (Sjogren, 1939). In small-grain growing areas, the binder and thresher were adapted for soybean harvest. Harvest losses for using the binder or mower for cutting and then threshing ranged from 16 to 35 per cent of the total yield, with an average loss of 24 per cent (Sjogren, 1939).

"The combine harvester was first used for soybeans in the mid-twenties. The combine harvester has been a major factor in the expansion of soybean production. This machine required less labor than earlier methods and was more efficient." Address: 1. Agronomist-in-charge, U.S. Regional Soybean Lab., Crops Research Div., ARS USDA, Urbana, Illinois; 2. Research Agronomist, U.S. Regional Soybean Lab., ARS USDA, Stoneville, Mississippi.

851. Nevins, Allan; Hill, Frank Ernest. 1963. Ford: Decline and rebirth 1933-1962. Vol. 3. New York, NY: Charles Scribner's Sons. xviii + 508 p. See p. 71-73, 323. [531 endnotes]

• ***Summary:*** Of the superb three-volume history of the Ford Motor Co. by Nevins and Hill, this volume contains the most information about Henry Ford's work with soybeans. During the 1930s, Henry Ford had a number of interests and activities outside of auto manufacturing. "One of them was Greenfield Village, where exhibits and historic buildings spoke for Ford to the Public. Its opening in 1933 had been preceded by a decade of collecting and planning on Ford's part." He established four schools in the Village from 1929 to 1943.

"A second project in which Ford was interested was the cultivation and processing of soy beans. He felt that the crop had a great dietary importance, could aid the farmer, and had a definite place in his own business. While he had begun experiments in 1929, they were carried on for some time in an informal fashion at Dearborn. But in 1935 a complete processing plant was established at the Rouge and in 1938 two others began operations at Saline and Milan, Michigan, for the extraction of oil from the bean, and the making of plastic units for Ford cars. These came to include lever knobs, horn buttons, switch handles, and distributor housings. In 1939 the Ford Motor Company grew about 100,000 bushels of soy beans, and bought an additional 500,000 bushels...

"A third and far more extensive activity that commanded Ford's energies was his village industries... During the 1930s Ford unquestionably intensified his interest in small plants. After 1935 no year passed in which he did not found at least one new unit. In six years he constructed 13 (including his two soy bean plants), and in 1938 could contemplate a list of 212 possible sites which E.G. Liebold had prepared. W.J. Cameron in his Ford Sunday Evening Hour and in magazine articles discussed the 'decentralization' which such activity represented. Even *Fortune* picked up the term. 'Mr. Ford now feels that he has learned all centralization can teach,' it remarked late in 1933. 'The next step is decentralization.'

The small plants "were important in that they contributed to the decentralization of Ford's own activity." They "all engaged his attention and even his passionate interest, and gave him less time for the V-8 and the Ford truck."

"The soy-bean processing factories had been discontinued during the war, and in November 1946 the principal one at Saline, Michigan, was sold to a commercial company. Much of the elder Ford's farm land had been put up for sale in the spring of 1946."

Appendix I (p. 478-79) gives very revealing Ford Motor Co. vehicle production statistics by vehicle type for each year, in the USA, Canada, and overseas, each year from 1903 to 1955. Sales of the Ford truck began in 1916, the tractor in 1917, the Lincoln in 1922, the Mercury in 1938, and the Metro-Coach in 1938. In the U.S. Ford's boom years in terms of total vehicles produced were from 1905 (1,599 vehicles) to 1923 (2,120,898 vehicles produced). The company did not surpass its 1923 record until 1955. After 1923 production was static to downhill. In 1927 there was a huge drop to 518,401 vehicles as the company phased out the Model T and prepared to launch the Model A. From 1930 to 1939 (the years when Henry Ford was most interested in soybeans) annual production averaged 855,000 vehicles, or 40% of the 1923 high. In the depths of the Great Depression, in 1932 and 1933, production was only about 400,000 vehicles, roughly 21% of the 1929 figure of 1,870,257. Address: Columbia Univ., New York City, New York.

852. Snell, John Ferguson. 1963. Macdonald College of McGill University: A history from 1904-1955. Montreal, Quebec, Canada: McGill University Press. xv + 259 p. Illust. Index. 24 cm. [30+* ref]
• ***Summary:*** In the chapter titled "Organization and Construction," page 57 states that Macdonald College opened in Nov. 1907. Dr. James W. Robertson, the Acting Principal, called Leonard S. Klinck from the Iowa State College to take charge of Cereal Husbandry. Klinck's residence / house at Macdonald College is described on p. 51.

In the chapter on "Practical Departments," the section on "Agronomy" (p. 91+) notes that the Agronomy Department, originally designated the Cereal Department, was established by Professor Leonard S. Klinck in 1906. The subsection titled "Staff" (p. 94-95) states: "In 1914, Professor Klinck was called to Vancouver to become Dean of the Faculty of Agriculture of the University of British Columbia. From this position he advanced to that of President of the University. His successor in the Chair of 'Cereal Husbandry' in Macdonald was his classmate in the Ontario Agricultural College, James Murray. After four years, Professor Murray left to take charge of the Noble Foundation Farm in Alberta, and Robert Summerby, a member of the first graduating class, was appointed to his successor, with the title of 'Professor of Agronomy.'" Prof. Summerby died in 1946. Prof. Klinck is also mentioned on pages 132 and 188. Address: Canada.

853. *Oleagineux.*1964. Industrie du soja [The soybean industry]. 19(1):41-42. Jan. [2 ref. Fre]
• ***Summary:*** Contents: Worldwide production of soybeans. Predictions for soybean exports. The need for research and the American Soybean Association. The effect of molybdium on soya. Soybean crushers and oil refiners in Canada. Market development in Germany by the Soybean Council of America. Denmark's purchase of soya. Soybean Council fair on Cyprus. Sales in Colombia. Sales in Japan. New uses. Address: Paris.

854. *Soybean Digest.*1964. Seed directory (Ad). Feb. p. 26.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Illinois, Indiana, Iowa, Kansas, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, Ohio, Oklahoma, South Carolina, Tennessee, Wisconsin, and Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers. Coker's Pedigreed Seed Co. is listed in Hartsville, South

Carolina. They sell Coker Hampton, Coker Hampton 266, Coker Stuart, and Coker 240.

855. *Soybean Digest.*1964. Seed directory (Ad). March. p. 40.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Illinois, Indiana, Iowa, Kansas, Minnesota, Mississippi, Missouri, Nebraska, North Carolina, Ohio, Oklahoma, South Carolina, Tennessee, Wisconsin, and Ontario (Canada). For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers. Coker's Pedigreed Seed Co. is listed in Hartsville, South Carolina. They sell Coker Hampton, Coker Hampton 266, Coker Stuart, and Coker 240. Is this the earliest listing seen for Coker (South Carolina) in this directory.

This directory also appears in the April 1964 issue (p. 38).

856. Tregunna, E.B.; Krotkov, G.; Nelson, C.D. 1964. Further evidence on the effects of light on respiration during photosynthesis. *Canadian J. of Botany* 42(8):989-97. Aug. [12 ref]
• ***Summary:*** "Both photosynthesis and respiration are usually studied by measuring either the rate of carbon dioxide fixation or oxygen evolution." This experiment is about an indirect way of measuring photosynthesis using an infrared carbon-dioxide analyzer. Light accelerated carbon dioxide in chlorophyll-rich soybean leaves relative to chlorophyll-deficient leaves. Address: Dep. of Biology, Queen's Univ., Kingston, Ontario.

857. Trip, P.; Krotkov, G.; Nelson, C.D. 1964. Metabolism of mannitol in higher plants. *American J. of Botany* 51(8):828-35. Sept. [26 ref]
• ***Summary:*** "Osmoregulation is the active regulation of the osmotic pressure of an organism's fluids to maintain the homeostasis of the organism's water content; that is it keeps the organism's fluids from becoming too dilute or too concentrated. Osmotic pressure is a measure of the tendency of water to move into one solution from another by osmosis. The higher the osmotic pressure of a solution the more water wants to move into the solution." Osmoregulation is one important way that plants conserve water (Source: Wikipedia, Oct. 2009).

"The wide use of mannitol as an osmoregulator is based on the assumption that it either does not enter living cells, of if it does, it is not metabolized... On the other hand, a number of observations contradict this assumption."

The soybean was one of 26 species used to determine the extent to which higher plants can metabolize mannitol-$C^{14}$. Address: Dep. of Biology, Queen's Univ., Kingston, Ontario, Canada.

858. Larsen, Marion R. 1964. The agricultural situation and crop prospects in Communist China, 1964. *USDA Economic Research Service, Foreign Agricultural Economic Report* No. 20. iv + 10 p. Oct.
• ***Summary:*** The section on "Crop outlook" contains a subsection titled "Soybeans" (p. 403) states: "Acreage of soybeans in 1964 continued to expand, following a substantial reduction in 1962... Yields are expected to exceeded those in 1963, resulting in a larger total harvest. It does not appear, however, that acreage and production will equal that in 1957, although both appear to be the largest since about 1960, when it is believed the crop began to decline."

"Imports of food: Including shipments delivered in 1964, the communist regime has imported over 22 million metric tons of grain [mostly wheat] since 1960 at an estimated cost in excess of $1.5 billion... Various government officials have indicated recently that it is now an economic policy to continue to import the cheaper grains (wheat, corn, barley, etc.) and export the higher priced rice and soybeans. Most of the country's exports of rice would go to soft-currency countries.

"Contracts with Canada and Argentina for grain purchases extend into 1966, and negotiations with France and Australia are expected to result in additional continued imports." Address: Agricultural Economist, Far East Branch, Foreign Regional Analysis Div., USDA, Washington, DC.

859. Ontario Soya-Bean Growers' Marketing Board. 1964. Research on soybeans: Presented to the Honourable Harry Hays, Minister of Agriculture, Ottawa. Chatham, Ontario, Canada. 7 p. Oct. 26. 28 cm.
• ***Summary:*** Ontario's 10,000 soybean growers have assessed themselves via a levy on their Marketing Board in order to study ways to increase soybean yields and expand production. "Soybean production in Ontario has had a phenomenal growth. Production was spurred by the war effort and shortage of fats and oils. Production has been limited to the southern part of the Province of Ontario and to a lesser extent the southern part of the Province of Manitoba, and has reached about one-third of Canada's requirements...

"It is a rarity today in agriculture to find a commodity with so much domestic market potential. Vast deficiencies of protein meals and vegetable oils exist in Canada–it is imperative that every effort be made to fill the gap by domestic production."

Canada presently has to import $60 million worth of soybeans, soy oil and soybean meal. Although exports of soybeans and soybean products total $30 million, this

deficit of $30 million is a major factor in Canada's trade balance with the U.S.

A chart on page 4 shows exports, production, imports, and crushings of whole soybeans only from 1965-1963. Research is needed on weed control in soybeans, and the development of growth regulators that enable the soybean plant to produce less leaves and more pods.

The report closes with the following: "Request: This submission is made to request the government to make more funds available specifically for soybean research, and to place more emphasis on the needs of the soybean industry. Respectfully submitted, F. Hyatt–Chairman, R. Smith, Past Chairman, L. Longhurst–Vice-Chairman K.A. Standing–Secretary-Manager, The Ontario Soya-Bean Growers' Marketing Board." Address: Box 668, Chatham, Ontario, Canada.

860. Ontario Soya-Bean Growers' Marketing Board. 1964. Research on soybeans: Presented to the Honourable William A. Stewart, Minister of Agriculture, Toronto. Chatham, Ontario, Canada. 7 p. Dec. 15. 28 cm.
• ***Summary:*** The contents of this document is identical to that presented to Harry Hays, the Minister of Agriculture in Ottawa on 26 Oct. 1964. Address: Box 668, Chatham, Ontario, Canada.

861. Schwarz, Richard William. 1964. John Harvey Kellogg: American Health Reformer. PhD thesis in modern history, University of Michigan. vi + 504 p. 23 cm. [234 + 1,308 footnotes]
• ***Summary:*** This is one of the finest examples of recent Adventist scholarship. John Harvey Kellogg was born on 26 Feb. 1852 in rural Tyrone Township, Livingston County, Michigan. His parents were John Preston Kellogg and Ann Stanley, his second wife. His birth was spaced almost midway between those of his seven half- and eight full brothers and sisters. Contents: Preface. 1. The making of a health reformer. 2. "What manner of man." 3. Biologic Living: The Kellogg "Gospel of Health." 4. Kellogg and the Battle Creek Sanitarium. 5. Lecturer, author, publisher. 6. Surgeon and inventor. 7. His brother's keeper. 8. Kellogg's break with the Adventist church. 9. Food manufacturer and eugenist. 10. Concluding years. Bibliography: Primary sources (Manuscript collections, books by John Harvey Kellogg, articles by John Harvey Kellogg, newspapers and periodicals, official reports and records, interviews, other primary sources, secondary sources).

Concerning the invention of peanut butter: (p. 283-84): "Another important item in the modern American diet first introduced by Dr. Kellogg was peanut butter. Shortly after 1890, John Harvey had a quantity of roasted peanuts ground up into a paste for use by patients who had difficulty in masticating nuts well enough to digest them properly. Later the doctor decided that roasting caused the fat content of the nuts to begin to decompose and that this irritated the digestive organs. From that time forward Sanitarium peanut butter was made from nuts which had been steam-cooked rather than roasted. Kellogg devised a variety of other nut butters which he claimed were 'sweeter, more palatable, and more digestible' than regular butter. He directed that these nut butters be used as shortening in the preparation of all baked goods produced at the Sanitarium. John Harvey made no attempt to control through patents the production of either peanut butter or any of his other nut butters. He announced that he believed that these were products that 'the world ought to have; let everybody that wants it have it, and make the best use of it.'" Address: Univ. of Michigan.

862. *Soybean Blue Book.*1965. Canadian production [of soybeans, plus bushels crushed, tons of oil produced, and tons of oilcake and meal produced]. p. 41.
• ***Summary:*** This table has two vertical halves. The left half gives Canadian soybean acreage, yield, total production, average farm price, and total farm value ($000) for each crop year from 1941-42 to 1965/66 (preliminary).

During these 21 years, seeded acreage as increased from 10,900 to 265,000 acres, with a peak of 263,000 in 1958-59. Average yield per seeded acre has increased from 19.9 to 30.3 bu/acre, with a peak of 31.3 in 1961-62. Production has grown from 217,000 to a peak of 8,030,000 bushels. Average farm price has risen from $1.73 to a peak of $2.87 per bushel. Total farm value has increased from $1.509 million to a peak of $20.021 million.

The right half gives bushels of soybeans crushed, tons of soybean oil produced, and tons of soybean oilcake and meal produced from crop year 1943-44 to 1964-65 (preliminary).

During this time, the quantity of soybeans crushed has increased from 241,315 to a peak of 19,540,984 bushels. The amount of soybean oil produced has risen from 1,078 tons to a peak of 100,528 tons. The amount of soybean oilcake and meal produced has increased from 6,308 tons to a peak of 464,888 tons.

Note across bottom of left half of table: 1. Most of Canada's soybean crop is grown in Ontario [which extends the furthest south of any Canadian province], but there were also small acreages in other provinces in the years 1942-43 to 1945-46. The totals for Canada include this production. Data from Dominion Bureau of Statistics.

Note across bottom of right half of table: "Compiled from official records of the Dominion Bureau of Statistics, U.S. Department of Agriculture, Foreign Agricultural Service, Fats and Oils Division."

863. *Foreign Agriculture.*1965. West German imports of soybeans hit new record. 3(17):15. April 26.
• ***Summary:*** German imports of soybeans during 1964 rose to a new high of 1.4 million tonnes–29% above those of

1963. Imports to the various countries was as follows: The U.S. sent 1,355,755 tonnes; Canada, 2,293 tons; Brazil, 298 tonnes; Mainland China, 44,597 tons; and others at 1,670 tonnes. The total number of tonnes of soybeans that West Germany imported in 1964 was then 1,404,613 tonnes.

864. *Soybean Digest.*1965. New process for making whole soybeans tasty. April. p. 24.
• ***Summary:*** This new process, which has been patented by Cargill in the USA and Canada, involves treatment of the soybeans by infrared heat to create new snack foods such as roasted and salted soybeans. The process gives the soybean a "toasted, nut-like flavor that is delicious."

865. *Soybean Digest.*1965. Soybean research committee coordinates Ontario work. April. p. 23-24.
• ***Summary:*** At the annual meeting of the Ontario Soya-Bean Marketing Board in Chatham, to Dr. J.W. Tanner (Asst. Prof., Dep. of Crop Science, Ontario Agricultural College, Guelph) said that the newly established soybean research committee "will attempt to coordinate the provincial research at Guelph and Ridgetown and the federal research at Harrow and Ottawa... The big gap in Ontario research must be in physiology at the production level, and this is the area that we in Guelph must concentrate in. Not only will physiology change existing production techniques, it will also change breeding objectives. Every soybean variety and corn hybrid is obsolete. They have been selected on the basis of their ability to yield in a 40-inch row. The 40-inch row evolved because the horse's stomach was 40 inches [wide]..." Chemical weed control has made it possible to grow soybeans in 7- or 14-inch drills or broadcast stands. So now we must redesign our plants, seeking types that perform best in narrow rows. The two basic approaches must be based on plant breeding, and evaluation and use of plant growth regulators. A photo shows Dr. Tanner.

866. *Toronto Daily Star (Canada).*1965. Chicago grain. May 25. p. 10.
• ***Summary:*** For soybeans, soybean oil, and soybean meal, the following prices are given: Opening price for each commodity from July to December of last year, and on to March of this year. Plus: Monday close: High, low, and close for the day.

867. Dechaine, R.C.; Callaghan, R.W. Assignors to General Mills, Inc. 1965. Method and apparatus for processing protein fiber. *Canadian Patent* 718,858. Sept. 28. Summarized in Soybean Digest, Feb. 1966, p. 52. *

868. National Soybean Processors Association. 1965. Year book, 1965-1966 (Association year). Chicago, Illinois. 63 p.
• ***Summary:*** On the cover (but not the title page) is written: "Year Book and Trading Rules, 1965-1966." Contents: Constitution and by-laws and code of ethics. Officers, directors and committees for 1965-66. Membership of the National Soybean Processors Association. Trading rules on soybean meal. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}, sampling of soybean meal {automatic sampler, probe sampler}). Trading rules on soybean oil. Definitions of grade and quality of export oils. Tentative soybean lecithin specifications. Appendix to trading rules on soybean oil: Uniform sales contract, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed).

The section titled "Officers, directors, and committees" (p. 12-15) states: President: Robert G. Houghtlin. Secretary: J.W. Moore. Treasurer: R.E. Fiedler. Executive Committee: L.W. Andreas, Chairman, Wilfred F. Carle, T.W. Bean, B.A. Townsend (term ending Sept. 1966). J.W. Moore, M.D. McVay, R.E. Fiedler, E.B. Copeland (term ending Sept. 1967). R.G. Houghtlin.

Board of Directors: Chairman of the board: L.W. Andreas. Vice chairman of the board: T.W. Bean. Immediate past chairman of the board: S.E. Cramer. (Term expiring Sept. 1966): R.A. Denman, Joe C. Givens, R.G. Golseth, Floyd E. Hiegel, H.D. Rissler, R.B. Williams. Term expiring Sept. 1967: T.J. Barlow, Elmer L. Buster, Elster B. Copeland, F.L. Morgan, H.R. Scroggs, B.A. Townsend. Term expiring Sept. 1968: Donald B. Walker -> Win Golden, Wilfred Carle, Arthur Frank, M.D. McVay, William King Self, Harry E. Wiysel. General counsel: Raymond, Mayer, Jenner & Block, Chicago, Illinois. Washington counsel: Sellers, Conner & Cuneo, DC. Washington representative: George L. Prichard, DC. Managing director, National Soybean Crop Improvement Council: Robert W. Judd, Urbana, Illinois.

Standing committees: For each committee, the names of all members (with the chairman designated), with the company and company address of each are given–Traffic and transportation. Technical. Oil trading rules. Industrial oil. Lecithin. Meal trading rules. Uniform rules and standards for soybean meal. Crop improvement council. Soybean research council. Soybean grades and contracts. Safety and insurance. Regional: Illinois, Indiana, Ohio, Kentucky, and eastern Missouri; Iowa, Minnesota, Nebraska, the Dakotas, Kansas, and Western Missouri; Mississippi River Delta Sections.

The following organizations, and individuals are members of NSPA: Allied Mills, Inc., Chicago, Illinois; Taylorville, Illinois; Guntersville, Alabama. Archer-Daniels-

Midland Co., Minneapolis, Minnesota; Decatur, Illinois; Mankato, Minnesota; Fredonia, Kansas; Bloomington, Illinois. Arkansas Grain Corp., Soybean Division, Stuttgart, Arkansas (Wilfred F. Carle); Helena, Arkansas (W.E. Higginbotham). Big 4 Co-op. Processing Assn., Sheldon, Iowa (Kenneth J. McQueen). Buckeye Cotton Oil Div. of, The Buckeye Cellulose Corp., Cincinnati Ohio (R.B. Williams); Little Rock, Arkansas; Augusta, Georgia; Memphis, Tennessee. Cargill, Inc., Minneapolis, Minnesota (M.D. McVay, Jay Haymaker); Chicago, Illinois (Robert Cournoyer); Cedar Rapids, Iowa (C.W. Bohlander); Des Moines, Iowa (W.J. Wheeler); Fort Dodge, Iowa (George J. Cox); Sioux City, Iowa (A.L. Peterson), Washington, Iowa (William R. Matson); Wichita, Kansas (Ralph S. Moore); Memphis, Tennessee (Philip St. Clair); Norfolk, Virginia (D.H. Leavenworth). Central Soya Co., Inc., Fort Wayne, Indiana (B.A. Townsend); Decatur, Indiana (T.H. Alwein); Indianapolis, Indiana (R.E. Syster); Chicago, Illinois (Willard C. Lighter); Gibson City, Illinois (George R. Walter); Belmond, Iowa (J.R. Wright); Bellevue, Ohio (Harry Stokely); Marion, Ohio (Leroy Rich); Chattanooga, Tennessee (Jack Rosenberger). Delphos Soya Products Co., Delphos, Ohio (Floyd E. Hiegel). Delta Cotton Oil and Fertilizer Co., Jackson, Mississippi (Alfred Jenkins). Farmers Grain Dealers Assn. of Iowa (Cooperative) Soybean Processing Division, Mason City, Iowa (H.D. Rissler). Farmers Union C.M.A. [CMA], St. Joseph, Missouri (Arthur E. Frank). Fremont Cake & Meal Co., Fremont, Nebraska (Harry E. Wiysel). Galesburg Soy Products Co., Galesburg, Illinois (Max Albert & Regi Simon -> Elnathan Anderson, Box 711). General Vegetable Oil Co., Fort Worth, Texas (J.D. Morton). Gooch Milling & Elevator Co., Lincoln, Nebraska (M.R. Eighmy). Grain Processing Corp., Muscatine, Iowa (G.A. Kent, F.J. Prochaska, H.P. Woodstra). Honeymead Products Co., Mankato, Minnesota (L.W. Andreas, W.B. Cox, J.I. Maslon, C.T. Mullan, L.K. Rasmussen); Huegely Iowa Milling Co., Cedar Rapids, Iowa (Joe Sinaiko, Bob Scroggs, Les Liabo). Kansas Soya Products Co. (The), Emporia, Kansas (Elmer L. Buster). Lauhoff Grain Co., Danville, Illinois (Ralph G. Golseth, Loren R. Larrick, Laurie J. Slocum). Marshall Mills Co., Marshalltown, Iowa (J.B. Saccaro). Minnesota Linseed Oil Co., Minneapolis, Minnesota (R.J. Lindquist, Jr.). Mississippi Cottonseed Products Co., Jackson, Mississippi (H.E. Covington). Missouri Farmers Assn., Grain Div., Mexico, Missouri (Kermit F. Head). Owensboro Grain Co., Owensboro, Kentucky (William M. O'Bryan). Paymaster Oil Mill Co., Houston, Texas (T.J. Barlow, C.R. Bergstrom); Phoenix, Arizona (O.C. Harris); Jackson, Mississippi (John Bookhart). Perdue (A.W.) & Son, Salisbury, Maryland (Robert L. Brodey). Planters Industries, Inc., Rocky Mount, North Carolina (W.T. Melvin). Planters Manufacturing Co., Clarksdale, Mississippi (A.K. Shaifer). Quincy Soybean Products Co., Quincy, Illinois (Theodore W. Bean, John Franks). Ralston Purina Co., St. Louis, Missouri (Donald B. Walker, W.L. Golden); Kansas City, Missouri (A.V. Couch); Bloomington, Illinois (R.C. Witte); Decatur, Illinois (R.E. Baer); Lafayette, Indiana (A. Hardy); Iowa Falls, Iowa (W. Bower); Louisville, Kentucky (J. Gardner); Raleigh, North Carolina (J.L. Bumgardner); Memphis, Tennessee (J.K. Sartain). Riverside Oil Mill, Marks, Mississippi (William King Self). Sisketon, Missouri (P.B. Bartmess). Southern Cotton Oil Div., Hunt Foods and Industries, Inc., New Orleans, Louisiana (F.L. Morgan); Newport, Arkansas (Jerry Jeffrey); Macon, Georgia (M.S. Long); Greenville, Mississippi (M.D. Kolb); Goldsboro, North Carolina (W.W. Davis). Southern Soy Corp., Estill, South Carolina (R.A. Denman). Southern Soya Corp. of Cameron, Cameron, South Carolina (Charles Everett Bullard). Staley (A.E.) Manufacturing Co., Decatur, Illinois (J.W. Moore, E.C. Lane, H.E. Lents); Painesville, Ohio (D.J. Hopkins). Swift & Co., Chicago, Illinois (Scott E. Cramer, W.W. Moore). Townsends, Inc., Millsboro, Delaware (P.C. Townsend). 869. Pogeler, Glenn H. 1965. What the Soybean Council is doing for you. *Soybean Digest.* Sept. p. 38-40.
• ***Summary:*** "Just a few short years ago, Howard Roach had a dream and it was about Spain. His research showed that the per capita consumption of edible oils was pitifully low in that country. Because Spain was almost entirely dependent on the olive crop as a source of edible fat, she was finding her supply of fats for the population always at a low level. Because olives are a tree crop, the production is based on a cycle of on one year, and off the next. This makes a tremendous fluctuation in supply from year to year.

"Howard Roach convinced the Spanish government that a program of supplementing their olive oil supply with soybean oil would make it possible to increase the per capita consumption of oil for the benefit of all. This would also allow Spain to continue her normal exports of olive oil which were needed to produce foreign exchange to enable them to continue the industrial expansion of the nation.

"Spain negotiated a P.L. 480 agreement, and for several years bought soybean oil under P.L. 480 [using local currency, pesetas]. As her financial situation improved, she was able to switch to dollar purchases and today, Spain is the largest buyer of soybean oil from the United States."

"Iran is another example of a country which originally began by buying U.S. soybean oil under P.L. 480 and has now switched to dollar purchases. Iran, in the fiscal year ending 1960, took from the United States 11,000 metric tons of soybean oil and, just 5 years later, is expected to import 45,000 metric tons."

"India is our newest large buyer of soybean oil and last fall signed an agreement with the U.S. government to take in approximately 75,000 tons..." Other users of U.S. soybean oil this past season include Pakistan, Greece, Guinea, Iceland, Tunisia, Egypt, Sierra Leone, Yugoslavia, Chile, Taiwan and several others.

"Europe and Canada are the major dollar buyers of U.S.-produced soybean oil." Major buyers of U.S. soybeans are Japan, Netherlands, Canada, West Germany, Denmark and many other countries.

"Spain is building up a crushing industry and, by the end of 1965, is expected to be able to crush very close to 700,000 metric tons of oilseeds per year..."

Soybean exports will top 200 million bushels this year and are expected to continue to rise. "Latest government estimates indicate that approximately 2 million tons of soybean meal will find their way overseas from the 1964 crop of soybeans. This is another record breaker with France, Germany, Netherlands, Canada, Belgium, Yugoslavia, Italy, Denmark, and Spain being the major users.

There has been a tremendous expansion in the exports of U.S. soybeans and soybean products. The Soybean Council of America deserves part of the credit. "In my travels overseas, it seems as though everyone is talking about soybeans and soybean products."

Also discusses how the Soybean Council operates and is financed, its relationship to USDA's Foreign Agricultural Service, its overseas offices, some of its problems, and reasons for expanding the program. A portrait photo shows Glenn Pogeler. Address: President, Soybean Council of America, Inc.

870. *Foreign Agriculture.*1965. The export and promotion of U.S. oilseeds and oilseed products. 3(48):10-12. Nov. 29.
• ***Summary:*** "U.S. oilseeds and oilseed products have continued as the nation's top dollar export earner of all agricultural commodities in the past year–a firm member of the 'billion dollar club.' FY [fiscal year] 1965 was a record export year with $1.1 billion total trade up 30 percent over 1963-64 and over 90 percent represented dollar business... Most of the 'nondollar' exports were soybean and cottonseed oils that moved under Public Law 480."

The year 1964-65 was a record year for exports of soybeans and soybean products. Leading importers of U.S. soybeans (in million bushels) were Japan (48.4), Canada (33.9), Netherlands (26.9), and West Germany (22.4). Leading importers of U.S. soybean meal (in 1,000 tons) were France (358.4), West Germany (300.7), Canada (249.4), and Netherlands (245.2). Leading importers of U.S. soybean oil (in million lb) were Spain (239.5), Pakistan (195.2), India (137.0), Morocco (79.5), Iran (70.7), Greece (54.7), Israel (42.9), and Yugoslavia (41.7).

"In Japan, one of the largest U.S. markets, continued check sampling at the rate of 5-10% is being made on imports to insure that the same quality of beans purchased is actually shipped and that U.S. exporters are informed of low-quality shipments. The American Soybean Association, through the Japan Oilstuff Inspectors Corporation, points out specific shipments of low quality thus allowing ASA to back up requests for exporters to maintain grade standards.

"ASA sponsored trips of two teams of Japanese Soybean Crushing Association officials to the United States in 1965 (the larger team came at its own expense) to view U.S. soybean production, marketing, and shipping methods. Since then, Japanese crushers have had a better understanding of the dependable supply and quality of U.S. soybeans."

871. Pillay, D.T.N. 1965. Responses of soybean seedlings to N-dimethyaminosuccinamic acid, a growth retardant. *Canadian J. of Botany* 43(11):1477-78. Nov. [3 ref]
• ***Summary:*** This acid (also called "B-nine") is reported to retard growth of the shoot of some ornamental and fruit plants when applied as a foliar spray. This experiment

confirmed the reports and elaborated on them. Address: Dep. of Biology, Univ. of Windsor, Windsor, Ontario.

872. *Quick Frozen Foods.*1965. The Rich Products story: It surges with the strength and vigor of the mighty waterway on whose shore it makes its home. 28(5):139-62. Dec. Also repaginated and reprinted by Rich Products Corp.
• ***Summary:*** Rich Products, a 20th century pioneer and leader in frozen food specialties, now in its 21st year of operation, is located on the banks of the Niagara River above Niagara Falls. "When the Buffalo concern introduced its Whip Topping as a 'wartime replacement' in 1945, the frozen food industry was doing a total annual volume of less than $200,000,000 a year. Today the industry is generating more than $5,000,000,000 in sales annually. Included in the story are bits of history.

"The fledgling Buffalo concern did $28,000 worth of business in 1945. Today its total sales are exceeding $25,000,000 a year. The largest portion of sales are in the frozen food division, the remainder in dry Coffee Rich, Whip Topping, and the fluid milk operation."

The two opening pages (printed with black and blue, then black and red ink) showcase Rich's many non-dairy products–mostly frozen–such as Rich's Whip Topping, Non-Dairy Coffee Rich, Sundi-whip. Photos show: (1) Bob Rich seated at his desk. (2) Small portrait photos of Herb Kusche, Jerry Hannon, Joe Robida, Ed Andrews, Rex Diamond, Bill Meyers, Oscar Albert PhD, Jo Ann Lang, Bill Wright, Dick Middleton, Bob Steele, Gordon Tebb. (3) Six individual photos of products (p. 144). (4) Rich's West Palm Beach, Florida, plant that makes Frozen Chocolate Eclairs. Robert E. Rich, Jr., vice-president of Rich Products of Canada, Ltd., Rich's plant in Ft. Erie, Canada (built in March 1964). (4) Frozen food trucks. Many shots of the inside of Rich's plants.

Throughout the story are many pages of congratulatory ads, big and small, from suppliers, distributors, contractors, packagers and container manufacturers, food brokers, etc. On the last page is a letter of thanks from Bob Rich (typed, with signature on letterhead) to all the above companies and individuals that have contributed to the growth of Rich Products over the past 21 years. Address: Buffalo, New York.

873. Canada–Dominion Bureau of Statistics, Agriculture Div., Crops Section. 1965? Handbook of agricultural statistics. Part I–Field crops 1908-63. Ottawa, Canada: Queen's Printer and Controller of Stationery. See p. 117. The 6 parts were published from 1955 to 1966.
• ***Summary:*** The earliest year given for soybean production in Manitoba is 1956-57, when 3,200 acres were planted. They yielded 32,000 bushels. In the peak year, 1958-59, 7,000 acres yielded 70,000 bushels. No figures are given after the year 1960-61, when only 6,000 bu were produced on 500 acres. Address: Canada.

874. Ontario Soya-Bean Growers' Marketing Board. 1965? The world of soybeans (Leaflet). Chatham, Ontario, Canada. 6 panels. Undated. 22 x 9 cm.
• ***Summary:*** Two panels list the many food and industrial products that can be made from soybeans. A little cartoon character "SO-ME-O says: Soybeans make life better all over the world." In Ontario, soybean have a total farm value of over $20 million. "Canadian soybean production only accounts for 30.5% of all Canadian needs of soybean oil. Meal production from Canadian soybeans provides only 31% of our requirements." Most of the rest is imported from the USA.

In 1964 81 million pounds of soybean oil was consumed in Canadian margarine and 62.5 million pounds was consumed in Canadian shortening. Address: Box 668, 143 Wellington St. West, Chatham, Ontario, Canada.

875. Bidwell, R.G.S.; Turner, Wendy B. 1966. Effect of growth regulators on carbon dioxide assimilation in leaves, and its correlation with the bud break response in photosynthesis. *Plant Physiology* 41(2):267-70. Feb. [11 ref]
• ***Summary:*** Spraying the leaves of a variety of plants (including soybeans) with indolacetic acid (IIA, a growth regulator) increased the rate of carbon dioxide assimilation from 30% to 100% during the period of 30-60 minutes following the spraying.

"The breaking of dormancy of axial buds in the bean plant was correlated with an increase in the rate of carbon dioxide assimilation in adjacent leaves for a brief period of time." Address: Dep. of Botany, Univ. of Toronto, Toronto 5, Canada.

876. Boyer, Robert A.; Schulz, A.A.; Schatzman, E.A. Assignors to Ralston Purina Company. 1966. Method of manufacturing a protein food product. *Canadian Patent* 727,064. Feb. 1. 10 p. *
• ***Summary:*** Describes production of soy protein fiber.

877. *Soybean Digest.*1966. Best adapted [soybean] varieties. Feb. p. 18.
• ***Summary:*** On a full-page outline map of the eastern half United States (plus Ontario; extending as far west as the western borders of North Dakota, South Dakota, and Nebraska {104º west longitude}) the name of each state appears along with soybean varieties best adapted to various parts of that state. The states shown with varieties are: North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Texas, Minnesota, Iowa, Missouri, Arkansas, Louisiana, Michigan, Illinois, Kentucky, Tennessee, Mississippi, Alabama, Georgia, Ohio, Pennsylvania, New Jersey, Maryland,

Delaware, West Virginia, Virginia, North Carolina, South Carolina, northern Florida.

A sampling of varieties for several states (listed from north to south within each state): Wisconsin–Flambeau, Norchief, Merit, Chippewa 64, Harosoy 63, Lindarin 63. Ohio–Chippewa 64, Harosoy 63, Lindarin 63, Ford, Ross, Clark 63. Ontario: Merit, Hardome, Chippewa, Harosoy, Harosoy 63, Harman. Arkansas: Hill, Hood, Lee, Bragg, Rebel.

878. Kirchner-Dean, Otto. comp. 1966. Soybean processing and utilization: A selected list of references, 1955-1965. *USDA Library List* No. 83. iv + 183 p. Aug. Author index. Subject index. 28 cm. [2218 ref]

• ***Summary:*** Contents: Part I: Processing. Meal. Oil. Beans. Part II: Utilization. Meal in feed. Oil in feed. Beans in feed. Meal in food. Oil in food (General, margarine). Beans in food (general, flour, milk, soy sauce). Meal for industrial uses (general, coatings). Oil for industrial uses (general, coatings, drying oils, paints, resins, soaps). Beans for industrial uses. Part III: Chemistry and research. Amino acids, bibliography, biochemistry, chromatography, composition, enzymes, fatty acids, lecithin, lipides, lipoxidase, organic chemistry, pesticide residues, phosphatides, proteins, research, sterols. Part IV: Miscellaneous. Argentina, Australia, Brazil, California, Canada, China, Congo, cook books, Far East, government loans, India, industry, international trade, Japan, laws and legislation, markets and marketing, nutrition, pesticide residues, varieties.

"All citations except those to patents have been examined and verified by the compiler. Patents cited were obtained from Chemical Abstracts. All foreign language titles have been translated into English with the original language indicated. [Warning: Many patent titles listed in this are different from those appearing on the actual patent.]

"Sources consulted: Agricultural Index, Bibliographic Index, Bibliography of Agriculture, Biological and Agricultural Index, Card Catalog of the National Agricultural Library, Chemical Abstracts, Dissertation Abstracts, Engineering Index, Food Science Abstracts, Journal of the Science of Food and Agriculture, Nutrition Reviews, and Pesticides Documentation Bulletin." Address: National Agricultural Library, Div. of Reference, Special Bibliographies Section.

879. *USDA Economic Research Service, Statistical Bulletin.*1966. U.S. fats and oils statistics 1909-1965. No. 376. 222 p. Aug.

• ***Summary:*** Table 74 (p. 67) gives "Soybeans: Acreage, supply, disposition, and price, 1924-65." The 21 column heads include: Production (increased from 4.9 million bushels in 1924 to 701.9 million in 1964). Exports (began in Oct. 1931, with 2.2 million bu reported for 1931, increasing to 205.9 million bu in 1964; based on inspections by Federal licensed inspectors). Crushings (increased from 0.3 million bu in 1924 to 473.1 million bu in 1964). Average price per bushel received for the season by farmers ($2.46 in 1924, falling to a low of $0.50 in 1931, staying below $1.00 until 1941 except for $1.27 in 1936, first topping $2.00 again at $2.05 in 1944, reaching an all-time peak of $3.33 in 1947, then staying between $2.00 and $2.75 until 1964).

Production of oil (increased from 2 million lb and 7.4 lb per bushel crushed in 1924 to 5,146 million lb and 10.9 lb per bushel crushed in 1964). Production of meal (increased from 8,000 tons and 49.5 lb per bushel crushed in 1924 to 11,286,000 tons and 47.7 lb per bushel crushed in 1964).

Table 86 (p. 76) shows "Soybean oil: Supply and disposition and oil equivalent of exports of soybeans, 191-64." Soybean oil production increased from 2 million lb in 1922 (the earliest year for which figures are reported) to 5,146,000 lb in 1964. Soybean oil imports started at 27 million lb in 1911, dropped slightly for several years, then skyrocketed to 118 million lb in 1915 after the start of World War I, and peaked at 332 million lb in 1917. They were negligible after 1922, when a tariff effectively shut off imports and promoted domestic U.S. soy oil production. The earliest figures for soy oil exports show that 58 million lb were exported in 1919, but in the following years soy oil exports were negligible, and did not top the 1919 figure until 1943. The big increases came starting in 1955 and by 1964 had reached 1,353,000 lb/year. Consumption/disappearance of soy oil in the U.S. was very large during World War I (when the amount consumed equaled the amount imported), then it was very small until the mid-1930s. It grew from then on, first in industrial uses, and after World War II in food uses. It rose from 1,076,000 lb in 1941 to 4,072,000 lb in 1964.

Table 87 (p. 77) shows "Soybean oil: Supply, disposition, and utilization, and oil equivalent of export of soybeans, 1912-1965. Utilization is divided into food uses and nonfood uses. Food uses included (in order or importance in 1917): Cooking and salad oils, shortening, and margarine. Nonfood uses included (with the earliest year reported after each): Soap (1912), paint and varnish (1931), linoleum and oilcloth (1931), resins (1949), other (1931). In 1965 the main food uses (in million lb) were: Shortening (1,471), cooking and salad oils (1,135), and margarine (1,112). In 1965 the main nonfood uses (in million lb) were: Paint and varnish (96), resins (96).

Table 173 (p. 155) lists "Soybeans: United States exports by country of destination, 1947-64." In 1964 the leading importers of American soybeans (in 1,000 bushels) were: Japan (49,298), Canada (34,951), Netherlands (28,066), West Germany (23,325), Denmark (13,444), Italy (10,401). In South America, the leading importer was

Venezuela (1,228). In Eastern Europe it was Poland (1,785) and the USSR (1,320). In Africa it was Morocco (418).

880. *Soybean News.*1966. Leader of U.S.D.A. soybean research [Dr. B.E. Caldwell]. 18(1):1. Oct.
• ***Summary:*** "Dr. Billy E. Caldwell of Beltsville, Maryland, has been appointed Leader of Soybean Investigations in the Crops Research Division, U.S. Department of Agriculture. He succeeds Dr. Robert W. Howell, who is now Chief, Oilseed and Industrial Crops Research Branch."

"The U.S.D.A. has soybean production research personnel in nine states and has state collaborators in about 30 states. The regional research program, which Dr. Caldwell will lead, also includes cooperation with research workers in two Canadian provinces."

"Dr. Caldwell joined the soybean research staff in 1963. He is a native of North Carolina, a graduate of North Carolina State University and received his Ph.D. degree from Iowa State University."

881. Stefansson, B.R. 1966. Altona, a new variety of soybeans. *Canadian J. of Plant Science* 46(6):693. Nov.
• ***Summary:*** "The soybean variety Altona was licensed in Canada in April 1966. Altona represents improvement over other maturity group 00 (earliest group) soybean varieties in yielding ability and in resistance to phytophthora root rot." In Table 1, the yield and composition of Altona are compared with those of Acme, Flambeau, and Erect varieties. It's average yield is 17.6 quintals/ha (1 quintal = 100 kg). The seed contains 40.7% protein and 19.4% oil. Altona originated as a selection from the cross Flambeau x 052-093 in a breeding program at the Univ. of Manitoba. Address: Dep. of Plant Science, Univ. of Manitoba, Winnipeg, MAN, Canada.

882. Stefansson, B.R. 1966. Registration of Portage soybeans. *Crop Science* 6(6):612. Nov/Dec.
• ***Summary:*** Registration No. 58. Portage soybeans originated as an F-4 plant selection from the cross Acme x Comet in a breeding program at the Univ. of Manitoba. Altona was licensed in Canada in April 1964. Address: Research Assoc., Dep. of Plant Science, Univ. of Manitoba, Winnipeg, MAN, Canada.

883. Harsany, Peter. 1966. Free bread for everyman! An essay on world hunger and production requirements. Montreal, Canada: Academic Publishing Co. 111 p. Illust. Map. 22 cm. *
• ***Summary:*** Someday we may be obliged to eradicate all animals to produce enough food for human beings.

884. Roberts, Ivan M. 1966. Soybeans in Canada. Ontario, Canada: Victory Soya Mills, Ltd. 32 p. Summarized as "Ontario growers are world champions" in Soybean Digest, June 1966, p. 26. *
Address: Toronto, ONT, Canada.

885. American Soybean Association. 1967. Soybean Digest Blue Book Issue. Hudson, Iowa: American Soybean Assoc. 170 p. Index. Advertisers' index. 22 cm.
• ***Summary:*** The title page of this year's *Blue Book* states: "Blue Book issue. Vol. 27. March, 1967. No. 6." A table (p. 26) gives world soybean production by continent and country, from 1955-59 to 1966 (preliminary) as follows: North America: Canada, United States, Mexico. South America: Argentina, Brazil, Colombia, Paraguay. Europe: Italy, Romania, Yugoslavia, Other Europe (excluding U.S.S.R.). USSR (Europe and Asia). Africa: Nigeria, Rhodesia, Tanzania. Asia: Turkey (Europe and Asia), China–Mainland, Cambodia, China–Taiwan, Indonesia, Japan, Korea–South, Thailand. Total #1. Total #2.

Soybean production in Mexico increased from about 39,000 bu in 1955-59, to 1,315 in 1964, to 2,205 in 1965 to 4,410 (preliminary) in 1966.

A table (p. 29) gives U.S. exports of soybeans, oil and meal from 1962 to 1965 (preliminary) to the following regions and countries (for marketing years beginning Sept. 1; in bushels): North America: Canada, Mexico, other, total. South America: total. Western Europe: Belgium & Luxembourg, Czechoslovakia, Denmark, Finland, France, Germany–West, Italy, Netherlands, Norway, Spain, Sweden, Switzerland, United Kingdom, other, total. Eastern Europe: Czechoslovakia, Hungary, USSR (Europe and Asia), Poland, other, total. Africa, total. Asia and Oceania: Hong Kong, Israel, Japan, Korea–South, Philippines, Taiwan, other, total. Grand total.

Exports of U.S. soybeans to Mexico increased from 33,000 bu in 1962 to 177,00 in 1964. Note: This is the 2nd earliest document seen (Feb. 2009) that gives statistics for trade (imports or exports) of soybeans, soy oil, or soybean meal to Mexico or Central America. Address: Hudson, Iowa.

886. Deveza, Manuel Carneiro. 1967. A cultura da Soja no mundo e o comércio internaiconal desta oleaginosa: Situaçao de Moçambiqe como produtor [World soybean cultivation and international trade in its oil. Mozambique's situation as a producer]. *Gazeta do Agricultor (Mozambique)* 19(214):66-72. March. [Por]
• ***Summary:*** Contents: General considerations. Soybean producing countries and continents and their production in tons (1948-1965). International commerce: importation of soybeans, soy oil, and soybean meal by countries and continents (in 1963 the 5 largest importers of soy oil were Spain, Pakistan, Turkey, Morocco, and Yugoslavia; the 5 largest importers of soybean meal were France, Canada, Germany, England, and Denmark). Value of the seeds, meal,

and oil. Uses of the soybean. Cultivation of the soybean in Mozambique. Potential for soybean culture in Mozambique. Address: Engenheiro agrónomo, Director Serviços de Agricultura, Província de Maçambique, Serviços de Veterinária, Mozambique.

887. *British Vegetarian.*1967. Home-made soya butter. March/April. p. 144.
• ***Summary:*** Mrs. Elizabeth Martyn of Vernon, BC, Canada, has contributed a recipe for making soya butter at home, using 4 tablespoons soya flour, 1 cup soya oil or sunflower oil, and water. Mix and heat. Puree in a blender, then refrigerate. Use like butter.

888. Office of the Chief Economist, Resources and Transportation Studies Section, Ontario. 1967. Soybeans in Ontario: Production, utilization and prospects. Toronto, Ontario, Canada. 40 p. April 25. 36 cm. [10+ ref]
• ***Summary:*** Contents: 1. Soybeans and alternative sources of vegetable oil. 2. Soybeans and soybean products production, consumption and utilization. 3. Soybean varieties and techniques of production. 4. Economic aspects of soybean production. 5. Possibilities of increasing soybean acreage in Ontario. 6. Areas with potential for increased soybean production. 7. Possible effects on soybeans of increasing rapeseed utilization. 8. Conclusion.

Total soybean acreage in Ontario has increased from 154,973 in 1951 to 265,000 in 1965. The two regions of production are the Lake Erie Region (which produced 12.71% of the provincial total in 1965; the largest soybean producing county is Elgin) and the Lake St. Clair Region (which produced 86.38% of the provincial total; the largest producing counties were Kent [94,700 acres], Essex [85,500], and Lambton [48,700]).

"About 70-75% of total Canadian soybean supply is imported (almost entirely from the United States); approximately 80-90% of the supply is crushed domestically, the rest is exported mostly to the United Kingdom" (p. 7).

"The greater part of the crop is sold to the three crushing plants in Toronto (Victory Mills Ltd., Maple Leaf Mills Ltd., and Canadian Vegetable Oils Processing Ltd.). The balance is exported to the United Kingdom where it is accorded preferential tariff treatment... Ontario's production is insufficient to meet the needs of Canadian processors, and large quantities [of soybeans] (65-70 per cent of their total requirements) are imported duty free from the United States" (p. 21-22).

"Conclusion: Ontario has a potential for increasing its soybean acreage, provided that (a) a gradual change in the pattern of crop production will be brought about (reduction of oats and mixed grain area); (b) research will provide higher yielding varieties especially for the area between the 2,500-2,700 heat unit lines; (c) reliable, cheap herbicides will be available; (d) large scale drainage and pasture improvement programs will be carried out; (e) extension efforts will concentrate on disseminating knowledge on adequate methods of soybean growing.

"The striking success of the Corn-Plan launched by the Ontario Government and O.A.C. [Ontario Agricultural College, Univ. of Guelph] indicates that a 'Soybean Plan' might lead to similar results." Address: Toronto, Ontario.

889. Hang, Y.D.; Jackson, H. 1967. Preparation of soybean cheese using lactic starter organisms. I. General characteristics of the finished cheese. *Food Technology* 21(7):95-96. July. [14 ref]
• ***Summary:*** 450 grams of Grade No. 1 dry mature soybeans (obtained from W.G. Thompson & Son, Limited, Blenheim, Ontario, Canada) were soaked and used to make soymilk. Coagulation of soymilk was brought about solely through acid development from *Streptococcus thermophilus.* No coagulants were added.

Note: This is the earliest English-language document seen (March 2007) that uses the term "soybean cheese" to refer to a Western-style soy cheese. It is also the earliest English-language document seen (March 2007) with the term "soybean cheese" in the title.

Note 2. This is the earliest document seen (Jan. 2010) that mentions W.G. Thompson & Son (or Sons) Ltd. in connection with soybeans. Address: Dep. of Dairy and Food Science, Univ. of Alberta, Edmonton, Alberta, Canada.

890. Hang, Y.D.; Jackson, H. 1967. Preparation of soybean cheese using lactic starter organisms. II. Effects of addition of rennet extract and skimmilk. *Food Technology* 21(7):97-100. July. [5 ref]
• ***Summary:*** The starter organism was *Streptococcus thermophilus.* Curd from inoculated milk was cut, cooked, pressed and dried. Effects of acetic acid, calcium sulfate, rennet extract and skimmilk [skim milk] on cheese production were tested. Possible use of *Penicillium roqueforti, P. camemberti* or *Mucor* spp. as starter organisms is mentioned. Showed that a satisfactory soybean cheese could be prepared using a lactic fermentation with soymilk. Address: Dep. of Dairy and Food Science, Univ. of Alberta, Edmonton, Alberta, Canada.

891. U.S. Regional Soybean Laboratory. comp. 1967. Strain index for Uniform Tests 00 to IV, 1939-1966. *RSLM (U.S. Regional Soybean Laboratory Mimeograph, Urbana, Illinois)* No. 231. July. 39 p. Not for publication.
• ***Summary:*** Contents: Introduction, by Richard L. Bernard. Number of strains per test. Number of test locations. Named varieties. Experimental strains (Code letter, agency). Description and history of development of released varieties.

Examples of code letters and agencies: A = Iowa Agr. Exp. Station and U.S.R.S.L. CM = Canada Dept. of Agr., Morden, Mannitoba [Canada]. Cornell = New York Agr. Exp. Station. D = Selections made at Dekalb, Illinois, by C.M. Woodworth, Univ. of Illinois, 1939-40. FC = Forage and Range Research Branch, U.S.D.A. MM = Manchu (Meharry), Purdue University. O = Research Station, Harrow, Ontario. O = Central Exp. Farm, Ottawa, Ontario. OAC = Ontario Agr. College, University of Guelph, Guelph, Ontario. PI = Plant Introduction Investigations, New Crops Research Branch, U.S.D.A. UM = University of Manitoba, Winnipeg. The other Agr. Exp. Stations cooperating with the U.S.R.S.L. were: Purdue (Indiana), Delta Branch (Mississippi), Ohio, Kansas, Illinois, Minnesota, Maryland, Maine, North Dakota, Missouri, South Dakota, Nebraska, Delaware, Wisconsin.

"*In 1939 and 1940, Uniform Tests II, II, and IV were called Uniform Early, Midseason, and Late Tests, respectively" (p. 3).

History of released varieties: A-100 (1964). Adams (1947). Amsoy (1965). Bethel (1961). Blackhawk (1947). Chippewa 64 (1963). Clark (1952). Clark 63 (1962). Custer (1966). Disoy (1966). Ford (1958). Grant (1955). Hark (1966). Harosoy 63 (1962). Hawkeye (1945 & 1947). Hawkeye 63 (1962). Henry (1960). Kent (1960). Lindarin (1958). Lindarin 63 (1962). Madison (1960). Magna (1966). Merit (1959). Monroe (1947). Norchief (1954). Perry (1950). Portage (1964). Prize (1966). Ross (1960). Scott (1958). Shelby (1958). Traverse (1965). Wabash (1947). Wayne (1964).

Note: A soybean strain becomes a variety when it is named and released. Address: Urbana, Illinois.

892. Abraham, F.R.; Fisher, G.A. 1967. Soybean production: Production costs, returns and management practices in southwestern Ontario, 1957-59-65. Ontario, Canada: Ontario Dep. of Agriculture and Food, Farm Economics, Co-operatives and Statistics Branch. 33 p. Aug. (Ontario Farm Economics Studies). 28 cm.

• ***Summary:*** Contents: List of tables. Observations and comments. Introduction. The soybean crop in Ontario. Variations between years in soybean production costs and returns. Variation between producer groups in soybean costs and returns. The effect of management and production practices in soybean production. Soybeans compared with other cash crops in southwestern Ontario. Trends in soybean production costs by years in Elgin County, 1957-1965. Appendix. Address: Ontario.

893. Canadian Committee on Fats and Oils, National Research Council of Canada. 1967. Proceedings of the symposium on fats and oils situation in Canada–Present and projected. Ottawa, Ontario, Canada: Department of Industry, Food Products Branch. 61 p. Held 12 Oct. 1967 in Ottawa, Canada.

• ***Summary:*** This work contains ten papers by various authors. Two are directly related to soya: (1) Production of Vegetable Oils in Canada, by Dr. J.C. Woodward (Research Branch, Canada Dep. of Agriculture, Ottawa). Concerning soybeans: "Breeding projects are carried on at Harrow, Ottawa, and Morden. Emphasis is on early maturity and on protein and oil yields. With our current varieties and management practices, the soybean is a marginal crop in Eastern Quebec and Ontario. Similarly, in the Prairie provinces a few hundred acres are grown in Southern Manitoba and some interest is being shown around Tabor in Southern Alberta.

"My outlook is that we are more likely to succeed in tailoring other agronomically-adapted oilseed crops to compete with soybean oil and meal rather than in developing a soybean adapted to our climatic conditions. Thus I do not anticipate the promotion of the soybean from a minor to a major crop in Canada."

(2) Margarine (abstract of a paper), by Mr. W.E. Jackson (Standard Brands Ltd., Montreal). In 1966 some 145 million lb of edible oils were used to produce 181 million lb of margarine in Canada. "At present soybean oil is the major vegetable oil used in margarine in Canada... The type of oil used is based on quality and price. Soybean oil may be used as the standard to evaluate these factors." Address: Ottawa, Ontario, Canada.

894. Stefansson, B.R. 1967. Reply to questions re soybeans. In: Proceedings of the Annual Conference of Manitoba Agronomists. See p. 26. Held 19-20 Dec. 1967.

• ***Summary:*** "Attempts to grow soybeans on a commercial scale in Manitoba have been made intermittently during the last 30 to 40 years. Mature soybeans have been produced by several growers but yields have been low and significant commercial production has not developed. The principle reasons for low yields probably are climatic factors such as the short growing season, long day length during the summer, and relatively low temperatures especially in the early part of the growing season.

"The soybean is a short day plant. Consequently, the crop requires a longer time to mature in long than in short days. Varieties which will mature satisfactorily at Minneapolis, Minnesota may not even flower when grown near Winnipeg. Only the earliest group of varieties (Group 00) will mature in Manitoba. Consequently, growers are limited to relatively short, low yielding varieties...

"In Manitoba temperatures in the end of May and in June are much below the optimum required for growth of soybeans. Consequently, early growth is poor, the crop usually gets a slow start and weeds often get ahead of the crop. Several soybean breeders have searched for soybean strains which would grow more rapidly at relatively low

temperatures but only minor improvements have been found. Since there appears to be no prospect of major increases in yield (50 to 100%) through improved varieties or better cultural practices, I do not think that significant commercial production of soybeans is likely to develop in Manitoba." Address: Plant Science Dep., Univ. of Manitoba, Winnipeg, MAN, Canada.

896. Ontario Soya-Bean Growers' Marketing Board. 1967. A summary of board structure and marketing aspects. Chatham, Ontario, Canada. 6 p. 28 cm.
• ***Summary:*** In the early days of the soybean industry in Canada, marketing the crop was difficult and prices were unstable. "Because of such factors, growers could see beneficial results of a representative organization. After grower concern became widespread, a vote was held in 1949 for the establishment of a marketing board. The vote carried by a majority of over seventy per cent of the eligible growers and the Ontario Soya-Bean Growers' Marketing Board was in business.

"To represent some six thousand growers, directors were elected on the basis of six districts comprising Elgin as District 1; Essex, District 2; Pelee Island, District 3; Kent, District 4; Lambton, District 5 and Middlesex, District 6. Original membership of the local board consisted of eleven directors. Amendments to the Plan due to increased numbers of growers brought present membership up to fifteen directors representing about 10,000 growers.

"The Ontario Soya-Bean Growers' Marketing Plan, under which the board was formed, incorporated a negotiating agency and it is through this that growers have realized the greatest benefits. From its beginning, the board has concentrated its efforts on the area of marketing... Freight rates have been lowered, exports initiated and soybeans were brought under the Federal Agricultural Stabilization Act...

"Operation of the Ontario Soya-Bean Growers' Marketing Board is financed by licence [license] fee only. During the first year, the licence fee was one-half cent per bushel. In 1950 it was raised to one cent and remained there until 1960... In 1960, the fee was reduced to one-half cent per bushel." Address: Chatham, Ontario, Canada.

897. *SoyaScan Notes.*1967. Chronology of Arran Stephens: Early years in preparation for work with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part I (1944–1967). Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** The focus of Arran's life has been his spiritual practice; his work with food has taken an important supporting role as service to others. He has written his autobiography, published as *Journey to the Luminous: Encounters with Mystical Adepts of our Century* (Seattle, Washington: Elton Wolf Publishing. 1999. 380 p. with 70 black and white photos). An expanded version, titled *Moth & The Flame: Adventures with Spiritual Adepts of Our Time* is now available free of charge on the Web at www.ArranStephens.com.

1944 Jan. 6–Arran Blackburn Stephens is born in Duncan, on southeast Vancouver Island, British Columbia, Canada–at King's Daughter Hospital, about 10 miles from the family farm. He is the youngest of three brothers, the others being John Rutherford Jamieson (Gwen's son from her first marriage. John was born on 20 Sept. 1931 in New Zealand, the son of William John Jamieson, a New Zealand sheep farmer) and Godfrey (born on 28 Oct. 1939). Arran's father, Rupert Edward Cripps Stephens, was born on 4 April 1896 in or near Plymouth, UK. Arran's mother, Gwendolyn Minnie Elise Hopkins was born on 4 Nov. 1909 in Kent, King Co., Washington. Arran's parents run Mountain Valley Farm, the family farm of 89 acres of hard living they inherited from Rupert's father; there they grow field berries. Rupert had been a captain in World War I and saw some brutal action in Belgium and Germany; he would never talk about it. Rupert's father, "Surgeon Commander, Dr. Harold Frederick Dale Stephens," was in the Royal Navy and saw action in the Boer War in South Africa. Arran's paternal grandmother (his father's mother), Agnes Grace Cripps, daughter of Lieut.-General J.M. Cripps and Agnes Grace Cripps, had been born in about 1857 in Peshawar, in India's North-West Frontier (in today's Pakistan). Agnes married Lt. General J.M. Cripps, who had lived in colonial India from 1839 to 1878. General Cripps wrote a book titled *Recollections of My Indian Career,* illustrated with 25 exquisite original watercolors by his wife, Agnes. Aaron later wrote: "In my child's mind's eye, India's mystery beckoned, like a distant voice from a faded dream."

At Mountain Valley Farm, the Stephens family lives in a "hand-hewn log-house, overlooking the Goldstream Valley," surrounded by natural beauty, a waterfall, and wilderness.

1947–When Arran is age 3, the family sells Mountain Valley Farm and moves to Goldstream, about 40 miles south, closer to Victoria, where they wrest Goldstream Berry Paradise farm from the forest. Arran's parents have renounced modern chemicals and mechanization, finding simple, economical methods (such as sawdust mulch and earthworms) to strengthen soil fertility and the health of plants, Rupert's credo is: "Always leave the soil better than you found it." They establish a roadside "berry stand" from which to sell their berries and other produce directly.

1951–Rupert's treatise *Sawdust is My Slave,* is published extolling the methods he had discovered. When not working the land, Rupert wrote the lyrics for hundreds of songs, poems, and articles.

1955–After attending a Christian Bible camp Arran's interest in God begins to awaken. He feels called to the ministry. His dad takes him to a pristine forest behind their farm and tells him: "Arra-boy, this is our church; this is our cathedral."

1957 Jan.–The family (with Arran age 13) sells the farm (Goldstream Berry Paradise) and moves from Vancouver Island to Southern California. "The songwriter in Rupert's heart was restless for fame and Hollywood." The family settled in a "rented palm-shaded hacienda in the Hollywood Hills." Arran quickly learned to his dismay that violent gangs controlled the schools and streets. This urban concrete jungle was a different world.

1959–At age 15, Arran's "secure, trusting world abruptly ended: mum and dad separated" (temporarily). Brother "Godfrey roared off on his Harley motorcycle for New Orleans [Louisiana] and high adventure;" he later became a renowned artist. Confused and desperate, Arran decided to become an artist and poet. He encountered the Beat generation and the counterculture of the 1960s.

1961–Arran (now 17) has one of his poems published in the *Mendicant Poetry Journal.* He struggles to navigate the psychedelic 1960s, becomes a spiritual seeker, reads books of many spiritual traditions, meets Eden Ahbez, the first vegetarian he had ever met, "part of a handful of health and fitness devotees from the Hollywood Hills, including well-known Gypsy Boots and Al Jacobson. But every hope, each oasis, turned into an empty mirage." "Often broke, I slept on the beach, drunk or high on cheap wine or high on drugs, sometimes crawling into a cardboard box to mitigate the winter cold. When hungry, I ate discarded food or begged. When I could I painted. Misery was my companion,... a course which took but two years to break mind, body, and spirit." By age 17 he "was a haggard alcoholic and drug-dazed atheist railing against the Author of pain." One day he tried to end it all in the Ocean waves off Venice Beach in California. But after a momentary experience of serenity, he pulled back from the brink.

Then he heard of a monastic retreat named Fountain of the World in the hills above smoggy Los Angeles. One week after his arrival he had an experience that profoundly changed the course of his life. During an evening group Concentration, he experienced brilliant light and "intoxicating waves of Unconditional Love... This was my first taste of a state of Reality–something beyond the senses; something beyond intoxication; perhaps something I had always been blindly hoping and groping for." Similar experiences returned repeatedly but were not encouraged by his fellow monastics. After two months, and increasing pressure to "renounce the world and become a full-fledged monastic brother," he decides to leave.

1963–In San Francisco, Arran experiences how this spiritual light can miraculously save the life of a person about to be run over by a bus. He "never hesitated to investigate any teacher, religion or teaching." "From 1961 to 1964, with one or two exceptions, the springs of Divine Light all but dried up as this prodigal profligate wandered and squandered the spiritual capital we all come into the world with."

1964 April–Arran's parents, now back together, move back to British Columbia from southern California. They now live in Victoria on Vancouver Island.

1964–Arran (now 20) has several one-man shows of paintings under his belt. He leaves San Francisco for lovely Mendocino County, then, en route to Tangiers, he arrives in New York's Greenwich Village–almost broke. He paints and reads spiritual books. After a two-year lapse he starts daily sitting meditation again. Many brief and isolated inner experiences of light and peace lifted him "above an otherwise sordid existence." Craving discipline and order, he joins a group and for 9 months studies Gurdjieff whose "principal teaching was that we are all 'asleep,' and must awaken in a higher sense through various esoteric practices, including self remembering and sacred dance." He earns money at odd jobs, including as a waiter in a macrobiotic restaurant, the Paradox (owned by Richard Lane). Arran becomes interested in the vegetarian aspect of macrobiotics. He recalls (2006): I "largely ate macrobiotic for years at a stretch, but I also experimented with various diets, such as vegan, mucusless (Arnold Ehret), fruitarian, raw foods, and some fasting." But increasingly he yearns to meet a living perfect master and experience mystical union with God. After reading about Sri Ramakrishna, he gives up his bad habits and returns to being a vegetarian.

"From 1964 to 1965 my life revolved around art and the inner quest. One day, when shown photos of Hazur Baba

Sawan Singh (1858-1948) and his disciple, Kirpal Singh (both great Sikh masters), and given a book by the latter, he is deeply moved. When he learns that Kirpal Singh is alive, he knows has almost found what he has been looking for. Meeting the Master in person became his passion. He writes Kirpal Sing (in India) asking for initiation.

1965 March 28–Arran receives a written reply, with instructions. "I was accepted for initiation... My feet were on the Path at last." He meditates, keeps a diary, and writes questions to his Master. Written answers return. He returns to Vancouver and opens the East West Gallery, eager to save enough money to go to India.

1967 Jan. 20–He departs for India, welcomed by his Master. He stays at the Master's Sawan Ashram, in Shakti Nagar, near Delhi, and has many wonderful experiences, beautifully and humbly described in detail. Most important are love, attending satsang, practicing meditation, not creating either bad or good karma, and weeding out personal shortcomings. Part of the practice is to eat a vegetarian diet and avoid all intoxicants. After exactly 7 transforming months in India he returns home. "Before leaving India, the Master authorized me to begin work as his representative in Western Canada." Continued. Address: Vancouver, BC, Canada.

898. *SoyaScan Notes.*1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part II (1967–1971). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** Continued: 1967–Arran begins his first food business when he starts the Golden Lotus restaurant at 2936 West 4th Ave. (at Bayswater), Vancouver. Serving natural, vegetarian and macrobiotic foods, it is the city's first vegetarian restaurant. Before he left India, his Master had encouraged him to take up this "right livelihood" and promised to extend "all feasible help, both inside and outside." A place was found and the necessary money appeared as if by magic. Most of the workers were spiritual seekers. All lived upstairs, above the restaurant.

Arran was one of the cooks; he had learned how to cook brown rice, veggies, hijiki, wakame and miso soup while working as a waiter at the Paradox Restaurant in New York City in 1964; he learned the rest by trial and error, including the use of macrobiotic and vegetarian cookbooks such as *Vegetarian Cookery,* by Pietro Rotondi, and (later) *Ten Talents* by Frank and Rosalie Hurd.

"Amazingly, the rather monastic rules–including regular meditation and celibacy–were accepted and enthusiastically followed. In the communal setting, all worked without pay for the first 9 months. "Before the year was out, bills and loans were entirely repaid and all began receiving hourly wages, benefits, room and board. The numbers attending our weekly satsangs outgrew the upstairs, and the venue shifted downtown to the YMCA." One photo shows Arran standing in front of the Golden Lotus restaurant in 1968 and another standing inside in 1969.

1968 Oct.–Arran and three others return to India to be with Master Kirpal Singh, having received his written permission. On the way they visit Ram Das (the former Richard Alpert) who was in retreat at his father's large New Hampshire estate. In India Arran lives close to Kirpal Singh. The Master will not initiate those who beg for food, only those who earn an honest living.

1969 March 4.–Arran, with the Master's blessing, marries an Indian woman, Rattan Mala Bagga, age 22, in a traditional Sikh marriage. She comes from a good family, has an M.A. degree, and is a lecturer at a girls' school in Moradabad. The Master, who changes her name to Ratana ("jewel") encourages family life and the tender bonds of matrimonial love and responsibility.

1969 April–Arran and sari-clad Ratana return to Vancouver, Canada, after nearly 6 months in India. He has changed from ascetic to householder. They settle into a little room above the restaurant, sharing a bathroom with 14 others and working, on average, 12-16 hours a day to get

the restaurant firmly established. In May and December, Kirpal Singh writes with wise advice. As a result: "In three months we saved $1,000 to make a down payment on a little two-bedroom house with a garden. Ratana was already pregnant with our first child, and we had had our fill of communal living."

"Considerable agitation began among the more left-leaning workers to turn the Golden Lotus into a commune. After a lot of soul-searching, we decided to make a clean break, and sold the restaurant to the group for a paltry $3,000, wishing them all success." Soon after the Golden Lotus restaurant became defunct.

1970 Jan.–Arran opens a little store named Jyoti Importers and Natural Foods at West 4th Ave., near Yew Street on the same street as the Golden Lotus, but on top of the hill. He sells "Indian bedspreads, clothing, classical musical instruments, and healthy and organic foods. Food soon edged out the other wares. It became obvious that my destined vocation was connected to organic foods and wholistic living." After several years of growth, the business moves into a much larger building at 1813-1817 West 4th Ave., a corner location and opens as Lifestream Natural Foods on 1 Jan. 1971. Then Lifestream expanded to a second store on Broadway at Traflagar (See: *Shared Vision* 1990, p. 9).

1970 April 4–Arran and Ratana's first child is born at St. Paul's hospital in Vancouver by natural childbirth. Master telegrammed. "You may name the baby Shanti" (the ancient Sanskrit word for "peace"). Note: All the Stephens' children were born at this same hospital. Arran writes: "I was present at the miracle of each birth. On the birth of two of our children, Ratana was blessed with the vision of our Master, and she also experienced great light within."

1970 spring–On an impulse, Arran gives half of his business, Jyoti, to Peter Harwood, his friend and fellow disciple of Kirpal Singh; Peter becomes a working partner.

1970 June–Arran attends the founding meeting of Organic Merchants (OM), held outdoors on the side of Mt. Shasta. Lifestream becomes one of the founding members. OM was the first trade association for natural food retailers on the West Coast and the first organic trade association. Arran also remembers OM meetings at Blake Rankin's, at Lifestream, and at Pajaro Dunes.

1971 (1990 Shared Vision article says Lifestream opened 1970 Jan. 1). Jan. 1–Arran opens Lifestream Natural Foods in Vancouver, British Columbia, Canada, just north of the U.S. border, at 1813-1817 West 4th Ave. (at Burrard). It is Canada's first large natural foods retail store. His father suggests the name. "Free fresh carrot juice drew in crowds; an electric powered 20-inch stone-buhr mill, visible through a window from the street, ground tons of fresh whole-grain flour every day; alfalfa sprouts were grown in our nearby warehouse / factory; fresh nut butters were roasted and milled to order; natural candy bars and cookies were extruded and baked; egg-free cakes and muffins popped from the ovens; pies, crunchy granola, bulk foods, and wholesome artisanal breads were baked and sold by the hundreds. These were all firsts in Canada." The inspiration came from many sources, but was not macrobiotic. The Lifestream brand was represented by a woman gathering sheaves of wheat into a basket. "Teachers brought classes of school children on tours to see how wholesome foods were made. The store became so busy that it was often difficult to wade through the crowds of shoppers and hangers-on... Sales doubled every year for seven years, and the business quickly branched out into wholesale distribution."

1971 or 1972–A separate small vegetarian restaurant, named Mother Nature's Inn (MNI) was started as a *separate* business in the rear of the large retail store (on West 4th Ave.) by Victor Yankowich,..." But after about a year MNI was purchased from Victor (for a pittance) for Ratana, who showed her business skills by running it very successfully and profitably. The company's best-known products are its line of Essene sprouted grain breads–moist, heavy, and delectable.

1972–Lifestream opens its own Bread of Life bakery (100% owned by Lifestream) in North Vancouver because of the area's scarcity of organic and natural baked items. The original Lifestream Essene Bread, developed by Arran at that bakery, was one of the Lifestream's first baked products. Essene Bread was always made with organic grain–from the Alvin Scheresky and David Orchard organic grain farms in Saskatchewan province.

A 1971 color photo shows Arran, smiling, holding a loaf of Essene Bread.

1971–At about this time Lifestream Natural Foods Ltd. moves to 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

This was a combination headquarters, warehouse, manufacturing and packaging facility. It housed a flour mill, alfalfa sprout operations, nut butter operation, tamari nut roasting and packaging, plus packaging a wide range of organic grains, beans, nuts, seeds, flours, etc. When this facility opened, the only other Lifestream operation was the retail store.

1971–Since there was a scarcity of natural and organic foods, Lifestream began to do wholesale distribution. Frank Ford, founder of Arrowhead Mills in Texas, appointed Lifestream as distributor in Canada for the entire Arrowhead Mills' range of organic grains, beans, flakes, hot cereals, and flours. Hundreds of products were developed and marketed under the Lifestream brand: Breads, other baked goods, fruit & nut-based energy bars, juices, trail mixes, tamari roasted nuts and seeds, preserves, yogurt, granolas, mueslis, sprouts, soyfoods, expeller-pressed oils, and a wide range of imported Japanese macrobiotic products. During the 1970s Lifestream's profits came from a blend of manufacturing, wholesaling, and retailing–but not even the accountants knew what percentage of the total came from each of these activities. Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

899. *SoyaScan Notes.*1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part III (1972–1980). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1972–A third partner, Louis Kiraly, joins Lifestream; he, too, is a disciple of Kirpal Singh. Louis contributed part of his outside job wages to help support the business during the first year. The three partners become equal owners of the company, which was incorporated at about this time as Lifestream Natural Foods, Ltd.–a limited corporation.

1972 Nov.–Sant Kirpal Singh visits Vancouver on his third world tour. He visits Arran and Ratana's home, and encourages Arran to build Lifestream into a large, successful business. Doing such service need not interfere with his spiritual practice.

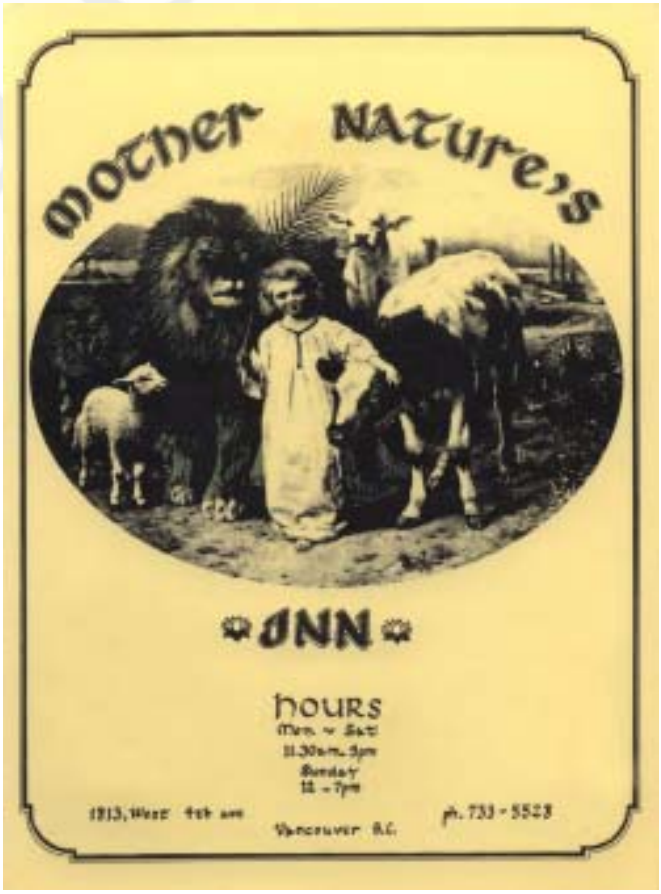
1972-73–Lifestream starts importing products from Muso Shokuhin (macrobiotic) in Japan. Blake Rankin and George Gearhart of Janus Foods in Washington state were good friends of Arran's. Their two companies did not compete. Canada had its own packaging regulations and Lifestream developed a complete line of Japanese products under the Lifestream brand for Canada.

1973 Feb. 1–The Stephens' 2nd child is born; the Master names her Gurdeep (Lamp of the Lord). Oct. Arran and Ratana, with both children, make another pilgrimage to India. One day "Yogi Bhajan, the founder of the 3HO Society, arrived at the ashram with a large retinue of Sikh followers. Yogi Ji was of gigantic stature, with a big black beard, flowing robes, jewelled rings, necklaces, and a commanding personality." The Stephens attend Kirpal Singh's 80th birthday on 6 Feb. 1974 then they return to Vancouver.

1974 Aug. 21–Sant Kirpal Singh returns to the Source, leaves his body (dies). Arran immediately flies to India, and arrives in time to see his Master's body cremated on a funeral pyre at Kirpal Bagh in Old Deli, a few miles from the Yamuna River. Bereft, he stays for about a month, searching for the Master's successor, then finally returns home–the succession enigma unresolved. He tries to return to being "a successful businessman responsible for more than a hundred employees, a devoted husband and father, etc." But for the next two years he is torn by the pangs of separation.

1974–Arran and Ratana buy 2 acres of land and a ranch house on Panorama Ridge, Surrey, BC, out in the country, about 15 miles southeast of Vancouver. They move there from their little house in Vancouver, work with others to build an ashram for those interested in Kirpal Singh's practice, and they live there for the next 5 years.

1974 Nov.–Lifestream is a member of the Natural Foods Distributors Assoc. (NFDA).



Desserts

Juices

Teas

1974–A 4-page menu (black on yellowish-tan paper) from Mother Nature's Inn this year still exists, along with a black-and-white photo of Lisa serving food in the restaurant.

1974 or 1975–Lifestream starts to lease space at 12411 Vulcan Way, Richmond, BC; it was converted from a pet food factory to completely vegetarian use. Here Lifestream operates its bakery and wholesale distribution; this continues until 1981.

1976 Jan.–Lifestream is still distributing products imported from Muso Shokuhin in Japan.

1977 July 23–A third child and daughter, Jyoti, is born in Vancouver.

1977 July–*The Lifestream Cookbook* is published by Lifestream (58 p.).

1978 June–Lifestream is now located in Richmond, BC, Canada V6V 1J7.

1978 Oct.–Arran and his family (wife and 3 children) return to India; he is still torn by the succession question. At first he tentatively but sincerely comes to believe that the "Desert Baba" in western India was Kirpal Singh's true successor; he shares his belief with other Kirpal Singh initiates. On Nov. 5 and 6 he realizes (to his immense relief and embarrassment) that Darshan Singh, Kirpal's eldest son, is his true successor and mystically one with his father. "The successor will bind you to your Master and not to himself."

1978 Dec.–When Arran returns from India he receives a letter (which he still has) which basically excommunicates him from the community of initiates and from the Ashram in Surrey, BC, which he and Ratana had helped to motivate, build, and finance. One of his partners at Lifestream could not handle the fact that Arran was no longer a follower of the "Desert Baba" any more, and soon that partner left to go see him in India. The advice he received in India was not helpful for his relationship with Arran, and soon he began a program of systematic non-cooperation with Arran in the business. The third partner remained fairly neutral and would not take sides. Yet it is soon clear that the Lifestream partnership has become unworkable. Yet as president, Arran has most of the responsibility. He was the first to arrive at work each day and the last to leave. And there were other inequities. The bank had only Arran as a secured creditor, yet the three partners were paid equally. Lifestream was always profitable, but the rapid growth meant tight cash flow. With no clear leadership at the top of the company, the Lifestream partnership begins to unravel.

1979 early–Arran and family move from their former community in Surrey, BC, in the "country back to the city, drawn to a gracious old house in a quiet neighborhood,

surrounded by a high-hedged secluded garden." They live and raise their family in this house for the next 23 years.

1979 April–Arran returns "alone to India for 3 weeks, to fortify and deepen my connection to the Divine working through Darshan, the poet-saint."

1979 Sept.–Fourth printing of *The Lifestream Cookbook;* it eventually sells over 100,000 copies. The company is now at 12411 Vulcan Way.

1979–Lifestream opens a big Lifestream Natural Foods retail store (#2) at 2582 West Broadway in Vancouver. On the 2nd floor above this new store, Woodlands Natural

Restaurant (vegetarian) opens. However the restaurant, owned by Ratana and Arran, is kept separate from Lifestream. The original Lifestream retail store at 1813-1817 West 4th Ave. continues to operate at its original location. A photo shows the Lifestream crew in about 1980.

1980–"Annual sales of Lifestream brand products reach $9 million, making the line one of Canada's leading natural food brands." Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

900. *SoyaScan Notes.*1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part IV (1981–1989). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** Continued: 1981–Annual sales of Lifestream brand products jump to a record $12 million, and there are about 100 employees. All the retail sales and sales of Lifestream's distribution company are in Canada. However, the majority of Lifestream's Manna Bread, natural energy bars, and organic baked goods are in the USA. An estimated 25% of Lifestream's total sales were in the USA to wholesale distributors.

1981–Arran refuses to co-sign a bank loan for Lifestream, in an attempt to resolve partnership problems at Lifestream, by trying to force his disaffected partner to either buy his shares at a price for which Arran was willing to sell them, or to let Arran buy his shares at the same price. But the disaffected partner refuses to sell his shares to Arran, and he doesn't have the means to buy Arran's shares. The third partner wouldn't decide one way or the other. Parshan Sahota, an Indian man, owns 8% of the shares; a hardworking, loyal employee, he had $60,000 to invest, an amount calculated to equal 8% of Lifestream's shares. Parshan is now operating a successful Lifestream distribution operation out of Ontario, is behind Arran all the way (he is not an initiate), however even with his support, Arran does not have the requisite 51% ownership or backing to gain control of the company. Despite the company's success, the only alternative at this point is to sell to an outsider. Arran and Ratana do not want to sell the Lifestream baby, as they felt very much identified with it. This is a painful but valuable lesson for them. A buyer is found.

1981 July or Aug.–Lifestream is reluctantly sold to a holding company controlled by investment bankers Gordon Byrne and David Mindell. They hire Arran to remain as president, but renege on a promise to give him back 10% of the company, so he resigns as president by the end of August. He recalls that they effectively cheated him out of approximately $200,000 in the technicalities of the sale. Several months later, on the advice of a seasoned attorney, Hyma Altman, Arran decides to seek legal recourse for the recovery of the promised 10%; the defendant settles out of court. Gordon sells his shares to David Mindell and they hire an ex-executive of a large consumer goods firm to run the company. Under the new ownership, Lifestream has difficulties in the marketplace and labor problems at the stores, which they sell or close.

After Arran resigns from the company, he goes back to work at Woodlands Natural Foods (the family restaurant business), and abides by a 3-year non-compete agreement which restricts him from going into retail, wholesale, or manufacturing.

1981 Aug.–Nabob Foods (Canada's #2 brand of coffee) buys (from David Mindell) the much weakened Lifestream manufacturing operation at 9100 Van Horne Way, Richmond, BC. Nabob invests heavily in the Lifestream brand.

1981 Oct. 11–Arjan, the Stephens' fourth child and first son, is born–on Canada's "Remembrance Day." Arran recalls: "From early ages, our kids worked for hourly wages at our various enterprises, as they wanted spending money. We told them that if they wanted money, they needed to earn it, and learn valuable life skills along the way."

1981 to 1985–During these three years when his non-compete agreement was in effect, Arran helped Ratana at the Woodlands vegetarian restaurant. He recalls: "She was the heart and smarts behind the restaurant operation. I was the builder, the Don Quixote, tilting at Windmills. I did wait on tables, chop vegetables, clean toilets, sweep the parking lot." Using the initial large restaurant at 2582 West Broadway as a central bakery and commissary, they supply the old Mother Nature's Inn–still there in the back of the original Lifestream store (it is a tenant of the store), convert it to a Woodlands, and open and supply two additional Woodlands restaurants and stores in Vancouver (permitted in the non-compete agreement). Arran continues: "But it was very difficult to keep it all organized and profitable, and the world load was excessive. Ratana had the three daughters and now out newborn son to look after, plus she helped out with the main restaurant. She was the real hero that kept it together. The various Woodlands satellites were becoming increasingly difficult to manage properly and cash flow was in a dangerous position We decided to sell off the two outlets at a loss, and contracted back to the two original, profitable restaurants. But now we did have a nice bakery built in the back of Woodlands on Broadway, and it was out of this little bakery [in 1985] that we began Nature's Path Manna Bread."

1982 July–Lifestream is selling (and perhaps making) Vegi-Patties, which are meatless burgers made with textured soya flour and wheat gluten.

1985 Jan.–Arran Stephens founds Nature's Path, Ltd.–supported by Ratana and her restaurant–and launches the company's first product, Manna Bread, at Natural Products Expo West. As a limited corporation (an "Ltd."), Nature's Path takes in over 20 small investors, but this becomes

unwieldy, and the investors have very high expectations. So Arran and Ratana buy back the shares at cost plus interest.

1985 end–Nature's Path soon outgrows the Woodlands and moves to a much larger leased building on Simpson Road in Richmond, BC. Ratana continues to profitably manage Woodlands, while Arran works very hard to establish the Natures Path bakery. Arran would drive a truck each week, loaded with bakery products, all the way down to Portland, Oregon, making store deliveries. There were difficulties with the fresh bread, however, as most stores wanted guaranteed sales, and the stale bread returns were sometimes unbelievable. Yet Manna Bread was the staple seller. Arran then "shifted emphasis toward more shelf-stable organic bakery products, and introduced a line of sprouted, organic breakfast cereals under the Manna / Nature's Path banner."

1988 Feb.–Arran makes his tenth pilgrimage to India. "Weary of our ups and downs in business, Ratana urges me to ask Master [Sant Darshan Singh] for his advice to help set my feet firmly on the path to consistent profitability." Very humbly and graciously Darshan gives three basic principles: (1) "Keep to quality. Quality should never be sacrificed either for quantity or money. Be honest." (2) "We should expand our business to the extent that we can control it personally." No more. (3) "We should be progressive, do our best, and make the most of our business, but not be too ambitious. Be very cautious–expansion is very easy; retreating is very difficult. We should be contented with whatever the Master blesses us." Arran deeply appreciated the wisdom of this extemporaneous and free advice. He later recalled: "Sales began to take off. We then started effectively competing with Health Valley, Lifestream, Arrowhead Mills, Erewhon and others. It was a lot of fun, and the growth was explosive."

1988–"Multigrain, Multigrain 'n Raisin, and Millet Rice are the very first Nature's Path cereals. All are still for sale today." Continued. Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

901. *SoyaScan Notes.*1967. Chronology of the work of Arran Stephens with natural foods, vegetarianism, and Lifestream Natural Foods Ltd. (Vancouver, then Richmond, BC, Canada). Part V (1990 on). 24 Sept. 1992. Compiled by William Shurtleff of Soyfoods Center.

• ***Summary:*** 1989–The Lifestream store at Broadway is sold and becomes Kitsilano Natural Foods. But Arran and Ratana Stephens continue to own the Woodlands vegetarian restaurant upstairs at this location.

1990 Nov.–A nice article (with 3 portrait photos) about Arran and Ratana, Lifestream, Woodlands, and Nature's Path appears in *Shared Vision* magazine in Vancouver. Nature's Path is located at 7453 Progress Way, Delta, BC V4G 1E8. Ratana continues to run Woodlands vegetarian restaurant at 2582 West Broadway in Vancouver. Arran discusses the great importance of staying true to one's vision, spiritual practice, and principles.

1991–Arran now owns a company named Manna Milling, which is a very big purveyor of natural cereals in Canada and the USA; their brand name is Nature's Path. Lifestream had an eastern branch in Toronto, named Lifestream East, which then became LifeSource, which is now run by Parshan Sahota (see above), who now owns a remnant of what used to be Landstrom.

1992–Ratana leaves Woodlands vegetarian restaurant to help Nature's Path full time as chief operating officer (COO).

1993–Nabob Foods is purchased by Kraft Foods / Phillip Morris.

1994–Kraft approaches Arran and offers to sell him Lifestream, since Nature's Path was seriously trouncing Lifestream in every market. Lifestream had shrunk dramatically and was losing near $2 million per year. Arran offered to pay Kraft the value of Lifestream's assets, but Kraft rejected this offer with the comment, "This company is worth three times what you are offering. Six months later the Kraft attorney called again, saying that they were prepared to accept Arran's offer. Arran replied, "My offer just dropped."

1995–Arran and Ratana finally purchase back the assets of Lifestream from Kraft–14 years after they were forced to sell it. Their objective was to restore the LifeStream (new spelling) brand and real estate, but not necessarily the manufacturing, as Nature's Path already had a state of the art cereal processing and baking facility at 7453 Progress Way, in nearby Delta, BC. So Nature's Path closed the old Lifestream facility (at 9100 Van Horne Way, Richmond, BC), consolidated its usable assets in their Delta plant, then leased out the building on Van Horne Way. It took nine months to reverse Lifestream's losses.

1995–Nature's Path opens up a large plant in Blaine, Washington state (USA).

1995–Ratana and Arran sell Woodlands (formerly Mother Nature's Inn) to Ratana's sister, in order to be able to devote their full attention to Nature's Path. Arran: "Woodlands was highly profitable and provided a much-needed service to the community. Sales from the West Broadway restaurant were over $1,000,000 per year. It was common to experience line-ups at Woodlands for every lunch and dinner. It had a wonderful atmosphere, but with the great growth and potential of Nature's Path, we couldn't handle the restaurant as well as Nature's Path, which led to the decision to sell it."

1996-2002–Arran serves on the board of the Organic Trade Association (OTA).

2002–Arran and Ratana purchase and move to their current house, named Shalimar, on 2.2 acres of land near the University of British Columbia, overlooking the water, the rain forest, and a canyon. There they developed a reflecting

pond, a large and gorgeous organic garden (both foods and ornamentals) and a fully-equipped cabin for guests.

2004–Nature's Path is now North America's largest certified-organic cereal company.

2004 May. *Natural Foods Merchandiser* (p. 29), in an article titled "25 who championed a cleaner plate," one in a series of articles celebrating the magazine's 25th anniversary, honors Arran as a pioneer–and shows a nice color portrait photo. He has been in the natural foods industry for 37 years. At age 23, he owned Canada's first vegetarian restaurant, the Golden Lotus. One challenge was transforming himself from a recluse to a professional leader and entrepreneur. He would like his epitaph to read: "Nurturer of people, nature and spirit."

2006 Feb. 1–Nature's Path Baking Inc. opens in Mississauga, just east of Toronto, Ontario, Canada. Arjan Stephens (the son) is the overall manager of this leased 36,000 square foot organic toaster pastry plant. A very bright young man, also devoted to the spiritual path, he earned his MBA in 2005 from the Stuart School of Business, Chicago, Illinois. Before he could finish his law degree, Arran asked him to help with the family business. 2006 July–The great majority of Nature's Path production is from the facility at Blaine, Washington (USA), with this plant and the one in Delta, BC, operating 24 hours a day, 7 days a week (24/7). Arran adds: "Nature's Path currently owns and operates more than 400,000 square feet of buildings and leases the 36,000 square foot plant in Mississauga. We are now looking at a very interesting opportunity in the Midwest for a new plant and distribution center, that will significantly reduce miles traveled. For example, most of our production currently takes place in the Pacific Northwest, but half of our business is east of the Rockies. Much of our grain supply comes from east of the Rockies. By locating an additional plant in the Midwest, in the middle of the Grain Belt, we can more cost effectively produce and deliver for all markets east of the Rockies. The freight savings alone will be in the millions annually. With the soaring costs of the fossil fuel economy, we have to do everything to reduce energy consumption and move as quickly as possible to renewable, greener energy. Our goal as a company is to be zero waste by 2010 and climate neutral by 2020. Of course, this can only happen by creating significant carbon offsets. We already have been doing this to some extent by supporting sustainable, organic agriculture, but we have a long way to go to create the offsets for fuel and energy consumption."

"My diet for decades now has consisted of whole grains, vegetables. fruits, nuts, seeds, beans, and small quantities of organic dairy. I haven't eaten meat, fish, fowl or eggs or anything containing them since 1964, and at 62 am quite healthy and vigorous."

Note: This is the earliest document seen (Feb. 2010) concerning Arran Stephens, Lifestream Natural Foods, or Nature's Path Foods, Inc. (British Columbia, Canada). Address: 724-26 W. 6th Ave., Vancouver 9, BC, Canada.

902. U.S. Regional Soybean Laboratory. comp. 1968. The Uniform Soybean Tests, northern states, 1967. *RSLM (U.S. Regional Soybean Laboratory Mimeograph, Urbana, Illinois)* No. 233. Feb. 151 p.
• ***Summary:*** Near bottom of title page: "United States Department of Agriculture. Agricultural Research Service. Crops Research Division, cooperating with State Agricultural Experiment Stations."

Contents: Soybean investigations personnel (in the Soybean Investigations, Oilseed and Industrial Crops Research Branch–mentioned for the first time as part of the Crops Research Division, ARS). Uniform Test participants (43 names and addresses, incl. 2 in California, 1 in Iowa, 5 in Ontario, Canada, and 2 in Manitoba, Canada). Introduction. Methods. Uniform test locations. Uniform test 00. Preliminary test 00. Uniform test 0. Preliminary test 0. Uniform test I. Preliminary test I. Uniform test II. Preliminary test II. Uniform test III. Preliminary test III. Uniform test IV. Preliminary test IV. Identification of parent strains. Growing conditions. Weather maps.

A map, facing the table of contents, shows the locations of the Uniform Soybean Tests, Northern States, 1967.

New varieties released: Corsoy (July 1967). Verde (1967). Address: Urbana, Illinois.

903. Jogarathnam, T. 1968. Marketing soybeans in Ontario. M.S.A. thesis, Ontario Agricultural College, Guelph, ONT, Canada. June. *
Address: Canada.

Ottawa, Ontario, Canada: Department of Industry, Food Products Branch. 90 p. Presented at the Annual Conference of the Canadian Institute of Food Technology, June 9-12, 1968, Banff, Alberta, Canada.
• ***Summary:*** Contents: Introduction, by Bernd Weinberg. Margarine manufacture and quality standards in Western Europe, by Dr. K.F. Gander (Technical Director, Margarine Union, Hamburg, Germany). Margarine manufacture and quality standards in Canada, by R.J. Sweeney (Manager, Quality Control, Kraft Foods Ltd., Montreal, Quebec, Canada). The technical application of vegetable oils in the more recent substitute dairy products, by I.C. Graham (Industrial Food Products Research Supervisor, Procter & Gamble Ltd., Hamilton, Ontario, Canada). Manufacture and quality of dairy substitutes, by H.D. Hamilton (Technical Director, Drew Chemical Corporation, Boonton, New Jersey). The nutritional significance of fats in our diet, by D.M. Hegsted (Department of Nutrition, Harvard School of

Public Health, Boston, Massachusetts). Address: Ottawa, Ontario, Canada.

905. Ontario Soya-Bean Growers' Marketing Board. 1968. The Canadian soybean industry "in summary" for review by: The Honourable H.A. Olson, Minister of Agriculture. Chatham, Ontario, Canada. 7 p. Aug. 19. 28 cm.
• ***Summary:*** Contents: Introduction. Production. Growers. Consumption. Prices. Factors in the U.S. (incl. P.L. 480 export program which assists U.S. producers in disposing of large volumes of soybean oil). Assistance (history of stabilization board price support, which began in 1958 at $2.10/bushel and was discontinued after 1964). Average price. Average yield. Conclusions. Six recommendations. Address: Chatham, Ontario, Canada.

906. *Soybean Digest.*1968. Certificates of meritorious service. Sept. p. 23.
• ***Summary:*** Contains a description and photo of each of the following men who have worked to help soybeans in America: (1) Dr. C.E. (Chuck) Caviness of the University of Arkansas. (2) Maynard Speece of Minneapolis, Minnesota. (3) Ken A. Standing of Blenhein, Ontario, Canada. (4) Kent Pellett of the American Soybean Association, Hudson, Iowa. Pellett has been a member of the ASA staff since 1942, as managing editor and editor of the *Soybean Digest.*

A photo, titled "Long-term service," also shows ASA president Harris Barnes recognizing two long-term retiring board members: Glen Myers (9 years) and David G. Wing (28 years).

907. *Soybean Digest.*1968. Canadian growers' problems. Sept. p. 82.
• ***Summary:*** A meeting "regarding critical problems facing Ontario's soybean growers" was held on 19 August 1968 in Ottawa according to the Ontario Soya-Bean Growers' Marketing Board. "The meeting involved K.A. Standing, secretary-manager of the Board, and grower officials with H.A. Olson, Canadian Minister of Agriculture.

"The Board officials noted that there had been little expansion of soy bean acreage in Canada for over 10 years. They said this was due to a combination of factors including ineffective research, increasing cost of production, inadequate price stability at reasonable profit levels, and the effects of inadequate import policies involving the whole oilseed and edible oil industry."

"The Ontario Growers' Board in July had asked the Agricultural Stabilization Board for a price support of $3/bu. The officials noted, 'with an expected average yield of not more than 28 bu/acre in 1968 and a price of not more than $2.50/bu, Ontario soybean growers will be fortunate to realize $5/acre net profit' at present costs of production."

908. Photograph of Dr. Sven Holmberg in Oct. 1968 in Fiskeby, Sweden, standing in a field of soybeans he had bred and raised. 1968.
• ***Summary:*** This digital image, made from a color slide, was sent to Soyfoods Center in Jan. 2010 by Dr. Harvey Voldeng, a plant breeder at Agriculture Canada in Ontario.

The photo was taken by Dr. Lorne Donovan (who was a corn and soybean breeder at the time) during a visit he made to Dr. Holmberg at Fiskeby, Norrköping. Dr. Voldeng says the field could be a field of Fiskeby V.

909. Stefansson, B.R. 1968. Registration of Altona soybeans. *Crop Science* 8(6):777. Nov/Dec.
• ***Summary:*** Registration No. 71. Altona soybeans originated as a selection from the cross Flambeau x 052-093 in a breeding program at the Univ. of Manitoba. Altona was licensed for sale in Canada in April 1966. Address: Assoc. Prof., Dep. of Plant Science, Univ. of Manitoba, Winnipeg, MAN, Canada.

910. Parker, Alfred J. 1968. Our cook book for a happy and healthy life. Vancouver, BC, Canada: Kabalarian Fraternal Organization. 233 p. Recipe index. Portrait. 22 cm.
• ***Summary:*** First copyrighted in 1967, this pseudo-vegetarian cookbook uses fish and shellfish in many recipes. Soy-related recipes include: Soya noodle & tuna casserole (with soya noodles, p. 103). Soya bean casserole (p. 123). Soya beans (cooking hints, including use of baking soda, p. 171). Soya loaf (with soya flakes, p. 189). Soya bean casserole (p. 196-97). Address: Kabalarian Fraternal Organization, 1160 West 10th Ave., Vancouver 9, B.C., Canada.

911. Ontario Soya-Bean Growers' Marketing Board. 1969. Ontario soybeans: Submission to Honourable H.A. Olson, Minister of Agriculture. Chatham, Ontario, Canada. 12 + 2 p. Feb. 28 cm.
• ***Summary:*** Ontario soybean growers are in desperate financial troubles. Canadian processors paid up to $0.19 per bushel more for imported soybeans than for domestic soybeans during the past year. The soybean growers are requesting a "deficiency payment" from the Canadian government. Address: Chatham, Ontario, Canada.

912. Bernard, R.L.; Creemens, C.R. comps. 1969. Evaluation of maturity Groups III and IV of the U.S.D.A. soybean collection. *RSLM (U.S. Regional Soybean Laboratory Mimeograph, Urbana, Illinois)* No. 238. 34 p. April. Not for publication.
• ***Summary:*** "A collection of introduced and domestic soybean strains obtained over the past sixty years is maintained by the U.S.D.A. for use by breeders, pathologists, and other research workers. Strains in maturity Groups 00 to IV are maintained by R.L. Bernard at the U.S.

Regional Soybean Laboratory, Urbana, Illinois, and those in Groups V to VIII by E.E. Hartwig at the Delta Branch Experiment Station, Stoneville, Mississippi.

"This report includes data on the 1,157 strains in maturity Groups III and IV in the Collection as of 1960, distributed as follows: Maturity Group III: 41 U.S. and Canadian varieties, 13 FC strains, and 523 PI strains. 577 Total. Maturity group IV: 48 U.S. and Canadian varieties, 18 FC strains, and 514 PI strains. Total: 580 Total. Grand total: 1,157. For each strain is given: Name. Foreign name or parentage. Origin. Year released. Maturity group. Flower color. Pubescence color. Pubescence type. Pod color. Seed coat luster. Seed coat color. Hilum color. Mottling. Mottling score. Other. Flowering date. Maturity date. Lodging score. Height (inches). Stem termination score. Branching score. Seed quality score. Shattering score. Seed weight (gm/100 seeds), yield (bu/acre). Seed composition (dry seed basis): Protein percentage, oil percentage. Protein composition: Methionine percentage. Oil composition: Palmitic acid, stearic acid, linoleic acid, linolenic acid, iodine number (calculated from GLC fatty acid composition on a crude basis). Disease reaction: PR = Phytophthora rot, Py = Pythium rot, R = resistant, S = susceptible.

Group III varieties: Harosoy 63, Shelby, Adams, Adelphia, A.K. (FC 30.761), A.K. (Harrow), A.K. (Kansas), Aoda, Bavender Special, Bethel, Boone, Charlin, Chestnut, Chief, Chusei, Clark, Clark 63, Cloud, Columbia, Cypress No. 1, Delmar, Dunfield, Ebony, Emperor, Fabulin, Ford, Fuki, Funk Delicious, Gibson, Granger, Green and Black, Guelph, Hahto (Michigan), Harbinsoy, Harman, Higan, Hokkaido & Clark 63, Hongkong, Hurrelbrink, Illington, Illini, Ilsoy, Imperial, Jefferson, Jogun, Kanrich, Kent, Kim, Kingston, Kingwa, Kura & Adams, Lincoln, Little Wonder, Macoupin, Manchu (L55-143), Manchu (Lafayette), Manchu 2204, Manchuria 13177, Manchuria 20173, Mandell, Mansoy, Midwest, Mingo, Morse, Norredo, Osaya, Patoka, Patterson, Peking, Pennsoy, Perry, Polysoy, Roe, Ross, Sanga, Sato-3, Scioto, Scott & Kent, Shelby, Shingto, Shiro, Sooty, Viking, Virginia, Wabash, Wayne, Willomi, Wilson, Wilson-5 [Wilson-Five], Wing Jet (Source: Ohio. Released by 1929), Wolverine.

Note the spelling "maturity Groups" and "... the Group III strains were grown in one block and Group IV in another." But twice in the middle of a sentence we find "more appropriate maturity groups,..." and "strains of the two maturity groups are listed together..."

Note: This is the earliest document seen (July 2000) that mentions the soybean variety Charlin.

Note from Dr. R.L. Bernard. 1999. July 15. "I was still resisting use of 'germplasm'–a strange word, hard to define–but later give in to the popular use by management and the press. This document shows the extension of the use of "maturity Groups" beyond the Uniform Test, as also does the 1949 *USDA Farmers' Bulletin* No. 1520. 'Maturity Group' was well-and long-established with the soybean germplasm when I came in 1954." Address: 1. Research Geneticist; 2. Agricultural Research Technician. Both: U.S. Regional Soybean Lab., Oilseed and Industrial Crops Research Branch, Crops Research Div., Agricultural Research Service, USDA.

913. *Buffalo Evening News (New York).*1969. Named president of Canadian unit. June 12.
• ***Summary:*** "Robert E. Rich Jr. has been named president of Rich Products of Canada Ltd. in Ft. Erie, Ontario. Mr. Rich has been president of the Canadian operation for the past four years and under his direction the Canadian facility has just completed its third major plant expansion since it was opened six years ago. He lives at 731 Lafayette Ave. The Canadian company is a subsidiary of the Rich Products Corp. in Buffalo."

A portrait photo shows Robert Rich, Jr.

914. Rollier, M.; Ferrif, -; Pierre, -. 1969. Le soja: Experimentation 1966-1968 (suite) [The soybean: Experimentation 1966-1968 (continued)]. *Informations Techniques CETIOM* No. 18. p. 27-40. 3rd trimester. [Fre]
• ***Summary:*** Contents: Variety studies in France (Maturity Group 00 to V). Group 00 (vegetative cycle 90-95 days): Portage, Flambeau. Group 0 (95-105 days): Merit, Grant, Capital, Comet, Mandarin-Ottawa, Traverse. Group I (105-115 days): Hudson, Chippewa 64. Group II (125-140 days): Harosoy 63, Hawkeye 63, Amsoy, Hark. Group III (150 days): Wayne. Gives details on each variety, including yield in quintals/hectare. Note: 1 quintal = 100 kg. The soybean variety Merit gave the highest yield (16.00), whereas Chippewa gave the lowest (10.60).

915. *Courier (Champaign-Urbana, Illinois).*1969. Hackleman is cited. Oct. 17. p. 23.
• ***Summary:*** J.C. Hackleman was presented the Outstanding Service Award by the Association of Official Seed Certifying Agencies at their recent meeting in St. Louis, Missouri.

"Hackleman, a founder of seed certifying agencies in 1919 in Chicago, helped the organization grow to a 43 state and 2 Canadian [provinces] association, now celebrating its 50th anniversary.

"Association President W.O. Scott, UI agronomist, termed Hackleman a 'giant' in the seed improvement in the U.S.

"As a charter member, Hackleman helped develop original seed certification standards to protect newly created improved crop varieties from losing identity and being contaminated by other seed stock in trading channels."

O.G. Bentley, Dean of the University of Illinois College of Agriculture, speaking to the Association of Official Seed Certifying Agencies in St. Louis, said "the declining number

of farmers and the public preoccupation with a variety of social and economic ill will make future funding of tax-supported agricultural research more difficult... "about half of all agricultural research in the U.S. is supported by state or federal taxes."

Bentley pointed out that whereas consumers in other parts of the world spent 40-90% of their income for food, the average U.S. family in 1968 spent only 17% (after income taxes) for food.

Bentley expressed concern over the "gradual erosion in federal support for agricultural research, with research costs increasing about 6 per cent a year and federal support increasing by four per cent."

916. Odell, A.D. 1969. Technological aspects of developing new foods. *Canadian Institute of Food Science and Technology Journal* 2(4):A69-71. Oct.
Address: Director, Special Programs, General Mills, Minneapolis.

917. Gorrill, A.D.L.; Nicholson, J.W.G. 1969. Growth, digestibility and nitrogen retention by calves fed milk replacers containing milk and soybean proteins supplemented with methionine. *Canadian J. of Animal Science* 49(3):315-21. Dec. [13 ref]
• ***Summary:*** "Milk replacers containing zero (all milk) or 70% of the total protein from a soybean protein concentrate..., with or without methionine supplementation, were fed to Holstein calves... It was concluded that the soybean protein concentrate could supply a major portion of the protein in milk replacers for rearing dairy calves." The soy protein was supplied by Promosoy, a soybean protein concentrate, supplied by Central Soya (Decatur, Illinois).
Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

918. Eagles, Blythe. 1969. Leonard Sylvanus Klinck 1877-1969. *Proceedings of the Royal Society of Canada* 7:80-83. Series IV.
• ***Summary:*** This is an obituary for Leonard S. Klinck, president emeritus of the University of British Columbia (UBC), who died on 27 March 1969 shortly after his 92nd birthday. An educational pioneer, he served for five years as the first dean of agriculture at UBC and for a quarter of a century as its president.

Klinck was born on 20 Jan. 1877 in Victoria Square, Ontario, Canada, of Pennsylvania-Dutch-Canadian ancestry. This gave him a love of the land, an integrity of purpose, deep convictions, and a devotion to education in its broadest sense." He attended high school in Richmond Hill and Model School in Newmarket, Ontario. After graduation, he was actively involved in farming and taught school for 3 years before entering the Ontario Agricultural College of the University of Toronto. "His friendship from age eleven with Professor Zavitz and the reading of a book, *Scientific Agriculture* by President Mills of O.A.C. and Dr. C.C. James, deputy minister of agriculture for Ontario, inspired him to continue his education." After receiving his Bachelor's degree in 1903, he pursued graduate studies under Prof. Willet M. Hayes at the University of Minnesota, where he gained experience in plant breeding. At Iowa State College, he continued his studies in plant breeding under Prof. Perry Holden [M.S.A. degree 1905. His 1905 thesis was titled "The improvement of Iowa's corn crop through seed selection" (53 leaves, mounted photos, tables, 29 cm.). This thesis is at Iowa State Univ., Parks Library Archives (special collections)]. He "developed a comprehensive understanding of the spirit and philosophy of university extension and adult education and of the complementary and supplementary relationship between teaching and research.

"For nine years he served as professor and head of the Department of Cereal Husbandry at Macdonald College, McGill University–the first faculty appointee after the principal, Dr. James W. Robertson. He established an enviable reputation in directing cultural experiments with a survey of the agronomic possibilities of the region and in institution work in plant breeding. The development of *Rhizoma* alfalfa at U.B.C. began at Macdonald College with seed of the feral 'Siberian' alfalfas sent to him by Professor Hansen of the United States Bureau of Plant Industry. Dr V.C. Brink paid tribute to him as a pioneer geneticist and plant breeder who saw problems through the mind and the eye..."

"At Macdonald College Professor Klinck demonstrated his outstanding personal characteristics of universal courtesy and full understanding of leadership from within. His students have achieved outstanding prominence as teachers, research scientists, and administrators in Canada and the United States."

Dr. Klinck left Macdonald College in early 1914 when he was called to UBC to advise and collaborate with President Westbrook in planning the future university. "Dr. Klinck is survived by his widow [Elizabeth Barclay Abernethy; they were married on 27 June 1941], a son [Ronald Woodard Klinck], and one sister. He was predeceased by his first wife [Mary Alice McDougall; they were married on 20 July 1904] in 1939." A large portrait photo on the first page shows Prof. Klinck.

Note: Prof. Klinck developed the first soybean varieties in Quebec province. His parents were Thomas William Klinck and Sarah Catherine Woodard. For additional biographical information see:

919. Soypro International Inc. 1969. A study of business prospects in the food industry of India. Cedar Falls, Iowa. iv + 87 p. Summarized as "Soybeans have good future in India" in Soybean Digest. 1969. Dec. p. 28. 28 cm. [20 ref]
• ***Summary:*** As part of The Canadian Food Advisory Team. For Malwa Economic Development Society (MEDS), Indore (which has expressed an interest in entering some aspect of the food industry in India). Sponsored by United Church of Canada.

Contents: Objectives and guidelines. Part I: Food resources and malnutrition. Food grains and pulses. Calories. Proteins: Legumes, oilseeds, milk, fish, poultry, meat. Fats and oils. Areas of food needs: Under-nourishment protein malnutrition. Summary and conclusions.

Part II: Food marketing. The non-market. Primary factors of the real market. Guidelines for product selection and production. Selling the product.

Part III: What is being done. Food ingredients: Grain processing, oilseeds for human nutrition. Consumer products: Protein foods for infants and children, foods for general consumption.

Part IV: Prospects for soybean production and soya food processing. Production: Yields, crop input, returns in relation to other crops. Market outlets and prices: Domestic markets for soy products, estimated prices. Soybean processing: Processing plants, storage, transportation, plant investment costs (new plants, converting existing plants to soybean processing). Low fiber meal and soy flour: Investment cost for production, marketing. Full-fat soy flour. Soy protein isolates. Specialty soy foods: Soy milk and related products, soy-based snack foods, cereals, dal. Conclusions.

Part V: Potential projects. Storage. Rice milling. Pulse milling. Soybean processing for soy flour, soy protein isolates. Sesame processing. Bread. Baby foods. High protein mixes. Synthetic milk or base for toned milk–related dairy products. Extruded high protein snacks/cereals. Low-cost quick-cooking dal. Food marketing and distribution.

List of references. Appendixes. Population of India. Recent production trends and current yields of key crops in India. Rough calculations of gross protein availability from local production in India.

This practical, business-oriented report focuses on low-cost high-protein foods designed to help private business meet India's problems of protein malnutrition, especially among infants and children. "Similarly, with fast rising interest in soybean production and utilization, considerable early attention had been given to this particular field..." In 1965-66, and in 1966-67 India had two devastating drought years. Prior to this, India has experienced four major droughts accompanied by famines since 1900: 1907-08, 1918-19 (the worst, with a 32.3% drop in agricultural output), 1920-21 (the second worst; 24.0% drop), and 1923-24 (16.6% drop).

Pulses, mostly in the form of dal ("the poor man's meat") have for many years been second only to food grains as a source of protein in Indian diets. Most pulses are dehulled by hand-powered stone mills at home before cooking, with a wastage of about 10%. However pulses are not keeping pace with the food grains in India's Green Revolution. Average yields are relatively low and response to fertilizer is low. Per capita consumption is static, or declining. India's main oilseeds in 1967-68 were (in descending order of output in million metric tons): groundnuts in the shell (5.83), cottonseed (2.00), rapeseed and mustard (1.48), sesame (0.42), and niger seed (0.10). Only groundnut, sesame, and niger also provide significant amounts of protein for humans. Yet after the oil is removed, most of the protein-rich oilseed cakes are used in livestock feeds or fertilizer, or exported; only about 10% of the available protein is used directly in human diets. There is now much interest in using more groundnut protein (as flour or isolate) in human foods; it has been used in toned milk. India's major source of animal protein is milk (both from water buffaloes and cows), with per capita daily consumption being 123 gm (4.4 oz).

Relatively little red meat is consumed in India; many states prohibit slaughter of cows. Goats and water buffaloes are the major sources of meat. According to CFTRI, 39% of Indians are deficient in proteins, and a high proportion of these are infants and children. Per capita availability of oils is 9.3 lb/year. 70 to 75% of all food produced stays on the farm and is consumed directly by the producers. Wheat is the main grain in north India, and rice in south India. About 25% of Indians are vegetarian by conviction, and "75% are now willing to eat animal products, with the latter percentage increasing every year. In practice, diets are still largely vegetarian because of the scarcity and cost of animal

products." Prestige is the single most important marketing factor in part because India is still a highly class-conscious society. The market is highly segmented. Products need to be targeted separately at the top 3 or 4 of the 5 class segments. The high class line should be introduced first. Cheap food or "food for the poor" has little chance of succeeding in commercial channels. Except as food for children, it is very hard to sell food on the basis of its nutritional or health-giving benefits. Sampling is the most effective promotional technique.

Several companies produce dried baby foods from milk and sell them in tin cans. In 1968 the biggest seller was Amul (3,500 to 3,800 tons), made by Kaira Dairy Coop. The pioneer commercial weaning food in India was Farex, made by Glaxo and sold in tins at Rs. 13 per kg. Kaira Dairy Coop launched Bal-Amul at Rs. 11 per kg and now produces 1,000 tons/year, expected to grow to 5,000 tons by 1974. Bal-Amul contains about 25% full-fat soy flour, 25% rice and wheat flour, 20% gram flour, 11% sugar, 10% nonfat dried milk, and 6-8% moisture. Processing equipment was donated by UNICEF. Soy flour and milk powder were donated by USAID. It will soon be offered in plastic bags at Rs. 7 to 8 per kg to reach a broader market. CSM contains 25% defatted or low-fat soy flour. Bal-Ahar contains 65% bulgur wheat, 25% groundnut flour, 10% Bengal gram [chickpea] flour plus vitamin/mineral pre-mix. Requiring 10-15 minutes cooking in water, it does not contain any soy. Use of CSM and Bal-Ahar is limited to food relief programs; they are not sold commercially.

MPF (Multi-Purpose Food, formulated under sponsorship of the Meals for Millions Foundation in the U.S.) consists of 75% groundnut flour, 25% Bengal gram flour, plus a vitamin/mineral pre-mix. Containing 45% protein, it sells for only Rs. 3.5/kg and is thus the cheapest protein source on the market and one of the best. However it has not met with any real success. 7 plants have been authorized to produce MPF in India. None are operating at capacity and most are not operating at all. Total output, currently 600 tons/year, is purchased largely by OXFAM for the Meals for Millions Foundation.

UNICEF is supplying an X-25 Wenger Cooker-extruder to CFTRI to experiment with extruded high-protein snacks. Note: The Wenger X-25 is a low-cost extrusion cooker / extruder. This is the earliest document seen (July 2006) that mentions the use of a low-cost extrusion cooker.

The population of India has grown from 314.8 million in 1941 to about 533.3 million in 1969. Each year the population is growing by about 13 million people. Roughly 80% lives in rural areas. In terms of gross protein availability, the main sources produced in India (in million metric tons of protein) are: rice 3.03, pulses 2.69, wheat 2.49, groundnuts 1.12, milk 1.05, and jowar (sorghum) 0.91. Soy is not listed. Address: Cedar Falls, Iowa.

920. Stuyvenberg, J.H. van. ed. 1969. Margarine: An economic, social and scientific history, 1869-1969. Liverpool, UK: Liverpool University Press; Toronto, Ontario, Canada: University of Toronto Press. xxiv + 342 p. Illust. Index. 25 cm. [215* ref]
• ***Summary:*** Contains seven excellent chapters on margarine by various authors, each with an historical perspective and cited separately. Also discusses the development of research on oils and fats, and their industry. Address: Prof. of Economic History, Univ. of Amsterdam.

921. Young, W.S. 1969. A new look at soybeans. *Ontario Department of Agriculture and Food, Publication* No. 173. 23 p. AGDEX 141/10. [3 ref]
• ***Summary:*** "Production from the nearly 300,000 acres of soybeans grown in Ontario and representing 95% of Canadian output leaves Canada in a severe deficit position with respect to that crop.

"Total production at about 9 million bushels represents only one third of the requirements of the three Canadian soybean processors (located in Toronto and Hamilton) to say nothing of the potential requirements for feeding raw to an expanding livestock population.

The top four soybean producing districts in Ontario province in 1968 were Kent (3,278,200 bu, yield 32.1 bu/acre), Essex (2,703,600 bu, yield 30.7), Lambton (1,919,200), and Elgin (722,500). The total province produced 9,027,000 bu. The Canada Dept. of Agriculture breeding programs in Manitoba, southwest Ontario, began in 1924.

"Soybeans produced by the 7,000 Ontario growers traditionally are marketed through one hundred local dealers... Once soybeans move off the farm they come under legislation of the Farm Products Marketing Act. Growers established a marketing scheme in 1949, and in turn, established the Ontario Soya-Bean Growers' Marketing Plan." Address: Crop Science Dep., Univ. of Guelph, ONT, Canada.

922. **Product Name:** Tofu.
**Manufacturer's Name:** Yet Sing Co.
**Manufacturer's Address:** 11 Baldwin St., Toronto, ONT, Canada. Phone: 416-977-3981.
**Date of Introduction:** 1969?
**New Product–Documentation:** Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Phone: 863-0818.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number.

Talk with Martha Gifford Thompson. 1989. April 11. The Toronto Zen Center, was an affiliate group nearby in Canada. In Toronto, which has a large Asian population,

were at least three tofu shops: one very small family-run Korean shop, which had no name, was on Baldwin Street; it is no longer there. "The first room was stacked to the ceiling with soybeans. Down in the basement were many people slogging around making tofu. It was quite a scene, and nobody spoke any English." Talk with Jay Thompson. 1989. April 11 and June 9. He visited this company on 11 Baldwin St. many times to buy tofu for the Rochester Zen Center. The other tofu shop on Baldwin Street is no longer there.

Talk with Jon Cloud of Soy City Foods. 1989. May 3. Yet Sing is a tofu company at 11 Baldwin St. They may have been the first tofu company in Ontario. Started by the 1960's, they are still in business. Talk with a lady at Yet Sing. 1989. May 4. She barely speaks English, but thinks the company started about 20 years ago. The man who started the company has retired. They are still at 11 Baldwin Street, Toronto, ONT, M5T 1L1. Talk with Jhasun Koo, owner and founder of Pyung Hwa Food Co. 1989. May 4. He started making tofu in 1978 on Dundas St. In 1978 the only other tofu companies in Toronto were Yet Sing (probably the first) and Hwa Chang. Both were run by Chinese-Canadians and both are still in business.

923. Bezaire, Ernie. 1970. Soybean marketing board wakes up with rude shock: In Essex County. *Windsor Daily Star (Essex County, Ontario, Canada).* Jan. 17. p. 7.
• ***Summary:*** "Essex–For years the Ontario Soybean Growers Marketing Board went along with the idea that it didn't have to market anything." This past year the directors tried to negotiate with the three Ontario crushers who buy their soybeans, but were told "We'll pay you what we damn well please." If the Board wants to negotiate, it must find more customers than the three Ontario crushers, and it must learn how to negotiate. Milton Farough of Maidstone, chairman of the OSGMB, is actively learning as much as he can about the soybean market.

924. *Soybean Digest.*1970. Seed directory (Ad). Feb. p. 42-43.
• ***Summary:*** Soybean seedsmen and seed companies are listed alphabetically by state (and within each state alphabetically by city) in the following states: Arkansas, Delaware, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Louisiana, Maryland, Minnesota, Mississippi, Missouri, Nebraska, New Jersey, North Carolina, North Dakota, Ohio, South Carolina, South Dakota, Tennessee, Virginia, Wisconsin, Canada (Ontario).

For each listing is given the amount and varieties of seed available, and whether certified, uncertified, or registered. Most of the entries are for individual farmers.

925. Fats and oils in Canada: Annual review 1969. 1970. Ottawa, Ontario, Canada: Edible Oils Section, Bakery, Cereals and Edible Oils Division, Agriculture, Fisheries and Food Products Branch, Dept. of Industry, Trade and Commerce. 118 p. 28 cm.
• ***Summary:*** This annual government publication is packed with statistics on the subject. Address: Ottawa 4, Ontario, Canada.

926. **Product Name:** Soy Flour with Gluten Flour for Bread and Rolls (Specially Processed for Diabetics).
**Manufacturer's Name:** MacDowell Brothers.
**Manufacturer's Address:** Brockville, ONT, Canada. Also Box 141, Ogdensburg, NY 13669.
**Date of Introduction:** 1970. March.
**New Product–Documentation:** *Soybean Digest Blue Book.* 1970. p. 116. Also listed in 1980.

927. Tape, Norman W. 1970. Rapeseed–Canada's soybean. *Canadian Food Industries* 41(5):45-49. May. [12 ref]
• ***Summary:*** "Oilseeds have been with us for centuries but the role their products have played in food manufacture has been insignificant until recent years. Oilseeds now supply a large portion of the world's edible fats and oils and protein supplement for animal feeding. In addition, the quantity of oilseed protein used by food processors has increased dramatically in the past decade...

"This increase in the use of oilseed protein in human foods is significant since it heralds the new area of 'food tailoring', where pseudo-animal products will be derived from plant sources. We see many products of this type in our supermarkets today. More foods will be fabricated from the basic 'building blocks' (i.e. protein, carbohydrate, and oils or fats) with the appropriate natural or artificial flavors, colors and odors. The 'building blocks' will be purchased on a 'cost-plus-function' basis...

"This paper describes the current and future market for oilseed protein in food manufacture, the present use of soy protein, the growing Canadian rapeseed industry, and the possibility of using rapeseed protein in food manufacture.

"Soybean technology has set the pace and goals for other oilseeds... At present, 92% of the soybean oil in the U.S. is used for edible purposes, primarily shortening, margarine, and salad oils. Eighty-five per cent of soybean meal is used in animal feeds; 10% is used for industrial purposes (e.g. paper coating, glue, fermentation substrates, etc.) and export; while 5% go into edible applications, such as meat extenders, meat analogues, dairy-type products, infant formulations and special dietary items...

"At the present time there are approximately 15,000,000 lbs. of isolated soy protein, 20,000,000 lbs. of soy protein concentrates and 200,000,000 lbs. of soy flour used for edible purposes in the U.S." Address: Food Research Inst., Canada Dep. of Agriculture, Ottawa, ONT, Canada.

928. *Toronto Daily Star (Canada).*1970. Sukiyaki made in five minutes: Japan (Ad). Aug. 19. p. 61. Women's Section
• ***Summary:*** In the lower right corner of this page is a recipe for Sukiyaki (with "2 cakes soybean curd, cut into 1-inch cubes").

"With the aid of the Dundas Union Store, one can buy all the authentic ingredients for an authentic sukiyaki for a very reasonable price..." Cook for no more than 4-5 minutes. Address: Toronto.

929. Ontario Soya-Bean Growers' Marketing Board. 1970. Proposal for establishment of an agency marketing plan for Ontario soybeans. Chatham, Ontario, Canada. 12 p.
• ***Summary:*** "The proposed establishment of an agency marketing plan for Ontario soybeans has been created as a result of serious grower resentment concerning low price levels received for their product. Failure on the part of the Ontario Soya-Bean Growers' Marketing Board to influence Ontario soybean processors through negotiations to pay more realistic prices for Ontario soybeans has aggravated growers' resentment...

"Unrestricted purchases of United States soybeans from unlimited supplies by Ontario processors has presented formidable odds to Ontario growers. From a production standpoint, Ontario growers have been able to compete with their most efficient counterparts in the U.S. producing an average yield of 28.9 bushels per acre during the past 5 years. The U.S. average for the same period was 25.7. Growers, however, have found it most difficult to compete with the price of U.S. soybeans and that is the reason for the board's action in seeking a change in the soybean plan.

"The intent is price improvement to growers by means of a single purchase and sales agency controlled by growers selling to whatever domestic or overseas market will pay the highest price." Address: Chatham, Ontario, Canada.

930. Probst, A.H. 1970. Fifty years of soybean variety improvement. *Soybean Digest.* Aug. p. 66-70.
• ***Summary:*** Contents: Introduction. The trend to yellow seed. Common objectives of soybean breeders: High yield, high oil content, high protein content, disease resistance, improved seed quality, maturity to fit rotations, shattering resistance, desirable plant height, lodging resistance, high podding from soil level. Threat of root rot. Reasons for yields of 100 bushels/acre.

Before 1920, the soybean was used mostly as a forage crop. It was "used extensively for hay, and to a lesser extent for soilage, silage, green manure, lambing- or hogging-off when grown as a companion crop with corn, and for direct feeding of the beans." In 1924 the first official U.S. production statistics showed that of the 1,782,000 acres produced, only 448,000, or 25%, were harvested for beans. "It was not until 1941 that 5,881,000 acres harvested for beans surpassed the 5,510,000 acres grown for all other purposes.

"The development of the soybean processing industry was nudged into being mainly by World War I when there was such a shortage of fats and oils in the U.S. that it was necessary to import Manchurian soybean oil."

"Well over 10,000 introductions have been brought into the U.S. since 1898. Approximately 4,775 introductions were brought in by W.J. Morse and P.H. Dorsett who spent 2½ years during 1929-1931 on an agricultural exploration trip in Japan, Korea, and Manchuria.

"The germplasm collection today numbers about 3,200 types plus nearly 300 named varieties."

"Through 1940 most varieties were released either as direct introductions, rogued introductions, or selections from introductions. Some selections from introductions may have been of hybrid origin. A few varieties developed from introductions which played an important role in the rapid expansion of acreage planted for processing 20-50 years ago included Dunfield, Illini, Manchu, Richland, Mukden, Mandarin, Habaro, Boone, Patoka, and Roanoke. All vegetable-type varieties up to 1956 were introductions.

"Only a few varieties released through 1940 are known to have come from artificial hybridization-breeding programs. These include Mamloxi, Mamotan, Mamredo, Ogden, Volstate, Tennessee Non-pop, Oloxi, Pee Dee, and Yelredo.

"Of this group, only Ogden, with numerous good qualities sought in varieties today, was grown extensively for a long period. The popularity of Ogden was such that nearly 30 years after its release in 1941 some of it was still being grown commercially.

"Following 1940, and especially after 1950 there have been few varieties released which have come directly from introductions."

"The establishment of the U.S. Regional Soybean Industrial Products Laboratory (now the U.S. Regional Soybean Laboratory) in 1936 at Urbana, Illinois, brought about a tremendous increase in soybean breeding. Variety development immediately lost its provincialism and went "big league" to have an immediate impact nationally and eventually internationally."

"A recent listing of the leading soybean varieties for the U.S. and Canada included 39, plus seven special-use varieties, five of which were vegetable types and two were high-protein types.

"Since 1943 over 80 varieties have been or are in the process of registration by the American Society of Agronomy or, more recently, the Crop Science Society of America.

"The major part of soybean-variety development in the past has been accomplished by public agencies, particularly the agricultural experiment stations and the U.S. Department of Agriculture. At least one private company

has been breeding soybeans for many years; a few for shorter periods.

"During the past few years, a few number of private companies have entered the field of soybean breeding."

Two main factors have led to yields of 100 bushels/acre or more: Better soybean varieties combined with improved cultural practices.

Small portrait photos show: George Kimmons (Ozark, Missouri; the first person to get 100 bu/acre yields, in 1968 with 109.6 bu/acre). W.J. Morse. M.D. Weiss. H.W. Johnson. R.W. Howell. B.E. Caldwell. J.L. Cartter. R.L. Bernard. R.L. Cooper. E.E. Hartwig. The work of each man in soybean variety development is discussed briefly on p. 70. Address: USDA Research Economist, and Prof. of Agronomy, Purdue Univ. [Indiana].

Edmondson, Clayton, Indiana. 1944-45–pres., Howard Roach, Plainfield, Iowa; vice pres., Walter McLaughlin, Decatur, Illinois; secy., Jeanne Strayer, Hudson, Iowa; treas., J.B. Edmondson, Clayton, Indiana.

1945-46–all officers held over, no convention. 1946-47–pres., Walter W. McLaughlin, Decatur, Illinois; vice pres., J.B. Edmondson, Clayton, Indiana; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1947-48–pres., Ersel Walley, Fort Wayne, Indiana; vice pres., W.G. Weigle, Van Wert, Ohio; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1948-49–pres., Ersel Walley, Fort Wayne, Indiana; vice pres., John Evans, Montevideo, Minnesota; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1949-50–pres., John W. Evans, Montevideo, Minnesota; vice pres., Jake Hartz Jr., Stuttgart, Arkansas; secy.-treas., Geo. M. Strayer, Hudson, Iowa.

1950-51–pres., John W. Evans, Montevideo, Minnesota; vice pres., Chester B. Biddle, Remington, Indiana; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1951-52–pres., Chester B. Biddle, Remington, Indiana; vice pres., Jake Hartz Jr., Stuttgart, Arkansas; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1952-53–pres., Chester B. Biddle, Remington, Indiana; vice pres., Jake Hartz Jr., Stuttgart, Arkansas; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1953-54–pres., Jake Hartz Jr., Stuttgart, Arkansas; vice pres., Albert Dimond, Lovington, Illinois; secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1954-55–pres., Jake Hartz Jr., Stuttgart, Arkansas; vice pres., Albert Dimond, Lovington,

Illinois; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa.

1955-56–pres., Albert Dimond, Lovington, Illinois; vice pres., H.H. Huddleston, Lamont, Mississippi; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1956-57–pres., Albert Dimond, Lovington, Illinois; vice pres., John Sawyer, London, Ohio; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1957-58–pres., John Sawyer, London, Ohio; vice pres., C.G. Simcox, Assumption, Illinois; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1958-59–pres., John Sawyer, London, Ohio; vice pres., C.G. Simcox, Assumption, Illinois; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1959-60–pres., C.G. Simcox, Assumption, Illinois; vice pres., Chas. V. Simpson, Waterville, Minnesota; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa.

1960-61–pres., Chas. V. Simpson, Waterville, Minnesota; vice pres., Hubert Baker, Dalton, Illinois; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1961-62–pres., Chas. V. Simpson, Waterville, Minnesota; vice pres., Hays Sullivan, Burdette, Arkansas; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1962-63–pres., Chas V. Simpson, Waterville, Minnesota; vice pres., Hays Sullivan, Burdette, Arkansas; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1963-64–pres., Hays Sullivan, Burdette, Arkansas; vice pres., Lyle Trisler, Fairmont, Illinois; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1964-65–pres., Hays Sullivan, Burdette, Arkansas; vice pres., L.C. Meade, West Lafayette, Indiana; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa.

1965-66–pres., L.C. Meade, West Lafayette, Indiana; vice pres., Harris Barnes Jr., Clarksdale, Mississippi; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1966-67–pres., L.C. Meade, West Lafayette, Indiana; vice pres., Harris Barnes Jr., Clarksdale, Mississippi; exec. vice pres. and secy.-treas., Geo. M. Strayer, Hudson, Iowa. 1967-68–pres., Harris Barnes Jr., Clarksdale, Mississippi; vice pres., Seeley Lodwick, Wever, Iowa; secy., Leslie Tindal, Pinewood, South Carolina; treas., John Sawyer, London, Ohio; exec. vice pres., Chet Randolph, Hudson, Iowa. 1968-69–pres., Harris Barnes Jr., Clarksdale, Mississippi; vice pres., Seeley Lodwick, Wever, Iowa; secy., Leslie Tindal, Pinewood, South Carolina; treas., John Sawyer, London, Ohio; exec. vice pres., Chet Randolph, Hudson, Iowa. 1969-70–pres., Leslie Tindal, Pinewood, South Carolina; vice pres., Harold Kuehn, Du Quoin, Illinois; secy., W.B. Tilson, Plainview, Texas; treas., Howard Adler, Sharpsville, Indiana; exec. vice pres., Chet Randolph, Hudson, Iowa.

932. *Soybean Digest.*1970. ASA directors of 50 years. Aug. p. 39.

• ***Summary:*** These directors of the American Soybean Assoc. are listed alphabetically by last name: O.H. Acom, Wardell, Missouri 1948-64; Howard Adler, Sharpsville, Indiana 1969-70; W.E. Ayres, Stoneville, Mississippi 1925-29, 1932-33.

Hubert Baker, Dalton, Illinois 1959-61; G.H. Banks, Osceola, Arkansas 1937-38; K.E. Beeson, West Lafayette, Indiana 1934-38; Harris Barnes, Clarksdale, Mississippi 1961-69; Chester B. Biddle, Remington, Indiana 1949-1969; C.E. Bowen, Champaign, Illinois 1964-67; G.M. Briggs, Madison, Wisconsin 1922-23, 1937-38; J.B. Buchanan, Guelph, Ontario, Canada 1928-30; W.L. Burlison, Urbana, Illinois 1929-31; John Butterfield, Pana, Illinois 1956-62; Frank Byron, Waseca, Minnesota 1969-70.

C.E. Carter, Columbia, Missouri 1921-22; Roy Chasteen, Crothersville, Indiana 1929-30; G.I. Christie, Guelph, Ontario, Canada 1928-29; Harvey S. Clapp, Accotink, Virginia 1928-29; H.I. Cohn Sr., St. Louis, Missouri 1949-52; Joe Coleman, Clare, Iowa 1967-70; J.S. Cutler, Columbus, Ohio 1925-28.

E.J. Delwiche, Madison, Wisconsin 1925-28; Gilles DePutter, Appin, Ontario, Canada 1953-56; Albert Dimond, Lovington, Illinois 1951-59; W.R. Dodson, [Louisiana] 1932-33; John Dries, Saukville, Wisconsin 1940-51; E.S. Dyas, Ames, Iowa 1934-36.

J.B. Edmondson, Clayton, Indiana 1928-29, 1935-49; W.C. Ethridge, Columbia, Missouri 1929-31; John Evans, Montevideo, Minnesota 1949-69.

Milton Farough, Maidstone, Ontario, Canada 1968-70; Robert Ford, Merlin, Ontario, Canada 1966-68; Taylor Fouts, Camden, Indiana 1926-28; Eugene Funk, Bloomington, Illinois 1935-37.

Frank Garwood, Stonington, Illinois 1946-49; Harry Gatton Jr., Rumsey, Kentucky 1959-66; Ben Gildersleeve, Hudson, Illinois 1961-67; Thomas Gilmore, Sandersville, Georgia. 1935-37; Walter Godchaux, New Orleans, Louisiana. 1926-28, 1932-33; John P. Gray, Baton Rouge, Louisiana. 1932-35, 1938-40.

J.C. Hackleman, Urbana, Illinois 1935-37; Joe Hammer, Des Moines, Iowa 1960-62; Jacob W. Hartz Sr., Stuttgart, Arkansas 1938-49; Jake Hartz Jr., Stuttgart, Arkansas, 1949-69; Calvin Heilman, Kenton, Ohio 1949-52; E.A. Hollowell, Washington, DC. 1930-31; Frank Hoxie, Shenandoah, Iowa 1967-70; H.H. Huddleston, Lamont, Mississippi 1950-57; H.C. Hughes, Ames, Iowa 1931-32; Frank W. Hyatt, Wheatley, Ontario, Canada 1962-64.

E.C. Johnson, Stryker, Ohio 1923-25; Joe Johnson, Champaign, Illinois 1941-44; A.E. Jolly, Chatham, Ontario, Canada 1956-59.

Harold Keller, Dyersburg, Tennessee 1966-70; Roger Killingsworth, Jonesville, Louisiana. 1967-70; Harold Kuehn, Du Quoin, Illinois 1967-70.

F.P. Latham, Belhaven, North Carolina 1925-27; F.C. Laughinghouse, Pantego, North Carolina 1967-70; Frank W. Lewis, Ursa, Illinois 1962-64; Seeley Lodwick, Wever, Iowa 1964-69; Lester Longhurst, St. Thomas, Ontario, Canada 1964-66; J.G. Loo Jr., Baton Rouge, Louisiana. 1932-33; Harold Lumsden, Essex, Missouri 1954-57.

Martin Manning, Ladd, Illinois 1966-70; C.K. McClelland, Fayetteville, Arkansas 1928-29, 1932-35; G.G. McIlroy, Irwin, Ohio 1938-50; Walter McLaughlin, Decatur, Illinois 1943-47; L.C. Meade, West Lafayette, Indiana 1962-70; C.L. Meharry, Attica, Indiana 1923-26, 1930-35; Wm. Merschman, West Point, Iowa, 1969-70; Gerald Michaelson, Dawson, Minnesota 1969-70; Roy H. Monier, Carrollton, Missouri 1943-44; W.J. Morse, Washington DC. 1923-25, 1931-32; Glen Myers, Memphis, Missouri 1959-68.

Stuart D. Ormsby, Belleville, New York 1941-43; W.A. Ostrander, Lafayette, Indiana 1920-23.

J.B. Park, Columbus, Ohio 1930-32, 1936-38; R.H. Peck, River Canard, Ontario, Canada 1947-53; Don Pemberton, Cape Girardeau, Missouri 1969-70; Joe Pepper, Weston, Missouri 1968-70; W.R. Perkins, State College, Mississippi 1934-35; LeRoy Pike, Pontiac, Illinois 1948-56; Harry A. Plattner, Malta Bend, Missouri 1944-48; Wm. Prichard, Louisville, Georgia. 1969-70.

Howard Roach, Plainfield, Iowa 1941-67; J.L. Robinson, Ames, Iowa 1923-25; Everett Royer, Irwin, Ohio, 1968-70.

John Sand, Marcus, Iowa 1943-46; John Sawyer, London, Ohio 1952-69; Walter M. Scott Jr., Tallulah, Louisiana 1957-61; Richard Simcoke, Kennett, Missouri 1964-69; C.G. Simcox, Assumption, Illinois 1949-61; Chas. Simpson, Waterville, Minnesota 1957-69; Gilbert Smith, Taylorville, Illinois 1944-46; J.T. Smith, Tolono, Illinois 1925-26; Richard Smith, Tilbury, Ontario, Canada 1960-62; Robert Smith, Walnut Ridge, Arkansas 1969-70; L.F. Stoner, Holly Bluff, Mississippi 1946-48; Bert S. Strayer, Hudson, Iowa 1930-31; George Strayer, Hudson, Iowa 1937-67; Jeanne Strayer, Hudson, Iowa 1944-46; Hays Sullivan, Burdette, Arkansas 1960-70.

C.W. Tabaka, Ivesdale, Illinois 1926-28; Edward Tillman, Caruthersville, Missouri 1952-54; Leslie Tindal, Pinewood, South Carolina 1967-70; W.B. Tilson, Plainview, Texas 1967-70; Lyle Trisler, Fairmont, Illinois 1961-66.

W.W. Wallace, Woodslee, Ontario, Canada 1959-60; Ersel Walley, Fort Wayne, Indiana 1941-62; P.A. Webber, Madison, Tennessee 1933-35; W.G. Weigle, Van Wert, Ohio 1946-49; R.G. Wiggins, Ithaca, New York 1937-38; F.S. Wilkins, Ames, Iowa 1925-26, 1929-30; Harry D. Wilson, [Baton Rouge, Louisiana] 1932-33; David G. Wing, Mechanicsburg, Ohio 1940-68; John Wing, Mechanicsburg, Ohio 1969-70; LaVerne Workman, Chatham, Illinois 1967-70.

Note: These directors come from only 16 U.S. states plus Ontario, Canada. Illinois has the most directors with 21, followed by Iowa with 14 and Indiana with 10.

934. Hughes, G. Bernard. 1970. Bristol blue glass. *Canadian Antiques Collector* 5(9):17-19. Oct.
• ***Summary:*** Bristol, England, was long known for its beautiful blue (from cobalt), semi-transparent flint glass. “Bristol-blue” (as was called) was in continuous production at Bristol from about 1763 to 1799, but little if any was made from about 1800 until 1820, during the Napoleonic wars which blocked supplies of Saxon smalt. In 1821, a lavish set was presented to George IV at his coronation; thereafter it came into vogue under the name of “king’s blue.”

“Label cruet sets, gilded with lettering and scrollwork, were advertised in 1764, soy and sauce bottles shortly afterwards. Cruet frames in Sheffield plate were fitted throughout with Bristol-blue oil and vinegar bottles and three casters, and soy frames with three to six gold-labeled

bottles. They continued in production until the 1830s, little variation being found..."

Photos show: (1) A collection of Bristol-blue glass on three shelves, ranging in tint from deep cobalt blue to smoky greyish-blue. "The pair of sauce bottles (top left) are cut with hollow diamond facets and are engraved "Soy" and Elder" (p. 17). (2) "Two sets of spirit decanters labelled [gin, brandy, and rum] and decorated in gold, with four 12-sided soy bottles with shoulder bands of diamonds cut in high relief." The soy bottles are less than half the height of the decanters, and much smaller in diameter (p. 18).

935. Sault, J.L.; Gale, J.B. 1970. A review of developments in simulated meats. *Quarterly Review of Agricultural Economics (Australia)* 23(4):209-221. Oct. [42 ref]
• ***Summary:*** Contents: Introduction. Nature of simulated meat products: Sources of raw material, processing methods. Production and marketing: The United States market (where virtually all production has been based on soya bean protein), the Japanese market, the Western European market, other countries (South Africa, Canada, Australia). Factors influencing competition with natural meats: Differences in properties, increases in incomes and changes in tastes, relative prices, promotion, government regulations. Summary and conclusions.

"The United States and Japan are the two main producers of simulated meats and account for most of world consumption... Virtually all of the United States' commercial production of simulated meats has been based on soya bean protein." At least 15 companies made simulated meat in 1969, but six of these produce most of the items marketed. A number of the manufacturers (such as General Mills) are very large and have invested large amounts of time and money in the process.

In Japan, production of western-style simulated meats is a very recent development. Consumption of such items is still very small, though it appears to be rising. "In 1968 domestic production plus imports of simulated meats totalled 37.7 million lb, and during the first six months of 1969 they amounted to 25.9 million lb." Most of these products are made in Japan by at least 19 firms. One feature of the Japanese industry has been the importance of wheat gluten as a protein source. In 1968 and the first half of 1969 some 36% of Japan's output was derived from wheat gluten; virtually all of the rest was based on soy protein.

Sales of simulated meat products in Western Europe have been considerably lower than those in the USA and Japan. The main developments have occurred in the Netherlands, West Germany, and Sweden. In the Netherlands, imports rose from 44,000 lb in 1967 to 1,166,000 lb in 1968, then fell the next year. In West Germany, simulated meats were first introduced to the trade and consumers in mid-1968.

"In South Africa one firm is manufacturing a simulated meat from soy protein by what appears to be a thermoplastic extrusion process. The product is being used as a meat extender rather than as a complete meat substitute. It is reported to be of a dry and wiry texture requiring a good deal of seasoning to make it palatable." Its price is higher than that of natural meat.

Note: This is the earliest document seen (Dec. 1997) that uses the term "thermoplastic extrusion" in connection with soy.

936. Kamm, L. 1970. Immunochemical quantitation of soybean protein in raw and cooked meat products. *J. of the Association of Official Analytical Chemists* 53(6):1248-52. Nov. [18 ref]
Address: Food Div., Food & Drug Lab., Dep. of National Health & Welfare, Ottawa, ONT, Canada.

937. Bernard, R.L.; Cremeens, C.R. 1970. Evaluation of maturity group 00 to IV named varieties of the U.S.D.A. soybean collection. *RSLM (U.S. Regional Soybean Laboratory Mimeograph, Urbana, Illinois)* No. 244. Dec. iii + 31 p. Not for publication. A revision of RSLM No. 205, 1960.
• ***Summary:*** Contents: Introduction: "There are 213 United States and Canadian named varieties (including two or more strains of some varieties) in the Group 00 to IV Soybean Germplasm Collection at Urbana [Illinois] as of December 1970." A table (p. i) shows the number of varieties in each of the six maturity groups; the greatest number (54) is in Group IV. Definitions of column headings follow on page ii-iii. Table 1 (p. 1-3): Checklist of U.S. and Canadian varieties, groups 00 to IV. Lists variety name (alphabetical), maturity group, and code. At the end is a description of the code sequence. Table 2 (p. 4-17): Origin of groups 00 to IV varieties. Lists variety name (alphabetical), prior designation, source, year named or released, developer or sponsor & year selected. An appendix to this table (p. 16-17) adds 21 more varieties. Table 3 (p. 18-19): Agronomic evaluation and seed composition data on 63 Group 0 and 00 soybean varieties grown at St. Paul, Minnesota, in 1963. For each variety is given: Maturity group, flowering date, maturity date, lodging score, height (inches), stem termination score, branching score, seed quality score, shattering score, weight of 100 seeds, yield (bu/acre), seed composition (protein, oil), protein composition (methionine, soybean trypsin inhibitors), oil composition (% linolenic acid, % linoleic acid), reaction to phytophthora rot disease (resistant or susceptible), mottling score.

Table 4 (p. 20-23): Agronomic evaluation and seed composition data on 22 Group I and I soybean varieties grown at Urbana, Illinois, in 1964. Table 5 (p. 24-29): Agronomic evaluation and seed composition data on 89 Group III and IV soybean varieties grown at Urbana,

Illinois, in 1965 and 1966. Table 6 (p. 30-31): Agronomic evaluation and seed composition data on 37 Group 00 to IV soybean varieties grown at Urbana, Illinois, in 1968.

Varieties evaluated: A-100, Acme, Adams, Adelphia, Agate, A.K. (FC 30.761), A.K. (Harrow), A.K. (Kansas), Aksarben, Altona, Amsoy, Amsoy 71, Anoka, Aoda, Bansei, Bansei (Ames), Bavender Special A, Bavender Special B, Bavender Special C, Beeson, Bethel, Black Eyebrow, Blackhawk, Bombay, Boone, Burwell, Calland, Capital, Carlin, Cayuga, Chestnut, Chief, Chippewa, Chippewa 64, Chusei, Clark, Clark 63, Clay, Cloud, Columbia, Comet, Corsoy, Crest, Custer, Cutler, Cypress No. 1, Delmar, Disoy, Dunfield, Dunn, Earlyana, Early White Eyebrow, Ebony, Elton, Emperor, Ennis I, Etum, Fabulin, Flambeau, Ford, Fuji, Funk Delicious, Funman, Giant Green, Gibson, Goku, Goldsoy, Granger, Grant, Green and Black, Guelph, Habaro, Hahto (Michigan), Hakote, Harbinsoy, Hardome, Hark, Harly, Harman, Harosoy, Harosoy 63, Hawkeye, Hawkeye 63, Henry, Hidatsa, Higan, Hokkaido, Hongkong, Hoosier, HP-963, Hurrelbrink, Illington, Illini, Ilsoy, Imperial, Jefferson, Jogun, Jogun (Ames), Kabott, Kagon, Kanrich, Kanro, Kanum, Kent, Kim, Kingston, Kingwa, Korean, Kura, Lincoln, Lindarin, Lindarin 63, Linman 533, Little Wonder, Macoupin, Madison, Magna, Manchu, Manchu (Lafayette), Manchu (Lafayette) B, Manchu (Madison), Manchu-Hudson, Manchu-Montreal, Manchu 3-Wisconsin, Manchu 606-Wisconsin, Manchu 2204, Manchukota, Manchuria, Manchuria 13177, Manchuria 20173, Mandarin, Mandarin-Ottawa, Mandarin 507, Mandell, Manitoba Brown, Mansoy, Medium Green, Mendota, Merit, Midwest, Miller 67, Mingo, Minsoy, Monroe, Morse, Morsoy, Mukden, Norchief, Norman, Norredo, Norsoy, OAC 211, Ogemaw, Ontario, Osaya, Ottawa, Pagoda, Pando, Patoka, Patterson, Peking, Pennsoy, Perry, Poland Yellow, Polysoy, Portage, Portugal, Pridesoy 57, Prize, Protana, Provar, Rampage, Renville, Richland, Roe, Ross, Sac, Sanga, Sato-3, Scioto, Scott, Seneca, Shelby, Shingto, Shiro, Sioux, Sooty, Sousei, Soysota, SRF300, Tastee, Toku, Tortoise Egg, Traverse, Verde, Viking, Virginia, Wabash, Waseda, Wayne, Wea, Willomi, Willomi B, Wilson, Wilson B, Wilson-5 [Wilson-Five], Wilson-5B, Wilson-6, Wing Jet, Wirth, Wisconsin Black, Wolverine, Yellow Marvel.

Note the capitalization in the text: “Strains in maturity Groups 00 to IV are maintained at the U.S. Regional Soybean Laboratory, Urbana, Illinois, and those in Groups V to VIII at the Delta Branch Experiment Station, Stoneville, Mississippi.”

Note 1. This is the earliest document seen (Nov. 2003) that contains the term “Soybean Germplasm Collection” (regardless of capitalization).

Note 2. This is the earliest document seen that mentions the soybean varieties Anoka (Aug. 2000), or Provar (Aug. 1999). Anoka (p. 32-33) was licensed or released in 1970. Developer: Minnesota AES and USRSL. Provar (p. 52-53) was licensed or released in 1969. Developer: Iowa AES and USRSL. Address: Urbana, Illinois.

938. Ellis, J.H. 1970. The Ministry of Agriculture in Manitoba. Winnipeg, Manitoba, Canada: Manitoba Dept. of Agriculture. See p. 236. Dec.
• ***Summary:*** Page 236 notes: “Forage Crop Improvement was first undertaken at M.A.C. [Manitoba Agricultural College] by Professor W. Southworth in 1916. This work consisted in selecting and breeding improved varieties of alfalfa, red clover, white and yellow sweet clover, grasses, corn, sudan grass, sainfoin, yellow trefoil, vetches, and soybeans... In breeding and selecting soybeans for earliness, a brown variety was produced and named Manitoba Brown, and several promising white soybean hybrids were produced and grown under number but were not named during Professor Southworth’s years of service.” Address: Prof. of Soils (Retired), Manitoba, Canada.

939. Gorrill, A.D.L. 1970. Physical and chemical characteristics of soybean and milk proteins before and after treatment with dilute alkali. *Canadian J. of Animal Science* 50(3):745-47. Dec. [6 ref]
• ***Summary:*** Promosoy, a soybean protein concentrate (SPC) supplied by Central Soya (Decatur, Indiana) readily dispersed in dilute alkali to yield a thick syrup-like mixture, which does not settle out in a liquid diet. “It had a smooth, bland taste, compared with a chalk-like taste when mixed with water. *In vitro* protein digestion by pepsin was also increased by this mild alkali treatment.” Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

940. Ontario Soya-Bean Growers’ Marketing Board. 1970. Notice of annual meeting of growers under the Ontario Soya-Bean Growers’ Marketing Plan. Chatham, Ontario, Canada. 4 p.
• ***Summary:*** The meeting was held on Thursday, Dec. 3, 1970 at the Holiday Inn, Great Hall, Keil Drive, Chatham. A financial statement for the year ending 31 Aug. 1970 shows assets of $116,000. Income for the year was $74,182, of which 93% came from a license fee of 1 cent per bushel. Expenses were $65,803. Address: Box 668, Chatham, Ontario, Canada.

941. Weber, C.R.; Fehr, W.R. 1970. Registration of Provar soybeans. *Crop Science* 10(6):728. Nov/Dec. [2 ref]
• ***Summary:*** Registration No. 78, for Provar. Developed at Iowa, it was increased and released in the summer of 1969 in Illinois, Iowa, Minnesota, and South Dakota. The Iowa Agricultural Experiment Station will be responsible for maintenance of breeder seed. Provar was evaluated in the Uniform Regional Tests beginning in 1963 by the Crops Research Division, and cooperating agricultural experiment stations in California, Illinois, Indiana, Iowa, Michigan,

Minnesota, Missouri, Nebraska, New Jersey, Ohio, South Dakota, Wisconsin, and Ontario (Canada). Other information on Provar has been published in Iowa Farm Science 23:3-5, 1969. Address: 1. Vice President and Director of Research, Peterson Seed, Company, Waterloo, Iowa, and Savage, Minnesota; 2. Associate Prof. of Agronomy, Iowa State Univ. and Collaborator, Crops Research Div., Agricultural Research Service, USDA.

942. Schwarz, Richard W. 1970. John Harvey Kellogg, M.D. Nashville, Tennessee: Southern Publishing Assoc. 256 p. Illust. Index. 22 cm. See p. 44, 120-23, 243. Also published in 1970 by Andrews Univ. Press (Berrien Springs, Michigan).

• ***Summary:*** This excellent biography of Dr. J.H. Kellogg was originally written as a 1964 PhD thesis at the University of Michigan. Although it contains no references or footnotes, and thus lacks the documentation and completeness of the dissertation, it is still (March 2009) the best biography of Dr. Kellogg. The author is a Seventh-day Adventist.

Contents: Preface. 1. The boy foreshadows the man. 2. A convert (the early health reform and vegetarian movements in America). 3. From teacher to doctor. 4. A man is what he eats. 5. Changing American habits. 6. Developing the Battle Creek Sanitarium. 7. Sanitarium ups and downs. 8. A torrent of words. 9. Variations on a boyhood dream. 10. The unwilling surgeon. 11. Products of an active mind. 12. All work, but little play. 13. What manner of man. 14. Father of forty-two children. 15. His brother's keeper. 16. The ties of fifty years are broken. 17. Food manufacturing and family quarrels. 18. New outlets for promoting an old program. 19. The last battles. 20. An epilogue.

Concerning meat substitutes (p. 121-23): "During the years in which he directed the experiments which led to the production of flaked cereals, Bromose, and Malted Nuts, Dr. Kellogg also attempted to develop a substitute for meat from plant sources. He traced his interest in such a product to conversations with Dr. Charles W. Dabney, noted agricultural chemist and former president of the University of Tennessee. When Dabney was serving as President Cleveland's Assistant Secretary of Agriculture [probably about 1893-1897], he had discussed with Kellogg the problem of supplying adequate protein for the world's rapidly expanding population. The men agreed that it was better economics to use grain for human food than to feed it to animals and then use them for food. The problem, as Dabney saw it, was to produce a grain product which would have all the nutritional value and taste appeal of meat.

"In 1896 Kellogg announced that he had perfected the ideal substitute for meat in Nuttose, a nut product which he could prepare to taste much like beef or chicken... The doctor's interest in new vegetarian meatlike protein foods continued active until shortly before his death. Among some of the more popular creations later developed in his laboratories were Protose, Battle Creek Steaks, and Battle Creek Skallops. Various combinations of nuts and wheat gluten composed the principal ingredients in the imitation meats...

"Kellogg's last major food discovery was an artificial milk made principally from soybeans. He was particularly enthusiastic over soy milk because it proved an excellent host for the *acidophilus* bacteria which the doctor believed needed to be implanted in the intestinal tract in order for it to function perfectly. Shortly after Kellogg had developed soy acidophilus milk, he chanced to read that Marie, smallest of the Dionne quintuplets, was suffering from bowel trouble. Immediately wiring the quints' physician, Dr. A. R. Dafoe, he announced he was sending him a supply of soy acidophilus milk, which he was certain would cure Marie's problem. About ten days later he received a letter from Dafoe which indicated that the soy acidophilus milk had indeed corrected the situation and asked that a continuous supply be sent to Callander, Ontario [Canada], for the five little girls."

In summarizing Dr. Kellogg's major accomplishments, the author notes (p. 243): "His introduction of peanut butter added another widely accepted item to the American diet, and it probably did more to provide a market for peanuts than did the efforts of any other person, with the possible exception of George Washington Carver. John Harvey's development of meatlike products from nuts and legumes combined with wheat gluten has not only helped to enrich the dietary of thousands of persons who for ethical, health, or religious reasons choose to be vegetarians, but such high-protein foods also hold possibilities for supplementing the diet in countries where the supply of meat is insufficient to provide enough protein for a rapidly expanding population."

Concerning Granola: In the early 1860s, Dr. James Caleb Jackson of Dansville, New York, developed Granula, America's first successful cold breakfast cereal, made solely from wheat. For 40 years, Dr. Jackson operated "Our Home on the Hillside," probably the most successful of the "water-cure" institutions that blossomed in the 1850s. "In an atmosphere approaching that of a European spa, Jackson provided hydropathic treatments and a special diet for as many as a thousand patients a year." In about the 1870s, at the Battle Creek Sanitarium, John Harvey Kellogg developed a similar product, which he named Granola. It differed from Jackson's Granula in that it consisted of several grains, and longer baking dextrinized the starch more thoroughly. "At first he apparently had no thought of selling it. He intended it solely for sanitarium patients. Gradually, however, as former patients and others interested in dietetic improvement sent to the sanitarium for Granola, a small commercial business developed, and Battle Creek thus took its first step toward becoming the 'Breakfast Food Capital of the World.'... Shortly after the production of

Granola for patients at the sanitarium began in 1877, Dr. Kellogg organized the Sanitarium Food Company as a subsidiary of the Battle Creek Sanitarium. Operated as an adjunct to the sanitarium bakery, for more than a decade it marketed a variety of oatmeal, graham, and fruit crackers and whole-grain cooked cereals–all originally devised to provide variety in the menu of sanitarium patients." All products were made from whole grains without artificial additives, and all underwent prolonged high-temperature baking designed to dextrinize their starch. "By 1889 the Sanitarium Foods had become popular enough to warrant the establishment of a separate factory; Granola alone sold at the rate of two tons a week." But when Dr. Kellogg wanted to expand the business, other sanitarium doctors refused to vote the funds. So Dr. Kellogg launched the private Sanitas Food Company, relying heavily on his younger brother, Will Keith, who had served as his personal accountant and business manager since 1880. John Harvey's new flaked cereals and vegetable meats became the property of the Sanitas Company. In mid-1906 Dr. Kellogg decided to change Sanitas' corporate name to the Kellogg Food Company. Then: "In the spring of 1921, to avoid further difficulties with Will Kellogg's manufacturing business [Battle Creek Toasted Corn Flake Company], Dr. Kellogg changed his concern's name to the Battle Creek Food Company."

Concerning flaked breakfast cereals: The first ones were developed from wheat jointly by Dr. J.H. Kellogg and his brother Will, in about 1894. Dr. Kellogg named their first successful wheat flakes product Granose Flakes, and on 31 May 1894 he applied for a U.S. patent on "Flaked cereal and process for preparing same." But in 1903 courts declared the doctor's patent invalid. Will Kellogg developed the product into a great commercial success, in part by adding sugar to the malt and corn combination from which he made the flakes. "The sugar greatly enhanced the cereal's taste appeal, and, as a result, the Corn Flakes business was booming by late 1905." Will convinced his brother, John Harvey, to relinquish Sanitas' rights to Corn Flakes, and in early 1906 Will established a separate Battle Creek Toasted Corn Flake Company with outside financing. John Harvey agreed not to take an active part in the new company's management. Six months later John Harvey decided to change Sanitas' corporate name to the Kellogg Food Company. The new company "began operating in July 1908, with Dr. Kellogg owning all but two of its fifteen thousand shares of stock. Not only did the new company absorb the old Sanitas Company, but it also leased the entire plant, machinery, goodwill, and business of the Battle Creek Sanitarium Food Company, thus bringing the manufacture and distribution of all the food products with which Dr. Kellogg was associated into one organization. By then John Harvey had decided that it would be a good thing to put out all company products under the trade name 'Kellogg's.'"

Will became very upset when Dr. Kellogg attached the family name to his new food company and products. Eventually a series of legal battles developed between the two brothers over this and other products. Will Keith Kellogg is discussed on pages 64, 118-20, 122, 144, 148, 192, 210-18, 224, 237-38.

On pages 193-208 are 16 pages of excellent black-and-white photos from the life of Dr. Kellogg, starting with a portrait of him and his wife in 1884.

Reprinted in 2006 by Review and Herald Publishing Association (Hagerstown, Maryland)–but with the new subtitle: "Pioneering health reformer." Adventist pioneer series. On the new cover, on a snipe in the upper right corner: "Father of the health food industry." Address: Andrews Univ., Berrien Springs, Michigan.

944. Schroder, D.J.; Jackson, H. 1971. Preparation of soybean cheese using lactic starter organisms. III. Effects of mold ripening and increasing concentrations of skim milk solids. *J. of Food Science* 36(1):22-24. Jan/Feb. [11 ref]
• ***Summary:*** Fermented soybean cheeses were prepared from blends of skim milk powder and soybean milk in 4 different proportions. The amount of skim milk had little effect on the flavor of the finished cheese due to the dominant beany flavor from the soybeans. The original cheese was made with *Streptococcus thermophilus* as a starter, plus rennet added after 1 hour to assist in the coagulation of the milk. The cheeses were waxed and stored at 20ºC. The surface of the cheeses were inoculated with one of two molds: *Rhizopus oligosporus, or Penicillium camemberti*. A third trial consisted of making tempeh, then grinding the tempeh to make a milk, which was made into cheese by the normal method. Mold ripening resulted in desirable changes in texture, but these were offset by the development of bitter flavors. Address: Dep. of Food Science, Univ. of Alberta, Edmondton, Canada; Schroeder present address: Univ. of Minnesota, St. Paul.

945. *Implement & Tractor (Kansas City, Missouri).*1971. Soybean combining: Search for a better way. 86(6):40. March 7.
• ***Summary:*** The majestic combine "was criticized for its shortcomings by agricultural engineers from 14 states and Canada during the Univ. of Illinois soybean equipment conference, Feb. 4-5.

"'The combine is a child of the grain industry and serves that industry well. But soybeans demand more tender

loving care than the combine provides,' said William M. Bruce, chief of USDA's harvesting and Farm Processing Research branch, Beltsville, Maryland."

Agricultural engineers can help agronomists increase soybean yields. "'An additional 2 bushels of soybeans per acre due to better harvesting machinery will increase the current average yields of soybeans by 7.5 per cent. That's 85 million bushels, or about $250 million in terms of the 1971 crop,'" said Henry Parker, manager of Swift Edible Oil Co., Champaign, Illinois.

Agricultural engineers from eight major soybean producing states reported on research programs on combines at their land-grant universities: Illinois, Minnesota, Nebraska, Iowa, Missouri, Louisiana, and Michigan.

Note: The soybean was first harvested by combine in 1924, and this crop was, in fact, responsible for the introduction of the combine into the eastern United States.

946. American Soybean Association. 1971. Soybean Digest Blue Book Issue. Hudson, Iowa: American Soybean Assoc. 176 p. Index. Index of advertisers. 22 cm.
• ***Summary:*** Page 65 titled "Canadian production" contains three tables: (1) "Canadian estimated acreage, yield, production, farm price and value, crop years 1941-42 through 1970-71" (preliminary). (2) "Soybean oil and oilcake production, crop years 1943-44 through 1969-70. Includes bushels of soybeans crushed each year, which was 20,054,212 in 1968-69. (3) "Soybean production, utilization and value, Canada, 1936-1970" (9 columns). including imports and exports.

A table titled "Number of soybean processing plants: Estimated number of soybean oil mills and processing capacity in the United States, 1951-69" (p. 86) has the following columns: (1) Year beginning September. (2) Number of mills. Decreased from 193 (an all-time high) in 1951 to 121 in 1959, rose slightly to a peak of 135 in 1967, then decreased to 132 in 1969.

(3) Annual processing capacity, total (million bu): Increased from 310 in 1951 to 770 in 1969. (4) Annual processing capacity, utilized (million bu): Increased from 244 in 1951 to 737 in 1969. (5) Annual processing capacity, excess (million bu; difference between total and utilized): Increased from 66 in 1951 to a peak of 102 in 1953, then decreased to a low of 51 in 1958, rose to a peak of 174 in 1967, then fell to a record low of 33 in 1969.

(6) Ratio of utilized to total (percent): Ranged from 68% in 1952 to 96% in 1969.

(7) Average per mill, processing capacity (million bu): Increased from 1.6 in 1951 to a high of 5.8 in 1969.

(8) Average per mill, capacity utilized (million bu): Increased from 1.3 in 1951 to a high of 5.8 in 1969.

Note: The number of soybean oil mills in the USA from 1934 to 1948 is given in: Nakamura, Hiroshi; Hieronymus, Thomas A. 1965. "Structure of the soybean processing industry." *Illinois Agric. Exp. Station, Bulletin* No. 706. 84 p. Feb. See p. 4-5.

1934: 19 mills crushed 9 million bushels of soybeans.

1935: 49 mills crushed 25 million bushels of soybeans.

1942: 99 mills crushed had an estimated annual capacity to crush 106 million bushels of soybeans.

1944: 137 mills crushed had an estimated annual capacity to crush 173 million bushels of soybeans. \1945: 160 mills crushed had an estimated annual capacity to crush 189 million bushels of soybeans.

1948: 185 mills crushed had an estimated annual capacity to crush 200 million bushels of soybeans.

1950-51: 193 mills crushed 252 million bushels of soybeans. Address: Hudson, Iowa.

947. Moore, James W. 1971. Challenge ahead for soybeans. *Soybean News* 22(3):2-3. April.
• ***Summary:*** Excerpts from an address at the First National Soybean Planning Conference banquet, held 3 March 1971 at St. Louis, Missouri. The USA faces two major challenges. We are now using about 13% more soybeans than we grow. The immediate solution lies in planting more soybean acres. The long-term solution lies in getting better yields per acre. If we do not do this, Brazilian soybeans, or Canadian rapeseed, or African groundnuts, or Russian sunflower seeds will fill the gap. A photo shows James Moore. Address: President, National Soybean Processors Assoc.

948. *Foreign Agriculture.*1971. U.K. fats and oils imports up as Britain buys more soybean oil. July 19. p. 6-7.
• ***Summary:*** Imports of soybean oil as oil in 1970 reached the very high level of 60,500 tons. As usual, most of it came from Canada, with shipments totaling 25,900 tons. Second most important supplier of soybean oil in 1970 was Spain, with 16,400 tons. Direct soybean oil imports from the U.S. totaled 1,600 tons.

• ***Summary:*** World soybean production has been increasing at the rate of 2.3% per annum from 1959 to 1968. World production has grown from an average of 19,724 tonnes in 1959-63 to an average of 38,405 tonnes in 1964-68. The three leading producing countries are USA (24,789,000 tonnes average 1964-68), China (10,978,000), and Brazil (559,000). The major importing countries are Japan (347,000 tonnes average 1964-1968), West Germany (262,000), Spain (136,000), Netherlands (97,000), Italy (93,000), Canada (83,000). Fluctuating prices and major influences affecting the basic trends are discussed. Address: TPI (Tropical Products Inst.), 56/62 Gray's Inn Rd., London WC1X 8LU, England.

• ***Summary:*** "The people in Japan, hearing how we have been treated by the Canadian Government, and that we are living in camps in the woods, send us barrels of soya sauce and miso paste."

Note 1. This book is written for elementary and junior high school students. A Japanese-Canadian girl recalls her experiences of the three years (1942-1945) that she and her family spent in a Canadian internment (evacuation and relocation) camp during World War II. It was the New Denver Relocation Center in British Columbia.

957. *SoyaScan Notes.*1972. Chronology of Janus Natural Foods, macrobiotic and natural foods distributor in Seattle, Washington. And of Granum. 17 March. 1992. Compiled by William Shurtleff of Soyfoods Center.
• ***Summary:*** 1972 Jan.–Janus Foods Inc. is established at 712 Seventh Ave. South in Seattle, Washington, by George Gearhart and Blake Rankin, formerly of Spiral Foods. Some background: In 1969, while a student at UCLA, Rankin came in contact with Erewhon, Los Angeles. After graduation from UCLA he and several friends set up a small health food store in Victoria, BC, Canada. Then he spent 3 months in Boston, Massachusetts, living in a Kushi study house and working in an Erewhon warehouse. Back in Seattle, he worked at Spiral Foods, a wholesale operation that was an offshoot of Chico-San. Spiral Foods owned the O-Soba Noodle Nook in Seattle. Shortly after that he and George Gearhart, the proprietor, closed Spiral Foods and in Jan. 1972 opened Janus Foods as a macrobiotic and natural foods wholesale and distribution company. Tim Hartman was third of the original incorporators; all three men managed the company. It was successful. From opening day, Janus sold miso and shoyu, imported from Japan; they were among the company's best-selling products. Janus never owned a natural foods retail store or restaurant, and never sold foods retail from their warehouse.

1972 Sept.–Rankin leaves Seattle on a trip to Japan via Hawaii. He leaves Hawaii for Japan in March 1973. Erewhon had given Janus permission to buy natural foods (bearing the Erewhon label) directly from Japan, so in the spring of 1973 Rankin traveled and worked with Muso and Mitoku to set up the first shipments to Janus in Seattle. Janus probably never paid any royalties or fees directly to Erewhon. He leaves Japan in Sept. 1973. Then he goes to Nepal and India on a spiritual search. In late 1973 he returns to Seattle and works for Janus.

1973–Two directories show that "Janus Foods Inc." is still located at 712 7th Ave. South, Seattle, Washington 98104. They now sell tamari and miso and distribute

products from Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, and Arrowhead Mills.

1974 March 8–Janus (Gearhart, Rankin, and Hartman) hosts the meeting of the Natural Food Distributors in Seattle; 16 people representing 12 companies attended.

1974 July 19. By this date, Janus Natural Foods, Inc. is located at 1523 Airport Way South, Seattle, WA 98134. Tim Hartman is still a manager of the company and Rankin is present. The company now sells barley koji. The company now has a lovely sprout-like logo (designed by Frederick Walsh) and a new brand called "Verity," whose labels were also designed by Walsh. Soy sauce and misos were sold under the Verity label for a while starting before Sept. 1976.

1975–The three managers decide to rotate the presidency of Janus annually. Rankin became president and Hartman left the company before his turn came around. During 1974 and 1975 Rankin and Gearhart were working on miso production.

1976 Sept.–Rankin leaves Janus and returns to Japan where he works for Mitoku and studies calligraphy. A few days after his arrival in Japan he meets his future wife, Yoko. They later had two children, but separated in 1988 and eventually were divorced.

1977–Janus leaves its large warehouse on Airport Way.

1979 Month? (before summer) Janus goes out of business, under the management of George Gearhart.

1981–Rankin returns to Seattle and in January or February starts Granum (pronounced GRAH-num, not GRAY-num) as a distributor and importer for Mitoku macrobiotic food products from Japan. The Granum logo is designed by Frederick Walsh. As of 1985 Granum has a small retail store and a 10,000 square foot warehouse, both at 2901 N.E. Blakeley St., Seattle, Washington 98105. Expected 1985 gross is more than $500,000.

As of March 1992 Granum has more than doubled its business compared with 1985. Blake has remarried to Nancy and they have a 2-year-old son, Addison. George Gearhart now lives in the suburbs to the south of Seattle. He is a sales manager, but no longer works in the natural foods industry. Address: 712 7th Ave. South, Seattle, Washington 98104.

958. Bourne, M.C. 1972. Defatted soybean cotyledons as a high protein, stable, dry food. *Canadian Institute of Food Science and Technology Journal* 5(2):A39-A41. April. [3 ref. Eng]
Address: New York State Agric. Exp. Station, Cornell Univ., Geneva, NY 14456.

959. Jaeger, Martin. 1972. Marketing soybeans. *Ontario Ministry of Agriculture and Food, Factsheet* AGDEX 141/840. 3 p. April.
• ***Summary:*** "More than 300,000 acres of soybeans are grown in Ontario. Ontario farmers received about $24 million from sales of soybeans in 1970. Most soybeans are crushed to produce meal and oil. The meal is used in mixed feeds for swine and poultry, while the oil is used in human food, mainly as cooking oil or as a component of margarine or shortening. Ontario-grown soybeans account for less than half of the soybean crushings in Ontario. The rest are imported by boat from the U.S.A."

"Sixty pounds of soybeans provide about 47.5 pounds of soybean meal" and 10.5 pounds of oil. There are three soybean crushing firms in Ontario: Canada Vegetable Oil Products in Hamilton, Victory Soya Mills Ltd. in Toronto, and Maple Leaf Mills Ltd. in Toronto.

"Pricing soybeans: Ontario processors have an agreement with the Soya-Bean Marketing Board under which the processors are supposed to pay as much for Ontario soybeans as they do for American soybeans of equal quality.

"In practice this means that current U.S. soybean prices determine Ontario soybean prices while the navigation is open in the autumn, spring and summer. Ontario farmers deliver about 75% of their soybeans during this crop period."

Also discusses: Chicago futures prices. Forward pricing (pricing soybeans before the time of delivery, e.g., before planting). Direct marketing (from farm to processors). Competition from rapeseed.

Tables show: (1) Hypothetical example of soybean pricing in the autumn, spring and fall (per bushel). (2) Hypothetical example of soybean pricing in winter (Feb. 1). Address: Economics Branch, Ontario Ministry of Agriculture and Food.

960. Scott, Tobi. 1972. Gardening in the Cariboo. *Organic Gardening and Farming* 19(4):72-73. April.
• ***Summary:*** Homesteading in British Columbia, Canada, this family enjoyed the bounty of alfalfa, soy, mung and lentil sprouts, harvested in their kitchen every 3-4 days.

961. Farmilant, Eunice. 1972. Macrobiotic cooking. New York, NY: New American Library. 224 p. Foreword by Herman Aihara. May. Index. 18 cm. [31 ref]
• ***Summary:*** This pocketbook has a color (beige) photo on the cover of ears of wheat, one wooden spoon filled with soybeans and one filled with unpolished rice. It is "A basic introductory guide to cooking and eating the macrobiotic way." The author's interest in macrobiotics began in April 1968. Basic information on soyfoods (especially miso, tamari, and tofu) is given on pages 29, 33-38, 213-14. Soy-related recipes include: Wheat berries and black beans (i.e. black soybeans, p. 78). Sprouts (incl. soy sprouts, p. 82-83). Miso pickles (p. 124-25). Miso soup (p. 128-29). Cream of miso soup (p. 135). Black beans and wheat berries (p. 139).

There is an entire chapter on miso and tofu (p. 142-46) including: What makes miso so beneficial? Barley miso

(nutritional analysis). Miso-vegetable stew. Miso-rice. Miso stew with vegetables. Miso-vegetable spoon bread. Homemade tofu (curded with fresh lemon juice).

Pizza–Macrobiotic style (with miso, p. 149). Chop suey (with tofu and miso, p. 151-52). Miso bechamel sauce (p. 159). Miso gravy. Simple tahini and tamari sauces (p. 160). Tempura dip (with tamari). Simple miso spreads (p. 161). Miso-vegetable spread. Miso-watercress spread.

There is a directory of macrobiotic stores and restaurants in the U.S. (p. 191-203, subdivided alphabetically by state, and within each state alphabetically by city). The following states have the following number of stores and restaurants: Alaska 1, Arizona 4, Arkansas 1, California 32, Colorado 4, Connecticut 18, District of Columbia 3, Florida 14, Georgia 7, Hawaii 2, Illinois 7, Indiana 2, Iowa 5, Louisiana 4, Maine 14, Maryland 7, Massachusetts 51, Michigan 12, Minnesota 3, Mississippi 2, Missouri 3, Nevada 1, New Hampshire 20, New Jersey 9, New Mexico 3, New York 61, North Carolina 5, Ohio 14, Oklahoma 3, Oregon 2, Pennsylvania 8, Rhode Island 5, South Carolina 1, Texas 4, Utah 1, Vermont 26, Virginia 4, Washington 3, Wisconsin 2.

There is also a directory of stores, restaurants, and centers outside the U.S. (p. 204-07, subdivided by country). The following countries have the following number of stores, restaurants, or centers: Australia 1, Belgium 2, Brazil 2, Canada 15, Denmark 4, France 29, Germany 1, Holland (Netherlands) 2, India 1, Italy 1, Japan 3, Portugal 1, Puerto Rico 1, Spain 1, Sweden 1, Switzerland 2, United Kingdom: England 13, Scotland 1, Vietnam 2.

A list of wholesale distributors in the U.S. (p. 208-09) includes Shiloh Farms (Route 59, Sulfur Springs, Arkansas), Erewhon Trading Co. (8003 W. Beverly Blvd., Los Angeles, California 90048), Chico San Foods (1262 Humboldt Ave., Chico, California 95926), Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Deer Valley Farms (Guilford, New York 13780), Infinity Food Co. (171 Duane, New York, NY 10013), Mottel Foods (451 Washington, New York, NY 10013), Juniper Farms (Box 100, Sugar Loaf, NY 10981), Pioneer Specialty Foods (Fargo, North Dakota 58100), Merit Food Co. (Pill Hill Lane, Box 177, Bally, Pennsylvania 19503), Essene (58th & Grays Ave., Philadelphia, PA 19143).

963. Kaldy, M.S. 1972. Protein yield of various crops as related to protein value. *Economic Botany* 26(2):142-44. June. [7 ref]

• ***Summary:*** The author compares the yield of usable protein per hectare of land for 6 crops taking into account the Biological Value (BV), Protein Score (PS; also called Chemical Score), and Net Protein Utilization (NPU). He then calculates the number of people whose protein needs could be met from one hectare of land using the three different values. For soybeans, the Biological Value is 29.2 (egg is 96 and potatoes are 73), the Protein Score is 70 (egg is 100 and potatoes are 70), and the NPU is 56 (egg is 100 and potatoes are 71). One acre planted to soybeans can supply the protein needs of more people under each of the 3 criteria than can be supplied by any of the other 5 crops, 29.2 people measuring protein quality by BV, 28.4 people measuring PS, and 22.7 people measuring NPU. Potatoes can supply the protein needs of the next largest number of people, followed by corn, beans, peas, and spring wheat.

Note: In March 1991, in answer to an enquiry from Soyfoods Center, Kaldy wrote: "In the paper I published in 1972 in *Economic Botany,* I was working with data representing average values for all Canada and not specifically for Alberta. My data reflects conditions in Ontario and to a lesser extent Nova Scotia, Prince Edward Island and Manitoba, but not in Alberta." But none of the names of these provinces are listed in the paper. Address: Research Station, Canada Dep. of Agriculture, Lethbridge, Alberta, Canada.

Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada.

966. Labow, Rosalind S.; Layne, D.S. 1972. The formation of glucosides of isoflavones and of some other phenols by rabbit liver microsomal fractions. *Biochemical Journal* 128(3):491-97. July. [21 ref]
• ***Summary:*** The soybean isoflavones are not metabolized completely in the intestinal tract. Only an indeterminate amount is absorbed and then excreted as glycosides. Mentions biochanin A, daidzein, genistein, genistin, equol, glucoronic acid, monoglucuronides, monoglucosides, glycosides, and glucoside. Equol [7-hydroxy-3-(4' -hydroxyphenyl)-chroman] is an isoflavone derivative which was found to form a glucoside in a rabbit liver.

Note: This is the earliest document seen (Nov. 2009) that uses the word "equol" in connection with soybeans. Address: Dep. of Biochemistry, Univ. of Ottawa, Ottowa, Ontario K1N 6N5, Canada.

968. Gorrill, A.D.L.; Nicholson, J.W.G. 1972. Effects of neutralizing acid whey powder in milk replacers containing milk and soybean proteins on performance and abomosal and intestinal digestion in calves. *Canadian J. of Animal Science* 52(3):465-76. Sept. [15 ref]
• ***Summary:*** "We conclude that acid whey powder can be added to milk replacers at levels of about 23% and that adjusting the pH improves calf performance." Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

969. Criswell, J.G.; Hume, D.J. 1972. Variation in sensitivity to photoperiod among early maturing soybean strains. *Crop Science* 12(5):657-60. Sept/Oct. [16 ref]
• ***Summary:*** A key article on day neutrality. Two experiments were conducted to identify soybean varieties that were not sensitive to photoperiod. Early maturing varieties were found to be less sensitive to photoperiod than were later varieties. Therefore 111 soybean varieties from Maturity Group 00 (the earliest group) were grown at photoperiods of 12, 22, 23, and 24 hours in a controlled environment. In about 70% of these varieties "the length of time from planting to flowering was unaffected by photoperiod." Address: Crop Science Dep., Univ. of Guelph, Guelph, ONT, Canada.

970. Ontario. Ministry of Agriculture and Food. Economics Branch. 1972. The soybean industry in Ontario. Toronto, Ontario, Canada. ix + 93 p. Oct. 6. 28 cm. [10 ref]
• ***Summary:*** Contents: 1. Introduction: Background, U.S. production and utilization of soybeans, Canadian supply and utilization of soybeans, supply and disposition of protein meal in Canada, supply and disposition of edible oils in Canada.

2. Soybean production in Ontario: The importance of soybeans to Ontario agriculture, agricultural land use in southwestern Ontario, yields and farm value of principal cash grain crops, characteristics of farms producing soybeans, proportion of soybeans grown on farms in different size groups, soybean production on crop and livestock farms, size and income potential of farms producing soybeans, comparative costs and returns for soybeans and other crops.

3. Marketing soybeans in Ontario: Timing sales of Ontario soybeans, the country elevator system, handlings by county, comparison between Ontario and Indiana elevators, services performed by country elevators, terms of first sale, grading, purchase and transport of soybeans by processors, the Ontario Soya-Bean Marketing Board.

4. Processing soybeans in Ontario: Structure and technology of the industry, the market for Canadian oil, the market for Canadian meal, processing margins.

5. Price determination for Ontario soybeans: The general price level for soybeans, Chicago prices and Chatham Track prices, tariff change and price, on-boat prices and handling expense, summary of price adjustment, significance of the difference in relative prices in May and December, quality difference and price, the dealer margin.

6. Prospects and outlook for soybeans: U.S. and world prospects for soybeans, prospects for Ontario soybeans in present markets, competition from prairie rapeseed, alternative opportunities for Ontario soybeans, summary of price outlook.

Soybeans were introduced into Canada in 1893 at the Ontario Agricultural College. They began to be produced commercially in the early 1930s. "From 1941 to 1971, the area planted to soybeans in Ontario increased from 10,000 to 360,000 acres. Although soybeans are not a major contributor to total farm income in Ontario, they are a vital part of the cash grain economy of southwestern Ontario... Cash receipts from soybeans amounted to $16.7 million in 1969, $23.9 million in 1970, and $29.1 million in 1971. From 1969 to 1971, soybeans accounted for 29.2% of Ontario farm cash receipts from grain and 1.7% of all farm cash receipts.

"In Canada, soybean production and processing is concentrated in Ontario, where the industry was established during World War II. The original impetus came from war-time government policies designed to alleviate the shortage of edible vegetable oils that resulted from the War's disrupting world production and marketing." p. 4.

"Very few farms in Ontario produce only soybeans. The crop is usually combined with other cash grain enterprises or with livestock production. In 1966, there were 7,652 farms in Ontario with soybeans, 7,325 of which were in Elgin, Essex, Kent, Lambton, and Middlesex counties." p. 17.

"Only three edible oilseed processing plants are in operation in central Canada and all are in Ontario. One is in Hamilton and the other two are in Toronto... Canadian crushers continue to rely largely on imported soybeans."

"Vertical integration is important in the soybean crushing industry. Victory Soya Mills is owned by Procter and Gamble, a large refiner and user of vegetable oils. Canadian Vegetable Oil Processing Limited (CVOP) is

owned by Canada Packers, which refines and uses large quantities of oil. Canada Packers also uses soybean meal in preparing feed for sale through its owned and franchised feed dealers. Maple Leaf Mills is not integrated in terms of oil but is integrated with respect to both purchase of grains and manufacture and sale of animal feed. In view of its lack of integration into use of oil, Maple Leaf is in a good position to sell to Lever Brothers (Monarch Fine Foods) and to Swift Canadian.

"About 23 million bushels were crushed in Ontario in 1970-71. About half of this total was crushed by Victory. The other two firms divided the rest, with CVOP crushing a little more than Maple Leaf Mills" (p. 46). Address: Parliament Buildings, Toronto, Ontario, Canada.

971. Gorrill, A.D.L.; Nicholson, J.W.G. 1972. Alkali treatment of soybean protein concentrate in milk replacers: its effects on digestion, nitrogen retention, and growth of lambs. *Canadian J. of Animal Science* 52(4):665-70. Dec. [11 ref. Eng; fre]
• ***Summary:*** "Alkali treatment to disperse a soybean protein concentrate (SPC) was studied in two milk replacer experiments, in which the SPC supplied 50% of the total nitrogen." Six lambs were used. Growth to 10 weeks of age was similar. Address: Research Station, Canada Agriculture, Fredericton, New Brunswick.

• ***Summary:*** Soybean protein-supplemented culture medium for polio virus, and for animal cell culture serum replacement. Address: Connaught Medical Research Lab., Univ. Toronto, Willowdale, Ontario, Canada.

973. Buzzell, R.I.; Donovan, L.S.; Giesbrecht, J.E. 1972. Growing soybeans. *Agriculture Canada, Publication* No. 1487. 19 p. Revised in 1979.
• ***Summary:*** Contents: Selecting a variety. Soybeans in a rotation. Soils and fertilizers. Preparing a seedbed: Fall tillage, spring tillage. Planting the crop: Seed treatment, inoculation, time, rate, and depth of seeding, row width, equipment. Controlling weeds: Cultural methods, chemical methods. Diseases: Seed decay, root and stem rots, leaf diseases, stem diseases. Insect pests. Harvesting. Storage. Producing seed soybeans. Marketing. Soybean research in the Canada Department of Agriculture. Acknowledgments. Address: 1. Research Station, Harrow, Ontario; 2. Ottawa Research Station, Central Experimental Farm, Ottawa, Ontario; 3. Research Station, Morden, Manitoba. All: Canada.

974. Horton, Lucy. 1972. Country commune cooking. New York, NY: Coward, McCann & Geoghegan. 232 + [8] p. Illust. by Judith St. Soleil. Index. 24 cm.
• ***Summary:*** A nostalgic memoir (for those who came of age at this time) of the world of young Americans in communes in the early 1970s, with many fine illustrations (see p. 27). The author, raised in New York City and educated at Bryn Mawr (Pennsylvania, with a major in classical archaeology), earned her traveling money by working as a live-in maid and cook for a rich "Park Avenue Lady" before embarking on the project that became this book. She hitch hiked to San Francisco, arriving in June 1971, then spent most of the next year visiting 43 communes in 12 states and Canada, and collecting recipes from each. There she found "a New Age of Food Consciousness." The main topic of conversation and common interest at these intentional communities was not God or sex, but food. This book, with her 150+ favorite recipes, features natural and organic foods (with lapses). Most of the recipes from California and the West Coast are vegetarian, but in New Mexico and eastward (especially New England) she was "surprised to find that vegetarianism was more the exception than the rule" (p. 81). Thus, Chapter 3 is titled "Meat (and one fish)." There are recipes for chicken, fish, deer, goat, beef, etc.

The Introduction notes (p. 15): "The *sine qua non* of commune cooking is tamari soy sauce, an unspeakably delicious fermented Japanese product available in natural foods stores which bears no resemblance to commercial soy sauce" * (Footnote: *"Kikkoman soy sauce, available in supermarkets, tastes like tamari but contains a preservative").

"1. Soups: The commune soups I sampled were typically of mixed vegetables with a tomato or miso (p. 159) base" (p. 27).

Tamari chickbits (p. 94, with chicken). Note about soy grits (p. 114). Sprouts (p. 135-36, many kinds including alfalfa, mung beans, soybeans, from Terra Firma, Oregon). Miso Almond Sauce (p. 158-59). Tamari gravy (p. 159). Soy-related recipes include: From Chapter 2, "Vegetarian main dishes"–Donna's soyburgers (p. 60-61, with whole soybeans, from California). Soy cheeseburgers (p. 61-62, with whole soybeans, from Moon Garden, Oregon). Suzy's soybean casserole (p. 63-64, from Breadloaf, New Mexico). Baked soybeans (p. 64-65, from Woolman Hill School, Massachusetts). Larry's tofu (soy cheese) (p. 65-68, homemade tofu from whole soybeans, from Om Shanti, Mendocino County, California). Breakfast cereal with roasted, salted soybeans (p. 163). Soy spread (p. 227, with soy flour, from The Motherlode, Oregon). Soy nuts (p. 229-30, baked, soaked soybeans with oil and salt). A photo on the rear cover shows the author, age 27, with long blonde hair, granny glasses, and blue denim overalls. Says Raymond A. Sokolov: "Lucy Horton has done more than

collect exotic recipes... she has assembled the crucial artifacts of a movement within The Movement."

Also discusses (see index): Adelle Davis, gluten (wheat), granola, ground nuts, macrobiotic diet, peanuts. Address: Derby, Vermont.

975. Houck, James P.; Ryan, M.E.; Subotnik, A. 1972. Soybeans and their products: Markets, models, and policy. Minneapolis, MN: University of Minnesota Press. vi + 284 p. Illust. Index. 24 cm.

• ***Summary:*** This classic work developed the standard framework for soybean sector analysis based on the joint product characteristics of soybean oil and meal. Contents: 1. Introduction. 2. World markets for food oils and high-protein meals. 3. Soybean markets in the United States. 4. Prices in the soybean sector. 5. Dynamic supply and demand model of the market for U.S. soybeans and their products. 6. Policy analysis with the dynamic model. 7. The economic and statistical framework for regional demand analysis. 8. Analysis of regional export demand for U.S. soybean oil: Mediterranean region, developed countries, Eastern Europe, developing countries, Latin America, Asia and Africa. 9. Analysis of regional export demand for U.S. soybean meal. 10. Analysis of regional export demand for U.S. soybeans: European community, other Western Europe, Canada, Japan, Israel and Taiwan. 11. Summary of regional analyses. Appendixes: Description and sources of data. Effective support prices and acreage supply functions: A general approach. Address: Univ. of Minnesota.

976. Quick, Graeme Ross. 1972. Historical perspective (Document part). In: G.R. Quick. 1972. Analysis of the Combine Header and Design for the Reduction of Gathering Loss in Soybeans. PhD thesis, Iowa State University, Ames, Iowa. 282 p. See p. 6-13. [83 ref]

• ***Summary:*** Patrick Bell in England (1826), and the McCormicks (1816-1850s; Cyrus Hall McCormick, lived 1809-1884 was an American inventor) and Hiram Moore (1838) in the U.S. developed and used cutting reapers. Shortly thereafter (in 1842) Australian inventors initiated the development of the "header-stripper" for standing cereal crops.

"The American horse-drawn machines probably evolved out of Cyrus Hall McCormick's 1831 reaper. They employed a cutterbar reciprocating through guards, conveying canvas and the bat reel. The first successful Australian machine, John Ridley's, used a stripping comb over which revolved a set of beaters to knock off" the heads, thresh them, and "deliver them to a box. There was no knife and the full straw was left standing."

"A 22-foot wide platform, side-fed harvester, with a steam engine replacing the horse team, was probably the first self-propelled machine. This was built by Wm. Berry in California in 1887 and was capable of harvesting 50 acres of wheat in a day. By 1893, Benjamin Holt had built and operated a 50-foot cut combine in California (Nyberg 1957). Daniel Best of San Leandro was credited with having built the first combine which replaced ground wheel drive power with an auxiliary steam engine drive (Caterpillar Tractor Co. 1954). The need for traction and flotation for these enormous combine harvesters led to the development of the first successful crawler track. Best and Holt later merged their interests to form the Caterpillar Tractor Company in 1925."

In Australia, by 1884, Hugh Victor McKay had added a winnower cleaning section to the basic Ridley-type, and in 1909 McKay built a 24-foot self-propelled stripper-harvester with an internal combustion engine side-mounted on the chassis. A market was growing for the stripper-harvesters made at McKay's "Sunshine" factory and, between 1895 and World War I, the company even exported 10,000 of its machines. This huge volume of exports caused North American harvester manufacturers to take note, and one result was that in 1901 Massey-Harris of Toronto, Ontario, Canada, began production of stripper-harvesters, followed in 1904 by International Harvester Co. of Chicago. Neither company sold these machines on their domestic markets (Baker 1961).

The Australian-born "stripper-harvester revolutionized the harvest operation by combining the gathering and threshing operations into one machine, but the [Ridley-type] stripper-beater, with its knifeless long tooth comb had severe limitations in wet or down and tangled crops. Grain loss was also high in sparse crops. The challenge to produce a machine in Australia which could cope with these conditions was partially met by some farmers in New South Wales. They worked with Massey-Harris representatives, and adopted the knife into their 'reaper-thresher' (Wheelhouse 1966). By 1910 the Canadian firm was manufacturing this long tooth combed machine specifically for export to Australia. It was another New South Welshman, Headlie S. Taylor, who finally overcame the problem of harvest lodging with the long toothed comb, after several years of development of his header-harvester. He installed augurs over the comb. This development attracted the interest of machinery manufacturer, H.V. McKay, who became impressed with the possibilities. McKay bought the manufacturing rights and then employed Taylor to work at the Sunshine factory in Victoria. In 1920, after a wet season in the Eastern Australian wheatbelt, the Sunshine header had won a wide reputation." Five reasons are given for the success of the twin-augur-header over the stripper-harvester.

"In 1924 Taylor produced the first Sun Auto-Header, a 12-foot self-propelled combine 'with the comb front forming the widest part of the machine.' The Tee-shaped combine configuration had arrived! This concept was patented and no other make of self-propelled combine with

full-width header was commercially released until the patent expired 17 years later. In 1938 a Sun Auto-Header harvested 3,300 bu of wheat in one day–a record that was unsurpassed during the next 33 years.

The pioneering research on combine design and manufacture in far-away Australia, conducted between the 1880s and 1924, was about to have a major and direct effect (via Canada!) on soybeans in America.

"Elmer J. Baker, 'the Reflector,' of *Farm Implement News* fame (later Implement and Tractor Magazine), was to be instrumental in directing the Massey-Harris Company to deliver a combine for soybean harvesting to a subscriber in Illinois. The subscriber was an International Harvester dealer who was disgruntled because his company refused to ship him a combine for sale to the Garwood Brothers–clients who were growing soybeans near Stonington, Illinois. There is no record of a combine having been tested in any crop in Illinois to that date, 1924. The Reflector referred his reader to Massey-Harris at Toronto, with full knowledge that they had no sales facilities in the U.S. What followed is history." Baker wrote about what happened in the 20 Nov. 1924 issue of *Farm Implement News* (which see).

"The success of the combine in the Illinois soybeans was followed by intensive breeding trials for the Garwood farms. The increase in plant size and yield led to a preference for the wide cylinder type combine. Several other harvesters were developed concomitantly for soybeans, but none could even approach the efficiency of the combine header (Sjogren 1939). No other method succeeded as well. The American self-propelled and pull-type combines of this era continued to use the draper-conveyor and side feeding.

"The 'straight-through' or 'scoop' design, with full-width threshing cylinder, made its appearance around 1935 and in 1938 Massey-Harris released the first self-propelled version, the 'Clipper' (Massey-Ferguson Inc., 1964). In 1939, coincident with the expiration of Taylor's patent, Massey-Harris offered the Model 21 combine of Tee-configuration" which now competed with McKay's Auto-Header made in Australia.

"Possibly the first U.S. combine to employ the auger was Curtis Baldwin's 'Gleaner.' Baldwin's earliest machines anticipated the 'Unisystem' approach to farm machinery design, whereby the same power system is used for a variety of field machines. Baldwin mounted his machine on a Fordson tractor in 1923. His concept of mounting the threshing-cylinder on the header still lingers in the modern 'down-front' Allis-Chalmers combines. All U.S. combines now utilize the auger conveyor for header cross-feeding."

"Combine sales did not increase significantly until World War II when wartime shortages of manpower and grain spotlighted the need for more efficient harvesting. Today an estimated 3 million combines are in use throughout the world.

"The present day version is more versatile than ever–the same machine can harvest a 5000-fold range of seed sizes–but it is also more complicated, containing an estimated 35,000 parts in one machine. It is more efficient, but it is more expensive than ever."

An illustration (p. 7) shows landmarks in the history of the harvester and header. Address: Iowa State Univ., Ames, Iowa.

977. Statistics Canada [Statistique Canada], Manufacturing and Primary Industries Div. 1973. Moulins à huile végétale 1971: Recensement annuel des manufactures [Vegetable oil mills 1971: Annual census of manufacturers]. Ottawa, ONT, Canada. 9 p. Jan. Catalogue 32-223 Annual. [Eng; Fre]
• ***Summary:*** A table (p. 1) shows crude oils used for processing. Soya oil was 477,250 lb in 1970 but only 60,248 lb. in 1971. Address: Ottawa, ONT, Canada.

978. Buttery, B.R.; Buzzell, R.I. 1973. Varietal difference in leaf flavonoids of soybeans. *Crop Science* 13(1):103-06. Jan/Feb. [21 ref]
• ***Summary:*** Flavonoids are found in most higher plants. They have been studied for their intrinsic interest as chemical compounds, for their value as "markers" in genetics and taxonomy, and for their function in the plant.

No comprehensive study of flavonoids in soybeans has yet been published, but various reports have described phenolic substances involved in seed color. Address: Research Station, Canada Dep. of Agriculture, Harrow, Ontario.

979. Cumming, D.B.; Stanley, D.W.; deMan, J.M. 1973. Fate of water soluble soy protein during thermoplastic extrusion. *J. of Food Science* 38(2):320-23. Feb. [16 ref]
• ***Summary:*** Water-soluble soybean proteins are made up of four basic ultracentrifuge fractions in differing amounts: 2S comprises 22% of the total, 7S–37%, 11S–31%, and 15S–11%. Much research has been published on each of these fractions. For example, the 7S fraction consists of at least two immunochemically distinct moieties, β-conglycinin and gamma-conglycinin. This research shows that heating in a controlled extrusion process causes most of the water-soluble soybean protein to break into subunits and/or become insoluble. Address: Dep. of Food Science, Univ. of Guelph, Guelph, Ontario, Canada.

980. Kosaric, Naim; Singh, Narendra. 1973. Nutrition–Two views. Kosaric: develop new technologies. Singh: research is on the wrong track. *Ceres: FAO Review on Development* 6(1):32-40. Jan/Feb.
• ***Summary:*** Discusses: Population explosion, amino acid fortification of foods, fish protein concentrate, leaf proteins

and leaf protein concentrate, single-cell proteins (especially petroleum-grown yeast protein), ramie *(Bohemeria nivea)*, etc.

Singh argues that corporate elites from developed countries set the R&D priorities and patterns in Third World countries for their own (elite) benefit, while disregarding simple, local solutions to nutritional problems. "Soy interests have extensively supported specific R & D use of the soybean. TVP promotion is the latest manifestation of their pursuits. In India, even research on groundnuts was supported by North American interests because of the market potential for soybean technology. Now, overt and covert promotional pressures have started to displace groundnut by soybean, even in raw material research and development."

Singh notes that leaf protein research started over 40 years ago and research on petroleum-grown yeast protein (SCP) started about 10 years ago. There are large sidebars on "Amino acid fortification of foods" and "Leaf protein concentrate" based on information provided by the Joint FAO/WHO/UNICEF Protein Advisory Group. Address: 1. Assoc. Prof., Faculty of Engineering Science, Univ. of Western Ontario, Canada; 2. Inst. for Storage and Processing of Agricultural Produce, Wageningen, Netherlands.

981. *Detroit News.*1973. Ottawa–Sell hamburger mixed with soybean protein. April 18. p. A-3, col. 1. Race edition. *

982. Altschul, Aaron M. 1973. The revered legume. *Nutrition Today* 8(2):22-29. March/April. Illust. [2 ref]
• ***Summary:*** Contains a nice but inauthentic illustration of Commodore Perry receiving a soybean plant in Japan. This illustration was created by slightly changing an almost identical illustration printed in Alan B. Cole's book "A Scientist with Perry in Japan: The Journal of Dr. James Morrow" (1947, p. 134). In the original, no soybean is shown. Address: Prof. of Community Medicine and International Health, School of Medicine, Georgetown Univ., Washington, DC.

983. *Toronto Star (Ontario, Canada).*1973. The ugly soybean contains a wealth of protein, vitamins. June 6. p. 77.
• ***Summary:*** The article begins: "Mirror, mirror on the wall, what is the ugliest vegetable of all? The soybean. Some call it 'tasteless.' Others ask 'What do you do with it?' Cost-conscious cooks, nutritionists, and the food industry would be far more understanding."

Under the soybean's dull yellow surface is "a treasure of protein, more than any other vegetable, and substantial amounts of calcium, iron, other minerals and vitamins B and E. Also the soybean has more changes of clothes than any beauty queen." Consider the following guises:

"Eaten like peanuts: Tofu (used in Oriental cooking as bean curd); green (fresh) soybeans (prepared as fresh, or eaten blanched...); dried soybeans (eaten as peanuts or used as other dried beans in cooked dishes); soybean flour (can be mixed with other flours but lacks gluten and can therefore replace only 15 per cent or so of wheat flour in recipes).

"Other aspects of the bean are: Soy sauce (essential in Oriental cooking and mistakenly used in the manner of ketchup by many North Americans 'eating Chinese'); Tamari (pure soy–preferred by vegetarians); miso (fermented soybean paste); soybean milk (liquid or powdered); soybean grits and flakes; lecithin (supplement to control cholesterol build-up)..."

"Soybeans have long been available in health food stores, and some of the larger supermarkets now carry them." The best variety for food use is said to be Bansei. Canned soybeans, which take less time to prepare, make a good beef extender.

Gives recipes for: Soybeans and mushrooms (with "2 cups cooked soybeans" and 1 tbsp. tamari or soy sauce). Baked soybeans (with "1 pound yellow soybeans picked over and washed." Let the beans soak in a large freezer container for 5 hours, then place them in the freezer for at least 24 hours to reduce the cooking time required. "Place frozen beans and liquid in a large kettle. Bring to a boil and simmer gently until tender, adding more hot water if necessary. This takes 2½ to 3½ hours"). Soybean-mint salad (with 2 cups cooked soybeans or 1 can {15½ ounces}), drained. Soy mayonnaise (with ½ cup soy flour).

984. *Saint Croix Courier (St. Stephen, New Brunswick).*1973. Connors' soyabean oil reserves low. 108(44):1. July 26.
• ***Summary:*** "Soyabean oil, a vital ingredient in Connors Brothers sardine products," cannot be obtained by the company at this time, since it is on a "list of critical items including soya beans, soya bean mash and oil restricted by President Nixon..." The freeze was ordered on June 13.

"Connors Brothers was caught unawares in June. A ban was lifted that month and assurance was given that soya beans would be available indefinitely. One week later a second soya bean freeze was imposed.

The U.S. is concerned that its reserves of soya beans will be depleted. Because of the shortage of anchovies in Peru and a subsequent lack of high protein commodities, many countries are in desperate need of soya beans. And despite the vast U.S. soya bean reserves, it is very possible they would sell out.

"However Canada is not a big user of soya beans and is perhaps unfairly included in the general ban."

985. Bhatty, R.S.; Sosulski, F.W.; Wu, K.K. 1973. Protein and nonprotein nitrogen contents of some oilseeds and peas. *Canadian J. of Plant Science* 53(3):651-57. July. [13 ref]
• ***Summary:*** Table 1 gives the nitrogen fractions of 7 oilseed meals and 3 varieties of peas. Soybean contains the following in mg per gram of meal: Meal protein 449. Nitrate nitrogen 0.0. Amide nitrogen: 5.8. Alkali-soluble nitrogen 67.0%. Soybean also contains the following nonprotein nitrogen as a percentage of meal nitrogen: NaOH-TCA 6.8%. EtOH 1.9%. TCA 12.8%.

Table 2 shows the free amino acid composition of the nonprotein nitrogen fractions of 7 oilseed meals and 3 varieties of peas (in micromoles per gram of meal).

989. Ontario Soya-Bean Growers' Marketing Board. 1973. Ontario Soybean Symposium, 1973. Ottawa: Agriculture Canada. 110 p. Held 11-12 Sept. 1973 at Ridgetown College of Agricultural Technology, Ridgetown, Ontario, Canada. 28 cm.
• ***Summary:*** Contains 17 papers by various authors; 4 are cited separately. This symposium was sponsored by the Ontario Soya-Bean Growers' Marketing Board, Ontario Ministry of Agriculture and Food, and Agriculture Canada. It was organized by a Planning Committee under Milton Farough, chairman.

Contents: Where we are and how we got there–An historical review of soybean production in Ontario, by Dr. J.W. Tanner. What's involved in handling–from a dealer's viewpoint, by J.G. Boughner. What's involved in processing–from a processor's viewpoint, by G.S. Boulter. World seed, oil, and protein situation, by Roger Murray. What is protein–the soybean crop, what it's used for, its qualities for feed and pet food, by Dr. W.D. Morrison. Soybean protein–its role as a food in Canada, by Dr. D.W. Stanley. The futures market as a price discovery mechanism, by Sean Usher. Dealer contracts with growers, by Frank J. Archibald. Contracting–a grower's viewpoint, by William H. Shanks.

The processor in contracts and futures, by D.D. Wright. The role of research, by W.W. Snow. Role of extension in the soybean industry, by John D. Curtis. A grower's viewpoint about present and future soybean production and marketing, by William Sim. Handling, storage facilities, transportation–present and future requirements, by Gordon McNern. Some implications of expanded soybean production on Ontario agriculture, by R.F. Heard. Soybean research, by Dr. R.P.A. Sims. Symposium summary, by Morris Huff. Address: Ontario, Canada.

990. Stanley, D.W. 1973. Soybean protein–Its role as a food in Canada. In: Ontario Soya-Bean Growers' Marketing Board, ed. 1973. Ontario Soybean Symposium 1973. Ottawa: Agriculture Canada. 110 p. See p. 52-56.
• ***Summary:*** Soy processors view soy protein as a food ingredient that "offers the triple advantages of desirable functional properties, high nutritional level and low cost." "To the health food faddists, soybeans and soy proteins provide a reasonable alternative to consuming meat..."

"The four common forms of soy protein are full-fat flours, defatted flours, concentrates and isolates–in increasing order of protein content." Soy protein can also be extruded or spun, and made into simulated meat (meat analogs). Also discusses the major uses of soy proteins (in baking, in meat products, etc.), flavor problems and acceptance, nutritional value, labeling and advertising.
Address: PhD, Food Science Dep., Univ. of Guelph, Guelph, ONT, Canada.

991. Tanner, J.W. 1973. Where we are and how we got there: An historical review of soybean production in Ontario. In: Ontario Soya-Bean Growers' Marketing Board, ed. 1973. Ontario Soybean Symposium 1973. Ottawa: Agriculture Canada. 110 p. See p. 11-22.
• ***Summary:*** The best summary of soybean history in Canada seen up to this time. The author believes that, "based on the chaotic events of the last 12 months... for historical purposes it would seem desirable to divide the history of soybeans into two eras: pre-September 1972 and post-September 1972. Certainly the events of the last year created an awareness in producers and the general public alike of a whole new vocabulary, including words such as anchovies, futures market, protein gap, embargo, superburger, and soaring prices. The latter produced another vocabulary most of which would be unprintable.

"The first report of soybeans grown in Canada was by C.A. Zavitz in 1893 at the Ontario Agricultural College. The seeds had been obtained from Dr. C. [Prof. C.C.] Georgeson, Kansas, who had received them from Japan three years earlier. [Note: Zavitz first published his research on soybeans in 1901, and first reported the results of his 1893 research in 1908]. For 30 years Zavitz, alone in Canada, meticulously conducted trials on variety tests, dates of planting, seed rates and row widths for soybeans grown for seed and hay.

"By 1927, Zavitz had evaluated over one hundred varieties, most of them for five years or over. The 31 year average of his best variety, Early Yellow was 16.78 bu/acre. The 22 year average green crop yield for the variety Ito San was 7.5 tons per acre per year. In 1924, Zavitz released OAC 211, the first variety of soybeans registered by the Canadian Seed Growers' Association. The variety continued as one of the recommended varieties until the mid 40's.

"The soybean program at Harrow was started in 1923 by Dr. F. Dimmock. [In 1923 he grew the first soybeans at Harrow. In 1925 the first soybeans were grown in Kent County. In 1930 the first soybean crosses were made at Harrow.] Dr. Dimmock was transferred to the Ottawa research station in 1927 where he continued his work on soybeans and produced a string of excellent early varieties of soybeans over 35-40 years including Acme, Comet, Crest, Mandarin, Capital, Merit, Kabott and Pagoda. The Harrow research was continued by Casper Owen who started breeding soybeans in 1931. This program was to prove to be one of the most outstanding in North America producing such varieties as AK (Harrow), Harman, Harly, Harosoy and Harome."

"In the late 1920s a few farmers were growing a small acreage of soybeans for grain, harvesting with a reaper and threshing the seed out. Two short-lived crushing plants were established in the south west part of Ontario in the mid-1930s, one of which was located at Shelbourne (or Colbourne [sic, Colborne]) Street in Chatham." Note: Founded in 1934 (see p. 18), this was apparently the first crushing plant in Canada. The name of the company was probably The Soy Bean Oil and Meal Co-Operative Co. of Canada, Ltd. (See C.A. MacConkey 1935, p. 65).
"Subsequently, few beans were grown for hay. The late 1930s were critical years for the soybean in Ontario, and without the help of the Maple Leaf Mills plant (which was primarily processing flax) and Toronto Elevators [which later merged with Maple Leaf Mills in 1962], there would have been no place to market the new crop.

"The establishment of soybeans as a major crop in North America was assured by the occurrence of World War II. Demand for oil created a rapid expansion in acreage and processing facilities, and in the U.S.A. 1940 marked the first year in which the acreage harvested as seed exceeded the acreage harvested for hay. The latter continued to dwindle away and now, represents an insignificant portion of the U.S. acreage.

"The rapid expansion in acreage, once the demand for oil was established, occurred as a result of a major promotional effort by the consuming industries. With the construction of a new plant in Toronto in 1944, Victory Mills launched one of the greatest promotions of a crop ever witnessed in the Province of Ontario. Extension bulletins, newspaper advertisements, movies, newsletters and meetings inundated the farmers with information and enthusiasm. Ralph Chamberlain and later Ivan Roberts promoted the crop at every opportunity. Acreage grew and by the early 50's, the soybean had become a major cash crop in S. Ontario and had its own marketing board.

"As the market for oil increased and the acreage expanded in the 1920's and 30's, the problem of disposing of all of the meal economically became acute, to the point of slowing the expansion... Gradually the feed industry began to recognize the value of the meal in livestock and pet foods with the result that, with a major market established for the meal by-product, the expansion of the oil industry was assured."

"To me there have been three outstanding accomplishments in the development of soybeans in Ontario to date: the pioneering work of C.A. Zavitz at the Ontario Agricultural College... Next, the role of Victory Mills in promoting the crop once the market for oil was established.

"Finally, the development at the Harrow Research Station of the variety Harosoy by Mr. Casper Owen. Released in 1951, Harosoy eventually grew to 80% of the Canadian crop (1965). However, its total impact was even greater in the United States midwest where, in 1966, 26% of the total U.S. crop of 25 million acres was Harosoy, including 42% of the crop in Illinois, 48% in Indiana, 46% in Ohio and 58% of Michigan's crop. To be that dominant, a variety can't just be good, it must be great and Harosoy (and later Harosoy 63) was certainly that."

A graph (p. 20) compares soybean yield in the USA and Canada from 1924 to 1971. The first statistics on Canadian soybean yields date from 1941, and from that year onward Canadian soybean yields were generally higher than U.S. yields–in some year 5-6 bushes/acre higher.

A second graph (p. 22) shows the surprisingly parallel growth of the number of soybean acres harvested from 1924 to 1972. Though the number of acres is smaller in Canada, the rate of growth is almost identical. Address: Crop Science Dep., Univ. of Guelph, Guelph, Ontario, Canada.

992. Lanier, Verle E. 1973. Soybeans: Feed today, food tomorrow. *Foreign Agriculture.* Oct. 15. p. 8-9.
• ***Summary:*** Reflecting the soybean's changing role, U.S. firms this year have exhibited prepared soy foods in both the UK and Italy, with much favorable reaction. Canada has begun importing U.S. soy protein for use in ground beef,

called “superburgers,” and Sweden recently relaxed trade restrictions to allow imports of textured soy products. This rising interest in soybean food uses is part of the concern worldwide over the inability of traditional industries to meet rapidly expanding protein needs.

Current trade estimates indicate that use of U.S. soybeans in protein products for human consumption in both domestic and foreign markets is running about 16 million bushels a year–hardly a dent in a 1,000 million-bushel crop. This amounts to only about 3% of total soy protein produced in the U.S., compared with the 85% that goes into animal feeds and 13% into industrial uses. However, a much brighter future is in prospect, with some experts predicting that the U.S. soy protein market might reach $2,000 million by 1980, contrasted with $75 million or so today. It took modern technology to develop soy products into desirable food items. One example of the possibilities is the growing acceptance of soy-extended ground beef, which is increasingly being seen in supermarkets at prices below those for the all-meat products.

In addition, the institutional trade already is using soy protein to a considerable degree, not only in ground beef, but also in other meat dishes. The major breakthrough here was made in 1971, when the USDA authorized use of textured vegetable protein, fortified with vitamins and minerals, in the Type A School Lunch Program and in lunch or supper of the Special Food Service Program for Children. Textured soy protein can now make up as much as 30% of meat patties, stews, sauces, and similar meat, poultry, or fish dishes. The article defines soy flour and grits, soy protein concentrates, isolated soy proteins, textured soy proteins, extruded soy protein products, spun soy protein products, and soy protein concentrate products. Address: Fats and Oils Div., Foreign Agricultural Service.

• ***Summary:*** Tables show results of variety trials in Costa Rica (1972), Nigeria (1971), Madhya Pradesh, India (1972), Thailand (1971), Jogjakarta, Indonesia (1971), Brazil (1970-71).

“While a few years ago there were grounds for believing that the USA could supply all the soybeans needed in world grain trade, at the present time it is very clear that this crop is in acutely short supply on a world-wide basis, and that many countries which previously have imported their soybean requirements will be considering means by which they may produce part or all of their needs.

“Development of the soybean from a forage crop into a major grain crop in the USA was made possible by a breeding breakthrough at the University of Illinois in the early 1920’s. Dr. C.M. Woodworth developed types which had an upright, non-branching growth habit, rather than the prostrate, vining habit which previously had been most common. As a result, it became possible to harvest the crop with normal field machinery. Growth in acreage and productivity was explosive.”

“In the USA there is at present a sharp distinction between ‘northern’ and ‘southern’ types. The ‘northern’ varieties are almost all of indeterminate growth habit and are based primarily on Manchurian and Hokkaido germ-plasm. The Manchurian types predominate, except in varieties adapted to extreme northern areas. While these ‘northern’ varieties are considered to be especially day-length sensitive, recent evidence indicates that their early maturity under warmer conditions is influenced more by high temperatures than by actual day-length.”

“The ‘southern’ types may be traced generally to germ-plasm imported from Taiwan or southern China. All the modern U.S. varieties in this class are of determinate growth habit; that is, increase in height virtually ceases once flowering begins. Although these varieties are popularly regarded as less sensitive to day-length, they actually tend to be more day-length sensitive and less temperature-sensitive than the ‘northern’ types.”

“In our experience with variety trials on a worldwide basis, we have found that some of the ‘southern’ types from the USA give superior performance when grown under favorable conditions, as compared with nearly all other germ-plasm tested.”

“Soybean breeding is generally not well developed in countries other than the USA and Canada. Recently, however, Brazil and India have undertaken programs on a significant scale.” Address: Univ. of Illinois, Urbana, IL.

• ***Summary:*** Contents: Series preface. Preface. Introduction. Section I: Production. 1. Food commodities. 2. Prerequisites for crop production. 3. The tropics. 4. Crops and water. 5. Livestock and poultry. 6. What oceans and freshwaters provide. 7. Visions of the future. Section II: Utilization. 8. Food storage, processing, and marketing. 9. International trade in food and feed. Section III: Consumption. 10. Man's needs. 11. Food and population. 12. Nutrition and health. 13. Protein: the key issue. 14. Food and the ecology crisis. Supplementary tables.

The United States is presently the world's largest producer of soybeans, producing 67% of the total; China produces 24.5% and Others produce the remaining 8.5%. Three pie charts show global production of soybeans and peanuts (groundnuts) (p. 20-21). The section on "Oilseeds" (p. 136-37) also discusses soybeans and peanuts. Tables show (p. 222): (1) "Soybeans–world trade–annual average of 1967-1969 (millions of metric tons)." The USA has 90.1% of the 8.74 MMT of world exports. Europe has 58.3% and Asia has 36.3% of the 8.64 MMT of world imports. The leading countries for net soybean imports are: Japan 2.39, West Germany 1.48, Spain 0.92, Netherlands 0.66, Italy 0.61, Denmark 0.42, Taiwan 0.40, and Canada 0.38. (2) United States soybean exports (millions of bushels). Gives quantity and percentage of total for major regions and individual countries in 1967-68 and 1969-70. The protein in these exports is used mostly for livestock feed; no hungry countries are major importers of soybeans.

India is the world's leading producer of peanuts, producing 33% of the total, followed by China (13.5%), Nigeria (7.3%), the USA (7.2%), and Other (39%). Address: Michigan State Univ.

999. Fornari, Harry. 1973. Bread upon the waters: A history of United States grain exports. Nashville, Tennessee, and London, England: Aurora Publishers. xvii + 174 p. Illust. Index. 23 cm. Summarized in Soybean Digest, July 1973, p. 18. [103* ref]
• ***Summary:*** The publication of this history of the U.S. grain trade coincides with Bunge's 50th anniversary as a grain trader and handler. Bunge has more than 30 offices, and owns and operates over 100 grain storage elevators, terminals, and other facilities throughout the U.S. and Canada.

Contents: Preface. Acknowledgments. 1. Corn from the colonies. 2. Antebellum seesaw. 3. *La Belle Epoque.* 4. Feasts, famines, and world wars. 5. 1945-1970: The staff of life. 6. 1945-1970: Feed grains, unlimited. 7. 1945-1970: The soybean explosion. 8. Portrait of an exporter. Bibliography.

Chapter 7 titled "1945-1970 The soybean explosion" (p. 131-42), discusses early history of the soybean (poor), introduction into the USA, expansion of cultivation, early exports, effect of World War II on increased production, soybean oil and meal, Soybean Council of America.

A graph (p. 139) shows U.S. soybean exports from 1945-1970. A table (p. 140-41) gives the following U.S. soybean statistics yearly from 1945-1970: Acreage grown for all purposes, acreage harvested for soybeans, yield in bushels/acre, production (million bushels), domestic crush (million bu), exports of soybeans (million bu), soybean oil (million lb), and soybean meal (1,000 tons), exports of soybeans as a percentage of production, exports of beans and meal as a percentage of bean production, price received by farmers ($/bu), average prices of soybeans (#2 yellow at Chicago, $/bu), soybean oil (crude Midwest, cents per pound), soybean meal (44% protein, bulk, Decatur, $/ton of 2,000 lb).

This book contains 47 pages of illustrations (many very old) and photos.

On the inside back dust jacket is a photo and biography of Harry Fornari, who was born in Rome in 1919 and came to the USA in 1939. Address: Great Neck, New York, Vice President, Bunge Corp.

1000. George Ohsawa Macrobiotic Foundation. 1973. Useful names and addresses. 1471–10th Ave., San Francisco, CA 94122. 55 p. 21 cm.

• ***Summary:*** This macrobiotic directory lists names and addresses of macrobiotic people, organizations, food stores and restaurants, and bookstores in the United States (each category broken down by state), Canada, and abroad. The leading states for individuals are California (7.3 pages), New York (1.5 p.), and Massachusetts (1 p.).

There are listings for the following foreign countries: Argentina, Australia, Austria, Belgium, Brazil, Costa Rica, Denmark, England, France, Germany, India, Ireland, Italy, Japan, Mexico, Netherlands, New Zealand, Norway, Portugal, Spain, Sweden, Switzerland, South Vietnam.

There are ads for the following companies: Sunflower, The Queensberry Bakery (112 Queensberry St., Boston 02215), East West Foundation Center, Sanae Inc. at 2 locations (Sanae Restaurant at 272A Newbury St., Boston, and The Seventh Inn at 288 Boylston St. in Boston), Prasad (1956 University Ave., Berkeley, California) (p. 0). Eden whole earth grocery and delicatessen, and Sun Bakery (330 Maynard St., Ann Arbor, Michigan) (p. 18). Janus Natural Foods (712 7th Ave. South, Seattle, Washington 98104. Phone: 206-MA4-1084) shows that they distribute (import) tamari and miso, as well as sea vegetables. They carry the following brands: Erewhon, Spiral Foods, Deaf Smith, Pure & Simple, Chico-San, Arrowhead Mills (p. 27). Cliffrose (129 Coffman, Longmont, Colorado). Ceres Harvest Natural Foods (3632 W. Colorado Ave., Colorado Springs, CO 80904; wholesale and retail) (p. 39). The Good Karma Cafe (501 Dolores St., San Francisco), and The Good Earth (123 Bolinas Rd., Fairfax, CA 94930) (p. 50). Greenberg's Natural Foods, Inc. (125 1st Ave., New York, NY 10003).

The George Ohsawa Macrobiotic Foundation is a non-profit organization located at 1471–10th Ave., San Francisco, California 94122. It was founded in 1971. The aim of the Foundation is to spread the teaching of the unifying principle and its practical applications in daily life. Address: San Francisco, California.

1001. Hartwig, Edgar E. 1973. Varietal development (in soybeans). In: B.E. Caldwell, ed. 1973. Soybeans: Improvement, Production, and Uses. Madison, Wisconsin: American Society of Agronomy. xviii + 681 p. See p. 187-210. Chap. 6. [68 ref]

• ***Summary:*** Contents. 1. Introduction. 2. Maturity classification. 3. Photoperiod response: Latitude, light quality. 4. Early history. 5. Growth habit. 6. Germplasm collection: Range of maturity, seed size (seed weight), percent protein and oil, oil quality, protein quality, seed holding (pod dehiscence and shattering), seeds per pod, pubescent type (pubescence density and erectness, glabrous), response to minerals, source of genes for pest resistance (disease resistance).

7. Varietal development: Introduction and history, the northern states (Lincoln, Harosoy, Clark, Hark, Amsoy, Corsoy, Wayne), the southern states (Ogden, Roanoke, Jackson, Palmetto, Lee), mid-Atlantic states. 8. Genetic background for major U.S. varieties. 9. Breeding for special qualities: Phytophthora rot, brown stem rot, cyst nematodes, resistance to feeding by insects, differences in oil and protein content, vegetable types, height of lower pods, adaptation to short-day regions [i.e. southern latitudes]. 10. Comments.

"Varietal development" has been of great importance in establishing the soybean as a major crop in the USA. Understanding photoperiodism in relation to varietal development has also "been of extreme importance. For no other major crop is photoperiodism as important in determining area of adaptation" (p. 187).

Maturity classification: In the early 1900s, soybeans were often classified on a scale from early to late, and the number of days to maturity was given. But various studies, starting with Haberlandt (1877), including Mooers (1908), and especially those by Garner and Allard (1920-1930) on the significance of day length on flowering behavior (photoperiodism), indicated that "days to maturity was not an adequate means of describing these types. Also, it was not adequate to describe them as early or late"–unless the latitude and date of planting was given, since the average days maturity for any given variety depends strongly on both of these variables. As a method of describing this responsiveness to day length, ten maturity groups were developed. For example, groups OO, O, and I are adapted to the longer days in the northern areas of adaptability in the USA and Canada. Varieties classed in Group VIII are adapted to the southernmost portions of the continental United States.

Early history: Discusses–Perry expedition to Japan (1854), Ball (1907–recognized 23 varieties), Piper & Morse (1910–described 47 soybean types and listed 280 types that had been grown in the Washington, DC, area). By 1922 more than 800 introductions had been made by the USDA and tested in various parts of the United States (Piper & Morse 1923). Some 43 introductions, which were found to be suited for production in the USA, were given names. Suitability for forage production was emphasized. During the 20-year period from 1907 to 1927, more than 2,000 lots of seed received from China, Japan, Korea, Siberia, and India were introduced by the USDA for testing (Morse 1927). Dorsett (1927) collected nearly 1,500 seed lots from northeastern China (39-53º north latitude) during a 2½-year period prior to 1927.

Because of the growing interest in soybeans in the United States, the USDA organized the Dorsett-Morse expedition to the northeast provinces of China, Korea, and Japan during the years 1929 to 1931. This was the only plant exploration program for which the primary objective was soybean collection. A total of 4,578 seed lots were collected. Of these, 3,379 (74%) were from Korea, 622 (14%) were from China, and 577 (13%) were from Japan.

Many of the soybeans from Japan were "large-seeded, vegetable types. Several of these were named in anticipation of their acceptance by the U.S. public, but few were ever grown extensively. One of these, PI 80481 named Rokusun, has a 100-seed weight of 55 gm, the largest seed size known in soybeans."

Germplasm collection: "Prior to 1949, no organized effort was made to maintain soybean introductions. Many were discarded after their initial observation if an immediate use was not recognized. Since that time an effort has been made to catalog the characteristics of each introduction and maintain viable seed."

Seed size: The 100-seed weight for soybean varieties currently produced in the USA ranges from 12-18 gm. Varieties classified as vegetable types will usually have a 100-seed weight greater than 20 gm. The seeds of *Glycine max*, the cultivated soybean, range in weight from 4 to 55 gm per 100 seeds. The wild annual soybean, *Glycine ussuriensis*, has very small seeds (1.2 to 1.8 gm/100 seeds).

Concerning vegetable types: "No clear-cut distinction exists to define a vegetable-type soybean. In general, seed size is in excess of 20 gm per 100 seeds and the beans have a milder flavor. Several vegetable-type varieties with somewhat improved agronomic qualities have been released in recent years. Disoy is of Group I; Magna and Prize are of Group II; and Kim, Kanrich, and Verde are of Group III in maturity. Verde produces seed having green cotyledons on maturity, which is assumed to be an advantage when immature seeds are used for canning or freezing." Address: Agricultural Research Service–USDA, Stoneville, Mississippi.

1002. Holmberg, Sven A. 1973. Soybeans for cool temperate climates. *Agri Hortique Genetica (Sweden)* 31(1/2):1-20. [21 ref. Eng; swe]

• ***Summary:*** An extremely interesting, influential, and original article. Contents: Introduction. Climate and temperature requirements of soya. Breeding soybeans in Sweden. Experiences from 30 years of soybean trials at Fiskeby. Summary.

It begins: "Summer temperature and moisture are the main climatic factors regulating the distribution of the soybean as a crop. The limiting or inhibiting factor is moisture in the eastern and southern parts of Europe and temperature in the northwestern parts (Riede 1938). Within the framework outlined by temperature and water, latitude and photoperiodism guide the choice of varieties (Enken 1959)."

"Local soybean varieties developed and grown along the east coast of Hokkaido and adjacent islands of the Okhotsk Sea have proved of immense value for the breeding of soybeans for cool, temperate climates."

Enken (1959) defined minimum temperatures for different stages in the growth cycle of the soybean plant and showed that the flowering stage is the most sensitive to temperature, requiring a minimum of 17-18ºC for normal flowering. Most of Western Europe has a summer maximum temperature below or just about equal to V. Enken's "biological minimum" temperature needed for the formation of reproductive organs and flowering.

For soybean breeders looking for basic material [germplasm] for adaptation to the cool climate of north western Europe, two different agro-climatic regions are of special interest: (1) Near Kushiro, Abashiri, or Nemuro on the northeastern coast of Hokkaido, Japan, and adjacent islands of the Sea of Okhotsk. (2) The northern zone of the Amurskaja region [Amurskaya Oblast] of East Siberia, Russia. In this old and recently developed soybean growing district (just north of the Amur River and of northern Manchuria), cold hardiness is the object of both natural and artificial selection. This zone is about 1,200 miles northeast of northeastern Hokkaido.

"Summary: Cold tolerant soybean varieties are the result of a long period of natural selection and persistent effort of growers settled in the cool and foggy regions of the east coast of Hokkaido and adjacent islands of the Okhotsk Sea. These dwarf or semi-dwarf local varieties collected and investigated by Japanese research workers are of increasing importance to soybean breeding for cold tolerance in Hokkaido and elsewhere. The same varieties rank high in protein content and seed quality, but scarcely in seed yield. Their tolerance to cold weather has been the key which has opened to modern plant breeding large parts of north western Europe, including Sweden, to closer geneecological adaptation and further development of the soybean as a food crop. The variety Fiskeby V, in practical use as a garden variety, may be said to prove this. The existence in the Soviet Union of varieties with more moderate demands on germination temperature and high yielding varieties in the north of the United States are indicators of possibilities that further combination work will lead to further progress in producing varieties capable of competing with the cereals as modern agricultural crops."

Tables: (1) Temperature requirements of the soybean (after Enken and Koloskov). The four columns are: Stage of development, "Biological minimum," sufficient, and optimum. The six stages are: Germination, emergence, formation of reproductive organs, flowering, seed formation, and ripening. For flowering (as an example), the three temperatures are 17-18, 19-20, 22-25ºC.

(2) Some data regarding summer climates of certain stations situated in warm and cool temperate areas, respectively. The four columns are: Station (in two groups), period (years during which temperatures were measured), latitude, warmest summer month ºC, summation of day-degrees ºC 5 months. The stations are: Warm temperature: Columbus, Ohio, USA; Chicago, Illinois, USA; Shenyang (Mukden) China; Sapporo (Hokkaido) Japan; Pinkiang

(Harbin) China; Chabarovsk [Kabarovsk], East Siberia, USSR [Russian Federation]; Winnipeg, Manitoba, Canada. Cool temperate: Abashiri, Hokkaido, Japan; Nemuro, Hokkaido, Japan; Brussels (Uccle), Belgium; London (Kew), England; Manchester, England; Copenhagen, Denmark; Norrköping (Fiskeby) Sweden–1931-1960 Norrköping (Fiskeby) Sweden–1960-71. Of all the stations listed, Fiskeby has the highest north latitude (58º36'), the coolest summer month (July, 16.2ºC), and the smallest summation of day-degrees over 5 months (2120–compared with 3192 in Columbus, Ohio).

(3) Mean temperatures, ºC, at Fiskeby / Nörkopping (latitude 58º36'), for the years 1970-1972. Temperatures are given each year for the months of April, May, June, July, August, September, October. August was the warmest the first year and July the 2nd and 3rd years.

(4) Local varieties of insular breed in yield tests at Fiskeby 1970-1972. Control: Fiskeby 5. The nine columns are: Variety, year (1970, 1971, 1972), date of seeding, date of bloom, date of ripeness, mean height of plants (cm), plants per square meter, seed weight (grams/plant), yield (kg/ha). The varieties include: Toshi-dai 7910, Karafuto 1 (from South Sakhalin), Fiskeby 5, Kamishunbetsu, Chishima (from the Kuril Islands).

(5) Market varieties of continental breed in yield test at Fiskeby 1970-1972. Control: Fiskeby 5. The nine columns are the same as those in Table 4. The varieties are: Amurskaja 310, Smena, Severnaja 4, Fiskeby 5, Altona. The highest yield (2,905 k/ha) was from Amurskaja 310 in 1972, planted on 25 April. The 2nd highest yield was from Smena in 1972, planted on 25 April. The 3rd highest was from Fiskeby 5 in 1972, planted on 25 April.

(6) Soybean varieties from three different agro-climatic regions–tested for germination in sand at a temperature of 9ºC in the day-time and 7ºC during the night. Almost all of each group would germinate at 20ºC. The table shows the per cent visible sprouts above sand surface after 14 to 21 days. The varieties in group 2 (Amurskaja 310, Severnaja 4, Smena) had the highest germination rates (range: 79-83% visible after 21 days).

(7) Soybean varieties from three different agro-climatic regions–tested for germination in sand at a temperature of 8ºC in the day-time and 6ºC during the night. Again, the varieties in group 2 (Amurskaja 310, Severnaja 4) had the highest germination rates (range: 55-66% visible after 26 days). They also had the longest mean length of seedlings after 26 days (47-48 mm).

(8) Protein and oil content of soybean varieties, grown at Fiskeby, during the years 1970-1972. In 1971 the mean protein content was 43.9% (range 39.1-48.4%) and the mean oil content was 14.9% (range 13.3-17.3%). In 1972 the mean protein content was 41.8% (range 38.3-47.0%) and the mean oil content was 15.8% (range 13.6-17.7%).

(9) Advances in earliness and lowering of temperature requirement, expressed in days from sowing and day-degrees ºC, respectively, in the breeding material at Fiskeby.

(10) Results regarding the variety Fiskeby V from Fiskeby near Norrköping during the years 1960-1972. The fifteen columns are: Year, seed yield (kg/ha), plants per square meter, planting date, start of flowering date, date of ripeness, days from planting to flowering, days from planting to ripeness, summation of daily mean temperatures ºC from planting to flowering, summation of daily mean temperatures ºC from planting to ripeness, mean temperatures ºC from planting to flowering, mean temperatures ºC from 1st flower and 30 days ahead, mean temperatures ºC from planting to ripeness, total rainfall from June to August (mm), total sunshine hours from July to August. The highest seed yield was in 1972 (2,290 kg/ha); the 2nd highest was in 1970 (2,030 kg/ha).

(11) The variety Fiskeby V at Fiskeby during the periods 1960-1972 and 1968-1972.

Figures (graphs unless otherwise stated): (1) Yield in relation to average July temperature for the years 1970-1972 for the varieties Fiskeby 5, Chishima, Amurskaja 310, and Altona [developed at the University of Manitoba, Canada]. As the July temperature increases, so does the final seed yield.

(2) Yield in relation to general temperature requirements (Sum of day-degrees). For the varieties Fiskeby 5, Chishima, and Amurskaja 310. As the sum of day-degrees increases, so does the final seed yield–dramatically.

(3) Soybean varieties from 3 different agroclimatic zones tested for germination in sand at a day temperature of 9ºC and a night temperature of 7ºC (See table 6). The variety with the highest germination after 21 days is 1091-3-1-6-1 from zone 3.

(4) Soybean varieties from 3 different agroclimatic zones tested for germination in sand at a day temperature of 8ºC and a night temperature of 6ºC (See table 7).

(5) Chart showing the origin / pedigree of Fiskeby 5 and some other interesting lines from the breeding material–including 1110-5-5-5 and 990-13-2-5-3-1-1 and 1091-3-1-6-1.

(6) Photo (7.5 by 11 cm, black and white) showing fields of “A nice, evenly ripening crop of Fiskeby V in September 1971, with the buildings of the Fiskeby-Breeding Station near Norrköping in the background.

(7) Rayed diagram of recent crosses made including 1091-3-1-6-1 (which is at center of diagram).

(8) Photo of three dry soybean plants with a ruler measuring 0 to 70 cm at the right. Cross 1174, 1091 x Fiskeby V. From left to right: F-2 plant from cross 1174, Fiskeby 5, another F-2 plant from cross 1174.

1003. Ito, Kazuo. 1973. Issei: A history of Japanese immigrants in North America. Translated by Shinichiro Nakamura and Jean S. Gerard. Seattle, Washington: Executive Committee for Publication of Issei, c/o Japanese Community Service, 1414 S. Weller St., Seattle, WA 98144. xxviii + 1016 p. Illust. Index of personal names only. 24 cm. Translation of *Hyakunen Sakura*. [100* ref. Eng]

• ***Summary:*** This massive book is basically a history of first-generation Japanese immigrants to Pacific Northwest (especially Washington, Oregon, and British Columbia), focusing on the great struggles and hardships they met, written from the viewpoint of individual Japanese who tell their stories (often in the first person), and compiled by a Japanese journalist. The book was first published in Japanese. Access to the wealth of information it contains is crippled by the lack of a subject index. So if one were looking for information about tofu, miso, or soyfoods, one would have to read the entire book. The index of personal names is well done.

At the very front of this book are very interesting maps of the old Japanese districts of the following cities: Seattle, Tacoma, and Spokane, Washington; Portland, Oregon; Vancouver, British Columbia, Canada. Unfortunately, none of the maps are dated. The name and location of each Japanese organization or business is shown clearly in English.

In Part 8, "Agriculture," we read that Japanese immigrants to American sometimes enjoyed Japanese soyfoods. In about 1910, in Fife, a farming community near Seattle, in about 1910, Gunji Fujimoto "had miso soup and pickles for breakfast" (p. 440). In about 1916, in Hood River (northern Oregon), Henry Nakamura wrote that Japanese people could get foods from Japan, including "fried bean curd" (p. 499-500). There they also enjoyed miso soup for breakfast, cooked red beans [azuki?] spread on bread for lunch, and rice, pickles, and dried radish strips cooked with soy sauce for dinner (p. 503). In the early 1920s in Oregon, breakfast typically consisted of rice, miso soup, and pickled cucumbers (Shoemon Nakamura, p. 512).

Part 20, "On the Streets," states that "The old Japanese towns in Seattle, Tacoma, Portland, and Vancouver (Canada) can hardly be traced today." The author has tried to reconstruct maps of these towns "in roughly the period of the 1920s, but not in any specific year" (p. 779-80). In Nov. 1908 Masanao Hanihara, Secretary of the Japanese Embassy, issued a report on his investigations of living conditions of Japanese in the western USA (p. 791). He found the Japanese still lived "at the level of immigrant laborers;" the conditions in their communities were "extremely low and chaotic." "The Japanese in these areas hardly mix with white residents, while sometimes they approach or mix with Chinese. There are many ill effects from clique-ishness." "The majority of Japanese workers lack knowledge of English, so whenever they make contracts they sign papers blindly" (p. 795-96). Hanihara estimated the Japanese population of various states as follows: Washington 9,000 to 10,000, Oregon 3,500 to 4,500, Wyoming 1,000 to 1,500, Idaho 1,000 to 1,500, Montana 1,000, and Alaska 1,000. The largest Japanese community in the region was in Seattle (about 4,000 Japanese). "Shinzaburo Ban of Portland is almost the top among successful Japanese on the Pacific Coast." His business, S. Ban Co., headquartered in Portland (where he arrived in 1891), acts mainly as a contract agency for Japanese laborers–a sort of employment agency, "and his store supplies sake, miso, soy sauce and other such Japanese foods and small items to the laborers" (p. 789-93; see portrait photo p. 792). A sidebar (p. 793, by Raisuke Tamura, Seattle) notes that "However long they lived in the United States, Japanese had to have Japanese food... Around 1906 I imported from Japan vegetables such as lotus root, Japanese radish *[daikon], gobo* (burdock), *zenmai* (fern), *abura-age* [deep-fried tofu pouches], *nigari* (bittern, a tofu coagulant), *tsukuneimo, yamaimo,* and so on, in hundred-pound baskets, and sold them to sawmills and railroad camps" (p. 793).

The 1 January 1916 edition the *Hokubei Nenkan* listed all businesses operating in various Japanese towns. These included two "tofu-makers" in Seattle, Washington (p. 800), at least one tofu maker in Tacoma, Washington (p. 804. Tacoma had a Japanese population of 931 in 1915–721 males and 210 females). Spokane didn't have a Japanese town as in Seattle and Tacoma, but in 1915 it did have a Japanese population of 536 (462 males and 74 females).

The map of old-town Portland, Oregon, probably from about 1935, shows 90 Japanese businesses located between 1st Ave. and 7th Ave. (running north-south) and between W. Burnside and N.W. Glisan (running east-west). Among these are two tofu manufacturing companies. "Ota Tofu Mfg." is located on 5th Ave. between Everett and Flanders. [Note: The actual address was 86½ 5th N]. "Fukei Tofu Mfg." is located is on N.W. Davis between 3rd Ave. and 4th Ave.

Contents: The book is divided into 21 parts, with each part containing several chapters (the number is shown in parentheses): 1. Sailing (6). 2. Secret passage and ship-jumping (5). 3. Japanese exclusion (15). 4. Japanese women (2). 5. Railroads (5). 6. Alaska (4). 7. Sawmills (2). 8. Agriculture (7). 9. Hotels (2). 10. Restaurants (2). 11. Mines (2). 12. Oysters (2). 13 Japanese language schools (2). 14. Studying English (3). 15. Pro-Japanese (8). 16. Furuya Company (4). 17. Lese majesty affairs (2). 18. Gambling (3). 19. Girls (2). 20. On the streets (9). 21. In Memorium [Memoriam–to the many who died]. (2). Appendixes: (1) Partial list of Japan-U.S. and Japan-Canada sister cities. (2) Japanese consulates. (3) Chronological table: Japan and America (side by side), 1868-Sept. 1972. Bibliography (p. 967-72, mostly Japanese-language books). Epilogues: To

English and to Japanese editions. Index of personal names (p. 988-1016). Address: Tokyo and Seattle, Washington.

1004. Konova, L.; Rainova, L. 1973. Biologichni i stopanski kachestva na introdutsipani sortove soia. II. [Biological and commercial properties of introduced soybean varieties. II.]. *Rastenievudni Nauki (Plant Science, Bulgaria)* 10(5):75-84. [4 ref. Bul; eng; rus]
• ***Summary:*** "Twenty-two introduced soybean varieties were studied under Sofia conditions. Their seed yields, crude protein and fat contents of seed as well as the complexity of yield were subjected to the study." The mid-season varieties proved to be the best producers. The highest seed yield, 2,413 kg/ha, was obtained from the Hungarian variety Szurkebarat, followed by the Canadian variety, Merit, with 2,340 kg/ha. Address: Inst. of Genetics and Plant Breeding, Sofia, Bulgaria.

1005. Orok, Etim Jonathan. 1973. Comparison of peanut meal, rapeseed meal, and soybean meal as protein supplements for pigs and laboratory rats. PhD thesis, University of Alberta, Canada. In: Index to American Doctoral Dissertations (1956-67), 1974. *
Address: Univ. of Alberta, Canada.

1006. Lundstedt, Erik; Lo, Frank Y. Assignors to Hong Kong Soya Bean Products Co., Ltd. (Kwun Tong, Kowloon, Hong Kong). 1974. Heat stable curd from soya bean milk and process of manufacture thereof. *Canadian Patent* 941,228. Feb. 5.
• ***Summary:*** Prepare soymilk with 6% solids. Add 1-10% by weight of edible fat. Heat to 93.5ºC with steam for 10 minutes. Homogenize at 2,500 lb. pressure. Cool to 24ºC. Add calcium chloride coagulant under strong agitation to form curds at below 49ºC. Heat to 71ºC. Cool to separate whey for superior smooth, silky curds. Hot pack by heating to at least 66ºC. Homogenize. Pump and pack hot. This is a curd, not cheese; there is no fermentation. Address: 1. South Chatham, Massachusetts; 2. Kwun Tong, Kowloon, Hong Kong.

1007. Fleming, S.E.; Sosulski, F.W.; Kilara, A.; Humbert, E.S. 1974. Viscosity and water absorption characteristics of slurries of sunflower and soybean flours, concentrates, and isolates. *J. of Food Science* 39(1):188-91. Jan/Feb. [15 ref] Address: Depts. of Crop Science and Dairy & Food Science, Univ. of Saskatchewan, Saskatoon, Saskatchewan, Canada S7N OWO.

1008. Rosenberg, Monda. 1974. One-pot meals liberate the cook. *Toronto Star (Ontario, Canada).* March 13. p. G1. Family Section
• ***Summary:*** Grandmother knew that a big pot of slowly simmering stew was the easiest way to always have dinner ready. Today, the pot has been replaced by woks and crock pots. Stir-frying food in a wok is neither new nor mysterious.

Joni Boyer, a young Toronto mother, likes to stir-fry most of her meals; its quick and easy. "In Joni's rounds of Chinese grocery stores, she has discovered an extremely source of protein–soybean curd. Made from boiled soybean milk, it is strained, curdled, spooned into muslin and then weighted to squeeze out moisture. Since these delicate pieces break apart easily, Joni just heats them through. In the Orient it is known as the 'meat without bones.'"

Five photos show women preparing one-pot meals. Address: Staff food writer.

1009. Brewer, D.; McLachlan, J.; Neish, A.C.; Shacklock, P.F.; Taylor, A.; MacIntyre, T.M. 1974. Effects of *Chondrus crispus* on fertility, pregnancy, and post-natal welfare of Shropshire ewes. *Canadian J. of Animal Science* 54(1):41-45. March. [14 ref. Eng; fre]
• ***Summary:*** At the Experimental Farm, Nappan, Cumberland County, Nova Scotia, eight Shropshire ewes, 4 to 9 years old, were fed *Chondrus crispus* (Irish moss–a type of seaweed/marine red algae, and the source of carrageenan), plus hay to appetite, and 0.68 kg daily of a mixture of rolled barley, soya bean oilmeal, and minerals. The diet helped to prevent ovine ill-thrift. Address: 1-5. Atlantic Regional Lab., National Research Council of Canada, Halifax, Nova Scotia; 6. Agriculture Canada, Experimental Farm, Nappan, Nova Scotia.

1010. Sen, N.P. 1974. Nitrosamines. In: I.E. Liener, ed. 1974. Toxic Constituents of Animal Foodstuffs. New York: Academic Press. x + 222 p. See p. 131-94. Chap. 5. [217* ref]
• ***Summary:*** "Magee and Barnes (1956) first reported the carcinogenicity of dimethylnitrosamine (DMN) in rats and subsequent reports (Schmaehl and Preussmann, 1959; Druckrey et al., 1967) established that DMN as well as many other *N*-nitrosamines [pronounced nai-TRO-suh-meens] are carcinogenic to a wide range of species causing cancer at different sites of the body...

Page 161 notes: "Recent reports (Hedler et al., 1971) indicate that soybean oil may contain fairly large amounts of DMN (0.45 ppm) and dibutylnitrosamine (0.29 ppm). The identity of DMN was confirmed by GLC-mass spectrometry."

Note: GLC stands for gas-liquid chromatography (a term first used in 1952). *Webster's Dictionary* defines mass spectrometry (a term first used in 1943) as "an instrumental method for identifying the chemical constitution of a substance by means of the separation of gaseous ions according to their differing mass and charge." Address: Food Research Laboratories, Health Protection Branch, Dep. of Health and Welfare, Ottawa, Canada.

1011. Ontario Soya-Bean Growers' Marketing Board, Information & Public Relations Dept. 1974. Canadian soybean industry trends & related rapeseed industry trends. 2nd ed. Chatham, Ontario, Canada. 20 p. 28 cm.
• ***Summary:*** Figures related to soybeans show: (1) Table: Acreage, yield, production, and farm value (per bushel, total, and per acre) in Ontario, by county, 1972. The three counties with the biggest acreage are Kent (130,200), Essex (128,000), and Lambton (98,000). Total Ontario acreage: 405,000. Average yield: 34.0 bu per acre. Total production: 13,770,000 bushels.

(2) Table: Acreage, yield, production and farm value, Ontario, 1942-1972, with five-year averages.

(3) Table: Canadian soybean production, crushings, imports, exports, and net consumption yearly from 1961-62 to 1973-74. Peak imports were 18.263 million bushels in 1969/70. Peak exports were 3.909 million bushels in 1964/65. Production statistics from OMAF (Ontario Ministry of Agriculture and Forestry). All others from Statistics Canada.

(4) Graph: Of statistics in table 3.

(5) Table: Canadian soybean oil statistics. Production, imports, exports, and net consumption yearly from 1961-62 to 1972-73.

(6) Graph: Of statistics in table 5.

(7) Table: Canadian soybean meal statistics. Production, imports, exports, and net consumption yearly from 1961-62 to 1972-73.

(8) Graph: Of statistics in table 7.

(9) Canadian edible oil production statistics, for soybean, rapeseed, and all others, 1966-67 to 1972-73. One column each: Margarine, shortening, salad and cooking oil, grand total. * All others includes coconut, corn, palm, peanut, sunflower marine and animal oils. In 1972-73 about 2/3 of the total oil used was rapeseed and one-third was soybean.

(10-11) Graph: Of statistics in table 10.

(12) Oils used in Canadian margarine, 1961-62 to 1972-3. One column each: Vegetable, marine & fish, animal. The amount of vegetable oil has increased steadily, while the amount of marine & fish, and of animal, have both decreased steadily.

(13) Graph: Of statistics in table 12.

(14) Oils used in Canadian shortening, 1961-62 to 1972-3. One column each: Vegetable, marine & fish, animal. The amount of vegetable oil has increased steadily, while the amount of marine & fish has decreased steadily, but the amount of animal has increased slightly.

(13)

(15) Graph: Of statistics in table 14.

(16) Oils used in Canadian salad & cooking oils, 1961-62 to 1972-3. One column for vegetable only. The amount of vegetable oil has increased steadily.

(17) Graph: Of statistics in table 16.

(18) Ontario soybeans: Mean values and ranges of oil & protein content (all counties), 1970-1973, by grade. Address: Chatham, Ontario, Canada.

1012. Application for recognition in the Canadian Agricultural Hall of Fame Association. 1974. Guelph, Ontario, Canada. 13 p. 28 cm. [2 ref]
• ***Summary:*** C.A. Zavitz was born in 1863 in Ontario, Canada, in Lobo Township, Coldstream village, Middlesex County. He died on 17 March 1942, and is buried at the Friends Burying Ground, Coldstream, Ontario. Primary and secondary education: Middlesex Country School System, then Strathroy High School. College: Ontario Agricultural College (1884-1886, completed degree course and graduated with B.S.A. degree from Univ. of Toronto). In 1916 received Doctor of Science (Honorary) from Univ. of Toronto. In 1935 received Doctor of Laws (Hon.) from Western University. In 1999 received posthumous Doctor of Laws (Hon.) from Western University. He married and had one child, Mr. Raymond Zavitz, of Ilderton, Ontario, now deceased. He lived and worked in Guelph, Ontario, for 41 years, and travelled widely in North America.

(A) Vocational contributions to agriculture in Canada: "1. Dr. Zavitz is best known for his work on cereal improvement. His early use of the nursery plot system produced OAC 21 barley which was widely acclaimed for its malting quality. 2. He devoted much research and effort into the development of alfalfa in Canada. Ontario's success in growing alfalfa is in a large measure due to the work of Dr. Zavitz. 3. Dr. Zavitz expended considerable effort on potatoes and became one of Canada's best authorities on the crop. 4. He was one of America's pioneer investigators of the usefulness of the soybean crop to this continent. Varieties suitable to Ontario were released. 5. His use of small experimental plots, pure line selection and hybridization and his research thoroughness, all made contributions to research methodology. 6. Dr. Zavitz published widely. These publications include Bulletin 228, Farm Crops; Bulletin 280, Alfalfa; Bulletin 332, "Forty years' experiments with grain crops."

"(B) Leadership: List in order of importance any plans or policies which were conceived by the nominee, but not necessarily executed by nominee: 1. As secretary, Dr. Zavitz provided the leadership necessary to expand the Ontario Agricultural and Experimental Union into a very highly successful extension programme. 2. Dr. Zavitz was one of the prime movers in the development of the Canadian Seed Growers Association. 3. He used the success of his Mandscheuri type barley as a lever to the legislators for continued support of the programmes at OAC. 4. He was first chairman of the Canadian Friends' Service Committee. 5. In Florida he was one of the promoters and founders of a permanent Friends' Meeting in St. Petersburg. 6. After

retirement, he published a booklet called 'Spiritual Life', recording his personal thoughts on spiritual themes."

(C) Summary, prepared by R.P. Hunter, Dep. of Crop Science, OAC. (p. 5-11). A good biography of Prof. Zavitz. The first records of the Ontario Agricultural and Experimental Union were in 1886. "At first membership was limited to students and ex-student members of the officers of the College Experimental Farm. C.A. Zavitz was one of the original student members. In 1886, the co-operative experimental testing had only twelve members. By 1888, there were nearly one hundred members. In 1891, there were a total of 2,642 plots planted out and by 1896, over 11,000 packages of seed and fertilizer were sent out to farmers for experimental testing. By 1924 material for experiments had been sent out to more than 100,000 farmers." (p. 9). In the USA, Iowa, Wisconsin, and Ohio organized similar systems, based on the one in Ontario. In 1927 Zavitz retired as head of the Field Husbandry Department.

"Dr. Zavitz was also one of America's pioneer investigators of the usefulness of the soybean crop on this continent. As early as 1893, he procured seed of five varieties of soybeans imported from the state of Kansas. Soon after investigation of the varieties obtained from the state of Kansas, he imported other varieties direct from the Orient. Up until his retirement in 1928, Zavitz continued to study the varieties and cultural practices necessary utilization of soybeans. He selected several varieties and seed of which many were made available to many hundreds of farmers throughout Ontario for tests on their own farms." (p. 10).

Part IV, an appreciation / obituary of Dr. Zavitz, by Prof. Arthur G. Dorland, was first published in the *Canadian Friend* magazine shortly after his death at age 79 in 1942; it was reprinted in the *OAC Review*, Vol. 54. It focuses on his life and work as a Quaker.

This application is to be forwarded to the Secretary-Treasurer, Canadian Agricultural Hall of Fame Association, c/o Royal Agricultural Winter Fair, Coliseum, Exhibition Park, Toronto 2B, Ontario, Canada.

Talk with R. Bruce Hunter, formerly of OAC. 2002. Feb. 3. He started writing this application in 1973, then finished and submitted it in the spring of 1974, before he left for Africa that summer.

Note: In Nov. 1974 Prof. Zavitz was inducted into the Canadian Agricultural Hall of Fame (CAHF). Then in 1999, Prof. Zavitz was awarded an posthumous honorary degree from the University of Guelph–the only posthumous honorary degree ever awarded by the university. CAHF started in 1962, and 172 people have been inducted (as of Dec. 2001). No more than three persons can be inducted per year. Address: Guelph, Ontario, Canada.

1013. Eden Foods. 1974. Spring pricelist. P.O. Box 100, Ann Arbor, MI 48107. 4 p. Effective June 1.

• ***Summary:*** There are many more total products than in the Nov. 1973 catalog. The 8 oz tamari soy sauce and the 3 types of miso (Mugi, Hacho, Kome) in 1-lb packages bear the Erewhon brand after the product name in the catalog, but the pints and gallons of tamari soy sauce and the same 3 types of miso sold in bulk (44 lb tubs) do not bear the Erewhon brand, perhaps indicating that Eden has found a way to go around Erewhon in importing bulk miso. New products include: Kuzu arrowroot. Grade C Korean nori (Roland). Canadian leaf dulse (Atlantic Mariculture). Cicilian olives (Pure & Simple). Barley malt powder. Barley malt syrup. Maple syrup. Bee pollen. Shiu-chu finest preserved Ginseng roots (China). Kirin extra large ginseng roots, red. pres. (China). Ginseng balls *(fo-ti-tieng, dong kwai* [angelica root]). Mao herb (Chinese ephedra). Lemongrass. And many other herbs. Address: Ann Arbor, Michigan. Phone: (313) 769-8444.

1014. Orok, E.J.; Bowland, J.P. 1974. Nigerian cocoa husks and cassava meal as sources of energy for rats fed soybean meal- or peanut meal-supplemented diets. *Canadian J. of Animal Science* 54(2):229-38. June. [12 ref]

• ***Summary:*** Inclusion of cassava meal at 30-50% of the diet gave the best overall rat growth. Cocoa husks, with their theobromine removed and fortified with DL-methionine and L-lysine can also be used efficiently in animal diets fortified with soybean meal. Address: Dep. of Animal Science, Univ. of Alberta, Edmonton, ALB, TG6 2E1, Canada.

1015. *Soybean Digest.*1974. Edible oils background. July. p. 11-13.

• ***Summary:*** Contains detailed information on edible oils and fats worldwide. As of 22 May 1974, soy oil costs 2.8 times as much as it did, on average, in 1972. However the price of every other edible oil and fat has increased about that much and, in some cases much more. Coconut oil is 4.7 times as expensive and palm kernel oil is 5.5 times as expensive. Tables show: (1) World production (in million metric tons) of leading oils and fats. Those with the largest production worldwide are: Soy 23.2%, butter 14.3%, sunflowerseed 11.3%, lard 8.8%, cottonseed 7.7%, groundnut / peanut 7.1%, rapeseed 6.5%. (2) World production and export of soybeans and soy oil (1973-74). The top producers of soybeans are: USA 67.4% of total, China 15.3%, Brazil 11.4%, Argentina 0.9%. Top net exporters of soybeans are: USA 87.2%, Brazil 12.1%. Top next exporters of soy oil are: USA 73.7%, Brazil 21.4%, Argentina 4.7%. (3) World production and export of coconut oil (1973-74). Leaders are Philippines, Indonesia, and West Germany (processor only). (4) World production and export of cottonseed and cottonseed oil (1973-74). Leaders are USA, USSR, and China. (5) World production

and export of sunflowerseed and sunflowerseed oil (1973-74). Leaders are USSR, Argentina, and Rumania. (6) World production and export of rapeseed and rapeseed oil (1973-74). Leaders are India, Canada, and China. (7) World production and export of groundnuts and groundnut oil (1973-74). Leaders are India, China, and USA.

A bar chart shows price increases (%) of edible oils since 22 May 1974.

1016. *Windsor Star (Essex County, Ontario, Canada).*1974. Hopes for soybean plant surface. Aug. 17. p. 7.
• ***Summary:*** "Essex–The first signs of attempts to woo Maple Leaf Mills to locate a $15 million soybean crushing plant in the county emerged Tuesday night. At their regular monthly meeting, the directors of the Essex County Federation of Agriculture [whose president is Peter Epp] decided to encourage the firm to move to the Windsor area. About a month ago, Maple Leaf Mills of Toronto announced it was interested in building a multi-million dollar crushing plant along the waterfront in Sarnia. The company, which is gradually phasing out its Toronto operation because the Ontario government is expropriating the land, owns elevators in Sarnia." Railways, highways, and deep water ports are available in Sarnia. But there is opposition to the proposal because the St. Clair Parkway Commission has plans for expanding a park system along the shoreline. Note: Maple Leaf Mills later decided against buying the Sarnia site.

1017. Lees, David H. 1974. Plant protein–Future for Canada. *Food in Canada*. Aug. p. 29-32. [10 ref]
• ***Summary:*** The writer believes that the production and processing of plant proteins, and products incorporating these proteins, from Canadian grains, oilseeds and legumes, has a very bright future in Canada.

The growth of soy flours, grits, concentrates and isolates in the USA is discussed. A portrait photo shows Dr. Lees. Address: PhD, Food scientist.

1018. Kamm, Henry. 1974. Red Cross teams fight malnutrition in nomads in Niger refugee camps. *New York Times.* Sept. 27. p. 2.
• ***Summary:*** Drought and famine have devastated the region south of the Sahara in Africa. A team of five Europeans and Canadians tries to care for about 20 nomad camps and villages. Those most vulnerable are children, women and nursing mothers. The simplest test for malnutrition in children is measurement of the upper arm circumference. The 5-10% with the worst malnutrition "are put on high-protein diets of corn-soya-milk powder and fishmeal." A map shows the region. A photo shows a group of refugees at a Red Cross camp in Lazare, north of Niamey, Niger. Address: Special to the New York Times.

1019. Gamble, Edwin. 1974. Research techniques in crop science. *Notes on Agriculture: Agricultural Research at the University of Guelph (Canada)* 10:7-8. Sept. *

1020. Carruthers, Jeff. 1974. Ottawa appears baffled, stalling on what to call vegetable wiener. *Globe & Mail (Toronto, ONT, Canada).* Oct. 29. p. 15.
• ***Summary:*** It will be months until an "all-vegetable wiener and other cheaper simulated meat products" are introduced for cost-conscious Canadian consumers, because of "federal Government infighting over naming and labeling these foods-of-the-future.

The Agriculture Department, defending the interests of Canada's meat industry, is opposed to the use of any "traditional" meat names–such as steak, burger, hamburger, wiener, sausage, and the like–for "non-meat or mostly non-meat simulated products." However Agriculture Minister Eugene Whelan said that a name such as "soyabean steak" was acceptable; the advertising could even say that it "tastes like beef."

However the Consumer Affairs Department, with support from the Health Department, has proposed that "the new vegetable protein products be called 'simulated' meat products." The label for a "simulated beefsteak" should state that it contains either "no meat or less meat than the traditional product."

In early 1973, while the regulations were being discussed, "some supermarkets in Eastern Canada introduced 'soyaburger' products (mixtures of real hamburger and soya protein, made to look like hamburger, that sell for less than hamburger)."

At that time, "the federal government decided to allow soyaburger products to be marketed, even though they were not covered by the Food and Drugs Act."

Now, consumers will have to wait. The issue is expected to be resolved before the year's end.

1021. Brown, Lester R.; Eckholm, Erik P. 1974. Our dietary habits: Should they be changed? For what reasons? *Vital Issues* 24(2):104. Oct. [1 ref]
• ***Summary:*** This Vital Issue is drawn from the authors' forthcoming book *By Bread Alone* (Praeger 1974). "Since the time of Malthus, the world food problem has been seen as a food-population problem. Currently population growth continues to generate demand for more food, but, in addition, affluence has emerged as a major claimant on world food resources." It examines the encouraging shift from beef and animal products to vegetable sources of protein, and the economy, ecology, health issues, inefficiency, and waste in beef production. A chart gives per capita meat consumption (including poultry but not fish) for various countries in 1960 and 1972, and the percentage increase during that time as follows (pounds per year): USA (208, 254, +22%), Australia (234, 235, 0%), France (168,

212, 26%), Canada (167, 211, 26%), United Kingdom (158, 171, 8%), West Germany (144, 192, 33%), Sweden (109, 112, 3%), USSR (80, 104, 30%), Italy (70, 136, 94%), Yugoslavia (62, 75, 21%), Spain (51, 96, 88%), Japan (14, 41, 364%). Address: 1. Senior Fellow; 2. Associate Fellow. Both: Overseas Development Council, Washington, DC.

1022. Fan, T.Y.; Sosulski, F.W. 1974. Dispersibility and isolation of proteins from legume flours. *Canadian Institute of Food Science and Technology Journal* 7(4):256-59. Oct. [9 ref. Eng; fre]

• ***Summary:*** Nitrogen extraction and precipitation curves, and yields of protein isolate, were determined for 9 legume flours containing 21-45% protein. "Soybean flour was the best source of protein isolate while lupine and fababean also provided high yields of relatively pure protein isolates.

"Seeds of soybean *(Glycine max)* [and the 8 other legumes]... were obtained from plots at the University of Saskatchewan." On a moisture-free basis, the soybean flour had the second highest protein content (43.5%, after lupine at 44.7%), the highest fat content (23.1%, followed by lupine at 7.9%), the highest fiber content (2.2%, followed by lima bean at 2.1%), the highest ash content (4.8%, followed by pea bean at 4.0), and the highest yield of protein isolate (36.6 gm per 100 gm flour, followed by lupine at 30.8 gm). Address: Dep. of Crop Science, Univ. of Saskatchewan, Saskatoon, SASK, S7N 0W0, Canada.

1023. Ford, Frank. 1974. Pack to nature: Nutrition made easy in the home or in the woods. Fort Worth, Texas: Harvest Press. vii + 157 p. Introduction by Roger Hillyard. Index. Oct. 18 cm. [13* ref]

• ***Summary:*** This book, containing over 250 recipes, describes how to use whole, natural food staples in quick, easy to prepare dishes. By Sept. 1976 this book had become *The Simpler Life Cookbook from Arrowhead Mills.*

In the introduction, Roger Hillyard (writing in Oct. 1974 from Soquel, California) recalls that in late February of 1969, he and his wife and daughter were returning to Boston from California. They stopped in the small Texas town of Hereford to visit Deaf Smith County and the company that was supplying food to a growing number of natural foods followers and devotees–including Erewhon. Four years later they spent a year in Hereford working with Frank Ford and Arrowhead Mills. "During the five years I have worked with, lived with, and been friends with Frank, I have witnessed one of the most dramatic and beautiful personal unfoldings. Frank never wore that robe of self-righteousness, and he helped me to exchange mine for something more embracing."

Soy-related recipes include: Quick soy pancakes (with soy flour, p. 35). Soybean salad (with cooked soy flakes, p. 43). Quick tamari orange salad dressing (with tamari soy sauce, p. 47). Paul's salad dressing (with tamari, p. 47). Soybean chili (with dry soybeans and "tamari soysauce," p. 54). Sprout soup (with 2 cups fresh soybean sprouts, p. 54). Sprouted lentil soup (with soy flour, p. 55). Squash stew (with soy flakes, p. 55). Tamari bouillon (p. 56). Vegetable-soy-sesame soup (with soy flakes, p. 59). Basic soybeans (p. 74). Basic soy flakes (p. 75). Basic bulghur-soy grits (p. 75). Lentil soy loaf (with cooked soybeans or soybean flakes, p. 84). Soy & mushroom loaf (with soy flakes, p. 85). Soy patties (with soy flakes, p. 87). Stuffed peppers (with soy flakes, p. 87). Soyflake & tahini spread (with soy flakes, p. 106).

A 2-page directory titled "Some Natural Foods Sources" (p. 153-54) lists 30 of the natural food industry's pioneers, including Akin Distributors, Inc. (Tulsa, Oklahoma), Arrowhead Mills, Inc. (Hereford, Texas), Basic Needs (Grand Prairie, Texas), Cinagro Distributors, Inc. (Atlanta, Georgia), Cliffrose (Longmont, Colorado), Collegedale Distributors, (Collegedale, Tennessee), The Concord (Snowflake, Arizona), Deer Valley Farms (Guilford, New York), Eden Organic Foods (Ann Arbor, Michigan), Erewhon Trading Company (33 Farnsworth St., Boston, Massachusetts 02210, and 8454 Steller Dr., Culver City, California 90320), Food for Health (Phoenix, Arizona), Food for Life (Elmhurst, Illinois), Good Food People (Austin, Texas), Great Plains Distributors (Kansas City, Missouri), Happy Health Products (Miami, Florida), Janus (Seattle, Washington), Laurelbrook Foods (Bel Air, Maryland), Lifestream Natural Foods (Vancouver, BC, Canada; Ratana and Arran Stephens), Mottel Health Foods (New York, NY), Naturally Good Foods (Hereford, Texas), Nu-Vita Foods Inc. (Portland, Oregon), Organic Foods & Gardens (City of Commerce, California), Shadowfax (Binghamton, New York), Shiloh Farms (Sulphur Springs, Arkansas), Taiyo, Inc. (Honolulu, Hawaii), Tree of Life (St. Augustine, Florida), Vim & Vigor (Honolulu, Hawaii), The Well (San Jose, California), Walnut Acres Inc. (Penns Creek, Pennsylvania).

A small photo on the rear cover shows Frank Ford out hiking, wearing a backpack.

Note: This is the earliest published document seen (Feb. 2010) concerning Lifestream Natural Foods (Vancouver, BC, Canada). Address: Deaf Smith County, Texas.

1024. *Soybean Digest.*1974. The international outlook of the soybean market. Oct. p. 8-10.

• ***Summary:*** Contents: Introduction. Western Europe. Italy (Ferruzzi). Japan. Taiwan and Korea. Latin America.

"Italy: ASA's [American Soybean Assoc.] already made a solid start in expanding soy oil prospects in Europe with an identified soy oil campaign now in its second year in Italy. Watts calls the agreement with Ferruzzi and Company the one outstanding market development activity carried out in Europe recently.

"'Di Soia Si Vivra' (with soy we live), Italian housewives heard again and again during the advertising campaign. And soy oil sold. 'After 7 months, over 50% of the Ferruzzi production at his two plants was identified soy oil. After 12 months, 96% of it was identified soy,' Watts says. 'In the 12 months of the campaign about 20 million lbs. of soy oil were sold to the Italian people.'

"A major competitor began a similar campaign on its own only a few weeks after Ferruzzi started his promotion effort. 'Now, at least 11 brands of soy oil are on the shelves in Italy,' reports Watts."

Note: This is the earliest document seen (April 2007) concerning the work of Ferruzzi and Co. with soybeans.

A pie chart shows 1974-75 soybean sales commitments: EEC 45%, other Western Europe 6.1%, Japan 21.9%, China 4%, other 4%, undesignated 19.5%.

Tables show: (1) U.S. soybean exports (July to June fiscal year basis) for two years (1972-73, and 1973-74) in quantity (million bushels) and value (million dollars) to: EEC, Spain, Canada, Israel, Japan, Soviet Union, China, Taiwan, unidentified (transshipments), other. (2) U.S. soybean meal exports; the five biggest buyers are West Germany, Japan, Italy, Netherlands, and Poland-Danzig. (3) U.S. soy oil exports; the five biggest buyers are Pakistan, Peru, Mexico, Canada, and Yugoslavia.

1025. Charles Ambrose Zavitz 1863-1942. 1974. Guelph, Ontario, Canada. 1 p. 28 cm.
• ***Summary:*** The follow citation was read when he was inducted into the Canadian Agricultural Hall of Fame on 17 November 1974: "Charles A. Zavitz was a member of the first class to graduate from the Ontario Agricultural College with the degree of Bachelor of Science of Agriculture (1888). During the next 41 years, while serving on the staff of the Field Husbandry Department of his Alma Mater, he displayed remarkable qualities of leadership in the fields of research, teaching and extension.

"Being an avid researcher, he attempted to develop many new varieties of field crops, but steadfastly refused to release any until proven by careful testing to be suitable to Canadian conditions. Undoubtedly, his most widely acclaimed new variety was O.A.C. No. 21 Barley, one that has stood the test of time.

"Professor Zavitz was one of the founders of the Canadian Seed Growers' Association, and a strong supporter for the Ontario Agricultural and Experimental Union. He use the members of the latter organization quite extensively to obtain wider distribution of varieties that had proven superior as a result of tests conducted under his supervision and, in so doing, added millions of dollars annually to the value of Ontario's field crops.

"Although primarily recognized for his work with cereals, Professor Zavitz made valuable contributions to the improvements of other field crops, notably alfalfa, potatoes, and soy beans.

"In appreciation of his achievements, the University of Toronto conferred the degree of Doctor of Science on him in 1916 and in 1935, following his retirement, he was the recipient of an Honourary Doctor of Laws degree from the University of Western Ontario as a tribute to his status as a distinguished son of that area of the Province.

*"Nominated by the Canadian Seed Growers' Association and the Ontario Pedigreed Seed Section– 1974."*

Note: Talk with R. Bruce Hunter of OAC and Ceiba-Geigy. 2002. Feb. 3. 1974 was the 100th anniversary of OAC and Charles Zavitz's induction was coordinated with that event. Bruce wrote the application. Address: Guelph, Ontario, Canada.

1026. Predicasts, Inc. 1974. World manufactured soybean foods. Special Study No. 108. Predicasts, Inc., 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, OH 44106. vi + 93 p. Dec. 24. No index. 28 cm. Research Analyst: Frederick M. Ross.
• ***Summary:*** Contents: 1. Introduction. 2. Summary. 3. Economics of Soybean Foods: Soybeans, soy flour, meat extenders (based on extruded textured soy flour), synthetic meat (based on spun isolates). 4. Industry structure: General, $1,000 million food and feed giants (ADM, Cargill, Central Soya, General Mills/Takeda Chemical, Nabisco, Ralston Purina/Fuji Oil, and Esmark [Swift]), other major manufactured soy food companies (Unilever, General Host [New York], Miles Laboratories/Worthington & Kyowa Hakko Kogyo, A.E. Staley Mfg. Co., Stange [Chicago, Illinois], Chambers & Fargus [Humberside, England]), food industry structure. 5. Demand for manufactured soybean products: Demand for meat & substitutes, supply of natural meat, demand for meat substitutes, demand for soy flour. 6. North America: United States, Canada. 7. Latin America: General, Argentina, Brazil, Mexico, Other Latin America (Brazil, Chile, Colombia, Ecuador, Paraguay, Peru, Uruguay). 8. West Europe: General, France, West Germany, Italy, Spain, United Kingdom, Other West Europe. 9. East Europe: General, Hungary, Poland, USSR, Other East Europe. 10. Africa: General, Egypt, Nigeria, South Africa, Other Africa & Mideast. 11. Asia: General, China, India, Indonesia, Japan, Pakistan, Other Asia. 12. Oceania: Australia, New Zealand, Other Oceania.

Most sections contain numerous tables, mostly on meat and meat substitute consumption, and raw protein consumption, by country. Address: 200 University Circle Research Center, 11001 Cedar Ave., Cleveland, Ohio 44106. Phone: 216-795-3000.

• ***Summary:*** The soybean is one of the plants discussed.

1029. **Product Name:** Supro 620.
**Manufacturer's Name:** Stange Canada.
**Manufacturer's Address:** Mississauga, ONT, Canada.
**Date of Introduction:** 1974.
**New Product–Documentation:** Predicasts. 1974. World Manufactured Soybean Foods. p. 13. "Stange (Chicago, Illinois) is one of the world's largest spice and food manufacturers with 1973 sales of $36 million. The firm, through Stange Canada, operates a plant in Mississauga, Ontario, that makes 'Supro 620' soy protein isolate, a very high grade protein ingredient for health foods, instant breakfasts, puddings and other specialty foods. The soy isolate is sold to large food manufacturers throughout North America for inclusion in their retail food products." Note: This product was apparently later purchased by Ralston Purina.

1030. Gibbs, Ronald Darnley. 1974. Chemotaxonomy of flowering plants. 4 vols. Montreal, Canada: McGill-Queen's University Press. Illust. 24 cm. *
• ***Summary:*** Vol. 1. Constituents. Vol. 2. Families. Vol. 3. Orders. Vol. 4. Bibliography, index.

Address: Agriculture, Food, and Nutrition Sciences, International Development Research Center, Ottawa, Canada.

1032. Newman, Marcea. 1974. The sweet life: Marcea Newman's natural-food dessert book. Boston, Massachusetts: Houghton Mifflin Co. 161 p. Illust. by Linda Stine. Index. 29 cm. A 1981 revised edition contained 176 p. [63* ref]
• ***Summary:*** This early and beautifully presented natural foods cookbook contains very innovative and tasty tofu dessert recipes made with limited natural sweeteners and no dairy products. It discusses the harmful effects of refined and denatured foods, with details on white flour, sugar, oil, salt, eggs, milk, and baking powder [which contains alum, a product of aluminum; "it may even be harmful"].

Chapter 1, titled "Natural necessities: Equipment, techniques, and ingredients," gives good definitions of and introductions to amasake (p. 6), miso (p. 10), tamari (p. 12), and tofu (soybean cheese, p. 13). Soy-related recipes include: Basic cake II with tofu sour creame (p. 25). Cheesecake tofu pie (p. 37). Cantaloupe cheesecake (p. 37, with tofu). Upside-down tofu cake (p. 38). Mincemeat filling with miso (p. 50-51). Tofu poppy seed filling (for pastries or phylo, p. 53). Instant tofu creame (p. 59). Tofu creame (p. 59). Tofu creame whip (p. 60). Tofu sour creame I and II (p. 60). Tofu custard (p. 62). Apple tofu delight (p. 82). Creame puffs with amasake filling (p. 82). Cherry tofu strudel (p. 88). Tofu sour creame cherry tart (p. 92). Thanksgiving squash-mincemeat pie (with miso in the filling, p. 98-99).

The inside dust jacket gives a brief biography of the author, who was born and raised in New York. In Berkeley, California, she studied Japanese and natural-food cooking, and helped to start a "noodle bar" where she baked her first dessert. Now she lives in Boston and caters weddings, parties and school fairs with natural and organic foods and desserts.

An Appendix (p. 151-52) lists the name and address of 39 suppliers of natural foods in the USA (divided by region), and 2 in Canada. This list includes the following companies: Erewhon Trading Co. (33 Farnsworth St., Boston, Massachusetts 02210), Good Nature Distributing Co. (Box 447, Export, Pennsylvania 15632), Infinity Co. (173 Duane Ave., New York, NY 10005), Shadowfax (25 N. Depot St., Binghamton, NY 13901), Sundance Organic Food (R.D. #1, Box 146A, Coventry, Connecticut 06238), Walnut Acres (Penns Creek, Pennsylvania 17862; founded by Paul Keene), Collegedale Distributors (Box 492, Collegedale, Tennessee 37315), Laurelbrook Foods (Box 47, Bel Air, Maryland 21014), Tree of Life (Box 1391, St. Augustine, Florida 32084), Ceres, Inc. (2582 Durango Dr., Colorado Springs. Colorado 80910), Cliffrose (129 Coffman St., Longmont, Colorado 80501), Eden Foods (Box 100, Ann Arbor, Michigan 48107), Food for Life (420 Wrightwood St., Elmhurst, Illinois 60126), Akin Distributors (Box 2747, Tulsa, Oklahoma 74101), Arrowhead Mills (Box 866, Hereford, Texas 79045), Shiloh Farms (Box 97, Sulphur Springs, Arizona 72768), Sunrise Distributors (Box 5216, Phoenix, Arizona 83010), Erewhon Trading Co. (8454 Steller Dr., Culver City, California 90230), Janus Natural Foods (1523 Airport Way, South, Seattle, Washington 98134), New Day Distributors (1242 S. Berendo St., Los Angeles, CA 90006), The Well/Pure & Simple (795 West Hedding St., San Jose, CA 95126), Lifestream Natural Foods, Ltd. (724-26 W. 6th Ave., Vancouver 9, BC, Canada), and Natural Foodstuffs (1 Main St., Box 27, Sutton, Quebec, Canada).

Note: This book contains the earliest recipe seen (Dec. 2005) for a tofu cheesecake. It is also the earliest English-

language document seen (Dec. 2005) that uses the term "cheesecake tofu pie" to refer to a tofu cheesecake. For the story of how Marcea got interested in tofu and wrote this book see: Marcea Newman. 1994. Oct. Re: Early work with tofu and tofu cheesecakes in America. Address: Boston, Massachusetts.

1033. Ontario Soya-Bean Growers' Marketing Board. 1974. 25th anniversary, 1949-1974. Box 1199, Chatham, ONT N7M 5L8, Canada. 32 p. 24 cm.
• ***Summary:*** Contents: A mark in time (History of soybeans in Ontario). For each year from 1949 to the present, a summary of the year's major events and activities related to the board and to soybeans, a photo of the chairman of the board with the names of the directors from the 6 districts: Elgin, Essex, Pelee Island, Kent, Lambton, and Middlesex. Elected county committeemen in 1974 from the 6 districts. Soybean variety development through the years. Extension programs beneficial to all. Table: Estimated acreage and total production of Ontario soybeans–1973 (Total Ontario soybean production in 1973: 14,753,000 bushels from 475,200 acres. Leading counties: Kent 5,348,000 bu. Essex 4,234,000 bu. Lambton 3,383,000).

Examples of some early history: 1949–"The first board. Provisions under the newly created soybean marketing plan regulations specified eleven directors to represent some 6,000 soybean growers in six districts. John H. Wilcox is chairman. The first office of the board was located in the office of the Ag. Rep. in Essex, and Angus McKinney was the first secretary. K.A. Standing acted as assistant on a part-time basis. Board operations were financed during the 1949-1950 crop year by a one-half cent per bushel license fee." In 1950, the license fee was increased from one-half cent to one cent per bushel, the level at which it remained until 1959. In 1960 the license fee was reduced by the board from one cent to one-half cent per bushel.

1951–The first annual convention of soybean growers was held February 15-16, 1951 at Community Hall, Chatham. Canadian soybean acreage in 1951 reached a high of 155,000 with an average yield of 24.8 bushels per acre. Production was a record 3.8 million bushels, while soybean imports from the USA were about 5 million bushels per year.

1952–K.A. Standing was appointed full-time secretary-manager, and in 1973 he became general manager of the soybean and wheat boards. In 1952 the board established its office in Chatham, Ontario, sharing facilities and staff of one secretary with the Ontario Seed Corn Marketing Board on Market Street. Expansion of office requirements resulted in a move to new quarters on Fourth Street in 1953.

1954–The Ontario Soya-Bean Growers' Marketing Board organized the first export of Canadian soybeans in 1954. The shipment was made from Port Stanley to interests in the United Kingdom. Initiated to generate competition in the domestic market, exports were to continue in every succeeding year. Some 1,492,000 bushels were exported during the 1954-55 crop year.

1958–This year the board was successful in having soybeans brought under the Agricultural Stabilization Act. The crop was supported at $2.10 per bushel. The average price to growers was $1.90, resulting in a deficiency payment of 19.6 cents per bushel for a total of $1,200,000 paid to soybean growers. Also in 1958 the office was moved from Fourth Street to Wellington Street West. Joint office and staff arrangements were made with the newly established Ontario Wheat Board, and Otis McGregor was appointed assistant secretary-manager.

Licensed varieties developed at both Canada and Ontario government research stations are: A.K. (Harrow) (licensed in 1931-33), Mandarin (1934), Harman (1944), Capital (1944), Harly (1948), Blackhawk (1950), Harosoy (1951), Hardome (1953), Acme (1953), Comet (1953), Crest (1957), Merit (1959), Harosoy 63 (1962), Chippewa 64 (1964), Vansoy (1970), Harwood (1970), Amsoy (1971), Wells (1972), Steele (1972), XK 505 (1973), Evans M61-96 (1974), Harlon OX 643 (1974). Address: Dep. of Animal Science, Univ. of Alberta, Edmonton, AB T6G 2E1, Canada.

1035. Radley, R.W. 1974. Soya bean adaptation to the cool, maritime climates of Northern Europe, with special reference to the U.K. *Outlook on Agriculture* 8(1):3-9. [15 ref]
• ***Summary:*** "Sharp increases in soya bean prices, and restrictions on US exports, have stimulated interest in the possibility of growing this crop in NW Europe. The principal limitations are temperature–especially at night–and daylength. One variety has often yielded well, experimentally, in Southern England, but in general yields are at present too uncertain and the lowest pods too near the ground. Development of better-adapted varieties would call for substantially increased research effort."

Table 1 shows that during the period 1961-70 the UK imported about US$50 million worth of soybeans and soybean products each year. Imports of whole soybeans decreased from a peak of 294,000 tonnes in 1964 to only 38,000 tonnes in 1970–worth $6.2 million. Imports of soya oil rose from 18,000 tonnes in 1961 to 61,000 tonnes in 1970 (worth $17.2 million) and imports of soya cake and meal rose from 142,000 tonnes in 1961 to 248,000 tonnes in

1970 (worth $28.5 million). A shortfall in Peruvian fishmeal from March 1972 onwards increased the demand for soybeans and soy products.

Production of soybeans in Europe is largely confined to Romania, Bulgaria, and Yugoslavia which together in 1972 produced no more than 188,000 tonnes on about 169,000 ha (average yield = 1.11 tonnes/ha). The location and extent of soybean production in Japan is of real significance for northern European countries. Japan cultivates about 90,000 ha/year of soybeans, largely on the northernmost island of Hokkaido, which, as Sven Holmberg (1956) writes "is the only country in the world where soya beans are grown as a major crop in a relatively cool and partly marine climate."

In 1973 Dr. E.S. Bunting of the Plant Breeding Institute, Cambridge, sowed several varieties of soybeans at Oxford; these included Fiskeby V (bred by Algot Holmberg & Soner A B in Sweden), Altona (the earliest of the varieties commercially available in Canada), and two Russian varieties grown in Eastern Siberia–Saliut 216 and Amurskaja 41 (both reputed to be cold-tolerant). Fiskeby 5 gave the best grain yields. Also on 21 May 1973 the author planted 110 varieties of soybeans (including Fiskeby V) at Silsoe, Bedfordshire, and showed how critical the planting date is in terms of germination. In 1974 Summerfield conducted controlled environment studies at Reading University.

"Eleven year (1960-70) growth and yield data for Fiskeby V grown at Norrköping, Sweden (latitude 58º 36'N), supplied to Bunting (1973, private communication) by Holmberg, indicate that the variety requires a 'heat-sum' of approximately 825 degree-days above 0ºC to bring about flowering and between 1,880 and 2,000 degree-days for completion of its growth cycle. The mean number of days from planting to harvest in the eleven year period was 133 but, perhaps more important, the range was from 115 to 165, reflecting to some extent the seasonal variation in temperature... (see also Holmberg 1956)."

"Fiskeby V would appear to be the only variety worthy of serious consideration in Britain at the present time... [but] for the crop to be a contender for a place in British agriculture, the variety will need further improvement through breeding."

"The real question is whether or not there is sufficient evidence at this stage for a higher level of research resources to be channelled into the crop." Address: National College of Agricultural Engineering, Silsoe, Bedford, England.

1036. Ross, Alexander M. 1974. The college on the hill: A history of the Ontario Agricultural College 1874-1974. Toronto, Ontario, Canada: Copp Clark Publishing. x + 180 p. Illust. Index. 22 x 29 cm. [279* ref]

• ***Summary:*** The contributions of C.A. Zavitz are well documented. In 1874 the college opened with 28 students. In 1877 the first diplomas were granted. In 1879, when James Mills became principal, 89 new freshman entered and the total attendance was 162.

In 1880 (by an act of incorporation) the School of Agriculture and Experimental Farm became the Ontario Agricultural College (OAC) and Experimental Farm, presided over by a president (James Mills), not a principal (p. 35). The Toronto *Globe* mocked the idea that a college was needed to teach practical-minded farmers or to confer degrees in agriculture. A course was established which would grant the degree of Bachelor of Science in Agriculture. By June 1888 the OAC had become affiliated with the University of Toronto. "At a special convocation at the University of Toronto on 1 October 1888, five third-year graduates from the College received their degrees. These men were J.A. Craig, G.C. Creelman, J.J. Fee, B.E. Paterson, and C.A. Zavitz." These were the first degrees granted by OAC. Before the end of the year Zavitz had become Assistant Superintendent of Experiments and Assistant Chemist at the Ontario Agricultural College.

In 1890 C.A. Zavitz, the newly appointed director of experiments, drew the attention of President Mills to the pressing need for an experimental station building, "where work could be accomplished during the winter months..." The two-story building was finally provided by the Ontario government in 1895 (p. 33).

Under Thomas Shaw the experimental plots grew more numerous each year. Much of Shaw's success was due to the work of his Assistant Superintendent of Experiments, the young Charles Zavitz (p. 45). President Mills recognized the capabilities and talents of Zavitz. "In his annual report for 1894 Mills drew Zavitz' work to the attention of the government by noting the growth in the number of plots used in experimental work: from 56 in 1889 to 1,705 in 1894. The President also pointed out that from 1890 to 1894 the Experimental Department had distributed over 23,000 packages of choice grain throughout Ontario."

In 1886 the members of the Ontario Agricultural and Experimental Union started the first cooperative experimental work on their own farms; most of the members were former graduates of OAC. "The spirit behind the Union drew its strength from the tireless energy of the Quaker, Charles Zavitz, whose interest in testing and developing different varieties of grains was to mean so much to the agricultural economy of Ontario. Zavitz was a scientist of his dat, a man endowed with remarkable ability to systematize his knowledge. He was painstakingly fastidious about his experimental work as well as imaginative and humble. But, he was a man born too soon, too early absorbed by the practical forces which insisted on immediate profits for rural Ontario" (p. 49-50).

In 1893 Zavitz and his helper Whiteside prepared an outstanding exhibit for the World's Columbian Exposition at Chicago, Illinois; it was widely reported in both American

and Canadian journals. In 1899 C.A. Zavitz attracted the attention of newspapers and visitors at the Industrial Fair in Toronto with his display of 160 varieties of wheat, and 80 varieties each of oats and barley. Ontario farmers were now enjoying the advantages of Zavitz' experimentation (p. 49).

The *O.A.C. Review* began publication in Nov. 1889; it was named by C.A. Zavitz. For more than 60 years it was published by OAC students, and it linked them with past graduates and faculty as one large family (p. 69).

The intensely religious orientation of faculty members like Mills and Zavitz "gave a strong nonconformist cast to religious life on campus." Many of the students had been raised in an atmosphere of "puritanical fundamentalism." Thus, the theories of Darwin and Huxley were earnestly discussed (p. 70).

Ever since the College was organized, the Professor of Agriculture had complete charge of the experimental farm, as well as instruction in field husbandry and live stock. But since the science of Agriculture has made great advances in the past few years, specialists are required to take charge of certain branches of the work. In 1903 Prof. C.A. Zavitz, the Experimentalist, was given a new branch of work, to be known as the Department of Field Husbandry. In 1904 his cousin, E.J. Zavitz, was put in charge of OAC's new Department of Forestry (p. 76).

In 1914 three new buildings were constructed on campus; one of these, the Field Husbandry Building, was later renamed Zavitz Hall. President Creelman was fortunate to have C.A. Zavitz on his faculty (p. 78).

In the *O.A.C. Annual Report* of 1911 C.A. Zavitz discussed the results of his tests with many grains, including the "Early Yellow Soy Bean, a legume which Zavitz may have grown for the first time in Canada in 1893. Although his methods may seem old-fashioned today, C.A. Zavitz's careful experimental work notably benefited Ontario agriculture, and placed Field Husbandry in the forefront of the O.A.C. departments" (p. 81).

At the outbreak of World War II, in the absence of President Creelman, Prof. C.A. Zavitz, a Quaker and a pacifist, was appointed Acting President during the fall of 1914. He opposed "setting up a military organization on campus, arguing that students could best support the war effort by devoting their energies to increasing the food supply of the country." The furore in the Guelph newspapers was immediate, yet he had support and was able to continue as Acting President until Dr. Creelman's return from an overseas tour (he was advising New Zealand on agricultural policies) in early 1915 (p. 88).

In June 1927 Dr. Zavitz, the "much respected Head of the Department of Field Husbandry," who had served OAC with distinction for 39 years, retired because of poor health. Prof. W.J. Squirrell succeeded him as head of the department (p. 104). Dr. Zavitz used to point to increased grain yields as justification for the costs of his experimentation (p. 114). Dr. Zavitz was the "grand old man" of field husbandry research at OAC. Soybeans and corn are discussed (p. 133). In 1921 Dr. Zavitz described the purpose of a Provincial Alumni Association; it was "to be an agency capable of rendering inestimable service to the agriculturists of the Province" (p. 157-58). Address: Head, English Dep., OAC, Guelph, Ontario, Canada.

1037. Mother Nature's Inn. 1974? Our menu. 1813 West 4th Ave., Vancouver, BC, Canada. 4 p. Undated.

• ***Summary:*** Contents: [Basics]: Soup of the day, Brown rice, Mother Nature's bread or sprouted 8 grain, Tahini, soy lecithin or vegie butter, Chapatti–whole wheat flatbread of India (buttered or with vegie butter), Sprouted 7 grain English muffin (buttered or with tahini or vegie butter), Bible bread with any spread. Fresh salads (incl. alfalfa sprouts or Tabouli salad). Salad dressings (incl. sesame tahini dressing).

Mom's great sandwiches, Daily special, Evening dinner menu (as posted on menu board) or Golden Lotus Macroplate.

Chapizza, Vegeburger (with vegetable protein patty). Desserts. Juices. Teas (incl. Healthy coffee, Roastaroma, Mu, Red Zinger). At the bottom of page 3: "All food served by Mother Nature's Inn are purely vegetarian and natural, We use neither eggs, sugar, nor cheese with animal rennet. Our fare is lovingly prepared from the freshest, highest quality produce available.

"May the long time sun shine upon you
All love surround you
And the pure light within you
Guide your way home."

On the rear cover is a large oval illustration of a child [Jesus] dressed in a long white road, leading a sheep, a lion and two cows. Around that, the name of the restaurant. Below: Its hours (Mon.–Sat. 11:30 am–5 pm, Sunday 12-7) and address.

Accompanying this menu is a photo (angled upwards) of a waitress at Mother Nature's Inn (Lisa) holding out a plate of food in her right hand; behind her are a hanging light, hanging plant, and the restaurant's ceiling. Address: Vancouver, BC, Canada. Phone: 733-5528.

1038. Ontario Soya-Bean Growers' Marketing Board. 1974? Ontario soybeans: Meeting the challenge of tomorrow (Leaflet). Chatham, Ontario, Canada. 6 panels. Undated. 22 x 9 cm.

• ***Summary:*** Contents: Title page. Basic description of soybeans, soybean oil, and meal. World production. Here in Ontario, a 54 million dollar crop. A very important commodity to the economy. Imports of soybeans, oil and meal for 1972-73 (quantity and value). Margarine. Shortening. Cooking and salad oils. Meal. Flour. Diagram of soybean utilization.

"In Canada, 95% of the production is confined to Southern Ontario where a record 13.8 million bushels were produced in 1972. Prior to World War II, soybean acreage in Ontario ranged in the area of some 30,000 acres. New varieties of soybeans and improved production techniques have contributed to acreage expansion." Address: Box 668, Chatham, ONT N7M 5K8, Canada.

1039. deMan, J.M.; Stanley, D.W.; Rasper, R. 1975. Composition of Ontario soybeans and soymilk. *Canadian Institute of Food Science and Technology Journal* 8(1):1-8. Jan. [4 ref. Eng; fre]
• ***Summary:*** Samples of 55 varieties Ontario-grown soybeans were analyzed. All samples were made into soymilk and the composition of the milk was determined, including the content of phosphorus, calcium, and magnesium. The soymilk was subjected to ultrafiltration and the diffusate analyzed for soluble constituents. "Correlations of variables indicated that an increased protein level in the soybeans was accompanied by a decrease in fat." Sucrose was the predominant sugar; certain varieties were found to have a very low content of raffinose and stachyose, the oligosaccharides that cause flatulence. On average, 63.5% of the calcium in the soybeans was recovered in the soymilk. The soymilk from the 55 samples had the following mean composition: total solids 5.98%, protein 2.71% (3.64% maximum), fat 1.24% (0.72% minimum), soluble solids 2.03%, calcium 9.87 mg/100 ml (13.0 mg max.), protein recovery 72.69% (94.1% max., i.e. the percentage of protein in the soybeans that was recovered in the soymilk). Address: 1. Dep. of Food Science, Univ. of Guelph, Guelph, ONT (Biz 1985: Food Technology Services, 58 Applewood Cres., Guelph, ONT N1H 6B5). Phone: 519-821-3436.

1040. deMan, J.M.; Tanaka, M.; Stanley, D.W. 1975. Coagulation properties of soybean milk. *Canadian Institute of Food Science and Technology Journal* 8(1):9-11. Jan. [4 ref. Eng; fre]
• ***Summary:*** The coagulation properties of 55 samples of soybean milk coagulated with calcium sulfate were investigated. Clotting time was generally in the range of 10-50 seconds. "Clotting time decreased with the age of the soymilk. Addition of phosphates and citrate prolonged the clotting times. All samples produced a firm gel, even when the soymilk was three days old." Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada N1G 2W1.

1041. Carroll, K.K.; Hamilton, R.M.G. 1975. Effects of dietary protein and carbohydrate on plasma cholesterol levels in relation to atherosclerosis. *J. of Food Science* 40(1):18-23. Jan/Feb. Symposium: Nutritional Perspectives and Atherosclerosis. [73 ref]
Address: Dep. of Biochemistry, Univ. of Western Ontario, London, ONT, Canada.

1042. Odell, A.D. 1975. Meat extension–amended regulations: Summary-overview (Leaflet). Montreal, Quebec, Canada. 1 p. 28 cm. [1 ref]
• ***Summary:*** "On February 12, 1975, historic and commendable amendments to the Food and Drug Regulations were published in the Canada Gazette, which deal with meat and poultry products, meat and poultry extenders, extended meat and poultry products and meatless simulated meats. These are detailed in Schedule No. 291 (pages 208-217) with respect to composition and quality. Schedule No. 280 (pages 226-232) deals with labelling requirements and permissible claims for these products." Address: Vice President–Technical Director, Industrial Grain Products Ltd., P.O. Box 6089, Montreal, Quebec H3C 3H1, Canada. Phone: 514-866-7961.

1043. Sanderson, J.B. 1975. Soybeans–Soybean variety testing. *Research Station Charlottetown, P.E.I., Research Summary* For the year 1974. See p. 28. (Agriculture Canada Research Branch).
• ***Summary:*** "Soybeans yielded up to 2,800 pounds of seed [at 15% moisture] and 1,050 pounds of protein per acre. Twelve varieties of soybeans were evaluated at Charlottetown in 1974. The varieties were seeded on June 3 in four rows, 14 inches (35 cm) apart... Five varieties, 070-16, Solut-216, Altona 070-6 and 070-3 matured before the frost... As indicated by the moisture content at harvest [15%], all varieties required additional drying. Of the licensed varieties, Altona had the best combination of maturity and seed yield. The unlicensed variety 070-16 shows promise." Address: Prince Edward Island, Canada.

1044. Japan Food Corporation. 1975. Kikkoman soy sauce: Now available at most supermarkets (If not, please ask them to stock.) (Ad). *Toronto Star (Ontario, Canada).* March 19. p. E2, E4.
• ***Summary:*** These are two tiny ads on two separate pages of this issue of the newspaper. On the left side of each ad is an illustration of a bottle of Kikkoman soy sauce. The name of the advertiser is not given.

The first ad contains only the text shown above.

The text of the second ad reads: "Kikkoman soy sauce. Low in calories. High in proteins."

Note: This is the earliest document seen that mentions "Kikkoman" in the Toronto Star. Address: Toronto, Canada.

1045. Japan Food Corporation. 1975. Kikkoman sauce: Now available at most supermarkets (If not, please ask them to stock.) (Ad). *Toronto Star (Ontario, Canada).* April 2. p. E3.

• ***Summary:*** "Here are six good reasons why: Possibly the most rewarding flavour discovery you will ever make. No hydrolized protein, no corn syrup, no caramel, no artificial flavour or colour. Just brewed naturally for 12 months. Brewed purely of select quality soy beans, wheat, salt & water (nothing else) [except koji starter culture]. Recommended by Good Housekeeping. Winner of 30 major international awards for quality, taste and excellency. And you'll like it.

"Send one Kikkoman label by scraping off any portion and 25 cents for your Kikkoman 'Ikebana' and recipe ideas (The label is well pasted)."

An illustration shows a bottle of Kikkoman soy sauce.

Note: The title of the ad calls the product "Kikkoman sauce," not "Kikkoman soy sauce." Address: 25-6 Connell Court, Toronto, M8Z 1E8 Canada. Phone: (416) 252-5728.

1046. Rothschild, Emma. 1975. A reporter at large [The world food economy and the 1974 World Food Conference near Rome, Italy]. *New Yorker.* May 26. p. 40-44, 49-50, 52, 54, 56, 58, 62-66, 68-70, 72-73, 76. See p. 50, col. 3.
• ***Summary:*** The world is in the midst of a food crisis. To many it seems to be a result of drought and natural disaster. But actually is a "sign of lasting insecurity in the world food economy. It is political and economic, and it could have been avoided." As with petroleum problems, it has been "caused by the decisions and policies of people and governments."

The World Food Conference, convened in November 1974, brought together more than 5,000 delegates including many high government officials. From the USA: Henry Kissinger (secretary of state), Earl Butz (secretary of agriculture), and Dr. Don Paarlberg (chief economist at the USDA). The Flanigan Report tried to analyze the world food crisis. William R. Pearce, a vice-president of Cargill, Inc., "said that in the nineteen-sixties the United States 'had excess capacity in corn and soybeans,' and therefore set out to encourage the development of a different diet pattern around the world.'" It encouraged the use of feed grains in meat production. American grain exports increased from 32 million tons in 1971 to 76 million in 1973. Canada and Australia also had huge grain exports. The USSR, Japan, and the European countries (collectively) each now feeds more than 100 million tons of grain to its animals. The USDA had succeeded in reducing U.S. surpluses.

1047. Castaigne, F.; Riel, R.R.; Boulet, M. 1975. Diffusion d'eau et de solides pendant la coagulation des fibres de protéines [Diffusion of water and solids during coagulation of protein fibers]. *Canadian Institute of Food Science and Technology Journal* 8(3):133-36. July. [3 ref. Fre; eng]
• ***Summary:*** Note: This is the earliest French-language document seen (Dec. 2004) that uses the term "fibres de protéines" to refer to protein fibers made by spinning soy protein. Address: Département des Vivres et Centre de Recherches en Nutrition, Faculté des Sciences de l'Agriculture et de l'Alimentation, Université Laval, Quebec, Canada.

1048. Ichiyama, Morio. 1975. Noda no rekishi [History of Noda]. Nagareyama, Chiba prefecture, Japan: Ron Shobo. 301 p. First ed. published in 1958 under title: Chiba-ken Noda Kyodoshi. [Jap]
• ***Summary:*** In the section titled "People from Noda who became known worldwide," the first person profiled is Shinzaburo MOGI (p. 263-65). "Mr. Shinzaburo Mogi, 5th son of the 5th Shichirouemon, was born in 1872 Feb. 27 at Noda. He studied at Tokyo Kosho (later Hitotsubashi Univ.), then left school after graduation. In 1892 he went to the USA. Initially, he worked for a milk company in Toronto, Canada. Then he worked at the Chicago [Illinois] branch office of Yamato Shokai. In 1897 he established Yamato Yunyu Co., an import company, and became its president. In 1913 he received Mr. Tsuneo Tanba as a general manager, to manage the soy sauce plant [?]. Under Mr. Tanba were Mr. Kitazawa and Mr. Kunihara.

Yamato Shokai was a company in Yokohama. whose president was Mr. Takeshi Oba. Its capitalization was 1,000,000 yen stock, half of the money put up by Junjiro Ishii and half by Mr. Shichirouemon Mogi. In 1907 in Denver [possibly some city other than Denver, Colorado?, says Ken Mogi IV] he managed a soy sauce plant. Later in Toronto, Canada, he had a relationship with a soy sauce plant. But neither of these soy sauce plants was successful. At International Trading he worked with Mr. Ichizaeomn Morimura (see History of Yokohama [which Ken Mogi says he would like to read]).

Mr. Tsuneo Tanba (a collector of ukiyo-e [color wood-block prints of everyday life in old Japan]), who worked under Mr. S. Mogi, said that Mr. S. Mogi, a Unitarian Christian, did not smoke or drink alcoholic beverages. He loved soy sauce, and he never left any soy sauce on his plate after a meal. He said: "I am not willing to go back to Noda. I do not want to manage a soy sauce plant in Noda."

When he was a student, Mr. S. Mogi helped Mr. Tokuzo Fukuda (later a famous scholar) by giving him 2.5 to 3 yen every month. Mr. S. Mogi asked his father to give Mr. Fukuda 6-9 yen per month for 1½ years. The father did not understand the situation so he visited S. Mogi's dormitory and found out the facts and was satisfied. On 1 Dec. 1946 Mr. Shinzaburo Mogi died.

Note 1. Translated by Kenzaburo "Ken" Mogi IV from the edition of 1975 (Showa 50 Aug. 1), for William Shurtleff of Soyfoods Center. Ken Mogi spent a great deal of time trying to find evidence that his ancestor, Shinzaburo Mogi, started a soy sauce plant in Denver, Colorado. He visited Denver in search of evidence. As of 2004 he stated that this was still a theory, NOT a proven fact.

Note 2. As of Feb. 2007, it is unclear whether or not Shinzaburo Mogi ever started a soy sauce plant in Denver, Colorado, or anywhere else in North America. There is no firm evidence that he did, only the memories of two people and some photos of the foundations of an old building. One of them, Tsuneo Tanba, is mentioned above. Yet Mr. Tanba gives no details. Note 3. Mr. Morio Ichiyama was born in 1897. Address: Noda, Japan.

1049. Dinshah, Freya. 1975. XXIII World Vegetarian Congress cook book. Malaga, New Jersey: North American Vegetarian Society. 40 p. Illust. No index. 27 cm. Spiral bound. Introduction by H. Jay Dinshah.
• ***Summary:*** This is a vegan cookbook. This congress is a milestone of the vegetarian movement both in North America and worldwide. "The International Vegetarian Union, founded in 1908, had held 22 previous Congresses from 1908 to 1973, each in the British Isles, continental Europe, or India." A congress is held every 2 years. The North American Vegetarian Society was created with two goals: (1) To bring about a complete renaissance of the vegetarian movement in the United States and Canada, and (2) To organize the 23rd Congress, which was held 16-28 Aug. 1975 at the University of Maine, Orono, Maine. Daily menus served at the Congress are listed on pages 7-8. Soya milk, and Willow Run Soya Lecithin Spread were available at each breakfast. Willow Run Spread, Soy Mayonnaise, Tamari Soy Sauce, Soya Milk, and Roasted Soya Beans were available at each lunch and dinner. Soy-related recipes include: Soya sprouts (p. 14-15). Soya butter (made with 3/4 cup soya powder, and ½ cup each soy oil and water, p. 16). Soy mayonnaise (with soya powder and Soyagen powder). Soya beans (boiled, then baked, p. 17). Soya peanut savory (with cooked soya beans, p. 20). Soya rounds (with cooked soya beans, baked, p. 20). Several tablespoons to 2/3 cup of Soyagen powder (powdered soymilk) or soya powder are used in many of the dessert recipes (p. 30-36). Soya milk (from soya powder, p. 32). Bread pudding (with soya milk, p. 32). Granola (with soya powder, p. 39). Page 40 lists 34 vegetarian societies affiliated with NAVS in the USA. Address: North American Vegetarian Society, 501 Old Harding Highway, Malaga, New Jersey.

1050. *Food Processing (Chicago).*1975. Textured vegetable protein with PER equal to 96% of casein: PER 2.0 + PER 0.8 = PER 2.4. Sept. p. 40.
• ***Summary:*** Perplus-73 is a textured vegetable protein product made from a blend of 80% defatted soy flour and 20% vital wheat gluten. Containing 52% protein with a PER (Protein Efficiency Ratio) of 2.4, it is available from Industrial Grain Products Limited, 1620 Sun Life Building, Montreal, Canada H3B 2X2.

1051. Food Systems Branch and Research Branch, Agriculture Canada; Grain Marketing Office. Industry, Trade and Commerce. 1975. Plant proteins in Canada: Utilization for human food. Canada. iii+ 163 p. Sept. 28 cm. [25+ ref]
• ***Summary:*** The title page depicts this as "An assembly of information describing protein crops, status of ingredient manufacturers and marketing, potential markets, research effort, government incentives and regulations, protein status reports, and sources of information."

Contents: Introduction. Protein crops: 1. Trends in breeding Canadian protein crops. 2. Statistical summaries, by crop, of production area, yield, production, farm price, farm value and protein yield.

Manufacturing: 1. Manufacturers, distributors, and vegetable protein associations in Canada, U.S.A., United Kingdom, Australia and Japan (incl. Canadian Vegetable Protein Association, Don Mills, Ontario; Food Protein Council (USA)). 2. Extraction processes for broad bean protein, oilseeds, soybean protein, rapeseed protein, wheat gluten, oat protein, corn refining, alfalfa protein.

Markets: 1. Canada's position in world plant protein markets. 2. Canada's position in world gluten markets. 3. Projected growth of plant protein food ingredients.

Tariffs: 1. Tariff description, by country and BTN number. 2. Canadian tariffs on vegetable flours, protein, oilseeds, oilcake and meal. 3. Countries entitled to British Preferential Tariff, Most Favoured National Customs Tariff, General Tariff, General Preferential Tariff.

Regulations: 1. Status of plant protein under Canadian Food and Drug Regulations. 2. Canadian regulations–protein and fat content in simulated and extended meat products. 3. Problems in evaluating protein quality. 4. Aspects of current U.S. legislation. 5. Proposed revised regulations for plant protein in U.S.A.

Government incentives: 1. Federal government assistance programs. 2. Provincial government assistance programs. 3. POS Pilot Plant Corporation.

Research effort: 1. Estimate of research effort, in man-years, on utilization of plant protein in Canada. 2. Non-exhaustive list of research topics on plant protein in Canada.

Status of Canadian plant protein development: 1. Canadian role in development of plant proteins. 2. Production and utilization of sunflower. 3. Current status of leaf protein. 4. Status of rapeseed protein. 5. SCP status. 6. Review of buckwheat as a potential source of human food. 7. Status of oat protein.

U.S.A. situation: 1. Review of "U.S. Plant Protein Situation." 2. Non-conventional food sources. Major sources of information on plant proteins. Address: Canada.

1055. Industrial Grain Products Ltd. 1975. IGP: Quality products ingrained (Leaflet). Montreal, Quebec, Canada. 2 p. Front and back.
• ***Summary:*** On the front of this color glossy leaflet is "IGP" in large red letters against a sky-blue background. Below are golden ears of wheat in a field. The text: "Industrial Grain Products Ltd. World leaders in: wheat proteins, wheat starches, hydrolyzed vegetable proteins."

On the back is a full-page color ad for PerPlus textured soy-wheat protein products. They have a minimum PER of 2.4. "PerPlus: the first textured natural soy-wheat protein products to comply with new Canadian regulatory requirements. Extra helping, extra profit... maintain nutritional value." A color large photo shows ground beef on a spatula. Address: 1620 Sun Life Building, Montreal, Quebec H3B 2X2, Canada. Phone: 514-866-7961.

1056. Smith, Elizabeth B. 1975. A guide to good eating the vegetarian way. *J. of Nutrition Education* 7(3):109-11. Sept. [17 ref]
• ***Summary:*** A food usage guide for lacto-ovo vegetarians shows in stepwise form how to select food and plan acceptable family meals with nutritional quality as the first priority. Address: Dep. of Foods and Nutrition, Faculty of Home Economics, Univ. of Manitoba, Winnipeg, MB, Canada R3T 2N2.

1057. National Soybean Processors Association. 1975. Year book and trading rules 1975-1976. Washington, DC. ii + 103 p.
• ***Summary:*** On the cover (but not the title page) is written: Effective October 1, 1975. Contents: The National Soybean Processors Association [Introduction and overview]. Constitution and by-laws. Officers and directors. Executive staff. Members. Standing committees. Food Protein Council. Trading rules on soybean meal. Sales contract. Appendix to trading rules on soybean meal: Official methods of analysis (moisture, protein, crude fiber, oil {only method numbers listed}, sampling of soybean meal {automatic sampler, probe sampler}), official weighmaster application, semi-annual scale report, official referee chemists (meal). Trading rules on soybean oil. Sales contract. Definitions of grade and quality of export oils. Soybean lecithin specifications. Appendix to trading rules on soybean oil: Inspection, grading soybean oil for color (N.S.P.A. tentative method), methods of analysis (A.O.C.S. official methods): Soybean oil, crude; soybean oil, refined; soybean oil, refined and bleached; soybean oil for technical

uses; soap stock, acidulated soap stock and tank bottoms (only method numbers listed), official weighmaster application, semi-annual scale report, official referee chemists (oil). Soybean oil export trading rules. Foreign trade definitions (for information purposes only).

The page titled National Soybean Processors Association (p. ii) states: "The NSPA is the professional association of America's soybean processors. Its members process and market more than 95 percent of all soybean crushed within the continental U.S. From nearly 85 processing centers, in every major soybean producing region of the nation, NSPA members service America's agricultural community.

"During the past crop year about 700,000,000 bushels of soybeans moved through processing plants of NSPA's 33 member firms. Approximately 60 percent of America's 1.2 billion-bushel soybean crop is bought and processed by NSPA members. Exporters account for another 32 percent of the crop, and the remainder [8%] is returned to farms for seed, feed, and residuals." Also discusses industry programs, soybean research, and international market development.

The section on officers, executive committee, and board of directors (p. 7-8) gives the name, company affiliation, and phone number of each person. Officers–President: Lowell K. Rasmussen, Honeymead Products Co. Vice President: John G. Reed, Jr., Continental Grain Co. Secretary: Stiles M. Harper, Southern Soya Corporation. Treasurer: T.J. Suelzer, Central Soya Co. Immediate past president: James R. Spicola, Cargill, Inc. Executive Committee: Donald B. Walker ('77), ADM. James R. Spicola, Cargill. Thomas J. Suelzer, Central Soya. John G. Reed, Jr., Continental. Martin Hinby ('76), Cook Industries.

Board of Directors (alphabetically by company; each member company has one representative on the board): Thomas H. Wolfe, Anderson, Clayton & Co. Donald B. Walker, Archer Daniels Midland Co. George H. Heinz, Buckeye Cellulose Corp. John Fallon, Bunge Corporation. James R. Spicola, Cargill, Inc. Thomas J. Suelzer, Central Soya Co., Inc. John G. Reed, Jr., Continental Grain Co., Martin Hilby, Cook Industries. Joe C. Givens, Dawson Mills. Alfred Jenkins, Delta Cotton Oil & Fertilizer Co. John A. Dotson, Far-Mar-Co., Inc. Kenneth E. Sullivan, Farmers Grain Dealers Assn. of Iowa. Donald M. Chartier, Farmland Industries, Inc. Gaylord O. Coan, Gold Kist Inc. Lowell K. Rasmussen, Honeymead Products Co. David C. Thompson, Krause Milling Co. Kenneth J. McQueen, Land O'Lakes, Inc. Floyd W. Brown, Lauhoff Grain Co. Kermit F. Head, Missouri Farmers Assn.–Grain Div. James A. Smith, National Protein Corp. Robert E. Hicks, Owensboro Grain Co., Inc. Frank P. Perdue, Perdue Incorporated. John H. Payne, Planters Manufacturing Co. William T. Melvin, Planters Oil Mill, Inc. Theodore W. Bean, Quincy Soybean Co. E.J. Cordes, Ralston Purina Co., W.L. Knoll, Riceland Foods, Inc. J.D. Morton, Sherman Oil Mill. Stiles M. Harper, Southern Soya Corp. James W. Moore, A.E. Staley Mfg. Co. W.W. Moore, Swift Edible Oil Co. Preston C. Townsend, Townsend's Inc. Tyler Terrett, West Tennessee Soya Mill, Inc.

Executive office, Washington, DC: Executive Director, Sheldon J. Hauck. Director, Public Affairs: Jack DuVall. Administrative Asst.: Jean N. Sullivan. National Soybean Crop Improvement Council: Robert W. Judd, Managing Director. General counsel: Edward H. Hatton, Esq., Jenner & Block, Chicago, Illinois.

Members (listed alphabetically by company; within each company, first the name of the official Association representative {who is on the Board}, followed by the other personal members listed alphabetically by surname. For example, Archer Daniels Midland Co., the company with the most personal members, has 24. After the name of each personal member is given his address and phone number. In the listing below, the number of personal members is shown in parentheses after the name of each company, followed by city and state of the various locations): Anderson, Clayton & Co. (6); Phoenix, Arizona; Osceola, Arkansas; Jackson, Mississippi; Vicksburg, Mississippi; Houston, Texas. Archer Daniels Midland Co. (24); Decatur, Illinois; Galesburg, Illinois; Granite City, Illinois; Fredonia, Kansas; Mankato, Minnesota; Red Wing, Minnesota; St. Louis, Missouri; Fremont, Nebraska; Lincoln, Nebraska; Kershaw, South Carolina. Buckeye Cellulose Corp. (8); North Little Rock, Arkansas; Augusta, Georgia; Cincinnati, Ohio; Memphis, Tennessee. Bunge Corporation (5); St. Louis, Missouri; New York City, New York; Cargill, Inc. (15); Gainesville, Georgia; Cedar Rapids, Iowa; Des Moines, Iowa; Sioux City, Iowa; Washington, Iowa; Chicago, Illinois; Wichita, Kansas; Minneapolis, Minnesota; Fayetteville, North Carolina; Memphis, Tennessee; Chesapeake, Virginia. Central Soya Co., Inc. (11); Chicago, Illinois; Gibson City, Illinois; Decatur, Indiana; Fort Wayne, Indiana; Indianapolis, Indiana; Belmond, Iowa; Marion, Ohio; Bellevue, Ohio; Delphos, Ohio; Chattanooga, Tennessee. Continental Grain Co. (8); Guntersville, Alabama; Chicago, Illinois; Taylorville, Illinois; New York City, New York; Cameron, South Carolina. Cook Industries (12); Pine Bluff, Arkansas; Emporia, Kansas; Marks, Mississippi; Memphis, Tennessee. Dawson Mills (3); Dawson, Minnesota. Delta Cotton Oil & Fertilizer Co. (1); Jackson, Mississippi. Far-Mar-Co., Inc. (1); St. Joseph, Missouri. Farmers Grain Dealers Assn. of Iowa (Cooperative), Soybean Processing Div. (1); Mason City, Iowa. Farmland Industries, Inc. (3); Van Buren, Arkansas; Sergeant Bluff, Iowa; Kansas City, Missouri. Gold Kist Inc. (3); Atlanta, Georgia. Honeymead Products Co. (3); Mankato, Minnesota. Krause Milling Co. (2); Milwaukee, Wisconsin. Land O'Lakes, Inc. (3); Fort Dodge, Iowa; Sheldon, Iowa. Lauhoff Grain Co. (1); Danville, Illinois. Missouri Farmers Assn.–Grain Div. (4);

Mexico, Missouri. National Protein Corp. (2); Champaign, Illinois; Chicago, Illinois. Owensboro Grain Co., Inc. (1); Owensboro, Kentucky. Perdue Incorporated (2); Salisbury, Maryland. Planters Manufacturing Co. (2); Clarksdale, Mississippi. Planters Oil Mill, Inc. (1); Rocky Mount, North Carolina. Quincy Soybean Co. (4); Quincy, Illinois. Ralston Purina Co. (8); Bloomington, Illinois; Lafayette, Indiana; Iowa Falls, Iowa; Louisville, Kentucky; St. Louis, Missouri; Raleigh, North Carolina; Memphis, Tennessee. Riceland Foods, Inc. (8); Helena, Arkansas; Stuttgart, Arkansas. Sherman Oil Mill (1); Fort Worth, Texas. Southern Soya Corp. (1); Estill, South Carolina. A.E. Staley Manufacturing Co. (8); Decatur, Illinois. Swift Edible Oil Co., Div. of Swift & Co. (1); Chicago, Illinois; Townsend's Inc. (2); Millsboro, Delaware. West Tennessee Soya Mill, Inc. (1); Tiptonville, Tennessee.

Associate Members: Anderson Clayton Foods, Dallas, Texas. Best Foods Div. of CPC International Inc., Englewood Cliffs, New Jersey. Canadian Vegetable Oil Processing Co., Hamilton, Ontario, Canada. Capital City Products Co., Div. of Stokely-Van Camp, Inc., Columbus, Ohio. I.H. French & Co., Champaign, Illinois. General Mills, Inc., Minneapolis, Minnesota. Glidden-Durkee, Div. of SCM Corporation, Chicago, Illinois (Gerald J. Daleiden). Grain Processing Corp., Muscatine, Iowa (H.P. Woodstra). Hartsville Oil Mill, Hartsville, South Carolina (Richard A. Koppein). Humko Products, Memphis, Tennessee. Hunt-Wesson Foods, Inc., Fullerton, California. Kraft Foods Div. of Kraftco Corp., Chicago, Illinois. Lever Bros Co., New York City, New York. Maple Leaf Mills Ltd., Toronto, Ontario, Canada (W.G. Milliken). Procter & Gamble Co., Cincinnati, Ohio. Quaker Oats Co. (The), Chicago, Illinois. Schouten International, Inc., Minneapolis, Minnesota. Southern Cotton Oil Co., New Orleans, Louisiana. Southern Feed Ingredients Co., Memphis, Tennessee. Wilsey Foods, Los Angeles, California.

Standing committees: For each committee, the function of the committee, the names of all members (with the chairman designated), with the company and company address of each are given–Crop Improvement Council. Meal trading rules. Oil trading rules. Safety and insurance. Soybean Research Council. Technical. Traffic and transportation. Food Protein Council (Objective and rules adopted 3 March 1971, amended 5 Nov. 1971). Address: 1800 M St., N.W., Washington, DC 20036. Phone: (202) 452-8040.

1058. Graham, Larry. 1975. Soy oil faces stiff competition. *Soybean Digest.* Dec. p. 12-13.
• ***Summary:*** The biggest immediate threat is generally considered to be palm oil, followed by coconut oil, Peruvian fish oil, Canadian rapeseed, Nigerian peanuts, animal fats, olive oil, Soviet sunflowers, cottonseed oil, Brazilian soy oil (discussed in great detail).

1059. Ralston Purina Co. 1975. Ralston Purina Company (News release). Checkerboard Square, St. Louis, MO 63188. 11 p. Dec.
• ***Summary:*** Contents: Introduction. Agricultural products and service. Research. Protein production and marketing. Consumer products. Food service and restaurants. International and Canadian operations. Ralston Purina and the future. New ventures. Corporate organization.

"Ralston Purina Company was founded in 1894 as the Robinson-Danforth Commission Company, St. Louis, Missouri." A broadly-based, protein-oriented food and feed company, it employs more than 50,000 people throughout the USA, Canada, and overseas. "The Company transacts more than $3,000 million of business annually and is known domestically and worldwide for its Checkerboard trademark products." Address: St. Louis, Missouri.

1060. Siegel, A.; Bhumiratana, A.; Lineback, D.R. 1975. Development, acceptability, and nutritional evaluation of high-protein soy-supplemented rice noodles for Thai children. *Cereal Chemistry* 52(6):801-12. Nov/Dec. [24 ref]
• ***Summary:*** "Dehydrated rice noodles, supplemented with 20 and 30% full-fat soy flour (dry basis), were developed for use in feeding programs at Child Nutrition Centers in Thailand... These soy-rice noodles contain 15.0 and 18.0% protein on a moisture-free basis, respectively; the control contained 7.8% protein... Protein costs of soy-rice noodles were substantially less than those for regular rice noodles." These noodles were not apparently sold commercially. "The soy flour used was Kaset full-fat soy flour, prepared semicommercially by the Institute of Food Research and Product Development (IFRDP), Bangkok, by the procedure described by Bhumiratana and Nondasuta" in 1972. This soy flour contained 40-49% protein. Address: 1&3. Kansas State Univ.; 2. Inst. of Food Research & Product Development, Kasetsart Univ., P.O. Box 4-710, Bangkok, Thailand; Siegel's present address: International Development Research Centre, Box 8500, Ottawa, Canada K1G 3H9.

1061. Uhm, I.H. 1975. A supply response model of Canadian rapeseed and soybeans. *Canada. Department of Agriculture, Economics Branch, Publication* No. 75/15. 57 p. Dec. [34 ref]
• ***Summary:*** "Introduction: This study theoretically formulates and statistically estimates the supply response of Canadian rapeseed and soybeans to price and non-price incentives. Specifically, this study measures the magnitude of adjustment coefficients and the elasticities of Canadian oilseed supply with respect to price and non-price variables in the short- and long-run. It also examines Canadian oilseed acreage allocation patterns."

"Historical background. A. Oilseed production: Canada's 'Cinderella' crop, rapeseed, was introduced in western Canada (mainly in the Parkbelt zone of the Prairies) in the 1940s as a wartime measure to satisfy a need for marine engine lubricants. There were about 75 growers in Saskatchewan in 1944, with about 4,800 acres under production. By the mid-1950's following a decade of stagnation, rapeseed production increased rapidly in importance, particularly since the early 1960's. In the 1969-70 crop year, Canadian rapeseed production was 420 times above the 1944 level, ranking Canada third in world production and constituting the world's largest exporter. Rapeseed is an excellent source of edible oil and protein meal for animal food, having an oil content of approximately 40 percent, and a meal content of close to 60 percent.

"While soil and climactic conditions restrict rapeseed production mainly to the Parkbelt zone of the Prairies, Canadian soybean acreage is concentrated in the counties of southern Ontario. The first report on Canadian soybean production in Canada was by C.A. Zavitz, of the Ontario Agricultural College in 1893. In the late 1920's a few farmers were growing small acreages of beans for grain in southern Ontario. Acreage expanded until, by the early 1950's soybeans became a major cash crop in southern Ontario. Canadian soybean acreage increased from 36,000 acres in 1944-45 to 322,00 in 1969-70 and was roughly one-fifth of rapeseed acreage for the three year average 1968-69 and 1970-71.

"From a land use viewpoint, soybeans in southern Ontario compete mainly with winter wheat, oats, corn mixed grains and barley, while rapeseed competes with wheat and barley in the Parkbelt zone of the Prairies." Address: Communications Unit, Economics Branch, Agriculture Canada, Ottawa K1A 0C5, Canada.

1062. **Product Name:** Textured Soy.
**Manufacturer's Name:** General Mills of Canada Ltd.
**Manufacturer's Address:** 1330 Martingrove Road, P.O. Box 505, Rexdale, Ontario M9W 4X4, Canada.
**Date of Introduction:** 1975.
**New Product–Documentation:** Agriculture Canada. 1975. "Plant Proteins in Canada." Sept. p. 34.

1063. **Product Name:** Textured Soy, and Textured Soy Protein Concentrate.
**Manufacturer's Name:** Griffith Laboratories Ltd.
**Manufacturer's Address:** 757 Pharmacy Ave., Scarborough, Ontario, Canada.
**Date of Introduction:** 1975.
**New Product–Documentation:** Agriculture Canada. 1975. "Plant Proteins in Canada." Sept. p. 34.

1064. **Product Name:** PerPlus-73 (Textured Vegetable Proteins–Soy and Gluten) [Unflavored, Natural or Caramel color].
**Manufacturer's Name:** Industrial Grain Products Ltd.
**Manufacturer's Address:** P.O. Box 6089, Montreal, Quebec H3C 3H1, Canada. Phone: 514-866-7961.
**Date of Introduction:** 1975.
**Ingredients:** Textured soy and gluten.
**New Product–Documentation:** IGP Technical Bulletin. 1975. Jan. PerPlus-73. 10 p. All pages of these individual Bulletins are printed with red and black ink on orange paper. Contents: Description and nutritional composition. Meat loaf mix with PerPlus-73. Meat loaf mix with 30% PerPlus-73. Sloppy Joe with 25% PerPlus-73. Chili-con PerPlus-73. Spaghetti meat type sauce with PerPlus-73. Steakettes with 25% PerPlus-73. Made in Canada, this is "an optimized blend of defatted soy flour and wheat protein concentrate."

Agriculture Canada. 1975. "Plant Proteins in Canada." Sept. p. 34.

Letter from USDA Food and Nutrition Service. 1975. Aug. 25. Re: PerPlus is an acceptable textured vegetable protein product under FNS Notice 219.

IGP: Quality products ingrained (Leaflet). 1975.

1065. **Product Name:** Tofu.
**Manufacturer's Name:** Metta Tofu Products.
**Manufacturer's Address:** Wren Rd., Denman Island, BC, V0R 1T0, Canada. Phone: 604-335-0108.
**Date of Introduction:** 1975.
**New Product–Documentation:** Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Owner: Ray Lipovsky; sea water tofu.

Richard Leviton. 1982, Sept. "In a small bright building: Cottage soy industries on Vancouver Island." Ray Lipovsky "has been churning out tofu since 1975 and can lay claim to being one of North America's earliest commercial and Caucasian tofu craftsmen." He makes tofu curded with sea water.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name and address. Owners: Ray Lipovsky & Robbie Newton.

1066. **Product Name:** Tofu.
**Manufacturer's Name:** Tofu Shop (perhaps Chinese Run).
**Manufacturer's Address:** Avenue Road, Toronto, ONT, Canada.
**Date of Introduction:** 1975.
**New Product–Documentation:** Talk with Martha Gifford Thompson of Rochester Zen Center. 1989. April 11. Once

or twice she visited a small tofu shop on Avenue Rd. in Toronto. It was not Japanese and probably not Korean. It may well have been Chinese run. This company had a name. They sold other products besides soy. Zensen, her former husband, might know more, about this shop.

1067. Wright, Louise. 1975. The road from Aston Cross: An industrial history, 1875-1975. Imperial House, Leamington Spa, Warwickshire, England: Smedley–HP Foods Ltd. 84 p. Illust. 25 x 19 cm. No index.

• ***Summary:*** This book was published on the centenary of the HP Foods Co. The story begins in 1875 when Edwin Samson Moore bought land in Tower Road, Aston Manor, and built his vinegar brewery, registered as the Midland Vinegar Company. He is believed to have taken up agencies for Mellors Sauce and Banquet Sauce. In 1886 the wheat sheaf was registered as the company's trade mark. In 1901 The Moores registered the offices of F.G. Garton Sauce Manufactory at Tower Road. In 1903 H.P. Sauce was launched and sold in Canada. Today it contains soy sauce. In 1902 adjacent Vulcan Brewery was acquired by the Moores. In 1904 the name H.P. was re-registered by the Midland Vinegar Co. In 1906 hundreds of donkey carts toured Great Britain to introduce H.P. Sauce. In 1913 H.P. Sauce was sold in the USA, and by 1917 in France and South Africa. In 1924 the Midland Vinegar Co. was sold to the British Shareholders' Trust, then floated as a public company named HP Sauce Ltd.

In 1930 HP Sauce Ltd. acquired Lea & Perrins Ltd. of Worcester by an exchange of shares. Lea & Perrins Inc. of New York remained a separate entity. Three members of the Perrins family (Dyson, Capt. Allan, and Col. Charles) joined the board of HP Sauce Ltd. Captain Alan Perrins visited Australia to arrange for the manufacture of HP Sauce and Lea & Perrins Sauce there. In 1931 manufacture of HP Sauce started in Sydney, Australia.

In 1940 bottling of Lea & Perrins Worcester Sauce was moved to Tower Road. In 1942 because of shipping losses, HP Sauce was manufactured by E.D. Smith and Sons at Winona, Ontario, Canada. In 1945-46 the bottling of Worcester Sauce was transferred back to Worcester.

In 1950 the purchase of market research data from A.C. Nielson started. In 1957 J.E. Lea was appointed managing director of Lea & Perrins. In 1966 first computer installed.

In 1967 HP Sauce Ltd. was acquired by the Imperial Tobacco Co. In 1969 H.P. Fruity Sauce (which now contains soy sauce) was launched.

In 1972 the company was renamed Smedley-HP Foods Ltd. (Smedley-HP for short) and the company offices were moved in phases to Imperial House, Leamington Spa.

Note: In 1916 the Dyson Perrins Laboratory was established at Oxford University. Founded with an endowment from Charles Dyson Perrins, heir to the Lea & Perrins Worcestershire sauce company, it was the main centre for research into organic chemistry at Oxford from 1916 to 2003, when it was retired. "During its 87 year working life, the laboratory had an extremely distinguished career; it can claim a stake in shaping the scientific careers of two Nobel Laureates, namely Lord Todd (1957) and Sir John W. Cornforth (1975) who passed their formative years as young chemists in the laboratories" (Source: Wikipedia). Address: Warwickshire, England.

1068. deMan, J.M. 1976. Texture-structure relationships in new protein foods. *Cereal Foods World* 21(1):10-13. Jan. [4 ref]

• ***Summary:*** Contents: Introduction. Spun fibers. Extruded products. Additional techniques (kori-tofu). Water sorption characteristics. Textural characteristics.

Photos show: (1) Scanning electron microscopy of spun soy fibers at six magnifications. (2) John M. deMan, with a brief biography. (3) Scanning electron microscopy of TVP. (4) Scanning electron microscopy of kori-tofu. (3) Scanning electron microscopy of structured soy protein concentrate. Address: Dep. of Food Science, Univ. of Guelph, Guelph, ONT, Canada.

1069. Hymowitz, T.; Carmer, S.G.; Newell, C.A. 1976. Soybean cultivars released in the United States and Canada: Morphological descriptions and responses to selected foliar, stem, and root diseases. *INTSOY Series* No. 9. 31 p. Jan. (College of Agric., Univ. of Illinois at Urbana-Champaign). [39 ref]

• ***Summary:*** This book consists mainly of tables generated from a computerized database. Information is given on 331 soybean cultivars. The introduction states: "The data contained in this bulletin were compiled from progress reports issued by Drs. Bernard and Hartwig, which were based in part on contributions made by collaborating pathologists, as well as from articles and bulletins authored by many investigators. The data were coded, punched on cards, and subsequently transferred to a computer storage system. The program used to retrieve the stored data was based upon the TAXIR system developed at the University of Colorado. References used in compiling the data can be found on pages 4 to 7 of this bulletin.

"We wish to thank those scientists who have contributed their data to the germplasm data bank and the following individuals who spent many hours coding, punching, proofreading, and programming the data: Dr. Satish Chandra, Billie Porter, Marsha King, and Barbara Worosz."

Table 1 is "Morphological descriptions of soybean cultivars released in the United States and Canada." Cultivars are listed in alphabetical order. The following information is given for each: Maturity group, flower color, pod color, seed coat color, hilum color, pubescence color, pubescence type (normal, appressed, semiappressed, dense).

Table 2 is "Responses to selected foliar diseases of soybean cultivars released in the United States and Canada." The diseases are bacterial blight, bacterial pustule, frogeye, frogeye race 2, and soybean rust.

Table 3 is "Responses to selected foliar, stem, and root diseases of soybean cultivars released in the United States and Canada." The diseases are brown spot, downy mildew, brown stem rot, pod and stem blight, and phytophthora root rot.

Talk with Ted Hymowitz. 1998. July 5. Ted and his colleagues created a computerized database, with the data entered on 80-column paper punch cards, using software that Sam G. Carmer borrowed from Washington State University. Carmer, a statistician, did the technical computer work. The data was stored on a magnetic tape on the University's mainframe computer; there were no personal computers in those days. They got a small grant to fund the project. This database was the first of its kind–and was used as the basis for a number of similar subsequent publications by other authors. Address: Dep. of Agronomy, Univ. of Illinois, Urbana.

1070. Sanderson, J.B. 1976. Soybeans–Soybean variety testing. *Research Station Charlottetown, P.E.I., Research Summary* For the year 1975. See p. 40. (Agriculture Canada Research Branch).

• ***Summary:*** Soybeans are discussed in the section titled "Protein and New Crops." "Several varieties of soybeans yielded over 40 bu/acre. Twenty varieties of soybeans were evaluated [at Charlottetown] in 1975. All varieties yielded over 30 bushels/acre with several varieties yielding over 40 bu/acre. All varieties matured in the field by late Sept." The following varieties had the highest yields (at 15% moisture) in pounds per acre: 073-4 (2,757 lb/acre; 118 days to maturity); 073-5 (2,582 lb/acre; 108 days to maturity); Evens (2,562 lb/acre; 124 days to maturity); 073-7 (2,459 lb/acre; 114 days to maturity). Note: lb/acre x 1.12 = kg/ha. Address: Prince Edward Island, Canada.

1071. *Toronto Star (Ontario, Canada).*1976. Vegetable oil plant planned for Windsor. March 25. p. C-11.

• ***Summary:*** "Maple Leaf Mills said that purchase option agreements have been negotiated with Morton Terminal Ltd. on two sites in Windsor for the construction of a $37 million vegetable oil processing complex.

W.G. Milliken, president of Maple Leaf Monarch Co. said that one of the two sites would be bought for an undisclosed amount within the next few weeks.

"Maple Leaf Monarch Co. was formed early this year as a joint venture by Maple Leaf Mills Ltd. and Lever Bros. Ltd. to construct the vegetable oil processing complex and to carry on a refining business in Canada."

1072. Maple Arrow: New Canadian soybean variety. 1976. Seed color: Yellow.

• ***Summary:*** Agriculture Canada Research Station. 1977. "Summary–Soybean work Nova Scotia 1954-1977." Kentville, Nova Scotia, Canada: ACRS. 62 p. Pages 47-51 contain tables which also include summary results of soybean trials conducted in 1976 at Charlottetown (Price Edward Island),... For each variety, the yield (in kg/ha), protein yield (in kg/ha), percentage of protein in the seeds, and percentage of oil in the seeds is given for each of the 3 locations. The best varieties (Maple Arrow, Altona, Portage) gave yields in the range of 2,400 to 3,300 kg/ha.

At Charlottetown (PEI), the highest yielding soybean varieties were Maple Arrow (2,600 kg/ha), M65-217 (2,447), and Altona (2,258).

Agriculture Canada, Food and Inspection Branch. 1982. "Amended description of variety." Nov. 3. 2 p. "Variety: Maple Arrow. License No. 1674. Date licensed: April 1, 1976. Origin and breeding: Originated from the cross Harosoy 63 x 840-7-3 made at the Agriculture Canada Research Station, Harrow, Ontario. Strain 840-7-3 is a very early selection from [Sven Holmberg] Sweden.

"Variety characteristics–Plant characteristics: Hypocotyl colour: purple. Flower colour: purple. Pubescence colour: brown. Lodging resistance: good. Disease reaction: resistant to *Phytophthora megasperma* races 1-4 but not races 5 and 6. Seed characteristics: Normal coat colour: shiny, yellow. Coat colour variant: brown. Hilum colour: brown. Hilum colour variant: black. Peroxidase activity: low. Oil content: higher than Altona or Vansoy. Protein content: lower than Altona or Vansoy. Maturity: 2500-2700 Heat Units.

Performance: In two years of the Ontario Soybean Variety Trials (Table 1), Maple Arrow outyielded both Altona and Vansoy. Maple Arrow generally matures a few days earlier than Altona and a week earlier than Vansoy, and possesses significantly stalk strength and seed quality."

Maintenance of breeder seed: Agriculture Canada Research Station. Canadian distributor: Ontario Pedigreed Stock Seed Distribution Committee. Recommended by: Ontario Oil and Protein Seed Crop Committee. Experimental data: Two tables comparing Maple Arrow, Altona, Vansoy.

Letter (e-mail) from Harvey Voldeng of Agriculture Canada. 2010. Feb. 15. "Maple Arrow was registered on 1 April, 1976. I have the variety description submitted to the Variety Registration Office in Canada, and will send you that as soon as I can find someone with a scanner to make a .pdf file. It gives breeding history and varietal characteristics. This information was never published."

1073. Maple Arrow: New Canadian soybean variety. 1976. Seed color: Yellow.

• ***Summary:*** Agriculture Canada Research Station. 1977. "Summary–Soybean work Nova Scotia 1954-1977." Kentville, Nova Scotia, Canada: ACRS. 62 p. Pages 47-51 contain tables which also include summary results of soybean trials conducted in 1976 at Charlottetown (Price Edward Island),... For each variety, the yield (in kg/ha), protein yield (in kg/ha), percentage of protein in the seeds, and percentage of oil in the seeds is given for each of the 3 locations. The best varieties (Maple Arrow, Altona, Portage) gave yields in the range of 2,400 to 3,300 kg/ha.

At Charlottetown (PEI), the highest yielding soybean varieties were Maple Arrow (2,600 kg/ha), M65-217 (2,447), and Altona (2,258).

Agriculture Canada, Food and Inspection Branch. 1982. "Amended description of variety." Nov. 3. 2 p. "Variety: Maple Arrow. License No. 1674. Date licensed: April 1, 1976. Origin and breeding: Originated from the cross Harosoy 63 x 840-7-3 made at the Agriculture Canada Research Station, Harrow, Ontario. Strain 840-7-3 is a very early selection from [Sven Holmberg] Sweden.

"Variety characteristics–Plant characteristics: Hypocotyl colour: purple. Flower colour: purple. Pubescence colour: brown. Lodging resistance: good. Disease reaction: resistant to *Phytophthora megasperma* races 1-4 but not races 5 and 6. Seed characteristics: Normal coat colour: shiny, yellow. Coat colour variant: brown. Hilum colour: brown. Hilum colour variant: black. Peroxidase activity: low. Oil content: higher than Altona or Vansoy. Protein content: lower than Altona or Vansoy. Maturity: 2500-2700 Heat Units.

Performance: In two years of the Ontario Soybean Variety Trials (Table 1), Maple Arrow outyielded both Altona and Vansoy. Maple Arrow generally matures a few days earlier than Altona and a week earlier than Vansoy, and possesses significantly stalk strength and seed quality."

1074. Fisher, G.A.; Davies, L.L. 1976. Grain corn and soybean production in southern Ontario: Production costs and returns in Essex, Kent, and Elgin counties, 1973 and 1974. Ontario, Canada: Ministry of Agriculture and Food. 19 p. April. (Economics Information). Unpublished manuscript.
• ***Summary:*** Contents: Index to 17 tables. Introduction. Methods used in determining costs and returns [profits]. Production costs and returns for grain corn. Production costs and returns for soybeans: Gross returns and yields, production costs, a comparison of 1973 and 1974 soybean production costs and returns for ten of the same study farms. Appendix. Address: Economics Branch, Ontario Ministry of Agriculture and Food, Legislative Buildings, Queen's Park, Toronto, ONT M7A 1B6, Canada.

1075. Littlejohns, D.A.; Tanner, J.W. 1976. Preliminary studies on the cold tolerance of soybean seedlings. *Canadian J. of Plant Science* 56(2):371-75. April. [9 ref. Eng; fre]
• ***Summary:*** The authors suggest cultivar screening at 10ºC to select cold-tolerant lines for early planting, thus permitting better utilization of a longer growing season in cold, northerly latitudes. Address: 1. Farm Crops Section, Ridgetown College of Agricultural Technology, Ridgetown, Ontario, N0P 2C0; 2. Crop Science Dep., Univ. of Guelph, Guelph, Ontario N1G 2W1. Both: Canada.

1076. Petkau, A.; Chelack, W.S. 1976. Radioprotective effect of superoxide dismutase on model phospholipid membranes. *Biochimica et Biophysica Acta* 433(3):445-56. May 21. [42 ref]
• ***Summary:*** Lipids from both soybeans and fresh beef brain were used. Hydroperoxide formation in model membranes was measured after exposure to X-rays or gamma rays in the presence of the enzyme bovine superoxide dismutase and other radical scavengers. The enzyme dismutates superoxide and protects membranes after an acute exposure to ionizing radiation and from low level radiation at natural background. The structure of membranes is currently viewed as a mosaic array of protein particles floating in a double-layered sheet of lipid molecules. Address: Atomic Energy of Canada Limited, Whiteshell Nuclear Research Establishment, Medical Biophysics Branch, Pinawa, Manitoba (Canada).

1077. MacDonald, W.C.; Dueck, J.W. 1976. Long term effect of shoyu (Japanese soy sauce) on the gastric mucosa of the rat. *J. of the National Cancer Institute* 56(6):1143-47. June. [13 ref]
• ***Summary:*** The long term effects of feeding shoyu to rats and its effect on gastric mucosa were studied. The animals fed shoyu were smaller and healthier than the controls. Breast tumors developed in 10 control rats, but none developed in those fed shoyu. It was concluded that shoyu did not appear to be a carcinogen in rats.

Note: This is the earliest document seen (May 2000) concerning soy and prevention of breast cancer–in

laboratory animals. Address: 1. Dep. of Medicine, Univ. of British Columbia, Vancouver, BC, Canada.

1078. Pearson, Richard. 1976. Early civilization in China: Book review of *The Cradle of the East*, by Ping-ti Ho. *Science* 193(4251):395-96. July 30.
• ***Summary:*** The purpose of this book is "to ascertain whether the major cultural elements which eventually coalesced in Shang civilization were of indigenous [Chinese] origins." The book is "an attempt to show that from the Yang Shao Neolithic through to the Chou there was a continuous series of creative innovations in North China that gave rise to and fostered Chinese civilization." Yang Shao culture began before 5000 B.C. in what is today southern Shensi, Shansi, and northwestern Honan provinces. The soil was loess and the main crop was millet. Ho believes that the Yang Shao developed the world's earliest writing system, consisting of word signs on pottery. Rice was domesticated in central China by 4000 B.C. Wheat and barley were introduced from the West in the second or late third millennium B.C. Bronze technology developed about 1600 B.C. Ho concludes that the major elements of Chinese civilization are all derived from the Yang Shao nuclear area; they reached other parts of China by a centrifugal process.

But the reviewer (like a number of specialists in Southeast Asian archaeology) is critical of this claim and the model of "cradles" and diffusion on which it is based. He believes, based on archaeological evidence, that cultivation of food crops may have been earlier in South China and Southeast Asia than in North China–because of favorable early post-Pleistocene conditions. Address: Dep. of Anthropology, Univ. of British Columbia, Vancouver, BC, Canada.

1079. Momcilovic, Berislav; Belonje, B.; Giroux, A.; Shah, B.G. 1976. Bioavailability of zinc in milk and soy protein-based infant formulas. *J. of Nutrition* 106(7):913-17. July. [19 ref]
• ***Summary:*** According to trials on young rats, to "provide equivalent amounts of available zinc, the total zinc content of the soy protein-based formula would need to be at least 20% higher than that of the formula containing milk protein." Address: Nutrition Research, Food Directorate, Dep. of Health and Welfare, Ottawa, Canada.

1080. Rennie, Gary. 1976. Maple Leaf plant construction set for November. *Windsor Star (Essex County, Ontario, Canada)*. Aug. 4. p. 1.
• ***Summary:*** Construction of the $37-million Maple Leaf Monarch vegetable oil processing plant will start in November this year, William Milliken, president of the company said today. The $37 million includes the price of the land. It is scheduled to begin operating in September 1978.

"The plant will be the largest integrated vegetable oil processing plant of its kind in Canada. A 41-acre site in the Morton Industrial Park in Windsor's west end [on the Detroit River waterfront] has been purchased for the plant which is a joint venture of Maple Leaf Mills Ltd. and Lever Brothers Ltd., both of Toronto."

The plant, which will employ about 100 workers permanently, and will process mainly soybeans (both locally grown and imported from the USA) plus some flax, rapeseed and sunflower seeds. With a processing capacity of about 1,400 metric tons per day, it will produce about 41% of the vegetable oils and meals in Eastern Canada.

"Maple Leaf Mills has been active in oil seed processing since 1941 and its vegetable oil division will be the nucleus of the new company. Lever Brothers Ltd., through its subsidiary, Monarch Fine Foods Ltd., is a leading manufacturer of edible oils and margarine."

Note: This is the earliest document seen stating that Lever Bros. owns part of Maple Leaf Monarch.

1081. Carruthers, Clive A. 1976. Re: The good work of PLENTY in Guatemala. Letter to PLENTY, The Farm, Summertown, Tennessee 38483 USA, Aug. 24. 1 p. Typed, with signature on letterhead.
• ***Summary:*** "Dear Sirs: As my term in Guatemala is drawing to an end, I wish to write and comment on all the wonderful help we have received from various individuals and organizations following the February 4th earthquake.

"One of the highlights in the group of volunteers is the 'PLENTY Group' from the United States. I was most appreciative of their offer to help and was fortunate to have their continued support from early April through to the present.

"This group has been most effective and one with the least problems that I have dealt with. Their calm, efficient manner and their ability to work as a unit is a pleasure to see and their direct participation has resulted in the construction of 10 schools which had been destroyed by the earthquake. In addition to these schools, they greatly assisted us in the early stages of house construction and the operation of our pre-fab factory. In my view, Canada, the Canadian Embassy in Guatemala, and the Guatemalan people are most fortunate in having the services of the 'PLENTY Group' and I hope that our association is able to continue to the benefit of both parties. Indeed we have learned much from our association with this group.

"Thanks again for allowing them to participate with us in this extremely valuable contribution to Guatemala. Yours sincerely,..." Address: Chargé d'Affaires, a.i., Canadian Embassy, P.O. Box 400, Guatemala, [Guatemala City], C.A. [Central America].

1082. Bennett, Gordon. 1976. Re: What is Miso? pamphlets from Westbrae Natural Foods. Letter to William Shurtleff at New-Age Foods Study Center, Aug. 25. 2 p. Handwritten, with signature. [1 ref]

• ***Summary:*** "(1) Greetings! This letter is a collection of several days of considerations: (2) Is it possible to omit your side of how miso is packaged in America–our miso bag looks terrible next to others, and its a label we no longer use; a new slide?

"(3) Is it possible to get some pictures made of the miso slides–we'd like to put some of the more striking one into our pricelist & perhaps use as displays in our stores. I will arrange and pay for this.

"(4) Re giving away pamphlets across the country; we feel this is basically a good idea. However (1) we would like you to give away the WB [Westbrae] logo pamphlets...

"(5) Sea vegetables–we are writing to Japan to determine what their labeling capabilities are–this will actually decide whether we can use your copy as is, or whether we need to edit it down...

"(6) Due to the surprisingly small turnout at the lecture, our expenses were much greater than the number of people present @ $1.00 per person. Next time we will use posters!" Note: Bill Shurtleff gave a outdoor lecture and slide show for Westbrae on Tuesday, Aug. 24, at John Hinkel Park in Berkeley, from 5-8 p.m.

"(7) A number of requests are coming for single pamphlets. We would like to forward there to you for your follow-up and interest. (8) The overseas mailing are more complex than we had thought. (9) Only 1 reply on the pamphlets so far–Manna in Toronto [Ontario, Canada]–their logo–small number [5,000]. (10) It is much more convenient for me to arrange to get your pamphlets, agar, or whatever you'd like in advance... (11) We all thoroughly enjoyed Tues eve.–thank you & thank you Akiko–Gordon." Address: 1224 10th St., Berkeley, California 94710. Phone: 415-524-0506.

1084. Ford, Frank. 1976. The simpler life cookbook from Arrowhead Mills. Fort Worth, Texas: Harvest Press. 157 p. Introduction by Fred Rohé. Index. 18 cm. [13* ref]

• ***Summary:*** The copyright page states: "First printing–Oct. 1974–23,000. Second printing–Feb. 1976–17,000. Third printing [this book], 110,000. This book is the second third edition of a book which was originally released under the title of *Pack to Nature."*

The body of the book is the same as that of earlier printings. However the 2-page directory titled "Some Natural Foods Sources" has been updated and expanded. It now lists 41 companies with full addresses and Zip codes. New additions include: Arrowhead Mills Distributing Co. (Denver, Colorado). Ceres Natural Foods (2582 Durango Dr., Colorado Springs, Colorado). Cinagro Distributors (now in Chamblee, Georgia). Earth Bound, Inc. (Woodbury, Connecticut). Earthwonder (Blue Eye, Missouri). Health Foods, Inc. (Des Plaines, Illinois). Houston Health Food Distributors (Houston, Texas). Kahan & Lessin Co. (Compton, California). Kozek Products (Los Angeles, California). Landstrom Co. (San Francisco, California). Laurelbrook Foods No. 2 (Raleigh, North Carolina). Lifestream Natural Foods (now at 1241 Vulcan Way, Richmond, BC, Canada). Manna Foods (Scarborough, Ontario, Canada). Midwest Natural Foods (Ann Arbor, Michigan). Nature's Best (El Segundo, California). Pure & Simple (795 West Hedding, San Jose, California). Shiloh Farms, Inc. Eastern Warehouse (Martindale {near New Holland}, Pennsylvania). The Wide Earth Store (Anchorage, Alaska). Tochi Products (Fargo, North Dakota).

Note: This is the earliest document seen (March 2006) that mentions Health Foods, Inc., a wholesale distributor of health foods and natural foods in Des Plaines (near Chicago). Address: Deaf Smith County, Hereford, Texas.

• ***Summary:*** License No. 1594. Harcor was developed by the Agriculture Canada Research Station, Harrow, Ontario. Its name was derived from Harosoy (63) and Corsoy. It was entered in the Ontario Soybean Variety Tests. Address: Research Station, Research Branch, Agriculture Canada, Harrow, Ontario, N0R 1G0.

1087. Farnum, C.; Stanley, D.W.; Gray, J.I. 1976. Protein-lipid interactions in soy films. *Canadian Institute of Food Science and Technology Journal* 9(4):201-06. Oct. [17 ref. Eng; fre]

• ***Summary:*** Microscopic studies show that yuba films consist of a protein matrix in which lipid droplets are dispersed. On a dry weight bases, soybeans contain 20.25% lipids, 36.5% proteins, and 4.7% ash. Soymilk contains 17.8% lipids, 41.85% proteins, and 6.8% ash. Yuba contains 18.0% lipids, 46.3% proteins, and 3.9% ash. Comparing the fatty acid composition of the oil in soybeans with the oil in yuba, the percentage of palmitic acid increases by 6%, stearic acid decreases by 69.7%, oleic acid increases by 2%, linoleic acid increases by 6%, and palmitic acid decreases by 19.8%. Address: Dep. of Food Science, Univ. of Guelph, Guelph, Ontario.

1093. Farm (The). 1976. Astronaut–Sister Farms. 156 Drakes Lane, Summertown, TN 38483. 1 p. Unpublished manuscript. Mimeographed.
• ***Summary:*** Gives the name and address (and in some cases the phone number) of 15 sister Farms related to The Farm in Summertown, Tennessee. They are located in: Ettrick, Wisconsin. Louisa, Virginia. Franklyn, New York. Eckert,

Colorado. Mobile, Alabama. Warner, New Hampshire. Futone, Missouri. near Hampton, Nova Scotia, Canada. Utuado, Puerto Rico. Columbia, Kentucky. San Rafael, California. Parkton, North Carolina. Wileyville, West Virginia. Lafayette, Tennessee. Nashville, Tennessee. Address: Summertown, Tennessee.

1094. **Product Name:** Vitasoy Tofu [Regular, or Pressed].
**Manufacturer's Name:** Mandarin Enterprises Ltd.
**Manufacturer's Address:** No. 13-12200 Vulcan Way, Richmond, BC, V6V 1S8, Canada. Phone: 604-270-1815.
**Date of Introduction:** 1976.
**Ingredients:** Feves de soya de provenance organique, l'eau coagulees dans du nigari (chloride de magnesium).
**Wt/Vol., Packaging, Price:** 425 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** Shurtleff & Aoyagi. 1979. July. New Tofu Shops & Soy Dairies in the West.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Eng-Choo Lim.

Soyfoods Center Computerized Mailing List. 1982. Sept. 17. Owner: Mr. Eng-Choo Lim. Address listed as 11031 Bridgeport Rd., #1107, Richmond BC, Canada V6X 1T3.

Labels. 1983, dated. In French and English. "A good source of protein." Leaflet. 1989. April. "Mandarin Enterprises has been making quality soyfoods in Canada since 1976."

1095. **Product Name:** Soybean sprouts.
**Manufacturer's Name:** Pyung Hwa Food Co. Inc.
**Manufacturer's Address:** 2139 Dundas St., Toronto, ONT, M6R 1X1, Canada. Phone: 416-534-0237.
**Date of Introduction:** 1976.
**Ingredients:** Soya beans (Feves de soya), water, magnesium chloride (chlorure de magnesium), calcium sulfate (sulfate de calcium).
**Wt/Vol., Packaging, Price:** 600 gm.
**How Stored:** Refrigerated.
**New Product–Documentation:** R. Leviton. 1980. Soyfoods magazine. Summer. p. 16-17. The company is at 2139 Dundas St. "located underneath a garage and service station. Mr. Jhasun Koo's traditional-style shop, which began operation in 1976,... also makes 4,000 pounds of soybean sprouts weekly and sells them in 50-pound sacks to Oriental restaurants and groceries." He has 7 workers.

Soyfoods Center Computerized Mailing List. 1981. Jan. 22. Owner: Mr. Jhasun Koo.

Talk with Jhasun Koo, owner and founder. 1989. May 4. He started making soy sprouts in his home basement in 1976. At that time, his company had no name. It was first named Pyung Hwa Food Co. in 1978. In 1986 he moved from Dundas St. to his current address: 115 McCormack St., Toronto, ONT, M6N 1X8. Phone: 416-767-7604. Mr. Koo is Korean.

1096. **Product Name:** Tofu.
**Manufacturer's Name:** Shinbo Tofu Co.
**Manufacturer's Address:** 450 Alexander St., Vancouver, BC, V6A 1C5, Canada. Phone: 604-255-8141.
**Date of Introduction:** 1976.
**New Product–Documentation:** Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies. Philip Saburo.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops and Soy Dairies in the West." p. 399. Owner: Philip Saburo.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Philip Saburo.

1097. **Product Name:** [Tofu].
**Foreign Name:** Tofu.
**Manufacturer's Name:** Soybios.
**Manufacturer's Address:** C.P. 929, 17911 Lebeau St., St. Janvier, QUE, J0N 1L0, Canada.
**Date of Introduction:** 1976.
**New Product–Documentation:** Shurtleff & Aoyagi. 1979. July. New Tofu Shops & Soy Dairies in the West. Norbert Argiles & Ron Bazar. In Sept. 1979 Norbert Argiles of Soybios ordered the book *Tofu & Soymilk Production.* The address is that shown above. This company became Unisoya.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owners: Norbert Argiles and Ron Bazar.

Fran Halter. 1984. The Gazette (Quebec). March 5. "A Committed True Believer Spreads the Word About the Curd." About Norbert Argiles of Unisoya. Talk with Yvon Tremblay and Richard Milon. 1987. Dec. 11. Unisoya was started in 1976 by Norbert Argiles. It was one of the first tofu shops in Quebec. Their tofu was sold in Montreal. Argiles worked for 10 years then burned out. He sold the company, which still exists.

1098. **Product Name:** Tofu.
**Manufacturer's Name:** Yet Chong Co.
**Manufacturer's Address:** 348 Powell St., Vancouver, BC, V6A 1G4, Canada. Phone: 604-681-2712.
**Date of Introduction:** 1976.
**New Product–Documentation:** Shurtleff & Aoyagi. 1977. Jan. 28. Commercial Tofu Shops and Soy Dairies.

Shurtleff & Aoyagi. 1978, Dec. *The Book of Tofu* (Ballantine pocketbook edition). "Appendix B: Tofu Shops

and Soy Dairies in the West." p. 399. Owner: Mr. Chong Kok.

Soyfoods Center. 1980. Sept. Tofu shops and soy dairies in the West (2 pages, typeset). Gives the company's name, address, and phone number. Owner: Mr. Chong Kok.

1100. Flengmark, Poul; Augustinussen, Erik. 1976. Dyrkning af soyabønner (Glycine max (L.) Merrill) [Growing of soyabean, *Glycine max* (L.) Merrill]. *Tidsskrift for Planteavl (Denmark)* 80(3):411-23. [15 ref. Dan; eng]
• ***Summary:*** From 1968 to 1974 seven soybean cultivars were planted at 3 sites in Denmark. The sites were Roskilde, Borris, and Roenhave. The varieties were: Portage, Dr. Donovans 052-903, and Altona (all from Canada), Fiskeby V (from Sweden), TFS 7 and TFS 10 (from France), and Warsjawska (from Poland). The first seeds were planted on 4 May 1968.

Seed yields ranged from a low of 0.52 tonnes/ha in the cultivar Portage to a high of 2.37 tonnes/ha in the cultivar Dr. Donovans 052-903. The cultivars Fiskeby V and Balestat were also suitable for growing in Denmark. Planting in mid-May generally gave higher seed yields than earlier or later planting. Planting at a depth of 2 cm in moist conditions and at 4 cm in dry conditions gave the best emergence. Planting deeper than 4 cm resulted in poor emergence. Populations of 17 and 26 plants per square meter gave seed yields of 1.58 tonnes/ha and 1.8 tonnes/ha respectively. Covering the plats with transparent and black plastic film accelerated emergence by 5-7 days and 2-4 days respectively compared with uncovered plots, but seed yield was not affected. Seed inoculation with *Rhizobium japonicum* resulted in poor development of nodules on plants growing on plots where soybeans had not been grown previously, whereas nodule development was plentiful on plots where soybeans had been grown before, whether or not the seed had been inoculated. Increasing applied nitrogen from 40 kg/ha to 120 kg/ha decreased nodule development but increased seed yields. Address: Statens Forsoegsstation, Roskilde, Denmark.

1101. Littlejohns, D.A.; Brooks, A.K.; Buzzell, R.I. 1976. Soybean production in Ontario. *Ontario Department of Agriculture and Food, Publication* No. 173. 15 p. AGDEX 141/10. [5 ref]
• ***Summary:*** This document is almost identical to one issued under the same title and number in 1971. Address: Ridgetown College of Agricultural Technology, Ridgetown, ONT, Canada.

1102. Mallard, Gwen. 1976. Soy bean magic: Delicious recipes with soy beans, flour & grits. Saanichton, British Columbia, and Seattle, Washington: Hancock House Publishers. 80 p. Index. 18 cm.
• ***Summary:*** Contents: 1. Commercially bought soy products: Soy flour, soy grits, soybean milk, soy flakes (fine, or coarse), soybean oil, soybean lecithin, soy lecithin spread (butter substitute), soy noodles, macaroni and spaghetti, soy sauce, soy coffee, roasted soy nuts, baked and green soybeans (canned). 2. Homemade soy products: Soy milk from dry beans, quick soy milk (from soy flour), soy cream (from soy flour), "soy base" (from soy flour), soy cheese from soy flour [tofu] (curded with lemon juice), oven-roasted soybeans, toasted soy flakes (coarse), toasted soy flour, sprouted soybeans. 3. Soybean recipes: Breads 'n breakfasts, soups 'n salads 'n salad dressings, soy suppers, desserts and delights.

To make soy base (p. 14): Slowly add 2 cups cold water to sifted soy flour to make a smooth paste. Stir in 1 teaspoon salt. Place in a double boiler and "cook for 30 minutes over rapidly boiling water. This mixture will be thick when it is cooked. Soy base is ideal for enriching gravies, stews, puddings, and soups. It will also make an excellent sandwich spread." Note: This is the earliest English-language document seen (April 2006) that uses the term "soy base" as a noun in this way; within 10 years the term had acquired a different meaning.

On the rear cover is a biography of Gwen Mallard by Derrick Mallard, her husband. She was born in 1917 in Fernie, British Columbia; she lived with her parents and three brothers in a log cabin in the beautiful Elk Valley among Canada's majestic Rocky Mountains. In 1971 she helped launch a campaign against plans for shipping oil in Alaskan tankers along the coast of British Columbia with the inherent dangers of disastrous oil spills (Note: On 24 March 1989 the tanker Exxon Valdez ran aground and spilled 11 million gallons of heavy crude oil in Alaska's pristine Prince William Sound–the world's worst oil spill in history). Gwen runs a small health food store and restaurant 14 miles north of Victoria, British Columbia. Address: British Columbia, Canada.

1103. Neufeld, Don F. 1976. Seventh-day Adventist encyclopedia, 2nd ed.: Loma Linda Foods. Washington, DC: Review and Herald Publishing Assoc. 1640 p. See p. 797-98.
• ***Summary:*** "A nonprofit corporation manufacturing and distributing health foods in the United States and Canada. It is owned and operated by the General Conference of Seventh-day Adventists for the purposes of (a) furthering by all proper means a better knowledge of the laws of healthful living, (b) manufacturing and selling healthful foods and related products, and (c) encouraging and supporting benevolent, educational, and religious enterprises of the

SDA Church. The main office, factory, and headquarters are at 11503 Pierce Street, Riverside, California; the second factory (featuring the production of soy milk in liquid and powdered form) is on Wooster Road, Mount Vernon, Ohio.

"Products include vegetarian protein foods (canned and frozen), soy milk, cereal coffee, gravy mixes, and canned soy beans.

"History. Forerunner of Loma Linda Foods was the Loma Linda Sanitarium bakery, which began operation in 1905. It was called The Sanitarium Food Company and its plant was situated on Anderson Street in Loma Linda. At first it manufactured a variety of breads and wafers, but it soon added other health food items. On Feb. 6, 1933, the name 'Loma Linda Food Company' was adopted, and on July 1, 1935, the first articles of incorporation were filed for a perpetual, nonprofit organization with a 12-member board of directors... On Nov. 14, 1937, groundbreaking ceremonies for a factory building were held on a nine-acre site donated by the Southern California Junior College (now La Sierra College) at Arlington (Riverside). The new factory began operations on July 16, 1938, the main product being Ruskets, a flaked whole-wheat biscuit cereal, but later more than 30 other products were added, the main emphasis being upon the development and perfection of high-protein foods of vegetable origin. The company also distributed related food items processed and packaged by others under the Loma Linda Foods label.

"On Jan. 1, 1951, Loma Linda Foods took over the business of the International Nutrition Laboratories, Inc., Mount Vernon, Ohio, purchased from Harry Willis Miller, M.D. Charles Percy Miles was named manager. The Canadian Division of Loma Linda Foods was established at Oshawa, Ontario, in 1962, on a site donated by Oshawa Missionary College (now Kingsway College). Frank L. Wessely was appointed its manager. It was closed in 1965.

"Loma Linda Foods has afforded financial support to the Seventh-day Adventist Dietetic Association and has provided fellowships to selected postgraduates of the School of Dietetics of Loma Linda University. By Jan. 1, 1965, it had also contributed to the denominational mission program more than $300,000, through the Loma Linda Foods label-saving plan for Sabbath school Investment.

*"General Managers:* G.T. Chapman, 1938-1962; C.P. Miles, 1963-1973; M.E. Dake, 1973." Address: Washington, DC.

• ***Summary:*** Contents: Introduction. Home and village traditional soybean foods by country. 1. Soybean food uses and production in Asia. Soaking dry soybeans. In China: Tou chiang (soybean milk; preparation, ways of serving), tou fu (soybean curd; yen-lu is the Chinese name for nigari), tou fu nao (soft curd), tou fu kan (dry / firm bean curd), chien chang (pressed tofu sheets), yu tou fu (fried tou fu), tung tou fu (frozen tou fu), tou fu pi (protein-lipid film; yuba), huang tou ya (yellow bean sprout or soybean sprout), mao tou (hairy bean, green soybean, or immature soybean), dry soybeans (roasting and frying, stewing and boiling), roasted soybean flour. Fermented soybean foods. Production and consumption of soybeans (China and Taiwan).

Japan: Tofu (soybean curd), kinugoshi tofu, processed tofu products (aburage or age, nama-age and ganmo), kori tofu (dried-frozen tofu), yaki tofu (grill tofu), yuba (protein-lipid film), soybean milk, gô (ground soybean mash), daizu no moyashi (soybean sprouts), edamame (green vegetable soybeans), whole soybeans, kinako. Fermented soybean foods: Production and consumption.

Korea: Tubu (soybean curd), soybean sprouts, whole soybeans (green soybeans, parched or roasted soybeans, boiled soybeans), soybean flour, soysauce, bean paste [Korean soybean miso], natto, production and consumption of soybeans.

Indonesia: Tahu or tahoo (soybean curd), bubuk kedele (soybean powder), tempe kedele, tempe gembus [the name in Central and East Java for okara tempeh], oncom tahu [the name in West Java for okara onchom], other soybean products (soybean sprouts, green soybeans, roasted and boiled soybeans, kecap or soysauce, tauco or bean paste [miso]), food mixtures (Saridele, Tempe-fish-rice or TFR, Soy-rice baby food, soybean residue [okara]-fish-rice), production and consumption of soybeans.

Thailand. Philippines: Soybean sprouts, soybean coffee, soybean cake (made from equal amounts of soybean flour and wheat flour), soybean milk, tou fu and processed tou fu products, production and consumption. Burma. India. Malaysia. Nepal. Singapore. Sri Lanka (Ceylon). Vietnam. West Asia [Middle East; Iran and Turkey]. References–Soybean food uses in Asia.

2. Soybean food uses and production in Africa. Ethiopia: Injera, wots and allichas, kitta, dabbo, dabokolo, porridge. Kenya. Morocco. Nigeria: Whole soybeans, soybean paste, corn-soy mixtures (soy-ogi). Tanzania. Uganda. Production. References–Soybean food uses in Africa.

3. Soybean food uses and production in Europe [both Eastern and Western]. 4. Soybean food uses and production in Latin America. Argentina. Bolivia. Brazil. Chile. Colombia. Ecuador. Guyana. Paraguay. Peru. Uruguay. Venezuela (fried arepas with textured soy). Mexico: New village process, commercial developments of soy-based food products, Gilford Harrison, Ruth Orellana, Seguras Social. Honduras. Costa Rica. Panama. Dominican Republic. Jamaica. Haiti. Trinidad. References–Soybean food uses in Latin America.

5. Soybean food uses and production in North America. United States: Oriental populations, vegetarian communes, The Farm in Tennessee. Canada. References–Soybean food uses in North America. 6. Soybean food uses in Oceania. Australia. New Zealand. 7. Summary of soybean food uses. Traditional soybean foods: Soybean milk, soybean curd and processed soybean curd products, protein-lipid film, soybean sprout, tempe (tempeh), green soybeans, boiled soybeans, roasted soybeans, soybean flour, soysauce, fermented soybean paste, fermented whole soybeans [Toushih, hamanatto], natto, fermented soybean curd. Experimental soybean foods: Whole soybean foods, soybean paste, soy flour, soy beverage. Production and consumption.

8. Recent simple soybean processes, other than traditional. Simple village process for processing whole soybeans: Equipment, process, sanitation requirements, quality of product, evaluation of product in formulas and procedures for family and institutional use in developing countries. NRRC village process. Foods from whole soybeans developed at the University of Illinois (drum dried flakes, canned and homecooked soybeans, soy beverages and beverage products, spreads, snacks).

Ways of cooking and serving soybeans in the American diet. 9. Industrial processes. Industrial production and selling prices of edible soybean protein products. 10. Barriers to acceptability and utilization of soybeans in food and research recommendations: Availability. Cultural and social factors. Texture. Flavor. Nutrition and food safety. Technology development. Technology transfer. Research recommendations [concerning each of the above barriers].

Concerning Morocco: Cereal-soy blends have been used extensively in Morocco; in fiscal year 1974 some 14.7 million lb were shipped to Morocco. Mmbaga (1975) reported that soy flour is being used in making porridge, with 1 part soy flour to 3 parts maize / corn flour.

Tables show: (1) Soybean production and imports in Taiwan, 1962-1975 (tonnes = metric tons, p. 33). Production rose from a 53,000 tonnes in 1962 to a peak of 75,200 tonnes in 1967, then fell to 61,900 tonnes in 1975. Imports skyrocketed from 62,400 tonnes in 1962 to a record 827,300 tonnes in 1975. (2) Consumption of soybean foods in Taiwan, 1964-1974 (kg/capita/year, p. 34). Total soybean foods not including tofu rose from 1.08 kg in 1964 to a peak of 2.61 kg in 1972 then fell to 1.99 kg in 1974. Consumption of tofu (80% water) rose from 18.75 kg in 1964 to a peak of 33.89 kg in 1972, then fell to 32.04 kg in 1974. (3) Supply and disposition of soybeans in Japan,

1971-1974 (p. 49). Total supply is beginning stocks, plus domestic production, and imports. Total disposition is crushing, plus traditional foods and feed. In 1974 imports accounted for 87.5% of the supply, and crushing accounted for 71.0% of the disposition. (4) Whole soybeans used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 50). Tofu and others rose from 508,000 in 1970 to 539,000 in 1974. Miso rose from 177,000 in 1970 to 192,000 in 1974. Shoyu rose from 13,000 in 1970 to 14,000 in 1974. (5) Defatted soybean meal used in the production of traditional foods in Japan, 1970-74 (tonnes / metric tons, p. 51). Shoyu rose from 163,000 in 1970 to 176,000 in 1974. Tofu and others was constant at 130,000 from 1971 to 1973. Miso decreased from 4,000 in 1970 to 2,000 in 1974. (6) Production of traditional soybean foods in Japan, 1970-74 (tonnes / metric tons, p. 52). Tofu and others rose from 1,867,800 in 1970 to 2,264,900 in 1973. Shoyu rose from 1,334,1000 in 1970 to 1,455,800 in 1974. Miso rose from 552,200 in 1970 to 587,200 in 1974. (7) Production and food use of beans [various types] and consumption of some soybean products in Korea, 1964-1967 (p. 56-57). In 1967 consumption (in tonnes / metric tons) was: Bean curd 290,000. Bean sprouts 270,000. Bean sauce 69,700. Bean paste 27,700. Total: 11.6 kg per capita per year. (8) Soybean production in Indonesia, 1960-1974 (p. 65). It rose from 442,862 tons in 1960 to 550,000 tons in 1974. (9) Consumption of soybeans in various parts of Indonesia in 1970 (p. 66). (10) Production of soybean foods in the province of Central Java, 1968-1972 (tons, p. 67). Kecap rose from 914,695 in 1968 to 1,524,000 in 1972. Tahu decreased from 18,570 in 1978 to 17,000 in 1972. Tempe rose from 506 in 1968 to 39,000 in 1972. (11) Area planted to soybeans and total soybean production in Thailand, 1964-1974 (p. 70). Area rose from 213,000 rais (6.25 rais = 1 ha) in 1964 to 1,016,000 rais in 1974. Production (in metric tons) rose from 31,300 in 1964 to 252,400 in 1974. (12) Utilization of soybeans by soybean-consuming countries, 1964-66 (based on FAO 1971 Food Balance Sheets, 1964-66 average, p. 150). The countries leading in per capita consumption (kg/person/year) are: China (PRC) 6.7. Japan 5.1. Korea(s) 5.0. Singapore 4.3. Indonesia 2.8. Malaysia 2.6. Taiwan (ROC) 1.1. (13) Amounts of cereal-soy blends distributed under Title II, Public Law 480 in fiscal year 1974 (p. 152-155). (14) U.S. exports of full-fat soy flour, 1974-75 (p. 156).

Note: This is the earliest English-language document seen (Feb. 2004) that uses the word “tubu” to refer to Korean-style tofu. Address: Northern Regional Research Center, Agricultural Research Service, Department of Agriculture, Peoria, Illinois 61604.

1109. Allis-Chalmers Corp. 1976? More from less (Motion picture). Milwaukee, Wisconsin. 27 minutes. Reviewed in Soybean Digest, June 1976, p. 36. *

• ***Summary:*** No-tillage farming and the latest crop-planting innovations is the subject of this 27-minute documentary film recently released by the agricultural equipment division of the Allis-Chalmers Corp. The moderator is Professor Shirley Phillips, one of the early researchers in no-tillage farming, of the University of Kentucky. Harry Young of Christian County, Kentucky, a pioneer in no-tillage farming, is among those featured. The film includes a panel discussion on the broad acceptance of no-tillage farming in many areas throughout the USA and Canada.

1111. Associated Press (AP). 1977. Food poisoning takes 69 lives. *Daily Colonist (Victoria, BC, Canada).* Jan. 9. p. 28, col. 5.

• ***Summary:*** “Sixty-nine persons died and 265 others in East Java were in hospital for food poisoning after eating tempe, a local dish made from soy beans, the daily newspaper *Kompas* reports.”

Note: The tempeh that killed these people was probably tempe bongkrek, made from shredded coconut presscake rather than from soybeans. There are no known reports of soybean tempeh being toxic, but many reports of coconut presscake being toxic.

1112. Stewart Seeds. Div. of Ciba-Geigy Seeds Ltd. 1977. It all started with Dr. C.A. Zavitz 1863-1942... the Crop Science Department of the Ontario Agricultural College of the University of Guelph. *Stewart Seed Science* 3(1):1, 6. Supplement to Farm and Country (Jan. 18).

• ***Summary:*** Contains a nice history of the pioneering work of Dr. Zavitz. “This giant among plant scientists will be long remembered, not just in Guelph, but across Ontario, Canada and the United States, for plant breeding success that may never be equalled.”

"At one time *90% of the barley acreage on Canada was* O.A.C. 21.

"The mention of just a few of the many contributions to agriculture made by Dr. Zavitz, is to illustrate the stature and talent, maybe even genius, of an outstanding Canadian. He was instrumental in the founding of the Ontario Agricultural and Experimental Union in 1886. This idea was adopted in the United States, and in Ontario has become the Soils and Crops Branch of OMAF. He was one of the prime movers in the development of the Canadian Seed Growers' Association. He was the first Canadian to receive a Fellowship in the American Society of Agronomy. He introduced soybeans to Canada in 1892, and developed the first soybean variety ever licensed in Canada, O.A.C. 211. And the list goes on and on... Canadian Agricultural Hall of Fame, Honorary Degrees, the development of hardy alfalfa varieties, improvements in potato production, and more... much more. Indeed Dr. Zavitz established the plant science foundation upon which a succession of talented people have continued to build."

Some of the dedicated crop scientists who have followed Dr. Zavitz include Dr. O.M. McConkey, Dr. D.N. Huntley, and Dr. J.W. (Jack) Tanner. A large color photo shows Dr. Tanner, presently Chairman, Dept. of Crop Science.

Soybean varieties from Stewarts (including a brief description of each): Beechwood, Nairn, Evans, Harlon, and Harcor.

Concerning the soybean variety Evans: "A good yielder in the 2700 heat unit range [Group 1]. Short growing, large seeded with good lodging resistance. Resistance to Phytophthora rot." Note: The variety Evans was named after John W. Evans, a leader in founding the Minnesota State Soybean Association; it was not named after Edward E. Evans, the pioneer soybean breeder from Michigan. Address: Ailsa Craig, Ontario N0M 1A0. Phone: (519) 293-3211.

1113. *Canadian Adventist Messenger.*1977. Ten Talents cookbook not recommended. Feb. 1. p. 4.
• ***Summary:*** "The cookbook *A Good Cook, Ten Talents* has been placed on the not recommended book list by the General Conference Health Department. A review by dietitians, pharmacists and physicians has found the nutritional and medical information contained in the book to be generally unsound and in several instances actually dangerous.

"Persons using this cookbook are advised to view with caution any nutritional statements or medical advice which it contains. Especially dangerous are the recommendations regarding formulas and foods for infants and small children, certain herbal remedies (some of which are poisonous), the listing of several plant foods as 'valuable' sources of Vitamin B-12 or Vitamin D, and the recommendation that apricot kernels be added to soy milk to improve the flavor (apricot kernels are poisonous).

"For further information, please contact: Ella Mae Stoneburner, R.N., M.S., Associate Director, Dept. of Health, General Conf. of Seventh-Day Adventists, 6840 Eastern Ave., N.W., Washington, DC 20012."

1114. *Windsor Star (Essex County, Ontario, Canada).*1977. April building start for Maple Leaf plant. Feb. 11.
• ***Summary:*** "Construction of Maple Leaf Mills' $37 million soybean crushing and processing plant could start in April but some delays are holding up a separate project for federal grain elevators. Mayor Bert Weeks said today."

1115. Schisler, Lee C.; Volkoff, Olga. 1977. The effect of safflower oil on mycelial growth of Boletaceae in submerged liquid cultures. *Mycologia* 69(1):118-25. Jan/Feb. [9 ref]
• ***Summary:*** The addition of small amounts of safflower oil (2.5 ml/liter) to liquid media stimulated mycelial growth of species of mushrooms tested. One ingredient in the standard medium used for isolation of Boletaceae is Soytone (p. 119). Note: This article does not explain what Soytone is or what it is made of. Address: 1. Dep. of Plant Pathology, The Pennsylvania State Univ., University Park, PA 16802; 2. Dep. of Botany, The Univ. of British Columbia, Vancouver, BC, Canada V6T 1W5.

1116. Eskin, N.A. Michael; Grossman, S.; Pinsky, A. 1977. Biochemistry of lipoxygenase in relation to food quality. *Critical Reviews in Food Science and Nutrition* 9(1):1-40. April. [268 ref]
• ***Summary:*** An extensive review of lipoxygenase in relation to food quality. This enzyme has been recognized since the late 1920s. It is well known for the variety and intensity of undesirable flavor it can produce from its normal substrate, linolenic acid. Address: 1. Dep. of Foods and Nutrition, Univ. of Manitoba, Winnipeg, Manitoba, Canada; 2-3. Bar-Ilan Univ., Ramat-Gan, Israel.

1117. Khan, A. Waheed; Cowen, Donna C. 1977. Rapid estimation of muscle proteins in beef-vegetable protein mixtures. *J. of Agricultural and Food Chemistry* 25(2):236-38. March/April. [10 ref]
Address: Div. of Biological Sciences, National Research Council of Canada, Ottawa, ONT, Canada K1A 0R6.

1118. Iso, James Y. 1977. Japan looks to the U.S. for more food-quality soybeans. *Foreign Agriculture.* May 16. p. 6, 16.
• ***Summary:*** When the People's Republic of China (PRC) cut back on its soybean exports last year because of a poor domestic harvest and disruption of marketing channels by the devastating earthquake, Japanese manufacturers of miso,

tofu, and other native soy foods were among the first to feel the pinch, having traditionally bought large quantities of PRC soybeans. Their shift could lead to perhaps a 100,000-ton gain in U.S. exports of food-quality soybeans to Japan.

"In 1976, the U.S. shipped about 520,000 tons of these food-use soybeans to Japan out of total U.S. soybean sales there of 3.2 million tons and Japan's total soybean imports of 3.5 million. Japan received another 132,000 tons of food beans from the PRC and a few thousand tons from other supplying countries.

"Adding to this a domestic production of 60,000 tons puts Japan's total soybean use in traditional foods last year at about 750,000 tons.

"Each year, Japan uses about 720,000 tons of soybeans in traditional foods, including roughly 350,000 tons of tofu (bean curd), 180,000 of miso (bean paste), and 70,000 of natto (fermented beans). The remaining tonnage goes into other native products, such as kinako (processed [dry roasted] beans) and frozen tofu, and into fresh soybean consumption.

"Manchurian beans, produced in the colder regions of North China (usually north of 43º latitude), have long been considered the best tasting for fermented foods like miso and natto."

"Outside of the PRC, the varieties of beans preferred by the food manufacturers are found in colder climates, such as Canada and the northern regions of the United States." Several "Japanese trading firms involved in importing food-type beans have come to prefer soybeans produced in Indiana, Illinois, Ohio, and Michigan. These beans, known among the trade as IOM (Indiana, Ohio, Michigan) beans, made up close to 500,000 tons of the food beans imported by Japan last year and go largely into tofu and related foods." Note: This is the earliest English-language document seen (Jan. 2008) that uses the abbreviation "IOM" in connection with soybeans.

"Around 55,000 tons of 'identity-preserved' varieties also were imported last year." Producers are looking for a large bean with a white hilum and high protein and carbohydrate content. All food beans must be #1 grade quality. Talks with miso/natto manufacturers have revealed that U.S. varieties Amsoy, Corsoy, Kanrich, and Beeson meet this general description. However, a bean with all the desired features comparable to the PRC's, particularly as related to taste, is not as yet commercially available in the U.S. Address: Foreign Market Development, Oilseeds and Products, Foreign Agricultural Service.

1119. Gupta, C.B.; Eskin, N.A.M. 1977. Potential use of vegetable rennet in the production of cheese. *Food Technology* 9(2):62-66. May. [10 ref]
• ***Summary:*** Many plant proteases are capable of clotting milk although the majority proved unsuitable for cheese production. The juice of the ash gourd *(Benincasa cerifera)* however gives good results. Address: Dep. of Foods and Nutrition, Univ. of Manitoba, Winnipeg, Manitoba R3T 2N2, Canada.

1120. Shields, Bill. 1977. Vegetable oil plant to begin production in fall of '78. *Windsor Star (Essex County, Ontario, Canada).* June 29. p. 3-4.
• ***Summary:*** William G. Milliken, president of Maple Leaf Monarch Company, said his vegetable oil processing plant and refinery now under construction on 40 waterfront acres, is scheduled to begin production in the fall of 1978. It will be the largest integrated vegetable oil plant in Canada, and is expected to stimulate Ontario soybean production. Lever Brothers is the largest margarine manufacturer in Canada. The deodorized and hardened oils and fats from the Windsor plant will be use in the production of margarine, shortening, salad and cooking oils. Refined technical oils will be used in the manufacture of paints and varnishes, printing inks, plastics and caulking compounds.

An illustration (architectural drawing) shows Maple Leaf Monarch's vegetable oil mill and refinery. Address: Star's Business Editor.

1121. Stanley, D.W. 1977. Foods for the future. *Notes on Agriculture (Guelph, Ontario)* 13(2):29-30. June.
• ***Summary:*** The world's number one problem is not, as some believe, dwindling fossil fuel supplies, but rather that the world's population is expected to double in the next 30 years, reaching some 7 billion by the year 2000. "Currently, the limiting nutrient in human feeding is protein... Oilseeds are an excellent source of protein." Soybeans are the oil seed most widely used as a protein source for diets. Vegetable protein processing is the focus of much research in the Department of Food Science at the University of Guelph. Texturized vegetable proteins, one of the foods of the future, are most widely made using thermal extrusion. During the 1971-72 school year about 23 million pounds of soy protein were used in the U.S. school lunch program. Address: Dep. of Food Science, Ontario Agricultural College, Univ. of Guelph, ONT, Canada.

1122. Harwood, Maureen. ed. 1977. The Lifestream cookbook. Richmond, BC: Lifestream Natural Foods Ltd. 52 p. Illust. by Elizabeth Scott. Index. 22 cm.
• ***Summary:*** Contents: Nutritional information: Protein and the vegetarian diet. Grains. Whole grain pasta. Beans. Tofu. Corn tortillas. Flakes and cereal. Whole grain flour. Seeds and sprouts (Alfalfa seeds, mung beans, lentils, sunflower seeds–unhulled, chick peas, fava beans, soybeans, wheat kernels, alfalfa seeds in Vita salad, sesame seeds in gomasio, pumpkin seeds), Nut butters and miso (incl. Miso honey dressing, Miso soup). Cashew butter & Engevita yeast. Dried fruit. Carob. Address: [Richmond, BC, Canada].

1123. Jaeger, Martin. 1977. Pricing and marketing soybeans. *Ontario Ministry of Agriculture and Food, Factsheet* No. 77-033. AGDEX 141/840. July. Revised, Aug. 1979, and Aug. 1981.
• ***Summary:*** Revision of Factsheet "Pricing soybeans," Dec. 1973. Address: Economics Branch.

1124. Stern, N.J.; Hesseltine, C.W.; Wang, H.L.; Konishi, F. 1977. *Lactobacillus acidophilus* utilization of sugars and production of a fermented soybean product. *Canadian Institute of Food Science and Technology Journal* 10(3):197-200. July. [12 ref. Eng; fre]
• ***Summary:*** Eight strains of *Lactobacillus acidophilus*, obtained from the ARS (Agricultural Research Service) culture collection, were tested for their ability to use monosaccharides (fructose, galactose, glucose and D (+) mannose), disaccharides (lactose, maltose and sucrose) and two oligosaccharides (raffinose and stachyose). As judged by titratable acidity and pH changes during growth, strain variation existed in the ability of the microorganisms to utilize the sugars. Strain NRRL B-1910 was a superior utilizer of raffinose and stachyose as measured by medium pH changes. Therefore, B-1910 was selected as inoculum for the successful production of a yogurt-like soybean product, which has potential as a good protein food source. Address: NRRC, Peoria, Illinois 61604.

1125. *Canadian Adventist Messenger.*1977. Ten Talents cookbook. Sept. 1. p. 14.
• ***Summary:*** There was an article about the *Ten Talents* cookbook in the Feb. 1 issue of this periodical. Discusses a controversy concerning a news release about the book. "It is understood that *Ten Talents* is not stocked in the Adventist Book Centres in Eastern and Western Canada. However *Ten Talents* is presently being re-edited to clarify information on some of the controversial areas mentioned in the February 1 article. The revised edition is available from Dr. and Mrs. F.J. Hurd, Box 86-A, Route 1, Chisholm, Minnesota 55719."

1126. *Soybean Digest.*1977. What is the competition up to? Sept. p. 14h-14j, 14l.
• ***Summary:*** Discusses the grain (mostly wheat) and oilseed (mostly soybean) marketing systems in the following countries (summarized from a report by the U.S. Comptroller General's office): Canada, Australia, Argentina, Brazil, and the European Community.

Brazil currently produces about one-third as many soybeans as the USA. Cooperatives dominate the national marketing system in Brazil. Though the government has set minimum price levels (announced 2 months before planting time) high enough to guarantee producers a profit, world prices have been such that support prices have been unnecessary. Credit is available from the government up to 80% of the support price. Even though Brazil's export and domestic soybean trade is in private hands, the government exercises strong regulatory power over the trade.

"The European Community was first formed in 1957 with Germany, France, Italy, Belgium, The Netherlands and Luxembourg agreeing to integrate their agricultural community programs. In 1973, Denmark, Ireland and the United Kingdom also became members.

"The agricultural goal for the European Community is to stabilize commodity prices at levels that afford producers fair returns while assuring adequate supplies at reasonable prices for consumers. It is nearly impossible to have an agriculture program that will satisfy both producers and consumers; in the European Community countries the bias is in favor of the producer. There are many complaints by consumers that the price supports are too high, the program too costly and that the program fosters inefficient production. The domestic price is protected by levies and duties on imports.

"The agriculture policy is financed through a European community guarantee fund financed by the levies and duties collected and by assessments... The European Community, even with the intra-European Community trade, still imports about 25% of its agricultural commodities and products. The European Community is the largest importer of agricultural commodities in the world and the largest U.S. customer."

1127. Shurtleff, William. comp. 1977. Large natural food distributors, health food distributors, and book distributors in North America. Lafayette, California. 1 p. Undated. Unpublished typescript.
• ***Summary:*** Most of the following companies are presently distributing *The Book of Tofu, The Book of Miso* and *The Book of Kudzu* published by Autumn Press. For each, the company name (listed alphabetically) and address are given:

Large natural food distributors (28): Arrowhead Distributing (Denver, Colorado), Beautiful Foods (Philadelphia, Pennsylvania), CC Grains (Seattle, Washington), Chico-San Inc. (Chico, California), Clear Eye (Rochester, New York; $3 million/year in sales), Dari Farms Natural Foods (Tolland, Connecticut), Eden Foods (Ann Arbor, Michigan; Phone: 313-973-9400. Tim Redmond, Michael Potter), Erewhon (Cambridge, Massachusetts; Phone: 617-354-2001. John Fogg, President), Erewhon West (Vernon, California; Phone: 213-582-6144. James Silver), Japan Food Corp. (JFC–South San Francisco, California; also in New York), Laurelbrook Foods (Raleigh, North Carolina), Llama Trading Co. (Greenfield, Massachusetts), Midwest Natural Foods (Ann Arbor, Michigan), Pure and Simple/The Well (San Jose, California; Pure & Simple changed to 1045 Pepitone, San Jose, CA 95110; Jon Hoefler), Rainbow Distributing (Denver,

Colorado), Reality Natural Foods (Haleiwa, Oahu, Hawaii), Redwood Natural Foods (3245 Santa Rosa Ave., Santa Rosa, California; Greg Hartman. Phone: 707-546-5878). Rock Island Foods (Ignacio, California), Shadowfax (Binghamton, New York), Starflower (Eugene, Oregon), Tree of Life (Augustine, Florida), United Naturals (Eureka, California), Westbrae (Emeryville, California), Lifestream Natural Foods (Vancouver, British Columbia, Canada), Manna Foods (Scarborough, Ontario, Canada).

Large health food distributors (8–also carry books): Akin (Tulsa, Oklahoma), Akin Southeast (Jacksonville, Florida), Balanced Foods (Bergen, New Jersey), Collegedale Distributors (Collegedale, Tennessee), Foods for Health (Phoenix, Arizona), Health Foods Inc. (Des Plaines, Illinois), Kahan and Lessin (Los Angeles, California), Natures Best (El Segundo, California).

Large booksellers [distributors] (3): Nutribooks Corp. (Denver, Colorado), Bookpeople (Berkeley, California), Landstrom (South San Francisco, California).

1128. Larmond, Elizabeth. 1977. Laboratory methods for sensory evaluation of foods. *Canada Dept. of Agriculture, Publication* No. 1637. 73 p. *
• ***Summary:*** Contains the "Hedonic Scale." 9 = like extremely. 8 = like very much. 7 = like moderately. 6 = like slightly. 5 = neither like nor dislike. 4 = dislike slightly. 3 = dislike moderately. 2 = dislike very much. 1 = dislike extremely. This 9-point scale, the most widely used one, has been in use for many years. It was originally developed by the Army Quartermaster Corps at Natick, Massachusetts. An 8 point scale (omitting number 5), and a seven point scale (omitting numbers 4 and 6) are also used. A ten point scale is almost never used.

To do statistical analysis, if you have more than two samples, use an analysis of variance. If you have just 2 samples, you can use a T-test. Address: Food Research Inst., Ottawa, ONT, Canada.

1129. Soldati, A. 1977. Forschungsarbeiten auf dem Gebiet der Sojabohne in den USA und Kanada [Research work in the field of soybeans in the USA and Canada]. Rapporto interno, Institut fuer Pflanzenbau ETH, Zurich, Switzerland. 40 p. Unpublished typescript. [Ger]*

1130. Taysi, V.; Schuster, W.; Sepet, H.; Posselt, U. 1977. Die Leistungen von Sojabohnensorten unterschiedlicher Provenienz unter ost-mediterranen und west-europaeischen Klimaverhaeltnissen [The productivity of soybean cultivars grown under east Mediterranean and west European climatic conditions]. *Zeitschrift fuer Acker- und Pflanzenbau (J. of Agronomy and Crop Science)* 144:311-24. [8 ref. Ger; eng]
• ***Summary:*** In 1972 and 1973, nine soybean varieties / cultivars (2 from Germany, 2 from Canada, 3 from the USA, one from South Africa, and one from Rumania) were tested in field trials at two locations: Gross-Gerau (Rhein-Main Region) and Izmir (West Anatolia, Turkey). The yields of seed were relatively low at both sites. Large differences in yield occurred between the varieties. At Izmir, the earlier varieties Caloria, Gieso, and Altona, as well as the later variety Beeson gave their highest production in a July planting. This means that these varieties are particularly for cultivation as a second crop. Address: 1. Agricultural faculty, Ege Univ., Izmir, Turkey; 2. Justus Liebig Univ., Giessen, West Germany.

1131. Agriculture Canada Research Station. 1977. Summary–Soybean work Nova Scotia 1954-1977. Kentville, Nova Scotia, Canada: ACRS. 62 p. 28 cm.
• ***Summary:*** The field work described in this report was conducted under the direction of G.G. Smeltzer [who began working with soybeans in 1954]. The data was compiled by F.G. Sawler. In the introductory comments, Smeltzer notes: "During the past 24 years some very factual data was obtained on soybean production in Nova Scotia. The information reported in this summary covers data collected at 50 farms and also at the Research Station, Kentville, N.S...

"A definite indication of soybeans economic potential for Nova Scotia was obtained by early test results from 1954-1973. With this information Dr. J.R. Wright and the writer planned a very extensive soybean evaluation program in 1974... For the most economic yield soybeans should be seeded by the middle of May."

The book consists mostly of tables showing variety trials, fertility trials, and production studies at specific locations in particular years. The tables contain information on yields, protein yields, protein and oil content, spacing between rows, spacing between seeds in each row, etc.

Pages 47-51 contain tables which also include summary results of soybean trials conducted in 1976 at Charlottetown (Price Edward Island), Fredericton (New Brunswick), and Lyndhurst (Nova Scotia). For each variety, the yield (in kg/ha), protein yield (in kg/ha), percentage of protein in the seeds, and percentage of oil in the seeds is given for each of the 3 locations. The best varieties (Maple Arrow, Altona, Portage) gave yields in the range of 2,400 to 3,300 kg/ha.

At Charlottetown (PEI), the highest yielding soybean varieties were Maple Arrow (2,600 kg/ha), M65-217 (2,447), and Altona (2,258).

Note: This is the earliest document seen (Jan. 2010) that mentions the soybean variety Maple Arrow. Address: Kentville, Nova Scotia, B0P 1X0, Canada.

1132. Carroll, K.K.; Huff, M.W.; Roberts, D.C.K. 1977. Dietary protein, hypocholesterolemia, and atherosclerosis. In: G. Schettler et al. Atherosclerosis IV. New York: Springer-Verlag. See p. 445-48. [29 ref]

• ***Summary:*** Feeding casein to rabbits produced hypercholesterolemia which in turn led to atherosclerosis. Address: 1. Univ. of Western Ontario.

1133. Johns, Warren L.; Utt, R.H. 1977. Chronology of the early history of Loma Linda Sanitarium and the College of Medical Evangelists [later Loma Linda University] (Document part). In: W.L. Johns and R.H. Utt, eds. 1977. The Vision Bold: An Illustrated History of the Seventh-day Adventist Philosophy on Health. Washington, DC: Review and Herald Publishing Assoc. 208 p. See p. 174-201.
• ***Summary:*** Loma Linda: The resurrection of Lonesome Linda: New medical center gets off to a very shaky start (Loma Linda Hotel, Loma Linda Sanitarium and College of Medical Evangelists). "They have gone and done what I told them not to" (American Medical Assoc., Percy Magan and Sutherland).

1906 April 15–Dedication of Loma Linda Sanitarium; Ellen White spoke to an audience of about 500. "Loma Linda is to be not only a sanitarium but an educational center... A school is to be established here for the training of gospel medical missionary evangelists" (TVN, p. 186). In 1908-09 120 students were enrolled, incl. eight in the first year of the medical-evangelistic course and seven in the second year–all no doubt medical students hoping to become licensed to practice medicine.

1909 Dec. 9–The college secured a charter from the State of California in the name of the College of Medical Evangelists; it was authorized to grant degrees in the liberal arts and sciences, dentistry, and medicine. But how would SDAs finance and staff a genuine, fully equipped school of medicine, whose students could pass state board examinations. Ellen White said to go ahead.

1910 June 15–The transfer of Loma Linda Sanitarium assets to the College of Medical Evangelists made the sanitarium legally an integral part of the college. The 1910 council also defined the constituency, named a board of trustees, outlined a curriculum, and elected a faculty. The goal was to develop a fully accredited school of medicine.

1910–Abraham Flexner published *Medical Education in the United States and Canada*, a report that exposed the deplorable state of medical education in the majority of medical schools, many of them little more than diploma mills. Flexner visited 155 medical schools, only 38 of which had budgets. "Some had started without approval or permission. Many students entered them without a high school diploma. Only the best schools had a four-year curriculum of six months each year.

In 1962 College of Medical Evangelists still existed. Address: 2. Freelance writer and editor, Wrightwood, California.

1134. University Microfilms International. 1977—. Dissertation Abstracts (Computerized bibliographic database). 300 N. Zeeb Road, Ann Arbor, MI 48106. [1043613 ref]
• ***Summary:*** This database contains virtually every American PhD dissertation accepted at an accredited institution since 1861, when academic doctoral degrees were first granted in the United States. Masters theses have been selectively indexed since 1962, and abstracts are included from spring 1988 to the present. Abstracts are included for a large majority of PhD dissertations after Jan. 1980. It also contains many Canadian dissertations and a small but increasing number from institutions abroad. British and European dissertations are included in the database from Jan. 1988 forward. First available for use in computerized form: 1977. Earliest records: 1861. Total records (9/90): 1,100,000. Address: Ann Arbor, Michigan. Phone: 800-521-3042.

1135. Carroll, K.K. 1978. Dietary protein in relation to plasma cholesterol levels and atherosclerosis. *Nutrition Reviews* 36(1):1-5. Jan. [50 ref]
Address: Prof. of Biochemistry, Univ. of Ontario, London, ONT, Canada N6A 5C1.

1136. Learning Tree (The). 1978. Make your own tofu at home–quicker and easier than baking bread! (Ad). *East West Journal*. Jan. p. 3.
• ***Summary:*** "The Learning Tree Tofu Kit contains: a 16-page booklet with recipes & instructions, a Philippine mahogany settling box, a pressing sack, cheesecloth, & enough natural Nigari solidifier for 10 batches of this practical gourmet food. An ideal gift for all your Natural Food friends. If you've never tasted homemade tofu, you've never tasted tofu! Available at your local natural food store, bookstore, or cookware shop, or send check or money order for $12.95 ($13.95 in Canada) to: The Learning Tree. The words "Tofu Kit" and those in the title of the ad are written in Cooper Black typeface, the same used for title of *The Book of Tofu*, by Shurtleff and Aoyagi. A photo shows three views of the kit (which was developed by Larry Needleman).

The ad also appeared in the following issues of this magazine: For 1978–Feb. (p. 21), April (p. 11), May (p. 41), June (p. 57), July (p. 76), Aug. (p. 14). Starting in Sept. 1978 (p. 18) the title was shortened to "Make your own tofu at home!!," with the word "HOME" written in large, bold caps. The prices were unchanged. This new ad also appeared in Oct. (p. 62), Nov. (p. 10), and Dec. (p. 69). For 1979–Feb. (p. 75), June (p. 14), Aug. (p. 66), Nov. (p. 68), Dec. (p. 4). For 1980: Jan. (p. 19) of this magazine. The kit now sold for $14.95.

Note: This is the earliest ad seen with the word "tofu" in the title. Address: Box 76, Bodega, California 94922.
